48. *Further invites* developed country Parties, the entity or entities entrusted with the operation of the financial mechanism, including the Global Environment Facility and the Green Climate Fund, multilateral, bilateral and other public donors, and private and non-governmental organizations that are in position to do so, to submit to the secretariat, as appropriate, the following information on financial, technology and capacity-building support available and/or provided for the preparation and/or implementation of nationally appropriate mitigation actions:

- (a) Whether the support available is for the preparation and/or implementation of nationally appropriate mitigation actions;
- (b) The source of the support, including, where applicable, the name of the developed country Parties in question and the executing entity channelling the support, including contact information;
- (c) The amount and type of support available, and whether it is financial (e.g. grant or facilitated loan), technology and/or capacity-building support;
- (d) The status of delivery;
- (e) The types of action that may be supported and the process for the provision of support;

49. *Invites* Parties and entities referred to in paragraphs 46 and 48 above to provide the secretariat, subsequent to the matching of action with support, information on both internationally supported mitigation actions and associated support;

50. *Requests* the secretariat, pursuant to decision 1/CP.16, paragraphs 53–59, to record and regularly update, in separate sections of the registry, information provided in accordance with paragraphs 46–49 above;

51. *Decides* that the registry will facilitate the matching of actions seeking international support with support available by providing and directing information to Parties that submitted information on nationally appropriate mitigation actions seeking support, and Parties and entities that have submitted information on the support available;

52. *Requests* the secretariat, subject to the availability of resources:

(a) To provide assistance to developing country Parties requesting information on the available sources of support in the registry;

(b) To provide information on the operation of the registry to the Conference of the Parties annually, in order to inform the discussions on the financial mechanism;

53. *Notes* that the financial mechanism may make use of information available in the registry when considering the provision of support for the preparation and implementation of individual nationally appropriate mitigation actions which are seeking support;

54. *Requests* the secretariat to develop a prototype of the registry by the thirty-sixth session of the Subsidiary Body for Implementation in order to present the prototype to Parties for their consideration;

55. *Also requests* the secretariat, if applicable, to improve the design of the prototype based on the views expressed by Parties at the thirty-sixth session of the Subsidiary Body for Implementation, in order to enable Parties to start using the prototype of the registry as soon as possible and within two months thereafter, with a view to finalizing the registry through a decision at the eighteenth session of the Conference of the Parties, taking into account the lessons learned from the initial experience gained;

#### **Modalities and guidelines for international consultation and analysis**

*Recalling*, in particular, Article 4, paragraphs 1, 3, and 7, Article 10, paragraph 2(a), and Article 12, paragraphs 1, 5 and 7, of the Convention,

*Also recalling* decisions on communications from non-Annex I Parties and, in particular, decisions 10/CP.2, 12/CP.4, 8/CP.5, 31/CP.7, 32/CP.7, 17/CP.8 and 8/CP.11,

*Noting* decision 1/CP.16, by which a process of international consultation and analysis of biennial update reports will be conducted under the Subsidiary Body for Implementation, aiming to increase the transparency of mitigation actions and their effects,

*Also noting* decision 1/CP.16, paragraph 60(c), by which developing country Parties, consistent with their capabilities and the level of support provided for reporting, should also submit biennial update reports containing updates of national greenhouse gas inventories, including a national inventory report and information on mitigation actions, needs and support received,

*Recognizing* that the guidelines for international measurement, reporting and verification referred to in decision 1/CP.16, paragraph 61, correspond to the guidelines determined for the international consultation and analysis of nationally appropriate mitigation actions of developing country Parties,

*Also recognizing* the need to have an efficient, cost-effective and practical international consultation and analysis process, which does not impose an excessive burden on Parties, and on the secretariat,

*Noting* that international consultation and analysis is non-intrusive, non-punitive, and respectful of national sovereignty,

56. *Adopts* the modalities and guidelines for international consultation and analysis as contained in annex IV;

57. *Recognizes* that the extent to which developing country Parties will effectively implement their commitments under the Convention will depend on the effective implementation by developed country Parties of their commitments under the Convention related to financial resources and transfer of technology;

58. *Decides*:

(a) That the first rounds of international consultation and analysis will be conducted for developing country Parties, commencing within six months of the submission of the first round of biennial update reports by developing country Parties;

(b) That the frequency of participation in subsequent rounds of international consultation and analysis by developing country Parties, based on their respective capabilities and national circumstances, and special flexibility for small island developing States and the least developed country Parties, will be determined by the frequency of the submission of biennial update reports;

(c) To revise the modalities and guidelines prescribed herein based on experiences gained in the first round of international consultation and analysis, no later than 2017;

(d) That small island developing States and the least developed country Parties may undergo international consultation and analysis as a group of Parties at their discretion;

59. *Urges* developed country Parties and other developed Parties included in Annex II to the Convention to provide new and additional financial resources at the agreed full cost in accordance with Article 4, paragraph 3, of the Convention with a view to supporting any reporting needed for international consultations and analysis;

60. *Aims* to facilitate the universal participation of developing country Parties in the international consultation and analysis process;

61. *Invites* Parties to submit to the secretariat, by 5 March 2012, their views on the composition, modalities and procedures of the team of technical experts referred to in annex IV, paragraph 1;

62. *Requests* the secretariat to compile these submissions into a miscellaneous document for consideration by the Subsidiary Body for Implementation at its thirty-sixth session, with a view to adopting a decision on the matter referred to in paragraph 61 above at the eighteenth session of the Conference of the Parties;

**C. Policy approaches and positive incentives on issues relating to reducing emissions from deforestation and forest degradation in developing countries; and the role of conservation, sustainable management of forests and enhancement of forest carbon stocks in developing countries**

*Recalling* the principles and provisions set forth in decision 1/CP.16 and its appendices I and II on policy approaches and positive incentives on issues relating to reducing emissions from deforestation and forest degradation in developing countries and the role of conservation, sustainable management of forests and enhancement of forest carbon stocks in developing countries,

*Also recalling* decisions 1/CP.13, 2/CP.13, 4/CP.15 and 12/CP.17,

*Further recalling* decision 1/CP.16, paragraphs 68–74 and 76–78,

*Reaffirming* that, in the context of the provision of adequate and predictable support to developing country Parties, Parties should collectively aim to slow, halt and reverse forest cover and carbon loss, in accordance with national circumstances, consistent with the ultimate objective of the Convention, as stated in its Article 2,

*Also reaffirming* decision 1/CP.16, appendix I, paragraph 1,

*Affirming* that efforts are already being made and actions being taken to reduce emissions from deforestation and forest degradation, and to maintain and enhance forest carbon stocks in developing countries,

*Recognizing* the importance of effective and continuing support for the activities referred to in decision 1/CP.16, paragraphs 73 and 76,

*Also recognizing* that policy approaches and positive incentives for mitigation actions in the forest sector, as referred to in decision 1/CP.16, paragraph 70, can promote poverty alleviation and biodiversity benefits, ecosystem resilience and the linkages between adaptation and mitigation, and should promote and support the safeguards referred to in decision 1/CP.16, appendix I, paragraph 2(c–e),

*Being aware of* the relevance of the work being undertaken by relevant international conventions and agreements,

63. *Agrees* that, regardless of the source or type of financing, the activities referred to in decision 1/CP.16, paragraph 70, should be consistent with the relevant provisions included in decision 1/CP.16, including the safeguards in its appendix I, in accordance with relevant decisions of the Conference of the Parties;

64. *Recalls* that for developing country Parties undertaking the results-based actions<sup>1</sup> referred to in decision 1/CP.16, paragraphs 73 and 77, to obtain and receive results-based finance, these actions should be fully measured, reported and verified,<sup>2</sup> and developing country Parties should have the elements referred to in decision 1/CP.16, paragraph 71, in accordance with any decisions taken by the Conference of the Parties on this matter;

65. *Agrees* that results-based finance provided to developing country Parties that is new, additional and predictable may come from a wide variety of sources, public and private, bilateral and multilateral, including alternative sources;

66. *Considers* that, in the light of the experience gained from current and future demonstration activities, appropriate market-based approaches could be developed by the Conference of the Parties to support the results-based actions by developing country Parties referred to in decision 1/CP.16, paragraph 73, ensuring that environmental integrity is preserved, that the provisions of decision 1/CP.16, appendices I and II, are fully respected, and should be consistent with the relevant provisions of decisions 1/CP.16 and 12/CP.17 and any future decision by the Conference of the Parties on these matters;

67. *Notes* that non-market-based approaches, such as joint mitigation and adaptation approaches for the integral and sustainable management of forests as a non-market alternative that supports and strengthens governance, the application of safeguards as referred to in decision 1/CP.16, appendix I, paragraph 2(c–e), and the multiple functions of forests, could be developed;

68. *Encourages* the operating entities of the financial mechanism of the Convention to provide results-based finance for the actions referred to in decision 1/CP.16, paragraph 73;

69. *Invites* Parties and admitted observer organizations to submit to the secretariat, by 5 March 2012, their views on modalities and procedures for financing results-based actions and considering activities related to decision 1/CP.16, paragraphs 68–70 and 72;

70. *Requests* the secretariat to compile the submissions by Parties into a miscellaneous document for consideration by the Ad Hoc Working Group on Long-term Cooperative Action under the Convention at its session to be held in conjunction with the thirty-sixth session of the Subsidiary Body for Scientific and Technological Advice;

71. *Also requests* the secretariat to prepare, subject to the availability of supplementary resources, a technical paper, based on submissions by Parties and admitted observer

<sup>1</sup> In accordance with decision 1/CP.16, appendix II.

<sup>2</sup> As agreed by the Conference of the Parties.

organizations on the issues referred to in paragraphs 69 and 70 above, as an input for the workshop referred to in paragraph 72 below;

72. *Further requests* the secretariat to organize, subject to the availability of supplementary resources, a workshop taking into account the submissions by Parties and admitted observer organizations referred to in paragraph 69 above, the technical paper referred to in paragraph 71 above, and the conclusions on this matter by the Ad Hoc Working Group on Long-term Cooperative Action under the Convention at its session to be held in conjunction with the thirty-sixth session of the Subsidiary Body for Scientific and Technological Advice, before the session of the Ad Hoc Working Group on Long-term Cooperative Action under the Convention to be held in conjunction with the eighteenth session of the Conference of the Parties;

73. *Requests* the Ad Hoc Working Group on Long-term Cooperative Action under the Convention to consider the submissions by Parties and admitted observer organizations referred to in paragraph 69 above, the technical paper referred to in paragraph 71 above and the report on the outcomes of the workshop referred to in paragraph 72 above with the aim of reporting on progress made and any recommendations to the Conference of the Parties at its eighteenth session.

#### **D. Cooperative sectoral approaches and sector-specific actions, in order to enhance the implementation of Article 4, paragraph 1(c), of the Convention**

##### **General framework**

74. *Agrees* to continue its consideration of a general framework for cooperative sectoral approaches and sector-specific actions with a view to adopting a decision on this matter at its eighteenth session, as appropriate;

##### **Agriculture**

75. *Requests* the Subsidiary Body for Scientific and Technological Advice to consider issues related to agriculture at its thirty-sixth session, with the aim of exchanging views and the Conference of the Parties adopting a decision on this matter at its eighteenth session;

76. *Invites* Parties and admitted observer organizations to submit to the secretariat, by 5 March 2012, their views on the issues referred to in paragraph 75 above;

77. *Requests* the secretariat to compile the submissions referred to in paragraph 76 above by Parties into a miscellaneous document for consideration by the Subsidiary Body for Scientific and Technological Advice at its thirty-sixth session;

##### **International aviation and maritime transport**

78. *Agrees* to continue its consideration of issues related to addressing emissions from international aviation and maritime transport;

#### **E. Various approaches, including opportunities for using markets, to enhance the cost-effectiveness of, and to promote, mitigation actions, bearing in mind different circumstances of developed and developing countries**

*Recalling* decisions 1/CP.13 and 1/CP.16,

*Also recalling* Article 1, paragraph 1, Article 3, paragraph 1, and Article 4, paragraphs 1, 2(a), 3, 7, 8 and 10, of the Convention,

*Affirming* the need to maintain consistency with the principles and commitments of the Convention, particularly that Parties should protect the climate system in accordance with their common but differentiated responsibilities and respective capabilities,

*Undertaking* to maintain and build upon the existing flexibility mechanisms established under the Kyoto Protocol,

*Recognizing* the role of public sources of finance in the implementation of mitigation activities,

*Acknowledging* the role of various approaches, including opportunities for using markets, to enhance the cost-effectiveness of, and to promote, mitigation actions, bearing in mind different circumstances of developed and developing countries,

*Noting* that Parties may, individually or jointly, develop and implement such approaches in accordance with their national circumstances,

79. *Emphasizes* that various approaches, including opportunities for using markets, to enhance the cost-effectiveness of, and to promote, mitigation actions, bearing in mind different circumstances of developed and developing countries, must meet standards that deliver real, permanent, additional and verified mitigation outcomes, avoid double counting of effort, and achieve a net decrease and/or avoidance of greenhouse gas emissions;

80. *Requests* the Ad Hoc Working Group on Long-term Cooperative Action under the Convention to conduct a work programme to consider a framework for such approaches, with a view to recommending a decision to the Conference of the Parties at its eighteenth session;

81. *Invites* Parties and admitted observer organizations to submit to the secretariat, by 5 March 2012, their views on the matters referred to in paragraphs 79 and 80 above, including their experiences, positive and negative, with existing approaches and mechanisms as well as lessons learned;

82. *Requests* the Ad Hoc Working Group on Long-term Cooperative Action under the Convention to conduct one or more workshops with Parties, experts and other stakeholders, including an in-session workshop at its session to be held in conjunction with the thirty-sixth sessions of the subsidiary bodies, to consider the submissions referred to in paragraph 81 above and to discuss the matters referred to in paragraphs 79 and 80 above;

83. *Defines* a new market-based mechanism, operating under the guidance and authority of the Conference of the Parties, to enhance the cost-effectiveness of, and to promote, mitigation actions, bearing in mind different circumstances of developed and developing countries, which is guided by decision 1/CP.16, paragraph 80, and which, subject to conditions to be elaborated, may assist developed countries to meet part of their mitigation targets or commitments under the Convention;

84. *Requests* the Ad Hoc Working Group on Long-term Cooperative Action under the Convention to conduct a work programme to elaborate modalities and procedures for the mechanism referred to in paragraph 83 above, with a view to recommending a decision to the Conference of the Parties at its eighteenth session;

85. *Invites* Parties and admitted observer organizations to submit to the secretariat, by 5 March 2012, their views on the matters referred to in paragraphs 83 and 84 above, including their experiences, positive and negative, with existing approaches and mechanisms as well as lessons learned;

86. *Requests* the Ad Hoc Working Group on Long-term Cooperative Action under the Convention to conduct one or more workshops with Parties, experts and other stakeholders, including an in-session workshop at its session to be held in conjunction with the thirty-sixth sessions of the subsidiary bodies, to consider the submissions referred to in paragraph 85 above and to discuss the matters referred to in paragraphs 83 and 84 above;

## **F. Economic and social consequences of response measures**

*Recalling* the ultimate objective of the Convention,

*Also recalling* and *reaffirming* decisions 1/CP.13 and 1/CP.16,

*Also reaffirming* the importance of the objective of the Convention, and the relevant principles and provisions of the Convention related to the economic and social consequences of response measures, in particular its Articles 2, 3 and 4,

*Affirming* that there is a need to give full consideration to what actions are necessary, including actions related to funding, insurance and the transfer of technology, to meet the specific needs and concerns of developing country Parties arising from the impact of the implementation of response measures,

*Acknowledging* that response measures to combat climate change may have negative environmental, social and economic consequences, and that all developing countries face economic and social consequences of response measures to climate change,

*Reaffirming* the principle of sovereignty of States in international cooperation to address climate change,

*Noting* that policies and measures to address climate change should be supportive of the economic and social development of developing country Parties,

*Reaffirming* that developed country Parties should take the lead in combating climate change and the adverse effects thereof,

*Also reaffirming* that developed country Parties are urged to strive to implement policies and measures to respond to climate change in such a way as to avoid negative social and economic consequences for developing country Parties, taking into account Article 3 of the Convention, and to assist these Parties to address such consequences by providing support, including financial resources, transfer of technology and capacity-building, in accordance with Article 4 of the Convention, to build up the resilience of societies and economies negatively affected by response measures,

87. *Recognizes* that social and economic development and poverty eradication are the first and overriding priorities of developing countries;

88. *Urges* Parties in implementing their policies and measures to promote a just transition of the workforce and the creation of decent work and quality jobs in accordance with nationally defined development priorities and strategies;

89. *Also urges* developed country Parties to assist developing country Parties to promote economic diversification in the context of sustainable development, especially for those listed in Article 4, paragraphs 8 and 9, of the Convention;

90. *Further urges* Parties to give full consideration to the positive and negative impacts of the implementation of response measures to mitigate climate change on society and on all vulnerable groups, in particular women and children;

91. *Recognizes* decision 8/CP.17 that establishes the Forum to Implement the Work Programme on the Impact of the Implementation of Response Measures, and consolidates all progressive discussions related to response measures under the Convention.

### III. Enhanced action on adaptation

*Recalling* the relevant provisions of the Convention,

*Also recalling* decision 1/CP.16, which established the Cancun Adaptation Framework and the Adaptation Committee,

92. *Affirms* that the Adaptation Committee shall be the overall advisory body to the Conference of the Parties on adaptation to the adverse effects of climate change;

93. *Also affirms* that the Adaptation Committee was established to promote the implementation of enhanced action on adaptation in a coherent manner under the Convention, as provided for by the Cancun Adaptation Framework, inter alia through the following functions:

(a) Providing technical support and guidance to the Parties, respecting the country-driven approach, with a view to facilitating the implementation of adaptation activities, including those listed in decision 1/CP.16, paragraphs 14 and 15, where appropriate;

(b) Strengthening, consolidating and enhancing the sharing of relevant information, knowledge, experience and good practices, at the local, national, regional and international levels, taking into account, as appropriate, traditional knowledge and practices;

(c) Promoting synergy and strengthening engagement with national, regional and international organizations, centres and networks, in order to enhance the implementation of adaptation actions, in particular in developing country Parties;

(d) Providing information and recommendations, drawing on adaptation good practices, for consideration by the Conference of the Parties when providing guidance on means to incentivize the implementation of adaptation actions, including finance, technology and capacity-building, and other ways to enable climate-resilient development and reduce vulnerability, including to the operating entities of the financial mechanism of the Convention, as appropriate;

(e) Considering information communicated by Parties on their monitoring and review of adaptation actions, support provided and received, possible needs and gaps and other relevant information, including information communicated under the Convention, with a view to recommending what further actions may be required, as appropriate;

94. *Decides* that the Adaptation Committee should make use of the following modalities in exercising its functions:

(a) Workshops and meetings;

(b) Expert groups;

(c) Compilation, review, synthesis, analysis reports of information, knowledge, experience and good practice;

(d) Channels for sharing information, knowledge and expertise;

(e) Coordination and linkages with all relevant bodies, programmes, institutions and networks, within and outside the Convention;

95. *Also decides* that the Adaptation Committee shall operate under the authority of, and be accountable to, the Conference of the Parties, which should decide on its policies in line with relevant decisions;
96. *Requests* the Adaptation Committee to report annually to the Conference of the Parties, through the subsidiary bodies, including on its activities, the performance of its functions, guidance, recommendations and other relevant information arising from its work, and, as appropriate, on further action that may be required under the Convention, for consideration by the Conference of the Parties;
97. *Also requests* the Adaptation Committee during its first year to develop a three-year plan for its work, which should include milestones, activities, deliverables and resource requirements, in accordance with its agreed functions, employing the modalities listed in paragraph 94 above, considering the indicative list of activities included in annex V, for approval by the Conference of the Parties at its eighteenth session;
98. *Further requests* the Adaptation Committee, in addition to developing its workplan, to initiate some of the activities contained in annex V during its first year;
99. *Requests* the Adaptation Committee to engage and develop linkages through the Conference of the Parties with all adaptation-related work programmes, bodies and institutions under the Convention, including the Least Developed Countries Expert Group, the Consultative Group of Experts on National Communications from Parties not included in Annex I to the Convention, the Technology Executive Committee, the Nairobi work programme on impacts, vulnerability and adaptation to climate change, the work programme on loss and damage and the operating entities of the financial mechanism of the Convention, as appropriate;
100. *Also requests* the Adaptation Committee to engage with, and draw on the expertise of, relevant institutions, organizations, frameworks, networks and centres outside of the Convention, including those at the intergovernmental, regional, national and, through them, subnational levels, where appropriate;
101. *Decides* that the Adaptation Committee shall comprise 16 members, who shall serve in their personal capacity, and will be nominated by Parties in their respective groups or constituencies and elected by the Conference of the Parties, with the aim of achieving a fair, equitable and balanced representation as follows:
- (a) Two members from each of the five United Nations regional groups;
  - (b) One member from a small island developing State;
  - (c) One member from a least developed country Party;
  - (d) Two members from Annex I Parties;
  - (e) Two members from non-Annex I Parties;
102. *Urges* regional groups in making their nominations to consider the special needs and concerns of particularly vulnerable developing countries;
103. *Encourages* Parties to nominate experts to the Adaptation Committee with a diversity of experience and knowledge relevant to adaptation to climate change, while also taking into account the need to achieve gender balance in accordance with decision 36/CP.7;
104. *Agrees* that the chairs of the Least Developed Countries Expert Group, the Technology Executive Committee and the Consultative Group of Experts on National Communications from Parties not included in Annex I to the Convention could be invited to attend meetings of the Adaptation Committee, as appropriate;

105. *Also agrees* that the Adaptation Committee should seek input from intergovernmental, international, regional, national and subnational organizations, centres and networks, the private sector and civil society, in undertaking its work, and to invite advisers drawn from them to participate in its meetings as expert advisers on specific issues as they arise;

106. *Decides* that members shall serve for a term of two years and shall be eligible to serve a maximum of two consecutive terms of office, and that the following rules shall apply:

(a) Half of the members shall be elected initially for a term of three years and half of the members shall be elected for a term of two years;

(b) Thereafter, the Conference of the Parties shall elect members for a term of two years;

(c) The members shall remain in office until their successors have been elected;

107. *Also decides* that if a member of the Adaptation Committee resigns or is otherwise unable to complete the assigned term of office or to perform the functions of that office, the Adaptation Committee may decide, bearing in mind the proximity of the next session of the Conference of the Parties, to appoint another member from the same group or constituency to replace said member for the remainder of that member's mandate, in which case the appointment shall count as one term;

108. *Further decides* that the Adaptation Committee shall elect annually a chair and a vice-chair from among its members to serve for a term of one year each, with one being a member from an Annex I Party and the other being a member from a non-Annex I Party, and that the positions of chair and vice-chair shall alternate annually between a member from an Annex I Party and a member from a non-Annex I Party;

109. *Decides* that if the chair is temporarily unable to fulfil the obligations of the office, the vice-chair shall serve as the chair. In the absence of the chair and the vice-chair at a particular meeting, any other member designated by the Adaptation Committee shall temporarily serve as the chair of that meeting;

110. *Also decides* that if the chair or the vice-chair is unable to complete the term of office, the Adaptation Committee shall elect a replacement to complete that term of office;

111. *Further decides* that decisions of the Adaptation Committee shall be taken by consensus;

112. *Decides* that the Adaptation Committee shall meet at least twice a year, where possible in conjunction with other adaptation-related UNFCCC meetings, while retaining its flexibility to adjust the number of meetings to suit its needs;

113. *Encourages* the Adaptation Committee to establish subcommittees, panels, thematic advisory groups or task-focused ad hoc working groups, if required, to provide, inter alia, expert advice in different sectors and areas, in order to assist the Adaptation Committee in performing its functions and achieving its objectives;

114. *Decides* that the meetings of the Adaptation Committee shall be open to attendance by admitted observer organizations, except where otherwise decided by the Adaptation Committee, with a view to encouraging a balanced representation of observers from Annex I Parties and from non-Annex I Parties;

115. *Also decides* that the Adaptation Committee shall convene its first meeting soon after the seventeenth session of the Conference of the Parties;

116. *Further decides* that English shall be the working language of the Adaptation Committee;

117. *Decides* that outputs of the Adaptation Committee shall be made publicly available on the UNFCCC website;

118. *Also decides* that the secretariat shall support and facilitate the work of the Adaptation Committee, subject to the availability of resources;

119. *Further decides* to review the progress and performance of the Adaptation Committee at its twenty-second session, with a view to adopting an appropriate decision on the outcome of this review;

## IV. Finance

### Standing Committee

*Recalling* Articles 4 and 11 of the Convention,

*Having established* the Standing Committee under the Conference of the Parties as provided for in decision 1/CP.16, paragraph 112,

120. *Decides* that the Standing Committee shall report and make recommendations to the Conference of the Parties, for its consideration, at each ordinary session of the Conference of the Parties on all aspects of its work;

121. *Also decides* that the Standing Committee shall assist the Conference of the Parties in exercising its functions with respect to the financial mechanism of the Convention in terms of improving coherence and coordination in the delivery of climate change financing, rationalization of the financial mechanism, mobilization of financial resources, and measurement, reporting and verification of the support provided to developing country Parties through activities, such as the following:

(a) Organizing a forum for the communication and continued exchange of information among bodies and entities dealing with climate change finance in order to promote linkages and coherence;

(b) Maintaining linkages with the Subsidiary Body for Implementation and the thematic bodies of the Convention;

(c) Providing to the Conference of the Parties draft guidance for the operating entities of the financial mechanism of the Convention, with a view to improving the consistency and practicality of such guidance, taking into account the annual reports of the operating entities as well as submissions from Parties;

(d) Making recommendations on how to improve the coherence, effectiveness and efficiency of the operating entities of the financial mechanism;

(e) Providing expert input, including through independent reviews and assessments, into the preparation and conduct of the periodic reviews of the financial mechanism by the Conference of the Parties;

(f) Preparing a biennial assessment, overview of climate finance flows, to include information on the geographical and thematic balance of such flows, drawing on available sources of information, including national communications and biennial reports of both developed and developing country Parties, information provided in the registry, information provided by Parties on assessments of their needs, reports prepared by the operating entities of the financial mechanism, and information available from other entities providing climate change finance;

122. *Further decides* that the Standing Committee shall perform any other functions that may be assigned to it by the Conference of the Parties;
123. *Requests* the Standing Committee to develop a work programme based on the activities outlined in paragraph 121 above for presentation to the Conference of the Parties at its eighteenth session;
124. *Decides* that the cost of meetings and the participation of members from developing country Parties will be included in the consideration of the core budget of the secretariat;
125. *Also decides* to adopt the composition and working modalities of the Standing Committee as contained in annex VI;

### **Long-term finance**

*Recalling* Articles 4 and 11 of the Convention,

*Also recalling* decision 1/CP.13, paragraph 1(e),

*Further recalling* decision 1/CP.16, paragraphs 18 and 97–101,

*Welcoming* the fast-start finance provided by developed countries as part of their collective commitment to provide new and additional resources approaching USD 30 billion for the period 2010–2012,

*Recalling* that developed country Parties commit, in the context of meaningful mitigation actions and transparency on implementation, to a goal of mobilizing jointly USD 100 billion per year by 2020 to address the needs of developing countries,

126. *Affirms* the importance of continuing to provide ongoing support beyond 2012;
127. *Decides* to undertake a work programme on long-term finance in 2012, including workshops, to progress on long-term finance in the context of decision 1/CP.16, paragraphs 97-101;
128. *Invites* the President of the Conference of the Parties to appoint two co-chairs, one from a developing country Party and one from a developed country Party, for the work programme mentioned in paragraph 127 above;
129. *Requests* the secretariat, to assist the co-chairs in supporting the workshops mentioned in paragraph 127 above;
130. *Decides* that the aim of the work programme referred to in paragraph 127 above is to contribute to the on-going efforts to scale up the mobilization of climate change finance after 2012; the work programme will analyse options for the mobilization of resources from a wide variety of sources, public and private, bilateral and multilateral, including alternative sources and relevant analytical work on the climate-related financing needs of developing countries; the analysis will draw upon relevant reports including that of the High-level Advisory Group on Climate Financing and the report on mobilizing climate finance for the Group of Twenty and the assessment criteria in the reports, and will also take into account lessons learned from fast-start finance;
131. *Requests* the co-chairs, supported by the secretariat, to prepare a report on the workshops referred to in paragraph 127 above for consideration by the Conference of the Parties at its eighteenth session;
132. *Notes* the information provided by developed country Parties on the fast-start finance they have provided and urges them to continue to enhance the transparency of their reporting on the fulfilment of their fast-start finance commitments;

## V. Technology development and transfer

### Arrangements to make the Technology Mechanism fully operational in 2012

*Recalling* the commitments under the Convention, in particular Article 4, paragraphs 1, 3, 5, 7, 8 and 9,

*Also recalling* decision 1/CP.13, paragraph 1(d), to enhance action on technology development and transfer to support action on mitigation and adaptation,

*Reaffirming* that the objective of enhanced action on technology development and transfer is to support action on mitigation and adaptation in order to achieve the full implementation of the Convention and that, in pursuit of this objective, the identification of technology needs will be based on a country-driven approach and national circumstances and priorities,

*Underlining* the importance of nationally determined technology needs, based on national circumstances and priorities, the setting of appropriate enabling environments to scale up the development and transfer of technologies in developing countries and the need to accelerate action at different stages of the technology cycle,

*Noting* the establishment of a Technology Executive Committee, and a Climate Technology Centre and Network in decision 1 CP/16, and their respective functions,

*Recalling* decision 1/CP.16, paragraph 128, on the work programme for the Ad Hoc Working Group on Long-term Cooperative Action under the Convention on technology development and transfer with a view to the Conference of the Parties taking a decision on, inter alia, a call for proposals to host the Climate Technology Centre and Network and the criteria to be used to evaluate and select a host of the Climate Technology Centre and Network at its seventeenth session in order to make the Technology Mechanism fully operational in 2012,

*Stressing* the importance of making its two components, the Technology Executive Committee and the Climate Technology Centre and Network, fully operational as soon as possible in 2012 in order to promote and enhance the research, development, deployment and diffusion of environmentally sound technologies in support of action on mitigation and adaptation in developing countries, in order to achieve the ultimate objective of the Convention,

*Recalling* that the Climate Technology Centre and Network and the Technology Executive Committee shall relate so as to promote coherence and synergy,

*Reaffirming* that both components of the Technology Mechanism shall facilitate the implementation of the objective set out in decision 1/CP.16, paragraph 113, in line with their respective functions agreed in decision 1/CP.16 and consistent with the mandate of the Technology Executive Committee in decision 1/CP.16, appendix IV, and the terms of reference of the Climate Technology Centre and Network contained in annex VII,

*Recalling* the need to further pursue the implementation of the Technology Mechanism and its two components with a view to making the Technology Mechanism fully operational as early as possible in 2012,

133. *Adopts* the terms of reference of the Climate Technology Centre and Network as contained in annex VII;

134. *Decides* that the Climate Technology Centre and Network shall begin its activities with an achievable scope of work so as to meet the needs of developing countries and be

flexible so that it can learn, adapt and adjust its scope and reach over time in response to the technology needs of developing countries and the demands of the emerging international climate change regime;

135. *Requests* the Climate Technology Centre and Network, once it is operational, to elaborate its modalities and procedures based on the terms of reference of the Climate Technology Centre and Network contained in annex VII and decision 1/CP.16, paragraph 123, and taking into account decision 1/CP.16, paragraph 120, and to report to the Conference of the Parties, through the subsidiary bodies at their thirty-eighth sessions, with a view to making a decision on this matter at the nineteenth session of the Conference of the Parties, including, *inter alia*, consideration of the following roles of the Climate Technology Centre and Network:

- (a) Identifying currently available climate-friendly technologies for mitigation and adaptation that meet their key low-carbon and climate-resilient development needs;
- (b) Facilitating the preparation of project proposals for the deployment, utilization and financing of existing technologies for mitigation and adaptation;
- (c) Facilitating adaptation and the deployment of currently available technologies to meet local needs and circumstances;
- (d) Facilitating research, development and demonstration of new climate-friendly technologies for mitigation and adaptation, which are required to meet the key objectives of sustainable development;
- (e) Enhancing national and regional human and institutional capacity to manage the technology cycle, and to support the challenges for activities listed in paragraphs 135 (a–d) above;
- (f) Helping to facilitate the financing of the activities listed in paragraphs 135 (a–e) above, through various sources in accordance with paragraph 139 below;

136. *Decides* that the selection process for the host of the Climate Technology Centre shall be launched upon the conclusion of the seventeenth session of the Conference of the Parties and shall be conducted in an open, transparent, fair and neutral manner in accordance with the process outlined in this decision, and informed by United Nations practices, in order to make the Technology Mechanism become fully operational in 2012;

137. *Requests* the secretariat:

- (a) To prepare and issue the call for proposals in accordance with this decision by 16 January 2012, including the preparation of the sample requests as referred to in annex VIII, paragraph 8(c), and invite interested organizations, including consortia of organizations, to submit their proposals in response to the call for proposals by 16 March 2012;
- (b) To provide responses to inquiries from interested organizations in consultation with the evaluation panel referred to in paragraph 137(d) below, as appropriate;
- (c) To compile the executive summaries contained in the submitted proposals and make them available simultaneously on the UNFCCC website;
- (d) To convene an evaluation panel, consisting of three members from Annex I Parties and three from non-Annex I Parties as nominated by the Technology Executive Committee from within its membership, by the end of February 2012:
  - (i) To conduct an assessment of the proposals received based on the methodology described in the criteria to be used to evaluate and select the host of the Climate Technology Centre contained in annex VIII, paragraph 9;

(ii) To prepare an evaluation report with a shortlist ranking up to five proponents, including information on how the criteria for the evaluation have been applied, and make it available for consideration by the Subsidiary Body for Implementation at its thirty-sixth session;

(e) To discuss the key elements of the potential host agreement with the top-ranked proponent, and, if needed, with the second-ranked and third-ranked proponents as agreed by the Subsidiary Body for Implementation at its thirty-sixth session and referred to in paragraph 138(a) below;

(f) To report the outcome of its discussion on the key elements of the potential host agreement to the Subsidiary Body for Implementation at its thirty-seventh session for its consideration, with a view to recommending it for consideration and approval by the Conference of the Parties at its eighteenth session;

138. *Requests* the Subsidiary Body for Implementation:

(a) To agree on, at its thirty-sixth session, a ranked list of up to three proponents based on the outcome of the assessment conducted by the evaluation panel referred to in paragraph 137(d)(i) above;

(b) To recommend the host of the Climate Technology Centre and Network to the Conference of the Parties for approval at its eighteenth session;

(c) To consider, at its thirty-sixth session, the constitution of the advisory board referred to in annex VII, paragraph 7, with a view to making a recommendation to the Conference of the Parties for consideration and adoption at its eighteenth session;

139. *Decides* that the costs associated with the Climate Technology Centre and the mobilization of the services of the Network should be funded from various sources, including the financial mechanism of the Convention, bilateral, multilateral and private-sector channels, philanthropic sources as well as financial and in-kind contributions from the host organization and participants in the Network;

140. *Requests* the Global Environment Facility to support the operationalization and activities of the Climate Technology Centre and Network without prejudging any selection of the host;

141. *Invites* Parties in a position to do so to support the Climate Technology Centre and Network through the provision of financial and other resources;

142. *Requests* the Technology Executive Committee and the Climate Technology Centre to establish procedures for preparing a joint annual report;

143. *Also requests* the secretariat to make available the joint annual report referred to in paragraph 142 above for consideration by the Conference of the Parties through its subsidiary bodies;

## VI. Capacity-building

*Recalling* decisions 2/CP.7, 2/CP.10, 4/CP.12 and 1/CP.16,

*Also recalling* decision 1/CP.16, paragraphs 136 and 137, which request the consideration of ways to further enhance the monitoring and review of the effectiveness of capacity-building, and to further elaborate the modalities regarding institutional arrangements for capacity-building, for consideration by the Conference of the Parties at its seventeenth session,

*Reaffirming* that capacity-building is essential in enabling developing country Parties to participate fully in addressing the challenges of climate change, and to implement effectively their commitments under the Convention,

*Also reaffirming* that capacity-building should be a continuous, progressive and iterative process that is participatory, country-driven and consistent with national priorities and circumstances,

*Further reaffirming* the importance of taking into account gender aspects and acknowledging the role and needs of youth and persons with disabilities in capacity-building activities,

*Acknowledging* that capacity-building is cross-cutting in nature and an integral part of enhanced action on mitigation, adaptation, technology development and transfer, and access to financial resources,

*Noting with appreciation* the progress made across the bodies established under the Convention and the operating entities of the financial mechanism, including those agreed to in decision 1/CP.16, in integrating capacity-building into enhanced action on mitigation, adaptation, technology development and transfer, and access to financial resources,

*Also noting* decision 1/CP.16, paragraph 65, which encourages Parties to develop low-carbon development strategies or plans in the context of sustainable development, welcoming those Parties that have already begun the process of developing these strategies, and noting the important capacity-building outcomes that this process and related partnerships can provide,

*Further noting* that, while progress has been made, gaps still remain in addressing the priority issues identified in the framework for capacity-building in developing countries as contained in decision 2/CP.7,

144. *Requests* the Subsidiary Body for Implementation to further enhance the monitoring and review of the effectiveness of capacity-building by organizing an annual in-session Durban Forum for in-depth discussion on capacity-building with the participation of Parties, representatives of the relevant bodies established under the Convention, and relevant experts and practitioners, with a view to sharing their experiences and exchanging ideas, best practices and lessons learned regarding the implementation of capacity-building activities;

145. *Decides* that the Durban Forum should include as inputs, inter alia, any capacity-building elements contained in the reports prepared since the most recent session of the Durban Forum by the relevant bodies established under the Convention;

146. *Requests* the secretariat to compile and synthesize the reports prepared since the most recent session of the Durban Forum by the relevant bodies established under the Convention;

147. *Also requests* the secretariat to prepare a summary report on the Durban Forum for consideration by the Subsidiary Body for Implementation;

148. *Encourages* Parties to continue to provide information through the appropriate channels, including national communications, on the progress made in enhancing the capacity to address climate change;

149. *Invites* developing country Parties to report on progress made and measures taken in implementing and improving their enabling environments to build national capacity for mitigation and adaptation, and to include the needs relevant to enhancing the progress made on such measures in their communications on capacity-building priorities;

150. *Requests* the secretariat to continue to compile and synthesize the information provided by Annex I Parties and to summarize the information provided by non-Annex I Parties in their national communications and submissions, and to compile and synthesize information on capacity-building activities, including lessons learned, provided by the relevant bodies established under the Convention and by international and regional organizations;

151. *Also requests* the Subsidiary Body for Implementation, in its consideration of the third and subsequent comprehensive reviews of the implementation of the framework for capacity-building in developing countries, to include the reports of relevant bodies established under the Convention, as well as the summary reports on the Durban Forum referred to in paragraph 147 above, as additional inputs to these reviews;

152. *Encourages* the relevant bodies established under the Convention, including, inter alia, the Consultative Group of Experts on National Communications from Parties not included in Annex I to the Convention, the Least Developed Countries Expert Group and the Global Environment Facility as an operating entity of the financial mechanism, to continue to elaborate and carry out work on capacity-building in an integrated manner, as appropriate, within their respective mandates;

153. *Recognizes* that there may be ways to further enhance the monitoring and review of the effectiveness of capacity-building;

154. *Decides* that, in addition to the topics outlined in paragraph 144 above, the first meeting of the Durban Forum, organized during the thirty-sixth session of the Subsidiary Body for Implementation, shall explore potential ways to further enhance monitoring and review of the effectiveness of capacity-building;

155. *Also decides* that the financial resources for enhanced action on capacity-building in developing country Parties should be provided by Parties included in Annex II to the Convention and other Parties in a position to do so through the current and any future operating entities of the financial mechanism, as well as through various bilateral, regional and other multilateral channels, as appropriate;

156. *Requests* that the actions of the secretariat called for in this decision be undertaken subject to the availability of financial resources;

## **VII. Review: further definition of its scope and development of its modalities**

*Recalling* decision 1/CP.16, paragraphs 4 and 138–140,

157. *Reaffirms* that the review should periodically assess the adequacy of the long-term global goal, in the light of the ultimate objective of the Convention, and the overall progress made towards achieving it, in accordance with the relevant principles and provisions of the Convention;

158. *Confirms* that the first review should start in 2013 and should be concluded by 2015, when the Conference of the Parties shall take appropriate action based on the review;

159. *Agrees* that Parties will continue working on the scope of the review and considering its further definition, with a view to taking a decision at the Conference of the Parties at its eighteenth session;

160. *Also agrees* that the review should be guided by the principles of equity and common but differentiated responsibilities and respective capabilities and should take into account, inter alia, the following:

- (a) The best available scientific knowledge, including the assessment reports of the Intergovernmental Panel on Climate Change;
- (b) Observed impacts of climate change;
- (c) An assessment of the overall aggregate effect of the steps taken by Parties in order to achieve the ultimate objective of the Convention;
- (d) Consideration of strengthening the long-term global goal, referencing various matters presented by the science, including in relation to temperature rise of 1.5 degrees Celsius;

161. *Further agrees* that the review should be based on information from various sources, including the following:

- (a) The assessment and special reports and technical papers of the Intergovernmental Panel on Climate Change;
- (b) Submissions from Parties, national communications, first biennial update reports from developing country Parties and biennial reports from developed country Parties, national inventories, reports on international consultation and analysis, international analysis and review, and other relevant reports from Parties and processes under the Convention;
- (c) Other relevant reports from United Nations agencies and other international organizations, including reports on emission projections, technology development, access, transfer and deployment, and reports on gross domestic product, including projections;
- (d) Scientific information on the observed impacts of climate change, including that from reports coordinated by relevant regional and subregional agencies;

162. *Decides* that the review referred to in decision 1/CP.16, paragraphs 4 and 138, will be conducted with the assistance of the Subsidiary Body for Scientific and Technological Advice and the Subsidiary Body for Implementation, and that the work shall be supported by expert consideration of the inputs referred to in paragraph 161 above, inter alia, through workshops and other in-session and intersessional activities, as appropriate;

163. *Agrees* to further define, at its eighteenth session, the expert consideration of inputs referred to in paragraph 162 above, including the possible establishment of a review expert group, to provide technical support to the review;

164. *Decides* that the review should consist of several phases, including information gathering and compilation, technical assessment through the organization of workshops, technical studies and the preparation of synthesis reports;

165. *Requests* the subsidiary bodies to organize workshops, including for the consideration of the information referred to in paragraph 161 above;

166. *Also requests* the subsidiary bodies to report on their considerations and findings to the Conference of the Parties, which should address those considerations and provide any further guidance, as appropriate;

167. *Decides* that subsequent reviews should take place following the adoption of an assessment report of the Intergovernmental Panel on Climate Change or at least every seven years;

## VIII. Other matters

### A. Matters related to Parties included in Annex I to the Convention undergoing the process of transition to a market economy

*Taking into account* that Annex I Parties undergoing the process of transition to a market economy are still lacking the appropriate means, knowledge and experience to develop and perform their national low-carbon development strategies with a view to achieving their quantified economy-wide emission reduction objectives as well as to implement their national action plans on adaptation,

*Recognizing* that the Parties, in spite of the consequences of the severe socio-economic crisis in the early 1990s, have made significant efforts through their targeted policies and measures to fully implement their commitments under the Convention and its Kyoto Protocol,

*Acknowledging* also that these Parties made their initial pledges with regard to green-house gas emission reduction levels to be achieved in the post-2012 period in the context of a comprehensive climate change framework,

168. *Invites* Annex I Parties that are in a position to do so, through multilateral agencies, including through the Global Environment Facility within its mandate, bilateral agencies and the private sector or through any further arrangements, as appropriate, to make available the capacity- building, financial, technical and technology transfer assistance for Annex I Parties undergoing the process of transition to a market economy in order to assist these Parties in the development and implementation of their national low-carbon development strategies and action plans consistent with their national priorities and with their emission reduction targets;

169. *Also invites* multilateral and bilateral agencies to coordinate their activities in support of the implementation of this assistance;

### B. Matters related to Parties included in Annex I to the Convention whose special circumstances are recognized by the Conference of the Parties

*Recalling* decision 26/CP.7 and decision 1/CP.16, which recognized that Turkey is in a situation different from that of other Annex I Parties,

170. *Agrees* to continue with the discussion on modalities for the provision of support for mitigation, adaptation, technology development and transfer, capacity-building and finance to Parties whose special circumstances are recognized by the Conference of the Parties in order to assist these Parties in the implementation of the Convention;

171. *Requests* that the actions of the secretariat called for in paragraphs 1–170 above be undertaken subject to the availability of financial resources.

## Annex I

### UNFCCC biennial reporting guidelines for developed country Parties

#### I. Objectives

1. The objectives of these guidelines for preparing the biennial reports are the following:

(a) To assist Parties included in Annex I to the Convention (Annex I Parties) in meeting their commitments for reporting under Articles 4 and 12 of the Convention enhanced by decision 1/CP.16;

(b) To ensure the provision of consistent, transparent, comparable, accurate and complete information by developed country Parties;

(c) To ensure that the biennial reports include information on the progress made by Annex I Parties in achieving their quantified economy-wide emission reduction targets, projected emissions, and the provision of financial, technological and capacity-building support to Parties not included in Annex I to the Convention (non-Annex I Parties);

(d) To facilitate the international assessment of emissions and removals related to progress towards the achievement of the quantified economy-wide emission reduction targets;<sup>1</sup>

(e) To facilitate reporting by Annex I Parties of information on any economic and social consequences of response measures.

#### II. Information on greenhouse gas emissions and trends

2. Summary information from the national greenhouse gas (GHG) inventory on emissions and emission trends prepared according to the “Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part I: UNFCCC reporting guidelines on annual inventories” (hereinafter referred to as the UNFCCC Annex I inventory reporting guidelines) shall be prepared for the period from 1990 to the latest year in the most recent inventory submission available. The information provided in the biennial report should be consistent with that provided in the most recent annual inventory submission, and any differences should be fully explained.

3. Annex I Parties shall provide summary information on their national inventory arrangements in accordance with the reporting requirements related to national inventory arrangements contained in the UNFCCC Annex I inventory reporting guidelines, and on the changes to these national inventory arrangements since their last national communication or biennial report.

#### III. Quantified economy-wide emission reduction target

4. Each Annex I Party shall describe its quantified economy-wide emission reduction target, including any conditions or assumptions that are relevant to the attainment of that

---

<sup>1</sup> Decision 1/CP.16, paragraph 44.

target, as communicated to the secretariat and contained in document FCCC/SB/2011/INF.1/Rev.1 or any update to that document.

5. The description of the Party's economy-wide emission reduction target shall include the following information, taking into consideration any relevant decisions of the Conference of the Parties (COP):

- (a) Base year;
- (b) Gases and sectors covered;
- (c) Global warming potential values as established by the relevant decisions adopted by the COP;
- (d) Approach to counting emissions and removals from the land use, land-use change and forestry (LULUCF) sector, taking into consideration any relevant decisions adopted by the COP;
- (e) Use of international market-based mechanisms in achieving its emission reduction target, taking into consideration any relevant decisions adopted by the COP, including a description of each source of international units and/or allowances from market-based mechanisms and the possible scale of the contributions of each;
- (f) Any other information, including relevant accounting rules, taking into consideration any relevant decisions of the COP, where appropriate.

#### **IV. Progress in achievement of quantified economy-wide emission reduction targets and relevant information**

##### **A. Mitigation actions and their effects**

6. Each Annex I Party shall provide information on its mitigation actions, including on the policies and measures it has implemented or plans to implement since its last national communication or biennial report to achieve its economy-wide emission reduction target. To the extent appropriate, Parties shall organize the reporting of mitigation actions by sector (energy, industrial processes and product use, agriculture, LULUCF, waste and other sectors) and by gas (carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons and sulphur hexafluoride).

7. Each Annex I Party shall provide information on changes in its domestic institutional arrangements, including institutional, legal, administrative and procedural arrangements used for domestic compliance, monitoring, reporting, archiving of information and evaluation of the progress towards its economy-wide emission reduction target.

8. Each Annex I Party is encouraged to provide, to the extent possible, detailed information on the assessment of the economic and social consequences of response measures.

##### **B. Estimates of emission reductions and removals and the use of units from the market-based mechanisms and land use, land-use change and forestry activities**

9. For the base year, information reported on the emission reduction target shall include the following:

- (a) Total GHG emissions, excluding emissions and removals from the LULUCF sector;
  - (b) Emissions and/or removals from the LULUCF sector based on the accounting approach applied taking into consideration any relevant decisions of the COP and the activities and/or lands that will be accounted for;
  - (c) Total GHG emissions, including emissions and removals from the LULUCF sector;
10. For each reported year, information reported on progress made towards the emission reduction targets shall include, in addition to the information noted in paragraph 9(a–c) above, information on the use of units from market-based mechanisms.

## V. Projections

11. Each Annex I Party shall report the updated projections for 2020 and 2030 consistent with the “Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part II: UNFCCC reporting guidelines on national communications” (hereinafter referred to as the UNFCCC Annex I reporting guidelines on national communications).
12. Each Annex I Party should report on the changes since its most recent national communication in the model or methodologies used for the preparation of projections and should provide supporting documentation.

## VI. Provision of financial, technological and capacity-building support to developing country Parties

13. Parties included in Annex II to the Convention (Annex II Parties) shall provide information on the provision of financial, technological and capacity-building support to non-Annex I Parties consistent with the requirements contained in section VIII of the UNFCCC Annex I reporting guidelines on national communications following common reporting formats,<sup>2</sup> including information to show how this support is new and additional. In reporting such information, Parties should distinguish, to the extent possible, between support provided to non-Annex I Parties for mitigation and adaptation activities, noting the capacity-building elements of such activities, where relevant. For activities with multiple objectives, the funding could be reported as a contribution allocated partially to the other relevant objectives.
14. Each Annex II Party shall provide a description of its national approach for tracking of the provision of financial, technological and capacity-building support to non-Annex I Parties, if appropriate. This description shall also include information on indicators and delivery mechanisms used and allocation channels tracked. If this information was already reported in the national communication, the biennial report should only report changes to this information.
15. In reporting information in accordance with paragraphs 17 and 18 below, Annex II Parties shall use any methodology to be developed under the Convention, taking into account international experience. Annex II Parties shall describe the methodology used in their biennial reports. Annex II Parties shall report in a rigorous, robust and transparent

---

<sup>2</sup> To be developed.

manner the underlying assumptions and methodologies used to produce information on finance.

## A. Finance

16. Each Annex II Party shall describe, to the extent possible, how it seeks to ensure that the resources it provides effectively address the needs of non-Annex I Parties with regard to climate change adaptation and mitigation.

17. Each Annex II Party shall provide information on the financial support it has provided, committed and/or pledged for the purpose of assisting non-Annex I Parties to mitigate GHG emissions and adapt to the adverse effects of climate change and any economic and social consequences of response measures, and for capacity-building and technology transfer in the areas of mitigation and adaptation, where appropriate. To that end, each Annex II Party shall provide summary information in a textual and tabular format on allocation channels and annual contributions for the previous two calendar or financial years without overlapping with the previous reporting periods, including, as appropriate, the following:

- (a) The Global Environment Facility, the Least Developed Countries Fund, the Special Climate Change Fund, the Adaptation Fund, the Green Climate Fund and the Trust Fund for Supplementary Activities;
- (b) Other multilateral climate change funds;
- (c) Multilateral financial institutions, including regional development banks;
- (d) Specialized United Nations bodies;
- (e) Contributions through bilateral, regional and other channels;

18. Each Annex II Party shall provide the summary information, referred to in paragraph 17 above, for the previous two calendar or financial years in a textual and tabular format on the annual financial support that it has provided for the purpose of assisting non-Annex I Parties, including the following:

- (a) The amount of financial resources (including the amount in original currency and its equivalent in United States dollars/international currency);
- (b) The type of support (for mitigation and adaptation activities);
- (c) The source of funding;
- (d) The financial instrument;
- (e) The sector;
- (f) An indication of what new and additional financial resources they have provided pursuant to Article 4, paragraph 3, of the Convention; Parties shall clarify how they have determined that such resources are new and additional;

19. Recognizing that the goal of mobilizing the financial resources referred to in decision 1/CP.16, paragraph 98, includes private financial sources, Annex II Parties should report, to the extent possible, on private financial flows leveraged by bilateral climate finance towards mitigation and adaptation activities in non-Annex I Parties, and should report on policies and measures that promote the scaling up of private investment in mitigation and adaptation activities in developing country Parties.

20. Annex II Parties should specify the types of instruments used in the provision of their assistance, such as grants and concessional loans.

## **B. Technology development and transfer**

21. Each Annex II Party shall provide information on measures taken to promote, facilitate and finance the transfer of, access to and the deployment of climate-friendly technologies for the benefit of non-Annex I Parties, and for the support of the development and enhancement of endogenous capacities and technologies of non-Annex I Parties. Parties may also provide information on success and failure stories.

22. Each Annex II Party shall provide, in textual and tabular formats, information on measures and activities related to technology transfer implemented or planned since its last national communication or biennial report. In reporting such measures and activities, Annex II Parties shall, to the extent possible, provide information on the recipient country, the target area of mitigation or adaptation, the sector involved and the sources of technology transfer from the public or private sectors, and shall distinguish between activities undertaken by the public and private sectors.

## **C. Capacity-building**

23. Each Annex II Party shall provide information, to the extent possible, on how it has provided capacity-building support that responds to the existing and emerging capacity-building needs identified by non-Annex I Parties in the areas of mitigation, adaptation, and technology development and transfer. Information should be reported in a textual and tabular format as a description of individual measures and activities.

## **VII. Other reporting matters**

24. Annex I Parties are encouraged to report, to the extent possible, on the domestic arrangements established for the process of the self-assessment of compliance with emission reductions in comparison with emission reduction commitments or the level of emission reduction that is required by science. Annex I Parties are encouraged to report, to the extent possible, on the progress made in the establishment of national rules for taking local action against domestic non-compliance with emission reduction targets.

25. Annex I Parties are encouraged to report any other information that the Party considers relevant to the achievement of the objective of the Convention and suitable for inclusion in its biennial report.

## **VIII. Reporting**

26. The information identified in these guidelines shall be communicated electronically by Annex I Parties to the secretariat and shall be in one of the official languages of the United Nations. Parties are encouraged to submit an English translation of the biennial report to facilitate its use in the review process.

## **IX. Updating of the guidelines**

27. These guidelines shall be revised, as appropriate, taking into consideration any relevant decisions of the COP.

## Annex II

### Modalities and procedures for international assessment and review

#### I. Objectives of the international assessment and review process

1. The overall objectives of the international assessment and review (IAR) process are to review the progress made in achieving emission reductions and assess the provision of financial, technological, and capacity-building support to developing country Parties, and to assess emissions and removals related to quantified economy-wide emission reduction targets under the Subsidiary Body for Implementation (SBI), taking into account national circumstances, in a rigorous, robust and transparent manner, with a view to promoting comparability and building confidence.
2. In addition, the IAR process aims at assessing the implementation of methodological and reporting requirements.

#### II. Process and scope

##### A. Process

3. The IAR process will be conducted in the following steps:
  - (a) A technical review of biennial reports, where relevant in conjunction with the annual greenhouse gas (GHG) inventories, and national communications of developed country Parties, which will result in an individual review report for each developed country Party;
  - (b) A multilateral assessment of developed country Parties' progress in implementation towards the achievement of emission reductions and removals related to their quantified economy-wide emission reduction targets.

##### B. Scope

4. Building upon relevant elements of the existing review process under the Convention, for each developed country Party, the following will be reviewed:
  - (a) All emissions and removals related to its quantified economy-wide emission reduction target;
  - (b) Assumptions, conditions and methodologies related to the attainment of its quantified economy-wide emission reduction target;
  - (c) Progress towards the achievement of its quantified economy-wide emission reduction target;
  - (d) Its provision of financial, technological and capacity-building support to developing country Parties;
5. For each developed country Party the following elements will be multilaterally assessed:

- (a) All emissions and removals related to its quantified economy-wide emission reduction target;
- (b) Assumptions, conditions and methodologies related to the attainment of its quantified economy-wide emission reduction target;
- (c) Progress towards the achievement of its quantified economy-wide emission reduction target.

### III. Technical review

6. Each developed country Party's biennial report will be reviewed, where relevant in conjunction with the annual GHG inventory and national communication review processes, as follows:

- (a) The technical review will be conducted in accordance with existing and revised guidelines and procedures under the Convention;
- (b) The technical expert review will examine the consistency of the annual GHG inventory with the biennial report and national communication but will not include in-depth examination of the inventory itself;
- (c) The Party concerned can respond to the questions or suggestions of the expert review team as well as propose and share any additional information or views;
- (d) In addition to the tasks set forth in decisions 2/CP.1, 9/CP.2, 6/CP.3 and 33/CP.7 and their related annexes, the expert review teams should also review progress in emission reductions and removals related to the quantified economy-wide emission reduction target. Additional experts may be added to the review team where necessary;

7. The output of the technical review will be a technical review report building on existing reporting standards and including an examination of the Party's progress in achieving its economy-wide emission reduction target.

### IV. Multilateral assessment

8. The multilateral assessment will be carried out for each developed country Party on the basis of the following:

- (a) The technical review report referred to in paragraph 7 above and any other relevant review reports of the annual GHG inventory and national communication;
- (b) The biennial report, the national GHG inventory, including the national inventory report, and the national communication;
- (c) Supplementary information on the achievement of the Party's quantified economy-wide emission reduction target, including on the role of land use, land-use change and forestry, and carbon credits from market-based mechanisms;

9. Each developed country Party will be assessed during an SBI session.

10. The multilateral assessment should entail the following:

- (a) Any Party may submit electronically through the secretariat written questions to the Party concerned in advance of the international assessment;
- (b) The Party under assessment should endeavour to respond to those questions, through the secretariat, within two months. The secretariat will compile the questions and answers and publish them on the UNFCCC website;

**FCCC/CP/2011/9/Add.1**

---

(c) During the SBI session, developed country Parties will undergo the assessment with the participation of all Parties. The Party under review may make a brief oral presentation, which will be followed by oral questions by Parties and responses by the Party under review.

11. The outputs of the international assessment for each Party will include the following: a record prepared by the secretariat which includes in-depth review reports, the summary report of the SBI, questions submitted by Parties and responses provided, and any other observations by the Party under review that are submitted within two months of the working group session of the SBI.

12. The SBI will forward conclusions based on the record referred to in paragraph 11 above to relevant bodies under the Convention as appropriate.

## Annex III

### **UNFCCC biennial update reporting guidelines for Parties not included in Annex I to the Convention**

#### **I. Objectives**

1. The objectives of the guidelines for the preparation of the biennial update reports from Parties not included in Annex I to the Convention (non-Annex I Parties) are as follows:

(a) To assist non-Annex I Parties in meeting their reporting requirements under Article 4, paragraph 1(a), and Article 12 of the Convention and decision 1/CP.16;

(b) To encourage the presentation of information in a consistent, transparent, complete, accurate and timely manner, taking into account specific national and domestic circumstances;

(c) To enable enhanced reporting by non-Annex I Parties on mitigation actions and their effects, needs and support received, in accordance with their national circumstances, capacities and respective capabilities, and the availability of support;

(d) To provide policy guidance to an operating entity of the financial mechanism for the timely provision of financial support needed by developing country Parties in order to meet the agreed full costs of preparing their biennial update reports;

(e) To facilitate the presentation of information on finance, technology and capacity-building support needed and received, including for the preparation of biennial update reports;

(f) To facilitate reporting by non-Annex I Parties, to the extent possible, on any economic and social consequences of response measures;

#### **II. Scope**

2. The scope of biennial update reports is to provide an update to the most recently submitted national communication in the following areas:

(a) Information on national circumstances and institutional arrangements relevant to the preparation of the national communications on a continuous basis;

(b) The national inventory of anthropogenic emissions by sources and removal by sinks of all greenhouse gases (GHGs) not controlled by the Montreal Protocol, including a national inventory report;

(c) Information on mitigation actions and their effects, including associated methodologies and assumptions;

(d) Constraints and gaps, and related financial, technical and capacity needs, including a description of support needed and received;

(e) Information on the level of support received to enable the preparation and submission of biennial update reports;

(f) Information on domestic measurement reporting and verification;

(g) Any other information that the non-Annex I Party considers relevant to the achievement of the objective of the Convention and suitable for inclusion in its biennial update report.

### III. National greenhouse gas inventory

3. Non-Annex I Parties should submit updates of national GHG inventories according to paragraphs 8–24 in the “Guidelines for the preparation of national communications from Parties not included in Annex I to the Convention” (hereinafter referred to as the UNFCCC guidelines for the preparation of national communications from non-Annex I Parties) as contained in the annex to decision 17/CP.8. The scope of the updates on national GHG inventories should be consistent with capacities, time constraints, data availabilities and the level of support provided by developed countries Parties for biennial update reporting.

4. Non-Annex I Parties should use the methodologies established by the latest UNFCCC guidelines for the preparation of national communications from non-Annex I Parties approved by the Conference of the Parties (COP) or those determined by any future decision of the COP on this matter.

5. The updates of the sections on the national inventories of anthropogenic emissions by sources and removals by sinks of all GHGs not controlled by the Montreal Protocol should contain updated data on activity levels based on the best information available using the *Revised 1996 IPCC Guidelines for National Greenhouse Gas Inventories* (hereinafter referred to as the Revised 1996 IPCC Guidelines), the *Good Practice Guidance and Uncertainty Management in National Greenhouse Gas Inventories*, and the *Good Practice Guidance for Land Use, Land-Use Change and Forestry* (hereinafter referred to as the IPCC good practice guidance for LULUCF); any change to the emission factor may be made in the subsequent full national communication.

6. Non-Annex I Parties are encouraged to include, as appropriate and to the extent that capacities permit, in the inventory section of the biennial update report, tables included in annex 3A.2 to the IPCC good practice guidance for LULUCF and the sectoral report tables annexed to the Revised 1996 IPCC Guidelines.

7. Each non-Annex I Party is encouraged to provide a consistent time series back to the years reported in the previous national communications.

8. Non-Annex I Parties which have previously reported on their national GHG inventories contained in their national communications are encouraged to submit summary information tables of inventories for previous submission years (e.g. for 1994 and 2000).

9. The inventory section of the biennial update report should consist of a national inventory report as a summary or as an update of the information contained in chapter III (National greenhouse gas inventories) of the annex to decision 17/CP.8, including table 1, on “National greenhouse gas inventory of anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol and greenhouse gas precursors”, and table 2, on “National greenhouse gas inventory of anthropogenic emissions of HFCs, PFCs and SF<sub>6</sub>”.

10. Additional or supporting information, including sector-specific information, may be supplied in a technical annex.

## **IV. Mitigation actions**

11. Non-Annex I Parties should provide information, in a tabular format, on actions to mitigate climate change, by addressing anthropogenic emissions by sources and removals by sinks of all GHGs not controlled by the Montreal Protocol.

12. For each mitigation action or groups of mitigation actions including, as appropriate, those listed in document FCCC/AWGLCA/2011/INF.1, developing country Parties shall provide the following information to the extent possible:

(a) Name and description of the mitigation action, including information on the nature of the action, coverage (i.e. sectors and gases), quantitative goals and progress indicators;

(b) Information on methodologies and assumptions;

(c) Objectives of the action and steps taken or envisaged to achieve that action;

(d) Information on the progress of implementation of the mitigation actions and the underlying steps taken or envisaged, and the results achieved, such as estimated outcomes (metrics depending on type of action) and estimated emission reductions, to the extent possible;

(e) Information on international market mechanisms.

13. Parties should provide information on the description of domestic measurement, reporting and verification arrangements.

## **V. Finance, technology and capacity-building needs and support received**

14. Non-Annex I Parties should provide updated information on constraints and gaps, and related financial, technical and capacity-building needs.

15. Non-Annex I Parties should also provide updated information on financial resources, technology transfer, capacity-building and technical support received from the Global Environment Facility, Parties included in Annex II to the Convention and other developed country Parties, the Green Climate Fund and multilateral institutions for activities relating to climate change, including for the preparation of the current biennial update report.

16. With regard to the development and transfer of technology, non-Annex I Parties should provide information on technology needs, which must be nationally determined, and on technology support received.

## **VI. Submission**

17. The information provided in accordance with these guidelines should be communicated by each non-Annex I Party to the COP, through the secretariat, in a single document, in electronic format.

18. Non-Annex I Parties should submit their biennial update reports in English or any one of the official United Nations languages.

19. Additional or supporting information may be supplied through other documents, such as a technical annex.

## **VII. Updating the guidelines**

20. These guidelines should be reviewed and revised, as appropriate, in accordance with decisions of the COP.

## Annex IV

### Modalities and guidelines for international consultation and analysis

#### I. Objectives

1. International consultation and analysis (ICA) of biennial update reports under the Subsidiary Body for Implementation (SBI) will be conducted in a manner that is non-intrusive, non-punitive and respectful of national sovereignty; ICA will aim to increase the transparency of mitigation actions and their effects, through analysis by technical experts in consultation with the Party concerned and through a facilitative sharing of views, and will result in a summary report.
2. Discussion on the appropriateness of such domestic policies and measures is not part of the process.

#### II. Scope and process

3. The ICA process will consist of the following two steps:
  - (a) A technical analysis of the biennial update reports submitted by Parties not included in Annex I to the Convention either, as a summary of parts of their national communication in the year in which the national communication is presented or as a stand-alone update report, by a team of technical experts in consultation with the Party, and will result in a summary report. The information considered should include the national greenhouse gas inventory report, information on mitigation actions, including a description of such actions, an analysis of their impacts and the associated methodologies and assumptions, the progress made in their implementation and information on domestic measurement, reporting and verification, and on support received.
  - (b) A facilitative sharing of views, which will have as input the biennial update report and summary report referred to in paragraph 3(a) above.
4. The information referred to in paragraph 3(a) above shall be the input for the technical analysis by a team of technical experts. Additional technical information may be provided by the Party concerned. Prior to finalizing the report, the draft summary report prepared by the team of technical experts will be shared with the Party concerned for review and comment over the following three months, in order to respond to and incorporate Party comments in the report. The summary report, incorporating comments from the Party, shall be finalized in consultation with the Party concerned and be presented to the SBI.
5. The summary report referred to in paragraph 4 above will be noted by the SBI in its conclusions and shall be made publicly available on the UNFCCC website.
6. The SBI shall, at regular intervals, convene a workshop for the facilitative exchange of views, open to all Parties, for all Parties for which there is a biennial update report and a final summary report. Parties will be allowed to submit written questions in advance.
7. The facilitative exchange of views among Parties will consist of a one- to three-hour session for each Party or group of Parties. Parties may request to go individually or in a group of up to five Parties. The session will consist of a brief presentation by the Party or Parties concerned on their biennial update report, followed by oral questions and answers among Parties.

**FCCC/CP/2011/9/Add.1**

---

8. The outcome of the ICA will be a summary report and a record of the facilitative sharing of views.

## Annex V

### Indicative list of activities for the Adaptation Committee

1. Considering relevant information and providing recommendations to the Conference of the Parties on ways to rationalize and strengthen coherence among adaptation bodies, programmes and activities under the Convention.
2. Preparing an overview of the capacities of regional centres and networks working on aspects related to adaptation to the adverse effects of climate change, drawing on relevant information, and making recommendations to the Parties on ways to enhance the role of regional centres and networks in supporting adaptation at the regional and national levels.
3. Identifying the process for and scope of overview and other periodic reports on adaptation issues relevant to the work of the Adaptation Committee.
4. Preparing periodic overview reports synthesizing information and knowledge relating to, *inter alia*, the implementation of adaptation actions and good adaptation practices, observed trends, lessons learned, gaps and needs, including in the provision of support, and areas requiring further attention, for consideration by the Conference of the Parties, drawing on information from Parties and on other relevant reports and documents, including those of other bodies under the Convention.
5. Upon request, considering technical support and guidance to the Parties as they develop national adaptation plans.
6. Also upon request, considering work in support of the work programme on loss and damage.
7. Exchanging information with relevant Convention bodies and others, including the Standing Committee and the Technology Executive Committee, on means to incentivize the implementation of adaptation actions, including finance, technology, and capacity-building, with a view to identifying opportunities and further actions for consideration by the Conference of the Parties.
8. Upon the request of the Parties, providing advice on adaptation-related matters to relevant Convention bodies, including to the operating entities of the financial mechanism, as appropriate.
9. Compiling a roster of experts on adaptation issues, building on the existing UNFCCC rosters.

## Annex VI

### Composition and working modalities of the Standing Committee

1. The Standing Committee shall be composed of the following:
  - (a) Ten members from Parties included in Annex I to the Convention (Annex I Parties);
  - (b) Ten members from Parties not included in Annex I to the Convention (non-Annex I Parties), including two members each from the African, Asia-Pacific, and the Latin America and Caribbean States, one member from a small island developing State and one member from a least developed country Party.
2. The Standing Committee shall be composed of members nominated by Parties for approval by the Conference of the Parties, who shall have the necessary experience and skills, notably in the areas of climate change, development and finance, taking into account the need to achieve gender balance in accordance with decision 36/CP.7.
3. Standing Committee members shall serve for a term of two years, with the option of seeking additional terms.
4. The Standing Committee shall elect annually a chair and a vice-chair from among its members for a term of one year each, with one being a member from a non-Annex I Party and the other being a member from an Annex I Party. The positions of chair and vice-chair shall alternate annually between a member from a developed country Party and a member from a developing country Party.
5. The Standing Committee shall develop further modalities for the participation of observers from the operating entities of the financial mechanism of the Convention, from funding entities (multilateral, bilateral and regional) involved in climate finance and from observer organizations from the private sector and civil society admitted to the Convention.
6. The Standing Committee shall draw upon additional expertise as it may deem necessary.
7. The Standing Committee shall meet at least twice a year, or more if necessary, and its first meeting shall take place prior to the thirty-sixth session of the Subsidiary Body for Implementation.
8. The Standing Committee shall reach its conclusions by consensus.
9. The secretariat shall provide administrative support for the work of the Standing Committee.
10. The Conference of the Parties will conduct a review of the functions of the Standing Committee in 2015.

## Annex VII

### Terms of reference of the Climate Technology Centre and Network

#### I. Mission

1. The mission of the Climate Technology Centre and Network is to stimulate technology cooperation and to enhance the development and transfer of technologies and to assist developing country Parties at their request, consistent with their respective capabilities and national circumstances and priorities, in order to build or strengthen their capacity to identify technology needs, to facilitate the preparation and implementation of technology projects and strategies taking into account gender considerations to support action on mitigation and adaptation and enhance low emissions and climate-resilient development.

#### II Functions

2. The Climate Technology Centre and Network shall perform the functions designated by the Conference of the Parties as contained in decision 1/CP.16, paragraph 123.

#### III. Architecture

3. The Climate Technology Centre and Network will consist of the following:

(a) A Climate Technology Centre;

(b) A Network with the participation of the relevant institutions capable of responding to requests from developing country Parties related to technology development and transfer, including national technology centres and institutions; regional climate technology centres and networks; intergovernmental, international, regional and sectoral organizations, partnerships and initiatives that may contribute to technology deployment and transfer; and research, academic, financial, non-governmental, private-sector and public-sector organizations, partnerships and initiatives.

#### IV. Roles and responsibilities

##### *Climate Technology Centre*

4. The Climate Technology Centre shall manage the process of receiving and responding to requests from developing country Parties and shall work with the Network to respond to such requests. The Climate Technology Centre will receive these requests from developing country Parties through the national entity designated for this purpose under decision 4/CP.13.

5. The Climate Technology Centre would respond to requests by developing country Parties either by itself or by identifying the appropriate organizations in the Network in consultation with the requesting developing country Party. The Centre will:

(a) Receive and assess requests and refine and prioritize those requests in conjunction with the nationally designated entity with the aim of establishing its technical feasibility;

(b) Respond to requests, through either the Centre or the Network, based on the use of the most appropriate capacity and expertise in accordance with its approved modalities and procedures.

*Network*

6. The members of the Network will undertake the substantive work to address requests made to the Climate Technology Centre by developing country Parties.

## V. Governance of the Climate Technology Centre and Network

7. The Climate Technology Centre and Network shall operate within its terms of reference and be accountable to, and under the guidance of, the Conference of the Parties through an advisory board.

8. That advisory board will determine its operational modalities and rules of procedure based on the functions outlined in decision 1/CP.16, paragraph 123.

9. The advisory board of the Climate Technology Centre and Network will:

(a) Provide guidance on:

(i) The report of the Climate Technology Centre and Network;

(ii) Prioritization criteria, taking into account the strategic considerations and recommendations provided by the Technology Executive Committee in relation to decision 1/CP.16, paragraph 120;

(b) Approve:

(i) The report of the Climate Technology Centre and Network;

(ii) Prioritization criteria for responding to requests from developing country Parties;

(iii) Criteria regarding the structure of the Network and the designation of organizations as members of the Network;

(iv) The programme of work (e.g. business plan and annual operating plan);

(c) Endorse:

(i) The appointment of the director;

(ii) The budget;

(iii) The financial statement;

(d) Ensure the application of fiduciary standards, and legal and ethical integrity;

(e) Monitor, assess and evaluate the timeliness and appropriateness of the responses of the Climate Technology Centre and Network to requests;

10. The Climate Technology Centre shall provide an annual report on the activities of the Climate Technology Centre and Network in order to facilitate the preparation of a joint annual report by the Technology Executive Committee and the Climate Technology Centre and Network on the activities of the Technology Mechanism, consisting of the report of the Climate Technology Centre and Network and the report of the Technology Executive Committee in accordance with their respective functions.

11. The constitution of the advisory board will be recommended by the subsidiary bodies to the Conference of the Parties at its eighteenth session.

12. The director of the Climate Technology Centre and Network shall be the secretary of the advisory board.

13. The host organization will provide the necessary administrative and infrastructural support for the effective functioning of the Climate Technology Centre and Network.

## **VI. Organizational structure of the Climate Technology Centre**

14. The organizational structure of the Climate Technology Centre will be designed and managed to maximize the effectiveness and efficiency of its operations.

15. The Climate Technology Centre shall have a lean cost-efficient organizational structure, within an existing institution, led by a director who will manage a small core team of professional and administrative staff, as required, to be appointed by and responsible to the host organization's governance structure in order to meet its responsibilities and to efficiently and effectively perform its functions.

16. The director will be approved by and accountable to the host governing body for the effectiveness and efficiency of the Climate Technology Centre in carrying out its functions.

17. As soon as practicable after appointment, the director will facilitate the timely recruitment of the staff of the Climate Technology Centre.

## **VII. Reporting and review**

18. The Climate Technology Centre shall provide an annual report on its activities and those of the Network and on the performance of their respective functions in accordance with decision 1/CP. 16, paragraph 126, and paragraph 10 above.

19. The report will contain all the information necessary to meet the principles of accountability and transparency required by the Convention and shall also include information on requests received and activities carried out by the Climate Technology Centre and Network, information on efficiency and effectiveness in responding to these requests, and information on ongoing work as well as lessons learned and best practices gained from that work.

20. The secretariat, subject to the availability of resources, shall commission an independent review of the effective implementation of the Climate Technology Centre and Network four years after its inception. The findings of the review, including any recommendations regarding enhancing the performance of the Climate Technology Centre and Network, will be considered by the Conference of the Parties. Subsequently, periodic independent reviews of the effectiveness of the Climate Technology Centre and Network will be conducted every four years.

## **VIII. Term of agreement**

21. The initial term of agreement to host the Climate Technology Centre will be for five years, with two four-year renewal periods, if so decided by the Conference of the Parties.

22. The renewal of agreement is subject to the host organization fulfilling its functions laid out in paragraph 2 above and its responsiveness to the direction given to it in paragraphs 4–6 above as identified in the findings of the independent review.

23. The Climate Technology Centre shall operate for initial terms until 2026, at which time the Conference of the Parties will review its functions and decide whether to extend its term.

## Annex VIII

### **Criteria to be used to evaluate and select the host of the Climate Technology Centre and Network and information required to be included in the proposals**

#### **I. Criteria to be used to evaluate and select the host of the Climate Technology Centre<sup>1</sup>**

1. The proposals will be evaluated against the following criteria in accordance with the methodology given in chapter II.

##### **A. Technical capabilities**

2. The prospective host's technical capabilities will be scored based on the following sub criteria, which are of equal importance:

(a) The proponent's comprehensive understanding of the development and transfer of technologies including in the context of the Convention, in particular the challenges and opportunities within developing countries as well as the understanding of regional, sub-regional and sectoral issues and differences regarding specific technologies;

(b) The breadth and depth of expertise as it relates to the subject areas, activities and roles and responsibilities of the Climate Technology Centre as referred to in the terms of reference of the Climate Technology Centre and Network contained in annex VII and the functions of the Climate Technology Centre contained in decision 1/CP.16, paragraph 123;

(c) Demonstrated capability to build capacity and facilitate the transfer of technology and technology diffusion in developing countries;

(d) Demonstrated capability in international multi-stakeholder cooperation, including the capability to involve the private sector (e.g. industrial enterprises) in order to maximize their contributions to Network activities in the development and transfer of environmentally sound technologies for adaptation and mitigation and the facilitation of networks.

##### **B. Technical approach**

3. The prospective host's technical approach will be scored based on the following sub criteria, which are of equal importance:

(a) The overall vision, organizational and administrative structure of the Climate Technology Centre and its ability to prioritize and respond to a high volume of requests from Parties which will have potentially broad content, in an effective and efficient manner;

(b) Demonstrated long-term commitment to host the Climate Technology Centre;

(c) Feasibility of the proposed approach and methodology for establishing and structuring the Network in order to accommodate regional and sub-regional issues, also

---

<sup>1</sup> In this annex, research and development, demonstration, deployment, diffusion and transfer of technologies are referred to as technology development and transfer.

including the involvement of a wide range of relevant organizations, centres, networks, initiatives and private-sector entities;

(d) Feasibility of how the Climate Technology Centre will engage with the Network to create and maintain relationships with developing countries in order to ensure effective and efficient lines of communication and of how it will coordinate with relevant organizations to minimize redundancy;

(e) The extent to which the approach focuses on the objective of building capacity in requesting developing countries over the life of a programme.

### **C. Existing governance and management structures**

4. The prospective host's existing governance and management structures will be scored based on the following sub criteria, which are of equal importance:

(a) The effectiveness of the governance structure and the system of the proponent institution to ensure the evaluation of operational performance against the following elements: integrity; transparency; fiduciary and ethical standards, consistent with the principles of the United Nations; and reporting and accountability;

(b) Demonstrated capability to ensure fair and open international tendering for the procurement of services in line with the fiduciary and ethical standards of the United Nations;

(c) Effectiveness of the current management structure of the host organization to ensure gender sensitivity, transparency, responsiveness, flexibility, financial management, auditing and reporting functions, and the ability to provide high-quality administrative, infrastructural and logistic arrangements, and accessibility to developing country Parties, including the least developed country Parties;

(d) The ability to simultaneously manage and administer multiple and complex projects in developing countries in a timely manner, including the ability to work effectively with different clients and interest groups towards shared and complementary objectives; and the ability to evaluate the operational performance of project management and to take measures to enhance its effectiveness.

### **D. Climate Technology Centre and Network management plan**

5. The prospective host's Climate Technology Centre and Network management plan will be scored based on the following sub criteria, which are of equal importance:

(a) The feasibility of the plan and the schedule for initiating the rapid operational start-up of the Centre and the Network;

(b) The strength of the institutional management plan and the effectiveness of the management structure to ensure legal capacity, transparency, responsiveness, flexibility, and the identification and management of risks, including legal risks;

(c) The ability to evaluate the operational performance, to take measures in order to enhance its effectiveness, and to promote an independent and accountable relationship to the Conference of the Parties and to its related bodies as delegated;

(d) The quality of respective proposed key personnel as demonstrated by the extent and the appropriateness of their relevant supervisory and management experience, and their technical qualifications and experience with regard to technology transfer and diffusion in developing countries;

(e) The transparency and feasibility of the approach on how the proponent plans to engage with and coordinate the Network members to respond to requests from Parties.

## **E. Past performance**

6. The prospective host's past performance will be scored based on the following sub-criteria, which are of equal importance:

(a) The quality of the product or service, including: consistency in meeting goals and targets; cooperation and effectiveness in solving and learning from problems; timeliness of performance, including adherence to contract schedules and other time-sensitive project conditions; and effectiveness of the management at making prompt decisions and ensuring the efficient operation of tasks;

(b) A proven track record of cost control, including forecasting costs as well as accuracy in financial reporting;

(c) Experience in assembling technical assistance teams, including cross-sectoral teams of experts, in-country contractors, private-sector entities and subcontractors, placing them in the field in a timely manner and providing them with all necessary support;

(d) Demonstrated broad regional coverage, including at both the national and the local level, and the capacity in relation to technology development and transfer to respond to requests of developing countries in an expeditious manner;

(e) Experience, as it relates to the functions identified in decision 1/CP.16, paragraph 123;

(f) Demonstrated experience of setting up, organizing, coordinating and managing a network.

## **F. Budget proposal for Climate Technology Centre and Network**

7. The prospective host's budget proposal for the Climate Technology Centre and Network will be scored based on the following sub-criteria, which are of equal importance:

(a) The budget proposal should be balanced, manageable, comprehensive and scalable while providing specifics on how it will maintain fiduciary standards and legal and ethical integrity that is in line with the principles of the United Nations;

(b) The level of resource contributions to be provided in the execution of the mandate contained in the terms of reference, such as financial and in-kind contributions, including the total sum in monetary terms;

(c) The business model for the Climate Technology Centre and Network to enable cost-efficiency and financial sustainability.

## **G. Examples**

8. The prospective host's examples will be scored based on the following sub-criteria, which are of equal importance. The two scenarios in paragraphs 8(a) and (b) below are only illustrative, and do not, in any way, prejudice the actual operating budget of the Climate Technology Centre and Network:

*Example budget scenarios for the Climate Technology Centre and Network*

(a) Prospective hosts will provide two hypothetical scenarios in their proposals: one for a total annual budget of USD 10 million per year, and a second for an annual budget of USD 30 million per year. For each scenario, the proposal should detail the nature, scope and quantity of services that could be provided so as to meet requests that are in line with the functions of the Climate Technology Centre and Network as defined in decision 1/CP.16, and the terms of reference as defined in annex VII;

(b) The percentage of the overall operating budget under the hypothetical total budget scenarios of USD 10 million and USD 30 million per year to be used for administrative costs, such as infrastructure, budgetary support, human resources and overheads; proposals with lower percentages of the operative costs will be given higher scores;

*Example activities of the Climate Technology Centre and Network:*

(c) The feasibility and cost-effectiveness of the prospective host's approach to responding to the two sample requests, including management and implementation plans and a description of detailed activities required to achieve the objective of the two sample requests, accompanied by a budget.

## II. Methodology

9. The criteria listed above are presented by major category, so that prospective hosts will know which areas require emphasis in the preparation of information. These criteria serve as the standard against which all information will be evaluated, and serve to identify the significant matters which prospective hosts should address. The evaluation criteria, which contain sub criteria, and their evaluation weights are shown in the table below:

### Evaluation criteria and associated weights

<i>Major category</i>	<i>Weight</i>
Technical capabilities	20
Technical approach	20
Existing governance and management structures	13
Climate Technology Centre and Network management plan	15
Past performance	10
Budget proposal for the Climate Technology Centre and Network	10
Examples	12

10. Value for money: the criteria above will be used to assess the value for money of each proposal according to the following methodology. Proposals need to score a minimum of 50 per cent for each category, and 60 per cent overall. Best value for money will be calculated as follows: for the proposals, at, or above, the minimum levels, the total number of points scored will be divided by the overall budget proposal from the proponent as referred to in paragraph 7(a) above, for the delivery of the assigned functions of the Climate Technology Centre and Network, and the ratio will be used as input for the selection process, where the higher the ratio the more favourable the proposal will be considered.

11. All other criteria being equal, preference shall be given to a host organization located in a developing country.

### **III. Information required to be included in the proposals**

12. Prospective hosts of the Climate Technology Centre must provide information in their proposals demonstrating how they will implement the terms of reference. The proposal should be organized so as to respond to the outline of the evaluation criteria in a concise manner. Failure to include all information as specified may result in the rejection of the proposal as being non-responsive. The information required includes the following:

- (a) An executive summary;
- (b) A main proposal with relevant information organized in accordance with the evaluation and selection criteria contained in paragraphs 1–8 above;
- (c) A proposed organizational chart of the Climate Technology Centre with brief descriptions of key positions;
- (d) An outline of the terms of reference of the director of the Climate Technology Centre;
- (e) A cost sheet;
- (f) A schedule for the start-up of the Climate Technology Centre and Network;
- (g) Resumes of key staff of the proponent organization proposed to be assigned to the Climate Technology Centre and Network;
- (h) A response to the sample requests as referred to in paragraph 8(c) above;
- (i) Statements of work of past activities relevant to the functions of the Climate Technology Centre and Network, including a matrix of past performance and associated references;
- (j) Audited financial reports of the past three fiscal years;
- (k) Other relevant material (e.g. annual reports, social responsibility reports).

*10<sup>th</sup> plenary  
11 December 2011*

## Decision 3/CP.17

### Launching the Green Climate Fund

*The Conference of the Parties,*

*Recalling* decision 1/CP.16,

1. *Welcomes* the report of the Transitional Committee (FCCC/CP/2011/6 and Add.1), taking note with appreciation of the work of the Transitional Committee in responding to its mandate given in decision 1/CP.16, paragraph 109;
2. *Approves* the governing instrument for the Green Climate Fund annexed to this decision;
3. *Decides* to designate the Green Climate Fund as an operating entity of the financial mechanism of the Convention, in accordance with Article 11 of the Convention, with arrangements to be concluded between the Conference of the Parties and the Fund at the eighteenth session of the Conference of the Parties to ensure that it is accountable to and functions under the guidance of the Conference of the Parties to support projects, programmes, policies and other activities in developing country Parties;
4. *Notes* that the Green Climate Fund will be guided by the principles and provisions of the Convention;
5. *Decides* to provide guidance to the Board of the Green Climate Fund, including on matters related to policies, programme priorities and eligibility criteria and matters related thereto, taking into account the Board's annual reports to the Conference of the Parties on its activities;
6. *Requests* the Board to operationalize the Fund in an expedited manner;
7. *Also requests* the Board to develop a transparent no-objection procedure to be conducted through national designated authorities referred to in paragraph 46 of the governing instrument annexed to this decision, in order to ensure consistency with national climate strategies and plans and a country driven approach and to provide for effective direct and indirect public and private sector financing by the Green Climate Fund. Further requests the Board to determine this procedure prior to approval of funding proposals by the Fund;
8. *Requests* the Board to balance the allocation of the Green Climate Fund resources between adaptation and mitigation activities;
9. *Stresses* the need to secure funding for the Green Climate Fund, taking into account paragraphs 29 and 30 of the governing instrument, to facilitate its expeditious operationalization, and requests the Board to establish the necessary policies and procedures, which will enable an early and adequate replenishment process;
10. *Invites* Parties, through their regional groupings and constituencies, to submit their nominations for the members of the Board to the interim secretariat by 31 March 2012, in accordance with paragraph 11 of the governing instrument for the Green Climate Fund, with the 12 seats for developing country Parties to be distributed as follows:
  - (a) Three members and alternate members from the Asia-Pacific States;
  - (b) Three members and alternate members from the African States;
  - (c) Three members and alternate members from the Latin American and the Caribbean States;

- (d) One member and alternate member from small island developing States;
- (e) One member and alternate member from least developed country Parties;
- (f) One member from developing country Parties not included in the regional groups and constituencies above and one alternate member to rotate between developing country Parties included in the groups and constituencies listed above;

11. *Decides* that the Green Climate Fund be conferred juridical personality and legal capacity and shall enjoy such privileges and immunities related to the discharge and fulfilment of its functions, in accordance with paragraphs 7 and 8 of the governing instrument;

12. *Invites* Parties, in line with the objectives set forth in paragraph 12 above, to submit to the Board expressions of interest for hosting the Green Climate Fund by 15 April 2012, based on the following criteria:

- (a) The ability to confer and/or recognize juridical personality and legal capacity to the Fund for the protection of its interests and the exercise of its functions, to give effect to paragraphs 7 and 8 of the governing instrument, including but not limited to the ability to contract, acquire and dispose of immovable and movable property, and to institute legal proceedings;

- (b) The ability to provide privileges and immunities to the Fund as are necessary for the fulfilment of its purposes, and to the officials of the Fund as are necessary for the independent exercise of their official functions in connection with the Fund;

- (c) Financial arrangements, administrative and logistical support to the Fund;

- (d) Any other information that the host country wishes to provide;

13. *Requests* the Board, following the receipt of expressions of interest, to conduct an open and transparent process for the selection of the host country, and to decide on a host country for endorsement by the Conference of the Parties at its eighteenth session, in accordance with paragraph 22 of the governing instrument;

14. *Also requests* the Board and the host country of the Green Climate Fund to develop, in accordance with paragraphs 7 and 8 of the governing instrument, the legal and administrative arrangements for hosting the Fund, and to ensure that juridical personality and legal capacity are conferred to the Fund, and privileges and immunities as are necessary are granted to the Fund and its officials in an expeditious manner;

15. *Further requests* the Board to establish the independent secretariat of the Green Climate Fund in the host country in an expedited manner as soon as possible, in accordance with paragraph 19 of the governing instrument;

16. *Invites* the Board to select the trustee of the Green Climate Fund through an open, transparent and competitive bidding process in a timely manner to ensure that there is no discontinuity in trustee services;

17. *Requests* the Board to initiate a process to collaborate with the Adaptation Committee and the Technology Executive Committee, as well as other relevant thematic bodies under the Convention, to define linkages between the Fund and these bodies, as appropriate;

18. *Recognizes* the need to facilitate the immediate functioning of the Green Climate Fund and ensure its independence, requests the UNFCCC secretariat jointly with the Global Environment Facility secretariat to take the necessary administrative steps to set up the interim secretariat of the Green Climate Fund as an autonomous unit within the UNFCCC secretariat premises without undue delay after the seventeenth session of the Conference of

the Parties so that the interim secretariat can provide technical, administrative and logistical support to the Board until the independent secretariat of the Green Climate Fund is established;

19. *Decides* that the interim arrangements should terminate no later than the nineteenth session of the Conference of the Parties;
20. *Also decides* that the interim secretariat shall be fully accountable to the Board and shall function under its guidance and authority, and that its head shall report to the Board;
21. *Urges* the Board to move promptly to appoint the head of the interim secretariat;
22. *Decides* that the criteria for the selection of the head of the interim secretariat shall include, inter alia, expertise in the design or management of funds, relevant administrative and management experience, experience in or working with developing countries, and policy expertise;
23. *Requests* the interim secretariat to make arrangements for convening the first Board meeting by 30 April 2012;
24. *Welcomes* the offers made by Switzerland and the Republic of Korea to host the first and second meetings of the Board respectively, and invites Parties to host subsequent meetings;
25. *Invites* Parties to make financial contributions for the start-up of the Green Climate Fund, including administrative costs of the Board and its interim secretariat;
26. *Welcomes* the generous offers of the Republic of Korea, Germany and Denmark to contribute to the start-up cost of the Green Climate Fund.

## Annex

### Governing instrument for the Green Climate Fund

The Green Climate Fund (hereinafter the “Fund”) is hereby established and will operate in accordance with the following provisions:

#### I. Objectives and guiding principles

1. Given the urgency and seriousness of climate change, the purpose of the Fund is to make a significant and ambitious contribution to the global efforts towards attaining the goals set by the international community to combat climate change.
2. The Fund will contribute to the achievement of the ultimate objective of the United Nations Framework Convention on Climate Change (UNFCCC). In the context of sustainable development, the Fund will promote the paradigm shift towards low-emission and climate-resilient development pathways by providing support to developing countries to limit or reduce their greenhouse gas emissions and to adapt to the impacts of climate change, taking into account the needs of those developing countries particularly vulnerable to the adverse effects of climate change.
3. The Fund will be guided by the principles and provisions of the Convention. The Fund will operate in a transparent and accountable manner guided by efficiency and effectiveness. The Fund will play a key role in channelling new, additional, adequate and predictable financial resources to developing countries and will catalyse climate finance, both public and private, and at the international and national levels. The Fund will pursue a country-driven approach and promote and strengthen engagement at the country level through effective involvement of relevant institutions and stakeholders. The Fund will be scalable and flexible and will be a continuously learning institution guided by processes for monitoring and evaluation. The Fund will strive to maximize the impact of its funding for adaptation and mitigation, and seek a balance between the two, while promoting environmental, social, economic and development co-benefits and taking a gender-sensitive approach.

#### II. Governance and institutional arrangements

##### A. Relationship to the Conference of the Parties

4. The Fund will be designated as an operating entity of the financial mechanism under Article 11 of the Convention and will be accountable to and function under the guidance of the Conference of the Parties (COP).
5. The Fund will be governed and supervised by a Board that will have full responsibility for funding decisions.
6. Arrangements will be concluded between the COP and the Fund, consistent with Article 11 of the Convention, to ensure that the Fund is accountable to and functions under the guidance of the COP. In order to ensure accountability to the COP, pursuant to Article 11, paragraph 3, the Board will:
  - (a) Receive guidance from the COP, including on matters related to policies, programme priorities and eligibility criteria, and matters related thereto;

- (b) Take appropriate action in response to the guidance received;
- (c) Submit annual reports to the COP for its consideration and receive further guidance.

## **B. Legal status**

7. In order to operate effectively internationally, the Fund will possess juridical personality and will have such legal capacity as is necessary for the exercise of its functions and the protection of its interests.

8. The Fund will enjoy such privileges and immunities as are necessary for the fulfilment of its purposes. The officials of the Fund will similarly enjoy such privileges and immunities as are necessary for the independent exercise of their official functions in connection with the Fund.

## **C. Rules of procedure of the Board**

### **1. Composition**

9. The Board will have 24 members, composed of an equal number of members from developing and developed country Parties. Representation from developing country Parties will include representatives of relevant United Nations regional groupings and representatives from small island developing States (SIDS) and least developed countries (LDCs).

10. Each Board member will have an alternate member, with alternate members entitled to participate in the meetings of the Board only through the principal member, without the right to vote, unless they are serving as the member. During the absence of the member from all or part of a meeting of the Board, his or her alternate will serve as the member.

### **2. Selection of Board members**

11. The members of the Board and their alternates will be selected by their respective constituency or regional group within a constituency. Members of the Board will have the necessary experience and skills, notably in the areas of climate change and development finance, with due consideration given to gender balance.

### **3. Term of membership**

12. Members and alternate members will serve for a term of three years and be eligible to serve additional terms as determined by their constituency.

### **4. Chairmanship**

13. Two co-chairs of the Board will be elected by the Board members from within their membership to serve for a period of one year, with one being a member from a developed country Party and the other being a member from a developing country Party.

### **5. Decision-making**

14. Decisions of the Board will be taken by consensus of the Board members. The Board will develop procedures for adopting decisions in the event that all efforts at reaching consensus have been exhausted.

**6. Quorum**

15. A two-thirds majority of Board members must be present at a meeting to constitute a quorum.

**7. Observers**

16. The Board will make arrangements, including developing and operating accreditation processes, to allow for effective participation by accredited observers in its meetings. The Board will invite, to participate as active observers: two civil society representatives, one each from developing and developed countries, and two private sector representatives, one each from developing and developed countries.

**8. Additional rules of procedure**

17. Additional rules of procedures will be developed by the Board.

**D. Role and functions of the Board**

18. The Board of the Fund will:

- (a) Oversee the operation of all relevant components of the Fund;
- (b) Approve operational modalities, access modalities and funding structures;
- (c) Approve specific operational policies and guidelines, including for programming, project cycle, administration, and financial management;
- (d) Approve funding in line with the Fund's principles, criteria, modalities, policies and programmes;
- (e) Develop environmental and social safeguards and fiduciary principles and standards that are internationally accepted;
- (f) Develop criteria and application processes for the accreditation of implementing entities of the Fund and accredit implementing entities and withdraw such accreditation;
- (g) Establish subcommittees and panels and define their terms of reference, as appropriate;
- (h) Establish additional thematic windows and/or substructures to address specific activities, as appropriate;
- (i) Establish a framework for the monitoring and evaluation of performance and the financial accountability of activities supported by the Fund and any necessary external audits;
- (j) Review and approve the administrative budget of the Fund and arrange for performance reviews and audits;
- (k) Appoint the Executive Director of the secretariat;
- (l) Appoint the head of the evaluation unit and the heads of all accountability units;
- (m) Receive guidance and take action in response to any guidance from the COP and prepare annual reports to the COP on its activities;
- (n) Develop working and coordination arrangements with other relevant bodies under the Convention and other relevant international institutions;

- (o) Select, appoint and enter into legal and administrative arrangements with the trustee;
- (p) Exercise such other functions as may be appropriate to fulfil the objectives of the Fund.

## **E. Secretariat**

### **1. Establishment of the secretariat**

19. The Fund will establish a secretariat, which will be fully independent. The secretariat will service and be accountable to the Board. It will have effective management capabilities to execute the day-to-day operations of the Fund.

20. The secretariat will be headed by an Executive Director with the necessary experiences and skills, who will be appointed by and be accountable to the Board. The Board will approve the job description and qualifications for the Executive Director. The Executive Director will be selected through a merit-based, open and transparent process.

21. The secretariat will be staffed with professional staff with relevant experience. The staff selection will be managed by the Executive Director and will be open, transparent and based on merit, taking into account geographical and gender balance.

22. The selection of the host country of the Fund will be an open and transparent process. The selection of the host country will be endorsed by the COP.

### **2. Functions**

23. The secretariat will be responsible for the day-to-day operations of the Fund, providing administrative, legal and financial expertise. In particular, the secretariat will:

- (a) Organize and execute all administrative duties;
- (b) Report information on the Fund's activities;
- (c) Liaise with members, implementing entities, and cooperating bilateral and multilateral institutions and agencies;
- (d) Prepare performance reports on the implementation of activities under the Fund;
- (e) Develop the work programme and annual administrative budget of the secretariat and trustee and submit them for approval by the Board;
- (f) Operationalize the project and programme cycle processes;
- (g) Prepare financial agreements related to the specific financing instrument to be concluded with an implementing entity;
- (h) Monitor the financial risks of the outstanding portfolio;
- (i) Work with the trustee to support the Board to enable it to carry out its responsibilities;
- (j) Carry out monitoring and evaluation functions;
- (k) Support the Board in arranging replenishment processes;
- (l) Establish and run effective knowledge management practices;
- (m) Perform any other functions assigned by the Board.

**F. Trustee**

24. The Fund will have a trustee with administrative competence to manage the financial assets of the Fund. The trustee will maintain appropriate financial records and will prepare financial statements and other reports required by the Board, in accordance with internationally accepted fiduciary standards.

25. The trustee will administer the assets of the Fund only for the purpose of, and in accordance with, the relevant decisions of the Board. The trustee will hold the assets of the Fund separate and apart from the assets of the trustee, but may commingle them for administrative and investment purposes with other assets maintained by the trustee. The trustee will establish and maintain separate records and accounts in order to identify the assets of the Fund.

26. The World Bank will serve as interim trustee for the Fund, subject to a review three years after the operationalization of the Fund.

27. The trustee will be accountable to the Board for the performance of its responsibilities as trustee for the Fund.

**III. Administrative costs**

28. The Fund will finance the operating costs of the Board, secretariat and trustee.

**IV. Financial inputs**

29. The Fund will receive financial inputs from developed country Parties to the Convention.

30. The Fund may also receive financial inputs from a variety of other sources, public and private, including alternative sources.

**V. Operational modalities**

31. The Fund will provide simplified and improved access to funding, including direct access, basing its activities on a country-driven approach and will encourage the involvement of relevant stakeholders, including vulnerable groups and addressing gender aspects.

32. The Board will steer the Fund's operations so that they evolve with the Fund's scale and maturity and will exercise flexibility to allow the Fund to evolve over time and become the main global fund for climate change finance.

**A. Complementarity and coherence**

33. The Fund shall operate in the context of appropriate arrangements between itself and other existing funds under the Convention, and between itself and other funds, entities, and channels of climate change financing outside the Fund.

34. The Board will develop methods to enhance complementarity between the activities of the Fund and the activities of other relevant bilateral, regional and global funding mechanisms and institutions, to better mobilize the full range of financial and technical capacities. The Fund will promote coherence in programming at the national level through

appropriate mechanisms. The Fund will also initiate discussions on coherence in climate finance delivery with other relevant multilateral entities.

## **B. Eligibility**

35. All developing country Parties to the Convention are eligible to receive resources from the Fund. The Fund will finance agreed full and agreed incremental costs for activities to enable and support enhanced action on adaptation, mitigation (including REDD-plus),<sup>1</sup> technology development and transfer (including carbon capture and storage), capacity-building and the preparation of national reports by developing countries.

36. The Fund will support developing countries in pursuing project-based and programmatic approaches in accordance with climate change strategies and plans, such as low-emission development strategies or plans, nationally appropriate mitigation actions (NAMAs), national adaptation plans of action (NAPAs), national adaptation plans (NAPs) and other related activities.

## **C. Funding windows and fund structure**

37. The Fund will have thematic funding windows. Initially, the Fund will have windows for adaptation and mitigation. An integrated approach to funding mitigation and adaptation will be used to allow for cross-cutting projects and programmes.

38. The Board shall also ensure adequate resources for capacity-building and technology development and transfer. The Fund will also provide resources for innovative and replicable approaches.

39. The Board will consider the need for additional windows. The Board will have the authority to add, modify and remove additional windows and substructures or facilities as appropriate.

### **1. Readiness and preparatory support**

40. The Fund will provide resources for readiness and preparatory activities and technical assistance, such as the preparation or strengthening of low-emission development strategies or plans, NAMAs, NAPs, NAPAs and for in-country institutional strengthening, including the strengthening of capacities for country coordination and to meet fiduciary principles and standards and environmental and social safeguards, in order to enable countries to directly access the Fund.

### **2. Private sector**

41. The Fund will have a private sector facility that enables it to directly and indirectly finance private sector mitigation and adaptation activities at the national, regional and international levels.

42. The operation of the facility will be consistent with a country-driven approach.

43. The facility will promote the participation of private sector actors in developing countries, in particular local actors, including small- and medium-sized enterprises and local financial intermediaries. The facility will also support activities to enable private sector involvement in SIDS and LDCs.

---

<sup>1</sup> Reducing emissions from deforestation and forest degradation in developing countries; and the role of conservation, sustainable management of forests and enhancement of forest carbon stocks in developing countries.

44. The Board will develop the necessary arrangements, including access modalities, to operationalize the facility.

#### **D. Access modalities and accreditation**

45. Access to Fund resources will be through national, regional and international implementing entities accredited by the Board. Recipient countries will determine the mode of access and both modalities can be used simultaneously.

46. Recipient countries may designate a national authority. This national designated authority will recommend to the Board funding proposals in the context of national climate strategies and plans, including through consultation processes. The national designated authorities will be consulted on other funding proposals for consideration prior to submission to the Fund, to ensure consistency with national climate strategies and plans.

##### **1. Direct access**

47. Recipient countries will nominate competent subnational, national and regional implementing entities for accreditation to receive funding. The Board will consider additional modalities that further enhance direct access, including through funding entities with a view to enhancing country ownership of projects and programmes.

##### **2. International access**

48. Recipient countries will also be able to access the Fund through accredited international entities, including United Nations agencies, multilateral development banks, international financial institutions and regional institutions.

##### **3. Accreditation**

49. The Board will develop, manage and oversee an accreditation process for all implementing entities based on specific accreditation criteria that reflect the Fund's fiduciary principles and standards and environmental and social safeguards.

#### **E. Allocation**

50. The Board will balance the allocation of resources between adaptation and mitigation activities under the Fund and ensure appropriate allocation of resources for other activities.

51. A results-based approach will be an important criterion for allocating resources.

52. In allocating resources for adaptation, the Board will take into account the urgent and immediate needs of developing countries that are particularly vulnerable to the adverse effects of climate change, including LDCs, SIDS and African States, using minimum allocation floors for these countries as appropriate. The Board will aim for appropriate geographical balance.

#### **F. Programming and approval processes**

53. The Fund will have a streamlined programming and approval process to enable timely disbursement. The Board will develop simplified processes for the approval of proposals for certain activities, in particular small-scale activities.

## **VI. Financial instruments**

54. The Fund will provide financing in the form of grants and concessional lending, and through other modalities, instruments or facilities as may be approved by the Board. Financing will be tailored to cover the identifiable additional costs of the investment necessary to make the project viable. The Fund will seek to catalyse additional public and private finance through its activities at the national and international levels.

55. The Fund may employ results-based financing approaches, including, in particular for incentivizing mitigation actions, payment for verified results, where appropriate.

56. Financial management practices and financing agreements will be in keeping with the Fund's fiduciary principles and standards and environmental and social safeguards to be adopted by the Board. The Board will develop an appropriate risk management policy for funding and financial instruments.

## **VII. Monitoring**

57. The programmes and projects, as well as other activities, funded by the Fund will be regularly monitored for impact, efficiency and effectiveness in line with rules and procedures established by the Board. The use of participatory monitoring involving stakeholders will be encouraged.

58. A results measurement framework with guidelines and appropriate performance indicators will be approved by the Board. Performance against these indicators will be reviewed periodically in order to support the continuous improvement of the Fund's impact, effectiveness and operational performance.

## **VIII. Evaluation**

59. There will be periodic independent evaluations of the performance of the Fund in order to provide an objective assessment of the results of the Fund, including its funded activities and its effectiveness and efficiency. The purpose of these independent evaluations is to inform decision-making by the Board and to identify and disseminate lessons learned. The results of the periodic evaluations will be published.

60. To this end, the Board will establish an operationally independent evaluation unit as part of the core structure of the Fund. The head of the unit will be selected by, and will report to, the Board. The frequency and types of evaluation to be conducted will be specified by the unit in agreement with the Board.

61. Reports of the Fund's independent evaluation unit will be provided to the COP for purposes of periodic reviews of the financial mechanism of the Convention.

62. The COP may commission an independent assessment of the overall performance of the Fund, including Board performance.

## **IX. Fiduciary standards**

63. The Board will agree on, adopt, and ensure the application of best practice fiduciary principles and standards to the Fund's entities, the trustee's function related to the Fund, and to all operations, projects and programmes financed by the Fund, including the implementing entities.

64. The Fund will support the strengthening of capacities in recipient countries, where needed, to be able to meet the Fund's fiduciary principles and standards, based on modalities that will be established by the Board.

## **X. Environmental and social safeguards**

65. The Board will agree on and adopt best practice environmental and social safeguards, which shall be applied to all programmes and projects financed using the resources of the Fund.

66. The Fund will support the strengthening of capacities in recipient countries, where needed, to enable them to meet the Fund's environmental and social safeguards, based on modalities that shall be developed by the Board.

## **XI. Accountability mechanisms**

67. The Fund's operations will be subject to an information disclosure policy that will be developed by the Board.

68. The Board will establish an independent integrity unit, to work with the secretariat and report to the Board, to investigate allegations of fraud and corruption in coordination with relevant counterpart authorities.

69. The Board will establish an independent redress mechanism that will report to the Board. The mechanism will receive complaints related to the operation of the Fund and will evaluate and make recommendations.

## **XII. Expert and technical advice**

70. In carrying out its functions the Board will develop mechanisms to draw on appropriate expert and technical advice, including from the relevant thematic bodies established under the Convention, as appropriate.

## **XIII. Stakeholder input and participation**

71. The Board will develop mechanisms to promote the input and participation of stakeholders, including private-sector actors, civil society organizations, vulnerable groups, women and indigenous peoples, in the design, development and implementation of the strategies and activities to be financed by the Fund.

## **XIV. Termination of the Fund**

72. Termination of the Fund will be approved by the COP based on a recommendation of the Board.

*10<sup>th</sup> plenary meeting  
11 December 2011*

## Decision 4/CP.17

### Technology Executive Committee – modalities and procedures

*The Conference of the Parties,*

*Recalling* the relevant provisions of the Convention, in particular Article 4, paragraphs 1, 3, 5, 7, 8 and 9,

*Also recalling* decision 1/CP.16 on the establishment of a Technology Mechanism, comprising a Technology Executive Committee and a Climate Technology Centre and Network, with the objective of enhancing action on technology development and transfer to support action on mitigation and adaptation in order to achieve the full implementation of the Convention,

*Further recalling* that the Technology Executive Committee shall report, on an interim basis, to the Conference of the Parties, through the subsidiary bodies, on its activities and the performance of its functions,

1. *Welcomes* the report on modalities and procedures of the Technology Executive Committee,<sup>1</sup> for consideration by the Conference of the Parties at its seventeenth session, as requested by decision 1/CP.16;
2. *Adopts* the modalities of the Technology Executive Committee as contained in annex I to this decision;
3. *Also adopts* the rules of procedure of the Technology Executive Committee as contained in annex II to this decision;
4. *Notes* that the modalities elaborated by the Technology Executive Committee, which are based on the functions of the Technology Executive Committee as listed in decision 1/CP.16, include the following six key elements:
  - (a) Analysis and synthesis;
  - (b) Policy recommendations;
  - (c) Facilitation and catalysing;
  - (d) Linkage with other institutional arrangements;
  - (e) Engagement of stakeholders;
  - (f) Information and knowledge sharing;
5. *Stresses* the importance of engaging a broad range of stakeholders at the international, regional, national and subnational levels, including public institutions, the business community, academia and non-governmental organizations, in conducting its work, and that its work may require the establishment of institutional interfaces and communication channels at different levels, which would allow the Technology Executive Committee to mobilize and leverage a wider range of expertise and resources;
6. *Requests* the Technology Executive Committee to further elaborate its modalities on linkages with other relevant institutional arrangements under and outside the Convention, in the light of the agreed outcome of the seventeenth session of the Conference of the Parties,

---

<sup>1</sup> FCCC/CP/2011/8.

and to provide such modalities for consideration by the subsidiary bodies at their thirty-sixth sessions, with a view to recommending the modalities for adoption by the Conference of the Parties at its eighteenth session;

## Activities and performance of the Technology Executive Committee for 2011

7. *Welcomes* the elected members of the Technology Executive Committee<sup>2</sup> and the election of Mr. Gabriel Blanco (Argentina) as chair and Mr. Antonio Pflüger (Germany) as vice-chair of the Technology Executive Committee for 2012 and acknowledges that Mr. Blanco and Mr. Pflüger acted as co-chairs of the first meeting of the Technology Executive Committee in 2011;

8. *Welcomes with appreciation* the report of the Technology Executive Committee on its activities and performance for 2011,<sup>3</sup> including on the outcomes of the group's first meeting, and the timely delivery of its report on modalities and procedures,<sup>4</sup> for consideration by the Conference of the Parties at its seventeenth session, as requested by decision 1/CP.16;

9. *Acknowledges* the late nomination of the members of the Technology Executive Committee for 2011 and agrees, on an exceptional basis and without setting a precedent, that the term of office of the members of the Technology Executive Committee currently in office will end immediately before the first meeting of the Technology Executive Committee in 2014 for those members serving a term of two years and immediately before the first meeting of the Technology Executive Committee in 2015 for those members serving a term of three years, as recommended by the Technology Executive Committee at its first meeting;<sup>5</sup>

10. *Also acknowledges* that the Technology Executive Committee expects to develop its rolling workplan for 2012–2013 during its next meeting, in February 2012, and requests that it make such workplan available in its report to the Subsidiary Body for Scientific and Technological Advice and the Subsidiary Body for Implementation<sup>6</sup> at their thirty-sixth sessions;

11. *Encourages* Parties and relevant organizations in a position to do so to supplement the financial resources made available through the UNFCCC core budget for the implementation of the activities of the Technology Executive Committee.

---

<sup>2</sup> FCCC/SB/2011/2, annex.

<sup>3</sup> FCCC/SB/2011/2.

<sup>4</sup> FCCC/CP/2011/8.

<sup>5</sup> FCCC/CP/2011/8, paragraph 13.

<sup>6</sup> Decision 1/CP.16, paragraph 126.

## Annex I

### Modalities of the Technology Executive Committee

#### I. Definitions

1. For the purpose of the modalities and procedures of the Technology Executive Committee (TEC):

- (a) The “Convention” means the United Nations Framework Convention on Climate Change (UNFCCC);
- (b) The “COP” means the Conference of the Parties to the Convention;
- (c) “Parties” means Parties to the Convention;
- (d) “Stakeholders” means the entities who have a role in the implementation of the functions of the TEC, or who may affect or be affected by the recommendations and actions of the TEC;
- (e) “National communications” means national communications submitted by Parties in accordance with Articles 4 and 12 of the Convention;
- (f) “TEC” means the Technology Executive Committee;
- (g) “Technology needs assessments” means the technology needs assessments conducted under the framework for meaningful and effective actions to enhance the implementation of Article 4, paragraph 5, of the Convention adopted by decision 4/CP.7 and enhanced by decision 3/CP.13;
- (h) “National adaptation programmes of action” means national adaptation programmes of action referred to in decision 5/CP.7, paragraph 11(c);
- (i) “Nationally appropriate mitigation actions” means nationally appropriate mitigation actions referred to in decision 1/CP.16, chapter III.B;
- (j) “National adaptation plans” means national adaptation plans referred to in decision 1/CP.16, paragraph 15;
- (k) “CTCN” means the Climate Technology Centre and Network referred to in decision 1/CP.16, paragraph 117(b);
- (l) “Observers” means the observers to the meetings of the TEC referred to in paragraphs 47 and 49 of the rules of procedure of the TEC, as referred in annex II to this decision;
- (m) “Expert advisers” means the expert advisers to the meetings of the TEC referred to in paragraph 44 of the rules of procedure of the TEC;
- (n) “TT:CLEAR” means the technology transfer information clearing house developed under the technology transfer framework;
- (o) “IPCC” means the Intergovernmental Panel on Climate Change.

#### II. Analysis and synthesis

2. For performing the functions as contained in decision 1/CP.16, paragraph 121(a), with regard to analysis and synthesis, the modalities will include, inter alia, the following:

(a) Producing periodic technology outlooks; collating, collecting and synthesizing a range of information on technology research and development and other technology-related activities from various sources, including, but not limited to, national communications, nationally determined technology needs and technology needs assessments, national adaptation programmes of action, nationally appropriate mitigation actions, national adaptation plans, and technology road maps and action plans; and examining the policy implications and opportunities for advancing technology development and transfer;

(b) Producing a series of technical papers on specific policies and technical issues, including those arising from technology needs assessments;

(c) Conducting a regular overview of existing technology development, transfer initiatives, activities and programmes with a view to identifying key achievements and gaps, good practices and lessons learned;

3. The TEC should aim to produce concise documents including executive summaries that can be useful for high-level policymakers, wherever possible.

4. The TEC should draw upon the best available expertise, liaise with existing organizations and institutions, and produce analysis that is broad-based, in order to ensure the credibility and legitimacy of its recommendations.

5. The TEC should also seek collaboration and, where appropriate, co-produce specific analysis and synthesis reports with relevant expert organizations. As a general option, the TEC could create institutional interfaces to seek inputs from relevant stakeholders in carrying out this function, which could include workshops, dialogues, ad hoc working groups and a designated website. It should also take advantage of possible institutional interfaces established with other constituted bodies under the Convention.

### III. Policy recommendations

6. To perform the functions as contained in decision 1/CP.16, paragraph 121(b), (c) and (e), with regard to policy recommendations, the modalities will include, inter alia, the following:

(a) Recommending to the COP, or other relevant bodies under the Convention, actions to promote technology development and transfer and to address barriers;

(b) Recommending guidance on policies and programme priorities related to technology development and transfer, with special consideration given to least developed country Parties;

7. The TEC may engage stakeholders in formulating the TEC recommendations for action. The stakeholders may include Parties, the COP, other relevant bodies/entities, including the CTCN, operating entities of the financial mechanism of the Convention as well as a range of individual entities that will be affected by the implementation of the recommendations.

8. The TEC could establish working groups or panels composed of relevant experts on certain matters, which could include the members of the TEC, outside experts or both, to advise the TEC in formulating its policy recommendations consistent with the rules of procedure of the TEC.

## IV. Facilitation and catalysing

9. For performing the functions as contained in decision 1/CP.16, paragraph 121(d), (f) and (g), with regard to facilitating and catalysing actions, the modalities will include, inter alia, the following:

(a) Promoting and collaborating with relevant organizations, resources permitting, in organizing workshops and forums to increase the opportunities for sharing experience with experts in developing and implementing technology road maps and action plans as well as other technology-related activities;

(b) Establishing an inventory of existing collaboration activities and a regular review process, with a view to identifying key achievements and gaps, good practices and lessons learned;

(c) Making recommendations on actions to promote collaboration;

(d) Making recommendations on best practices and relevant tools to develop technology road maps and action plans;

(e) Establishing an inventory of technology road maps and action plans;

(f) Making recommendations on concrete actions, such as an international process for the development of technology road maps and action plans as well as support required to enhance the development of these items, and in particular capacity-building programmes that may be appropriate;

10. The TEC should identify stakeholders for each technology area, taking into consideration that the CTCN, intergovernmental organizations and other technology actors at the national level would be important partners in undertaking the function of developing technology road maps, while general technology cooperation would be an area where international organizations, the private sector, non-governmental organizations and research communities could have an important role to play.

11. The TEC should establish a procedure to involve stakeholders with regard to providing information on cooperative activities including experiences shared, lessons learned and opportunities for collaboration in facilitating and catalysing specific issues on the development and transfer of technologies. The TEC could consider establishing a permanent or issue-based interface with relevant organizations with expertise on climate technologies for the sake of efficiency and effectiveness.

## V. Linkage with other institutional arrangements

12. The TEC acknowledged the need to achieve coherence and maintain interactions with other relevant institutional arrangements under and outside of the Convention as requested by decision 1/CP.16, paragraph 125. Without prejudicing the outcome of the negotiations between Parties on the possible relationships and linkages between the TEC and the CTCN, the financial mechanism and other institutional arrangements under the Convention being negotiated under the Ad Hoc Working Group on Long-term Cooperative Action under the Convention, the TEC agreed to reconsider its modalities on these matters at its first meeting to be held in 2012, in the light of an expected agreed outcome in this regard at the seventeenth session of the COP.

## **VI. Engagement of stakeholders**

13. The TEC should engage a broad range of stakeholders at the international, regional and national levels, including public institutions, the business community, academia and non-governmental organizations, in conducting its work. Stakeholder engagement would be issue-based and would be channelled through work programmes, and may require the establishment of institutional interfaces and communication channels at different levels, which would allow the TEC to mobilize and leverage a wider range of expertise and resources.

14. The TEC could engage relevant stakeholders through, inter alia, the following:

(a) Offering participation in the TEC meetings as observers or expert advisers, where applicable;

(b) Engaging stakeholders through other models that the TEC may consider establishing, such as consultative groups, stakeholder forums and technical task forces.

## **VII. Information and knowledge sharing**

15. The TEC should disseminate its outputs and facilitate knowledge sharing through a well-functioning information platform that responds to the information and knowledge service requirements of its potential users, including Parties and a wide range of technology actors, experts and stakeholders.

16. The platform would be a tool used to promote the collaboration between various actors and to seek cooperation with relevant international organizations and initiatives. It would support the efforts of the TEC in the following ways: exploring opportunities for information sharing, establishing links with existing knowledge platforms and implementing joint initiatives and programmes.

17. The TEC should consider upgrading TT:CLEAR with an expanded and more strategic focus, tailored to the functions of the TEC, and building on existing technology information networks.

## Annex II

### Rules of procedure of the Technology Executive Committee

#### I. Scope

1. These rules of procedure shall apply to the Technology Executive Committee (TEC) in accordance with decision 1/CP.16, paragraph 125, and appendix IV to that decision on the composition and mandate of the TEC, as well as with any other relevant decisions of the Conference of the Parties.

#### II. Definitions

2. For the purpose of these rules:

(a) The “Convention” means the United Nations Framework Convention on Climate Change (UNFCCC);

(b) The “COP” means the Conference of the Parties to the Convention;

(c) “CTCN” means the Climate Technology Centre and Network;

(d) “Chair” means the member of the TEC elected as chair of the TEC;

(e) “Vice-chair” means the member of the TEC elected as vice-chair of the TEC;

(f) “Observers” means observers to the meetings of the TEC;

(g) “Stakeholders” means the entities that have a role in the implementation of the functions of the TEC, or that may affect or be affected by the recommendations and actions of the TEC;

(h) “Secretariat” means the secretariat referred to in Article 8 of the Convention;

(i) “TEC” means the Technology Executive Committee.

#### III. Members

3. The COP, by decision 1/CP.16, decided that the TEC shall have the mandate and composition as contained in appendix IV to that decision.

4. The TEC shall comprise 20 expert members, elected by the COP, serving in their personal capacity and nominated by Parties with the aim of achieving a fair and balanced representation, as follows:

(a) Nine members from Parties included in Annex I to the Convention (Annex I Parties);

(b) Three members from each of the three regions of the Parties not included in Annex I to the Convention (non-Annex I Parties), namely Africa, Asia and the Pacific, and Latin America and the Caribbean; one member from a small island developing State; and one member from a least developed country Party;<sup>1</sup>

---

<sup>1</sup> Decision 1/CP.16, appendix IV, paragraph 1.

5. Members shall serve for a term of two years and shall be eligible to serve a maximum of two consecutive terms of office. The following rules shall apply:
- (a) Half of the members shall be elected initially for a term of three years and half of the members shall be elected for a term of two years;
  - (b) Thereafter, the COP shall elect every year a member for a term of two years;
  - (c) The members shall remain in office until their successors are elected;<sup>2</sup>
6. The term of office of a member shall start at the first meeting of the TEC in the calendar year following his or her election and shall end immediately before the first meeting of the TEC in the calendar year in which the term ends, as applicable two or three years thereafter.
7. If a member of the TEC resigns or is otherwise unable to complete the assigned term of office or to perform the functions of that office, the TEC may decide, bearing in mind the proximity of the next session of the COP, to appoint another member from the same constituency to replace said member for the remainder of that member's mandate, in which case the appointment shall count as one term.<sup>3</sup>
8. If a member is unable to participate in two consecutive meetings of the TEC and unable to perform the functions and tasks set out by the TEC, the chair will bring this matter to the attention of the TEC and will seek clarification from the regional group that nominated that member on the status of his or her membership.

#### IV. Chair and vice-chair

9. The TEC shall elect annually a chair and a vice-chair from among its members for a term of one year each, with one being a member from an Annex I Party and the other being a member from a non-Annex I Party. The positions of chair and vice-chair shall alternate annually between a member from an Annex I Party and a member from a non-Annex I Party.<sup>4</sup>
10. If the chair is temporarily unable to fulfil the obligations of the office, the vice-chair shall serve as chair. In the absence of the chair and vice-chair at a particular meeting, any other member designated by the TEC shall temporarily serve as the chair of that meeting.<sup>5</sup>
11. If the chair or vice-chair is unable to complete the term of office, the TEC shall elect a replacement to complete the term of office, taking into account paragraph 8 above.<sup>6</sup>
12. Consistent with decision 1/CP.16, the TEC will be chaired by a chair and a vice-chair.
13. The chair and the vice-chair shall collaborate in chairing meetings of the TEC and in executing the work of the TEC throughout the year so as to ensure coherence between meetings.
14. After completion of his or her term of office, the chair will be nominated as vice-chair, and vice versa.
15. After the two-year cycle is complete, the TEC will nominate two new members for the roles, unless otherwise decided.

---

<sup>2</sup> Decision 1/CP.16, appendix IV, paragraph 4.

<sup>3</sup> Decision 1/CP.16, appendix IV, paragraph 8.

<sup>4</sup> Decision 1/CP.16, appendix IV, paragraph 5.

<sup>5</sup> Decision 1/CP.16, appendix IV, paragraph 6.

<sup>6</sup> Decision 1/CP.16, appendix IV, paragraph 7.

16. If either the chair or the vice-chair resigns or is otherwise unable to complete his or her term of office, the TEC shall elect a replacement from the appropriate constituency to complete the remainder of the term.

17. The chair of the meeting shall, *inter alia*, declare the opening and closing of the meeting, ensure the observance of these rules of procedure, accord the right to speak and announce decisions. He or she shall rule on points of order and, subject to these rules, shall have complete control of the proceedings and over the maintenance of order.

18. The chair of the meeting shall call upon speakers in the order in which they signify their desire to speak. The secretariat shall maintain a list of speakers. The chair may call a speaker to order if his or her remarks are not relevant to the subject under discussion.

19. During discussion of any matter, a member may at any time raise a point of order, which shall be decided on immediately by the chair of the meeting. A member may appeal against the ruling of the chair. The appeal shall stand unless overruled by a two-thirds majority of the members, representing a two-thirds majority of members from Annex I Parties and a two-thirds majority of members from non-Annex I Parties.

20. Proposals and amendments to proposals may be introduced and submitted to the secretariat in writing by members; such proposals and amendments shall be circulated for consideration by all members of the TEC. As a general rule, no proposal shall be discussed or put forward for a decision at any meeting unless copies have been circulated to the members not later than the day preceding the meeting. However, the chair of the meeting may, with the agreement of the TEC, permit the discussion and consideration of proposals and amendments even though they have not been circulated or have been circulated only the same day.

21. The chair and/or the vice-chair, or any member designated by the TEC, shall report on behalf of the TEC to the COP and/or other subsidiary bodies as mandated by the COP.

22. The chair and/or the vice-chair, or any member designated by the TEC, shall represent the TEC at external meetings and shall report back to the TEC on those meetings.

23. The TEC may further define additional roles and responsibilities for the chair and the vice-chair.

24. The chair and the vice-chair in the exercise of their functions remain under the authority of the TEC.

## V. Secretariat

25. The secretariat shall support and facilitate the work of the TEC.<sup>7</sup>

26. The secretariat shall:

(a) Make the necessary arrangements for the meetings of the TEC, including announcing meetings, issuing invitations and making available the relevant documents;

(b) Maintain meeting records and arrange for the storage and preservation of documents of the meetings;

(c) Make documents of the meetings of the TEC available to the public, unless a specific document is deemed confidential by the TEC;

---

<sup>7</sup> Decision 1/CP.16, appendix IV, paragraph 12.

27. The secretariat shall track the implementation of decisions on actions taken by the TEC and report on the progress of these actions intersessionally and at each meeting of the TEC.

28. In addition, the secretariat shall perform any other functions assigned that the TEC may require or that the COP may direct with respect to the work of the TEC.

## **VI. Meetings**

29. The TEC shall meet at least twice per year as of 2012, resources permitting. Additional meetings may be organized as necessary to enable it to discharge its responsibilities.

30. The meetings of the TEC shall take place in the country of the seat of the secretariat, unless otherwise decided by the TEC and subject to the necessary arrangements being made by the secretariat in consultation with the chair. Decisions on the location of meetings other than at the seat of the secretariat shall take into account the benefits of venue rotation, particularly venues in developing countries and those that facilitate the participation of key stakeholders of the TEC.

31. At least two thirds of the members of the TEC, representing a two-thirds majority of members from Annex I Parties and a two-thirds majority of members from non-Annex I Parties, must be present to constitute a quorum.

32. At the last Committee meeting of each calendar year, the chair and the vice-chair shall propose, for the approval of the TEC, a provisional schedule of meetings for the coming calendar year.

33. If the schedule, including dates and venue, of a meeting needs to be changed owing to unforeseen circumstances, the secretariat, with the agreement of the chair and the vice-chair, shall notify and seek agreement from the members on the new arrangement within two weeks of this notification, in accordance with paragraph 55 below. Once agreed, the secretariat shall post such information on the UNFCCC website at least eight weeks prior to the meeting in question. Where it is essential to facilitate the work of the TEC, the chair and the vice-chair may decide to shorten the notification period.

34. Members are requested to confirm their attendance at meetings of the TEC as early as possible and at least four weeks prior to a meeting for members eligible for funding for their participation to enable sufficient time for the secretariat to make the necessary travel arrangements.

## **VII. Agenda and documentation for meetings**

35. The chair shall, in consultation with the vice-chair and assisted by the secretariat, prepare the provisional agenda for each meeting as well as a draft report on the meeting.

36. The provisional agenda for each meeting shall be transmitted to members of the TEC at least four weeks in advance of the meeting.

37. Members may propose additions or changes to the provisional agenda, in writing, to the secretariat within one week of receiving the provisional agenda, and these additions or changes shall be included in a revised provisional agenda by the secretariat in agreement with the chair and the vice-chair.

38. The secretariat shall indicate the administrative and financial implications of all substantive items on the proposed agenda.

39. The secretariat shall transmit the provisional annotated agenda and any supporting documentation to the members at least two weeks prior to the meeting. Documents may be transmitted after that date with the approval of the chair and the vice-chair.

40. Documents for a meeting, unless it has been decided by the chair and the vice-chair that the documentation should be restricted for internal use by its members, shall be published on the UNFCCC website at least three weeks prior to that meeting.

41. The TEC shall, at the beginning of each meeting, adopt the meeting agenda.

## **VIII. Decision-making**

42. Decisions will be taken according to the rule of consensus.<sup>8</sup>

## **IX. Working language**

43. The working language of the TEC shall be English.

## **X. Participation of expert advisers in meetings**

44. The TEC, in performing its functions, should draw upon outside expertise, including the UNFCCC roster of experts and the CTCN, to provide advice, including as expert advisers at its meetings.<sup>9</sup>

45. The TEC should seek input from intergovernmental and international organizations and the private sector and may seek input from civil society in undertaking its work. It may invite advisers drawn from relevant intergovernmental and international organizations as well as the private sector and civil society to participate in its meetings as expert advisers on specific issues as they arise.<sup>10</sup>

46. The chair and the vice-chair may, in consultation with the TEC, invite representatives of intergovernmental and international organizations as well as the private sector and civil society to participate in a meeting of the TEC as expert advisers on specific issues under consideration at the meeting.

## **XI. Participation of observers**

47. The meetings of the TEC shall be open to attendance by accredited observer organizations and observers from Parties, except where otherwise decided by the TEC.<sup>11</sup>

48. The meetings of the TEC that are open shall be webcast through the UNFCCC website.

49. The TEC may decide on additional procedures for the participation of observer organizations other than those accredited to the UNFCCC.

50. The TEC may, in the interests of economy and efficiency, decide to limit the physical attendance of observers at its meetings, in accordance with the procedures for the participation of observer organizations referred to in paragraphs 47 and 49 above.

<sup>8</sup> Decision 1/CP.16, appendix IV, paragraph 2.

<sup>9</sup> Decision 1/CP.16, appendix IV, paragraph 9.

<sup>10</sup> Decision 1/CP.16, appendix IV, paragraph 10.

<sup>11</sup> Decision 1/CP.16, appendix IV, paragraph 11.

51. The TEC may decide at any time that a meeting or part thereof should be closed to observers.

52. The secretariat shall notify observers of the date and venue of the meeting that they may attend. Observers shall notify the secretariat at least three weeks in advance of the meeting of their intention to attend.

53. Observers may, with the agreement of the TEC, be invited to address the TEC on matters under consideration by the TEC. The chair shall notify the TEC one week in advance of the meeting of the proposed interventions by observers, if any.

54. Any observer wishing to make an intervention under particular items on the agenda at a meeting shall inform the chair through the secretariat of its interest at least two weeks in advance.

## **XII. Use of electronic means of communication**

55. The TEC shall use electronic means of communication to facilitate intersessional work and to take decisions in accordance with guidelines to be agreed by the TEC. The secretariat shall ensure that a secure and dedicated web interface is established and maintained to facilitate the work of the TEC.

## **XIII. Panels and working groups**

56. The TEC may establish panels and working groups, if required, to provide, inter alia, expert advice to assist the TEC in its work.

57. In establishing a panel or working group, the TEC shall determine its terms of reference, which shall include a workplan, the deadline for submission of documents, the criteria for selection of panel or working group members and the necessary budgetary requirements.

## **XIV. Workplan**

58. The TEC shall agree on the workplan. The secretariat shall prepare information on the financial requirements for the implementation of the workplan for consideration by the TEC. The workplan shall be kept under regular review by the TEC.

59. Newly funded activities not included in the original workplan shall be circulated by the secretariat at the request of the chair for approval by the TEC. Such approval may also be provided through electronic means, in accordance with paragraph 55 above. Committee members may provide their response and approval within two weeks of the circulation of the information by the secretariat.

60. Funding for activities included in the original workplan and for newly funded activities not included in the workplan may be accepted from Parties and the private sector, in accordance with United Nations and UNFCCC rules and regulations.<sup>12</sup>

---

<sup>12</sup> Financial Regulations and Rules of the United Nations, available at <<http://www.un.org/Docs/journal/asp/ws.asp?m=ST/SGB/2003/7>>.

**XV. Amendments to the rules of procedure**

61. These rules of procedure may be amended by the TEC by consensus and, to be effective, must be approved formally by the COP. Pending formal approval, the TEC may decide to apply the amendment provisionally.

**XVI. Overriding authority of the Convention**

62. In the event of any conflict between any provision of these rules and any provision of the Convention, the Convention shall take precedence.

*10<sup>th</sup> plenary meeting  
9 December 2011*

## Decision 5/CP.17

### National adaptation plans

*The Conference of the Parties,*

*Recalling* Article 4, paragraphs 4 and 9, and relevant Articles of the Convention,

*Also recalling* decision 1/CP.16,

*Acknowledging* that national adaptation planning can enable all developing and developed country Parties to assess their vulnerabilities, to mainstream climate change risks and to address adaptation,

*Also acknowledging* that, because of their development status, climate change risks magnify development challenges for least developed countries,

*Recognizing* the need to address adaptation planning in the broader context of sustainable development planning,

#### I. Framing national adaptation plans

1. *Agrees* that the objectives of the national adaptation plan process are as follows:
  - (a) To reduce vulnerability to the impacts of climate change, by building adaptive capacity and resilience;
  - (b) To facilitate the integration of climate change adaptation, in a coherent manner, into relevant new and existing policies, programmes and activities, in particular development planning processes and strategies, within all relevant sectors and at different levels, as appropriate;
2. *Also agrees* that planning for adaptation at the national level is a continuous, progressive and iterative process, the implementation of which should be based on nationally identified priorities, including those reflected in the relevant national documents, plans and strategies, and coordinated with national sustainable development objectives, plans, policies and programmes;
3. *Further agrees* that enhanced action on adaptation should be undertaken in accordance with the Convention, should follow a country-driven, gender-sensitive, participatory and fully transparent approach, taking into consideration vulnerable groups, communities and ecosystems, and should be based on and guided by the best available science and, as appropriate, traditional and indigenous knowledge, and by gender-sensitive approaches, with a view to integrating adaptation into relevant social, economic and environmental policies and actions, where appropriate;
4. *Agrees* that the national adaptation plan process should not be prescriptive, nor result in the duplication of efforts undertaken in-country, but should rather facilitate country-owned, country-driven action;

## II. A process to enable least developed country Parties to formulate and implement national adaptation plans

### A. Guidelines

5. *Agrees* that the formulation of national adaptation plans should build on and complement existing adaptation planning;
6. *Decides* to adopt the initial guidelines for the formulation of national adaptation plans contained in the annex to this decision;
7. *Invites* Parties and relevant organizations to submit to the secretariat, by 13 February 2013, information on their experiences with the application of the guidelines for the national adaptation plan process for least developed country Parties, for compilation by the secretariat into a miscellaneous document for consideration by the Subsidiary Body for Implementation at its thirty-eighth session;
8. *Requests* the secretariat to prepare a synthesis report on experiences with the application of the guidelines for the national adaptation plan process in least developed country Parties, taking into account the submissions referred to in paragraph 7 above and other relevant sources of information, for consideration by the Subsidiary Body for Implementation at its thirty-eighth session;
9. *Decides* to take stock of, and if necessary revise, the guidelines mentioned in paragraph 6 above at its nineteenth session, taking into account the submissions referred to in paragraph 7 above, the synthesis report referred to in paragraph 8 above, reports of the Least Developed Country Expert Group and other relevant sources of information;
10. *Invites* least developed country Parties to use the guidelines and modalities contained in this decision, in accordance with their national circumstances, in preparing their national adaptation plans;
11. *Also invites* least developed country Parties to strive to implement institutional arrangements to facilitate their national adaptation plan process, building on existing institutions and consistent with their national circumstances;

### B. Modalities

12. *Decides* on the following modalities to support and enable least developed country Parties to formulate and implement national adaptation plans, inter alia:
  - (a) Technical guidelines for the national adaptation plans;
  - (b) Workshops and expert meetings;
  - (c) Training activities;
  - (d) Regional exchanges;
  - (e) Syntheses of experiences, best practices and lessons learned;
  - (f) Technical papers;
  - (g) Technical advice;
13. *Requests* the Least Developed Countries Expert Group to provide technical guidance and support to the national adaptation plan process, as appropriate;

14. *Also requests* the Least Developed Countries Expert Group, in carrying out its mandate to support the identification and implementation of medium- and long-term adaptation in least developed countries, to prioritize support for the formulation and implementation of national adaptation plans;
15. *Further requests* the Least Developed Countries Expert Group to prepare technical guidelines as referred to in paragraph 12(a) above for the national adaptation plan process, based on the initial guidelines, included in the annex to this decision;
16. *Requests* the Least Developed Countries Expert Group to arrange a review of the above-mentioned technical guidelines and to identify support needs for the process of formulation and implementation of the national adaptation plans, including through the modalities referred to in paragraph 12 above;
17. *Also requests* the Least Developed Countries Expert Group to invite the Adaptation Committee and other relevant bodies under the Convention to contribute to its work in support of the national adaptation plan process; and to report, as appropriate;
18. *Invites* national and regional centres and networks to strengthen their programmes and engage in support of the national adaptation plan process in least developed country Parties, at the regional, national and subnational levels, as appropriate, in a manner that is country-driven and that encourages cooperation and coordination between regional stakeholders;
19. *Also invites* Parties to strengthen their engagement with regional centres and networks, where possible, in the process of formulation and implementation of the national adaptation plan process in least developed country Parties;
20. *Requests* developed country Parties to continue to provide least developed country Parties with finance, technology and capacity-building in accordance with decision 1/CP.16, including paragraph 18, and other relevant decisions of the Conference of the Parties;

### **C. Financial arrangements for the formulation and implementation of national adaptation plans**

21. *Urges* developed country Parties to mobilize financial support for the national adaptation plan process for least developed country Parties through bilateral and multilateral channels, including through the Least Developed Countries Fund, in accordance with decision 1/CP.16;
22. *Requests* the Global Environment Facility, as an operating entity of the financial mechanism, through the Least Developed Countries Fund, to consider how to enable activities for the preparation of the national adaptation plan process for least developed countries Parties, while maintaining progress for the least developed countries work programme, which includes the national adaptation programmes of action;
23. *Invites* United Nations organizations, specialized agencies and other relevant organizations, as well as bilateral and multilateral agencies, to support the national adaptation plan process in least developed country Parties and, where possible, to consider establishing support programmes for the national adaptation plan process within their mandates, as appropriate, which could facilitate financial and technical support to least developed country Parties; and to submit to the secretariat, by 13 February 2012, information on how they have responded to this invitation;

24. *Also invites* Parties and relevant organizations as well as bilateral and multilateral agencies, to submit to the secretariat, by 13 February 2012, information on support to the national adaptation plan process in least developed countries;
25. *Further invites* the Global Environment Facility, as an operating entity of the financial mechanism for the operation of the Least Developed Countries Fund, to submit information to the Subsidiary Body for Implementation, through the secretariat, by 13 February 2012, on how they could enable activities undertaken as part of the national adaptation plan process in least developed country Parties, for compilation by the secretariat into a miscellaneous document for consideration by the Subsidiary Body for Implementation at its thirty-sixth session;
26. *Requests* the secretariat to prepare a synthesis report on the support for the national adaptation plan process for least developed country Parties, taking into account the submissions referred to in paragraphs 23–25 above and other relevant sources of information, for consideration by the Subsidiary Body for Implementation at its thirty-sixth session;
27. *Also requests* the Subsidiary Body for Implementation to consider guidance on policies and programmes to enable support for the national adaptation plan process for least developed country Parties, at its thirty-sixth session, taking into account, inter alia, the guidance in decision 27/CP.7 and the synthesis report referred to in paragraph 26 above, and taking into account other relevant decisions on financial support under the Convention, for consideration by the Conference of the Parties at its eighteenth session;

### **III. An invitation to developing country Parties that are not least developed country Parties to employ the modalities for national adaptation plans**

28. *Reiterates* the invitation to other developing country Parties to employ the modalities for national adaptation plans elaborated in this decision;
29. *Invites* interested developing country Parties that are not least developed country Parties to use the guidelines for the national adaptation plans for least developed country Parties adopted in this decision, in accordance with their national circumstances, when formulating their national adaptation plans;
30. *Requests* the Adaptation Committee, in accordance with its agreed functions, to consider, in its workplan, the relevant modalities for supporting interested developing country Parties that are not least developed country Parties, to plan, prioritize and implement their national adaptation planning measures, including through the use of the modalities contained in this decision, and to report to the Conference of the Parties at its eighteenth session;
31. *Invites* the operating entities of the financial mechanism of the Convention, bilateral and multilateral organizations and other institutions as appropriate, to provide financial and technical support to developing country Parties to plan, prioritize and implement their national adaptation planning measures, consistent with decision 1/CP.16 and relevant provisions of the Convention;

#### IV. Reporting, monitoring and evaluation

32. *Invites* Parties to provide information, through their national communications, on what measures they have undertaken and on support provided or received relevant to the national adaptation plan process;
33. *Encourages* least developed country Parties, to the extent possible, to provide information on their national adaptation plan process through their national communications, as well as other channels;
34. *Requests* the Least Developed Countries Expert Group, the Adaptation Committee and other relevant bodies under the Convention to include information in their reports on how they have responded to the requests made in this decision and on their activities relevant to the national adaptation plan process, as per their respective mandates;
35. *Invites* United Nations organizations, multilateral, intergovernmental and other international and regional organizations to provide information on their activities to support the national adaptation plan process;
36. *Requests* the secretariat, consistent with Article 8 of the Convention, to collect, compile and synthesize information needed by the Subsidiary Body for Implementation to monitor and evaluate the progress made on the national adaptation plan process, drawing upon information in accordance with paragraphs 32–35 above;
37. *Also requests* the Subsidiary Body for Implementation to monitor and evaluate progress made on the national adaptation plan process at its forty-second session, based on the reports by the secretariat referred to in paragraph 36 above, with a view to making recommendations to the Conference of the Parties, as appropriate;
38. *Further requests* the secretariat to utilize and enhance existing databases, to include information on support and other activities under the national adaptation plan process, as appropriate;
39. *Requests* that the actions of the secretariat called for in this decision be undertaken subject to the availability of financial resources.

## Annex

### **Initial guidelines for the formulation of national adaptation plans by least developed country Parties**

#### **I. Introduction**

1. The elements described in paragraphs 2–6 below are indicative of the activities that can be undertaken in the development of national adaptation plans (NAPs). The planning of such activities will depend on national circumstances and should be determined by least developed country Parties.

#### **II. Elements of national adaptation plans**

##### **A. Laying the groundwork and addressing gaps**

2. Activities undertaken under this element would be planned with a view to identifying weaknesses and gaps in enabling environments, and addressing them as necessary, to support the formulation of comprehensive adaptation plans, programmes and policies, through, inter alia:

(a) Identification and assessment of institutional arrangements, programmes, policies and capacities for overall coordination and leadership on adaptation;

(b) Assessment of available information on climate change impacts, vulnerability and adaptation, measures taken to address climate change, and gaps and needs, at the national and regional levels;

(c) Comprehensive, iterative assessments of development needs and climate vulnerabilities.

##### **B. Preparatory elements**

3. In developing NAPs, consideration would be given to identifying specific needs, options and priorities on a country-driven basis, utilizing the services of national and, where appropriate, regional institutions, and to the effective and continued promotion of participatory and gender-sensitive approaches coordinated with sustainable development objectives, policies, plans and programmes. Activities may include the following:

(a) Design and development of plans, policies and programmes by considering decision 1/CP.16, paragraph 14(a), to address the gaps and needs referred to in paragraph 2 above;

(b) Assessments of medium- and long-term adaptation needs, and, as appropriate, development needs and climate vulnerabilities;

(c) Activities aimed at integrating climate change adaptation into national and subnational development and sectoral planning;

(d) Participatory stakeholder consultations;

(e) Communication, awareness-raising and education.

**C. Implementation strategies**

4. Activities carried out as part of the implementation strategies would take into consideration the following:

- (a) Prioritizing work according to development needs and climate change vulnerability and risk;
- (b) Strengthening institutional and regulatory frameworks to support adaptation;
- (c) Training and coordination at the sectoral and subnational levels;
- (d) Public dissemination of information on the national adaptation plan process, to be made available to the public and to the UNFCCC secretariat;
- (e) Considering other relevant multilateral frameworks and international programmes and initiatives, with a view to building on and complementing existing adaptation planning.

**D. Reporting, monitoring and review**

5. These activities, including national adaptation plan documents, could be included in national strategies and plans, as appropriate.

6. Under this element, Parties should undertake a regular review, at intervals that they determine:

- (a) To address inefficiencies, incorporating the results of new assessments and emerging science and reflect lessons learned from adaptation efforts;
- (b) To monitor and review the efforts undertaken, and provide information in their national communications on the progress made and the effectiveness of the national adaptation plan process.

**United States Department of State**  
***Office of the Special Envoy for Climate Change***  
**Washington, D.C. 20520**

Mr. Yvo de Boer  
Executive Secretary  
United Nations Framework Convention on Climate Change  
P.O. Box 260124  
D-53153 Bonn

January 28, 2010

Dear Mr. de Boer:

The United States is pleased to inform you, through this letter, of its desire to be associated with the Copenhagen Accord. Attached please find the submission of the United States concerning its emissions reduction target, in the format set forth in Appendix 1 to the Copenhagen Accord, for compilation in accordance with paragraph 4 of the Accord. The U.S. listing is provided on the assumption that other Annex 1 Parties, as well as the more advanced non-Annex 1 parties, have, by January 31, associated with the Accord and submitted mitigation actions for compilation in accordance with paragraph 4 or paragraph 5 of the Accord, as the case may be.

We look forward to implementing the Accord, including those portions of the Accord that call for COP decisions.

Sincerely,

A handwritten signature in black ink, appearing to read "Todd Stern", written over a horizontal line.

Todd Stern  
U.S. Special Envoy for Climate Change

Attachment:  
U.S. Submission

Attachment:

## APPENDIX I

Annex I Parties	<i>Quantified economy-wide emissions targets for 2020</i>	
	Emissions reduction in 2020	Base year
United States of America	In the range of 17%, in conformity with anticipated U.S. energy and climate legislation, recognizing that the final target will be reported to the Secretariat in light of enacted legislation. [1]	2005

[1] The pathway set forth in pending legislation would entail a 30% reduction in 2025 and a 42% reduction in 2030, in line with the goal to reduce emissions 83% by 2050.

# Climate Change 2007: Synthesis Report

---

## Synthesis Report

### **An Assessment of the Intergovernmental Panel on Climate Change**

*This underlying report, adopted section by section at IPCC Plenary XXVII (Valencia, Spain, 12-17 November 2007), represents the formally agreed statement of the IPCC concerning key findings and uncertainties contained in the Working Group contributions to the Fourth Assessment Report.*

---

Based on a draft prepared by:

#### **Core Writing Team**

## **Introduction**

---

## Introduction

This Synthesis Report is based on the assessment carried out by the three Working Groups (WGs) of the Intergovernmental Panel on Climate Change (IPCC). It provides an integrated view of climate change as the final part of the IPCC's Fourth Assessment Report (AR4).

Topic 1 summarises observed changes in climate and their effects on natural and human systems, regardless of their causes, while Topic 2 assesses the causes of the observed changes. Topic 3 presents projections of future climate change and related impacts under different scenarios.

Topic 4 discusses adaptation and mitigation options over the next few decades and their interactions with sustainable develop-

ment. Topic 5 assesses the relationship between adaptation and mitigation on a more conceptual basis and takes a longer-term perspective. Topic 6 summarises the major robust findings and remaining key uncertainties in this assessment.

A schematic framework representing anthropogenic drivers, impacts of and responses to climate change, and their linkages, is shown in Figure I.1. At the time of the Third Assessment Report (TAR) in 2001, information was mainly available to describe the linkages clockwise, i.e. to derive climatic changes and impacts from socio-economic information and emissions. With increased understanding of these linkages, it is now possible to assess the linkages also counterclockwise, i.e. to evaluate possible development pathways and global emissions constraints that would reduce the risk of future impacts that society may wish to avoid.

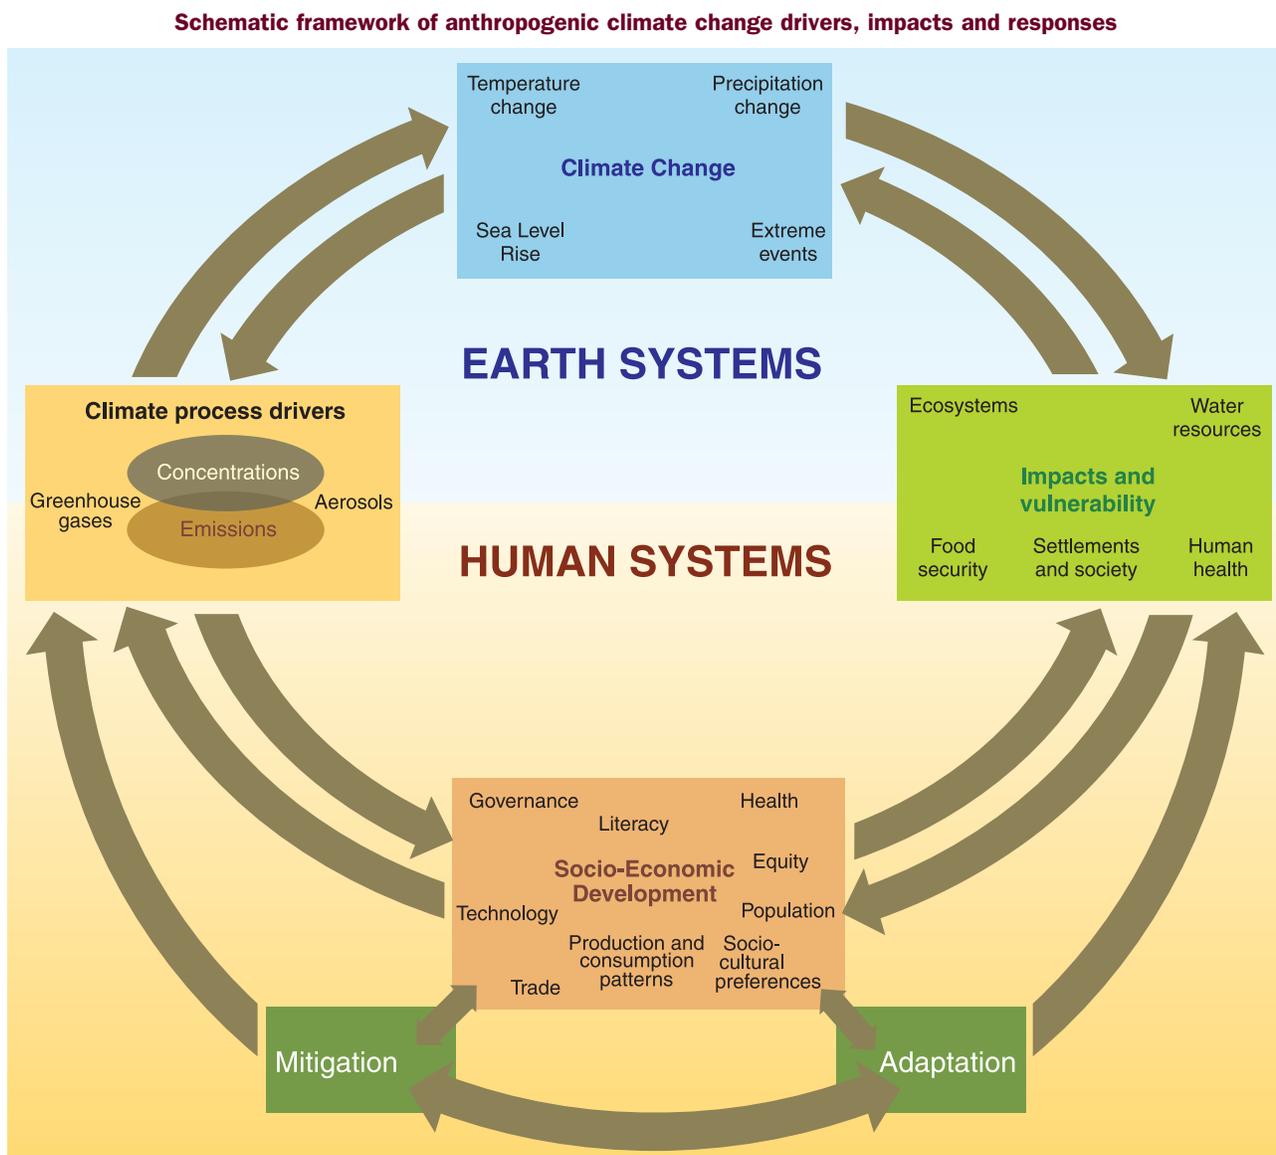

Figure I.1. Schematic framework representing anthropogenic drivers, impacts of and responses to climate change, and their linkages.

## Treatment of uncertainty

The IPCC uncertainty guidance note<sup>1</sup> defines a framework for the treatment of uncertainties across all WGs and in this Synthesis Report. This framework is broad because the WGs assess material from different disciplines and cover a diversity of approaches to the treatment of uncertainty drawn from the literature. The nature of data, indicators and analyses used in the natural sciences is generally different from that used in assessing technology development or the social sciences. WG I focuses on the former, WG III on the latter, and WG II covers aspects of both.

Three different approaches are used to describe uncertainties each with a distinct form of language. Choices among and within these three approaches depend on both the nature of the information available and the authors' expert judgment of the correctness and completeness of current scientific understanding.

Where uncertainty is assessed qualitatively, it is characterised by providing a relative sense of the amount and quality of evidence (that is, information from theory, observations or models indicating whether a belief or proposition is true or valid) and the degree of agreement (that is, the level of concurrence in the literature on a particular finding). This approach is used by WG III through a series of self-explanatory terms such as: *high agreement, much evidence*; *high agreement, medium evidence*; *medium agreement, medium evidence*; etc.

Where uncertainty is assessed more quantitatively using expert judgement of the correctness of underlying data, models or analyses, then the following scale of confidence levels is used to express the assessed chance of a finding being correct: *very high confidence* at least 9 out of 10; *high confidence* about 8 out of 10; *medium confidence* about 5 out of 10; *low confidence* about 2 out of 10; and *very low confidence* less than 1 out of 10.

Where uncertainty in specific outcomes is assessed using expert judgment and statistical analysis of a body of evidence (e.g. observations or model results), then the following likelihood ranges are used to express the assessed probability of occurrence: *virtually certain* >99%; *extremely likely* >95%; *very likely* >90%; *likely* >66%; *more likely than not* > 50%; *about as likely as not* 33% to 66%; *unlikely* <33%; *very unlikely* <10%; *extremely unlikely* <5%; *exceptionally unlikely* <1%.

WG II has used a combination of confidence and likelihood assessments and WG I has predominantly used likelihood assessments.

This Synthesis Report follows the uncertainty assessment of the underlying WGs. Where synthesised findings are based on information from more than one WG, the description of uncertainty used is consistent with that for the components drawn from the respective WG reports.

Unless otherwise stated, numerical ranges given in square brackets in this report indicate 90% uncertainty intervals (i.e. there is an estimated 5% likelihood that the value could be above the range given in square brackets and 5% likelihood that the value could be below that range). Uncertainty intervals are not necessarily symmetric around the best estimate.

## **Observed changes in climate and their effects**

---

## 1.1 Observations of climate change

Since the TAR, progress in understanding how climate is changing in space and time has been gained through improvements and extensions of numerous datasets and data analyses, broader geographical coverage, better understanding of uncertainties and a wider variety of measurements. *{WGI SPM}*

### Definitions of climate change

Climate change in IPCC usage refers to a change in the state of the climate that can be identified (e.g. using statistical tests) by changes in the mean and/or the variability of its properties, and that persists for an extended period, typically decades or longer. It refers to any change in climate over time, whether due to natural variability or as a result of human activity. This usage differs from that in the United Nations Framework Convention on Climate Change (UNFCCC), where climate change refers to a change of climate that is attributed directly or indirectly to human activity that alters the composition of the global atmosphere and that is in addition to natural climate variability observed over comparable time periods.

**Warming of the climate system is unequivocal, as is now evident from observations of increases in global average air and ocean temperatures, widespread melting of snow and ice and rising global average sea level (Figure 1.1).** *{WGI 3.2, 4.8, 5.2, 5.5, SPM}*

Eleven of the last twelve years (1995-2006) rank among the twelve warmest years in the instrumental record of global surface temperature (since 1850). The 100-year linear trend (1906-2005) of 0.74 [0.56 to 0.92]°C is larger than the corresponding trend of 0.6 [0.4 to 0.8]°C (1901-2000) given in the TAR (Figure 1.1). The linear warming trend over the 50 years from 1956 to 2005 (0.13 [0.10 to 0.16]°C per decade) is nearly twice that for the 100 years from 1906 to 2005. *{WGI 3.2, SPM}*

The temperature increase is widespread over the globe and is greater at higher northern latitudes (Figure 1.2). Average Arctic temperatures have increased at almost twice the global average rate in the past 100 years. Land regions have warmed faster than the oceans (Figures 1.2 and 2.5). Observations since 1961 show that the average temperature of the global ocean has increased to depths of at least 3000m and that the ocean has been taking up over 80% of the heat being added to the climate system. New analyses of balloon-borne and satellite measurements of lower- and mid-tropospheric temperature show warming rates similar to those observed in surface temperature. *{WGI 3.2, 3.4, 5.2, SPM}*

Increases in sea level are consistent with warming (Figure 1.1). Global average sea level rose at an average rate of 1.8 [1.3 to 2.3]mm per year over 1961 to 2003 and at an average rate of about 3.1 [2.4 to 3.8]mm per year from 1993 to 2003. Whether this faster rate for 1993 to 2003 reflects decadal variation or an increase in the longer-

term trend is unclear. Since 1993 thermal expansion of the oceans has contributed about 57% of the sum of the estimated individual contributions to the sea level rise, with decreases in glaciers and ice caps contributing about 28% and losses from the polar ice sheets contributing the remainder. From 1993 to 2003 the sum of these climate contributions is consistent within uncertainties with the total sea level rise that is directly observed. *{WGI 4.6, 4.8, 5.5, SPM, Table SPM.1}*

Observed decreases in snow and ice extent are also consistent with warming (Figure 1.1). Satellite data since 1978 show that annual average Arctic sea ice extent has shrunk by 2.7 [2.1 to 3.3]% per decade, with larger decreases in summer of 7.4 [5.0 to 9.8]% per decade. Mountain glaciers and snow cover on average have declined in both hemispheres. The maximum areal extent of seasonally frozen ground has decreased by about 7% in the Northern Hemisphere since 1900, with decreases in spring of up to 15%. Temperatures at the top of the permafrost layer have generally increased since the 1980s in the Arctic by up to 3°C. *{WGI 3.2, 4.5, 4.6, 4.7, 4.8, 5.5, SPM}*

At continental, regional and ocean basin scales, numerous long-term changes in other aspects of climate have also been observed. Trends from 1900 to 2005 have been observed in precipitation amount in many large regions. Over this period, precipitation increased significantly in eastern parts of North and South America, northern Europe and northern and central Asia whereas precipitation declined in the Sahel, the Mediterranean, southern Africa and parts of southern Asia. Globally, the area affected by drought has *likely*<sup>2</sup> increased since the 1970s. *{WGI 3.3, 3.9, SPM}*

Some extreme weather events have changed in frequency and/or intensity over the last 50 years:

- It is *very likely* that cold days, cold nights and frosts have become less frequent over most land areas, while hot days and hot nights have become more frequent. *{WGI 3.8, SPM}*
- It is *likely* that heat waves have become more frequent over most land areas. *{WGI 3.8, SPM}*
- It is *likely* that the frequency of heavy precipitation events (or proportion of total rainfall from heavy falls) has increased over most areas. *{WGI 3.8, 3.9, SPM}*
- It is *likely* that the incidence of extreme high sea level<sup>3</sup> has increased at a broad range of sites worldwide since 1975. *{WGI 5.5, SPM}*

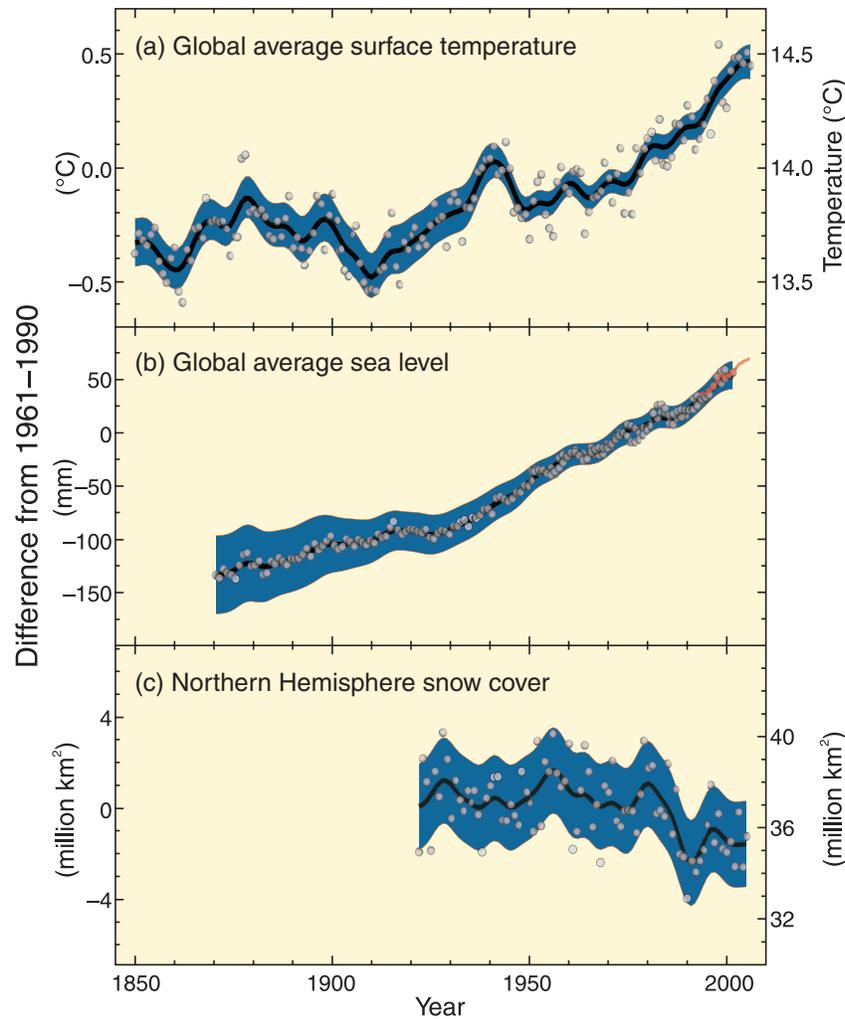

There is observational evidence of an increase in intense tropical cyclone activity in the North Atlantic since about 1970, and suggestions of increased intense tropical cyclone activity in some other regions where concerns over data quality are greater. Multi-decadal variability and the quality of the tropical cyclone records prior to routine satellite observations in about 1970 complicate the detection of long-term trends in tropical cyclone activity. *{WGI 3.8, SPM}*

Average Northern Hemisphere temperatures during the second half of the 20<sup>th</sup> century were *very likely* higher than during any other 50-year period in the last 500 years and *likely* the highest in at least the past 1300 years. *{WGI 6.6, SPM}*

<sup>2</sup> Likelihood and confidence statements in italics represent calibrated expressions of uncertainty and confidence. See Box 'Treatment of uncertainty' in the Introduction for an explanation of these terms.

<sup>3</sup> Excluding tsunamis, which are not due to climate change. Extreme high sea level depends on average sea level and on regional weather systems. It is defined here as the highest 1% of hourly values of observed sea level at a station for a given reference period.

**Changes in temperature, sea level and Northern Hemisphere snow cover**

**Figure 1.1.** Observed changes in (a) global average surface temperature; (b) global average sea level from tide gauge (blue) and satellite (red) data; and (c) Northern Hemisphere snow cover for March-April. All differences are relative to corresponding averages for the period 1961-1990. Smoothed curves represent decadal averaged values while circles show yearly values. The shaded areas are the uncertainty intervals estimated from a comprehensive analysis of known uncertainties (a and b) and from the time series (c). {WGI FAQ 3.1 Figure 1, Figure 4.2, Figure 5.13, Figure SPM.3}

**1.2 Observed effects of climate changes**

The statements presented here are based largely on data sets that cover the period since 1970. The number of studies of observed trends in the physical and biological environment and their relationship to regional climate changes has increased greatly since the TAR. The quality of the data sets has also improved. There is a notable lack of geographic balance in data and literature on observed changes, with marked scarcity in developing countries. {WGII SPM}

These studies have allowed a broader and more confident assessment of the relationship between observed warming and impacts than was made in the TAR. That assessment concluded that “there is high confidence<sup>2</sup> that recent regional changes in temperature have had discernible impacts on physical and biological systems”. {WGII SPM}

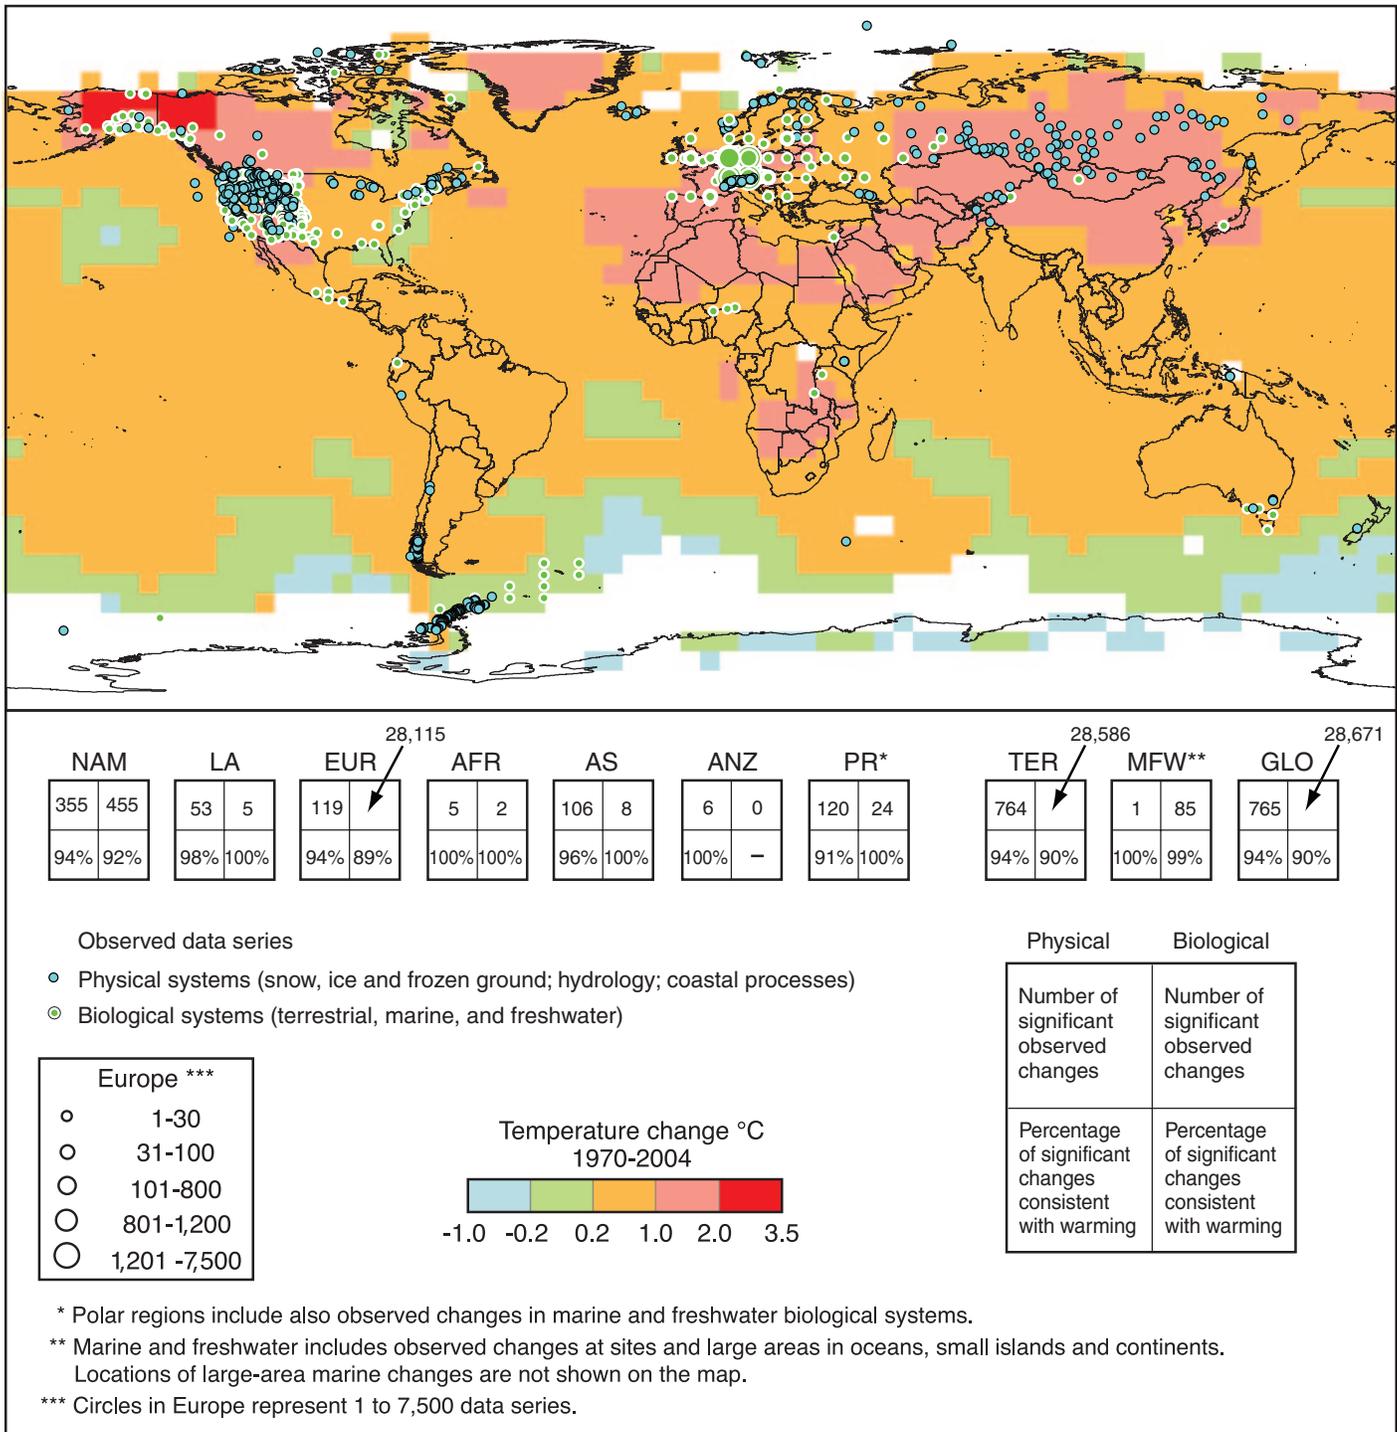

**Observational evidence from all continents and most oceans shows that many natural systems are being affected by regional climate changes, particularly temperature increases.** {WGII SPM}

There is high confidence that natural systems related to snow, ice and frozen ground (including permafrost) are affected. Examples are:

- enlargement and increased numbers of glacial lakes {WGII 1.3, SPM}
- increasing ground instability in permafrost regions and rock avalanches in mountain regions {WGII 1.3, SPM}
- changes in some Arctic and Antarctic ecosystems, including those in sea-ice biomes, and predators at high levels of the food web. {WGII 1.3, 4.4, 15.4, SPM}

Based on growing evidence, there is high confidence that the following effects on hydrological systems are occurring: increased runoff and earlier spring peak discharge in many glacier- and snow-fed rivers, and warming of lakes and rivers in many regions, with effects on thermal structure and water quality. {WGII 1.3, 15.2, SPM}

**Changes in physical and biological systems and surface temperature 1970-2004**

**Figure 1.2.** Locations of significant changes in data series of physical systems (snow, ice and frozen ground; hydrology; and coastal processes) and biological systems (terrestrial, marine, and freshwater biological systems), are shown together with surface air temperature changes over the period 1970-2004. A subset of about 29,000 data series was selected from about 80,000 data series from 577 studies. These met the following criteria: (1) ending in 1990 or later; (2) spanning a period of at least 20 years; and (3) showing a significant change in either direction, as assessed in individual studies. These data series are from about 75 studies (of which about 70 are new since the TAR) and contain about 29,000 data series, of which about 28,000 are from European studies. White areas do not contain sufficient observational climate data to estimate a temperature trend. The 2 x 2 boxes show the total number of data series with significant changes (top row) and the percentage of those consistent with warming (bottom row) for (i) continental regions: North America (NAM), Latin America (LA), Europe (EUR), Africa (AFR), Asia (AS), Australia and New Zealand (ANZ), and Polar Regions (PR) and (ii) global-scale: Terrestrial (TER), Marine and Freshwater (MFW), and Global (GLO). The numbers of studies from the seven regional boxes (NAM, ..., PR) do not add up to the global (GLO) totals because numbers from regions except Polar do not include the numbers related to Marine and Freshwater (MFW) systems. Locations of large-area marine changes are not shown on the map. {WGII Figure SPM.1, Figure 1.8, Figure 1.9; WGI Figure 3.9b}

There is *very high confidence*, based on more evidence from a wider range of species, that recent warming is strongly affecting terrestrial biological systems, including such changes as earlier timing of spring events, such as leaf-unfolding, bird migration and egg-laying; and poleward and upward shifts in ranges in plant and animal species. Based on satellite observations since the early 1980s, there is *high confidence* that there has been a trend in many regions towards earlier ‘greening’ of vegetation in the spring linked to longer thermal growing seasons due to recent warming. *{WGII 1.3, 8.2, 14.2, SPM}*

There is *high confidence*, based on substantial new evidence, that observed changes in marine and freshwater biological systems are associated with rising water temperatures, as well as related changes in ice cover, salinity, oxygen levels and circulation. These include: shifts in ranges and changes in algal, plankton and fish abundance in high-latitude oceans; increases in algal and zooplankton abundance in high-latitude and high-altitude lakes; and range changes and earlier fish migrations in rivers. While there is increasing evidence of climate change impacts on coral reefs, separating the impacts of climate-related stresses from other stresses (e.g. over-fishing and pollution) is difficult. *{WGII 1.3, SPM}*

**Other effects of regional climate changes on natural and human environments are emerging, although many are difficult to discern due to adaptation and non-climatic drivers.** *{WGII SPM}*

Effects of temperature increases have been documented with *medium confidence* in the following managed and human systems:

- agricultural and forestry management at Northern Hemisphere higher latitudes, such as earlier spring planting of crops, and alterations in disturbances of forests due to fires and pests *{WGII 1.3, SPM}*
- some aspects of human health, such as excess heat-related mortality in Europe, changes in infectious disease vectors in parts of Europe, and earlier onset of and increases in seasonal production of allergenic pollen in Northern Hemisphere high and mid-latitudes *{WGII 1.3, 8.2, 8.ES, SPM}*
- some human activities in the Arctic (e.g. hunting and shorter

travel seasons over snow and ice) and in lower-elevation alpine areas (such as limitations in mountain sports). *{WGII 1.3, SPM}*

Sea level rise and human development are together contributing to losses of coastal wetlands and mangroves and increasing damage from coastal flooding in many areas. However, based on the published literature, the impacts have not yet become established trends. *{WGII 1.3, 1.ES, SPM}*

### 1.3 Consistency of changes in physical and biological systems with warming

Changes in the ocean and on land, including observed decreases in snow cover and Northern Hemisphere sea ice extent, thinner sea ice, shorter freezing seasons of lake and river ice, glacier melt, decreases in permafrost extent, increases in soil temperatures and borehole temperature profiles, and sea level rise, provide additional evidence that the world is warming. *{WGI 3.9}*

Of the more than 29,000 observational data series, from 75 studies, that show significant change in many physical and biological systems, more than 89% are consistent with the direction of change expected as a response to warming (Figure 1.2). *{WGII 1.4, SPM}*

### 1.4 Some aspects of climate have not been observed to change

Some aspects of climate appear not to have changed and, for some, data inadequacies mean that it cannot be determined if they have changed. Antarctic sea ice extent shows inter-annual variability and localised changes but no statistically significant average multi-decadal trend, consistent with the lack of rise in near-surface atmospheric temperatures averaged across the continent. There is insufficient evidence to determine whether trends exist in some other variables, for example the meridional overturning circulation (MOC) of the global ocean or small-scale phenomena such as tornadoes, hail, lightning and dust storms. There is no clear trend in the annual numbers of tropical cyclones. *{WGI 3.2, 3.8, 4.4, 5.3, SPM}*

# 2

---

## Causes of change

---

## Causes of change

This Topic considers both natural and anthropogenic drivers of climate change, including the chain from greenhouse gas (GHG) emissions to atmospheric concentrations to radiative forcing<sup>4</sup> to climate responses and effects.

### 2.1 Emissions of long-lived GHGs

The radiative forcing of the climate system is dominated by the long-lived GHGs, and this section considers those whose emissions are covered by the UNFCCC.

**Global GHG emissions due to human activities have grown since pre-industrial times, with an increase of 70% between 1970 and 2004 (Figure 2.1).<sup>5</sup> {WGIII 1.3, SPM}**

Carbon dioxide (CO<sub>2</sub>) is the most important anthropogenic GHG. Its annual emissions have grown between 1970 and 2004 by about 80%, from 21 to 38 gigatonnes (Gt), and represented 77% of total anthropogenic GHG emissions in 2004 (Figure 2.1). The rate of growth of CO<sub>2</sub>-eq emissions was much higher during the recent 10-year period of 1995-2004 (0.92 GtCO<sub>2</sub>-eq per year) than during the previous period of 1970-1994 (0.43 GtCO<sub>2</sub>-eq per year). {WGIII 1.3, TS.1, SPM}

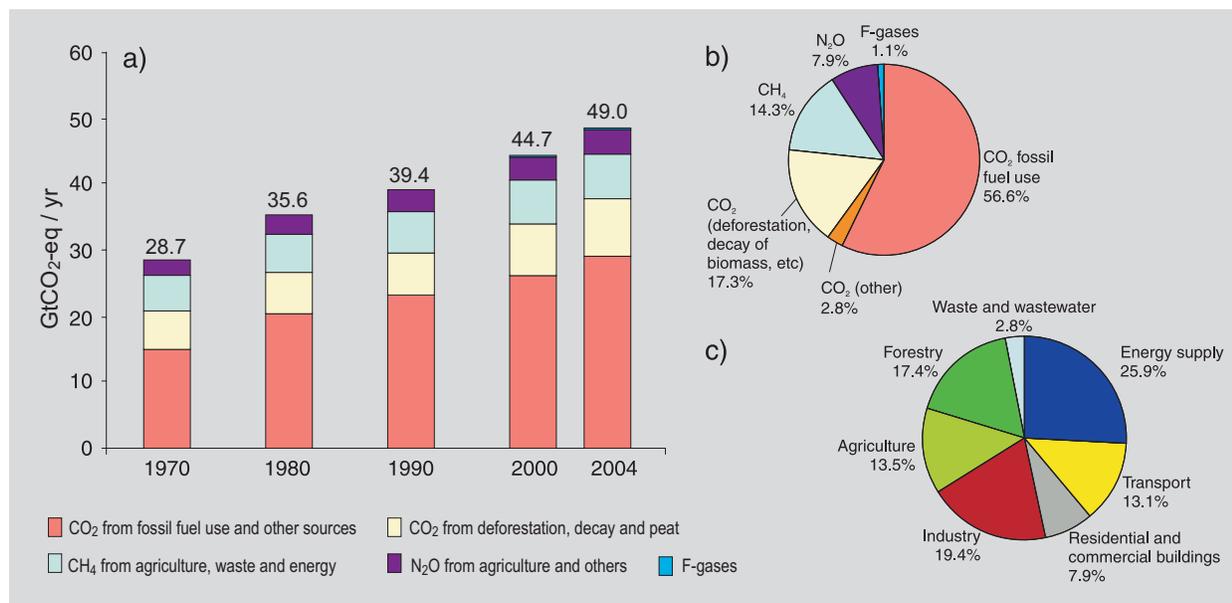

### Carbon dioxide-equivalent (CO<sub>2</sub>-eq) emissions and concentrations

GHGs differ in their warming influence (radiative forcing) on the global climate system due to their different radiative properties and lifetimes in the atmosphere. These warming influences may be expressed through a common metric based on the radiative forcing of CO<sub>2</sub>.

- **CO<sub>2</sub>-equivalent emission** is the amount of CO<sub>2</sub> emission that would cause the same time-integrated radiative forcing, over a given time horizon, as an emitted amount of a long-lived GHG or a mixture of GHGs. The equivalent CO<sub>2</sub> emission is obtained by multiplying the emission of a GHG by its Global Warming Potential (GWP) for the given time horizon.<sup>6</sup> For a mix of GHGs it is obtained by summing the equivalent CO<sub>2</sub> emissions of each gas. Equivalent CO<sub>2</sub> emission is a standard and useful metric for comparing emissions of different GHGs but does not imply the same climate change responses (see WGI 2.10).
- **CO<sub>2</sub>-equivalent concentration** is the concentration of CO<sub>2</sub> that would cause the same amount of radiative forcing as a given mixture of CO<sub>2</sub> and other forcing components.<sup>7</sup>

The largest growth in GHG emissions between 1970 and 2004 has come from energy supply, transport and industry, while residential and commercial buildings, forestry (including deforestation) and agriculture sectors have been growing at a lower rate. The

#### Global anthropogenic GHG emissions

**Figure 2.1.** (a) Global annual emissions of anthropogenic GHGs from 1970 to 2004.<sup>5</sup> (b) Share of different anthropogenic GHGs in total emissions in 2004 in terms of CO<sub>2</sub>-eq. (c) Share of different sectors in total anthropogenic GHG emissions in 2004 in terms of CO<sub>2</sub>-eq. (Forestry includes deforestation.) {WGIII Figures TS.1a, TS.1b, TS.2b}

<sup>4</sup> Radiative forcing is a measure of the influence a factor has in altering the balance of incoming and outgoing energy in the Earth-atmosphere system and is an index of the importance of the factor as a potential climate change mechanism. In this report radiative forcing values are for changes relative to pre-industrial conditions defined at 1750 and are expressed in watts per square metre (W/m<sup>2</sup>).

<sup>5</sup> Includes only carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs) and sulphurhexafluoride (SF<sub>6</sub>), whose emissions are covered by the UNFCCC. These GHGs are weighted by their 100-year Global Warming Potentials (GWPs), using values consistent with reporting under the UNFCCC.

<sup>6</sup> This report uses 100-year GWPs and numerical values consistent with reporting under the UNFCCC.

<sup>7</sup> Such values may consider only GHGs, or a combination of GHGs and aerosols.

sectoral sources of GHGs in 2004 are considered in Figure 2.1c. *{WGIII 1.3, SPM}*

The effect on global emissions of the decrease in global energy intensity (-33%) during 1970 to 2004 has been smaller than the combined effect of global income growth (77%) and global population growth (69%); both drivers of increasing energy-related CO<sub>2</sub> emissions. The long-term trend of declining CO<sub>2</sub> emissions per unit of energy supplied reversed after 2000. *{WGIII 1.3, Figure SPM.2, SPM}*

Differences in per capita income, per capita emissions and energy intensity among countries remain significant. In 2004, UNFCCC Annex I countries held a 20% share in world population, produced 57% of the world's Gross Domestic Product based on Purchasing Power Parity (GDP<sub>PPP</sub>) and accounted for 46% of global GHG emissions (Figure 2.2). *{WGIII 1.3, SPM}*

## 2.2 Drivers of climate change

Changes in the atmospheric concentrations of GHGs and aerosols, land cover and solar radiation alter the energy balance of the climate system and are drivers of climate change. They affect the absorption, scattering and emission of radiation within the atmosphere and at the Earth's surface. The resulting positive or negative changes in energy balance due to these factors are expressed as radiative forcing<sup>4</sup>, which is used to compare warming or cooling influences on global climate. *{WGI TS.2}*

Human activities result in emissions of four long-lived GHGs: CO<sub>2</sub>, methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O) and halocarbons (a group of gases containing fluorine, chlorine or bromine). Atmospheric concentrations of GHGs increase when emissions are larger than removal processes.

**Global atmospheric concentrations of CO<sub>2</sub>, CH<sub>4</sub> and N<sub>2</sub>O have increased markedly as a result of human activities since 1750 and now far exceed pre-industrial values determined from ice cores spanning many thousands of years**

**(Figure 2.3). The atmospheric concentrations of CO<sub>2</sub> and CH<sub>4</sub> in 2005 exceed by far the natural range over the last 650,000 years. Global increases in CO<sub>2</sub> concentrations are due primarily to fossil fuel use, with land-use change providing another significant but smaller contribution. It is *very likely* that the observed increase in CH<sub>4</sub> concentration is predominantly due to agriculture and fossil fuel use. The increase in N<sub>2</sub>O concentration is primarily due to agriculture. *{WGI 2.3, 7.3, SPM}***

The global atmospheric concentration of CO<sub>2</sub> increased from a pre-industrial value of about 280ppm to 379ppm in 2005. The annual CO<sub>2</sub> concentration growth rate was larger during the last 10 years (1995-2005 average: 1.9ppm per year) than it has been since the beginning of continuous direct atmospheric measurements (1960-2005 average: 1.4ppm per year), although there is year-to-year variability in growth rates. *{WGI 2.3, 7.3, SPM; WGIII 1.3}*

The global atmospheric concentration of CH<sub>4</sub> has increased from a pre-industrial value of about 715ppb to 1732ppb in the early 1990s, and was 1774ppb in 2005. Growth rates have declined since the early 1990s, consistent with total emissions (sum of anthropogenic and natural sources) being nearly constant during this period. *{WGI 2.3, 7.4, SPM}*

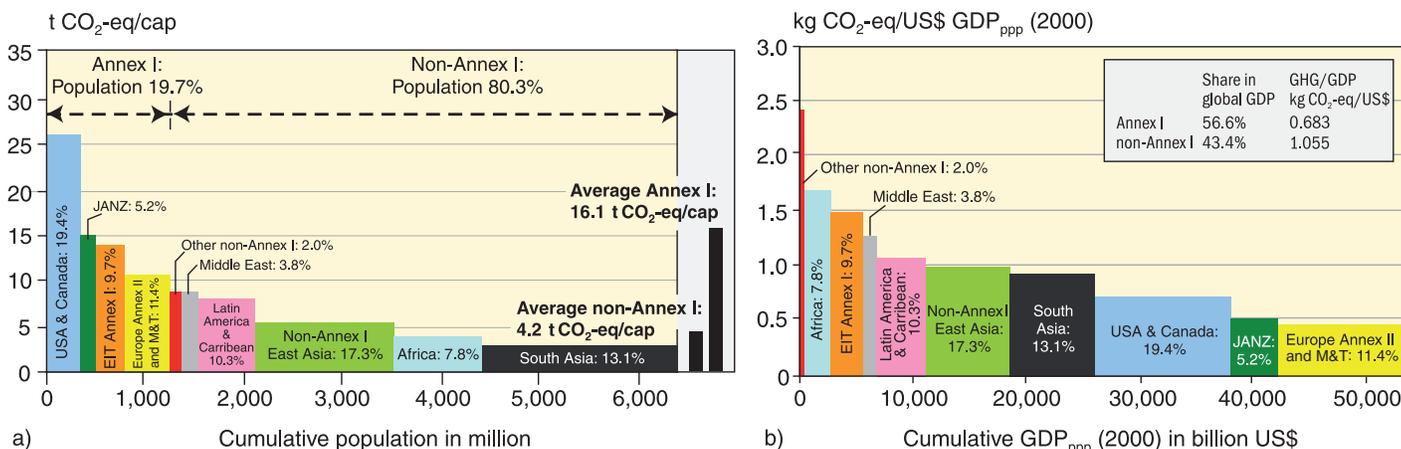

The global atmospheric N<sub>2</sub>O concentration increased from a pre-industrial value of about 270ppb to 319ppb in 2005. *{WGI 2.3, 7.4, SPM}*

Many halocarbons (including hydrofluorocarbons) have increased from a near-zero pre-industrial background concentration, primarily due to human activities. *{WGI 2.3, SPM; SROC SPM}*

**There is *very high confidence* that the global average net effect of human activities since 1750 has been one of warming, with a radiative forcing of +1.6 [+0.6 to +2.4] W/m<sup>2</sup> (Figure 2.4). *{WGI 2.3, 6.5, 2.9, SPM}***

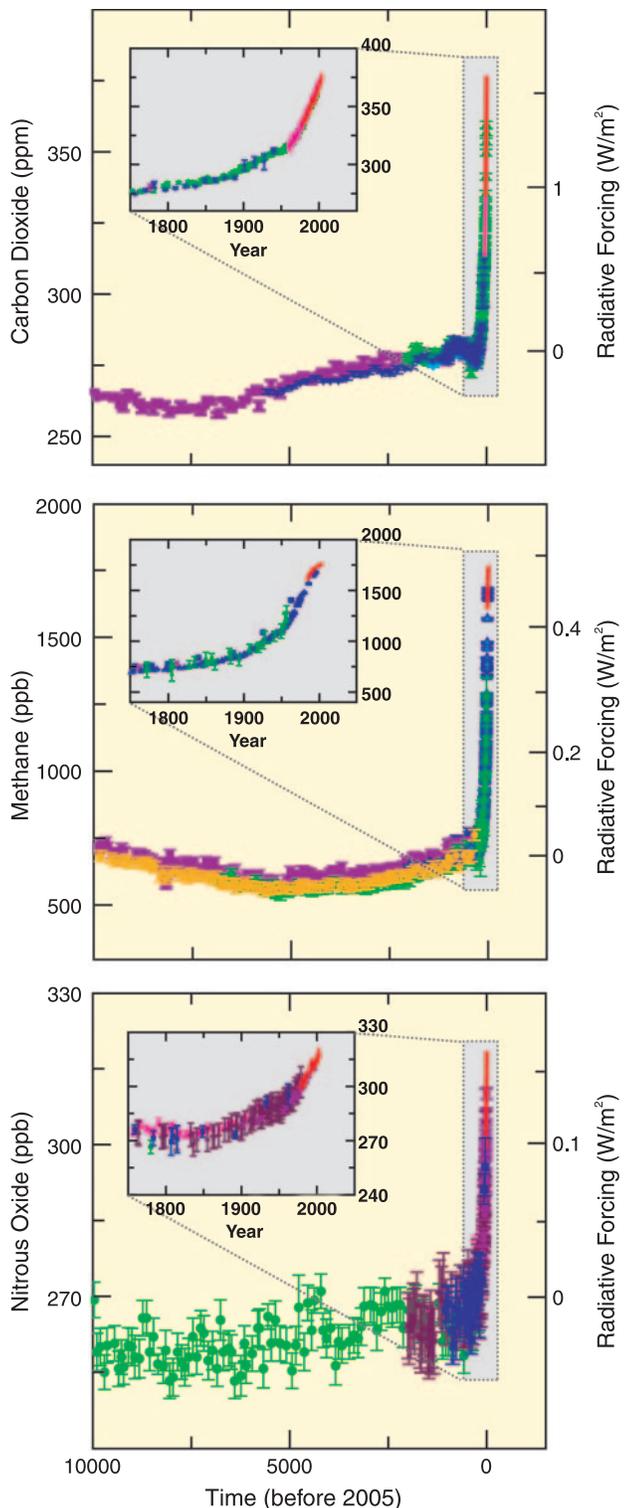

The combined radiative forcing due to increases in CO<sub>2</sub>, CH<sub>4</sub> and N<sub>2</sub>O is +2.3 [+2.1 to +2.5] W/m<sup>2</sup>, and its rate of increase during

### Regional distribution of GHG emissions by population and by GDP<sub>PPP</sub>

**Figure 2.2.** (a) Distribution of regional per capita GHG emissions according to the population of different country groupings in 2004 (see appendix for definitions of country groupings). (b) Distribution of regional GHG emissions per US\$ of GDP<sub>PPP</sub> over the GDP of different country groupings in 2004. The percentages in the bars in both panels indicate a region's share in global GHG emissions. *{WGIII Figures SPM.3a, SPM.3b}*

## Changes in GHGs from ice core and modern data

**Figure 2.3.** Atmospheric concentrations of  $\text{CO}_2$ ,  $\text{CH}_4$  and  $\text{N}_2\text{O}$  over the last 10,000 years (large panels) and since 1750 (inset panels). Measurements are shown from ice cores (symbols with different colours for different studies) and atmospheric samples (red lines). The corresponding radiative forcings relative to 1750 are shown on the right hand axes of the large panels. {WGI Figure SPM.1}

the industrial era is *very likely* to have been unprecedented in more than 10,000 years (Figures 2.3 and 2.4). The  $\text{CO}_2$  radiative forcing increased by 20% from 1995 to 2005, the largest change for any decade in at least the last 200 years. {WGI 2.3, 6.4, SPM}

Anthropogenic contributions to aerosols (primarily sulphate, organic carbon, black carbon, nitrate and dust) together produce a cooling effect, with a total direct radiative forcing of  $-0.5$  [ $-0.9$  to  $-0.1$ ]  $\text{W/m}^2$  and an indirect cloud albedo forcing of  $-0.7$  [ $-1.8$  to  $-0.3$ ]  $\text{W/m}^2$ . Aerosols also influence precipitation. {WGI 2.4, 2.9, 7.5, SPM}

In comparison, changes in solar irradiance since 1750 are estimated to have caused a small radiative forcing of  $+0.12$  [ $+0.06$  to  $+0.30$ ]  $\text{W/m}^2$ , which is less than half the estimate given in the TAR. {WGI 2.7, SPM}

## 2.3 Climate sensitivity and feedbacks

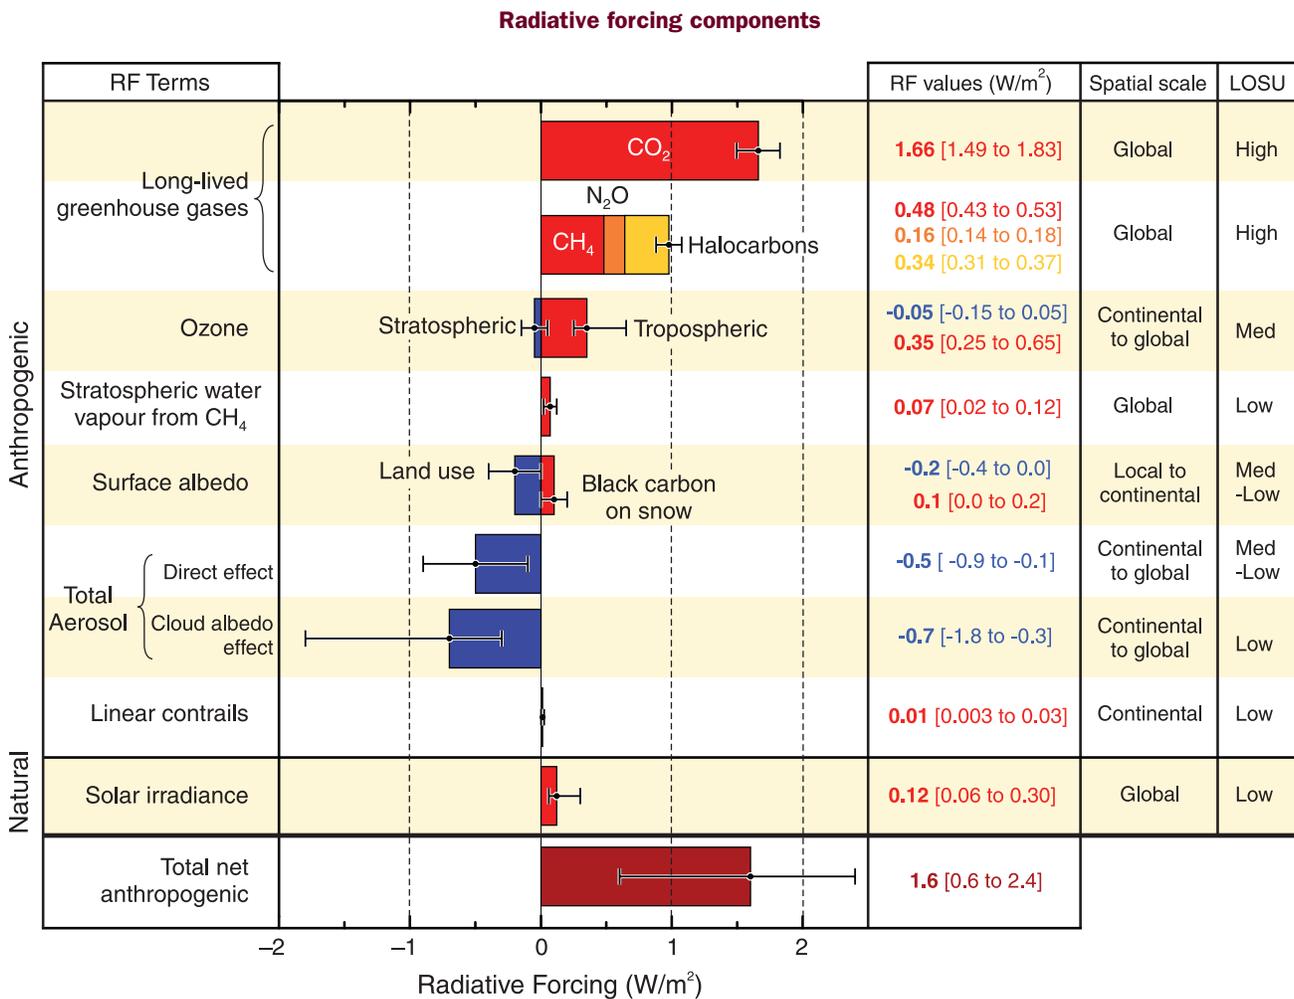

The equilibrium climate sensitivity is a measure of the climate system response to sustained radiative forcing. It is defined as the equilibrium global average surface warming following a doubling of  $\text{CO}_2$  concentration. Progress since the TAR enables an assessment that climate sensitivity is *likely* to be in the range of  $2$  to  $4.5^\circ\text{C}$  with a best estimate of about  $3^\circ\text{C}$ , and is *very unlikely* to be less than  $1.5^\circ\text{C}$ . Values substantially higher than  $4.5^\circ\text{C}$  cannot be excluded, but agreement of models with observations is not as good for those values. {WGI 8.6, 9.6, Box 10.2, SPM}

Feedbacks can amplify or dampen the response to a given forcing. Direct emission of water vapour (a greenhouse gas) by human activities makes a negligible contribution to radiative forcing. However, as global average temperature increases, tropospheric water vapour concentrations increase and this represents a key positive feedback but not a forcing of climate change. Water vapour changes represent the largest feedback affecting equilibrium climate sensitivity and are now better understood than in the TAR. Cloud feedbacks remain the largest source of uncertainty. Spatial patterns of climate response are largely controlled by climate processes and feedbacks. For example, sea-ice albedo feedbacks tend to enhance the high latitude response. {WGI 2.8, 8.6, 9.2, TS.2.1.3, TS.2.5, SPM}

Warming reduces terrestrial and ocean uptake of atmospheric  $\text{CO}_2$ , increasing the fraction of anthropogenic emissions remaining in the atmosphere. This positive carbon cycle feedback leads to larger atmospheric  $\text{CO}_2$  increases and greater climate change for a given emissions scenario, but the strength of this feedback effect varies markedly among models. {WGI 7.3, TS.5.4, SPM; WGI 4.4}

## 2.4 Attribution of climate change

Attribution evaluates whether observed changes are quantitatively consistent with the expected response to external forcings (e.g. changes in solar irradiance or anthropogenic GHGs) and inconsistent with alternative physically plausible explanations. {WGI TS.4, SPM}

**Figure 2.4.** Global average radiative forcing (RF) in 2005 (best estimates and 5 to 95% uncertainty ranges) with respect to 1750 for CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O and other important agents and mechanisms, together with the typical geographical extent (spatial scale) of the forcing and the assessed level of scientific understanding (LOSU). Aerosols from explosive volcanic eruptions contribute an additional episodic cooling term for a few years following an eruption. The range for linear contrails does not include other possible effects of aviation on cloudiness. {WGI Figure SPM.2}

**Most of the observed increase in global average temperatures since the mid-20<sup>th</sup> century is very likely due to the observed increase in anthropogenic GHG concentrations.<sup>8</sup> This is an advance since the TAR’s conclusion that “most of the observed warming over the last 50 years is likely to have been due to the increase in GHG concentrations” (Figure 2.5). {WGI 9.4, SPM}**

The observed widespread warming of the atmosphere and ocean, together with ice mass loss, support the conclusion that it is *extremely unlikely* that global climate change of the past 50 years can be explained without external forcing and *very likely* that it is not due to known natural causes alone. During this period, the sum of solar and volcanic forcings would *likely* have produced cooling, not warming. Warming of the climate system has been detected in changes in surface and atmospheric temperatures and in temperatures of the upper several hundred metres of the ocean. The observed pattern of tropospheric warming and stratospheric cooling

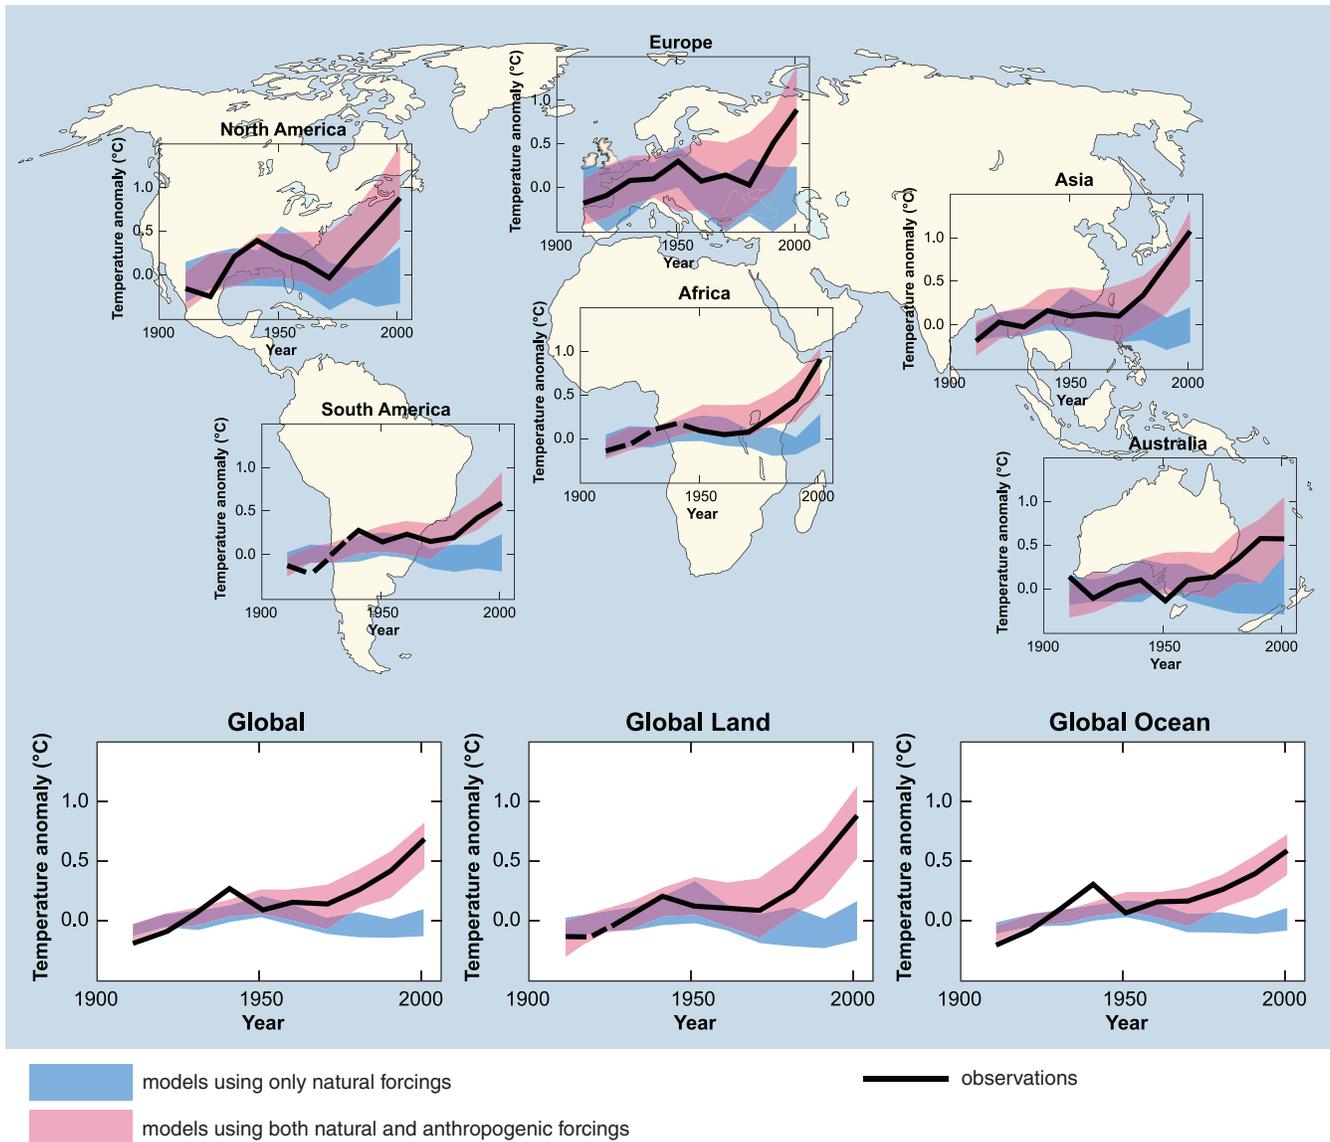

is *very likely* due to the combined influences of GHG increases and stratospheric ozone depletion. It is *likely* that increases in GHG concentrations alone would have caused more warming than observed because volcanic and anthropogenic aerosols have offset some warming that would otherwise have taken place. {WGI 2.9, 3.2, 3.4, 4.8, 5.2, 7.5, 9.4, 9.5, 9.7, TS.4.1, SPM}

**It is likely that there has been significant anthropogenic warming over the past 50 years averaged over each continent (except Antarctica) (Figure 2.5). {WGI 3.2, 9.4, SPM}**

The observed patterns of warming, including greater warming over land than over the ocean, and their changes over time, are simulated only by models that include anthropogenic forcing. No coupled global climate model that has used natural forcing only has reproduced the continental mean warming trends in individual continents (except Antarctica) over the second half of the 20<sup>th</sup> century. {WGI 3.2, 9.4, TS.4.2, SPM}

<sup>8</sup> Consideration of remaining uncertainty is based on current methodologies.

Global and continental temperature change

**Figure 2.5.** Comparison of observed continental- and global-scale changes in surface temperature with results simulated by climate models using either natural or both natural and anthropogenic forcings. Decadal averages of observations are shown for the period 1906-2005 (black line) plotted against the centre of the decade and relative to the corresponding average for the 1901-1950. Lines are dashed where spatial coverage is less than 50%. Blue shaded bands show the 5 to 95% range for 19 simulations from five climate models using only the natural forcings due to solar activity and volcanoes. Red shaded bands show the 5 to 95% range for 58 simulations from 14 climate models using both natural and anthropogenic forcings. {WGI Figure SPM.4}

Difficulties remain in simulating and attributing observed temperature changes at smaller scales. On these scales, natural climate variability is relatively larger, making it harder to distinguish changes expected due to external forcings. Uncertainties in local forcings, such as those due to aerosols and land-use change, and feedbacks also make it difficult to estimate the contribution of GHG increases to observed small-scale temperature changes. {WGI 8.3, 9.4, SPM}

**Advances since the TAR show that discernible human influences extend beyond average temperature to other aspects of climate, including temperature extremes and wind patterns. {WGI 9.4, 9.5, SPM}**

Temperatures of the most extreme hot nights, cold nights and cold days are *likely* to have increased due to anthropogenic forcing. It is *more likely than not* that anthropogenic forcing has increased the risk of heat waves. Anthropogenic forcing is *likely* to have contributed to changes in wind patterns, affecting extra-tropical storm tracks and temperature patterns in both hemispheres. However, the observed changes in the Northern Hemisphere circulation are larger than simulated by models in response to 20<sup>th</sup> century forcing change. {WGI 3.5, 3.6, 9.4, 9.5, 10.3, SPM}

It is *very likely* that the response to anthropogenic forcing contributed to sea level rise during the latter half of the 20<sup>th</sup> century. There is some evidence of the impact of human climatic influence

on the hydrological cycle, including the observed large-scale patterns of changes in land precipitation over the 20<sup>th</sup> century. It is *more likely than not* that human influence has contributed to a global trend towards increases in area affected by drought since the 1970s and the frequency of heavy precipitation events. {WGI 3.3, 5.5, 9.5, TS.4.1, TS.4.3}

**Anthropogenic warming over the last three decades has likely had a discernible influence at the global scale on observed changes in many physical and biological systems. {WGII 1.4}**

A synthesis of studies strongly demonstrates that the spatial agreement between regions of significant warming across the globe and the locations of significant observed changes in many natural systems consistent with warming is *very unlikely* to be due solely to natural variability of temperatures or natural variability of the

systems. Several modelling studies have linked some specific responses in physical and biological systems to anthropogenic warming, but only a few such studies have been performed. Taken together with evidence of significant anthropogenic warming over the past 50 years averaged over each continent (except Antarctica), it is *likely* that anthropogenic warming over the last three decades has had a discernible influence on many natural systems. {WGI 3.2, 9.4, SPM; WGII 1.4, SPM}

Limitations and gaps currently prevent more complete attribution of the causes of observed natural system responses to anthropogenic warming. The available analyses are limited in the number of systems, length of records and locations considered. Natural temperature variability is larger at the regional than the global scale, thus affecting identification of changes to external forcing. At the regional scale, other non-climate factors (such as land-use change, pollution and invasive species) are influential. {WGII 1.2, 1.3, 1.4, SPM}

# 3

---

## **Climate change and its impacts in the near and long term under different scenarios**

---

### 3.1 Emissions scenarios

There is *high agreement and much evidence*<sup>9</sup> that with current climate change mitigation policies and related sustainable development practices, global GHG emissions will continue to grow over the next few decades. Baseline emissions scenarios published since the IPCC Special Report on Emissions Scenarios (SRES, 2000) are comparable in range to those presented in SRES (see Box on SRES scenarios and Figure 3.1).<sup>10</sup> {WGIII 1.3, 3.2, SPM}

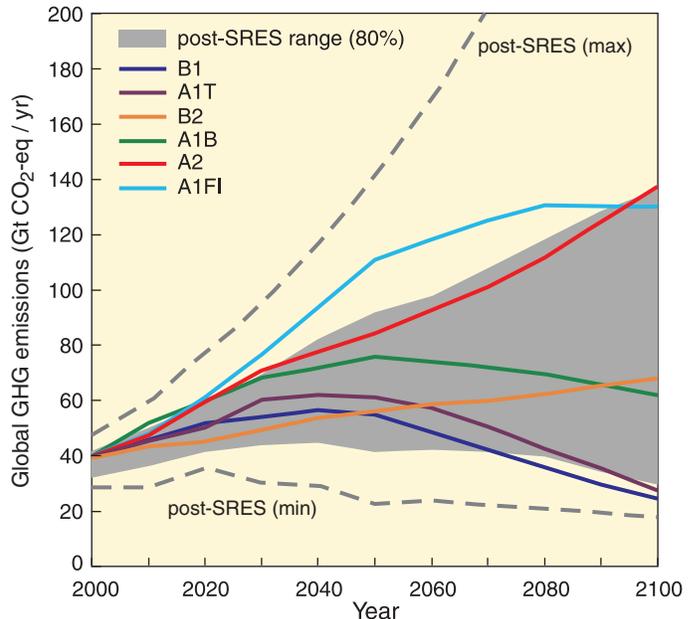

The SRES scenarios project an increase of baseline global GHG emissions by a range of 9.7 to 36.7 GtCO<sub>2</sub>-eq (25 to 90%) between 2000 and 2030. In these scenarios, fossil fuels are projected to maintain their dominant position in the global energy mix to 2030 and beyond. Hence CO<sub>2</sub> emissions from energy use between 2000 and 2030 are projected to grow 40 to 110% over that period. {WGIII 1.3, SPM}

Studies published since SRES (i.e. post-SRES scenarios) have used lower values for some drivers for emissions, notably population projections. However, for those studies incorporating these new population projections, changes in other drivers, such as economic growth, result in little change in overall emission levels. Economic growth projections for Africa, Latin America and the Middle East to 2030 in post-SRES baseline scenarios are lower than in SRES, but this has only minor effects on global economic growth and overall emissions. {WGIII 3.2, TS.3, SPM}

Aerosols have a net cooling effect and the representation of aerosol and aerosol precursor emissions, including sulphur dioxide, black carbon and organic carbon, has improved in the post-SRES scenarios. Generally, these emissions are projected to be lower than reported in SRES. {WGIII 3.2, TS.3, SPM}

Available studies indicate that the choice of exchange rate for Gross Domestic Product (GDP) (Market Exchange Rate, MER or

#### Scenarios for GHG emissions from 2000 to 2100 in the absence of additional climate policies

**Figure 3.1.** Global GHG emissions (in GtCO<sub>2</sub>-eq per year) in the absence of additional climate policies: six illustrative SRES marker scenarios (coloured lines) and 80<sup>th</sup> percentile range of recent scenarios published since SRES (post-SRES) (gray shaded area). Dashed lines show the full range of post-SRES scenarios. The emissions include CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O and F-gases. {WGIII 1.3, 3.2, Figure SPM.4}

Purchasing Power Parity, PPP) does not appreciably affect the projected emissions, when used consistently.<sup>11</sup> The differences, if any, are small compared to the uncertainties caused by assumptions on other parameters in the scenarios, e.g. technological change. {WGIII 3.2, TS.3, SPM}

#### SRES scenarios

SRES refers to the scenarios described in the IPCC Special Report on Emissions Scenarios (SRES, 2000). The SRES scenarios are grouped into four scenario families (A1, A2, B1 and B2) that explore alternative development pathways, covering a wide range of demographic, economic and technological driving forces and resulting GHG emissions. The SRES scenarios do not include additional climate policies above current ones. The emissions projections are widely used in the assessments of future climate change, and their underlying assumptions with respect to socio-economic, demographic and technological change serve as inputs to many recent climate change vulnerability and impact assessments. {WGI 10.1; WGII 2.4; WGIII TS.1, SPM}

The A1 storyline assumes a world of very rapid economic growth, a global population that peaks in mid-century and rapid introduction of new and more efficient technologies. A1 is divided into three groups that describe alternative directions of technological change: fossil intensive (A1FI), non-fossil energy resources (A1T) and a balance across all sources (A1B). B1 describes a convergent world, with the same global population as A1, but with more rapid changes in economic structures toward a service and information economy. B2 describes a world with intermediate population and economic growth, emphasising local solutions to economic, social, and environmental sustainability. A2 describes a very heterogeneous world with high population growth, slow economic development and slow technological change. No likelihood has been attached to any of the SRES scenarios. {WGIII TS.1, SPM}

<sup>9</sup> Agreement/evidence statements in italics represent calibrated expressions of uncertainty and confidence. See Box 'Treatment of uncertainty' in the Introduction for an explanation of these terms.

<sup>10</sup> Baseline scenarios do not include additional climate policies above current ones; more recent studies differ with respect to UNFCCC and Kyoto Protocol inclusion. Emission pathways of mitigation scenarios are discussed in Topic 5.

<sup>11</sup> Since the TAR, there has been a debate on the use of different exchange rates in emissions scenarios. Two metrics are used to compare GDP between countries. Use of MER is preferable for analyses involving internationally traded products. Use of PPP is preferable for analyses involving comparisons of income between countries at very different stages of development. Most of the monetary units in this report are expressed in MER. This reflects the large majority of emissions mitigation literature that is calibrated in MER. When monetary units are expressed in PPP, this is denoted by GDP<sub>PPP</sub>. {WGIII SPM}

## 3.2 Projections of future changes in climate

**For the next two decades a warming of about 0.2°C per decade is projected for a range of SRES emissions scenarios. Even if the concentrations of all GHGs and aerosols had been kept constant at year 2000 levels, a further warming of about 0.1°C per decade would be expected. Afterwards, temperature projections increasingly depend on specific emissions scenarios (Figure 3.2). {WGI 10.3, 10.7; WGIII 3.2}**

Since the IPCC’s first report in 1990, assessed projections have suggested global averaged temperature increases between about 0.15 and 0.3°C per decade from 1990 to 2005. This can now be compared with observed values of about 0.2°C per decade, strengthening confidence in near-term projections. {WGI 1.2, 3.2}

### 3.2.1 21<sup>st</sup> century global changes

**Continued GHG emissions at or above current rates would cause further warming and induce many changes in the global climate system during the 21<sup>st</sup> century that would very likely be larger than those observed during the 20<sup>th</sup> century. {WGI 10.3}**

Advances in climate change modelling now enable best estimates and *likely* assessed uncertainty ranges to be given for projected warming for different emissions scenarios. Table 3.1 shows best estimates and *likely* ranges for global average surface air warming for the six SRES marker emissions scenarios (including climate-carbon cycle feedbacks). {WGI 10.5}

Although these projections are broadly consistent with the span quoted in the TAR (1.4 to 5.8°C), they are not directly comparable. Assessed upper ranges for temperature projections are larger than in the TAR mainly because the broader range of models now available suggests stronger climate-carbon cycle feedbacks. For the A2 scenario, for example, the climate-carbon cycle feedback increases the corresponding global average warming at 2100 by more than 1°C. Carbon feedbacks are discussed in Topic 2.3. {WGI 7.3, 10.5, SPM}

Because understanding of some important effects driving sea level rise is too limited, this report does not assess the likelihood, nor provide a best estimate or an upper bound for sea level rise. Model-based projections of global average sea level rise at the end of the 21<sup>st</sup> century (2090-2099) are shown in Table 3.1. For each scenario, the mid-point of the range in Table 3.1 is within 10% of the TAR model average for 2090-2099. The ranges are narrower than in the TAR mainly because of improved information about some uncertainties in the projected contributions.<sup>12</sup> The sea level projections do not include uncertainties in climate-carbon cycle feedbacks nor do they include the full effects of changes in ice sheet flow, because a basis in published literature is lacking. Therefore the upper values of the ranges given are not to be considered upper bounds for sea level rise. The projections include a contribution due to increased ice flow from Greenland and Antarctica at the rates observed for 1993-2003, but these flow rates could increase or decrease in the future. If this contribution were to grow linearly with global average temperature change, the upper ranges of sea level rise for SRES scenarios shown in Table 3.1 would increase by 0.1 to 0.2m.<sup>13</sup> {WGI 10.6, SPM}

**Table 3.1. Projected global average surface warming and sea level rise at the end of the 21<sup>st</sup> century. {WGI 10.5, 10.6, Table 10.7, Table SPM.3}**

Case	Temperature change (°C at 2090-2099 relative to 1980-1999) <sup>a, d</sup>		Sea level rise (m at 2090-2099 relative to 1980-1999)
	Best estimate	Likely range	Model-based range excluding future rapid dynamical changes in ice flow
Constant year 2000 concentrations <sup>b</sup>	0.6	0.3 – 0.9	Not available
B1 scenario	1.8	1.1 – 2.9	0.18 – 0.38
A1T scenario	2.4	1.4 – 3.8	0.20 – 0.45
B2 scenario	2.4	1.4 – 3.8	0.20 – 0.43
A1B scenario	2.8	1.7 – 4.4	0.21 – 0.48
A2 scenario	3.4	2.0 – 5.4	0.23 – 0.51
A1FI scenario	4.0	2.4 – 6.4	0.26 – 0.59

Notes:

- a) These estimates are assessed from a hierarchy of models that encompass a simple climate model, several Earth Models of Intermediate Complexity, and a large number of Atmosphere-Ocean General Circulation Models (AOGCMs) as well as observational constraints.
- b) Year 2000 constant composition is derived from AOGCMs only.
- c) All scenarios above are six SRES marker scenarios. Approximate CO<sub>2</sub>-eq concentrations corresponding to the computed radiative forcing due to anthropogenic GHGs and aerosols in 2100 (see p. 823 of the WGI TAR) for the SRES B1, AIT, B2, A1B, A2 and A1FI illustrative marker scenarios are about 600, 700, 800, 850, 1250 and 1550ppm, respectively.
- d) Temperature changes are expressed as the difference from the period 1980-1999. To express the change relative to the period 1850-1899 add 0.5°C.

<sup>12</sup> TAR projections were made for 2100, whereas the projections for this report are for 2090-2099. The TAR would have had similar ranges to those in Table 3.1 if it had treated uncertainties in the same way.

<sup>13</sup> For discussion of the longer term see Sections 3.2.3 and 5.2.

### 3.2.2 21<sup>st</sup> century regional changes

**There is now higher confidence than in the TAR in projected patterns of warming and other regional-scale features, including changes in wind patterns, precipitation and some aspects of extremes and sea ice.** {WGI 8.2, 8.3, 8.4, 8.5, 9.4, 9.5, 10.3, 11.1}

Projected warming in the 21<sup>st</sup> century shows scenario-independent geographical patterns similar to those observed over the past several decades. Warming is expected to be greatest over land and at most high northern latitudes, and least over the Southern Ocean (near Antarctica) and northern North Atlantic, continuing recent observed trends (Figure 3.2 right panels). {WGI 10.3, SPM}

Snow cover area is projected to contract. Widespread increases in thaw depth are projected over most permafrost regions. Sea ice is projected to shrink in both the Arctic and Antarctic under all SRES scenarios. In some projections, Arctic late-summer sea ice disappears almost entirely by the latter part of the 21<sup>st</sup> century. {WGI 10.3, 10.6, SPM; WGII 15.3.4}

It is *very likely* that hot extremes, heat waves and heavy precipitation events will become more frequent. {SYR Table 3.2; WGI 10.3, SPM}

Based on a range of models, it is *likely* that future tropical cyclones (typhoons and hurricanes) will become more intense, with larger peak wind speeds and more heavy precipitation associated with ongoing increases of tropical sea-surface temperatures. There is less confidence in projections of a global decrease in numbers of tropical cyclones. The apparent increase in the proportion of very

intense storms since 1970 in some regions is much larger than simulated by current models for that period. {WGI 3.8, 9.5, 10.3, SPM}

Extra-tropical storm tracks are projected to move poleward, with consequent changes in wind, precipitation and temperature patterns, continuing the broad pattern of observed trends over the last half-century. {WGI 3.6, 10.3, SPM}

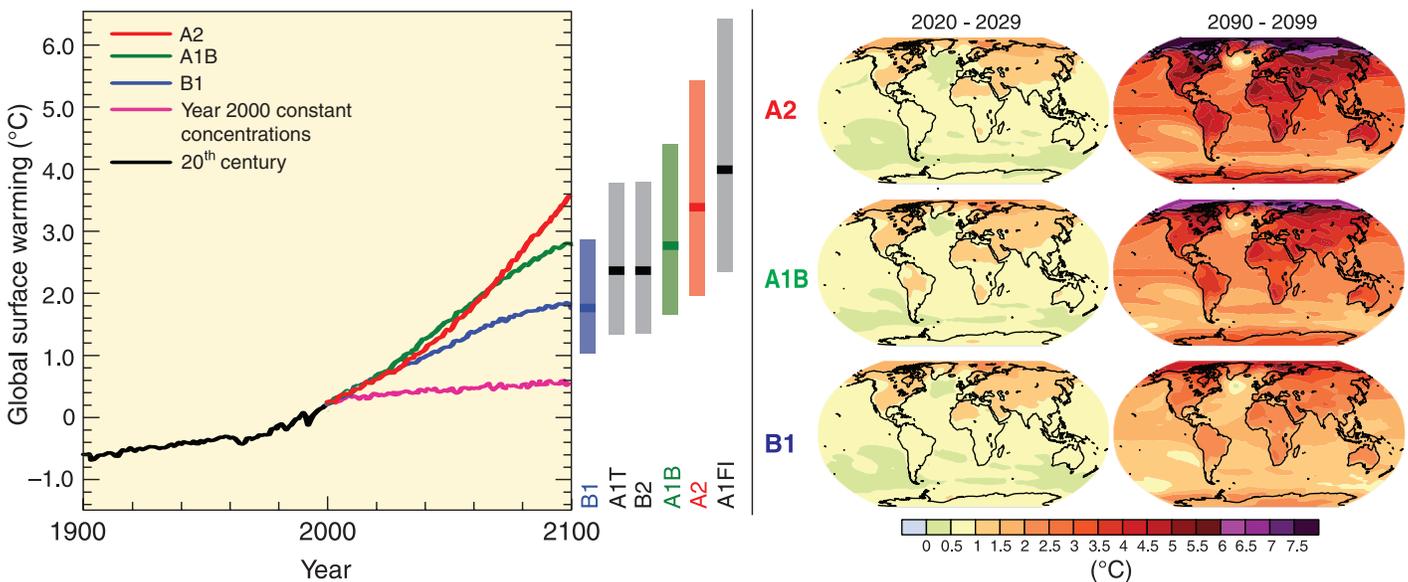

Since the TAR there is an improving understanding of projected patterns of precipitation. Increases in the amount of precipitation are *very likely* in high-latitudes, while decreases are *likely* in most subtropical land regions (by as much as about 20% in the A1B scenario in 2100, Figure 3.3), continuing observed patterns in recent trends. {WGI 3.3, 8.3, 9.5, 10.3, 11.2-11.9, SPM}

### 3.2.3 Changes beyond the 21<sup>st</sup> century

**Anthropogenic warming and sea level rise would continue for centuries due to the time scales associated with climate processes and feedbacks, even if GHG concentrations were to be stabilised.** {WGI 10.4, 10.5, 10.7, SPM}

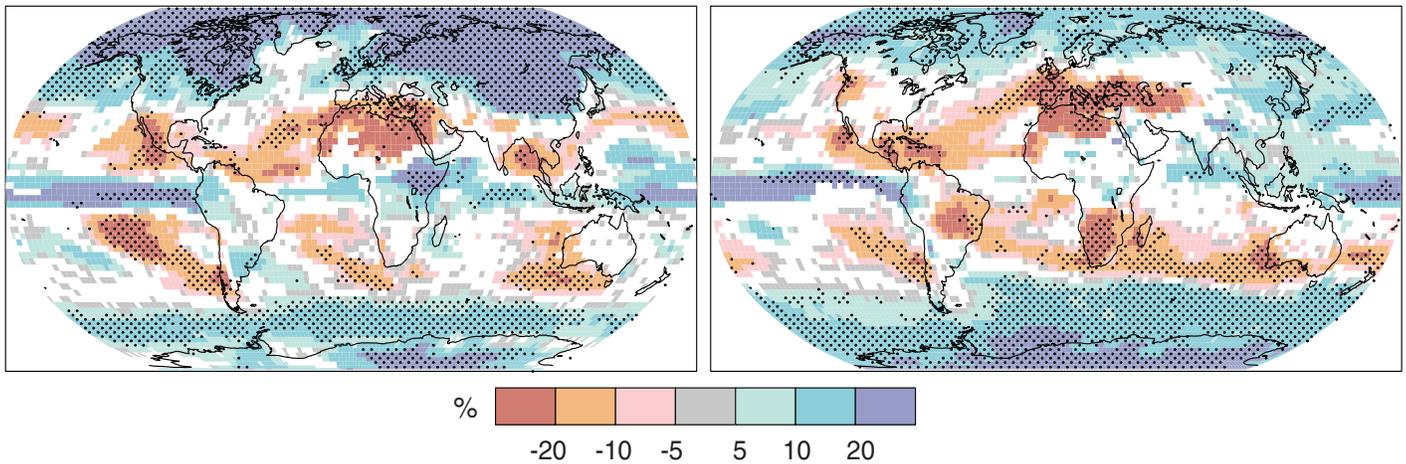

If radiative forcing were to be stabilised, keeping all the radiative forcing agents constant at B1 or A1B levels in 2100, model experiments show that a further increase in global average temperature of about 0.5°C would still be expected by 2200. In addition, thermal expansion alone would lead to 0.3 to 0.8m of sea level rise by 2300 (relative to 1980-1999). Thermal expansion would continue for many centuries, due to the time required to transport heat into the deep ocean. {WGI 10.7, SPM}

**Atmosphere-Ocean General Circulation Model projections of surface warming**

**Figure 3.2. Left panel:** Solid lines are multi-model global averages of surface warming (relative to 1980-1999) for the SRES scenarios A2, A1B and B1, shown as continuations of the 20<sup>th</sup> century simulations. The orange line is for the experiment where concentrations were held constant at year 2000 values. The bars in the middle of the figure indicate the best estimate (solid line within each bar) and the likely range assessed for the six SRES marker scenarios at 2090-2099 relative to 1980-1999. The assessment of the best estimate and likely ranges in the bars includes the Atmosphere-Ocean General Circulation Models (AOGCMs) in the left part of the figure, as well as results from a hierarchy of independent models and observational constraints. **Right panels:** Projected surface temperature changes for the early and late 21<sup>st</sup> century relative to the period 1980-1999. The panels show the multi-AOGCM average projections for the A2 (top), A1B (middle) and B1 (bottom) SRES scenarios averaged over decades 2020-2029 (left) and 2090-2099 (right). {WGI 10.4, 10.8, Figures 10.28, 10.29, SPM}

**Multi-model projected patterns of precipitation changes**

**Figure 3.3.** Relative changes in precipitation (in percent) for the period 2090-2099, relative to 1980-1999. Values are multi-model averages based on the SRES A1B scenario for December to February (left) and June to August (right). White areas are where less than 66% of the models agree in the sign of the change and stippled areas are where more than 90% of the models agree in the sign of the change. {WGI Figure 10.9, SPM}

Contraction of the Greenland ice sheet is projected to continue to contribute to sea level rise after 2100. Current models suggest ice mass losses increase with temperature more rapidly than gains due to increased precipitation and that the surface mass balance becomes negative (net ice loss) at a global average warming (relative to pre-industrial values) in excess of 1.9 to 4.6°C. If such a negative surface mass balance were sustained for millennia, that would lead to virtually complete elimination of the Greenland ice sheet and a resulting contribution to sea level rise of about 7m. The corresponding future temperatures in Greenland (1.9 to 4.6°C global) are comparable to those inferred for the last interglacial period 125,000 years ago, when palaeoclimatic information suggests reductions of polar land ice extent and 4 to 6m of sea level rise. {WGI 6.4, 10.7, SPM}

Dynamical processes related to ice flow – which are not included in current models but suggested by recent observations –

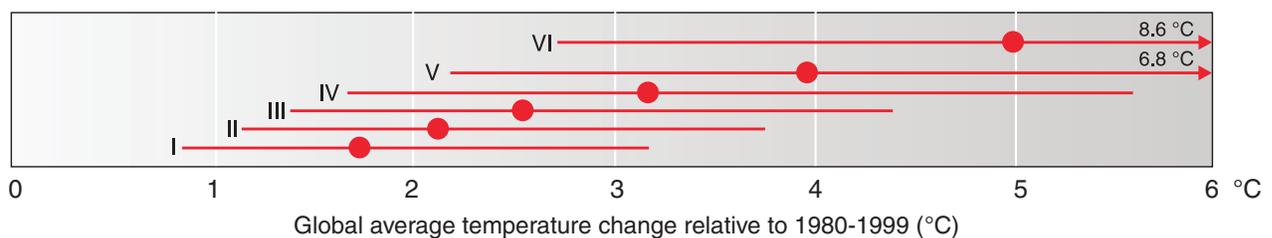

could increase the vulnerability of the ice sheets to warming, increasing future sea level rise. Understanding of these processes is limited and there is no consensus on their magnitude. {WGI 4.6, 10.7, SPM}

Current global model studies project that the Antarctic ice sheet will remain too cold for widespread surface melting and gain mass due to increased snowfall. However, net loss of ice mass could occur if dynamical ice discharge dominates the ice sheet mass balance. {WGI 10.7, SPM}

Both past and future anthropogenic CO<sub>2</sub> emissions will continue to contribute to warming and sea level rise for more than a millennium, due to the time scales required for the removal of this gas from the atmosphere. {WGI 7.3, 10.3, Figure 7.12, Figure 10.35, SPM}

Estimated long-term (multi-century) warming corresponding to the six AR4 WG III stabilisation categories is shown in Figure 3.4.

**Estimated multi-century warming relative to 1980-1999 for AR4 stabilisation categories**

**Figure 3.4.** Estimated long-term (multi-century) warming corresponding to the six AR4 WG III stabilisation categories (Table 5.1). The temperature scale has been shifted by -0.5°C compared to Table 5.1 to account approximately for the warming between pre-industrial and 1980-1999. For most stabilisation levels global average temperature is approaching the equilibrium level over a few centuries. For GHG emissions scenarios that lead to stabilisation at levels comparable to SRES B1 and A1B by 2100 (600 and 850 ppm CO<sub>2</sub>-eq; category IV and V), assessed models project that about 65 to 70% of the estimated global equilibrium temperature increase, assuming a climate sensitivity of 3°C, would be realised at the time of stabilisation. For the much lower stabilisation scenarios (category I and II, Figure 5.1), the equilibrium temperature may be reached earlier. {WGI 10.7.2}

### 3.3 Impacts of future climate changes

**More specific information is now available across a wide range of systems and sectors concerning the nature of future impacts, including some fields not covered in previous assessments. {WGII TS.4, SPM}**

The following is a selection of key findings<sup>14</sup> regarding the impacts of climate change on systems, sectors and regions, as well as some findings on vulnerability<sup>15</sup>, for the range of climate changes projected over the 21<sup>st</sup> century. Unless otherwise stated, the confidence level in the projections is *high*. Global average temperature increases are given relative to 1980-1999. Additional information on impacts can be found in the WG II report. {WGII SPM}

#### 3.3.1 Impacts on systems and sectors

##### Ecosystems

- The resilience of many ecosystems is *likely* to be exceeded this century by an unprecedented combination of climate change, associated disturbances (e.g. flooding, drought, wildfire, insects, ocean acidification) and other global change drivers (e.g. land-use change, pollution, fragmentation of natural systems, over-exploitation of resources). {WGII 4.1-4.6, SPM}
- Over the course of this century, net carbon uptake by terrestrial ecosystems is *likely* to peak before mid-century and then weaken or even reverse<sup>16</sup>, thus amplifying climate change. {WGII 4.ES, Figure 4.2, SPM}
- Approximately 20 to 30% of plant and animal species assessed so far are *likely* to be at increased risk of extinction if increases in global average temperature exceed 1.5 to 2.5°C (*medium confidence*). {WGII 4.ES, Figure 4.2, SPM}
- For increases in global average temperature exceeding 1.5 to 2.5°C and in concomitant atmospheric CO<sub>2</sub> concentrations, there are projected to be major changes in ecosystem structure and function, species' ecological interactions and shifts in species' geographical ranges, with predominantly negative consequences for biodiversity and ecosystem goods and services, e.g. water and food supply. {WGII 4.4, Box TS.6, SPM}

##### Food

- Crop productivity is projected to increase slightly at mid- to high latitudes for local mean temperature increases of up to 1 to 3°C depending on the crop, and then decrease beyond that in some regions (*medium confidence*). {WGII 5.4, SPM}
- At lower latitudes, especially in seasonally dry and tropical regions, crop productivity is projected to decrease for even small local temperature increases (1 to 2°C), which would increase the risk of hunger (*medium confidence*). {WGII 5.4, SPM}
- Globally, the potential for food production is projected to increase with increases in local average temperature over a range

of 1 to 3°C, but above this it is projected to decrease (*medium confidence*). {WGII 5.4, 5.5, SPM}

##### Coasts

- Coasts are projected to be exposed to increasing risks, including coastal erosion, due to climate change and sea level rise. The effect will be exacerbated by increasing human-induced pressures on coastal areas (*very high confidence*). {WGII 6.3, 6.4, SPM}
- By the 2080s, many millions more people than today are projected to experience floods every year due to sea level rise. The numbers affected will be largest in the densely populated and low-lying megadeltas of Asia and Africa while small islands are especially vulnerable (*very high confidence*). {WGII 6.4, 6.5, Table 6.11, SPM}

##### Industry, settlements and society

- The most vulnerable industries, settlements and societies are generally those in coastal and river flood plains, those whose economies are closely linked with climate-sensitive resources and those in areas prone to extreme weather events, especially where rapid urbanisation is occurring. {WGII 7.1, 7.3, 7.4, 7.5, SPM}
- Poor communities can be especially vulnerable, in particular those concentrated in high-risk areas. {WGII 7.2, 7.4, 5.4, SPM}

##### Health

- The health status of millions of people is projected to be affected through, for example, increases in malnutrition; increased deaths, diseases and injury due to extreme weather events; increased burden of diarrhoeal diseases; increased frequency of cardio-respiratory diseases due to higher concentrations of ground-level ozone in urban areas related to climate change; and the altered spatial distribution of some infectious diseases. {WGI 7.4, Box 7.4; WGII 8.ES, 8.2, 8.4, SPM}
- Climate change is projected to bring some benefits in temperate areas, such as fewer deaths from cold exposure, and some mixed effects such as changes in range and transmission potential of malaria in Africa. Overall it is expected that benefits will be outweighed by the negative health effects of rising temperatures, especially in developing countries. {WGII 8.4, 8.7, 8.ES, SPM}
- Critically important will be factors that directly shape the health of populations such as education, health care, public health initiatives, and infrastructure and economic development. {WGII 8.3, SPM}

##### Water

- Water impacts are key for all sectors and regions. These are discussed below in the Box 'Climate change and water'.

<sup>14</sup> Criteria of choice: magnitude and timing of impact, confidence in the assessment, representative coverage of the system, sector and region.

<sup>15</sup> Vulnerability to climate change is the degree to which systems are susceptible to, and unable to cope with, adverse impacts.

<sup>16</sup> Assuming continued GHG emissions at or above current rates and other global changes including land-use changes.

## Climate change and water

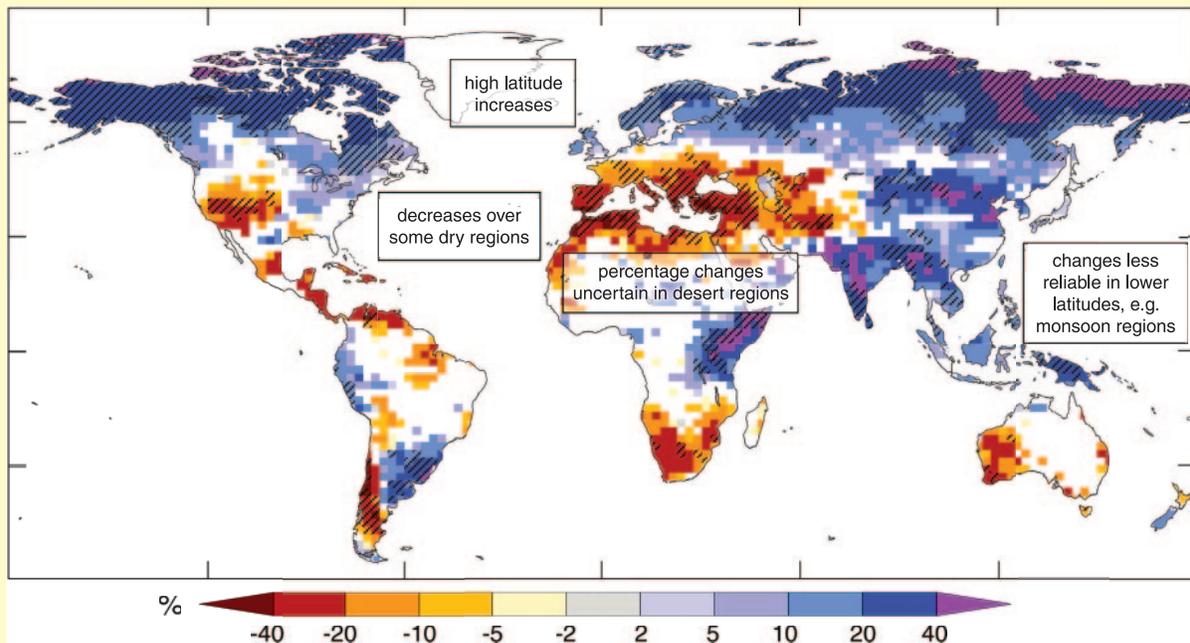

Climate change is expected to exacerbate current stresses on water resources from population growth and economic and land-use change, including urbanisation. On a regional scale, mountain snow pack, glaciers and small ice caps play a crucial role in freshwater availability. Widespread mass losses from glaciers and reductions in snow cover over recent decades are projected to accelerate throughout the 21<sup>st</sup> century, reducing water availability, hydropower potential, and changing seasonality of flows in regions supplied by meltwater from major mountain ranges (e.g. Hindu-Kush, Himalaya, Andes), where more than one-sixth of the world population currently lives. {WGI 4.1, 4.5; WGII 3.3, 3.4, 3.5}

Changes in precipitation (Figure 3.3) and temperature (Figure 3.2) lead to changes in runoff (Figure 3.5) and water availability. Runoff is projected with *high confidence* to increase by 10 to 40% by mid-century at higher latitudes and in some wet tropical areas, including populous areas in East and South-East Asia, and decrease by 10 to 30% over some dry regions at mid-latitudes and dry tropics, due to decreases in rainfall and higher rates of evapotranspiration. There is also *high confidence* that many semi-arid areas (e.g. the Mediterranean Basin, western United States, southern Africa and north-eastern Brazil) will suffer a decrease in water resources due to climate change. Drought-affected areas are projected to increase in extent, with the potential for adverse impacts on multiple sectors, e.g. agriculture, water supply, energy production and health. Regionally, large increases in irrigation water demand as a result of climate changes are projected. {WGI 10.3, 11.2-11.9; WGII 3.4, 3.5, Figure 3.5, TS.4.1, Box TS.5, SPM}

The negative impacts of climate change on freshwater systems outweigh its benefits (*high confidence*). Areas in which runoff is projected to decline face a reduction in the value of the services provided by water resources (*very high confidence*). The beneficial impacts of increased annual runoff in some areas are *likely* to be tempered by negative effects of increased precipitation variability and seasonal runoff shifts on water supply, water quality and flood risk. {WGII 3.4, 3.5, TS.4.1}

Available research suggests a significant future increase in heavy rainfall events in many regions, including some in which the mean rainfall is projected to decrease. The resulting increased flood risk poses challenges to society, physical infrastructure and water quality. It is *likely* that up to 20% of the world population will live in areas where river flood potential could increase by the 2080s. Increases in the frequency and severity of floods and droughts are projected to adversely affect sustainable development. Increased temperatures will further affect the physical, chemical and biological properties of freshwater lakes and rivers, with predominantly adverse impacts on many individual freshwater species, community composition and water quality. In coastal areas, sea level rise will exacerbate water resource constraints due to increased salinisation of groundwater supplies. {WGI 11.2-11.9; WGII 3.2, 3.3, 3.4, 4.4}

### Projections and model consistency of relative changes in runoff by the end of the 21st century

**Figure 3.5.** Large-scale relative changes in annual runoff (water availability, in percent) for the period 2090-2099, relative to 1980-1999. Values represent the median of 12 climate models using the SRES A1B scenario. White areas are where less than 66% of the 12 models agree on the sign of change and hatched areas are where more than 90% of models agree on the sign of change. The quality of the simulation of the observed large-scale 20<sup>th</sup> century runoff is used as a basis for selecting the 12 models in the multi-model ensemble. The global map of annual runoff illustrates a large scale and is not intended to refer to smaller temporal and spatial scales. In areas where rainfall and runoff is very low (e.g. desert areas), small changes in runoff can lead to large percentage changes. In some regions, the sign of projected changes in runoff differs from recently observed trends. In some areas with projected increases in runoff, different seasonal effects are expected, such as increased wet season runoff and decreased dry season runoff. Studies using results from few climate models can be considerably different from the results presented here. {WGII Figure 3.4, adjusted to match the assumptions of Figure SYR 3.3; WGII 3.3.1, 3.4.1, 3.5.1}

### Studies since the TAR have enabled more systematic understanding of the timing and magnitude of impacts related to differing amounts and rates of climate change. {WGII SPM}

Examples of this new information for systems and sectors are presented in Figure 3.6. The upper panel shows impacts increasing with increasing temperature change. Their estimated magnitude and timing is also affected by development pathways (lower panel). {WGII SPM}

Depending on circumstances, some of the impacts shown in Figure 3.6 could be associated with 'key vulnerabilities', based on a number of criteria in the literature (magnitude, timing, persistence/reversibility, the potential for adaptation, distributional aspects, likelihood and 'importance' of the impacts) (see Topic 5.2). {WGII SPM}

### 3.3.2 Impacts on regions<sup>17</sup>

#### Africa

- By 2020, between 75 and 250 million of people are projected to be exposed to increased water stress due to climate change. {WGII 9.4, SPM}
- By 2020, in some countries, yields from rain-fed agriculture could be reduced by up to 50%. Agricultural production, including access to food, in many African countries is projected to be severely compromised. This would further adversely affect food security and exacerbate malnutrition. {WGII 9.4, SPM}
- Towards the end of the 21<sup>st</sup> century, projected sea level rise will affect low-lying coastal areas with large populations. The cost of adaptation could amount to at least 5 to 10% of GDP. {WGII 9.4, SPM}
- By 2080, an increase of 5 to 8% of arid and semi-arid land in Africa is projected under a range of climate scenarios (*high confidence*). {WGII Box TS.6, 9.4.4}

#### Asia

- By the 2050s, freshwater availability in Central, South, East and South-East Asia, particularly in large river basins, is projected to decrease. {WGII 10.4, SPM}
- Coastal areas, especially heavily populated megadelta regions in South, East and South-East Asia, will be at greatest risk due to increased flooding from the sea and, in some megadeltas, flooding from the rivers. {WGII 10.4, SPM}
- Climate change is projected to compound the pressures on natural resources and the environment associated with rapid urbanisation, industrialisation and economic development. {WGII 10.4, SPM}
- Endemic morbidity and mortality due to diarrhoeal disease primarily associated with floods and droughts are expected to rise in East, South and South-East Asia due to projected changes in the hydrological cycle. {WGII 10.4, SPM}

#### Australia and New Zealand

- By 2020, significant loss of biodiversity is projected to occur in some ecologically rich sites, including the Great Barrier Reef and Queensland Wet Tropics. {WGII 11.4, SPM}

- By 2030, water security problems are projected to intensify in southern and eastern Australia and, in New Zealand, in Northland and some eastern regions. {WGII 11.4, SPM}
- By 2030, production from agriculture and forestry is projected to decline over much of southern and eastern Australia, and over parts of eastern New Zealand, due to increased drought and fire. However, in New Zealand, initial benefits are projected in some other regions. {WGII 11.4, SPM}
- By 2050, ongoing coastal development and population growth in some areas of Australia and New Zealand are projected to exacerbate risks from sea level rise and increases in the severity and frequency of storms and coastal flooding. {WGII 11.4, SPM}

#### Europe

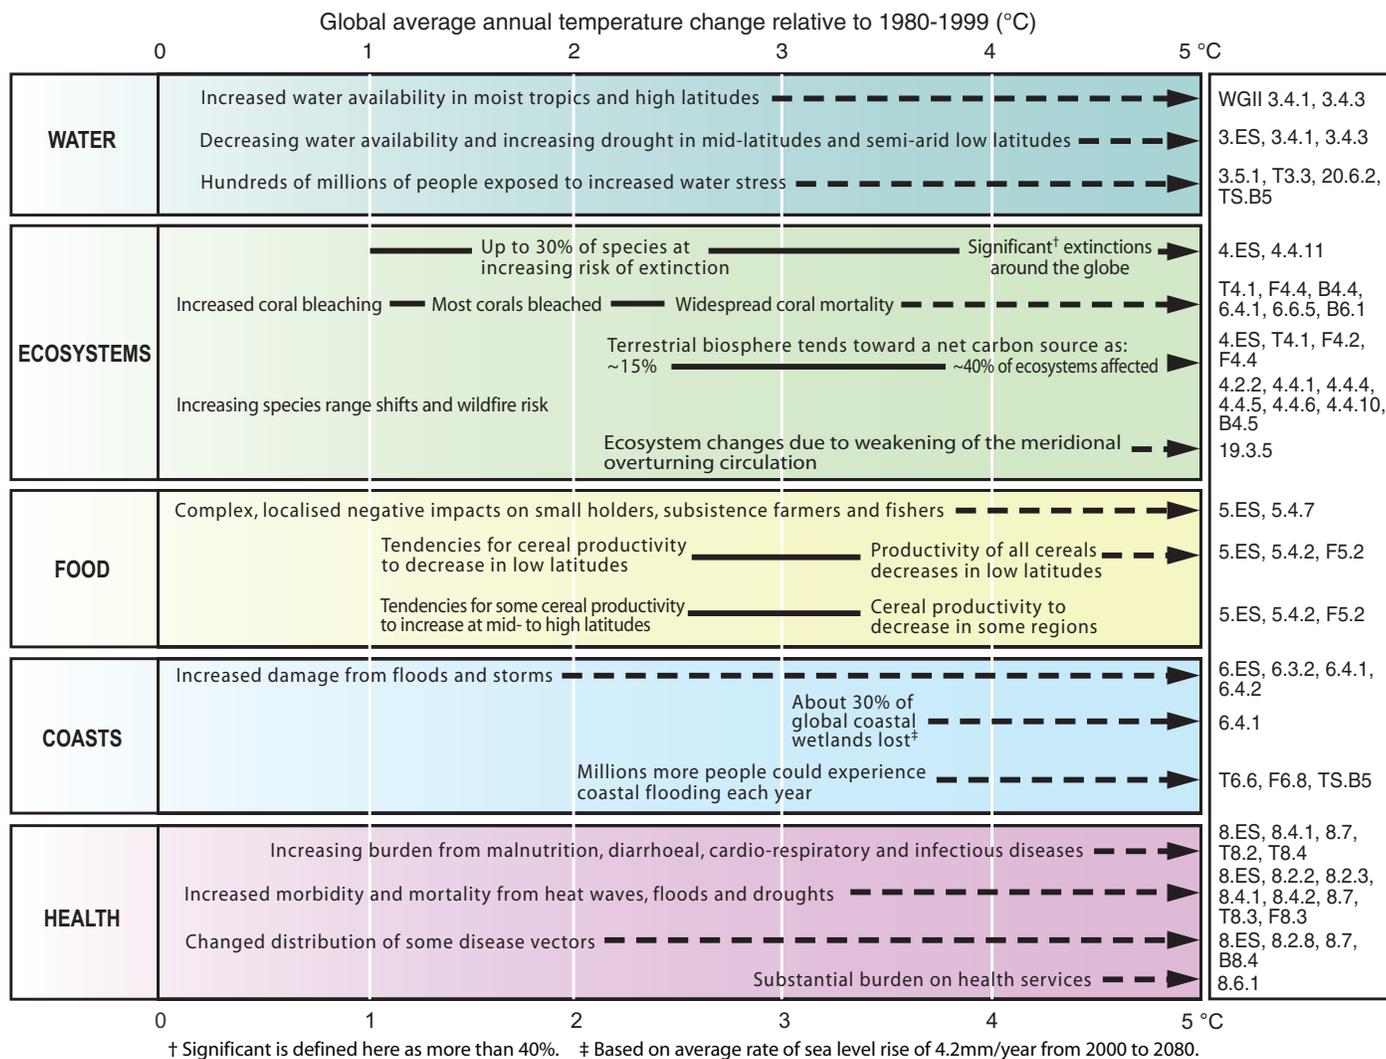

- Climate change is expected to magnify regional differences in Europe's natural resources and assets. Negative impacts will include increased risk of inland flash floods and more frequent coastal flooding and increased erosion (due to storminess and sea level rise). {WGII 12.4, SPM}
- Mountainous areas will face glacier retreat, reduced snow cover and winter tourism, and extensive species losses (in some areas up to 60% under high emissions scenarios by 2080). {WGII 12.4, SPM}
- In southern Europe, climate change is projected to worsen conditions (high temperatures and drought) in a region already vulnerable to climate variability, and to reduce water availability, hydropower potential, summer tourism and, in general, crop productivity. {WGII 12.4, SPM}
- Climate change is also projected to increase the health risks due to heat waves and the frequency of wildfires. {WGII 12.4, SPM}

#### Latin America

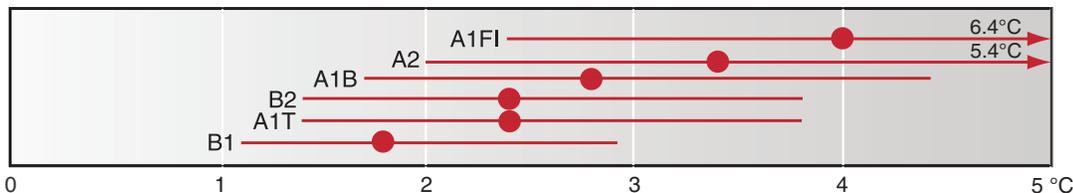

- By mid-century, increases in temperature and associated decreases in soil water are projected to lead to gradual replacement of tropical forest by savanna in eastern Amazonia. Semi-arid vegetation will tend to be replaced by arid-land vegetation. {WGII 13.4, SPM}
- There is a risk of significant biodiversity loss through species extinction in many areas of tropical Latin America. {WGII 13.4, SPM}
- Productivity of some important crops is projected to decrease and livestock productivity to decline, with adverse consequences for food security. In temperate zones, soybean yields are projected to increase. Overall, the number of people at risk of hunger is projected to increase (*medium confidence*). {WGII 13.4, Box TS.6}
- Changes in precipitation patterns and the disappearance of glaciers are projected to significantly affect water availability for human consumption, agriculture and energy generation. {WGII 13.4, SPM}

<sup>17</sup> Unless stated explicitly, all entries are from WG II SPM text, and are either *very high confidence* or *high confidence* statements, reflecting different sectors (agriculture, ecosystems, water, coasts, health, industry and settlements). The WG II SPM refers to the source of the statements, timelines and temperatures. The magnitude and timing of impacts that will ultimately be realised will vary with the amount and rate of climate change, emissions scenarios, development pathways and adaptation.

**Examples of impacts associated with global average temperature change**  
**(Impacts will vary by extent of adaptation, rate of temperature change and socio-economic pathway)**

**Warming by 2090-2099 relative to 1980-1999 for non-mitigation scenarios**

**Figure 3.6.** Examples of impacts associated with global average temperature change. **Upper panel:** Illustrative examples of global impacts projected for climate changes (and sea level and atmospheric CO<sub>2</sub> where relevant) associated with different amounts of increase in global average surface temperature in the 21<sup>st</sup> century. The black lines link impacts; broken-line arrows indicate impacts continuing with increasing temperature. Entries are placed so that the left-hand side of text indicates the approximate level of warming that is associated with the onset of a given impact. Quantitative entries for water scarcity and flooding represent the additional impacts of climate change relative to the conditions projected across the range of SRES scenarios A1FI, A2, B1 and B2. Adaptation to climate change is not included in these estimations. Confidence levels for all statements are high. The upper right panel gives the WG II references for the statements made in the upper left panel.\* **Lower panel:** Dots and bars indicate the best estimate and likely ranges of warming assessed for the six SRES marker scenarios for 2090-2099 relative to 1980-1999. {WGI Figure SPM.5, 10.7; WGII Figure SPM.2; WGIII Table TS.2, Table 3.10}

\*Where ES = Executive Summary, T = Table, B = Box and F = Figure. Thus B4.5 indicates Box 4.5 in Chapter 4 and 3.5.1 indicates Section 3.5.1 in Chapter 3.

## North America

- Warming in western mountains is projected to cause decreased snowpack, more winter flooding and reduced summer flows, exacerbating competition for over-allocated water resources. *{WGII 14.4, SPM}*
- In the early decades of the century, moderate climate change is projected to increase aggregate yields of rain-fed agriculture by 5 to 20%, but with important variability among regions. Major challenges are projected for crops that are near the warm end of their suitable range or which depend on highly utilised water resources. *{WGII 14.4, SPM}*
- Cities that currently experience heat waves are expected to be further challenged by an increased number, intensity and duration of heat waves during the course of the century, with potential for adverse health impacts. *{WGII 14.4, SPM}*
- Coastal communities and habitats will be increasingly stressed by climate change impacts interacting with development and pollution. *{WGII 14.4, SPM}*

## Polar Regions

- The main projected biophysical effects are reductions in thickness and extent of glaciers, ice sheets and sea ice, and changes in natural ecosystems with detrimental effects on many organisms including migratory birds, mammals and higher predators. *{WGII 15.4, SPM}*
- For human communities in the Arctic, impacts, particularly those resulting from changing snow and ice conditions, are projected to be mixed. *{WGII 15.4, SPM}*
- Detrimental impacts would include those on infrastructure and traditional indigenous ways of life. *{WGII 15.4, SPM}*
- In both polar regions, specific ecosystems and habitats are projected to be vulnerable, as climatic barriers to species invasions are lowered. *{WGII 15.4, SPM}*

## Small Islands

- Sea level rise is expected to exacerbate inundation, storm surge, erosion and other coastal hazards, thus threatening vital infrastructure, settlements and facilities that support the livelihood of island communities. *{WGII 16.4, SPM}*
- Deterioration in coastal conditions, for example through erosion of beaches and coral bleaching, is expected to affect local resources. *{WGII 16.4, SPM}*
- By mid-century, climate change is expected to reduce water resources in many small islands, e.g. in the Caribbean and Pacific, to the point where they become insufficient to meet demand during low-rainfall periods. *{WGII 16.4, SPM}*
- With higher temperatures, increased invasion by non-native species is expected to occur, particularly on mid- and high-latitude islands. *{WGII 16.4, SPM}*

## 3.3.3 Especially affected systems, sectors and regions

**Some systems, sectors and regions are likely to be especially affected by climate change.**<sup>18</sup> *{WGII TS.4.5}*

Systems and sectors: *{WGII TS.4.5}*

- particular ecosystems:
  - terrestrial: tundra, boreal forest and mountain regions because of sensitivity to warming; mediterranean-type ecosystems because of reduction in rainfall; and tropical rainforests where precipitation declines
  - coastal: mangroves and salt marshes, due to multiple stresses
  - marine: coral reefs due to multiple stresses; the sea-ice biome because of sensitivity to warming
- water resources in some dry regions at mid-latitudes<sup>19</sup> and in the dry tropics, due to changes in rainfall and evapotranspiration, and in areas dependent on snow and ice melt
- agriculture in low latitudes, due to reduced water availability
- low-lying coastal systems, due to threat of sea level rise and increased risk from extreme weather events
- human health in populations with low adaptive capacity.

Regions: *{WGII TS.4.5}*

- the Arctic, because of the impacts of high rates of projected warming on natural systems and human communities
- Africa, because of low adaptive capacity and projected climate change impacts
- small islands, where there is high exposure of population and infrastructure to projected climate change impacts
- Asian and African megadeltas, due to large populations and high exposure to sea level rise, storm surges and river flooding.

Within other areas, even those with high incomes, some people (such as the poor, young children and the elderly) can be particularly at risk, and also some areas and some activities. *{WGII 7.1, 7.2, 7.4, 8.2, 8.4, TS.4.5}*

## 3.3.4 Ocean acidification

The uptake of anthropogenic carbon since 1750 has led to the ocean becoming more acidic with an average decrease in pH of 0.1 units. Increasing atmospheric CO<sub>2</sub> concentrations lead to further acidification. Projections based on SRES scenarios give a reduction in average global surface ocean pH of between 0.14 and 0.35 units over the 21<sup>st</sup> century. While the effects of observed ocean acidification on the marine biosphere are as yet undocumented, the progressive acidification of oceans is expected to have negative impacts on marine shell-forming organisms (e.g. corals) and their dependent species. *{WGI SPM; WGII SPM}*

## 3.3.5 Extreme events

**Altered frequencies and intensities of extreme weather, together with sea level rise, are expected to have mostly adverse effects on natural and human systems (Table 3.2).** *{WGII SPM}*

Examples for selected extremes and sectors are shown in Table 3.2.

<sup>18</sup> Identified on the basis of expert judgement of the assessed literature and considering the magnitude, timing and projected rate of climate change, sensitivity and adaptive capacity.

<sup>19</sup> Including arid and semi-arid regions.

**Table 3.2.** Examples of possible impacts of climate change due to changes in extreme weather and climate events, based on projections to the mid- to late 21<sup>st</sup> century. These do not take into account any changes or developments in adaptive capacity. The likelihood estimates in column two relate to the phenomena listed in column one. {WGII Table SPM.1}

Phenomenon <sup>a</sup> and direction of trend	Likelihood of future trends based on projections for 21 <sup>st</sup> century using SRES scenarios	Examples of major projected impacts by sector			
		Agriculture, forestry and ecosystems {WGII 4.4, 5.4}	Water resources {WGII 3.4}	Human health {WGII 8.2, 8.4}	Industry, settlement and society {WGII 7.4}
Over most land areas, warmer and fewer cold days and nights, warmer and more frequent hot days and nights	<i>Virtually certain<sup>b</sup></i>	Increased yields in colder environments; decreased yields in warmer environments; increased insect outbreaks	Effects on water resources relying on snowmelt; effects on some water supplies	Reduced human mortality from decreased cold exposure	Reduced energy demand for heating; increased demand for cooling; declining air quality in cities; reduced disruption to transport due to snow, ice; effects on winter tourism
Warm spells/heat waves. Frequency increases over most land areas	<i>Very likely</i>	Reduced yields in warmer regions due to heat stress; increased danger of wildfire	Increased water demand; water quality problems, e.g. algal blooms	Increased risk of heat-related mortality, especially for the elderly, chronically sick, very young and socially isolated	Reduction in quality of life for people in warm areas without appropriate housing; impacts on the elderly, very young and poor
Heavy precipitation events. Frequency increases over most areas	<i>Very likely</i>	Damage to crops; soil erosion, inability to cultivate land due to waterlogging of soils	Adverse effects on quality of surface and groundwater; contamination of water supply; water scarcity may be relieved	Increased risk of deaths, injuries and infectious, respiratory and skin diseases	Disruption of settlements, commerce, transport and societies due to flooding; pressures on urban and rural infrastructures; loss of property
Area affected by drought increases	<i>Likely</i>	Land degradation; lower yields/crop damage and failure; increased livestock deaths; increased risk of wildfire	More widespread water stress	Increased risk of food and water shortage; increased risk of malnutrition; increased risk of water- and food-borne diseases	Water shortage for settlements, industry and societies; reduced hydropower generation potentials; potential for population migration
Intense tropical cyclone activity increases	<i>Likely</i>	Damage to crops; windthrow (uprooting) of trees; damage to coral reefs	Power outages causing disruption of public water supply	Increased risk of deaths, injuries, water- and food-borne diseases; post-traumatic stress disorders	Disruption by flood and high winds; withdrawal of risk coverage in vulnerable areas by private insurers; potential for population migrations; loss of property
Increased incidence of extreme high sea level (excludes tsunamis) <sup>c</sup>	<i>Likely<sup>d</sup></i>	Salinisation of irrigation water, estuaries and fresh-water systems	Decreased fresh-water availability due to saltwater intrusion	Increased risk of deaths and injuries by drowning in floods; migration-related health effects	Costs of coastal protection versus costs of land-use relocation; potential for movement of populations and infrastructure; also see tropical cyclones above

Notes:

- a) See WGI Table 3.7 for further details regarding definitions.
- b) Warming of the most extreme days and nights each year.
- c) Extreme high sea level depends on average sea level and on regional weather systems. It is defined as the highest 1% of hourly values of observed sea level at a station for a given reference period.
- d) In all scenarios, the projected global average sea level at 2100 is higher than in the reference period. The effect of changes in regional weather systems on sea level extremes has not been assessed. {WGI 10.6}

### 3.4 Risk of abrupt or irreversible changes

**Anthropogenic warming could lead to some impacts that are abrupt or irreversible, depending upon the rate and magnitude of the climate change. {WGII 12.6, 19.3, 19.4, SPM}**

Abrupt climate change on decadal time scales is normally thought of as involving ocean circulation changes. In addition on

longer time scales, ice sheet and ecosystem changes may also play a role. If a large-scale abrupt climate change were to occur, its impact could be quite high (see Topic 5.2). {WGI 8.7, 10.3, 10.7; WGII 4.4, 19.3}

Partial loss of ice sheets on polar land and/or the thermal expansion of seawater over very long time scales could imply metres of sea level rise, major changes in coastlines and inundation of low-lying areas, with greatest effects in river deltas and low-lying

islands. Current models project that such changes would occur over very long time scales (millennial) if a global temperature increase of 1.9 to 4.6°C (relative to pre-industrial) were to be sustained. Rapid sea level rise on century time scales cannot be excluded. {SYR 3.2.3; WGI 6.4, 10.7; WGII 19.3, SPM}

Climate change is *likely* to lead to some irreversible impacts. There is *medium confidence* that approximately 20 to 30% of species assessed so far are *likely* to be at increased risk of extinction if increases in global average warming exceed 1.5 to 2.5°C (relative to 1980-1999). As global average temperature increase exceeds about 3.5°C, model projections suggest significant extinctions (40 to 70% of species assessed) around the globe. {WGII 4.4, Figure SPM.2}

Based on current model simulations, it is *very likely* that the meridional overturning circulation (MOC) of the Atlantic Ocean will slow down during the 21<sup>st</sup> century; nevertheless temperatures in the region are projected to increase. It is *very unlikely* that the MOC will undergo a large abrupt transition during the 21<sup>st</sup> century. Longer-term changes in the MOC cannot be assessed with confidence. {WGI 10.3, 10.7; WGII Figure, Table TS.5, SPM.2}

Impacts of large-scale and persistent changes in the MOC are *likely* to include changes in marine ecosystem productivity, fisheries, ocean CO<sub>2</sub> uptake, oceanic oxygen concentrations and terrestrial vegetation. Changes in terrestrial and ocean CO<sub>2</sub> uptake may feed back on the climate system. {WGII 12.6, 19.3, Figure SPM.2}

# 4

---

## **Adaptation and mitigation options and responses, and the inter-relationship with sustainable development, at global and regional levels**

---

## 4.1 Responding to climate change

Societies can respond to climate change by adapting to its impacts and by reducing GHG emissions (mitigation), thereby reducing the rate and magnitude of change. This Topic focuses on adaptation and mitigation options that can be implemented over the next two to three decades, and their inter-relationship with sustainable development. These responses can be complementary. Topic 5 addresses their complementary roles on a more conceptual basis over a longer timeframe.

The capacity to adapt and mitigate is dependent on socio-economic and environmental circumstances and the availability of information and technology<sup>20</sup>. However, much less information is available about the costs and effectiveness of adaptation measures than about mitigation measures. {WGII 17.1, 17.3; WGIII 1.2}

## 4.2 Adaptation options

**Adaptation can reduce vulnerability, both in the short and the long term.** {WGII 17.2, 18.1, 18.5, 20.3, 20.8}

Vulnerability to climate change can be exacerbated by other stresses. These arise from, for example, current climate hazards, poverty, unequal access to resources, food insecurity, trends in economic globalisation, conflict and incidence of diseases such as HIV/AIDS. {WGII 7.2, 7.4, 8.3, 17.3, 20.3, 20.4, 20.7, SPM}

Societies across the world have a long record of adapting and reducing their vulnerability to the impacts of weather- and climate-related events such as floods, droughts and storms. Nevertheless, additional adaptation measures will be required at regional and local levels to reduce the adverse impacts of projected climate change and variability, regardless of the scale of mitigation undertaken over the next two to three decades. However, adaptation alone is not expected to cope with all the projected effects of climate change, especially not over the long term as most impacts increase in magnitude. {WGII 17.2, SPM; WGIII 1.2}

A wide array of adaptation options is available, but more extensive adaptation than is currently occurring is required to reduce vulnerability to climate change. There are barriers, limits and costs, which are not fully understood. Some planned adaptation is already occurring on a limited basis. Table 4.1 provides examples of planned

adaptation options by sector. Many adaptation actions have multiple drivers, such as economic development and poverty alleviation, and are embedded within broader development, sectoral, regional and local planning initiatives such as water resources planning, coastal defence and disaster risk reduction strategies. Examples of this approach are the Bangladesh National Water Management Plan and the coastal defence plans of The Netherlands and Norway, which incorporate specific climate change scenarios. {WGII 1.3, 5.5.2, 11.6, 17.2}

Comprehensive estimates of the costs and benefits of adaptation at the global level are limited in number. However, the number of adaptation cost and benefit estimates at the regional and project levels for impacts on specific sectors, such as agriculture, energy demand for heating and cooling, water resources management and infrastructure, is growing. Based on these studies there is *high confidence* that there are viable adaptation options that can be implemented in some of these sectors at low cost and/or with high benefit-cost ratios. Empirical research also suggests that higher benefit-cost ratios can be achieved by implementing some adaptation measures at an early stage compared to retrofitting long-lived infrastructure at a later date. {WGII 17.2}

**Adaptive capacity is intimately connected to social and economic development, but it is not evenly distributed across and within societies.** {WGII 7.1, 7.2, 7.4, 17.3}

The capacity to adapt is dynamic and is influenced by a society's productive base, including natural and man-made capital assets, social networks and entitlements, human capital and institutions, governance, national income, health and technology. It is also affected by multiple climate and non-climate stresses, as well as development policy. {WGII 17.3}

Recent studies reaffirm the TAR finding that adaptation will be vital and beneficial. However, financial, technological, cognitive, behavioural, political, social, institutional and cultural constraints limit both the implementation and effectiveness of adaptation measures. Even societies with high adaptive capacity remain vulnerable to climate change, variability and extremes. For example, a heat wave in 2003 caused high levels of mortality in European cities (especially among the elderly), and Hurricane Katrina in 2005 caused large human and financial costs in the United States. {WGII 7.4, 8.2, 17.4}

<sup>20</sup> Technology is defined as the practical application of knowledge to achieve particular tasks that employs both technical artefacts (hardware, equipment) and (social) information ('software', know-how for production and use of artefacts).

Table 4.1. Selected examples of planned adaptation by sector.

Sector	Adaptation option/strategy	Underlying policy framework	Key constraints and opportunities to implementation (Normal font = constraints; italics = opportunities)
<b>Water</b> {WGII 5.5, 16.4; Tables 3.5, 11.6, 17.1}	Expanded rainwater harvesting; water storage and conservation techniques; water reuse; desalination; water-use and irrigation efficiency	National water policies and integrated water resources management	Financial, human resources and physical barriers; <i>integrated water resources management; synergies with other sectors</i>
<b>Agriculture</b> {WGII 10.5, 13.5; Table 10.8}	Adjustment of planting dates and crop variety; crop relocation; improved land management, e.g. erosion control and soil protection through tree planting	R&D policies; institutional reform; land tenure and land reform; training; capacity building; crop insurance; financial incentives, e.g. subsidies and tax credits	Technological and financial constraints; access to new varieties; markets; <i>longer growing season in higher latitudes; revenues from 'new' products</i>
<b>Infrastructure/settlement (including coastal zones)</b> {WGII 3.6, 11.4; Tables 6.11, 17.1}	Relocation; seawalls and storm surge barriers; dune reinforcement; land acquisition and creation of marshlands/wetlands as buffer against sea level rise and flooding; protection of existing natural barriers	Standards and regulations that integrate climate change considerations into design; land-use policies; building codes; insurance	Financial and technological barriers; availability of relocation space; <i>integrated policies and management; synergies with sustainable development goals</i>
<b>Human health</b> {WGII 14.5, Table 10.8}	Heat-health action plans; emergency medical services; improved climate-sensitive disease surveillance and control; safe water and improved sanitation	Public health policies that recognise climate risk; strengthen health services; regional and international cooperation	Limits to human tolerance (vulnerable groups); knowledge limitations; financial capacity; <i>upgraded health services; improved quality of life</i>
<b>Tourism</b> {WGII 12.5, 15.5, 17.5; Table 17.1}	Diversification of tourism attractions and revenues; shifting ski slopes to higher altitudes and glaciers; artificial snow-making	Integrated planning (e.g. carrying capacity; linkages with other sectors); financial incentives, e.g. subsidies and tax credits	Appeal/marketing of new attractions; financial and logistical challenges; potential adverse impact on other sectors (e.g. artificial snow-making may increase energy use); <i>revenues from 'new' attractions; involvement of wider group of stakeholders</i>
<b>Transport</b> {WGII 7.6, 17.2}	Realignment/relocation; design standards and planning for roads, rail and other infrastructure to cope with warming and drainage	Integrating climate change considerations into national transport policy; investment in R&D for special situations, e.g. permafrost areas	Financial and technological barriers; availability of less vulnerable routes; <i>improved technologies and integration with key sectors (e.g. energy)</i>
<b>Energy</b> {WGII 7.4, 16.2}	Strengthening of overhead transmission and distribution infrastructure; underground cabling for utilities; energy efficiency; use of renewable sources; reduced dependence on single sources of energy	National energy policies, regulations, and fiscal and financial incentives to encourage use of alternative sources; incorporating climate change in design standards	Access to viable alternatives; financial and technological barriers; acceptance of new technologies; <i>stimulation of new technologies; use of local resources</i>

Note:  
Other examples from many sectors would include early warning systems.

### 4.3 Mitigation options

Both bottom-up and top-down studies<sup>21</sup> indicate that there is *high agreement and much evidence of substantial economic potential*<sup>21</sup> for the mitigation of global GHG emissions over the coming decades that could offset the projected growth of global emissions or reduce emissions below current levels. {WGIII 11.3, SPM}

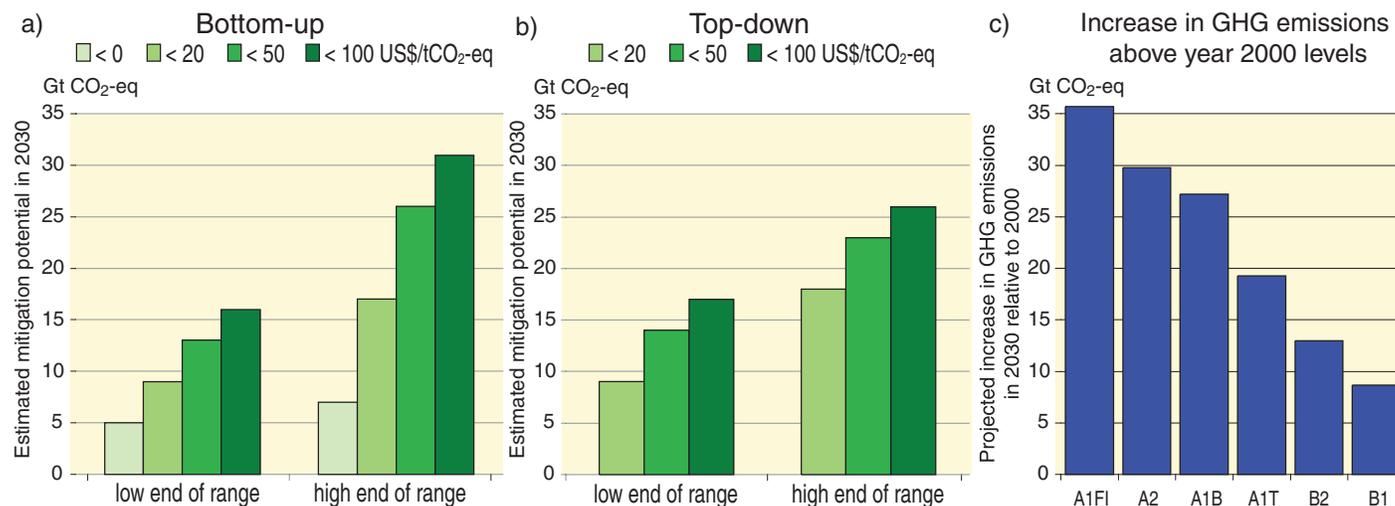

Figure 4.1 compares global economic mitigation potential in 2030 with the projected emissions increase from 2000 to 2030. Bottom-up studies suggest that mitigation opportunities with net negative costs<sup>22</sup> have the potential to reduce emissions by about 6 GtCO<sub>2</sub>-eq/yr in 2030. Realising these requires dealing with implementation barriers. The economic mitigation potential, which is generally greater than the market mitigation potential, can only be achieved when adequate policies are in place and barriers removed.<sup>21</sup> {WGIII 11.3, SPM}

Sectoral estimates of economic mitigation potential and marginal costs derived from bottom-up studies corrected for double counting of mitigation potential are shown in Figure 4.2. While top-down and bottom-up studies are in line at the global level, there are considerable differences at the sectoral level. {WGIII 11.3, SPM}

No single technology can provide all of the mitigation potential in any sector. Table 4.2 lists selected examples of key technologies, policies, constraints and opportunities by sector. {WGIII SPM}

Future energy infrastructure investment decisions, expected to total over US\$20 trillion<sup>23</sup> between 2005 and 2030, will have long-term impacts on GHG emissions, because of the long lifetimes of energy plants and other infrastructure capital stock. The widespread diffusion of low-carbon technologies may take many decades, even if early investments in these technologies are made attractive. Initial estimates show that returning global energy-related CO<sub>2</sub> emissions to 2005 levels by 2030 would require a large shift in the pattern of investment, although the net additional investment required ranges from negligible to 5 to 10%. {WGIII 4.1, 4.4, 11.6, SPM}

#### Comparison between global economic mitigation potential and projected emissions increase in 2030

**Figure 4.1.** Global economic mitigation potential in 2030 estimated from bottom-up (Panel a) and top-down (Panel b) studies, compared with the projected emissions increases from SRES scenarios relative to year 2000 GHG emissions of 40.8 GtCO<sub>2</sub>-eq (Panel c). Note: GHG emissions in 2000 are exclusive of emissions of decay of above-ground biomass that remains after logging and deforestation and from peat fires and drained peat soils, to ensure consistency with the SRES emissions results. {WGIII Figures SPM.4, SPM.5a, SPM.5b}

<sup>21</sup> The concept of 'mitigation potential' has been developed to assess the scale of GHG reductions that could be made, relative to emission baselines, for a given level of carbon price (expressed in cost per unit of carbon dioxide equivalent emissions avoided or reduced). Mitigation potential is further differentiated in terms of 'market mitigation potential' and 'economic mitigation potential'.

**Market mitigation potential** is the mitigation potential based on private costs and private discount rates (reflecting the perspective of private consumers and companies), which might be expected to occur under forecast market conditions, including policies and measures currently in place, noting that barriers limit actual uptake.

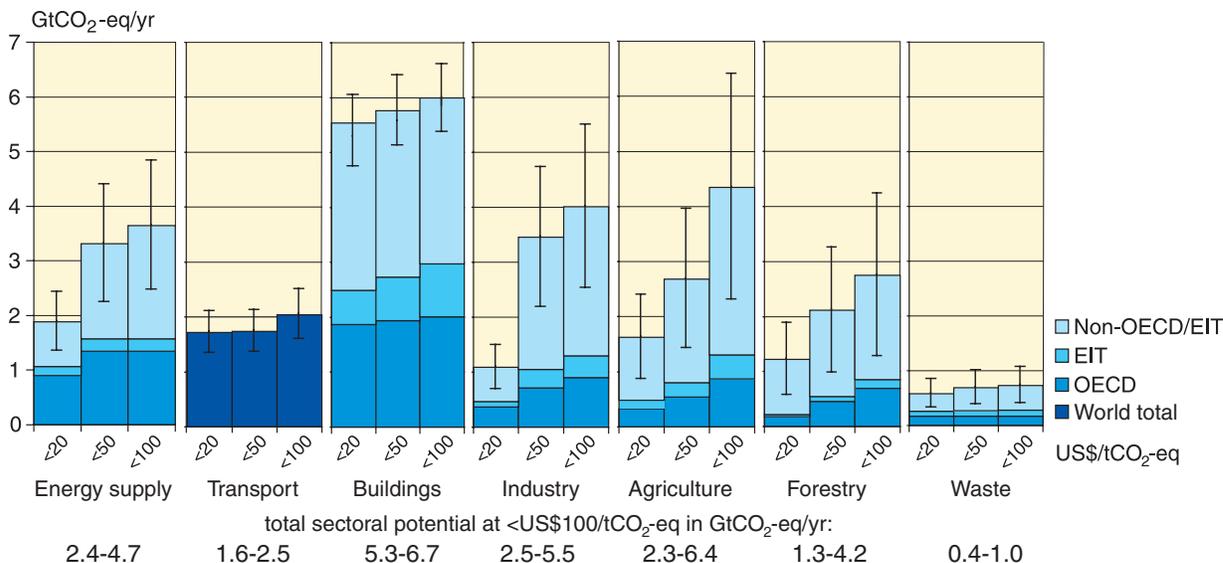

**Economic mitigation potential** is the mitigation potential that takes into account social costs and benefits and social discount rates (reflecting the perspective of society; social discount rates are lower than those used by private investors), assuming that market efficiency is improved by policies and measures and barriers are removed.

Mitigation potential is estimated using different types of approaches. **Bottom-up studies** are based on assessment of mitigation options, emphasising specific technologies and regulations. They are typically sectoral studies taking the macro-economy as unchanged. **Top-down studies** assess the economy-wide potential of mitigation options. They use globally consistent frameworks and aggregated information about mitigation options and capture macro-economic and market feedbacks.

<sup>22</sup> Net negative costs (no regrets opportunities) are defined as those options whose benefits such as reduced energy costs and reduced emissions of local/regional pollutants equal or exceed their costs to society, excluding the benefits of avoided climate change.

<sup>23</sup> 20 trillion = 20,000 billion = 20×10<sup>12</sup>

**Economic mitigation potentials by sector in 2030 estimated from bottom-up studies**

**Figure 4.2.** Estimated economic mitigation potential by sector and region using technologies and practices expected to be available in 2030. The potentials do not include non-technical options such as lifestyle changes. {WGIII Figure SPM.6}

**Notes:**

- a) The ranges for global economic potentials as assessed in each sector are shown by vertical lines. The ranges are based on end-use allocations of emissions, meaning that emissions of electricity use are counted towards the end-use sectors and not to the energy supply sector.
- b) The estimated potentials have been constrained by the availability of studies particularly at high carbon price levels.
- c) Sectors used different baselines. For industry the SRES B2 baseline was taken, for energy supply and transport the World Energy Outlook (WEO) 2004 baseline was used; the building sector is based on a baseline in between SRES B2 and A1B; for waste, SRES A1B driving forces were used to construct a waste-specific baseline; agriculture and forestry used baselines that mostly used B2 driving forces.
- d) Only global totals for transport are shown because international aviation is included.
- e) Categories excluded are non-CO<sub>2</sub> emissions in buildings and transport, part of material efficiency options, heat production and cogeneration in energy supply, heavy duty vehicles, shipping and high-occupancy passenger transport, most high-cost options for buildings, wastewater treatment, emission reduction from coal mines and gas pipelines, and fluorinated gases from energy supply and transport. The underestimation of the total economic potential from these emissions is of the order of 10 to 15%.

**While studies use different methodologies, there is high agreement and much evidence that in all analysed world regions near-term health co-benefits from reduced air pollution, as a result of actions to reduce GHG emissions, can be substantial and may offset a substantial fraction of mitigation costs. {WGIII 11.8, SPM}**

Energy efficiency and utilisation of renewable energy offer synergies with sustainable development. In least developed countries, energy substitution can lower mortality and morbidity by reducing indoor air pollution, reduce the workload for women and children and decrease the unsustainable use of fuelwood and related deforestation. {WGIII 11.8, 11.9, 12.4}

**Literature since the TAR confirms with high agreement and medium evidence that there may be effects from Annex I countries' action on the global economy and global emissions, although the scale of carbon leakage remains uncertain. {WGIII 11.7, SPM}**

Fossil fuel exporting nations (in both Annex I and non-Annex I countries) may expect, as indicated in the TAR, lower demand and prices and lower GDP growth due to mitigation policies. The extent of this spillover depends strongly on assumptions related to policy decisions and oil market conditions. {WGIII 11.7, SPM}

Critical uncertainties remain in the assessment of carbon leakage. Most equilibrium modelling supports the conclusion in the TAR of economy-wide leakage from Kyoto action in the order of 5 to 20%, which would be less if competitive low-emissions technologies were effectively diffused. {WGIII 11.7, SPM}

**There is also high agreement and medium evidence that changes in lifestyle and behaviour patterns can contribute to climate change mitigation across all sectors. Management practices can also have a positive role. {WGIII SPM}**

Examples that can have positive impacts on mitigation include changes in consumption patterns, education and training, changes in building occupant behaviour, transport demand management and management tools in industry. {WGIII 4.1, 5.1, 6.7, 7.3, SPM}

**Policies that provide a real or implicit price of carbon could create incentives for producers and consumers to significantly invest in low-GHG products, technologies and processes. {WGIII SPM}**

An effective carbon-price signal could realise significant mitigation potential in all sectors. Modelling studies show that global carbon prices rising to US\$20-80/tCO<sub>2</sub>-eq by 2030 are consistent with stabilisation at around 550ppm CO<sub>2</sub>-eq by 2100. For the same

Table 4.2 Selected examples of key sectoral mitigation technologies and practices currently commercially available. Key mitigation technologies and practices projected to be commercialised before 2030 shown in italics.

Sector	Key mitigation technologies and practices currently commercially available. Key mitigation technologies and practices projected to be commercialised before 2030 shown in italics.	Policies, measures and instruments shown to be environmentally effective	Key constraints or opportunities (Normal font = constraints; <i>italics</i> = opportunities)
<b>Energy Supply</b> {WGIII 4.3, 4.4}	Improved supply and distribution efficiency; fuel switching from coal to gas; nuclear power; renewable heat and power (hydropower, solar, wind, geothermal and bioenergy); combined heat and power; early applications of carbon dioxide capture and storage (CCS) (e.g. storage of removed CO <sub>2</sub> from natural gas); CCS for gas, biomass and coal-fired electricity generating facilities; advanced nuclear power; advanced renewable energy, including tidal and wave energy, concentrating solar, and solar photovoltaics	Reduction of fossil fuel subsidies; taxes or carbon charges on fossil fuels Feed-in tariffs for renewable energy technologies; renewable energy obligations; producer subsidies	Resistance by vested interests may make them difficult to implement <i>May be appropriate to create markets for low-emissions technologies</i>
<b>Transport</b> {WGIII 5.4}	More fuel-efficient vehicles; hybrid vehicles; cleaner diesel vehicles; biofuels; modal shifts from road transport to rail and public transport systems; non-motorised transport (cycling, walking); land-use and transport planning; <i>second generation biofuels; higher efficiency aircraft; advanced electric and hybrid vehicles with more powerful and reliable batteries</i>	Mandatory fuel economy; biofuel blending and CO <sub>2</sub> standards for road transport Taxes on vehicle purchase, registration, use and motor fuels; road and parking pricing	Partial coverage of vehicle fleet may limit effectiveness Effectiveness may drop with higher incomes
<b>Buildings</b> {WGIII 6.5}	Efficient lighting and daylighting; more efficient electrical appliances and heating and cooling devices; improved cook stoves, improved insulation; passive and active solar design for heating and cooling; alternative refrigeration fluids, recovery and recycling of fluorinated gases; <i>integrated design of commercial buildings including technologies, such as intelligent meters that provide feedback and control; solar photovoltaics integrated in buildings</i>	Appliance standards and labelling Building codes and certification	Particularly appropriate for countries that are building up their transportation systems Periodic revision of standards needed <i>Attractive for new buildings. Enforcement can be difficult</i>
<b>Industry</b> {WGIII 7.5}	More efficient end-use electrical equipment; heat and power recovery; material recycling and substitution; control of non-CO <sub>2</sub> gas emissions; and a wide array of process-specific technologies; <i>advanced energy efficiency; CCS for cement, ammonia, and iron manufacture; inert electrodes for aluminium manufacture</i>	Demand-side management programmes Public sector leadership programmes, including procurement Incentives for energy service companies (ESCOs)	Need for regulations so that utilities may profit <i>Government purchasing can expand demand for energy-efficient products</i> <i>Success factor: Access to third party financing</i>
<b>Agriculture</b> {WGIII 8.4}	Improved crop and grazing land management to increase soil carbon storage; restoration of cultivated peaty soils and degraded lands; improved rice cultivation techniques and livestock and manure management to reduce CH <sub>4</sub> emissions; dedicated nitrogen fertiliser application techniques to reduce N <sub>2</sub> O emissions; improved energy crops to replace fossil fuel use; improved energy efficiency; <i>improvements of crop yields</i>	Tradable permits Voluntary agreements	Predictable allocation mechanisms and stable price signals important for investments Success factors include: clear targets, a baseline scenario, third-party involvement in design and review and formal provisions of monitoring, close cooperation between government and industry
<b>Forestry/forests</b> {WGIII 9.4}	Afforestation; reforestation; forest management; reduced deforestation; harvested wood product management; use of forestry products for bioenergy to replace fossil fuel use; <i>tree species improvement to increase biomass productivity and carbon sequestration; improved remote sensing technologies for analysis of vegetation/soil carbon sequestration potential and mapping land-use change</i>	Financial incentives and regulations for improved land management; maintaining soil carbon content; efficient use of fertilisers and irrigation	<i>May encourage synergy with sustainable development and with reducing vulnerability to climate change, thereby overcoming barriers to implementation</i>
<b>Waste</b> (WGIII 10.4)	Landfill CH <sub>4</sub> recovery; waste incineration with energy recovery; composting of organic waste; controlled wastewater treatment; recycling and waste minimisation; <i>biocovers and biofilters to optimise CH<sub>4</sub> oxidation</i>	Financial incentives (national and international) to increase forest area, to reduce deforestation and to maintain and manage forests; land-use regulation and enforcement Financial incentives for improved waste and wastewater management Renewable energy incentives or obligations Waste management regulations	Constraints include lack of investment capital and land tenure issues. <i>Can help poverty alleviation.</i> <i>May stimulate technology diffusion</i> Local availability of low-cost fuel Most effectively applied at national level with enforcement strategies

stabilisation level, studies since the TAR that take into account induced technological change may lower these price ranges to US\$5-65/tCO<sub>2</sub>-eq in 2030.<sup>24</sup> {WGIII 3.3, 11.4, 11.5, SPM}

**There is high agreement and much evidence that a wide variety of national policies and instruments are available to governments to create the incentives for mitigation action. Their applicability depends on national circumstances and an understanding of their interactions, but experience from implementation in various countries and sectors shows there are advantages and disadvantages for any given instrument.** {WGIII 13.2, SPM}

Four main criteria are used to evaluate policies and instruments: environmental effectiveness, cost effectiveness, distributional effects including equity, and institutional feasibility. {WGIII 13.2, SPM}

General findings about the performance of policies are: {WGIII 13.2, SPM}

- **Integrating climate policies in broader development policies** makes implementation and overcoming barriers easier.
- **Regulations and standards** generally provide some certainty about emission levels. They may be preferable to other instruments when information or other barriers prevent producers and consumers from responding to price signals. However, they may not induce innovations and more advanced technologies.
- **Taxes and charges** can set a price for carbon, but cannot guarantee a particular level of emissions. Literature identifies taxes as an efficient way of internalising costs of GHG emissions.
- **Tradable permits** will establish a carbon price. The volume of allowed emissions determines their environmental effectiveness, while the allocation of permits has distributional consequences. Fluctuation in the price of carbon makes it difficult to estimate the total cost of complying with emission permits.
- **Financial incentives** (subsidies and tax credits) are frequently used by governments to stimulate the development and diffusion of new technologies. While economic costs are generally higher than for the instruments listed above, they are often critical to overcome barriers.
- **Voluntary agreements** between industry and governments are politically attractive, raise awareness among stakeholders and have played a role in the evolution of many national policies. The majority of agreements have not achieved significant emissions reductions beyond business as usual. However, some recent agreements, in a few countries, have accelerated the application of best available technology and led to measurable emission reductions.
- **Information instruments** (e.g. awareness campaigns) may positively affect environmental quality by promoting informed choices and possibly contributing to behavioural change, however, their impact on emissions has not been measured yet.

- **Research, development and demonstration (RD&D)** can stimulate technological advances, reduce costs and enable progress toward stabilisation.

Some corporations, local and regional authorities, NGOs and civil groups are adopting a wide variety of voluntary actions. These voluntary actions may limit GHG emissions, stimulate innovative policies and encourage the deployment of new technologies. On their own, they generally have limited impact on national- or regional-level emissions. {WGIII 13.4, SPM}

#### 4.4 Relationship between adaptation and mitigation options and relationship with sustainable development

**There is growing understanding of the possibilities to choose and implement climate response options in several sectors to realise synergies and avoid conflicts with other dimensions of sustainable development.** {WGIII SPM}

Climate change policies related to energy efficiency and renewable energy are often economically beneficial, improve energy security and reduce local pollutant emissions. Reducing both loss of natural habitat and deforestation can have significant biodiversity, soil and water conservation benefits, and can be implemented in a socially and economically sustainable manner. Forestation and bioenergy plantations can restore degraded land, manage water runoff, retain soil carbon and benefit rural economies, but could compete with food production and may be negative for biodiversity, if not properly designed. {WGII 20.3, 20.8; WGIII 4.5, 9.7, 12.3, SPM}

There is growing evidence that decisions about macro-economic policy, agricultural policy, multilateral development bank lending, insurance practices, electricity market reform, energy security and forest conservation, for example, which are often treated as being apart from climate policy, can significantly reduce emissions (Table 4.3). Similarly, non-climate policies can affect adaptive capacity and vulnerability. {WGII 20.3; WGIII SPM, 12.3}

**Both synergies and trade-offs exist between adaptation and mitigation options.** {WGII 18.4.3; WGIII 11.9}

Examples of synergies include properly designed biomass production, formation of protected areas, land management, energy use in buildings, and forestry, but synergies are rather limited in other sectors. Potential trade-offs include increased GHG emissions due to increased consumption of energy related to adaptive responses. {WGII 18.4.3, 18.5, 18.7, TS.5.2; WGIII 4.5, 6.9, 8.5, 9.5, SPM}

<sup>24</sup> Studies on mitigation portfolios and macro-economic costs assessed in this report are based on top-down modelling. Most models use a global least-cost approach to mitigation portfolios, with universal emissions trading, assuming transparent markets, no transaction cost, and thus perfect implementation of mitigation measures throughout the 21<sup>st</sup> century. Costs are given for a specific point in time. Global modelled costs will increase if some regions, sectors (e.g. land use), options or gases are excluded. Global modelled costs will decrease with lower baselines, use of revenues from carbon taxes and auctioned permits, and if induced technological learning is included. These models do not consider climate benefits and generally also co-benefits of mitigation measures, or equity issues. Significant progress has been achieved in applying approaches based on induced technological change to stabilisation studies; however, conceptual issues remain. In the models that consider induced technological change, projected costs for a given stabilisation level are reduced; the reductions are greater at lower stabilisation level.

**Table 4.3.** Integrating climate change considerations into development policies – selected examples in the area of mitigation. {WGIII 12.2.4.6}

Selected sectors	Non-climate change policy instruments and actions	Potentially affects:
Macro-economy	Implement non-climate taxes/subsidies and/or other fiscal and regulatory policies that promote sustainable development	Total global GHG emissions
Forestry	Adoption of forest conservation and sustainable management practices	GHG emissions from deforestation
Electricity	Adoption of cost-effective renewables, demand-side management programmes, and transmission and distribution loss reduction	Electricity sector CO <sub>2</sub> emissions
Petroleum imports	Diversifying imported and domestic fuel mix and reducing economy's energy intensity to improve energy security	Emissions from crude oil and product imports
Insurance for building, transport sectors	Differentiated premiums, liability insurance exclusions, improved terms for green products	Transport and building sector GHG emissions
International finance	Country and sector strategies and project lending that reduces emissions	Emissions from developing countries

### 4.5 International and regional cooperation

There is *high agreement and much evidence* that notable achievements of the UNFCCC and its Kyoto Protocol are the establishment of a global response to the climate change problem, stimulation of an array of national policies, the creation of an international carbon market and the establishment of new institutional mechanisms that may provide the foundation for future mitigation efforts. Progress has also been made in addressing adaptation within the UNFCCC and additional initiatives have been suggested. {WGII 18.7; WGIII 13.3, SPM}

The impact of the Protocol's first commitment period relative to global emissions is projected to be limited. Its economic impacts on participating Annex-B countries are projected to be smaller than presented in the TAR, which showed 0.2 to 2% lower GDP in 2012 without emissions trading and 0.1 to 1.1% lower GDP with emissions trading among Annex-B countries. To be more environmentally effective, future mitigation efforts would need to achieve deeper reductions covering a higher share of global emissions (see Topic 5). {WGIII 1.4, 11.4, 13.3, SPM}

The literature provides *high agreement and much evidence* of many options for achieving reductions of global GHG emissions at the international level through cooperation. It also suggests that successful agreements are environmentally effective, cost-effective, incorporate distributional considerations and equity, and are institutionally feasible. {WGIII 13.3, SPM}

Greater cooperative efforts to reduce emissions will help to reduce global costs for achieving a given level of mitigation, or will improve environmental effectiveness. Improving and expanding the scope of market mechanisms (such as emission trading, Joint Implementation and Clean Development Mechanism) could reduce overall mitigation costs. {WGIII 13.3, SPM}

Efforts to address climate change can include diverse elements such as emissions targets; sectoral, local, sub-national and regional actions; RD&D programmes; adopting common policies; implementing development-oriented actions; or expanding financing instruments. These elements can be implemented in an integrated fashion, but comparing the efforts made by different countries quantitatively would be complex and resource intensive. {WGIII 13.3, SPM}

Actions that could be taken by participating countries can be differentiated both in terms of when such action is undertaken, who participates and what the action will be. Actions can be binding or non-binding, include fixed or dynamic targets, and participation can be static or vary over time. {WGIII 13.3, SPM}

# 5

---

**The long-term perspective: scientific and socio-economic aspects relevant to adaptation and mitigation, consistent with the objectives and provisions of the Convention, and in the context of sustainable development**

---

## 5.1 Risk management perspective

**Responding to climate change involves an iterative risk management process that includes both mitigation and adaptation, taking into account actual and avoided climate change damages, co-benefits, sustainability, equity and attitudes to risk. {WGII 20.9, SPM; WGIII SPM}**

Risk management techniques can explicitly accommodate sectoral, regional and temporal diversity, but their application requires information about not only impacts resulting from the most likely climate scenarios, but also impacts arising from lower-probability but higher-consequence events and the consequences of proposed policies and measures. Risk is generally understood to be the product of the likelihood of an event and its consequences. Climate change impacts depend on the characteristics of natural and human systems, their development pathways and their specific locations. {SYR 3.3, Figure 3.6; WGII 20.2, 20.9, SPM; WGIII 3.5, 3.6, SPM}

## 5.2 Key vulnerabilities, impacts and risks – long-term perspectives

**The five ‘reasons for concern’ identified in the TAR are now assessed to be stronger with many risks identified with higher confidence. Some are projected to be larger or to occur at lower increases in temperature. This is due to (1) better understanding of the magnitude of impacts and risks associated with increases in global average temperature and GHG concentrations, including vulnerability to present-day climate variability, (2) more precise identification of the circumstances that make systems, sectors, groups and regions especially vulnerable and (3) growing evidence that the risk of very large impacts on multiple century time scales would continue to increase as long as GHG concentrations and temperature continue to increase. Understanding about the relationship between impacts (the basis for ‘reasons for con-**

**cern’ in the TAR) and vulnerability (that includes the ability to adapt to impacts) has improved. {WGII 4.4, 5.4, 19.ES, 19.3.7, TS.4.6; WGIII 3.5, SPM}**

The TAR concluded that vulnerability to climate change is a function of exposure, sensitivity and adaptive capacity. Adaptation can reduce sensitivity to climate change while mitigation can reduce the exposure to climate change, including its rate and extent. Both conclusions are confirmed in this assessment. {WGII 20.2, 20.7.3}

No single metric can adequately describe the diversity of key vulnerabilities or support their ranking. A sample of relevant impacts is provided in Figure 3.6. The estimation of key vulnerabilities in any system, and damage implied, will depend on exposure (the rate and magnitude of climate change), sensitivity, which is determined in part and where relevant by development status, and adaptive capacity. Some key vulnerabilities may be linked to thresholds; in some cases these may cause a system to shift from one state to another, whereas others have thresholds that are defined subjectively and thus depend on societal values. {WGII 19.ES, 19.1}

The five ‘reasons for concern’ that were identified in the TAR were intended to synthesise information on climate risks and key vulnerabilities and to “aid readers in making their own determination” about risk. These remain a viable framework to consider key vulnerabilities, and they have been updated in the AR4. {TAR WGII Chapter 19; WGII SPM}

- **Risks to unique and threatened systems.** There is new and stronger evidence of observed impacts of climate change on unique and vulnerable systems (such as polar and high mountain communities and ecosystems), with increasing levels of adverse impacts as temperatures increase further. An increasing risk of species extinction and coral reef damage is projected with higher confidence than in the TAR as warming proceeds. There is *medium confidence* that approximately 20 to 30% of plant and animal species assessed so far are *likely* to be at increased risk of extinction if increases in global average temperature exceed 1.5 to 2.5°C over 1980-1999 levels. Confidence has increased that a 1 to 2°C increase in global mean temperature above 1990 levels (about 1.5 to 2.5°C above pre-indus-

### Key Vulnerabilities and Article 2 of the UNFCCC

Article 2 of the UNFCCC states:

“The ultimate objective of this Convention and any related legal instruments that the Conference of the Parties may adopt is to achieve, in accordance with the relevant provisions of the Convention, stabilisation of greenhouse gas concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system. Such a level should be achieved within a time frame sufficient to allow ecosystems to adapt naturally to climate change, to ensure that food production is not threatened and to enable economic development to proceed in a sustainable manner.”

Determining what constitutes “dangerous anthropogenic interference with the climate system” in relation to Article 2 of the UNFCCC involves value judgements. Science can support informed decisions on this issue, including by providing criteria for judging which vulnerabilities might be labelled ‘key’. {SYR 3.3, WGII 19.ES}

Key vulnerabilities<sup>25</sup> may be associated with many climate-sensitive systems, including food supply, infrastructure, health, water resources, coastal systems, ecosystems, global biogeochemical cycles, ice sheets and modes of oceanic and atmospheric circulation. {WGII 19.ES}

More specific information is now available across the regions of the world concerning the nature of future impacts, including for some places not covered in previous assessments. {WGII SPM}

<sup>25</sup> Key Vulnerabilities can be identified based on a number of criteria in the literature, including magnitude, timing, persistence/reversibility, the potential for adaptation, distributional aspects, likelihood and ‘importance’ of the impacts.

trial) poses significant risks to many unique and threatened systems including many biodiversity hotspots. Corals are vulnerable to thermal stress and have low adaptive capacity. Increases in sea surface temperature of about 1 to 3°C are projected to result in more frequent coral bleaching events and widespread mortality, unless there is thermal adaptation or acclimatisation by corals. Increasing vulnerability of Arctic indigenous communities and small island communities to warming is projected. {SYR 3.3, 3.4, Figure 3.6, Table 3.2; WGII 4.ES, 4.4, 6.4, 14.4.6, 15.ES, 15.4, 15.6, 16.ES, 16.2.1, 16.4, Table 19.1, 19.3.7, TS.5.3, Figure TS.12, Figure TS.14}

- **Risks of extreme weather events.** Responses to some recent extreme climate events reveal higher levels of vulnerability in both developing and developed countries than was assessed in the TAR. There is now higher confidence in the projected increases in droughts, heat waves and floods, as well as their adverse impacts. As summarised in Table 3.2, increases in drought, heat waves and floods are projected in many regions and would have mostly adverse impacts, including increased water stress and wild fire frequency, adverse effects on food production, adverse health effects, increased flood risk and extreme high sea level, and damage to infrastructure. {SYR 3.2, 3.3, Table 3.2; WGI 10.3, Table SPM.2; WGII 1.3, 5.4, 7.1, 7.5, 8.2, 12.6, 19.3, Table 19.1, Table SPM.1}
- **Distribution of impacts and vulnerabilities.** There are sharp differences across regions and those in the weakest economic position are often the most vulnerable to climate change and are frequently the most susceptible to climate-related damages, especially when they face multiple stresses. There is increasing evidence of greater vulnerability of specific groups such as the poor and elderly not only in developing but also in developed countries. There is greater confidence in the projected regional patterns of climate change (see Topic 3.2) and in the projections of regional impacts, enabling better identification of particularly vulnerable systems, sectors and regions (see Topic 3.3). Moreover, there is increased evidence that low-latitude and less-developed areas generally face greater risk, for example in dry areas and megadeltas. New studies confirm that Africa is one of the most vulnerable continents because of the range of projected impacts, multiple stresses and low adaptive capacity. Substantial risks due to sea level rise are projected particularly for Asian megadeltas and for small island communities. {SYR 3.2, 3.3, 5.4; WGI 11.2-11.7, SPM; WGII 3.4.3, 5.3, 5.4, Boxes 7.1 and 7.4, 8.1.1, 8.4.2, 8.6.1.3, 8.7, 9.ES, Table 10.9, 10.6, 16.3, 19.ES, 19.3, Table 19.1, 20.ES, TS.4.5, TS.5.4, Tables TS.1, TS.3, TS.4, SPM}
- **Aggregate impacts.** Compared to the TAR, initial net market-based benefits from climate change are projected to peak at a lower magnitude and therefore sooner than was assessed in the TAR. It is *likely* that there will be higher damages for larger magnitudes of global temperature increase than estimated in the TAR, and the net costs of impacts of increased warming are projected to increase over time. Aggregate impacts have also been quantified in other metrics (see Topic 3.3): for example,

climate change over the next century is *likely* to adversely affect hundreds of millions of people through increased coastal flooding, reductions in water supplies, increased malnutrition and increased health impacts. {SYR 3.3, Figure 3.6; WGII 19.3.7, 20.7.3, TS.5.3}

- **Risks of large-scale singularities.**<sup>26</sup> As discussed in Topic 3.4, during the current century, a large-scale abrupt change in the meridional overturning circulation is *very unlikely*. There is *high confidence* that global warming over many centuries would lead to a sea level rise contribution from thermal expansion alone that is projected to be much larger than observed over the 20<sup>th</sup> century, with loss of coastal area and associated impacts. There is better understanding than in the TAR that the risk of additional contributions to sea level rise from both the Greenland and possibly Antarctic ice sheets may be larger than projected by ice sheet models and could occur on century time scales. This is because ice dynamical processes seen in recent observations but not fully included in ice sheet models assessed in the AR4 could increase the rate of ice loss. Complete deglaciation of the Greenland ice sheet would raise sea level by 7m and could be irreversible. {SYR 3.4; WGI 10.3, Box 10.1; WGII 19.3.7, SPM}

### 5.3 Adaptation and mitigation

**There is *high confidence* that neither adaptation nor mitigation alone can avoid all climate change impacts. Adaptation is necessary both in the short term and longer term to address impacts resulting from the warming that would occur even for the lowest stabilisation scenarios assessed. There are barriers, limits and costs that are not fully understood. Adaptation and mitigation can complement each other and together can significantly reduce the risks of climate change.** {WGII 4.ES, TS 5.1, 18.4, 18.6, 20.7, SPM; WGIII 1.2, 2.5, 3.5, 3.6}

Adaptation will be ineffective for some cases such as natural ecosystems (e.g. loss of Arctic sea ice and marine ecosystem viability), the disappearance of mountain glaciers that play vital roles in water storage and supply, or adaptation to sea level rise of several metres<sup>27</sup>. It will be less feasible or very costly in many cases for the projected climate change beyond the next several decades (such as delta regions and estuaries). There is *high confidence* that the ability of many ecosystems to adapt naturally will be exceeded this century. In addition, multiple barriers and constraints to effective adaptation exist in human systems (see Topic 4.2). {SYR 4.2; WGII 17.4.2, 19.2, 19.4.1}

Unmitigated climate change would, in the long term, be *likely* to exceed the capacity of natural, managed and human systems to adapt. Reliance on adaptation alone could eventually lead to a magnitude of climate change to which effective adaptation is not possible, or will only be available at very high social, environmental and economic costs. {WGII 18.1, SPM}

<sup>26</sup> See glossary

<sup>27</sup> While it is technically possible to adapt to several metres of sea level rise, the resources required are so unevenly distributed that in reality this risk is outside the scope of adaptation. {WGII 17.4.2, 19.4.1}

**Efforts to mitigate GHG emissions to reduce the rate and magnitude of climate change need to account for inertia in the climate and socio-economic systems. {SYR 3.2; WGI 10.3, 10.4, 10.7, SPM; WGIII 2.3.4}**

After GHG concentrations are stabilised, the rate at which the global average temperature increases is expected to slow within a few decades. Small increases in global average temperature could still be expected for several centuries. Sea level rise from thermal expansion would continue for many centuries at a rate that eventually decreases from that reached before stabilisation, due to ongoing heat uptake by oceans. {SYR 3.2, WGI 10.3, 10.4, 10.7, SPM}

Delayed emission reductions significantly constrain the opportunities to achieve lower stabilisation levels and increase the risk of more severe climate change impacts. Even though benefits of mitigation measures in terms of avoided climate change would take several decades to materialise, mitigation actions begun in the short term would avoid locking in both long-lived carbon intensive infrastructure and development pathways, reduce the rate of climate change and reduce the adaptation needs associated with higher levels of warming. {WGII 18.4, 20.6, 20.7, SPM; WGIII 2.3.4, 3.4, 3.5, 3.6, SPM}

**5.4 Emission trajectories for stabilisation**

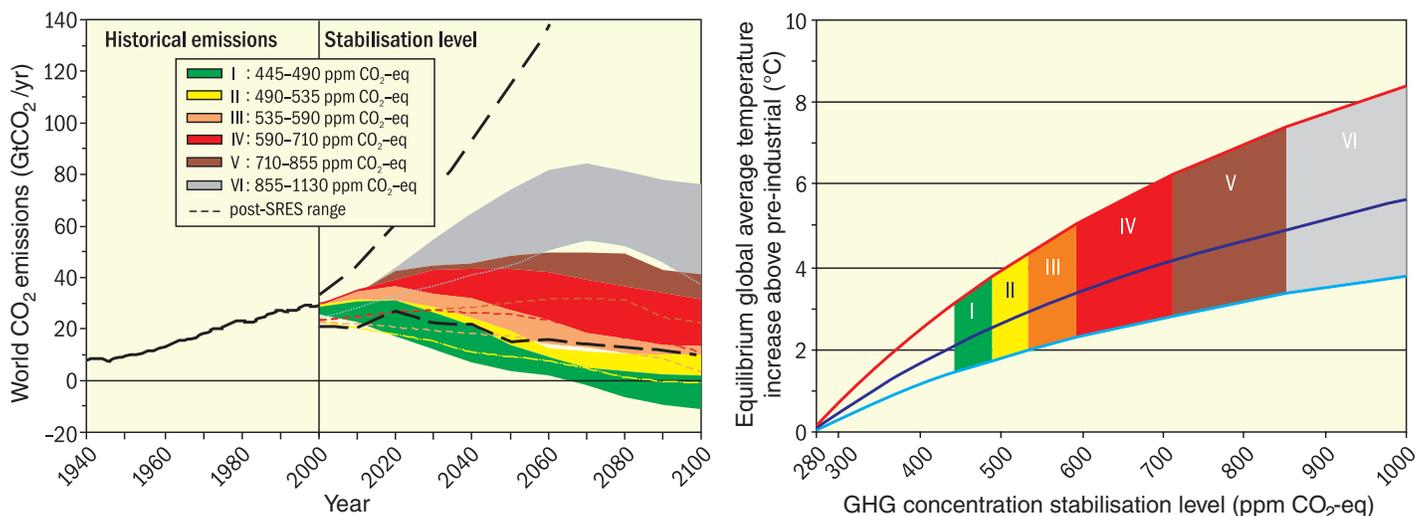

**In order to stabilise the concentration of GHGs in the atmosphere, emissions would need to peak and decline thereafter.<sup>28</sup> The lower the stabilisation level, the more quickly this peak and decline would need to occur (Figure 5.1).<sup>29</sup> {WGIII 3.3, 3.5, SPM}**

Advances in modelling since the TAR permit the assessment of multi-gas mitigation strategies for exploring the attainability and costs for achieving stabilisation of GHG concentrations. These scenarios explore a wider range of future scenarios, including lower levels of stabilisation, than reported in the TAR. {WGIII 3.3, 3.5, SPM}

**Mitigation efforts over the next two to three decades will have a large impact on opportunities to achieve lower stabilisation levels (Table 5.1 and Figure 5.1). {WGIII 3.5, SPM}**

Table 5.1 summarises the required emission levels for different groups of stabilisation concentrations and the resulting equilibrium

**CO<sub>2</sub> emissions and equilibrium temperature increases for a range of stabilisation levels**

**Figure 5.1.** Global CO<sub>2</sub> emissions for 1940 to 2000 and emissions ranges for categories of stabilisation scenarios from 2000 to 2100 (left-hand panel); and the corresponding relationship between the stabilisation target and the likely equilibrium global average temperature increase above pre-industrial (right-hand panel). Approaching equilibrium can take several centuries, especially for scenarios with higher levels of stabilisation. Coloured shadings show stabilisation scenarios grouped according to different targets (stabilisation category I to VI). The right-hand panel shows ranges of global average temperature change above pre-industrial, using (i) 'best estimate' climate sensitivity of 3°C (black line in middle of shaded area), (ii) upper bound of likely range of climate sensitivity of 4.5°C (red line at top of shaded area) (iii) lower bound of likely range of climate sensitivity of 2°C (blue line at bottom of shaded area). Black dashed lines in the left panel give the emissions range of recent baseline scenarios published since the SRES (2000). Emissions ranges of the stabilisation scenarios comprise CO<sub>2</sub>-only and multigas scenarios and correspond to the 10<sup>th</sup> to 90<sup>th</sup> percentile of the full scenario distribution. Note: CO<sub>2</sub> emissions in most models do not include emissions from decay of above ground biomass that remains after logging and deforestation, and from peat fires and drained peat soils. {WGIII Figures SPM.7 and SPM.8}

<sup>28</sup> Peaking means that the emissions need to reach a maximum before they decline later.

<sup>29</sup> For the lowest mitigation scenario category assessed, emissions would need to peak by 2015 and for the highest by 2090 (see Table 5.1). Scenarios that use alternative emission pathways show substantial differences on the rate of global climate change. {WGII 19.4}

**Table 5.1.** Characteristics of post-TAR stabilisation scenarios and resulting long-term equilibrium global average temperature and the sea level rise component from thermal expansion only.<sup>a</sup> {WGI 10.7; WGIII Table TS.2, Table 3.10, Table SPM.5}

Category	CO <sub>2</sub> concentration at stabilisation (2005 = 379 ppm) <sup>b</sup>	CO <sub>2</sub> -equivalent concentration at stabilisation including GHGs and aerosols (2005=375 ppm) <sup>b</sup>	Peaking year for CO <sub>2</sub> emissions <sup>a,c</sup>	Change in global CO <sub>2</sub> emissions in 2050 (percent of 2000 emissions) <sup>a,c</sup>	Global average temperature increase above pre-industrial at equilibrium, using 'best estimate' climate sensitivity <sup>d,e</sup>	Global average sea level rise above pre-industrial at equilibrium from thermal expansion only <sup>f</sup>	Number of assessed scenarios

## Notes:

- The emission reductions to meet a particular stabilisation level reported in the mitigation studies assessed here might be underestimated due to missing carbon cycle feedbacks (see also Topic 2.3).
- Atmospheric CO<sub>2</sub> concentrations were 379ppm in 2005. The best estimate of total CO<sub>2</sub>-eq concentration in 2005 for all long-lived GHGs is about 455ppm, while the corresponding value including the net effect of all anthropogenic forcing agents is 375ppm CO<sub>2</sub>-eq.
- Ranges correspond to the 15<sup>th</sup> to 85<sup>th</sup> percentile of the post-TAR scenario distribution. CO<sub>2</sub> emissions are shown so multi-gas scenarios can be compared with CO<sub>2</sub>-only scenarios (see Figure 2.1).
- The best estimate of climate sensitivity is 3°C.
- Note that global average temperature at equilibrium is different from expected global average temperature at the time of stabilisation of GHG concentrations due to the inertia of the climate system. For the majority of scenarios assessed, stabilisation of GHG concentrations occurs between 2100 and 2150 (see also Footnote 30).
- Equilibrium sea level rise is for the contribution from ocean thermal expansion only and does not reach equilibrium for at least many centuries. These values have been estimated using relatively simple climate models (one low-resolution AOGCM and several EMICs based on the best estimate of 3°C climate sensitivity) and do not include contributions from melting ice sheets, glaciers and ice caps. Long-term thermal expansion is projected to result in 0.2 to 0.6m per degree Celsius of global average warming above pre-industrial. (AOGCM refers to Atmosphere-Ocean General Circulation Model and EMICs to Earth System Models of Intermediate Complexity.)

global average temperature increases, using the 'best estimate' of climate sensitivity (see Figure 5.1 for the *likely* range of uncertainty). Stabilisation at lower concentration and related equilibrium temperature levels advances the date when emissions need to peak and requires greater emissions reductions by 2050.<sup>30</sup> Climate sensitivity is a key uncertainty for mitigation scenarios that aim to meet specific temperature levels. The timing and level of mitigation to reach a given temperature stabilisation level is earlier and more stringent if climate sensitivity is high than if it is low. {WGIII 3.3, 3.4, 3.5, 3.6, SPM}

Sea level rise under warming is inevitable. Thermal expansion would continue for many centuries after GHG concentrations have stabilised, for any of the stabilisation levels assessed, causing an eventual sea level rise much larger than projected for the 21<sup>st</sup> century (Table 5.1). If GHG and aerosol concentrations had been stabilised at year 2000 levels, thermal expansion alone would be expected to lead to further sea level rise of 0.3 to 0.8m. The eventual contributions from Greenland ice sheet loss could be several metres, and larger than from thermal expansion, should warming in excess of 1.9 to 4.6°C above pre-industrial be sustained over many centuries. These long-term consequences would have major impli-

cations for world coastlines. The long time scale of thermal expansion and ice sheet response to warming imply that mitigation strategies that seek to stabilise GHG concentrations (or radiative forcing) at or above present levels do not stabilise sea level for many centuries. {WGI 10.7}

Feedbacks between the carbon cycle and climate change affect the required mitigation and adaptation response to climate change. Climate-carbon cycle coupling is expected to increase the fraction of anthropogenic emissions that remains in the atmosphere as the climate system warms (see Topics 2.3 and 3.2.1), but mitigation studies have not yet incorporated the full range of these feedbacks. As a consequence, the emission reductions to meet a particular stabilisation level reported in the mitigation studies assessed in Table 5.1 might be underestimated. Based on current understanding of climate-carbon cycle feedbacks, model studies suggest that stabilising CO<sub>2</sub> concentrations at, for example, 450ppm<sup>31</sup> could require cumulative emissions over the 21<sup>st</sup> century to be less than 1800 [1370 to 2200] GtCO<sub>2</sub>, which is about 27% less than the 2460 [2310 to 2600] GtCO<sub>2</sub> determined without consideration of carbon cycle feedbacks. {SYR 2.3, 3.2.1; WGI 7.3, 10.4, SPM}

<sup>30</sup> Estimates for the evolution of temperature over the course of this century are not available in the AR4 for the stabilisation scenarios. For most stabilisation levels global average temperature is approaching the equilibrium level over a few centuries. For the much lower stabilisation scenarios (category I and II, Figure 5.1), the equilibrium temperature may be reached earlier.

<sup>31</sup> To stabilise at 1000ppm CO<sub>2</sub>, this feedback could require that cumulative emissions be reduced from a model average of approximately 5190 [4910 to 5460] GtCO<sub>2</sub> to approximately 4030 [3590 to 4580] GtCO<sub>2</sub>. {WGI 7.3, 10.4, SPM}

## 5.5 Technology flows and development

There is *high agreement* and *much evidence* that all stabilisation levels assessed can be achieved by deployment of a portfolio of technologies that are either currently available or expected to be commercialised in coming decades, assuming appropriate and effective incentives are in place for development, acquisition, deployment and diffusion of technologies and addressing related barriers. {WGIII SPM}

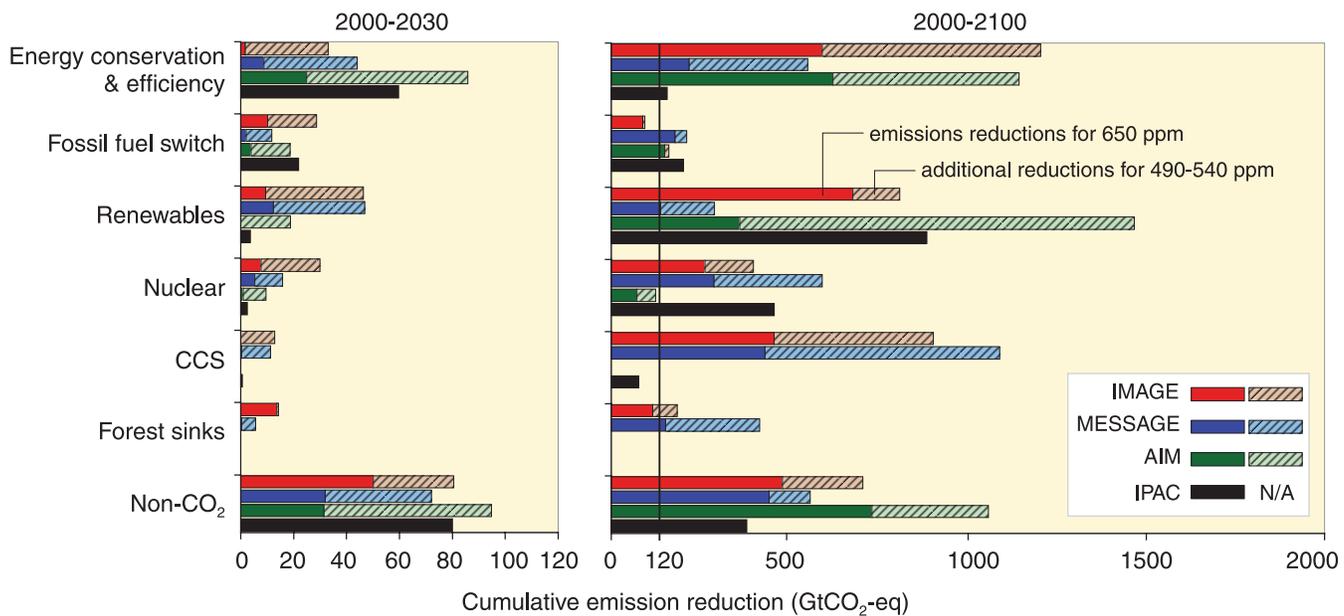

Worldwide deployment of low-GHG emission technologies as well as technology improvements through public and private RD&D would be required for achieving stabilisation targets as well as cost reduction.<sup>32</sup> Figure 5.2 gives illustrative examples of the contribution of the portfolio of mitigation options. The contribution of different technologies varies over time and region and depends on the baseline development path, available technologies and relative costs, and the analysed stabilisation levels. Stabilisation at the lower of the assessed levels (490 to 540ppm CO<sub>2</sub>-eq) requires early investments and substantially more rapid diffusion and commercialisation of advanced low-emissions technologies over the next decades

(2000-2030) and higher contributions across abatement options in the long term (2000-2100). This requires that barriers to development, acquisition, deployment and diffusion of technologies are effectively addressed with appropriate incentives. {WGIII 2.7, 3.3, 3.4, 3.6, 4.3, 4.4, 4.6, SPM}

Without sustained investment flows and effective technology transfer, it may be difficult to achieve emission reduction at a significant scale. Mobilising financing of incremental costs of low-carbon technologies is important. {WGIII 13.3, SPM}

There are large uncertainties concerning the future contribution of different technologies. However, all assessed stabilisation scenarios concur that 60 to 80% of the reductions over the course of the century would come from energy supply and use and industrial processes. Including non-CO<sub>2</sub> and CO<sub>2</sub> land-use and forestry mitigation options provides greater flexibility and cost-effectiveness. Energy efficiency plays a key role across many scenarios for most regions and time scales. For lower stabilisation levels, scenarios put more emphasis on the use of low-carbon energy sources, such as renewable energy, nuclear power and the use of CO<sub>2</sub> capture and storage (CCS). In these scenarios, improvements of carbon intensity of energy supply and the whole economy needs to be much faster than in the past (Figure 5.2). {WGIII 3.3, 3.4, TS.3, SPM}

Illustrative mitigation portfolios for achieving stabilisation of GHG concentrations

**Figure 5.2** Cumulative emissions reductions for alternative mitigation measures for 2000-2030 (left-hand panel) and for 2000-2100 (right-hand panel). The figure shows illustrative scenarios from four models (AIM, IMAGE, IPAC and MESSAGE) aiming at the stabilisation at low (490 to 540ppm CO<sub>2</sub>-eq) and intermediate levels (650ppm CO<sub>2</sub>-eq) respectively. Dark bars denote reductions for a target of 650ppm CO<sub>2</sub>-eq and light bars denote the additional reductions to achieve 490 to 540ppm CO<sub>2</sub>-eq. Note that some models do not consider mitigation through forest sink enhancement (AIM and IPAC) or CCS (AIM) and that the share of low-carbon energy options in total energy supply is also determined by inclusion of these options in the baseline. CCS includes CO<sub>2</sub> capture and storage from biomass. Forest sinks include reducing emissions from deforestation. The figure shows emissions reductions from baseline scenarios with cumulative emissions between 6000 to 7000 GtCO<sub>2</sub>-eq (2000-2100). {WGIII Figure SPM.9}

<sup>32</sup> By comparison, government funding in real absolute terms for most energy research programmes has been flat or declining for nearly two decades (even after the UNFCCC came into force) and is now about half of the 1980 level. {WGIII 2.7, 3.4, 4.5, 11.5, 13.2}

## 5.6 Costs of mitigation and long-term stabilisation targets

**The macro-economic costs of mitigation generally rise with the stringency of the stabilisation target and are relatively higher when derived from baseline scenarios characterised by high emission levels. {WGIII SPM}**

There is *high agreement* and *medium evidence* that in 2050 global average macro-economic costs for multi-gas mitigation towards stabilisation between 710 and 445ppm CO<sub>2</sub>-eq are between a 1% gain to a 5.5% decrease of global GDP (Table 5.2). This corresponds to slowing average annual global GDP growth by less than 0.12 percentage points. Estimated GDP losses by 2030 are on average lower and show a smaller spread compared to 2050 (Table 5.2). For specific countries and sectors, costs vary considerably from the global average.<sup>33</sup> {WGIII 3.3, 13.3, SPM}

## 5.7 Costs, benefits and avoided climate impacts at global and regional levels

**Impacts of climate change will vary regionally. Aggregated and discounted to the present, they are very likely to impose net annual costs, which will increase over time as global temperatures increase. {WGII SPM}**

For increases in global average temperature of less than 1 to 3°C above 1980-1999 levels, some impacts are projected to produce market benefits in some places and sectors while, at the same time, imposing costs in other places and sectors. Global mean losses could be 1 to 5% of GDP for 4°C of warming, but regional losses could be substantially higher. {WGII 9.ES, 10.6, 15.ES, 20.6, SPM}

Peer-reviewed estimates of the social cost of carbon (net economic costs of damages from climate change aggregated across the

globe and discounted to the present) for 2005 have an average value of US\$12 per tonne of CO<sub>2</sub>, but the range from 100 estimates is large (-\$3 to \$95/tCO<sub>2</sub>). The range of published evidence indicates that the net damage costs of climate change are projected to be significant and to increase over time. {WGII 20.6, SPM}

It is *very likely* that globally aggregated figures underestimate the damage costs because they cannot include many non-quantifiable impacts. It is *virtually certain* that aggregate estimates of costs mask significant differences in impacts across sectors, regions, countries and populations. In some locations and amongst some groups of people with high exposure, high sensitivity and/or low adaptive capacity, net costs will be significantly larger than the global average. {WGII 7.4, 20.ES, 20.6, 20.ES, SPM}

**Limited and early analytical results from integrated analyses of the global costs and benefits of mitigation indicate that these are broadly comparable in magnitude, but do not as yet permit an unambiguous determination of an emissions pathway or stabilisation level where benefits exceed costs. {WGIII SPM}**

Comparing the costs of mitigation with avoided damages would require the reconciliation of welfare impacts on people living in different places and at different points in time into a global aggregate measure of well-being. {WGII 18.ES}

Choices about the scale and timing of GHG mitigation involve balancing the economic costs of more rapid emission reductions now against the corresponding medium-term and long-term climate risks of delay. {WGIII SPM}

**Many impacts can be avoided, reduced or delayed by mitigation. {WGII SPM}**

Although the small number of impact assessments that evaluate stabilisation scenarios do not take full account of uncertainties in projected climate under stabilisation, they nevertheless provide indications of damages avoided and risks reduced for different

**Table 5.2. Estimated global macro-economic costs in 2030 and 2050. Costs are relative to the baseline for least-cost trajectories towards different long-term stabilisation levels. {WGIII 3.3, 13.3, Tables SPM.4 and SPM.6}**

Stabilisation levels (ppm CO <sub>2</sub> -eq)	Median GDP reduction <sup>a</sup> (%)		Range of GDP reduction <sup>b</sup> (%)		Reduction of average annual GDP growth rates (percentage points) <sup>c,e</sup>	
	2030	2050	2030	2050	2030	2050
445 – 535 <sup>d</sup>	Not available		<3	<5.5	< 0.12	< 0.12
535 – 590	0.6	1.3	0.2 to 2.5	slightly negative to 4	< 0.1	< 0.1
590 – 710	0.2	0.5	-0.6 to 1.2	-1 to 2	< 0.06	< 0.05

Notes:

Values given in this table correspond to the full literature across all baselines and mitigation scenarios that provide GDP numbers.

- a) Global GDP based on market exchange rates.
- b) The 10<sup>th</sup> and 90<sup>th</sup> percentile range of the analysed data are given where applicable. Negative values indicate GDP gain. The first row (445-535ppm CO<sub>2</sub>-eq) gives the upper bound estimate of the literature only.
- c) The calculation of the reduction of the annual growth rate is based on the average reduction during the assessed period that would result in the indicated GDP decrease by 2030 and 2050 respectively.
- d) The number of studies is relatively small and they generally use low baselines. High emissions baselines generally lead to higher costs.
- e) The values correspond to the highest estimate for GDP reduction shown in column three.

<sup>33</sup> See Footnote 24 for further details on cost estimates and model assumptions.

amounts of emissions reduction. The rate and magnitude of future human-induced climate change and its associated impacts are determined by human choices defining alternative socio-economic futures and mitigation actions that influence emission pathways. Figure 3.2 demonstrates that alternative SRES emission pathways could lead to substantial differences in climate change throughout the 21<sup>st</sup> century. Some of the impacts at the high temperature end of Figure 3.6 could be avoided by socio-economic development pathways that limit emissions and associated climate change towards the lower end of the ranges illustrated in Figure 3.6. *{SYR 3.2, 3.3; WGIII 3.5, 3.6, SPM}*

Figure 3.6 illustrates how reduced warming could reduce the risk of, for example, affecting a significant number of ecosystems, the risk of extinctions, and the likelihood that cereal productivity in some regions would tend to fall. *{SYR 3.3, Figure 3.6; WGII 4.4, 5.4, Table 20.6}*

## 5.8 Broader environmental and sustainability issues

**Sustainable development can reduce vulnerability to climate change, and climate change could impede nations' abilities to achieve sustainable development pathways. *{WGII SPM}***

It is *very likely* that climate change can slow the pace of progress toward sustainable development either directly through increased

exposure to adverse impacts or indirectly through erosion of the capacity to adapt. Over the next half-century, climate change could impede achievement of the Millennium Development Goals. *{WGII SPM}*

Climate change will interact at all scales with other trends in global environmental and natural resource concerns, including water, soil and air pollution, health hazards, disaster risk, and deforestation. Their combined impacts may be compounded in future in the absence of integrated mitigation and adaptation measures. *{WGII 20.3, 20.7, 20.8, SPM}*

**Making development more sustainable can enhance mitigative and adaptive capacities, reduce emissions, and reduce vulnerability, but there may be barriers to implementation. *{WGII 20.8; WGIII 12.2, SPM}***

Both adaptive and mitigative capacities can be enhanced through sustainable development. Sustainable development can, thereby, reduce vulnerability to climate change by reducing sensitivities (through adaptation) and/or exposure (through mitigation). At present, however, few plans for promoting sustainability have explicitly included either adapting to climate change impacts, or promoting adaptive capacity. Similarly, changing development paths can make a major contribution to mitigation but may require resources to overcome multiple barriers. *{WGII 20.3, 20.5, SPM; WGIII 2.1, 2.5, 12.1, SPM}*

# 6

## **Robust findings, key uncertainties**

---

## Robust findings, key uncertainties

As in the TAR, a robust finding for climate change is defined as one that holds under a variety of approaches, methods, models and assumptions, and is expected to be relatively unaffected by uncertainties. Key uncertainties are those that, if reduced, could lead to new robust findings. *{TAR SYR Q.9}*

Robust findings do not encompass all key findings of the AR4. Some key findings may be policy-relevant even though they are associated with large uncertainties. *{WGII 20.9}*

The robust findings and key uncertainties listed below do not represent an exhaustive list.

### 6.1 Observed changes in climate and their effects, and their causes

#### Robust findings

Warming of the climate system is unequivocal, as is now evident from observations of increases in global average air and ocean temperatures, widespread melting of snow and ice and rising global average sea level. *{WGI 3.9, SPM}*

Many natural systems, on all continents and in some oceans, are being affected by regional climate changes. Observed changes in many physical and biological systems are consistent with warming. As a result of the uptake of anthropogenic CO<sub>2</sub> since 1750, the acidity of the surface ocean has increased. *{WGI 5.4, WGII 1.3}*

Global total annual anthropogenic GHG emissions, weighted by their 100-year GWPs, have grown by 70% between 1970 and 2004. As a result of anthropogenic emissions, atmospheric concentrations of N<sub>2</sub>O now far exceed pre-industrial values spanning many thousands of years, and those of CH<sub>4</sub> and CO<sub>2</sub> now far exceed the natural range over the last 650,000 years. *{WGI SPM; WGIII 1.3}*

Most of the global average warming over the past 50 years is *very likely* due to anthropogenic GHG increases and it is *likely* that there is a discernible human-induced warming averaged over each continent (except Antarctica). *{WGI 9.4, SPM}*

Anthropogenic warming over the last three decades has *likely* had a discernible influence at the global scale on observed changes in many physical and biological systems. *{WGII 1.4, SPM}*

#### Key uncertainties

Climate data coverage remains limited in some regions and there is a notable lack of geographic balance in data and literature on observed changes in natural and managed systems, with marked scarcity in developing countries. *{WGI SPM; WGII 1.3, SPM}*

Analysing and monitoring changes in extreme events, including drought, tropical cyclones, extreme temperatures and the frequency and intensity of precipitation, is more difficult than for climatic averages as longer data time-series of higher spatial and temporal resolutions are required. *{WGI 3.8, SPM}*

Effects of climate changes on human and some natural systems are difficult to detect due to adaptation and non-climatic drivers. *{WGII 1.3}*

Difficulties remain in reliably simulating and attributing observed temperature changes to natural or human causes at smaller than continental scales. At these smaller scales, factors such as land-use change and pollution also complicate the detection of anthropogenic warming influence on physical and biological systems. *{WGI 8.3, 9.4, SPM; WGII 1.4, SPM}*

The magnitude of CO<sub>2</sub> emissions from land-use change and CH<sub>4</sub> emissions from individual sources remain as key uncertainties. *{WGI 2.3, 7.3, 7.4; WGIII 1.3, TS.14}*

## 6.2 Drivers and projections of future climate changes and their impacts

#### Robust findings

With current climate change mitigation policies and related sustainable development practices, global GHG emissions will continue to grow over the next few decades. *{WGIII 3.2, SPM}*

For the next two decades a warming of about 0.2°C per decade is projected for a range of SRES emissions scenarios. *{WGI 10.3, 10.7, SPM}*

Continued GHG emissions at or above current rates would cause further warming and induce many changes in the global climate system during the 21<sup>st</sup> century that would *very likely* be larger than those observed during the 20<sup>th</sup> century. *{WGI 10.3, 11.1, SPM}*

The pattern of future warming where land warms more than the adjacent oceans and more in northern high latitudes is seen in all scenarios. *{WGI 10.3, 11.1, SPM}*

Warming tends to reduce terrestrial ecosystem and ocean uptake of atmospheric CO<sub>2</sub>, increasing the fraction of anthropogenic emissions that remains in the atmosphere. *{WGI 7.3, 10.4, 10.5, SPM}*

Anthropogenic warming and sea level rise would continue for centuries even if GHG emissions were to be reduced sufficiently for GHG concentrations to stabilise, due to the time scales associated with climate processes and feedbacks. *{WGI 10.7, SPM}*

Equilibrium climate sensitivity is *very unlikely* to be less than 1.5°C. *{WGI 8.6, 9.6, Box 10.2, SPM}*

Some systems, sectors and regions are *likely* to be especially affected by climate change. The systems and sectors are some ecosystems (tundra, boreal forest, mountain, mediterranean-type, mangroves, salt marshes, coral reefs and the sea-ice biome), low-lying coasts, water resources in some dry regions at mid-latitudes and in the dry tropics and in areas dependent on snow and ice melt, agriculture in low-latitude regions, and human health in areas with low adaptive capacity. The regions are the Arctic, Africa, small islands and Asian and African megadeltas. Within other regions, even those with high incomes, some people, areas and activities can be particularly at risk. *{WGII TS.4.5}*

Impacts are *very likely* to increase due to increased frequencies and intensities of some extreme weather events. Recent events have demonstrated the vulnerability of some sectors and regions, including in developed countries, to heat waves, tropical cyclones, floods and drought, providing stronger reasons for concern as compared to the findings of the TAR. *{WGII Table SPM.2, 19.3}*

## Key uncertainties

Uncertainty in the equilibrium climate sensitivity creates uncertainty in the expected warming for a given CO<sub>2</sub>-eq stabilisation scenario. Uncertainty in the carbon cycle feedback creates uncertainty in the emissions trajectory required to achieve a particular stabilisation level. *{WGI 7.3, 10.4, 10.5, SPM}*

Models differ considerably in their estimates of the strength of different feedbacks in the climate system, particularly cloud feedbacks, oceanic heat uptake and carbon cycle feedbacks, although progress has been made in these areas. Also, the confidence in projections is higher for some variables (e.g. temperature) than for others (e.g. precipitation), and it is higher for larger spatial scales and longer time averaging periods. *{WGI 7.3, 8.1-8.7, 9.6, 10.2, 10.7, SPM; WGII 4.4}*

Aerosol impacts on the magnitude of the temperature response, on clouds and on precipitation remain uncertain. *{WGI 2.9, 7.5, 9.2, 9.4, 9.5}*

Future changes in the Greenland and Antarctic ice sheet mass, particularly due to changes in ice flow, are a major source of uncertainty that could increase sea level rise projections. The uncertainty in the penetration of the heat into the oceans also contributes to the future sea level rise uncertainty. *{WGI 4.6, 6.4, 10.3, 10.7, SPM}*

Large-scale ocean circulation changes beyond the 21<sup>st</sup> century cannot be reliably assessed because of uncertainties in the meltwater supply from the Greenland ice sheet and model response to the warming. *{WGI 6.4, 8.7, 10.3}*

Projections of climate change and its impacts beyond about 2050 are strongly scenario- and model-dependent, and improved projections would require improved understanding of sources of uncertainty and enhancements in systematic observation networks. *{WGII TS.6}*

Impacts research is hampered by uncertainties surrounding regional projections of climate change, particularly precipitation. *{WGII TS.6}*

Understanding of low-probability/high-impact events and the cumulative impacts of sequences of smaller events, which is required for risk-based approaches to decision-making, is generally limited. *{WGII 19.4, 20.2, 20.4, 20.9, TS.6}*

## 6.3 Responses to climate change

### Robust findings

Some planned adaptation (of human activities) is occurring now; more extensive adaptation is required to reduce vulnerability to climate change. *{WGII 17.ES, 20.5, Table 20.6, SPM}*

Unmitigated climate change would, in the long term, be *likely* to exceed the capacity of natural, managed and human systems to adapt. *{WGII 20.7, SPM}*

A wide range of mitigation options is currently available or projected to be available by 2030 in all sectors. The economic mitigation potential, at costs that range from net negative up to US\$100/tCO<sub>2</sub>-equivalent, is sufficient to offset the projected growth of global emissions or to reduce emissions to below current levels in 2030. *{WGIII 11.3, SPM}*

Many impacts can be reduced, delayed or avoided by mitigation. Mitigation efforts and investments over the next two to three decades will have a large impact on opportunities to achieve lower stabilisation levels. Delayed emissions reductions significantly constrain the opportunities to achieve lower stabilisation levels and increase the risk of more severe climate change impacts. *{WGII SPM, WGIII SPM}*

The range of stabilisation levels for GHG concentrations that have been assessed can be achieved by deployment of a portfolio of technologies that are currently available and those that are expected to be commercialised in coming decades, provided that appropriate and effective incentives are in place and barriers are removed. In addition, further RD&D would be required to improve the technical performance, reduce the costs and achieve social acceptability of new technologies. The lower the stabilisation levels, the greater the need for investment in new technologies during the next few decades. *{WGIII 3.3, 3.4}*

Making development more sustainable by changing development paths can make a major contribution to climate change mitigation and adaptation and to reducing vulnerability. *{WGII 18.7, 20.3, SPM; WGIII 13.2, SPM}*

Decisions about macro-economic and other policies that seem unrelated to climate change can significantly affect emissions. *{WGIII 12.2}*

### Key uncertainties

Understanding of how development planners incorporate information about climate variability and change into their decisions is limited. This limits the integrated assessment of vulnerability. *{WGII 18.8, 20.9}*

The evolution and utilisation of adaptive and mitigative capacity depend on underlying socio-economic development pathways. *{WGII 17.3, 17.4, 18.6, 19.4, 20.9}*

Barriers, limits and costs of adaptation are not fully understood, partly because effective adaptation measures are highly dependent on specific geographical and climate risk factors as well as institutional, political and financial constraints. *{WGII SPM}*

Estimates of mitigation costs and potentials depend on assumptions about future socio-economic growth, technological change and consumption patterns. Uncertainty arises in particular from assumptions regarding the drivers of technology diffusion and the potential of long-term technology performance and cost improvements. Also little is known about the effects of changes in behaviour and lifestyles. *{WGIII 3.3, 3.4, 11.3}*

The effects of non-climate policies on emissions are poorly quantified. *{WGIII 12.2}*

# The Emissions Gap Report

**Are the Copenhagen  
Accord Pledges  
Sufficient to Limit  
Global Warming to 2° C or 1.5° C?**

**A preliminary assessment**

**TECHNICAL SUMMARY**

## Acknowledgements

The United Nations Environment Programme (UNEP) would like to thank the Steering Committee, all the lead and contributing authors, and the Secretariat for their contribution to the development of this report.

The following individuals and/or organizations have provided scientific input to the report. Authors have contributed to this report in their individual capacity and their organizations are mentioned for identification purposes.

**Steering Committee Members:** Joseph Alcamo, Chair (UNEP), Kilaparti Ramakrishna (UNEP), Bert Metz (European Climate Foundation), Suzana Kahn Ribeiro (COPPE, Federal University of Rio de Janeiro), Anand Patwardhan (Indian Institute of Technology Bombay), Adrian Fernandez (Instituto Nacional de Ecología, Mexico) and Julia Martinez (Instituto Nacional de Ecología, Mexico).

**Lead Authors:** Michel den Elzen (PBL Netherlands Environmental Assessment Agency), William Hare (Potsdam Institute for Climate Impact Research), Niklas Höhne (Ecofys), Kelly Levin (World Resources Institute), Jason Lowe (Met Office, Hadley Center), Keywan Riahi (International Institute for Applied Systems Analysis), Joeri Rogelj (ETH Zurich), Elizabeth Sawin (Climate Interactive), Chris Taylor (Grantham Research Institute, LSE), Detlef van Vuuren (PBL Netherlands Environmental Assessment Agency), Murray Ward (Global Climate Change Consultants).

**Contributing Authors:** Valentina Bosetti (Fondazione Eni Enrico Mattei), Claudine Chen (Potsdam Institute for Climate Impact Research), Rob Dellink (Organisation for Economic Co-operation and Development), Jørgen Fenhann (UNEP Risoe), Claudio Gesteira (COPPE, Federal University of Rio de Janeiro), Tatsuya Hanaoka (National Institute for Environmental Studies), Mikiko Kainuma (National Institute for Environmental Studies), Jiang Kejun (Energy Research Institute), Emanuele Massetti (Fondazione Eni Enrico Mattei), Ben Matthews (UCLouvain, Centre for Earth and Climate Research), Caspar Olausson (Danish Energy Agency), Brian O'Neill (National Center for Atmospheric Research), Nicola Ranger (Grantham Research Institute, LSE), Fabian Wagner (International Institute for Applied Systems Analysis), Zhao Xiusheng (Tsinghua University).

**Secretariat:** Ramzi Elias, Project Manager (European Climate Foundation), Maria Blazogiannaki (European Climate Foundation), Harsha Dave (UNEP), Ernest Imbamba (UNEP).

**Production team:** Fanina Kodre-Alexander, Kelvin Memia, Amos Muema, Elijah Munyao, Enid Ngaira and Geoffrey Thompson (UNEP).

UNEP would also like to thank the following individuals from around the world for their valuable comments, provision of data and valuable advice: Dan Bernie (Hadley Centre), Greg Briner (Organisation for Economic Co-operation and Development), Alex Bowen (Grantham Research Institute, LSE), Marcel Brinkman (McKinsey & Company), Christa Clapp (Organisation for Economic Co-operation and Development), John Christensen (UNEP), Volodymyr Demkine (UNEP), Thomas Færgeman (Concito), Richard Folland (Climate Strategies), Giacomo Grassi (Joint Research Center, European Commission), Nora Greenglass (Woods Hole Research Center), Joerg Haas (European Climate Foundation), Markus Hagemann (Ecofys), Trevor Houser (Peterson Institute for International Economics), Maryna Karavai (UNEP Risoe), Jacob Krog Søbysgaard (Danish Energy Agency), Emilio Lebre La Rovere (COPPE, Federal University of Rio de Janeiro), Arkadiy Levintanus (UNEP), Malte Meinshausen (Potsdam Institute for Climate Impact Research), Leo Meyer (PBL Netherlands Environmental Assessment Agency), Sara Moltmann (Ecofys), Tom Phillips (McKinsey & Company), Dale Rothman (University of Denver), Michiel Schaeffer (Climate Analytics), Lori Siegel (Climate Interactive), Bob Ward (Grantham Research Institute, LSE), Kaveh Zahedi (UNEP)

## Foreword

Climate change represents one of the greatest challenges but also an inordinate opportunity to catalyse a transition to a low carbon, resource-efficient Green Economy.

This report informs Governments and the wider community on how far a response to climate change has progressed over the past 12 months, and thus how far the world is on track to meet wider goals.

The pledges associated with the Copenhagen Accord of 2009 are the point of departure for this report. What might be achieved in terms of limiting a global temperature rise to 2° C or less in the twenty-first century and in terms of setting the stage for a Green Economy?

And what remains to be done—what is the gap between scientific reality and the current level of ambition of nations? The analysis focuses on where global emissions need to be in around 10 years time to be in line with what the science says is consistent with the 2° C or 1.5° C limits, and where we expect to be as a result of the pledges.

If the highest ambitions of all countries associated with the Copenhagen Accord are implemented and supported, annual emissions of greenhouse gases could be cut, on average, by around 7 gigatons (Gt) of CO<sub>2</sub> equivalent by 2020.

Without this action, it is likely that a business-as-usual scenario would see emissions rise to an average of around 56 Gt of CO<sub>2</sub> equivalent by around 2020. Cuts in annual emissions to around 49 Gt of CO<sub>2</sub> equivalent would still however leave a gap of around 5 Gt compared with where we need to be—a gap equal to the total emissions of the world's cars, buses and trucks in 2005.

That is because the experts estimate that emissions need to be around 44 Gt of CO<sub>2</sub> equivalent by 2020 to have a likely chance of pegging temperatures to 2° C or less.

However, if only the lowest ambition pledges are implemented, and if no clear rules are set in the negotiations, emissions could be around 53 Gt of CO<sub>2</sub> equivalent in 2020—not that different from business as usual—so the rules set in the negotiations clearly matter.

This report, the result of an unprecedented partnership between UNEP and individuals from 25 leading research centres, underlines the complexity of various scenarios.

*The Emissions Gap Report* emphasizes that tackling climate change is still manageable, if leadership is shown. In Cancun action on financing, mitigation and adaptation need to mature and move forward—supported perhaps by action on non-CO<sub>2</sub> pollutants such as methane from rubbish tips to black carbon emissions.

Above all, Cancun must demonstrate to society as a whole that Governments understand the gaps left by Copenhagen. But at the same time remain committed to counter climate change while meeting wider development goals.

*Achim Steiner,  
UN Under-Secretary-General,  
UNEP Executive Director*

# The Emissions Gap Report

## Are the Copenhagen Accord Pledges Sufficient to Limit Global Warming to 2° C or 1.5° C?

### A Preliminary Assessment

November 2010

The Copenhagen Accord declared that deep cuts in global emissions are required “so as to hold the increase in global temperature below 2 degrees Celsius”. The Accord called for an assessment that would consider strengthening the long-term goal including “temperature rises of 1.5 degrees”. Since December 2009, 140 countries<sup>1</sup> have associated themselves with the Copenhagen Accord. Of these, 85 countries have pledged to reduce their emissions or constrain their growth up to 2020.

The question remains, however, whether these pledges are sufficient to achieve the Accord’s temperature limits, or if there will be a gap between what is needed and what is expected as a result of the pledges.

Many scientific groups have identified global emission pathways<sup>2</sup>, or emissions trajectories, that are consistent with various temperature limits, while others have estimated global emissions in 2020 based on the Copenhagen Accord pledges. Some groups have calculated both. Not surprisingly, different groups have come up with different estimates. The range of estimates is caused, for example, by the fact that some of the pledges have conditions attached, such as the provision of finance and technology or ambitious action from other countries. This leads to a range of potential outcomes rather than a single estimate.

To understand and interpret the range of results coming from different studies, the United Nations Environment Programme (UNEP), in conjunction with the European Climate Foundation and the National Institute of Ecology, Mexico, convened a six-month preliminary assessment of these studies. This assessment aims to provide policymakers with an overview of results from various studies, as well as their areas of agreement and disagreement. Individuals from twenty-five groups have contributed to the assessment and co-authored this publication. This report is a summary of that work.

Notably, the 2020 emissions reduction pledges analysed in this report were not decided under a quantitative top-down approach to emissions management — one that starts with temperature limits for which the mitigation effort is distributed among countries by negotiation. Therefore, at this time we are only analysing the effect of the offers brought forward by countries in the form of pledges under the Copenhagen Accord.<sup>3</sup>

<sup>1</sup> As of 12 November 2010.

<sup>2</sup> An “emission pathway” shows how emissions change into the future

<sup>3</sup> We note that this is a technical report that explores possible outcomes associated with the implementation of the Copenhagen Accord. It is not intended to legitimize the Accord, nor does it constitute an endorsement of a pledge-and-review architecture vis-à-vis a target-based approach for emission reductions. In addition this report is not intended to advocate any particular policy or emissions pathway.

# COP15 COPENHAGEN

UNITED NATIONS CLIMATE CHANGE CONFERENCE 2009

# CMP5 COPENHAGEN

The final plenary meeting at COP 15, Copenhagen, Denmark  
19 December, 2009

**This assessment addresses four main questions:**

- What 2020 emission levels are consistent with the 2° C and 1.5° C limits<sup>4</sup>?
- What are the expected global emissions in 2020?
- How big is the “emissions gap”?
- How can the gap be reduced?

<sup>4</sup> Although the Copenhagen Accord is not explicit about the baseline against which temperature increase should be measured, we have assumed that it is pre-industrial levels.

## Key findings

- Studies show that emission levels of approximately 44 gigatonnes of carbon dioxide equivalent (GtCO<sub>2</sub>e) (range: 39-44 GtCO<sub>2</sub>e\*) in 2020 would be consistent with a “likely” chance of limiting global warming to 2° C.
- Under business-as-usual projections, global emissions could reach 56 GtCO<sub>2</sub>e (range: 54-60 GtCO<sub>2</sub>e) in 2020, leaving a gap of 12 GtCO<sub>2</sub>e.
- If the lowest-ambition pledges were implemented in a “lenient” fashion\*\*, emissions could be lowered slightly to 53 GtCO<sub>2</sub>e (range: 52-57 GtCO<sub>2</sub>e), leaving a significant gap of 9 GtCO<sub>2</sub>e.
- The gap could be reduced substantially by policy options being discussed in the negotiations:
  - » By countries moving to higher ambition, conditional pledges
  - » By the negotiations adopting rules that avoid a net increase in emissions from (a) “lenient” accounting of land use, land-use change and forestry activities and (b) the use of surplus emission units.
- If the above policy options were to be implemented, emissions in 2020 could be lowered to 49 GtCO<sub>2</sub>e (range: 47-51 GtCO<sub>2</sub>e), reducing the size of the gap to 5 GtCO<sub>2</sub>e. This is approximately equal to the annual global emissions from all the world’s cars, buses and transport in 2005— But this is also almost 60 per cent of the way towards reaching the 2° C target.
- It will also be important to avoid increasing the gap by “double-counting” of offsets.
- Studies show that it is feasible to bridge the remaining gap through more ambitious domestic actions, some of which could be supported by international climate finance.
- With or without a gap, current studies indicate that steep emission reductions are needed post 2020 in order to keep our chances of limiting warming to 2° C or 1.5° C.

\* Range here refers to the “majority of results”, i.e. their 20th and 80th percentile.

\*\*“Lenient” in this report is used to refer to the situation in which LULUCF accounting rules and the use of surplus emission units result in a net increase in emissions

### Box 1: Method for assessing emission levels consistent with temperature limits

In this assessment we examine two groups of pathways: (1) pathways produced by integrated assessment models (IAM), which simulate the energy-economic system including the turnover of energy infrastructure; and (2) “stylized” pathways, produced by other models that do not explicitly model the change in the energy system or feasibility of emission reduction rates. We focus on results from IAMs because they are able to actually describe the system’s response to different policies and measures and emission-related targets (see Box 2). However, we also draw on “stylized” scenarios in order to better understand the theoretical rates of emission reduction and magnitude of negative emissions needed to be consistent with particular temperature limits.

A total of 223 emission pathways produced by 15 modelling groups have been analysed<sup>5</sup>. We account for many, but not all, sources of the uncertainty of models and data by compiling results from a number of studies and identifying conclusions that appear robust.

<sup>5</sup> Detail on the studies reviewed can be found in Chapters 2 and 3 of the full report.

## What 2020 emission levels are consistent with the 2° C and 1.5° C limits?

### 1. The level of human-induced global warming is primarily determined by the cumulative emissions over time, i.e. when emissions peak, at what level, and how fast they decline thereafter.

The total stock of greenhouse gases in the atmosphere has a strong effect on climate forcing related to climate change. This stock is determined by the accumulated emissions of greenhouse gases in the atmosphere. It follows that cumulative emissions have a profound influence on the long-term increase of global temperature<sup>6</sup>.

An important point is that several different emission pathways can result in the same cumulative emissions over a period of time. But not all pathways are considered equally feasible; some are thought to be constrained by an upper ceiling on the rate of emission reductions due to technological, economic, social and political factors. Hence, the feasibility of reduction rates plays a central role in determining which 2020 emission levels are consistent with temperature limits. Also important are assumptions about the feasibility of “negative emissions”, i.e. the net removal of carbon dioxide (CO<sub>2</sub>) from the atmosphere through, for example, planting forests or capturing CO<sub>2</sub> from biomass (see Box 3).

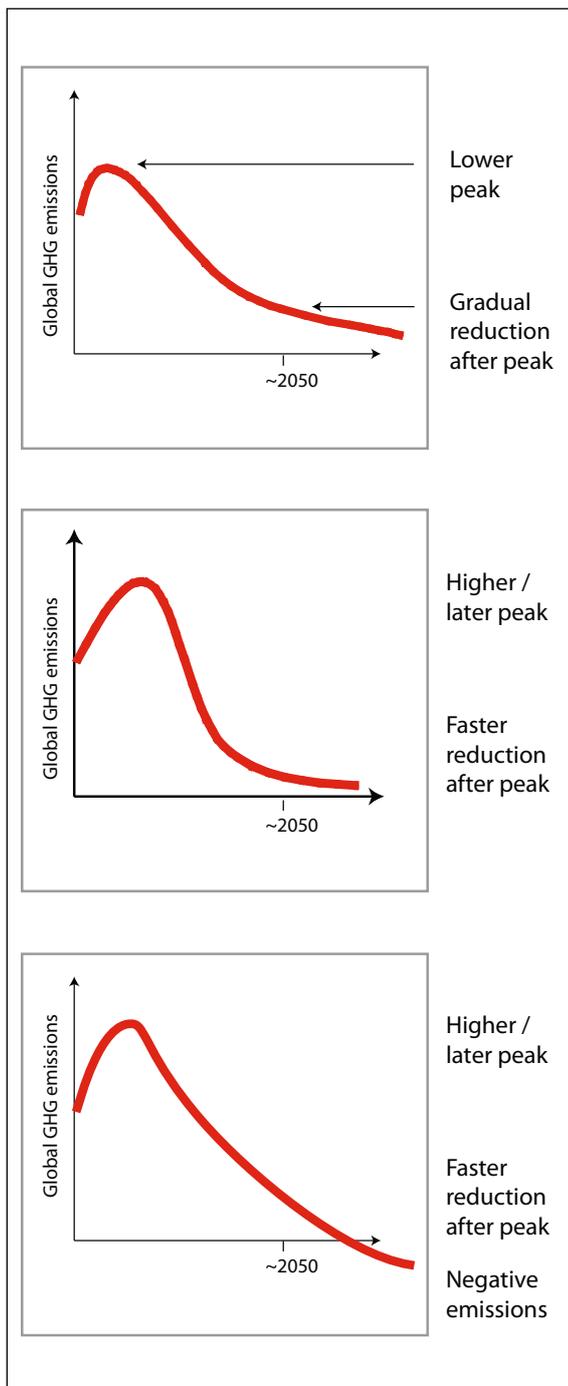

Studies show that there is a trade-off between the timing of the peak and the rate of decrease in emissions afterwards—the sooner and lower the peak, the slower the rate of decrease can be afterwards. Conversely, the longer the peak is delayed and the higher it is, the faster emissions must decline afterwards, and/or the stronger the negative emissions over the long term, in order to stay within the temperature limit (see Figure 1).

Many recent modelling studies have assumed that it would be unrealistic for global emissions to immediately start decreasing (because of political and economic factors) and therefore have focused on scenarios in which global emissions continue to increase for a few years and then decrease sharply afterwards.

<sup>6</sup> It is important to note that a number of other factors, such as the level of sulphate aerosols and the shape of the pathway, also have a significant influence on the maximum temperature increase.

**Figure 1: Illustration of different pathway types for the same temperature increase.**

See Point 1 for explanation.

### Box 2: Understanding temperature limits

A temperature increase of 2° C or 1.5° C represents an increase in global average near surface temperature compared with pre-industrial times. This is meant to be an indicator of local climate changes. Importantly, a 2° C or 1.5° C global average increase can translate into much higher temperature changes locally.

There are significant uncertainties in the relationship between temperature, emission pathways, cumulative emissions, and atmospheric concentrations. Therefore, in this assessment, each emission pathway is associated with a range of probabilities for temperature, reflecting uncertainties in the carbon cycle and many other aspects of the climate system. Hence, an emission pathway is associated with probabilities of staying within a range of different temperature changes.

To illustrate, an emission pathway that has a 50 per cent chance of limiting warming to under 2° C, may also have a 5 per cent probability that warming will exceed 3° C and, say, a 10 per cent probability of staying below 1.5° C. Similarly, an emission pathway that has a 66 per cent chance of staying under 2° C, may also have a probability of less than 3 per cent that warming will exceed 3° C and, say, a 20 per cent probability of staying below 1.5° C.

In this assessment we focus on emission pathways that lead to a global average temperature increase of less than 2° C over this century with a “likely” chance (greater than 66 per cent probability) and then explain how they would be different for a “medium” chance (50-66 per cent probability). In addition we examine pathways in which the temperature changes are below 1.5° C by the end of the century, but “overshoots” this value for part of the century.

## 2. Emission pathways consistent with a “likely” chance of meeting the 2° C limit generally peak before 2020, have emission levels in 2020 around 44 GtCO<sub>2</sub>e (range: 39-44 GtCO<sub>2</sub>e<sup>7</sup>), have steep emission reductions afterwards and/or reach negative emissions in the longer term.

Emission pathways assessed in this report that provide a “likely” (greater than 66 per cent) chance of staying within the 2° C limit, have the following characteristics:

A peak in global annual emissions<sup>8</sup> before 2020.

2020 global emission levels of around 44 GtCO<sub>2</sub>e (range: 39-44 GtCO<sub>2</sub>e).<sup>9</sup>

Average annual reduction rates of CO<sub>2</sub> from energy and industry between 2020 and 2050 of around 3

per cent (range: 2.2 - 3.1 per cent)<sup>10</sup>.

2050 global emissions that are 50-60 per cent below their 1990 levels.

In most cases, negative CO<sub>2</sub> emissions from energy and industry starting at some point in the second half of the century.

Accepting a “medium” (50-66 per cent) rather than “likely” chance of staying below the 2° C limit relaxes the constraints only slightly: emissions in 2020 could be 1 GtCO<sub>2</sub>e higher, and average rates of reduction after 2020 could be 2.5 per cent per year (range 2.2-3.0 per cent). Nevertheless, global emissions still need to peak before 2020 in the majority of cases.

See Box 1 for details on the assessment method employed in this report.

<sup>7</sup> All ranges given in this report represent the 20th and 80th percentiles of results, unless otherwise stated. This range has been chosen to reflect the majority of results of the analysis.

<sup>8</sup> Global annual emissions consist of emissions of the “Kyoto basket of gases” coming from energy, industry and land use.

<sup>9</sup> These are rounded numbers. If numbers with one decimal place were shown it would be clear that the upper end of the range is slightly greater than 44 GtCO<sub>2</sub>e and the median slightly smaller than 44. The fact that both the median and upper end of the range are 44 indicates that many of the estimates were close to 44.

<sup>10</sup> Throughout this report emission reduction rates are given for carbon dioxide emissions from energy and industry and expressed relative to 2000 emission levels except when explicitly stated otherwise.

**3. It turns out that the 2020 emission levels with a “likely” chance of staying within the 2° C limit can be about the same as those with a “medium” or lower chance of meeting the 1.5° C target. However, to have a higher chance of meeting the 1.5° C target the emission reduction rates after 2020 would have to be much faster.**

In this assessment we have identified some emission pathways that keep the increase in temperature below 1.5° C by 2100, but “overshoot” this limit by a small amount for a few decades prior to 2100. However, the chance of doing so is low (range: 27–35 per cent probability). The emission levels in 2020 of these pathways are about the same as those in Point 2 above, i.e. they are consistent with a likely chance of staying below the 2° C limit throughout the twenty-first century.<sup>11</sup>

<sup>11</sup> One IAM pathway has been identified that has a “medium” chance of complying with the 1.5° C limit by 2100 (with some overshoot for a few decades) and shows emission reduction rates considered feasible in the IAM literature. See Chapter 2, full report.

In addition, the most ambitious “stylized” pathways show that staying within the 1.5° C limit with overshoot (and with a “medium” or “likely” chance) have emission reduction rates after 2020 that are at the high end or faster than presently found in the IAM literature. Lower emission levels in 2020 would allow slower emission reduction rates after 2020.

These findings should be considered preliminary, however, as few studies have explicitly looked at the question of achieving the 1.5° C target.

**4. The range in results stems from uncertainties of assumptions and models used for calculations.**

The range in estimates of emission levels comes from model uncertainties including the omission of feedback phenomena in the climate system and (in some models) the impact of aerosols on climate forcing. The uncertainty of key assumptions, such as baseline emissions, also has an influence on calculations.

**Box 3. What are feasible emission reduction rates? What are negative emissions?**

The behaviour of the climate system dictates that future temperatures will be strongly influenced by emissions throughout the coming decades. Hence, the consistency of 2020 emissions with a given temperature limit can only be judged if emissions after 2020 are taken into account. For that reason it is important to know the feasible rates of emission reductions after 2020. Feasibility refers to whether a particular emission pathway is considered achievable. It depends upon technical, economic, political and social constraints and the extent of mitigation policy. Some of these factors, in particular technological and economic feasibility, can be represented in models such as integrated assessment models (IAM). These include assumptions about the maximum feasible rate of introducing technology, maximum costs of technologies, feasibility of specific system configurations, and limits regarding behavioural changes. Another important factor determining the maximum emissions reduction rate is the typical lifetime of machinery and infrastructure. These lifetimes are important if mitigation strategies aim to avoid premature replacement of capital, which is often considered to be very expensive. Other factors, such as political or social attitudes, might also influence the rate of emission reductions, but they are usually not taken into account by IAMs.

There are different views about feasible emission reduction rates. The highest average rate of emission reductions over the next four to five decades found in the IAM literature is around 3.5 per cent per year. This would imply a decarbonization rate (the rate of decrease in emissions per unit of GDP) of more than 6 per cent per year. Historically (1969–2009), a decarbonization rate of about one per cent has been seen globally. However, it is important to note that expectations about feasibility can change with future developments in technology, attitudes, and economics.

One of many important elements related to the feasibility of emission pathways is negative emissions. Many of the scenarios compiled in this assessment show global negative CO<sub>2</sub> emissions (from energy and industry) from mid-century onwards in order to achieve the temperature limits examined here<sup>12</sup>.

Global negative CO<sub>2</sub> emissions would occur if the removal of CO<sub>2</sub> from the atmosphere is greater than the emissions into it. This might be achievable through large-scale afforestation efforts, for example. Many models assume a large deployment of bioenergy combined with carbon-capture-and-storage (BECCS) technology in order to achieve negative emissions. The feasibility of large scale bioenergy systems is related to its sustainability, including the availability of sufficient land and water, its impact on biodiversity, and the productivity of biomass.

If negative CO<sub>2</sub> emissions at a significant scale are not possible, then the options for meeting the limits are substantially constrained.

<sup>12</sup> In this assessment, 75 per cent of scenarios with a “likely” chance of staying below 2° C and 50 per cent of the scenarios that have a “medium” chance of staying below 2° C.

## What are the expected global emissions in 2020?

**5. Global emissions in 2020 will depend on the pledges implemented and the rules surrounding them. On one hand, emissions in 2020 could be as low as 49 GtCO<sub>2</sub>e (range: 47-51 GtCO<sub>2</sub>e) when countries implement their conditional pledges with “strict” accounting rules. On the other hand, they could be as high as 53 GtCO<sub>2</sub>e (range: 52-57 GtCO<sub>2</sub>e) when countries implement unconditional pledges with “lenient” accounting rules.**

As a reference point, without pledges global greenhouse gas emissions may increase from 45 GtCO<sub>2</sub>e in 2005 to around 56 GtCO<sub>2</sub>e in 2020 (range: 54-60 GtCO<sub>2</sub>e) according to business-as-usual projections. These results come from thirteen studies that have been reviewed in this assessment.

Results show that the pledges, if implemented, are expected to reduce global emissions in 2020 compared to business-as-usual projections. How much lower will depend on:

- i. Whether countries implement their unconditional (lower ambition) or conditional (higher ambition) pledges. Conditions attached to the pledges include, for example, the provision of adequate climate finance and ambitious action from other countries.
- ii The extent to which accounting rules for land use, land-use change and forestry (LULUCF) can be used to weaken the mitigation targets of industrialized countries. This could occur if credit is given for LULUCF activities that would have happened in any case without further policy intervention.
- iii The extent to which surplus emissions units, particularly those that could be carried over from the current commitment period of the Kyoto Protocol, are used to meet industrialized country targets.

For the purposes of this report, we have developed four cases that provide a range of plausible outcomes from the UNFCCC negotiations, each with different combinations of the factors mentioned above. We use the term “lenient rules” to refer to cases in which countries maximise the use of surplus emission units and “lenient LULUCF credits”, and thereby weaken mitigation targets.<sup>13</sup> We use “strict rules” for the cases in which they do not<sup>14</sup>.

*Case 1 – Unconditional pledge, lenient rules:* If countries implement their unconditional pledges and are subject to “lenient” accounting rules (as explained in the paragraph above), global emissions are expected to be about 53 GtCO<sub>2</sub>e in 2020 (range: 52-57 GtCO<sub>2</sub>e), or about 3 GtCO<sub>2</sub>e lower than business-as-usual projections.

*Case 2 – Unconditional pledge, strict rules:* If countries implement their unconditional pledges and are subject to “strict” accounting rules (as explained in the paragraph above), global emissions are expected to drop to 52 GtCO<sub>2</sub>e (range: 50-55 GtCO<sub>2</sub>e).

*Case 3 – Conditional pledge, lenient rules:* If countries implement their higher ambition, conditional pledges and are subject to “lenient” accounting rules, global emissions are expected to drop to 51 GtCO<sub>2</sub>e (range: 49-53 GtCO<sub>2</sub>e).

*Case 4 – Conditional pledge, strict rules:* If countries implement their higher ambition, conditional pledges, and are subject to “strict” accounting rules, global emissions are expected to drop to 49 GtCO<sub>2</sub>e in 2020. (range: 47-51 GtCO<sub>2</sub>e).

Thus, under the most ambitious outcome, the pledges could result in 2020 emissions that are 7 GtCO<sub>2</sub>e lower than business as usual.

<sup>13</sup> Credits given for carbon removals from existing forests or other sinks that would have occurred without policy intervention. See Chapter 3 of the full report for more detail on the “lenient” and “strict” definitions.

<sup>14</sup> Note that surplus emission units and credits given for LULUCF activities do not necessarily weaken mitigation targets.

**6. Emissions could be lower or higher than these estimates, as a result of other factors. Emissions could be higher if offsets were to be “double-counted” towards both industrialized and developing country pledges or if pledges were to be ineffectively implemented. Emissions could be lower as a result of international climate finance for further mitigation efforts, or if countries were to strengthen their pledges, or if domestic activities went beyond their pledges.**

The estimates reflected in the four cases do not take into account all factors that could affect emissions in 2020.

Two factors could increase emissions and lessen the impact of the pledges. If industrialized countries were to use offsets to meet their targets, and the developing countries that supplied the offsets also counted them towards their pledges, then emissions would be higher than estimated in Point 5. This “double-counting” of offsets could increase emissions in 2020 by up to 1.3 GtCO<sub>2</sub>e in 2020. Similarly, if domestic policies were to be ineffective in meeting the pledges, emissions could be higher in 2020.

There are also factors that could further decrease emissions in 2020. If substantial international funds were to become available as agreed to in the Copenhagen Accord, emissions could be as much as 2.5 GtCO<sub>2</sub>e lower in 2020 than in the four cases above. Similarly, if domestic policies went beyond international pledges or if pledges were strengthened, emissions could be substantially lower.

**7. A number of uncertainties lead to a significant range in estimates of expected 2020 emissions.**

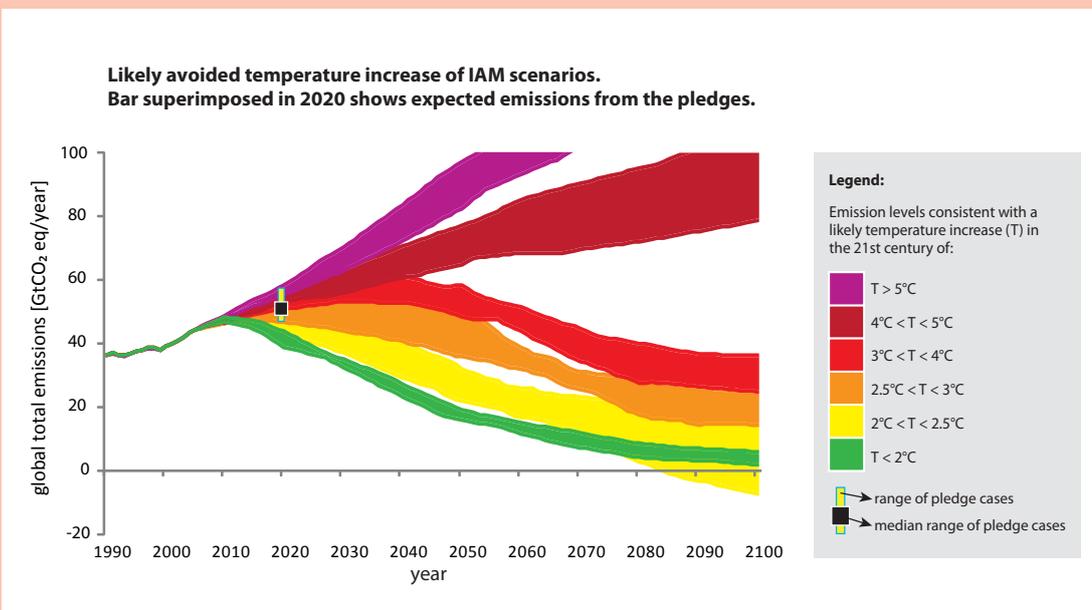

There is a large range between different groups' estimates for 2020 emission levels, even under the same assumptions regarding conditionality of pledges and accounting rules (range: -4 to +8 GtCO<sub>2</sub>e around the median estimate, depending on the case). The range of estimates is caused, for example, by differences in the underlying data sets, the treatment of emissions from LULUCF, the estimates of emissions from international transport, and the assumptions made about business-as-usual emissions growth of developing countries.

#### **Box 4. What are the temperature implications of present pledges?**

It is not possible to precisely answer the above question because the trend in temperature will strongly depend on the pathway of emissions after 2020. But results from integrated assessment models give us a hint at the range of pathways that could occur between 2020 and 2100. If we start at the level of emissions expected from the Copenhagen Accord pledges in 2020 and then follow the range of these pathways through to 2100, we find that they imply a temperature increase of between 2.5 to 5° C before the end of the century (see Figure 2). The lower bound is the case in which emissions are fairly stringently controlled after 2020, and the upper in which they are more weakly controlled. In other words, emission levels in 2020 implied by current pledges do not seem to be consistent with 2° C or 1.5° C temperature limits. To stay within these limits, emission levels would have to be lower in 2020 and then be followed by considerable reductions.

*(Box continued on next page)*

**Figure 2 – Temperature increases associated with emission pathways and compared to the expected emissions from the pledges.** Coloured bands show groups of IAM emission pathways that have approximately the same “likely” avoided temperature increase in the twenty-first century. Specifically the coloured bands show the 20th to 80th percentile range of the IAM pathways associated with those temperature increases<sup>15</sup>. Superimposed on top of the pathways is the range of estimated emissions resulting from the Copenhagen Accord pledges. The small black bar shows the range of median estimates from the four pledge cases. The thin blue bar represents the wider range of estimates associated with those four cases (the 20th to 80th percentile range).

<sup>15</sup>The gaps between the coloured bands come about because this report mainly compiled pathways from low greenhouse gas stabilisation scenario.

## How big is the “emissions gap”?

**8. A “gap” is expected in 2020 between emission levels consistent with a 2° C limit and those resulting from the Copenhagen Accord pledges. The size of the gap depends on the likelihood of a particular temperature limit, and how the pledges are implemented. If the aim is to have a “likely” chance (greater than 66 per cent) of staying below the 2° C temperature limit, the gap would range from 5-9 GtCO<sub>2</sub>e, depending on how the pledges are implemented.**

As a reference point, we saw in Point 2 that to have a “likely” chance of staying below the 2° C temperature limit, global emissions should be around 44 GtCO<sub>2</sub>e (range: 39-44 GtCO<sub>2</sub>e). But according to business-as-usual projections global emissions in 2020 may be around 56 GtCO<sub>2</sub>e (range: 54-60 GtCO<sub>2</sub>e). This leaves a gap of about 12 GtCO<sub>2</sub>e (range: 10-21 GtCO<sub>2</sub>e).

<sup>16</sup> All cases refer to emission levels consistent with a “likely” chance of staying below 2° C.

The four pledge cases, each with different assumptions about the future outcome of the UNFCCC negotiations, result in different gaps as follows<sup>16</sup>:

*Case 1 – Unconditional pledges, lenient rules.* The gap would be reduced down to 9 GtCO<sub>2</sub>e (range: 8-18 GtCO<sub>2</sub>e) or about 3 GtCO<sub>2</sub>e below business as usual.

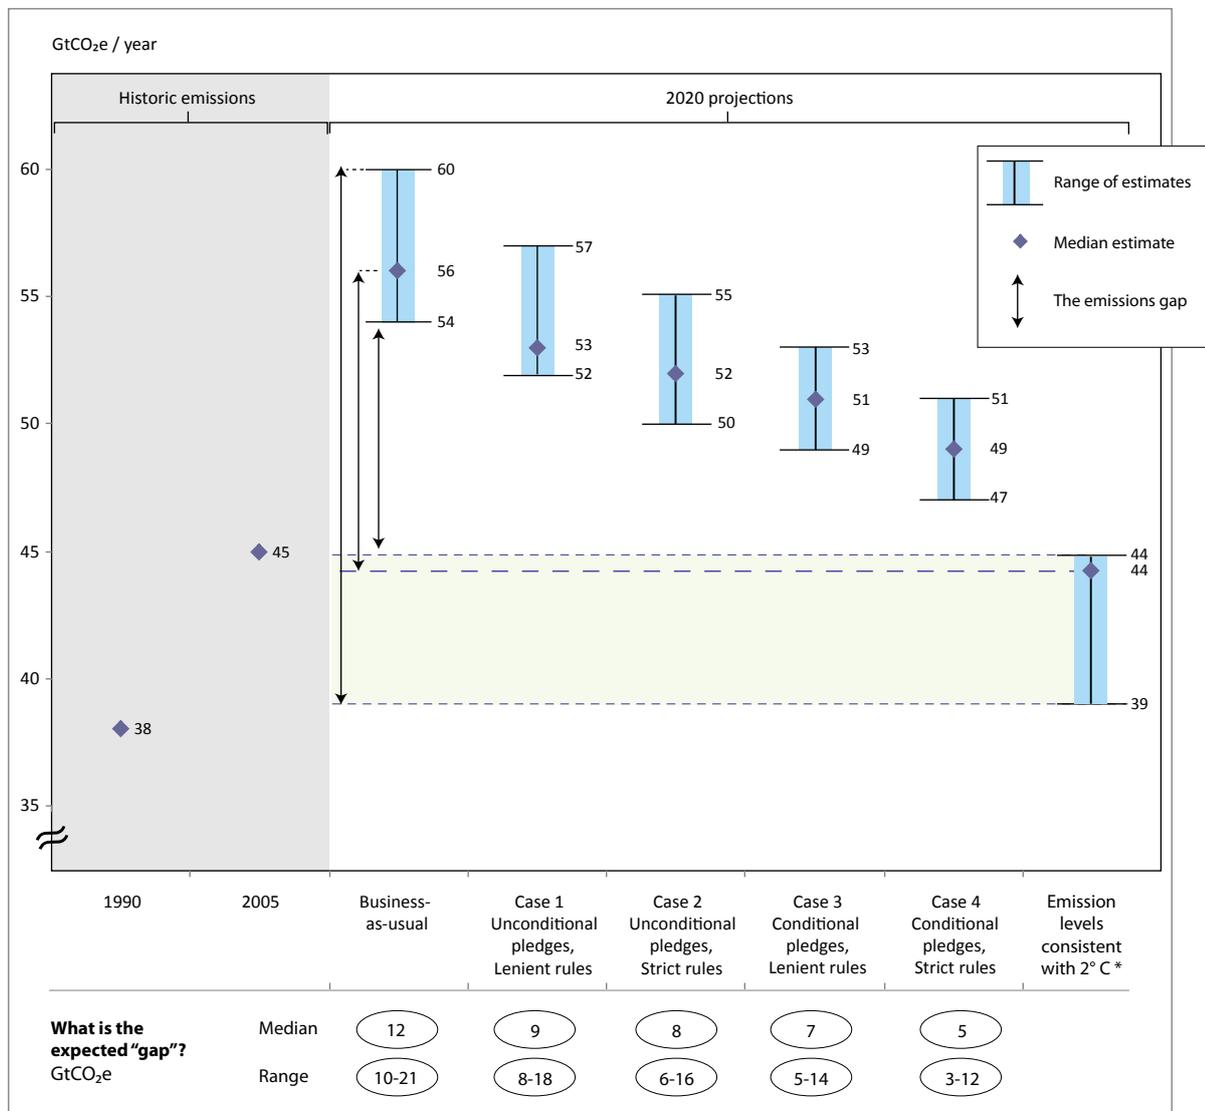

*Case 2 – Unconditional pledges, strict rules.* The gap would be about 8 GtCO<sub>2</sub>e (range: 6-16 GtCO<sub>2</sub>e), or about 4 GtCO<sub>2</sub>e below business as usual.

*Case 3 – Conditional pledges, lenient rules.* The gap would be about 7 GtCO<sub>2</sub>e (range: 5-14 GtCO<sub>2</sub>e) or about 5 GtCO<sub>2</sub>e below business as usual.

*Case 4 – Conditional pledges, strict rules.* The gap would be about 5 GtCO<sub>2</sub>e (range: 3-12 GtCO<sub>2</sub>e). This is about 7 GtCO<sub>2</sub>e lower than business as usual, and almost 60 per cent of the way to the 2° C levels. Although the gap would be considerably narrower than the business as usual case, it would still be as large as the total greenhouse gas emissions from the European Union in 2005 or from global road transport emissions in that year.

These results can be seen in Figure 3.

**Figure 3: Comparison of expected emissions in 2020 with the emission levels consistent with a “likely” chance of meeting the 2° C limit.** The figure compares the expected emissions in 2020 resulting from the four pledge cases with the emission levels consistent with a “likely” chance of meeting the 2° C limit. The median estimates and range of estimates (20th to 80th percentile) are shown. The gap between expected emissions and the 2° C levels is given below in each case.

\* A “likely” chance of limiting warming to 2° C by 2100

Double-counting of international emission offsets could also increase the gap up to 1.3 GtCO<sub>2</sub>e. This is a real risk since the Copenhagen Accord does not include rules regarding the use of international offsets.

As a final point here, to have a “medium” rather than a “likely” chance of staying within the 2° C limit, global emissions in 2020 can be about 1 GtCO<sub>2</sub>e higher and the gap also narrows by about 1 GtCO<sub>2</sub>e.

**9. There are considerable uncertainties around the estimates of the gap.**

Since the emissions gap is the difference between emission levels for different temperature targets and expected emissions in 2020, the gap also inherits the

uncertainties of these two components. The reader will note that the range around median estimates (Figure 3) is not symmetric; the lower bound extends about 1-2 GtCO<sub>2</sub>e below the median, whereas the upper bound rises 7-9 GtCO<sub>2</sub>e above it (for a “likely” chance of staying below 2° C). One way to interpret this skewed range is that the gap may turn out to be higher rather than lower than the median.

This assessment focuses on the majority (20th – 80th percentile) of emission pathways. But there are obviously also results outside of this range. In the extreme case, if we combine the highest 2° C emission levels with the lowest estimate of expected emissions, the gap disappears. At the opposite extreme, if we combine the lowest 2° C emission levels with the highest estimate of expected emissions, the gap would be greater than 20 GtCO<sub>2</sub>e.

## How can the gap be reduced?

### 10. Various international policy actions are available to close the gap.

#### *a) Reducing the gap through higher ambition pledges.*

The gap can be reduced by around 2-3 GtCO<sub>2</sub>e (with a range of estimates from 2 to 5 GtCO<sub>2</sub>e) by moving from the unconditional (lower ambition) pledges to the conditional (higher ambition) pledges.

- **Industrialized countries:** The majority of this reduction would come from industrialized countries, whose pledges are sometimes conditional on the ambitious action of other countries or on domestic legislation.
- **Developing countries:** A smaller, but still important, part of the reduction would come from developing countries, whose pledges are sometimes conditional on the adequate provision of international climate finance or technology transfer.

#### *b) Reducing the gap by tightening the rules*

The gap can be reduced by around 1-2 GtCO<sub>2</sub>e by ensuring that “strict” rules apply to the use of LULUCF credits and surplus emission units.

- **LULUCF accounting:** If industrialized countries apply “strict” accounting rules to minimise the use of what we refer to as ‘lenient LULUCF credits’<sup>17</sup>, they would strengthen the effect of their pledges and thus reduce the emissions gap by up to 0.8 GtCO<sub>2</sub>e.
- **Surplus emission units:** Likewise, if the rules governing the use of surplus emission units under the Kyoto Protocol were designed in a way that would avoid the weakening of mitigation targets, the gap could be reduced by up to 2.3 GtCO<sub>2</sub>e. These include units carried over from the current commitment period and any potential new surpluses created in the next.

We note that policy options (a) and (b) are interdependent and so their benefits cannot necessarily be added together. But we estimate that the two options combined could reduce emissions by around 4 GtCO<sub>2</sub>e in 2020 (with a range of estimates of 4-6 GtCO<sub>2</sub>e) compared with the least ambitious case (case 1).

<sup>17</sup> Credits given for carbon removals from existing forests or other sinks that would have occurred without policy intervention.

In addition, the risk of the gap increasing in size can be avoided if the negotiations set rules regarding international offsets to prevent them from being counted towards both industrialized and developing country pledges. “Double-counting” would increase the gap by up to 1.3 GtCO<sub>2</sub>e.

### 11. It is feasible to close the remaining gap through further mitigation actions by countries, some of which could be supported by international climate finance.

If the above measures were to be taken, there might still be a gap of 5 GtCO<sub>2</sub>e compared with a 2° C limit. This gap could be closed if countries were to adopt more ambitious actions or pledges. The results from integrated assessment models (IAM) suggest that it is possible to reach emission levels where there is no gap, using mitigation measures that are economically and technologically feasible.

Analysis also shows that international climate finance in line with the Copenhagen Accord could help achieve some of these reductions in developing countries.

### 12. Studies show that laying the groundwork for steep rates of emissions reduction from 2020 onwards would be necessary for staying within a limit of 2° C and even more so for 1.5° C, whatever the outcome of the pledges.

The results of the IAM pathways that have a “likely” (greater than 66 per cent) or even “medium” (50-66 per cent) chance of limiting temperature increase to 2° C show average annual emission reduction rates of greater than 2 per cent per year after 2020. Achieving this over the long-term would be unprecedented because, on the contrary, global emissions have almost continuously grown since the industrial revolution.

The higher the emissions in 2020, the faster the rate of decline required thereafter to meet temperature targets. Therefore, if targets are to be met, it will be essential to lay the groundwork now for such rates of reduction. This can be done, for example, by avoiding lock-in of high carbon infrastructure with long life-spans and developing and introducing advanced clean technologies.

## Glossary

**Double-counting:** In the context of this report, double counting refers to a situation in which the same emission reductions are counted towards meeting two countries' pledges.

**GtCO<sub>2</sub>e:** For the purpose of this report, greenhouse gas emissions are the sum of the basket of greenhouse gases listed in Annex A of the Kyoto Protocol, expressed as carbon dioxide equivalent. The carbon dioxide equivalent of the various gases is computed by using the global warming potentials published in the Second IPCC Assessment Report.

**Integrated assessment model (IAM) pathways:** emission pathways produced by models which simulate the energy-economic system including the turnover of energy infrastructure;

**"Likely" chance:** A greater than 66% likelihood. The term is used to convey the probabilities of meeting temperature limits.

**"Lenient" LULUCF credits:** Credits given for carbon removals from existing forests or other sinks that would have occurred without policy intervention and are likely to be included in the baseline assumed in model calculations.

**"Medium" chance:** A 50 to 66% likelihood. The term is used to convey the probabilities of meeting temperature limits.

**Negative emissions:** Either globally or for a particular sector, the emissions that could occur if, in a given period, the removal of greenhouse gases from the atmosphere is greater than the addition of emissions into it..

**"Stylized" pathways:** emission pathways, produced by models that do not explicitly model the change in the energy system or feasibility of emission reduction rates.

**Surplus emission units:** After the first commitment period of the Kyoto Protocol (2008-2012), according to Article 3, paragraph 13, Parties holding emission units not required for compliance with their commitments are able to carry over these units for future use or sale. There is also the possibility that new surplus emissions units will be created in the second commitment period, where targets are set below business-as-usual expectations.

# **UNITED NATIONS FRAMEWORK CONVENTION ON CLIMATE CHANGE**

**UNITED NATIONS**

**1992**

**UNITED NATIONS FRAMEWORK CONVENTION ON CLIMATE CHANGE**

The Parties to this Convention,

Acknowledging that change in the Earth's climate and its adverse effects are a common concern of humankind,

Concerned that human activities have been substantially increasing the atmospheric concentrations of greenhouse gases, that these increases enhance the natural greenhouse effect, and that this will result on average in an additional warming of the Earth's surface and atmosphere and may adversely affect natural ecosystems and humankind,

Noting that the largest share of historical and current global emissions of greenhouse gases has originated in developed countries, that per capita emissions in developing countries are still relatively low and that the share of global emissions originating in developing countries will grow to meet their social and development needs,

Aware of the role and importance in terrestrial and marine ecosystems of sinks and reservoirs of greenhouse gases,

Noting that there are many uncertainties in predictions of climate change, particularly with regard to the timing, magnitude and regional patterns thereof,

Acknowledging that the global nature of climate change calls for the widest possible cooperation by all countries and their participation in an effective and appropriate international response, in accordance with their common but differentiated responsibilities and respective capabilities and their social and economic conditions,

Recalling the pertinent provisions of the Declaration of the United Nations Conference on the Human Environment, adopted at Stockholm on 16 June 1972,

Recalling also that States have, in accordance with the Charter of the United Nations and the principles of international law, the sovereign right to exploit their own resources pursuant to their own environmental and developmental policies, and the responsibility to ensure that activities within their jurisdiction or control do not cause damage to the environment of other States or of areas beyond the limits of national jurisdiction,

Reaffirming the principle of sovereignty of States in international cooperation to address climate change,

Recognizing that States should enact effective environmental legislation, that environmental standards, management objectives and priorities should reflect the environmental and developmental context to which they apply,

and that standards applied by some countries may be inappropriate and of unwarranted economic and social cost to other countries, in particular developing countries,

Recalling the provisions of General Assembly resolution 44/228 of 22 December 1989 on the United Nations Conference on Environment and Development, and resolutions 43/53 of 6 December 1988, 44/207 of 22 December 1989, 45/212 of 21 December 1990 and 46/169 of 19 December 1991 on protection of global climate for present and future generations of mankind,

Recalling also the provisions of General Assembly resolution 44/206 of 22 December 1989 on the possible adverse effects of sea-level rise on islands and coastal areas, particularly low-lying coastal areas and the pertinent provisions of General Assembly resolution 44/172 of 19 December 1989 on the implementation of the Plan of Action to Combat Desertification,

Recalling further the Vienna Convention for the Protection of the Ozone Layer, 1985, and the Montreal Protocol on Substances that Deplete the Ozone Layer, 1987, as adjusted and amended on 29 June 1990,

Noting the Ministerial Declaration of the Second World Climate Conference adopted on 7 November 1990,

Conscious of the valuable analytical work being conducted by many States on climate change and of the important contributions of the World Meteorological Organization, the United Nations Environment Programme and other organs, organizations and bodies of the United Nations system, as well as other international and intergovernmental bodies, to the exchange of results of scientific research and the coordination of research,

Recognizing that steps required to understand and address climate change will be environmentally, socially and economically most effective if they are based on relevant scientific, technical and economic considerations and continually re-evaluated in the light of new findings in these areas,

Recognizing that various actions to address climate change can be justified economically in their own right and can also help in solving other environmental problems,

Recognizing also the need for developed countries to take immediate action in a flexible manner on the basis of clear priorities, as a first step towards comprehensive response strategies at the global, national and, where agreed, regional levels that take into account all greenhouse gases, with due consideration of their relative contributions to the enhancement of the greenhouse effect,

Recognizing further that low-lying and other small island countries, countries with low-lying coastal, arid and semi-arid areas or areas liable to floods, drought and

desertification, and developing countries with fragile mountainous ecosystems are particularly vulnerable to the adverse effects of climate change,

Recognizing the special difficulties of those countries, especially developing countries, whose economies are particularly dependent on fossil fuel production, use and exportation, as a consequence of action taken on limiting greenhouse gas emissions,

Affirming that responses to climate change should be coordinated with social and economic development in an integrated manner with a view to avoiding adverse impacts on the latter, taking into full account the legitimate priority needs of developing countries for the achievement of sustained economic growth and the eradication of poverty,

Recognizing that all countries, especially developing countries, need access to resources required to achieve sustainable social and economic development and that, in order for developing countries to progress towards that goal, their energy consumption will need to grow taking into account the possibilities for achieving greater energy efficiency and for controlling greenhouse gas emissions in general, including through the application of new technologies on terms which make such an application economically and socially beneficial,

Determined to protect the climate system for present and future generations,

Have agreed as follows:

**ARTICLE 1****DEFINITIONS \***

For the purposes of this Convention:

1. "Adverse effects of climate change" means changes in the physical environment or biota resulting from climate change which have significant deleterious effects on the composition, resilience or productivity of natural and managed ecosystems or on the operation of socio-economic systems or on human health and welfare.
  2. "Climate change" means a change of climate which is attributed directly or indirectly to human activity that alters the composition of the global atmosphere and which is in addition to natural climate variability observed over comparable time periods.
  3. "Climate system" means the totality of the atmosphere, hydrosphere, biosphere and geosphere and their interactions.
  4. "Emissions" means the release of greenhouse gases and/or their precursors into the atmosphere over a specified area and period of time.
  5. "Greenhouse gases" means those gaseous constituents of the atmosphere, both natural and anthropogenic, that absorb and re-emit infrared radiation.
  6. "Regional economic integration organization" means an organization constituted by sovereign States of a given region which has competence in respect of matters governed by this Convention or its protocols and has been duly authorized, in accordance with its internal procedures, to sign, ratify, accept, approve or accede to the instruments concerned.
  7. "Reservoir" means a component or components of the climate system where a greenhouse gas or a precursor of a greenhouse gas is stored.
  8. "Sink" means any process, activity or mechanism which removes a greenhouse gas, an aerosol or a precursor of a greenhouse gas from the atmosphere.
  9. "Source" means any process or activity which releases a greenhouse gas, an aerosol or a precursor of a greenhouse gas into the atmosphere.
-

\* Titles of articles are included solely to assist the reader.

**ARTICLE 2****OBJECTIVE**

The ultimate objective of this Convention and any related legal instruments that the Conference of the Parties may adopt is to achieve, in accordance with the relevant provisions of the Convention, stabilization of greenhouse gas concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system. Such a level should be achieved within a time-frame sufficient to allow ecosystems to adapt naturally to climate change, to ensure that food production is not threatened and to enable economic development to proceed in a sustainable manner.

**ARTICLE 3****PRINCIPLES**

In their actions to achieve the objective of the Convention and to implement its provisions, the Parties shall be guided, inter alia, by the following:

1. The Parties should protect the climate system for the benefit of present and future generations of humankind, on the basis of equity and in accordance with their common but differentiated responsibilities and respective capabilities. Accordingly, the developed country Parties should take the lead in combating climate change and the adverse effects thereof.
2. The specific needs and special circumstances of developing country Parties, especially those that are particularly vulnerable to the adverse effects of climate change, and of those Parties, especially developing country Parties, that would have to bear a disproportionate or abnormal burden under the Convention, should be given full consideration.
3. The Parties should take precautionary measures to anticipate, prevent or minimize the causes of climate change and mitigate its adverse effects. Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing such measures, taking into account that policies and measures to deal with climate change should be cost-effective so as to ensure global benefits at the lowest possible cost. To achieve this, such policies and measures should take into account different socio-economic contexts, be comprehensive, cover all relevant sources, sinks and reservoirs of greenhouse gases and adaptation, and comprise all economic sectors. Efforts to address climate change may be carried out cooperatively by interested Parties.

4. The Parties have a right to, and should, promote sustainable development. Policies and measures to protect the climate system against human-induced change should be appropriate for the specific conditions of each Party and should be integrated with national development programmes, taking into account that economic development is essential for adopting measures to address climate change.

5. The Parties should cooperate to promote a supportive and open international economic system that would lead to sustainable economic growth and development in all Parties, particularly developing country Parties, thus enabling them better to address the problems of climate change. Measures taken to combat climate change, including unilateral ones, should not constitute a means of arbitrary or unjustifiable discrimination or a disguised restriction on international trade.

#### ARTICLE 4

##### COMMITMENTS

1. All Parties, taking into account their common but differentiated responsibilities and their specific national and regional development priorities, objectives and circumstances, shall:
  - (a) Develop, periodically update, publish and make available to the Conference of the Parties, in accordance with Article 12, national inventories of anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, using comparable methodologies to be agreed upon by the Conference of the Parties;
  - (b) Formulate, implement, publish and regularly update national and, where appropriate, regional programmes containing measures to mitigate climate change by addressing anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, and measures to facilitate adequate adaptation to climate change;
  - (c) Promote and cooperate in the development, application and diffusion, including transfer, of technologies, practices and processes that control, reduce or prevent anthropogenic emissions of greenhouse gases not controlled by the Montreal Protocol in all relevant sectors, including the energy, transport, industry, agriculture, forestry and waste management sectors;
  - (d) Promote sustainable management, and promote and cooperate in the conservation and enhancement, as appropriate, of sinks and reservoirs of all

greenhouse gases not controlled by the Montreal Protocol, including biomass, forests and oceans as well as other terrestrial, coastal and marine ecosystems;

- (e) Cooperate in preparing for adaptation to the impacts of climate change; develop and elaborate appropriate and integrated plans for coastal zone management, water resources and agriculture, and for the protection and rehabilitation of areas, particularly in Africa, affected by drought and desertification, as well as floods;
- (f) Take climate change considerations into account, to the extent feasible, in their relevant social, economic and environmental policies and actions, and employ appropriate methods, for example impact assessments, formulated and determined nationally, with a view to minimizing adverse effects on the economy, on public health and on the quality of the environment, of projects or measures undertaken by them to mitigate or adapt to climate change;
- (g) Promote and cooperate in scientific, technological, technical, socio-economic and other research, systematic observation and development of data archives related to the climate system and intended to further the understanding and to reduce or eliminate the remaining uncertainties regarding the causes, effects, magnitude and timing of climate change and the economic and social consequences of various response strategies;
- (h) Promote and cooperate in the full, open and prompt exchange of relevant scientific, technological, technical, socio-economic and legal information related to the climate system and climate change, and to the economic and social consequences of various response strategies;
- (i) Promote and cooperate in education, training and public awareness related to climate change and encourage the widest participation in this process, including that of non-governmental organizations; and
- (j) Communicate to the Conference of the Parties information related to implementation, in accordance with Article 12.

2. The developed country Parties and other Parties included in Annex I commit themselves specifically as provided for in the following:

- (a) Each of these Parties shall adopt national<sup>1</sup> policies and take corresponding measures on the mitigation of climate change, by limiting its anthropogenic emissions of greenhouse gases and protecting and enhancing its greenhouse gas sinks and reservoirs. These policies and measures will demonstrate that developed countries are taking the lead in modifying longer-term trends in anthropogenic emissions consistent with the objective of the Convention, recognizing that the return by the end of the present decade to earlier levels of anthropogenic emissions of carbon dioxide and other greenhouse gases not controlled by the Montreal Protocol would contribute to such modification, and taking into account the differences in these Parties' starting points and approaches, economic structures and resource bases, the need to maintain strong and sustainable economic growth, available technologies and other individual circumstances, as well as the need for equitable and appropriate contributions by each of these Parties to the global effort regarding that objective. These Parties may implement such policies and measures jointly with other Parties and may assist other Parties in contributing to the achievement of the objective of the Convention and, in particular, that of this subparagraph;
- (b) In order to promote progress to this end, each of these Parties shall communicate, within six months of the entry into force of the Convention for it and periodically thereafter, and in accordance with Article 12, detailed information on its policies and measures referred to in subparagraph (a) above, as well as on its resulting projected anthropogenic emissions by sources and removals by sinks of greenhouse gases not controlled by the Montreal Protocol for the period referred to in subparagraph (a), with the aim of returning individually or jointly to their 1990 levels these anthropogenic emissions of carbon dioxide and other greenhouse gases not controlled by the Montreal Protocol. This information will be reviewed by the Conference of the Parties, at its first session and periodically thereafter, in accordance with Article 7;
- (c) Calculations of emissions by sources and removals by sinks of greenhouse gases for the purposes of subparagraph (b) above should take into account the best available scientific knowledge, including of the effective capacity of sinks and the respective contributions of such gases to climate change. The Conference of the Parties shall consider and agree

---

<sup>1</sup> This includes policies and measures adopted by regional economic integration organizations.

on methodologies for these calculations at its first session and review them regularly thereafter;

- (d) The Conference of the Parties shall, at its first session, review the adequacy of subparagraphs (a) and (b) above. Such review shall be carried out in the light of the best available scientific information and assessment on climate change and its impacts, as well as relevant technical, social and economic information. Based on this review, the Conference of the Parties shall take appropriate action, which may include the adoption of amendments to the commitments in subparagraphs (a) and (b) above. The Conference of the Parties, at its first session, shall also take decisions regarding criteria for joint implementation as indicated in subparagraph (a) above. A second review of subparagraphs (a) and (b) shall take place not later than 31 December 1998, and thereafter at regular intervals determined by the Conference of the Parties, until the objective of the Convention is met;
- (e) Each of these Parties shall :
  - (i) Coordinate as appropriate with other such Parties, relevant economic and administrative instruments developed to achieve the objective of the Convention; and
  - (ii) Identify and periodically review its own policies and practices which encourage activities that lead to greater levels of anthropogenic emissions of greenhouse gases not controlled by the Montreal Protocol than would otherwise occur;
- (f) The Conference of the Parties shall review, not later than 31 December 1998, available information with a view to taking decisions regarding such amendments to the lists in Annexes I and II as may be appropriate, with the approval of the Party concerned;
- (g) Any Party not included in Annex I may, in its instrument of ratification, acceptance, approval or accession, or at any time thereafter, notify the Depositary that it intends to be bound by subparagraphs (a) and (b) above. The Depositary shall inform the other signatories and Parties of any such notification.

3. The developed country Parties and other developed Parties included in Annex II shall provide new and additional financial resources to meet the agreed full costs incurred by

developing country Parties in complying with their obligations under Article 12, paragraph 1. They shall also provide such financial resources, including for the transfer of technology, needed by the developing country Parties to meet the agreed full incremental costs of implementing measures that are covered by paragraph 1 of this Article and that are agreed between a developing country Party and the international entity or entities referred to in Article 11, in accordance with that Article. The implementation of these commitments shall take into account the need for adequacy and predictability in the flow of funds and the importance of appropriate burden sharing among the developed country Parties.

4. The developed country Parties and other developed Parties included in Annex II shall also assist the developing country Parties that are particularly vulnerable to the adverse effects of climate change in meeting costs of adaptation to those adverse effects.

5. The developed country Parties and other developed Parties included in Annex II shall take all practicable steps to promote, facilitate and finance, as appropriate, the transfer of, or access to, environmentally sound technologies and know-how to other Parties, particularly developing country Parties, to enable them to implement the provisions of the Convention. In this process, the developed country Parties shall support the development and enhancement of endogenous capacities and technologies of developing country Parties. Other Parties and organizations in a position to do so may also assist in facilitating the transfer of such technologies.

6. In the implementation of their commitments under paragraph 2 above, a certain degree of flexibility shall be allowed by the Conference of the Parties to the Parties included in Annex I undergoing the process of transition to a market economy, in order to enhance the ability of these Parties to address climate change, including with regard to the historical level of anthropogenic emissions of greenhouse gases not controlled by the Montreal Protocol chosen as a reference.

7. The extent to which developing country Parties will effectively implement their commitments under the Convention will depend on the effective implementation by developed country Parties of their commitments under the Convention related to financial resources and transfer of technology and will take fully into account that economic and social development and poverty eradication are the first and overriding priorities of the developing country Parties.

8. In the implementation of the commitments in this Article, the Parties shall give full consideration to what actions are necessary under the Convention, including actions related to funding, insurance and the transfer of technology, to meet the

specific needs and concerns of developing country Parties arising from the adverse effects of climate change and/or the impact of the implementation of response measures, especially on:

- (a) Small island countries;
- (b) Countries with low-lying coastal areas;
- (c) Countries with arid and semi-arid areas, forested areas and areas liable to forest decay;
- (d) Countries with areas prone to natural disasters;
- (e) Countries with areas liable to drought and desertification;
- (f) Countries with areas of high urban atmospheric pollution;
- (g) Countries with areas with fragile ecosystems, including mountainous ecosystems;
- (h) Countries whose economies are highly dependent on income generated from the production, processing and export, and/or on consumption of fossil fuels and associated energy-intensive products; and
- (i) Land-locked and transit countries.

Further, the Conference of the Parties may take actions, as appropriate, with respect to this paragraph.

9. The Parties shall take full account of the specific needs and special situations of the least developed countries in their actions with regard to funding and transfer of technology.

10. The Parties shall, in accordance with Article 10, take into consideration in the implementation of the commitments of the Convention the situation of Parties, particularly developing country Parties, with economies that are vulnerable to the adverse effects of the implementation of measures to respond to climate change. This applies notably to Parties with economies that are highly dependent on income generated from the production, processing and export, and/or consumption of fossil fuels and associated energy-intensive products and/or the use of fossil fuels for which such Parties have serious difficulties in switching to alternatives.

## **ARTICLE 5**

### **RESEARCH AND SYSTEMATIC OBSERVATION**

In carrying out their commitments under Article 4, paragraph 1(g), the Parties shall:

- (a) Support and further develop, as appropriate, international and intergovernmental programmes and networks or organizations aimed at defining, conducting, assessing and financing research, data collection and systematic observation, taking into account the need to minimize duplication of effort;
- (b) Support international and intergovernmental efforts to strengthen systematic observation and national scientific and technical research capacities and capabilities, particularly in developing countries, and to promote access to, and the exchange of, data and analyses thereof obtained from areas beyond national jurisdiction; and
- (c) Take into account the particular concerns and needs of developing countries and cooperate in improving their endogenous capacities and capabilities to participate in the efforts referred to in subparagraphs (a) and (b) above.

**ARTICLE 6****EDUCATION, TRAINING AND PUBLIC AWARENESS**

In carrying out their commitments under Article 4, paragraph 1(i), the Parties shall:

- (a) Promote and facilitate at the national and, as appropriate, subregional and regional levels, and in accordance with national laws and regulations, and within their respective capacities:
  - (i) The development and implementation of educational and public awareness programmes on climate change and its effects;
  - (ii) Public access to information on climate change and its effects;
  - (iii) Public participation in addressing climate change and its effects and developing adequate responses; and
  - (iv) Training of scientific, technical and managerial personnel.
- (b) Cooperate in and promote, at the international level, and, where appropriate, using existing bodies:
  - (i) The development and exchange of educational and public awareness material on climate change and its effects; and
  - (ii) The development and implementation of education and training programmes, including the strengthening of national institutions and the exchange or secondment of personnel to train experts in this field, in particular for developing countries.

**ARTICLE 7****CONFERENCE OF THE PARTIES**

1. A Conference of the Parties is hereby established.

2. The Conference of the Parties, as the supreme body of this Convention, shall keep under regular review the implementation of the Convention and any related legal instruments that the Conference of the Parties may adopt, and shall make, within its mandate, the decisions necessary to promote the effective implementation of the Convention. To this end, it shall:

- (a) Periodically examine the obligations of the Parties and the institutional arrangements under the Convention, in the light of the objective of the Convention, the experience gained in its implementation and the evolution of scientific and technological knowledge;
- (b) Promote and facilitate the exchange of information on measures adopted by the Parties to address climate change and its effects, taking into account the differing circumstances, responsibilities and capabilities of the Parties and their respective commitments under the Convention;
- (c) Facilitate, at the request of two or more Parties, the coordination of measures adopted by them to address climate change and its effects, taking into account the differing circumstances, responsibilities and capabilities of the Parties and their respective commitments under the Convention;
- (d) Promote and guide, in accordance with the objective and provisions of the Convention, the development and periodic refinement of comparable methodologies, to be agreed on by the Conference of the Parties, inter alia, for preparing inventories of greenhouse gas emissions by sources and removals by sinks, and for evaluating the effectiveness of measures to limit the emissions and enhance the removals of these gases;
- (e) Assess, on the basis of all information made available to it in accordance with the provisions of the Convention, the implementation of the Convention by the Parties, the overall effects of the measures taken pursuant to the Convention, in particular environmental, economic and social effects as well as their cumulative impacts and the extent to which progress towards the objective of the Convention is being achieved;
- (f) Consider and adopt regular reports on the implementation of the Convention and ensure their publication;
- (g) Make recommendations on any matters necessary for the implementation of the Convention;
- (h) Seek to mobilize financial resources in accordance with Article 4, paragraphs 3, 4 and 5, and Article 11;
- (i) Establish such subsidiary bodies as are deemed necessary for the implementation of the Convention;

- (j) Review reports submitted by its subsidiary bodies and provide guidance to them;
- (k) Agree upon and adopt, by consensus, rules of procedure and financial rules for itself and for any subsidiary bodies;
- (l) Seek and utilize, where appropriate, the services and cooperation of, and information provided by, competent international organizations and intergovernmental and non-governmental bodies; and
- (m) Exercise such other functions as are required for the achievement of the objective of the Convention as well as all other functions assigned to it under the Convention.

3. The Conference of the Parties shall, at its first session, adopt its own rules of procedure as well as those of the subsidiary bodies established by the Convention, which shall include decision-making procedures for matters not already covered by decision-making procedures stipulated in the Convention. Such procedures may include specified majorities required for the adoption of particular decisions.

4. The first session of the Conference of the Parties shall be convened by the interim secretariat referred to in Article 21 and shall take place not later than one year after the date of entry into force of the Convention. Thereafter, ordinary sessions of the Conference of the Parties shall be held every year unless otherwise decided by the Conference of the Parties.

5. Extraordinary sessions of the Conference of the Parties shall be held at such other times as may be deemed necessary by the Conference, or at the written request of any Party, provided that, within six months of the request being communicated to the Parties by the secretariat, it is supported by at least one third of the Parties.

6. The United Nations, its specialized agencies and the International Atomic Energy Agency, as well as any State member thereof or observers thereto not Party to the Convention, may be represented at sessions of the Conference of the Parties as observers. Any body or agency, whether national or international, governmental or non-governmental, which is qualified in matters covered by the Convention, and which has informed the secretariat of its wish to be represented at a session of the Conference of the Parties as an observer, may be so admitted unless at least one third of the Parties present object. The admission and participation of observers shall be subject to the rules of procedure adopted by the Conference of the Parties.

#### ARTICLE 8

**SECRETARIAT**

1. A secretariat is hereby established.
2. The functions of the secretariat shall be:
  - (a) To make arrangements for sessions of the Conference of the Parties and its subsidiary bodies established under the Convention and to provide them with services as required;
  - (b) To compile and transmit reports submitted to it;
  - (c) To facilitate assistance to the Parties, particularly developing country Parties, on request, in the compilation and communication of information required in accordance with the provisions of the Convention;
  - (d) To prepare reports on its activities and present them to the Conference of the Parties;
  - (e) To ensure the necessary coordination with the secretariats of other relevant international bodies;
  - (f) To enter, under the overall guidance of the Conference of the Parties, into such administrative and contractual arrangements as may be required for the effective discharge of its functions; and
  - (g) To perform the other secretariat functions specified in the Convention and in any of its protocols and such other functions as may be determined by the Conference of the Parties.
3. The Conference of the Parties, at its first session, shall designate a permanent secretariat and make arrangements for its functioning.

**ARTICLE 9****SUBSIDIARY BODY FOR SCIENTIFIC AND TECHNOLOGICAL ADVICE**

1. A subsidiary body for scientific and technological advice is hereby established to provide the Conference of the Parties and, as appropriate, its other subsidiary bodies with timely information and advice on scientific and technological matters relating to the Convention. This body shall be open to participation by all Parties and shall be multidisciplinary. It shall comprise government representatives competent in the relevant field of expertise. It shall report regularly to the Conference of the Parties on all aspects of its work.

2. Under the guidance of the Conference of the Parties, and drawing upon existing competent international bodies, this body shall:

- (a) Provide assessments of the state of scientific knowledge relating to climate change and its effects;
- (b) Prepare scientific assessments on the effects of measures taken in the implementation of the Convention;
- (c) Identify innovative, efficient and state-of-the-art technologies and know-how and advise on the ways and means of promoting development and/or transferring such technologies;
- (d) Provide advice on scientific programmes, international cooperation in research and development related to climate change, as well as on ways and means of supporting endogenous capacity-building in developing countries; and
- (e) Respond to scientific, technological and methodological questions that the Conference of the Parties and its subsidiary bodies may put to the body.

3. The functions and terms of reference of this body may be further elaborated by the Conference of the Parties.

## ARTICLE 10

### SUBSIDIARY BODY FOR IMPLEMENTATION

1. A subsidiary body for implementation is hereby established to assist the Conference of the Parties in the assessment and review of the effective implementation of the Convention. This body shall be open to participation by all Parties and comprise government representatives who are experts on matters related to climate change. It shall report regularly to the Conference of the Parties on all aspects of its work.

2. Under the guidance of the Conference of the Parties, this body shall:

- (a) Consider the information communicated in accordance with Article 12, paragraph 1, to assess the overall aggregated effect of the steps taken by the Parties in the light of the latest scientific assessments concerning climate change;
- (b) Consider the information communicated in accordance with Article 12, paragraph 2, in order to assist the

Conference of the Parties in carrying out the reviews required by Article 4, paragraph 2(d); and

- (c) Assist the Conference of the Parties, as appropriate, in the preparation and implementation of its decisions.

## ARTICLE 11

### FINANCIAL MECHANISM

1. A mechanism for the provision of financial resources on a grant or concessional basis, including for the transfer of technology, is hereby defined. It shall function under the guidance of and be accountable to the Conference of the Parties, which shall decide on its policies, programme priorities and eligibility criteria related to this Convention. Its operation shall be entrusted to one or more existing international entities.

2. The financial mechanism shall have an equitable and balanced representation of all Parties within a transparent system of governance.

3. The Conference of the Parties and the entity or entities entrusted with the operation of the financial mechanism shall agree upon arrangements to give effect to the above paragraphs, which shall include the following:

- (a) Modalities to ensure that the funded projects to address climate change are in conformity with the policies, programme priorities and eligibility criteria established by the Conference of the Parties;
- (b) Modalities by which a particular funding decision may be reconsidered in light of these policies, programme priorities and eligibility criteria;
- (c) Provision by the entity or entities of regular reports to the Conference of the Parties on its funding operations, which is consistent with the requirement for accountability set out in paragraph 1 above; and
- (d) Determination in a predictable and identifiable manner of the amount of funding necessary and available for the implementation of this Convention and the conditions under which that amount shall be periodically reviewed.

4. The Conference of the Parties shall make arrangements to implement the above-mentioned provisions at its first session, reviewing and taking into account the interim arrangements referred to in Article 21, paragraph 3, and shall decide

whether these interim arrangements shall be maintained. Within four years thereafter, the Conference of the Parties shall review the financial mechanism and take appropriate measures.

5. The developed country Parties may also provide and developing country Parties avail themselves of, financial resources related to the implementation of the Convention through bilateral, regional and other multilateral channels.

## ARTICLE 12

### COMMUNICATION OF INFORMATION RELATED TO IMPLEMENTATION

1. In accordance with Article 4, paragraph 1, each Party shall communicate to the Conference of the Parties, through the secretariat, the following elements of information:

- (a) A national inventory of anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, to the extent its capacities permit, using comparable methodologies to be promoted and agreed upon by the Conference of the Parties;
- (b) A general description of steps taken or envisaged by the Party to implement the Convention; and
- (c) Any other information that the Party considers relevant to the achievement of the objective of the Convention and suitable for inclusion in its communication, including, if feasible, material relevant for calculations of global emission trends.

2. Each developed country Party and each other Party included in Annex I shall incorporate in its communication the following elements of information:

- (a) A detailed description of the policies and measures that it has adopted to implement its commitment under Article 4, paragraphs 2(a) and 2(b); and
- (b) A specific estimate of the effects that the policies and measures referred to in subparagraph (a) immediately above will have on anthropogenic emissions by its sources and removals by its sinks of greenhouse gases during the period referred to in Article 4, paragraph 2(a).

3. In addition, each developed country Party and each other developed Party included in Annex II shall incorporate details of measures taken in accordance with Article 4, paragraphs 3, 4 and 5.

4. Developing country Parties may, on a voluntary basis, propose projects for financing, including specific technologies, materials, equipment, techniques or practices

that would be needed to implement such projects, along with, if possible, an estimate of all incremental costs, of the reductions of emissions and increments of removals of greenhouse gases, as well as an estimate of the consequent benefits.

5. Each developed country Party and each other Party included in Annex I shall make its initial communication within six months of the entry into force of the Convention for that Party. Each Party not so listed shall make its initial communication within three years of the entry into force of the Convention for that Party, or of the availability of financial resources in accordance with Article 4, paragraph 3. Parties that are least developed countries may make their initial communication at their discretion. The frequency of subsequent communications by all Parties shall be determined by the Conference of the Parties, taking into account the differentiated timetable set by this paragraph.

6. Information communicated by Parties under this Article shall be transmitted by the secretariat as soon as possible to the Conference of the Parties and to any subsidiary bodies concerned. If necessary, the procedures for the communication of information may be further considered by the Conference of the Parties.

7. From its first session, the Conference of the Parties shall arrange for the provision to developing country Parties of technical and financial support, on request, in compiling and communicating information under this Article, as well as in identifying the technical and financial needs associated with proposed projects and response measures under Article 4. Such support may be provided by other Parties, by competent international organizations and by the secretariat, as appropriate.

8. Any group of Parties may, subject to guidelines adopted by the Conference of the Parties, and to prior notification to the Conference of the Parties, make a joint communication in fulfilment of their obligations under this Article, provided that such a communication includes information on the fulfilment by each of these Parties of its individual obligations under the Convention.

9. Information received by the secretariat that is designated by a Party as confidential, in accordance with criteria to be established by the Conference of the Parties, shall be aggregated by the secretariat to protect its confidentiality before being made available to any of the bodies involved in the communication and review of information.

10. Subject to paragraph 9 above, and without prejudice to the ability of any Party to make public its communication at any time, the secretariat shall make communications by Parties

under this Article publicly available at the time they are submitted to the Conference of the Parties.

### ARTICLE 13

#### RESOLUTION OF QUESTIONS REGARDING IMPLEMENTATION

The Conference of the Parties shall, at its first session, consider the establishment of a multilateral consultative process, available to Parties on their request, for the resolution of questions regarding the implementation of the Convention.

### ARTICLE 14

#### SETTLEMENT OF DISPUTES

1. In the event of a dispute between any two or more Parties concerning the interpretation or application of the Convention, the Parties concerned shall seek a settlement of the dispute through negotiation or any other peaceful means of their own choice.

2. When ratifying, accepting, approving or acceding to the Convention, or at any time thereafter, a Party which is not a regional economic integration organization may declare in a written instrument submitted to the Depositary that, in respect of any dispute concerning the interpretation or application of the Convention, it recognizes as compulsory ipso facto and without special agreement, in relation to any Party accepting the same obligation:

- (a) Submission of the dispute to the International Court of Justice, and/or
- (b) Arbitration in accordance with procedures to be adopted by the Conference of the Parties as soon as practicable, in an annex on arbitration.

A Party which is a regional economic integration organization may make a declaration with like effect in relation to arbitration in accordance with the procedures referred to in subparagraph (b) above.

3. A declaration made under paragraph 2 above shall remain in force until it expires in accordance with its terms or until three months after written notice of its revocation has been deposited with the Depositary.

4. A new declaration, a notice of revocation or the expiry of a declaration shall not in any way affect proceedings pending before the International Court of Justice or the arbitral tribunal, unless the parties to the dispute otherwise agree.

5. Subject to the operation of paragraph 2 above, if after twelve months following notification by one Party to another that a dispute exists between them, the Parties concerned have not been able to settle their dispute through the means mentioned in paragraph 1 above, the dispute shall be submitted, at the request of any of the parties to the dispute, to conciliation.

6. A conciliation commission shall be created upon the request of one of the parties to the dispute. The commission shall be composed of an equal number of members appointed by each party concerned and a chairman chosen jointly by the members appointed by each party. The commission shall render a recommendatory award, which the parties shall consider in good faith.

7. Additional procedures relating to conciliation shall be adopted by the Conference of the Parties, as soon as practicable, in an annex on conciliation.

8. The provisions of this Article shall apply to any related legal instrument which the Conference of the Parties may adopt, unless the instrument provides otherwise.

## ARTICLE 15

### AMENDMENTS TO THE CONVENTION

1. Any Party may propose amendments to the Convention.

2. Amendments to the Convention shall be adopted at an ordinary session of the Conference of the Parties. The text of any proposed amendment to the Convention shall be communicated to the Parties by the secretariat at least six months before the meeting at which it is proposed for adoption. The secretariat shall also communicate proposed amendments to the signatories to the Convention and, for information, to the Depositary.

3. The Parties shall make every effort to reach agreement on any proposed amendment to the Convention by consensus. If all efforts at consensus have been exhausted, and no agreement reached, the amendment shall as a last resort be adopted by a three-fourths majority vote of the Parties present and voting at the meeting. The adopted amendment shall be communicated by the secretariat to the Depositary, who shall circulate it to all Parties for their acceptance.

4. Instruments of acceptance in respect of an amendment shall be deposited with the Depositary. An amendment adopted in accordance with paragraph 3 above shall enter into force for those Parties having accepted it on the ninetieth day after the date of receipt by the Depositary of an instrument of acceptance by at least three fourths of the Parties to the Convention.

5. The amendment shall enter into force for any other Party on the ninetieth day after the date on which that Party deposits with the Depositary its instrument of acceptance of the said amendment.

6. For the purposes of this Article, "Parties present and voting" means Parties present and casting an affirmative or negative vote.

## ARTICLE 16

### ADOPTION AND AMENDMENT OF ANNEXES TO THE CONVENTION

1. Annexes to the Convention shall form an integral part thereof and, unless otherwise expressly provided, a reference to the Convention constitutes at the same time a reference to any annexes thereto. Without prejudice to the provisions of Article 14, paragraphs 2(b) and 7, such annexes shall be restricted to lists, forms and any other material of a descriptive nature that is of a scientific, technical, procedural or administrative character.

2. Annexes to the Convention shall be proposed and adopted in accordance with the procedure set forth in Article 15, paragraphs 2, 3 and 4.

3. An annex that has been adopted in accordance with paragraph 2 above shall enter into force for all Parties to the Convention six months after the date of the communication by the Depositary to such Parties of the adoption of the annex, except for those Parties that have notified the Depositary, in writing, within that period of their non-acceptance of the annex. The annex shall enter into force for Parties which withdraw their notification of non-acceptance on the ninetieth day after the date on which withdrawal of such notification has been received by the Depositary.

4. The proposal, adoption and entry into force of amendments to annexes to the Convention shall be subject to the same procedure as that for the proposal, adoption and entry into force of annexes to the Convention in accordance with paragraphs 2 and 3 above.

5. If the adoption of an annex or an amendment to an annex involves an amendment to the Convention, that annex or amendment to an annex shall not enter into force until such time as the amendment to the Convention enters into force.

## ARTICLE 17

### PROTOCOLS

1. The Conference of the Parties may, at any ordinary session, adopt protocols to the Convention.

2. The text of any proposed protocol shall be communicated to the Parties by the secretariat at least six months before such a session.

3. The requirements for the entry into force of any protocol shall be established by that instrument.

4. Only Parties to the Convention may be Parties to a protocol.

5. Decisions under any protocol shall be taken only by the Parties to the protocol concerned.

#### **ARTICLE 18**

##### **RIGHT TO VOTE**

1. Each Party to the Convention shall have one vote, except as provided for in paragraph 2 below.

2. Regional economic integration organizations, in matters within their competence, shall exercise their right to vote with a number of votes equal to the number of their member States that are Parties to the Convention. Such an organization shall not exercise its right to vote if any of its member States exercises its right, and vice versa.

#### **ARTICLE 19**

##### **DEPOSITARY**

The Secretary-General of the United Nations shall be the Depositary of the Convention and of protocols adopted in accordance with Article 17.

**ARTICLE 20****SIGNATURE**

This Convention shall be open for signature by States Members of the United Nations or of any of its specialized agencies or that are Parties to the Statute of the International Court of Justice and by regional economic integration organizations at Rio de Janeiro, during the United Nations Conference on Environment and Development, and thereafter at United Nations Headquarters in New York from 20 June 1992 to 19 June 1993.

**ARTICLE 21****INTERIM ARRANGEMENTS**

1. The secretariat functions referred to in Article 8 will be carried out on an interim basis by the secretariat established by the General Assembly of the United Nations in its resolution 45/212 of 21 December 1990, until the completion of the first session of the Conference of the Parties.

2. The head of the interim secretariat referred to in paragraph 1 above will cooperate closely with the Intergovernmental Panel on Climate Change to ensure that the Panel can respond to the need for objective scientific and technical advice. Other relevant scientific bodies could also be consulted.

3. The Global Environment Facility of the United Nations Development Programme, the United Nations Environment Programme and the International Bank for Reconstruction and Development shall be the international entity entrusted with the operation of the financial mechanism referred to in Article 11 on an interim basis. In this connection, the Global Environment Facility should be appropriately restructured and its membership made universal to enable it to fulfil the requirements of Article 11.

**ARTICLE 22****RATIFICATION, ACCEPTANCE, APPROVAL OR ACCESSION**

1. The Convention shall be subject to ratification, acceptance, approval or accession by States and by regional economic integration organizations. It shall be open for accession from the day after the date on which the Convention is closed for signature. Instruments of ratification, acceptance, approval or accession shall be deposited with the Depositary.

2. Any regional economic integration organization which becomes a Party to the Convention without any of its member

States being a Party shall be bound by all the obligations under the Convention. In the case of such organizations, one or more of whose member States is a Party to the Convention, the organization and its member States shall decide on their respective responsibilities for the performance of their obligations under the Convention. In such cases, the organization and the member States shall not be entitled to exercise rights under the Convention concurrently.

3. In their instruments of ratification, acceptance, approval or accession, regional economic integration organizations shall declare the extent of their competence with respect to the matters governed by the Convention. These organizations shall also inform the Depositary, who shall in turn inform the Parties, of any substantial modification in the extent of their competence.

## **ARTICLE 23**

### **ENTRY INTO FORCE**

1. The Convention shall enter into force on the ninetieth day after the date of deposit of the fiftieth instrument of ratification, acceptance, approval or accession.

2. For each State or regional economic integration organization that ratifies, accepts or approves the Convention or accedes thereto after the deposit of the fiftieth instrument of ratification, acceptance, approval or accession, the Convention shall enter into force on the ninetieth day after the date of deposit by such State or regional economic integration organization of its instrument of ratification, acceptance, approval or accession.

3. For the purposes of paragraphs 1 and 2 above, any instrument deposited by a regional economic integration organization shall not be counted as additional to those deposited by States members of the organization.

## **ARTICLE 24**

### **RESERVATIONS**

No reservations may be made to the Convention.

## **ARTICLE 25**

### **WITHDRAWAL**

1. At any time after three years from the date on which the Convention has entered into force for a Party, that Party may withdraw from the Convention by giving written notification to the Depositary.

2. Any such withdrawal shall take effect upon expiry of one year from the date of receipt by the Depositary of the notification of withdrawal, or on such later date as may be specified in the notification of withdrawal.

3. Any Party that withdraws from the Convention shall be considered as also having withdrawn from any protocol to which it is a Party.

## **ARTICLE 26**

### **AUTHENTIC TEXTS**

The original of this Convention, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic, shall be deposited with the Secretary-General of the United Nations.

**IN WITNESS WHEREOF** the undersigned, being duly authorized to that effect, have signed this Convention.

**DONE** at New York this ninth day of May one thousand nine hundred and ninety-two.

ATMOSPHERE  
WATCH

# WMO GREENHOUSE GAS BULLETIN

The State of Greenhouse Gases in the Atmosphere  
Based on Global Observations through 2010

No. 7 | 21 November 2011

In the figure above, zonally averaged nitrous oxide (N<sub>2</sub>O) abundance from WMO/GAW air sampling sites is plotted as a function of latitude from 1980 to 2010. Nitrous oxide is now the third most important contributor to radiative forcing of long-lived greenhouse gases, recently surpassing CFC-12, and its impact on climate integrated over 100 years is 298 times greater than equal emissions of carbon dioxide (CO<sub>2</sub>). It plays an important role in stratospheric ozone (O<sub>3</sub>) destruction. The major anthropogenic source of N<sub>2</sub>O to the

atmosphere is the use of nitrogen containing fertilizers (including manure), which have profoundly affected the global nitrogen cycle. Reductions in the amounts of fertilizer applied to agricultural fields to better match the nitrogen needs of crops can reduce N<sub>2</sub>O emissions. Such changes must be made carefully to avoid lower crop yields, which would raise concerns about global food security. The predominant use of fertilizers in the mid-latitudes of the northern hemisphere is responsible for the small north-to-south gradient of ~1.2 ppb.<sup>[1]</sup>

## Executive summary

The latest analysis of observations from the WMO Global Atmosphere Watch (GAW) Programme shows that the globally averaged mixing ratios of carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>) and nitrous oxide (N<sub>2</sub>O) reached new highs in 2010, with CO<sub>2</sub> at 389.0 ppm,<sup>[2]</sup> CH<sub>4</sub> at 1808 ppb and N<sub>2</sub>O at 323.2 ppb. These values are greater than those in pre-industrial times (before 1750) by 39%, 158% and 20%, respectively. Atmospheric increases of CO<sub>2</sub> and N<sub>2</sub>O from

2009 to 2010 are consistent with recent years, but they are higher than both those observed from 2008 to 2009 and those averaged over the past 10 years. Atmospheric CH<sub>4</sub> continues to increase, consistent with the past three years. The NOAA Annual Greenhouse Gas Index shows that from 1990 to 2010 radiative forcing by long-lived greenhouse gases increased by 29%, with CO<sub>2</sub> accounting for nearly 80% of this increase. Radiative forcing of N<sub>2</sub>O exceeded that of CFC-12, making N<sub>2</sub>O the third most important long-lived greenhouse gas.

## Overview

This is the seventh in a series of WMO/GAW Annual Greenhouse Gas Bulletins. Each year, this bulletin reports the atmospheric burdens and rates of change of the most important long-lived greenhouse gases (LLGHGs) – carbon dioxide, methane, nitrous oxide, CFC-12 and CFC-11 – and provides a summary of the contributions of the lesser gases. These five major gases account for approximately 96% of radiative forcing due to LLGHGs (Figure 1).

The WMO Global Atmosphere Watch Programme coordinates systematic observations and analysis of atmospheric composition, including greenhouse gases and other trace species. The GAW CO<sub>2</sub>, CH<sub>4</sub> and N<sub>2</sub>O networks are comprehensive and baseline networks of the Global Climate Observing System (GCOS). Sites where greenhouse gases are monitored are shown in Figure 2. Measurement data are reported by participating countries and archived and distributed by the World Data Centre for Greenhouse Gases (WDCGG) at the Japan Meteorological Agency.

Statistics on global atmospheric abundances in 2010 and changes in abundance since 2009 and 1750 for the three major greenhouse gases are given in the table. These results are obtained from a global analysis (GAW Report No. 184, available at <http://www.wmo.int/gaw>) of datasets

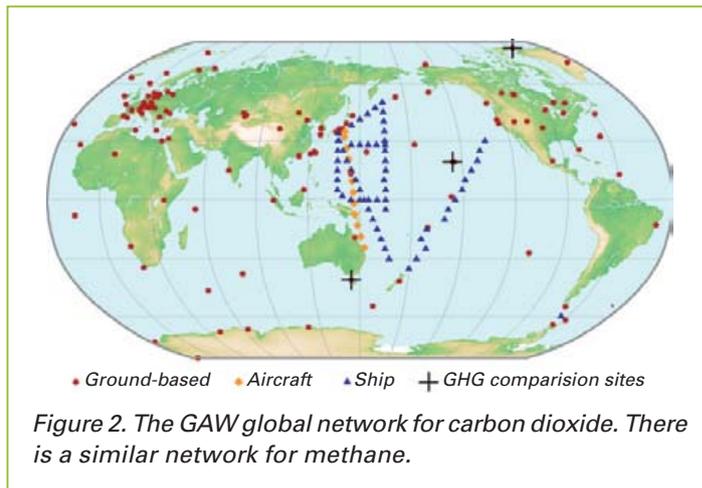

Figure 2. The GAW global network for carbon dioxide. There is a similar network for methane.

that are traceable to the WMO World Reference Standard. Data from mobile stations, with the exception of NOAA flask sampling in the Pacific (blue triangles in Figure 2), are not used for this global analysis.

The three greenhouse gases summarized in the table have been increasing in the atmosphere since the beginning of the industrial era. Their atmospheric abundances are directly connected with human activity, unlike water vapour, which is the most important greenhouse gas but whose abundance is controlled by fast climate feedbacks. They are generally much longer lived in the atmosphere than water vapour. The three primary greenhouse gases are not only closely linked to anthropogenic activities, but they also have strong interactions with the biosphere and the oceans. Chemical reactions in the atmosphere affect their abundances as well. Prediction of the evolution of greenhouse gases in the atmosphere requires an understanding of their many sources and sinks.

According to the NOAA Annual Greenhouse Gas Index, the total radiative forcing by all LLGHGs increased by 29% from 1990 to 2010 and by 1.4% from 2009 to 2010 (see Figure 1 and <http://www.esrl.noaa.gov/gmd/aggi>).

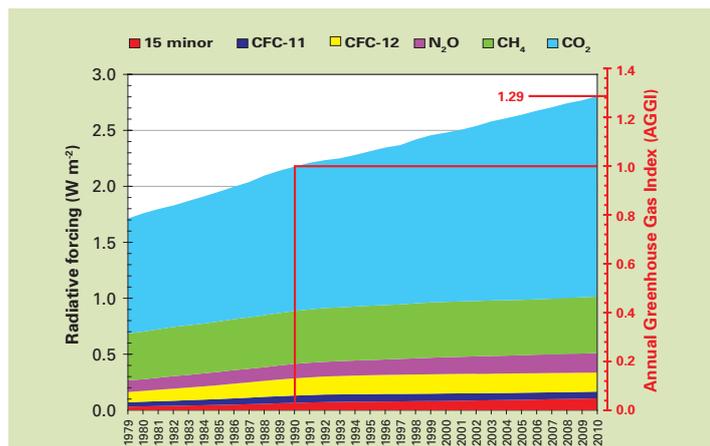

Figure 1. Atmospheric radiative forcing, relative to 1750, of all long-lived greenhouse gases and the 2010 update of the NOAA Annual Greenhouse Gas Index (AGGI). The reference year for the index is 1990 (AGGI = 1).

Global abundances of and increases in key greenhouse gases from the GAW global greenhouse gas monitoring network. Global abundances for 2010 are calculated as an average over 12 months.

	CO <sub>2</sub> (ppm)	CH <sub>4</sub> (ppb)	N <sub>2</sub> O (ppb)
Global abundance in 2010	389.0	1808	323.2
2010 abundance relative to year 1750 <sup>a</sup>	139%	258%	120%
2009–2010 absolute increase	2.3	5	0.8
2009–2010 relative increase	0.59%	0.28%	0.25%
Mean annual absolute increase during last 10 years	1.97	2.6	0.75

<sup>a</sup> Assuming a pre-industrial mixing ratio of 280 ppm for CO<sub>2</sub>, 700 ppb for CH<sub>4</sub> and 270 ppb for N<sub>2</sub>O.

## Carbon dioxide (CO<sub>2</sub>)

Carbon dioxide is the single most important anthropogenic greenhouse gas in the atmosphere, contributing ~64%<sup>[3]</sup> to radiative forcing by LLGHGs. It is responsible for 85% of the increase in radiative forcing over the past decade and 81% over the last five years. For about 10 000 years before the industrial revolution, the atmospheric abundance of CO<sub>2</sub> was nearly constant at ~280 ppm. This level represented a balance among the atmosphere, the oceans and the biosphere. Since 1750, atmospheric CO<sub>2</sub> has increased by 39%, primarily because of emissions from combustion of fossil fuels (total of 8.4±0.5 PgC<sup>[4]</sup> in 2009; <http://www.globalcarbonproject.org>), deforestation and land-use change. High-precision measurements of atmospheric CO<sub>2</sub> beginning in 1958 show that the average increase in CO<sub>2</sub> in the atmosphere corresponds to ~55% of the CO<sub>2</sub> emitted by fossil fuel combustion. The remaining ~45% has been removed from the atmosphere by the oceans and the terrestrial biosphere. The airborne fraction, the portion of CO<sub>2</sub> emitted by fossil fuel combustion that remains in the atmosphere, varies interannually without a confirmed global trend. Globally averaged CO<sub>2</sub> in 2010 was 389.0 ppm and the increase from the previous year

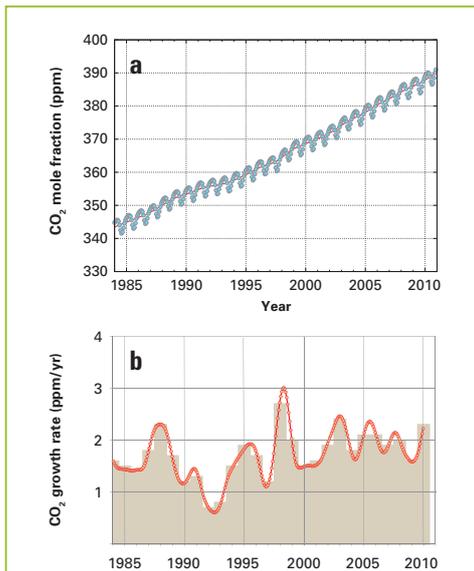

Figure 3. Globally averaged  $\text{CO}_2$  mole fraction (a) and its growth rate (b) from 1984 to 2010. Annually averaged growth rate is shown by columns at (b).

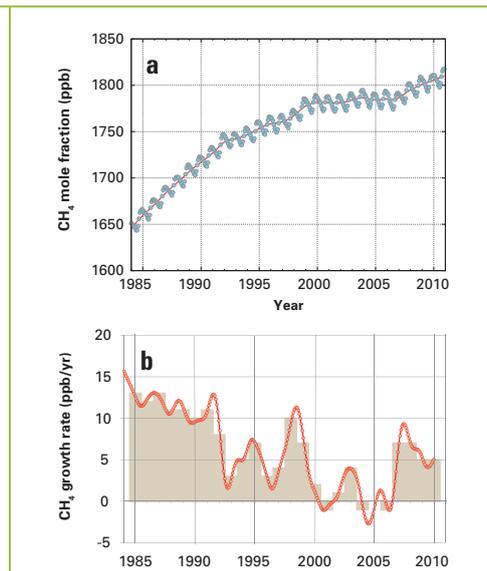

Figure 4. Globally averaged  $\text{CH}_4$  mole fraction (a) and its growth rate (b) from 1984 to 2010. Annually averaged growth rate is shown by columns at (b).

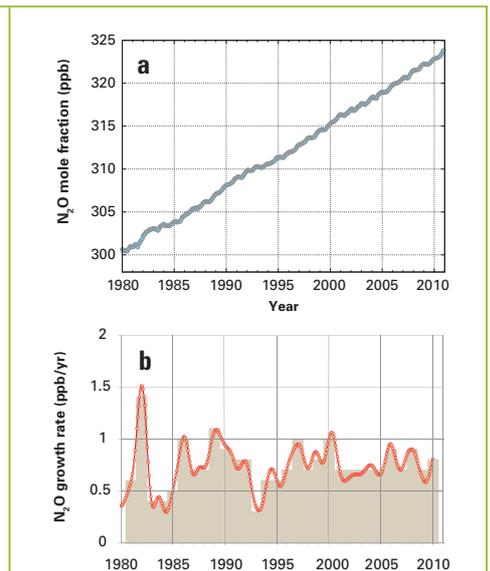

Figure 5. Globally averaged  $\text{N}_2\text{O}$  mole fraction (a) and its growth rate (b) from 1980 to 2010. Annually averaged growth rate is shown by columns at (b).

was 2.3 ppm (Figure 3). This growth rate is higher than the average for the 1990s (~1.5 ppm/yr) and the average for the past decade (~2.0 ppm/yr).

## Methane ( $\text{CH}_4$ )

Methane contributes ~18%<sup>[3]</sup> to radiative forcing by LLGHGs. Approximately 40% of methane emitted into the atmosphere comes from natural sources such as wetlands and termites, while anthropogenic sources, such as ruminants, rice agriculture, fossil fuel exploitation, landfills and biomass burning, account for about 60%. Methane is removed from the atmosphere primarily by reaction with the hydroxyl radical (OH). Before the industrial era, atmospheric methane was at ~700 ppb. Increasing emissions from anthropogenic sources are responsible for the 158% increase in  $\text{CH}_4$ . Globally averaged  $\text{CH}_4$  in 2010 was 1808 ppb, an increase of 5 ppb from the previous year. It exceeds the highest annual mean abundance so far, which was recorded in 2009 (Figure 4). The growth rate of  $\text{CH}_4$  decreased from ~13 ppb/yr during the early 1980s to near zero from 1999 to 2006. Since 2007, atmospheric  $\text{CH}_4$  has been increasing again. The 19 ppb rise from 2006 to 2009 was followed by a 5 ppb rise in 2010. The reasons for the renewed increase in  $\text{CH}_4$  are not fully understood and several factors, mostly biogenic, were reported to contribute to this increase. To improve our understanding of the processes that affect  $\text{CH}_4$  emissions, more in situ measurements are needed close to the source regions.

## Nitrous oxide ( $\text{N}_2\text{O}$ )

Nitrous oxide contributes ~6%<sup>[3]</sup> to radiative forcing by LLGHGs. It is now the third most important contributor to this total. Its atmospheric abundance prior to industrialization was 270 ppb. It is emitted into the atmosphere from natural and

anthropogenic sources, including oceans, soil, biomass burning, fertilizer use, and various industrial processes. Anthropogenic sources may account for approximately 40% of the total  $\text{N}_2\text{O}$  emissions. It is removed from the atmosphere by photochemical processes in the stratosphere. Globally averaged  $\text{N}_2\text{O}$  during 2010 was 323.2 ppb, up 0.8 ppb from the previous year (Figure 5) and 20% above the pre-industrial level. The mean growth rate has been 0.75 ppb/yr over the past 10 years.

## Other greenhouse gases

Sulphur hexafluoride ( $\text{SF}_6$ ) is a potent LLGHG controlled by the Kyoto Protocol to the United Nations Framework Convention on Climate Change. It is produced artificially and used as an electrical insulator in power distribution equipment. Its mixing ratio has increased to double that observed in the mid-1990s (Figure 6). The ozone-depleting chlorofluorocarbons (CFCs), together with minor halogenated gases, contribute ~12%<sup>[3]</sup> to radiative forcing by LLGHGs. While CFCs and most halons are decreasing, hydrochlorofluorocarbons (HCFCs) and hydrofluorocarbons (HFCs), which are also potent greenhouse gases, are increasing at rapid rates, although they are still low in abundance (Figure 7).

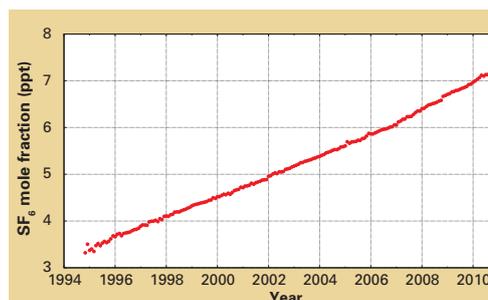

Figure 6. Monthly mean mole fraction of sulphur hexafluoride ( $\text{SF}_6$ ) from 1995 to 2010 averaged over 18 stations

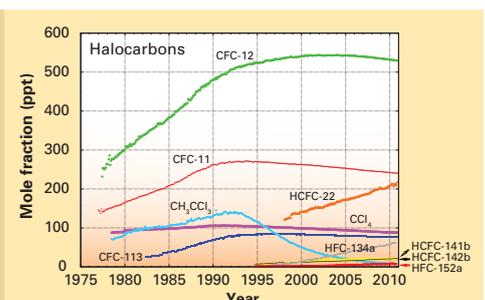

Figure 7. Monthly mean mole fraction of the most important halocarbons from 1977 to 2010 averaged over the network (between 7 and 19 stations)

Tropospheric ozone has a relatively short lifetime. Its radiative forcing, however, appears to be comparable to that of the halocarbons, although much less certain. It is difficult to estimate the global distribution and trend of tropospheric ozone because of its uneven geographical distribution and high temporal variability. Many other pollutants, such as carbon monoxide, nitrogen oxides and volatile organic compounds, although insignificant as greenhouse gases, have an indirect effect on the radiative forcing through their impact on the tropospheric ozone abundance. Aerosols (suspended particulate matter) are also short-lived substances that influence radiative forcing.

All gases mentioned herein as well as aerosols are monitored by the GAW Programme, with support from WMO Member countries and contributing networks.

## Distribution of the bulletins

The WMO Secretariat prepares and distributes bulletins in cooperation with the World Data Centre for Greenhouse Gases at the Japan Meteorological Agency and the GAW Scientific Advisory Group for Greenhouse Gases, with the assistance of the NOAA Earth System Research Laboratory (ESRL). The bulletins are available through the GAW Programme Web page and on the home page of WDCGG.

## Acknowledgements and links

Fifty WMO Member countries have contributed CO<sub>2</sub> data to the GAW WDCGG. Approximately 49% of the measurement records submitted to WDCGG are obtained at sites in the NOAA ESRL cooperative air-sampling network. The rest of the network is maintained by Australia, Canada, China, Japan and many European countries (see the national reports in GAW Report No. 186, available at <http://www.wmo.int/gaw>). The Advanced Global Atmospheric Gases Experiment (AGAGE) is also a GAW-affiliated network contributing observations to this bulletin. The GAW monitoring stations contributing data to this bulletin, shown in Figure 2, are included in the list of contributors on the WDCGG Web page (<http://gaw.kishou.go.jp/wdcgg>). They are also described in the GAW Station Information System (<http://gaw.empa.ch/gawsis>) operated by EMPA, Switzerland.

<sup>[1]</sup> ppb = number of molecules of the gas per billion (10<sup>9</sup>) molecules of dry air.

<sup>[2]</sup> ppm = number of molecules of the gas per million molecules of dry air.

<sup>[3]</sup> This percentage is calculated as the relative contribution of the mentioned gas to the increase in global radiative forcing caused by all long-lived greenhouse gases since 1750 (<http://www.esrl.noaa.gov/gmd/aggi>).

<sup>[4]</sup> 1 PgC = 1 billion tons or 1 000 x million tons of carbon.

## Selected greenhouse gas observatories

**The Samoa Observatory** (14.23°S, 170.56°W) was established in 1974, and is one of six NOAA ESRL Global Monitoring Division (GMD) Baseline Observatories. It is located on the north-eastern tip of Tutuila Island, American Samoa, on a ridge over-

looking the South Pacific Ocean. Since its construction, the Observatory has survived two major hurricanes with only minor damage. It has the distinction of obtaining 30% of its daytime power from solar panels. Flask collection for measurements of N<sub>2</sub>O started in January 1977 and continuous measurements have been carried out since July 1978.

### Barrow Observatory

(71.32°N, 156.61°W), established in 1973 in Alaska, United States of America, is staffed year-round by two engineers/scientists who often commute to work in winter on snowmobiles. The Observatory is host to numerous cooperative

research projects from around the world owing to its unique location, dedicated and highly trained staff, excellent power and communications infrastructure. It is located so that it receives minimal influence from local pollution. Flask collection for measurements of N<sub>2</sub>O started in January 1977 and continuous measurements have been carried out since January 1987.

**Niwot Ridge** (40.05°N, 105.59°W) is located approximately 35 km west of Boulder, Colorado, United States, with the entire study site lying above 3000 m elevation. Niwot Ridge, including the main alpine

study site, is part of the Roosevelt National Forest and has been designated a Biosphere Reserve by UNESCO, and an Experimental Ecology Reserve by the United States Department of Agriculture Forest Service. Air samples have been taken here, in flasks, for NOAA ESRL GMD since 1963. These flasks have been analysed for N<sub>2</sub>O since January 1977 and continuous N<sub>2</sub>O observations have been carried out since January 1987.

There are a number of other stations with long-term observations of N<sub>2</sub>O mole fractions: Cape Grim, Australia (N<sub>2</sub>O observations have been carried out since 1978), Adrigole, Ireland (started in 1978) then moved to Mace Head, Ireland (records from 1987 onward), Ragged Point, Barbados (since 1978) and, in the United States, Cape Meares, Oregon (beginning in 1979) then moved to Trinidad Head, California (1995), and Mauna Loa, Hawaii (started in 1978).

Dear Counsel,  
Judge Sargus would like to have a very brief telephone conference today at  
10:00 a.m. -- the call-in information is shown below. If you could, please  
let me know if you will be able to participate.  
Thank you so much,  
Debbie

The call in number is 888-684-8852., please call about 5 minutes prior to  
the scheduled time of call.  
You will be asked for an access code, which is: 9586353#  
Then you will be asked for a Conference Security Code, which is 1182

Debra Hepler  
Secretary to Judge Edmund A. Sargus, Jr.  
(614) 719-3240

Daily News  
States Eye Suit To Force EPA Limits On Methane From Oil And Gas Drilling  
Posted: December 11, 2012

A coalition of eastern states is threatening to sue EPA to try and force regulations imposing first-time limits on the greenhouse gas (GHG) methane from oil and gas drilling operations, saying the agency is violating the Clean Air Act because it has not met an air law mandate to declare and justify whether such controls would be "appropriate."

The states' potential lawsuit -- announced in a Dec. 11 notice of intent (NOI) to sue EPA -- adds to legal pressure on the agency to control GHGs from the sector. EPA already faces a suit from environmentalists over the agency's revised new source performance standards (NSPS) for oil and gas drilling issued in August, in which EPA deferred setting methane limits and instead said it would "continue to evaluate the appropriateness" of setting such controls.

In contrast to the environmentalists' lawsuit, the states would not be suing directly over the revised NSPS, and the 60-day window for challenging the Aug. 15 final rule has already passed. Instead, the states would be suing to claim EPA has failed to meet a mandate in Clean Air Act section 111(b)(1)(B) to review whether it should set such limits for previously unregulated pollutants from the sector as part of its review of the sector's NSPS.

EPA first set NSPS criteria pollutant rules for the oil and gas sector in 1985 and air toxics limits in 1999, but then missed a mandate in the air law to review the rules every eight years. Environmentalists sued in 2009 to force a review of the rules, resulting in the updated NSPS and air toxics regulations that EPA issued in August.

In the rules, EPA addressed emissions from some sources not previously regulated by the agency. For example, the rules require installation of reduced emissions completions -- a set of equipment and processes designed to capture emissions otherwise released during the completion phase at hydraulic fracturing drilling wells.

While EPA's final NSPS rules require emissions controls that the agency says will result in methane reductions as a side-benefit of meeting the limits set for volatile organic compounds and other conventional pollutants, critics say EPA should not have sidestepped whether to set direct methane controls. In the final rules, EPA pushed off the decision on whether methane should be directly regulated from the sector saying, "Rather, we intend to continue to evaluate the appropriateness of regulating methane with an eye toward taking additional steps if appropriate."

However, the seven states that filed the NOI claim EPA's statements violate a mandate under section 111(b)(1)(B) of the Clean Air Act to formally determine whether regulating methane in the revised NSPS would be appropriate. That section of the air law says that the agency administrator "need not review any such standard if the Administrator determines that such review is not appropriate in light of readily available information on the efficacy of such standard" -- a determination that the states threatening the suit contend EPA failed to make in the review.

"That section imposes a clear-cut nondiscretionary duty of timeliness that requires EPA to make a decision within the 8-year review period whether it is 'appropriate' to revise the standards to regulate methane, regardless of whether the substance of that decision is discretionary," says the NOI, filed by New York Attorney General Eric Schneiderman and backed by Connecticut, Delaware, Maryland, Massachusetts, Rhode Island and Vermont.

The states argue that it would be "wholly inconsistent" with the language of section 111 of the air law if EPA could refuse to address pollutants that are emitted by a listed source category already subject to existing NSPS rules, and that the agency has previously determined endanger public health and welfare.

Further, EPA failed to address methane in the final emissions rules despite "extensive information" that setting limits for the pollutant would be appropriate, the states say, citing data from EPA's Natural Gas Star voluntary program and its GHG inventories for various industry sectors, which it publishes annually.

The NOI says, "instead of drawing on the successes of the Natural Gas Star Program to propose a course of action, or even soliciting comment on the issue, the agency chose to ignore the problem" despite ample data on cost-effective control technologies for reducing methane from oil and gas

facilities.

### 'Appropriateness' Finding

Moreover, the states say that EPA's failure to render an "appropriateness" finding on methane controls has also prevented the agency from fulfilling its statutory requirement to public updated emissions guidelines covering methane releases from existing sources in the sector, violating section 111(d) of the air law.

Citing EPA's 2009 GHG endangerment finding -- which includes methane among GHGs listed as endangering human health and welfare -- the states in a Dec. 11 press release say "because EPA recognizes that methane endangers public health and welfare and is emitted in large quantities by the oil and gas industry -- and has 18 years of data demonstrating that many methods of controlling these emissions are available and cost-effective -- the agency broke the law by deferring a decision on whether to set NSPS standards for methane emissions from the industry."

The states' argument echoes part of the environmentalists' suit that claims harm to the public from uncontrolled oil and gas drilling methane emissions. The states say in the NOI that "EPA's ongoing failure to address the sector's methane emissions violates the Clean Air Act and harms the health and welfare of our residents."

Meanwhile, environmentalists' and drilling companies' suits over the NSPS and air toxics rules continue in the U.S. Court of Appeals for the District of Columbia Circuit, with industry groups contesting storage tank controls and other aspects of the rules, and environmentalists citing the agency's failure to update emissions guidelines or set limits for emissions from liquids unloading, among other issues. -- Bridget DiCosmo ( [bdicosmo@iwpnews.com](mailto:bdicosmo@iwpnews.com) This e-mail address is being protected from spambots. The Inside Story  
State AGs Seek Strict PM NAAQS  
Posted: December 11, 2012

Nine states' attorneys general (AGs) are urging EPA to tighten its fine particulate matter (PM2.5) ambient air standard from the existing 15 micrograms per cubic meter (ug/m3) limit to 12 ug/m3, saying any weaker limit would violate a Clean Air Act mandate to protect public health.

In a separate push for EPA to tighten the PM2.5 national ambient air quality standard (NAAQS), environmentalists are citing new studies they say show adverse health effects from PM2.5 exposure that warrant setting a stricter limit. The agency has proposed tightening the standard to between 12-13 ug/m3 and took comment on an even more stringent limit of 11 ug/m3.

EPA faces a binding Dec. 14 deadline to issue the rule, but some observers question whether the agency can meet the deadline as it only sent the final revised NAAQS for White House Office of Management & Budget (OMB) pre-publication review Dec. 4, and inter-agency review can take months.

Environmentalists and EPA officials, however, have expressed confidence that the deadline will be met. EPA previously met a June 14 court-ordered deadline to propose revisions to the standard, including a new, separate PM2.5 standard of either 28 or 30 "deciviews," a measure of haze, to improve visibility.

As part of the rulemaking, EPA is proposing to retain its existing 24-hour PM2.5 standard addressing short-term exposures, which was set at 35 ug/m3 in 2006, and to retain its limit for larger "coarse" PM of 150 ug/m3, first set in 1987.

The U.S. District Court for the District of Columbia imposed the June 14 proposal deadline and signed

off on a Dec. 14 final rule consent decree deadline after environmentalists and states sued the agency to force compliance with a Clean Air Act mandate to review the NAAQS.

The rule will also address the D.C. Circuit's 2009 ruling remanding the 2006 PM<sub>2.5</sub> NAAQS to EPA in *American Farm Bureau Federation v. EPA*. The court sent the rule back to EPA asking it to better justify selecting a NAAQS limit at odds with its science advisors' recommendations.

In a Dec. 6 letter to OMB, AGs from New York, Maryland, New Mexico, Washington, Vermont and other states note that they successfully challenged the 2006 standard in the case, and the D.C. Circuit found that it was "contrary to law." The attorneys argue that setting a standard at 13 ug/m<sup>3</sup> "would not satisfy the agency's obligation under the statute to protect public health with an adequate margin of safety," citing both the findings of EPA staff and the Clean Air Scientific Advisory Committee that harms could come from PM<sub>2.5</sub> exposures below this level.

"Therefore, we believe it would be contrary to the Clean Air Act and to the D.C. Circuit's decision in *American Farm Bureau* to set the annual standard at 13 ug/m<sup>3</sup>," the AGs say. They also express support for a standard no higher than 12 ug/m<sup>3</sup>, saying it is "necessary to protect public health with an adequate margin of safety as required under the Clean Air Act" and "compelled both by the extensive and overwhelming public health evidence contained in the record and by EPA's own 2010 quantitative health risk assessment for particulate matter."

Several of EPA's six ambient air standards face legal challenges based on the requirement that they protect public health with an adequate margin of safety. For instance, several copper smelting companies are urging the Supreme Court to review the D.C. Circuit's July 20 ruling upholding EPA's 2010 sulfur dioxide (SO<sub>2</sub>) NAAQS, arguing that the lower court allowed EPA too much discretion to set standards stricter than the Clean Air Act's requirements to provide an "adequate margin of safety" to protect public health.

And D.C. Circuit judges at Nov. 16 oral arguments over challenges to EPA's 2008 ozone NAAQS seemed receptive to environmentalists' claim that "an extraordinary body of scientific evidence" shows that the 2008 primary NAAQS is too weak to protect human health.

In a related development, the Natural Resources Defense Council in a Dec. 7 letter highlighted several new studies on PM<sub>2.5</sub> effects, saying that "we think it is important to consider this important information as EPA finalizes the standards."

In the letter, the group cites a Harvard School of Public Health study finding "strong evidence of an association between reductions in PM<sub>2.5</sub> and improvements in life expectancy, especially in densely populated areas," and a University of Michigan School of Public Health study that the group says "documents a strong case for considering obese adults as sensitive populations in the PM NAAQS update due to the heightened pulmonary susceptibility."

Says NRDC, "The paper notes that EPA considers pre-existing cardiac and respiratory conditions in people as comprising sensitive populations that are more susceptible to PM pollution. However, obese adults, who are more vulnerable to respiratory illness and make up roughly one-third of the U.S. population are not considered in those sensitive groups."

---

Dear Journalist,

Not surprisingly, today the DC Circuit rejected a misguided legal challenge by some power companies to block EPA's proposed carbon pollution standards for coal- and gas-fired power plants – standards that have received the support of over 2 million Americans.

There is no legal basis for challenging an EPA proposal as it is manifestly not final agency action subject to judicial review.

It is unfortunate that the Agency spent precious, scarce public resources litigating such flawed legal challenges when there is so much vital work for our nation to do in protecting human health and the environment from carbon pollution – and moving forward swiftly to address the profound human and economic costs of extreme weather.

Sincerely yours,

Vickie Patton

**United States Court of Appeals**  
FOR THE DISTRICT OF COLUMBIA CIRCUIT

**No. 12-1248**

**September Term, 2012**

**EPA-77FR22392**

**Filed On:** December 13, 2012

Las Brisas Energy Center, LLC,

Petitioner

v.

Environmental Protection Agency and Lisa  
Perez Jackson,

Respondents

-----  
Conservation Law Foundation, et al.,  
Intervenors  
-----

Consolidated with 12-1251, 12-1252, 12-1253,  
12-1254, 12-1257

**BEFORE:** Rogers, Garland, and Brown, Circuit Judges

**ORDER**

Upon consideration of the motions to dismiss, the oppositions thereto, and the replies; and the motion for declaratory relief, the oppositions thereto, and the replies, it is

**ORDERED** that the motions to dismiss be granted. The challenged proposed rule is not final agency action subject to judicial review. See 42 U.S.C. § 7607(b)(1); Bennett v. Spear, 520 U.S. 154, 177-78 (1997) (holding that final agency action “must mark the consummation of the agency’s decisionmaking process” and “must be one by which rights or obligations have been determined, or from which legal consequences will flow”) (internal quotations omitted). It is

**United States Court of Appeals**  
FOR THE DISTRICT OF COLUMBIA CIRCUIT

**No. 12-1248**

**September Term, 2012**

**FURTHER ORDERED** that the motion for declaratory relief be dismissed as moot.

Pursuant to D.C. Circuit Rule 36, this disposition will not be published. The Clerk is directed to withhold issuance of the mandate herein until seven days after resolution of any timely petition for rehearing or petition for rehearing en banc. See Fed. R. App. P. 41(b); D.C. Cir. Rule 41.

**Per Curiam**

Subject: Telephone Status Conference in Case No. 99-1182 - United States v AEP  
Date: Tue Dec 18 2012 14:47:16 EST  
Attachments:

---

Please see below for the call-in instructions for the telephone status conference tomorrow, December 19, 2012 at 9:00 a.m.

The call in number is 888-684-8852., please call about 5 minutes prior to the scheduled time of call.

You will be asked for an access code, which is: 9586353#

Then you will be asked for a Conference Security Code, which is 1182

Debra Hepler  
Secretary to Judge Edmund A. Sargus, Jr.

(614) 719-3240

Reception

Environmental Law Section EPA Update Program, Business Meeting and Cocktail

Date: Fri Jan 11 2013 10:06:49 EST

Attachments:

Greetings:

The Environmental Law Section will once again hold a one-credit EPA Update program on Thursday, January 24th beginning at 5:00 p.m. at the New York Hilton Hotel, in the Beekman Parlor on the 2nd Floor. Marla Wieder, Joe Siegel and Chris Saporita will be speaking.

Space is limited for attendance at this program. There is no charge to attend. If interested in attending, please click here to register: [www.nysba.org/EPAUpdateam13](http://www.nysba.org/EPAUpdateam13)

The program will be followed by the Section's business meeting and cocktail reception.

As a reminder, the Section's program will be held on Friday, January 25th in the East Ballroom on the 3rd Floor beginning at 8:50 a.m. The Executive Committee will take place at 2:15 p.m. in the Regent Parlor on the 2nd Floor.

If you have any agenda items or materials for the Executive Committee, please let me know as soon as possible.

If you have any questions or need any further information, just let me know.

Subject: wood boiler pollution - unresolved

Dear Ms. Symes:

We wrote to Senator Gillibrand in August 2011 about the issue of wood boiler pollution and the lack of regulations by EPA causing countless Americans to suffer unbelievable pollution. EPA has yet to advance any regulations for wood boilers. NY DEC --- the agency in charge of enforcing the Clean Air Act in NY --- has also done little to correct the EPA's loophole despite 2 highly regarded reports (2005 and 2008) by the NY AG's Office and a petition by the NY AG's Office in August 2005 to EPA.

We became aware of wood boilers in 2004 and have worked diligently since then to try and regain not only our clean air back but that of others. Sadly we have been met with near bureaucratic indifference to the plight of families becoming ill from the pollution. We personally continue to be subjected to horrendous pollution from an indoor wood boiler w/no action by NY DEC despite an existing Order on Consent and Schedule of Compliance which shut down the Outdoor Wood Boiler only to have it replaced by an Indoor Boiler with the same horrendous emissions.

Why has the EPA not yet regulated these devices nor has the Federal Government set up any change out programs to help families get back their clean air? We need Senator Gillibrand to recognize this problem for not only our family but all those that continue to suffer. An EPA loophole should not be causing families decade long nightmares. Did you ever get a response back from EPA on the issue of their failure to issue New Source Performance Standards in over 20 years? A consortium of Environmental Agencies has sent EPA a letter but still nothing. How long does it take government to address such a serious health issue. EPA just updated the National Ambient Air Quality Standards and yet those of us in Rural NY and other parts of the U.S. are subjected to spikes in fine particulate from wood boilers that are far in excess of these standards with no one seeming to care.

Nearly 1 in 10 children have asthma now and wood boilers are a major source of fine particulate, a very serious trigger for asthmatics. Every day we worry about our health and that of our daughter. Below are some of this year's emails to DEC requesting they enforce their Order on Consent. Included are YouTube links of 2 videos taken (March and December), two of many sent to DEC documenting the ongoing violations of the Order on Consent. We would very much appreciate if Senator Gillibrand would follow up w/DEC for enforcement of the existing Order on Consent and Schedule of Compliance AND express some outrage to the EPA about their failure to address this source of pollution. If EPA recognized wood stoves as needing regulation in the 1980s why are they not adopting standards holding wood boilers to the same standards? This is not an unreasonable expectation. We understand the lax enforcement and climbing into bed w/the industry by the Bush Administration but expected President Obama to stand by his commitment for EPA to regulate based upon science. Europe is light years ahead of the U.S. in testing methods and pollution limitations for wood burning appliances. What is wrong w/the U.S. Over and over again we see that the Federal government seemingly does not care about the environment anymore. Children are exposed to increasing levels of chemicals and pollution and the Federal government does nothing. Many of the same chemicals that are in cigarette smoke are in wood smoke, so why the delay? EPA has commissioned countless studies --- many with the New York Energy and Research Development Authority. How long does it take to turn science into public policy to protect the public?

Our Village Deputy Mayor and the Rensselaer Co. Minority Offices have both sent letters to DEC requesting DEC action. Our case is just one of many where regulators have turned a blind eye mainly we believe because of the lack of knowledge of the very real health issues of wood smoke. Many regulators are wood burners including the DEC Commissioner and fail to comprehend the lack of emission regulations on boilers (NY DEC Part 247 left indoor boilers unaddressed, holds wood boilers to a lesser standard than stoves thereby reversing the 1980s EPA strides in curbing wood smoke

emissions, and did not address in place boilers --- partly we believe because the Asst. Commissioner for Air Resources had a somewhat unsavory conflict with the industry). The public deserves regulation and educational awareness as people look for alternative heating sources. Not only are the families that live downwind exposed but so too are the unwitting owners of these boilers. Attached is a copy of the Village's letter to DEC along with the letter DEC sent to Senator Gillibrand in April 2012 stating they would not enforce the Order on Consent because of limited staff resources. We would very much appreciate it if Senator Gillibrand would request on our behalf that DEC allocate its limited resources to enforcing their Order on Consent and as a member of the Senate Environmental Committee take a more active role in pushing the EPA for this much needed regulation (New Source Performance Standards) along with Change Out Programs so that no American family has to endure the nightmare of having their home engulfed in wood smoke filled with carcinogens, PAHs, VOCs, and fine particulate.

Thank you,

Subject: absolutely horrendous  
Date: Sat, 29 Dec 2012 22:37:29 -0500

Dear Mr. Shaw, Mr., Flint, Mr. Kelly, and Mr. Gibbs:

Tonight our home is again surrounded by the thick putrid smelling wood smoke from our neighbor's boiler. The smell is permeating our home. I smelled it when I went in the computer/laundry room to put clothes in the dryer. This room is the room that is most noticeable. It is directly under our daughter's bedroom and is on the front eastern corner of the house. I then came downstairs to hang up my newly laundered rugs and could smell the smoke here as well. I went to the door and opened it and the smell hit me in the face. I quickly closed the door but the smell is seeping around the door.

This situation is completely unbearable. I would very much appreciate an update on the status of the enforcement of the Order on Consent. I am very distressed to know that our young daughter Katarina is continually subjected to this pollution. What is wrong w/the DEC? I do not understand why you are ignoring us and not enforcing the law.

I am requesting that you please enforce the Compliance Schedule. The letter sent to Senator Gillibrand clearly said it was a violation but you have elected to not use scarce resources. It does not seem that enforcement of an existing order should take that much of the DEC's time. I have repeatedly requested a meeting w/the Commissioner to appeal this non-enforcement decision and have received no rational reason for the denial.

What must our family do to regain our clean air and stop this assault on our family?

Thank you for your attention to this most serious health issue.

Sincerely,

Bonnie Lichak

Subject: Indoor Wood Boiler video  
Date: Mon, 17 Dec 2012 21:49:37 -0500

Dear Mr. Shaw, Mr. Flint, Mr. Kelly, and Mr. Gibbs:

Here is a video John took today . This went on longer than 10 minutes today. Horrendous.

<http://youtu.be/GWcPu9cW1ZM>

Please enforce the Order on Consent BEFORE John dies of a heart attack documenting and taking these videos. What does it take for DEC to enforce Part 211 and Part 227-1.3 especially when there is an existing Compliance Schedule that is not being adhered to. Would you want your children or family or those in your neighborhood to endure what we are all enduring?

Sincerely,

Bonnie Lichak

Subject Request for Appeal to DEC to Enforce the Order on Consent

Dear Sirs:

Since the Wood Boiler has been started our home continues to be engulfed in thick acrid smelling wood smoke. It settles in our yard because of the topography. On Sunday I asked Katarina to take the dog out for a run around 3:00. I was in the dining room vaccuuming and as soon as she opened the door I could smell the horrible smell of the boiler. I told her she could not go out. Do you know what it is like to have to try and not look or act alarmist that your home is being engulfed by carcinogens, PAHs, VOCs and PM 2.5. I try my hardest to protect us by being away from home or inside. We all know that is a joke since at least half of outdoor air becomes indoor air and the toxins build up. Do you know what it is like to worry about the lungs of your child from just breathing your air.

For Thanksgiving we went away to my Mom's but John stayed here to hunt. We escaped for 5 days, but he did not. When we drove in the driveway on Sunday we were greeted w/the boiler spewing.

This morning I took Katarina to her bus stop. Thankfully she does not have to stand at the end of our driveway engulfed in smoke. As we drove out the smell was in the air and the boiler was just starting up. By the time I came back -- about 5 minutes the yard was filled w/smoke. The short run from the car to the house was enough for my clothes and hair to get the smoke attached to me.

Nearly every morning and night when I have to let the dog out I am smacked in the face by the smoke when I open the door. Much of the smoke seems to be under the cover of darkness. I'm not sure if that is because someone has advised my neighbor that opacity testing does not work at night or it just seems much more of the smoke is under the cover of darkness. John did however get another video the other day. The DOH did a study showing over 500 ug/m3 from a wood boiler. The Federal NAAQS are 35 ug/m3. Studies have shown spikes can cause serious health impacts including asthma and heart attacks. What does DEC think the impact of spikes of 500 ug/m3 are to our family? If our family has a serious health event is DEC going to say no certain connection can be made? Does the health of our family matter to no one?

We do not want to live like this. 9 years of trying to get someone to listen to us only to have one appliance replaced w/another. I now have a respiratory thing I can not get rid of. Started in November w/sore throat and dropped into my chest. Last Monday I returned to work from Thanksgiving and two of my co-workers came to my desk and told me to go home. I'm sure I can get signed statements from Ms. Grandy and Mr. Shields if that would count for anything. I'm not really contagious I just sound like I'm dying I wanted to tell them but I did not. Yesterday I gave in and used my inhaler. Do you know what it is like to wake every night coughing and unable to stop. No good rest, not getting better. I took off 2 days work last week. The coughing continues.

I want to know where and how do I file an appeal for the DEC to enforce the Order on Consent. I sent letters, pictures and video in July and was dismissed by the Regional Office. I want this to go before an Administrative Law Judge. Is there a process in DEC for that?

I have requested a meeting w/the Commissioner in the past and been denied. I will call Mr. Ballantyne again today.

My family's health and well being are in ALL of your hands. I am begging for someone to do something. Time to go. Late for work again thanks to all of you.

Sincerely,

Bonnie Lichak

Subject: Wood Boiler engulfing home for 9th season  
Date: Mon, 5 Nov 2012 06:45:33 -0500

Dear Mr. Shaw, Mr. Flint, Mr. Gibbs and Mr. Kelly:

Our neighbor, Gerald Landrigan at 2142 US 20, Nassau, NY 12123 started up his indoor wood boiler this weekend. Our yard was again engulfed in smoke. Attached is a picture previously taken and a video previously taken showing what we endure. We will again be taking videos and pictures and sending to you but are again requesting that the Order on Consent be enforced.

## ENERGY EFFICIENCY:

Lawsuit could force costly delay in new gas furnace standards

Nayantara Narayanan, E&E reporter

Published: Thursday, January 17, 2013

The wait for more fuel-efficient gas furnaces just got longer. The Department of Energy has moved to withdraw a new rule that would require consumers in 30 northern states to buy 90-percent-efficient furnaces starting May 1.

The rule would have saved 81 million to 130 million metric tons of carbon dioxide between 2013 and 2045, according to DOE estimates, as consumers upgraded their furnaces from 80 percent efficiency to 90 percent efficiency systems.

In a joint settlement of a case brought against it by the American Public Gas Association, DOE last week asked the U.S. Court of Appeals for the District of Columbia Circuit to vacate the new rule. The settlement needs to be approved by the court for the rule to be vacated.

APGA had challenged the rule last year. One of its main contentions was that DOE had issued a direct final rule without considering all stakeholders' concerns. DOE can issue a direct final rule, allow a period for public comment, and then consider withdrawing the rule if any comments provide a reasonable basis not to go ahead with it.

"APGA put forward adverse comments, and I know other groups did as well. But despite receiving adverse comments, DOE went ahead with the rule," said David Schryver, APGA's executive vice president.

"We believe that the DOE did the right thing in proposing the direct final rule," said Kit Kennedy, clean energy counsel at the Natural Resources Defense Council. "We think that the DOE did the right thing and should have continued to defend the lawsuit."

Kennedy said the rule was formed out of a consensus agreement after DOE consulted manufacturers, trade associations, and environmental and consumer advocates.

APGA also said the new rule would hurt efficiency. The rule would require installing condensing furnaces with additional vents, Schryver said, and the higher cost of venting would drive consumers to lower-efficiency electric furnaces.

Andrew deLaski, executive director of the Appliance Standards Awareness Project (ASAP), said there's no danger of that happening. "I think it's ludicrous. According to EIA, heating with an electric furnace is three times [the price] as compared to gas, and with gas prices declining it's probably four times," he said. "Electric furnaces -- there's no place in the market. They have 5 percent of market share today because they are a really lousy choice in terms of operating costs."

Potential \$10.7B in heating savings put on ice

However, DOE concedes that some consumers would find it expensive to upgrade their gas furnaces to the new standard. For these cases, it had proposed a waiver of the 90 percent efficiency rule.

"The rule does mention a potential waiver process, but no waiver process was ever agreed to. We found that the proposed waiver would be unworkable," Schryver said. "If you're living in a cold northern state and the furnace goes out in January, you don't want to have to wait two or three days to get a waiver to have an 80 percent furnace as opposed to a 90 percent furnace."

Schryver said that contractors were not trained to assess waivers, and it was not certain that they have 80 percent furnaces available to install in households that received waivers.

But sticking with the old standard could be the costlier option for regular households. DOE estimates that the 90 percent standard over 30 years would save consumers \$10.7 billion taking into account utility bills, equipment costs and gas prices. "Consumer protection organizations like efficiency standards because they save money for consumers," Kennedy said.

If the court accepts the settlement and the gas furnace efficiency standard rule is vacated, DOE will have to go back to the drawing board to come up with a new rule. Kennedy said this sets the stage for even stricter norms. "The law requires that the standard be set at the highest level that is economically feasible," she said. "We will be pushing for the highest possible standard, and that could be higher than the 90 percent level."

DeLaski is less optimistic. He said DOE will now take another year to issue a proposed standard and an additional two years to come up with a new final standard.

"It actually means we'll have to wait another seven years. There's a five-year lag time from when the DOE publishes a standard and when it goes into effect," deLaski said. The new standard will apply only to the installation of new products. "That means that 80 percent units will be installed to run for the next 20 to 40 years," he added.

All, Andrew and I each posted blogs on this today. I suspect there will be press on this over time, so if your offices are interested in commenting and could have quotes/statements at the ready, that would be helpful.

[http://switchboard.nrdc.org/blogs/kkennedy/the\\_us\\_department\\_of\\_energy\\_re.html](http://switchboard.nrdc.org/blogs/kkennedy/the_us_department_of_energy_re.html)

<http://www.aceee.org/blog/2013/01/why-does-cave-furnace-standards-such->

Responses to the DOE/APGA motion are due 1/25. We're still thinking about our strategy.

Would love your thoughts on all of this.

Thanks, Kit

Dear all,

I would like to schedule a time tomorrow (Thursday 2/14) to follow up on NSPS. Please indicate your availability during the following times:

11:30am EST (I know that is a little early for west coast folks)

12pm EST

3pm EST

3:30pm EST

5pm EST

Best,

Kelly

Hey Kit, would love to get together for dinner. You may have heard back already from Maureen or Lisa B. that there are plans to have drinks/food with Steve Russo after work that day at the City Beer Hall due to his impending departure. Maureen sent the e-mail around to the bureau last week so she would know whether it's just EPB folks (and Bob) and Steve or a larger contingent. In any event, I'm happy to do a separate dinner with you after stopping by the Russo happy hour or just meeting up with you there.

Hi all,

I have added Ben.

I have some updated intel. Could we do a half-hour call tomorrow at 4 or 4:30 eastern?

David may be called for jury duty on Wednesday so we are trying to leave that day open for now. Today (Tuesday), David can do:

2:30pm EST

3:00pm EST

3:30pm EST

Please let me know if any of those times work.

Best,

Kelly

Hi Pam, I'm contacting you because you were a great help in tracking down some sample BACT analyses for GHGs in advance of the oral argument last year in the Tailoring Rule case. Before asking someone to do a comprehensive search of EPA's RACT/BACT/LAER database, I figured I'd ask you first whether you or others at EDF are aware of any BACT analyses for existing facilities who triggered PSD under the Tailoring Rule by exceeding the 75,000 tpy threshold for a major modification. (The ones you made me aware of last year concerned new facilities, not modifications of existing ones.) Thanks for any help.--Mike

Subject: FW: Possible Multi-State Letter to President Obama re Amendment of EPA and ACOE Clean Water Act Guidelines

I am forwarding this email chain to all states that were signatories to the 11/1/2007 letter to Congress (attached) supporting the Clean Water Restoration Act of 2007 (and a few others). Rhode Island is considering drafting a letter to President Obama asking him to move forward on the proposed amendments to EPA and ACOE guidelines interpreting the jurisdiction of the Clean Water Act, which were submitted to the White House last February.

A link to the guidance at issue ([http://water.epa.gov/lawsregs/guidance/wetlands/upload/wous\\_guidance\\_4-2011.pdf](http://water.epa.gov/lawsregs/guidance/wetlands/upload/wous_guidance_4-2011.pdf)) and EPA's informational page about it (<http://water.epa.gov/lawsregs/guidance/wetlands/CWAwaters.cfm>). Below is a link to a helpful NWF article on this issue.

I would appreciate comments as to whether your state might be interested in joining this letter. Additionally, please let me know if there are other states that might be interested. Also, let me know if you would like to be removed from this email list or if there are others that should be included.

Thanks for your consideration.

Greg

Subject: RE: Possible Multi-State Letter to President Obama re Amendment of EPA and ACOE Clean Water Act Guidelines

As a follow-up to my email below, attached is a letter to Congress from 11/1/2007 by DC, CA, CT, DE, ME, MD, MA, NH, NY, OR, RI, and VT, which supported the Clean Water Restoration Act of 2007. This Act would have reestablished the Clean Water Act's traditional reach to waters of the United States. Unfortunately, nothing very substantive has happened since that letter was issued.

From: Gregory Schultz

Sent: Thursday, March 07, 2013 11:18 AM

To: Michael J. Myers; Augenstern, Fred (AGO); Triplett, Tracy (AGO); Iancu, Carol; Thea Schwartz; 'Koschwitz, Scott N.'

Subject: Possible Multi-State Letter to President Obama re Amendment of EPA and ACOE Clean Water Act Guidelines

Importance: Low

Rhode Island is considering drafting a letter to President Obama asking him to move forward on the proposed amendments to EPA and ACOE guidelines interpreting the jurisdiction of the Clean Water Act. Last February, the ACOE and EPA submitted to the White House the final draft of a policy that would replace existing guidelines that are inconsistent with the intent of the CWA (promulgated during the G.W. Bush administration). Yet despite a public review process and widespread public support for this final draft, the White House has failed so far to approve the EPA and Corps guidelines. I have attached below a link to a recent article from the National Wildlife Federation that provides more detail. Additionally, I have been in contact with the Sierra Club and other environmental groups that would actively support a letter from the states to the President.

Before going further, I was hoping to gauge interest from your states (CT, MA, NY, and VT)( I realize that I may not be sending to the correct AAGs – please forward where appropriate). Could you let me know whether this might be something of interest to your state? I would like to gauge initial interest, finalize a draft letter, then send out to a wider audience (probably through NAAG).

Please feel free to contact me to discuss.

Thanks

Greg

## STATE ATTORNEYS GENERAL

A Communication from the Chief Legal Officers Of the following States:

The District of Columbia; California; Connecticut; Delaware; Maine; Maryland; Massachusetts; New Hampshire; New Jersey; New York; Oregon; Rhode Island; Vermont

November 1, 2007

The Honorable James Oberstar  
Chair, House Committee on Transportation and Infrastructure  
2365 Rayburn House Office Building  
Washington, DC 20515

The Honorable John Mica  
Ranking Member, House Committee on Transportation and Infrastructure  
2313 Rayburn House Office Building  
Washington, DC 20515

Dear Chairman Oberstar and Congressman Mica:

We submit this letter on behalf of the undersigned State Attorneys General to support enactment of H.R. 2421, the Clean Water Restoration Act of 2007. As the highest law enforcement officers in our respective states, we have important responsibilities for interpretation, implementation, and enforcement of the Clean Water Act and state programs modeled on that Act. Our actions to assure clean water for our states protect the health of our citizens, the livelihoods of many of those we serve, recreational opportunities, and the beauty of our natural environments. Our abilities to carry out the task of assuring clean waters for all will be significantly enhanced if the bipartisan Clean Water Restoration Act of 2007 is passed, which reestablishes the Clean Water Act's traditional reach to waters of the United States.

When it enacted the first strong national act to clean our nation's waters in 1972, and consistently through amendments and oversight after that, Congress endorsed a broad and strong scope for the Clean Water Act to restore our rivers and streams to chemical, physical, and biological integrity. We continue to work to achieve the law's important goals of cleaning up and maintaining our nation's waters using the framework of the law—setting standards, using a permitting system, and assuring strong and effective enforcement. Congress recognized from the beginning the important role of states in carrying out the program to achieve these clean water goals. States have structured many aspects of their own programs on the model of the federal law, and the federal law creates a floor that helps maintain consistency among state water pollution control programs throughout the country. A strong and clear federal law is critical to our roles as State Attorneys General in restoring our waters.

Unfortunately, in recent years the Courts have made enforcement of the law more difficult and thus the achievement of its important purposes more uncertain. In 2001, the Supreme Court in Solid Waste Agency of Northern Cook County (SWANCC) v. United States Army Corps of Engineers introduced some confusion as to what waters Congress intended to cover under the Clean Water Act. That problem was exacerbated by two additional Supreme Court decisions in June 2006.

These 2006 decisions—Rapanos v. United States and Carabell v. United States Army Corps of Engineers—raised doubts that the Clean Water Act extends to certain wetlands. Wetlands, of course, are important components of the ecosystem and significantly affect the quantity, quality, and biological integrity of downstream waters. They filter pollutants out of waters before they flow into our rivers and streams. Wetlands are home to myriad bird and fish species, act as essential breeding grounds, and provide the sites for birdwatching, fishing, hunting, and other activities critical to the environment and economies of many states. As State Attorneys General, we may challenge grants or denials of wetlands permits, or seek delegation of the wetlands programs, so we have a keen interest in the scope of this law. The Supreme Court’s decisions make less clear what wetlands will be considered covered by the Act.

The recent uncertainty in scope of the Clean Water Act’s coverage also affects what waters will be subject to the point source discharge programs of the Clean Water Act. The permits that the states or EPA issue under the point source program are among the most important and effective tools we have to control water pollution. In most of our states, the state is the primary issuer of permits and primary enforcer for that point source discharge program. The lack of clarity brought about by the recent decisions can lead to more litigation and can cause a serious problem for effective enforcement of this law and our mission to clean up and maintain the waters in our states.

Further, every state in the continental United States has waters that are downstream of another state, so we are affected by actions of other states and by the federal legal standard. A strong federal standard and federal program are essential to our state programs and to restoring and maintaining clean waters in our states.

Many states supported the federal government in asking the Supreme Court in the recent cases to uphold the historically broad scope of the Clean Water Act so that we could continue to clean up and maintain our waters and protect the health and welfare of our states’ citizens and their environment. We want to keep working to meet the important goals that Congress had in mind when it enacted, amended, and strengthened the Clean Water Act through the years.

H.R. 2421, the Clean Water Restoration Act of 2007, clarifies that the Clean Water Act covers all waters, and every kind of water by changing the term “navigable waters” throughout the Act to “waters of the United States.” “Waters” includes all waters (and similar ecological features) subject to the legislative power of Congress under the Constitution. As a result, H.R. 2421 restores the full protection of the Clean Water Act before the Court’s recent decisions.

The Supreme Court has created ambiguity about the reach of the Clean Water Act. We urge Congress to clean up the law by enacting the Clean Water Restoration Act of 2007 so that we can continue to clean up our nation's waters.

Thank you for your consideration.

Sincerely,

Linda Singer

Hello Michael and Andy,

We wanted to make sure you were aware of and had copies of a good neighbor-related administrative petition and petition for review that we (along with Sierra Club) filed yesterday. Attached are:

(1) a combined petition for reconsideration of the 1/15/13 ozone SIPs final rule and for administrative action regarding good neighbor obligations for the 2006 and 2013 PM2.5 NAAQS, and accompanying brief section 126 analysis; and

(2) a petition for review of the 1/15/13 ozone SIPs final rule.

We have also provided copies of the attached to Maryland, Delaware, and Connecticut.

Best,

Graham

All--A cousin of mine who's an undergrad at UConn would like to do an EJ case study relating to relicensing of a coal-fired plant in Bridgeport (Bridgeport Harbor Station). I understand Sierra Club is involved in that proceeding. Are any of you working on this, or could you suggest someone for my cousin to contact to get some basic info and whether there are SC members affected by the plant that he might talk to? Thanks much.--Mike

Hi Mike:

I would be happy to speak with your cousin about the Bridgeport facility and Sierra Club's work in Bridgeport around the plant. I will also likely put him in touch with our organizer, Onte Johnson, who is based in Bridgeport and can connect your cousin with members who are directly impacted by the plant.

Best,

Josh

Subject: Coalition for Responsible Regulation v. EPA, et al and consolidated cases; Courtesy  
Copy of Pacific Legal Foundation Petition for Writ of Certiorari

Date: Thu Mar 21 2013 16:17:40 EDT

Attachments: Courtesy Copy Service List ii.pdf  
Petition for Writ of Certiorari 3-20-13.pdf

---

Dear Counsel:

Attached please find an electronic courtesy copy of Pacific Legal Foundation's Petition for Writ of Certiorari to the United States Supreme Court from the decision of the D.C. Circuit in the cases consolidated under the case name Coalition for Responsible Regulation, et. al v. Environmental Protection Agency, et al., along with an electronic copy of the courtesy copy service list. Because not all counsel in the consolidated cases were included in the D.C. Circuit's ECF system, we are sending first class courtesy copies as well.

Sincerely,

Theodore Hadzi-Antich  
Senior Staff Attorney  
Pacific Legal Foundation  
930 G Street  
Sacramento, CA 95814

916-419-7111

## QUESTION PRESENTED

Carbon dioxide is a ubiquitous natural substance that is essential to life on Earth. Certain prominent scientific organizations have concluded that atmospheric emissions of carbon dioxide from man-made sources contribute to global climate change. Relying on such conclusions, the United States Environmental Protection Agency (EPA) promulgated a regulation, *Endangerment and Cause or Contribute Findings for Greenhouse Gasses under Section 202(a) of the Clean Air Act*, 74 Fed. Reg. 66,496 (Dec. 15, 2009) (the Endangerment Finding), in which it determined that carbon dioxide and related substances pose a danger to human health and welfare, thereby establishing a springboard for comprehensive federal regulation of carbon dioxide emissions under the Clean Air Act. Because carbon dioxide is virtually everywhere and in everything, the Endangerment Finding confers upon EPA unprecedented authority to direct and control the Nation's physical, economic, and social infrastructure. Congress requires that a wide variety of regulations promulgated by EPA be made available for peer review by a panel of independent scientists known as the Science Advisory Board (SAB), whose function is to ensure the scientific credibility of EPA's regulatory proposals. 42 U.S.C. § 4365(c)(1). EPA promulgated the Endangerment Finding without providing the SAB with the opportunity for scientific peer review.

The question presented is: Must the Endangerment Finding be set aside because EPA violated the congressional mandate to submit the proposed Finding to the Science Advisory Board for peer review, as required by 42 U.S.C. § 4365(c)(1)?

## LIST OF ALL PARTIES

Many petitioners challenged the Endangerment Finding in the United States Court of Appeals for the District of Columbia Circuit, and many others challenged EPA regulations that depended upon the Endangerment Finding. The D.C. Circuit consolidated all the challenges into four sets of cases as follows: **(1) Lead Case No. 09-1322** (including Case Nos. 10-1024, 10-1025, 10-1026, 10-1030, 10-1035, 10-1036, 10-1037, 10-1038, 10-1039, 10-1040, 10-1041, 10-1042, 10-1044, 10-1045, 10-1046, 10-1234, 10-1235, 10-1239, 10-1245, 10-1281, 10-1310, 10-1318, 10-1319, 10-1320, 10-1321); **(2) Lead Case No. 10-1073** (including Case Nos. 10-1083, 10-1099, 10-1109, 10-1110, 10-1114, 10-1118, 10-1119, 10-1120, 10-1122, 10-1123, 10-1124, 10-1125, 10-1126, 10-1127, 10-1128, 10-1129, 10-1131, 10-1132, 10-1145, 10-1147, 10-1148, 10-1199, 10-1200, 10-1201, 10-1202, 10-1203, 10-1206, 10-1207, 10-1208, 10-1210, 10-1211, 10-1212, 10-1213, 10-1216, 10-1218, 10-1219, 10-1220, 10-1221, 10-1222); **(3) Lead Case No. 10-1092** (including Case Nos. 10-1094, 10-1134, 10-1143, 10-1144, 10-1152, 10-1156, 10-1158, 10-1159, 10-1160, 10-1161, 10-1162, 10-1163, 10-1164, 10-1166, 10-1182); and **(4) Lead Case No. 10-1167** (including Case Nos. 10-1168, 10-1169, 10-1170, 10-1173, 10-1174, 10-1175, 10-1176, 10-1177, 10-1178, 10-1179, 10-1180). The D.C. Circuit issued one opinion in connection with the referenced consolidated cases. Pacific Legal Foundation, the petitioner herein, was the petitioner in Case No. 10-1310, which was among the cases addressed by the consolidated judgment below. Other parties in the consolidated cases include the following:

The petitioners in related cases addressed by the consolidated judgment below, which are not petitioners herein, included Greg Abbott, Attorney General of Texas; Alpha Natural Resources, Inc.; American Farm Bureau Federation; Michele Bachmann, U.S. Representative, Minnesota 6th District; Haley Barbour, Governor of the State of Mississippi; Marsha Blackburn, U.S. Representative, Tennessee 7th District; Kevin Brady, U.S. Representative, Texas 8th District; Paul Broun, U.S. Representative, 10th District; Dan Burton, U.S. Representative, Indiana 5th District; Chamber of Commerce of the United States of America; Coalition for Responsible Regulation, Inc.; Collins Industries, Inc.; Collins Trucking Company, Inc.; Commonwealth of Virginia; Competitive Enterprise Institute; Nathan Deal, U.S. Representative, Georgia 9th District; Energy-Intensive Manufacturers' Working Group on Greenhouse Gas Regulation; Freedom Works; The Science and Environmental Policy Project; Georgia Agribusiness Council, Inc.; Georgia Coalition for Sound Environmental Policy, Inc.; Georgia Motor Trucking Association, Inc.; Gerdau Ameristeel US Inc.; Phil Gingrey, U.S. Representative, Georgia 11th District; Great Northern Project Development, L.P.; Industrial Minerals Association - North America; J&M Tank Lines, Inc.; Kennesaw Transportation, Inc.; Steve King, U.S. Representative, Iowa 5th District; Jack Kingston, U.S. Representative, Georgia 1st District; Landmark Legal Foundation; Langboard, Inc. - MDF; Langboard, Inc. - OSB; Langdale ChevroletPontiac, Inc.; The Langdale Company; Langdale Farms, LLC; Langdale Ford Company; Langdale Forest Products Company; Langdale Fuel Company; Mark R. Levin; John Linder, U.S. Representative, Georgia 7th District;

Louisiana Department of Environmental Quality; Missouri Joint Municipal Electric Utility Commission; National Cattlemen's Beef Association; National Environmental Development Association's Clean Air Project; National Mining Association; Ohio Coal Association; Peabody Energy Company; Rick Perry, Governor of Texas; Tom Price, U.S. Representative, Georgia 6th District; Dana Rohrabacher, U.S. Representative, California 46th District; Rosebud Mining-Co.; John Shadegg, U.S. Representative, Arizona 3rd District; John Shimkus, U.S. Representative, Illinois 19th District; South Carolina Public Service Authority; Southeast Trailer Mart, Inc.; Southeastern Legal Foundation, Inc.; State of Alabama; State of Nebraska; State of North Dakota; State of South Carolina; State of South Dakota; State of Texas; Texas Agriculture Commission; Texas Commission on Environmental Quality; Texas General Land Office; Texas Public Utilities Commission; Texas Railroad Commission; Utility Air Regulatory Group; Lynn Westmoreland, U.S. Representative, Georgia 3rd District; The American Chemistry Council; American Frozen Food American Fuel & Petrochemical Manufacturers; American Iron and Steel Institute; American Petroleum Institute; Brick Industry Association; Clean Air Implementation Project; Corn Refiners Association; Glass Association of North America; Glass Packaging Institute; Independent Petroleum Association of America; Indiana Cast Metals Association; Michigan Manufacturers Association; Mississippi Manufacturers Association; National Association of Home Builders; The National Association of Manufacturers; National Federation of Independent Business; National Oilseed Processors Association; North American Die Casting Association;

v

Portland Cement Association; Specialty Steel Industry of North America; Tennessee Chamber of Commerce and Industry; Western States Petroleum Association; West Virginia Manufacturers Association; and Wisconsin Manufacturers and Commerce.

Respondent herein, which was also the respondent in this case below, is the Environmental Protection Agency.

The respondents in related cases addressed by the consolidated judgment below included the U.S. Environmental Protection Agency (EPA), and Lisa P. Jackson, Administrator, U.S. Environmental Protection Agency. Lisa Perez Jackson ceased to hold the office of Administrator, U.S. Environmental Protection Agency, on February 15, 2013; that office is currently held in an acting capacity by Robert Perciasepe, Acting Administrator, U.S. Environmental Protection Agency.

**PETITION FOR WRIT OF CERTIORARI**

Petitioner Pacific Legal Foundation (PLF) respectfully petitions this Court for a writ of certiorari to review the judgment of the United States Court of Appeals for the District of Columbia Circuit denying PLF's Petition for Review of the Endangerment Finding, entered on June 26, 2012, in the case of *Coalition for Responsible Regulation, et al. v. Environmental Protection Agency*, 684 F.3d 102 (D.C. Cir. 2012).

---

**OPINIONS BELOW**

The opinion of the D.C. Circuit is reported as *Coalition for Responsible Regulation, et al. v. Environmental Protection Agency*, 684 F.3d 102. The slip opinion is reproduced in Appendix A. The judgment of the D.C. Circuit was entered on June 26, 2012, and is reproduced in Appendix B. The order of the D.C. Circuit denying a panel rehearing is reported as *Coalition for Responsible Regulation, et al. v. Environmental Protection Agency*, No. 09-1322, 2012 U.S. App. LEXIS 26315 (Dec. 20, 2012). The order is reproduced at Appendix C. The order of the D.C. Circuit denying rehearing en banc is reported as *Coalition for Responsible Regulation v. Environmental Protection Agency*, No. 09-1322, 2012 U.S. App. LEXIS 26313 (Dec. 20, 2012). The order is reproduced at Appendix D. The challenged administrative rule is set forth in *Endangerment and Cause or Contribute Findings for Greenhouse Gasses under Section 202(a) of the Clean Air Act*, 74 Fed. Reg. 66,496 (Dec. 15, 2009), and is reproduced in Appendix F.

---

**JURISDICTION**

The D.C. Circuit had jurisdiction to review this case pursuant to 42 U.S.C. § 7607 (b), (d). The decision of the D.C. Circuit was entered on June 26, 2012. Appendix (App.) B. On December 20, 2012, the D.C. Circuit denied Petitioner's Petition for Panel Rehearing, App. E, as well as the Petitioner's Petition for Rehearing En Banc, App. D. This Court has jurisdiction under 28 U.S.C. § 1254(1).

---

**CONSTITUTIONAL AND STATUTORY PROVISIONS AT ISSUE**

42 U.S.C. § 4365(c)(1) states as follows:

The [EPA] Administrator, at the time any proposed criteria document, standard, limitation, or regulation under the Clean Air Act, the Federal Water Pollution Control Act, the Resource Conservation and Recovery Act of 1976, the Noise Control Act, the Toxic Substances Control Act, or the Safe Drinking Water Act, or under any other authority of the Administrator, is provided to any other Federal agency for formal review and comment, shall make available to the [Science Advisory] Board such proposed criteria document, standard, limitation, or regulation, together with relevant scientific and technical information in the possession of the Environmental Protection Agency on which the proposed action is based.

---

**STATEMENT OF THE CASE**

Because carbon dioxide is ubiquitous, this case presents a rare instance in which an administrative agency's promulgation of a rule in violation of a statutory mandate will have profound societal impacts. This Court has repeatedly held that courts must "give effect, if possible, to every clause and word of a statute." *See, e.g., Moskal v. United States*, 498 U.S. 103, 109 (1990); *United States v. Menasche*, 348 U.S. 528, 538-39 (1955); *Montclair v. Ramsdell*, 107 U.S. 147, 152 (1883). Yet the D.C. Circuit's holding below disregards the plain language of 42 U.S.C. § 4365(c)(1) and authorizes the United States Environmental Protection Agency (EPA) to ignore its nondiscretionary, statutory duty to submit to the Science Advisory Board for peer review its administrative finding that carbon dioxide and related compounds endanger human health and welfare. The holding is in conflict with decisions of this Court, a decision of the Ninth Circuit, and prior decisions of the D.C. Circuit.

**A. The Endangerment Finding  
and its Practical Implications**

The Endangerment Finding is set forth in *Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act*, 74 Fed. Reg. 66,496 (Dec. 15, 2009), reproduced in Appendix F. The finding has sparked EPA's promulgation of mobile source emissions limitations for carbon dioxide, which depend entirely on the Endangerment Finding. *See Light Duty Vehicle Greenhouse Gas Emissions Standards and Corporate Average Fuel Economy Standards; Final Rule*, 75 Fed.

Reg. 25,324 (May 7, 2010), and *Greenhouse Gas Emissions Standards and Fuel Efficiency Standards for Medium-and Heavy-Duty Engines and Vehicles*, 76 Fed. Reg. 57,106 (Sept. 15, 2011). In turn, EPA determined that the mobile source rules trigger regulatory programs for stationary sources of carbon dioxide emissions under the Clean Air Act, including the Prevention of Significant Deterioration of Air Quality Program, under which permits are issued pursuant to 42 U.S.C. §§ 7475, 7479. Further, EPA determined that requirements for stationary sources under Title V of the Clean Air Act, 42 U.S.C. § 7602(j), are triggered. EPA's interpretations of the regulatory triggers engendered by the Endangerment Finding have resulted in the promulgation of EPA's *Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule*, 75 Fed. Reg. 31,514 (June 3, 2010), which governs certain stationary source emissions of carbon dioxide throughout the nation. Additional carbon dioxide emissions controls are on EPA's regulatory agenda. *See, e.g., Proposed Standards of Performance for Greenhouse Gas Emissions for New Stationary Sources, Electric Utility Generating Units*, 77 Fed. Reg. 22,392, *et seq.* (Mar. 27, 2012).

Roger O. McClellan is a former long-standing member of the Science Advisory Board (SAB) who served for years as a member of the SAB's Executive Committee and Co-Chair of the SAB's Clean Air Scientific Advisory Committee. He filed a declaration in the court below in support of Pacific Legal Foundation's challenge to the Endangerment Finding. Among other things, Mr. McClellan's declaration states that the Endangerment Finding "can have a profound impact on society." Declaration of Roger O. McClellan

¶ 8, Exhibit 1 of PLF's Petition for Rehearing En Banc Under Rule 35 and, In the Alternative, Petition for Rehearing Under Rule 40, reproduced in Appendix E-4. EPA has never contested the fact that the Endangerment Finding will have a profound societal impact.

### **B. The Science Advisory Board and Its Role in EPA Rulemaking**

The SAB's mission is to provide "expert and independent advice to the [EPA] on the scientific and technical issues facing the Agency" and to assist EPA "in identifying emerging environmental problems." 40 C.F.R. § 1.25(c). SAB "functions as a technical peer review panel for [EPA]." Lynn E. Dwyer, *Good Science in the Public Interest: A Neutral Source of Friendly Facts?*, 7 Hastings W.-N.W. J. Env'tl. L. & Pol'y 3, 6 (Fall 2000). A key purpose of SAB is to render advice to EPA "on a wide range of environmental issues and the integrity of the EPA's research." *Meyerhoff v. United States EPA*, 958 F.2d 1498, 1499 (9th Cir. 1992). See Joint Explanatory Statement of the Committee on Conference, The Environmental Research, Development, and Demonstration Authorization Act of 1978, Conf. Rep. 96-722, 3296 (1977) (Congress gave SAB the job "of advising the [EPA] on the adequacy of scientific information supporting proposed regulations.")

EPA is required by statute to submit to SAB any proposed "criteria document, standard, limitation, or regulation under the Clean Air Act . . . together with relevant scientific and technical information in the possession of [EPA] on which the proposed action is based" at the time the proposal is made available to other federal agencies "for formal review and

comment.” 42 U.S.C. § 4365(c)(1). Such “formal review and comment” occurs during the public comment period for regulatory proposals. *Lead Industries Ass’n v. EPA*, 647 F.2d 1130, 1137 (1980) (proposed criteria documents prepared by EPA under the Clean Air Act were properly submitted to SAB during public comment period). *See Mo. Coalition v. United States EPA*, No., 04-cv-00660, 2005 U.S. Dist. LEXIS 42186, at \*5 (E.D. Mo. Sept. 14, 2005) (“drafts should be made available for public review and comment and review by . . . the EPA’s Science Advisory Board.”). A scientist who served on the Science Advisory Board for over 20 years has stated in a declaration filed below, “I have always understood that EPA’s proposed regulations under the Clean Air Act would be made available to the SAB for review at the earliest possible time and no later than the date the regulations are first published in the Federal Register for comment by other federal agencies and the general public.” McClellan Decl. ¶ 7, App. E-4.

The purpose of the submittal requirement is to provide SAB an opportunity to make available “its advice and comments [to EPA] on the adequacy of the scientific and technical basis of the [regulatory proposals],” 42 U.S.C. § 4365(c)(2), and the submittal duty is nondiscretionary. *American Petroleum Inst. v. Costle*, 665 F.2d 1176, 1188 (D.C. Cir. 1981) (*API*) (“The language of the statute indicates that making a [regulatory proposal] . . . available to the SAB for comment is mandatory . . .”). *See* Joint Explanatory Statement, H.R. Conf. Rep. 96-722, 3296 (1977) (“The first paragraph of this subsection *requires* the Administrator of EPA to make available to the [Science Advisory] Board any proposed criteria, document, standard, limitation or regulation together with

scientific background information in the possession of the Agency on which the proposed action is based.” (emphasis added)).

“SAB essentially serves a critical gatekeeper role whose mission is to ensure that EPA’s regulatory proposals are based upon sound scientific and technical principles.” McClellan Decl. ¶ 11, App. E-5. EPA has often “changed its regulatory proposals and schedules based on review and comment by SAB. This has been the rule rather than the exception . . . as SAB was created to provide an expert reality check for EPA scientific and technical determinations that inform policy judgments.” McClellan Decl. ¶ 10, App. E-5.

### **C. The D.C. Circuit’s Decision**

PLF filed its Petition for Review in the D.C. Circuit on Oct. 4, 2010, pursuant to Clean Air Act Section 307(b)(1), 42 U.S.C. § 7607(b)(1), on the grounds that EPA improperly denied PLF’s administrative petition for reconsideration of the Endangerment Finding. The petition for reconsideration was based on EPA’s failure to comply with the requirement set forth in 42 U.S.C. § 4365(c)(1) to submit the Endangerment Finding to SAB before the finding was promulgated.

In the D.C. Circuit, PLF argued that EPA’s failure to submit the Endangerment Finding to SAB for peer review prior to promulgating the finding required vacatur and remand under *Small Refiner Lead Phase-Down Task Force v. EPA*, 705 F.2d 506, 522 (D.C. Cir. 1983) and *Lead Industries Ass’n v. EPA*, 647 F.2d at 1137. Without addressing the specific arguments raised by PLF, the D.C. Circuit concluded that EPA did not violate the SAB submittal requirement because

(1) it was “not clear” whether the Endangerment Finding was submitted “to any other Federal agency for formal review and comment,” thereby triggering the SAB submittal duty, *Coalition for Responsible Regulation*, 684 F.3d at 124, and (2) “even if EPA violated its mandate by failing to submit the Endangerment Finding to the SAB, Industry Petitioners have not shown that this error was ‘of such central relevance to the rule that there is a substantial likelihood that the rule would have been significantly changed if such errors had not been made.’” *Coalition for Responsible Regulation*, 684 F.3d at 124 (citations omitted).

PLF now timely petitions this Court to resolve a question of exceptional nationwide importance: whether an administrative agency may ignore a statutory mandate to obtain independent peer review of a scientific finding that serves as the trigger for a cascade of federal regulations that will have substantial impacts on the Nation for years to come.

**REASONS FOR GRANTING THE WRIT**

**THE COURT SHOULD GRANT THE  
WRIT TO ADDRESS AN ISSUE OF  
NATIONAL IMPORTANCE: ALLOWING  
EPA TO EVADE THE CONGRESSIONAL  
MANDATE OF SCIENTIFIC PEER  
REVIEW OPENS THE DOOR TO A  
TORRENT OF REGULATIONS THAT  
WILL PROFOUNDLY IMPACT THE  
NATION'S ECONOMY**

**A. The Endangerment Finding Will  
Have An Extraordinary Effect Upon  
The Nation's Physical, Economic,  
and Social Infrastructure**

EPA has never disputed the fact that the Endangerment Finding embodies one of the most burdensome, costly, and far-reaching regulatory programs ever adopted by a federal administrative agency. The Endangerment Finding is the springboard for EPA's regulation of an entirely new category of emissions under the Clean Air Act, including the ubiquitous natural substance carbon dioxide. Because carbon dioxide is everywhere and in everything, the Endangerment Finding confers upon EPA unparalleled authority to regulate virtually every aspect of the Nation's economy. Indeed, EPA itself reached the conclusion that the Endangerment Finding could lead to "absurd" economic and regulatory impacts. 75 Fed. Reg. at 31,517 ("costs to sources and administrative burdens to permitting authorities . . . so severe that they bring the judicial doctrine of 'absurd results' into play.").

EPA relies on the Endangerment Finding to support a series of new and costly federal regulations, including the Auto Rule, 75 Fed. Reg. 25,324 (May 7, 2010), under which it regulates carbon dioxide emissions from automobiles and SUVs, and the Truck Rule, 76 Fed. Reg. 57,106 (Sep. 15, 2011), under which it regulates such emissions from medium- and heavy-duty trucks. In turn, those rules have triggered the Prevention of Significant Deterioration of Air Quality Program for carbon dioxide, under which permits are issued for stationary sources pursuant to 42 U.S.C. §§ 7475, 7479. Also triggered are EPA's permitting requirements for stationary sources under Title V of the Clean Air Act, 42 U.S.C. § 7602(j). These regulations and interpretations led EPA to promulgate its Tailoring Rule, 75 Fed. Reg. 31,514 (June 3, 2010), by which EPA in effect rewrote the Clean Air Act's emissions thresholds for regulating stationary sources, because EPA deemed them unmanageable in light of its Endangerment Finding. Remarkably, EPA has stated that the additional paperwork costs alone from adding carbon dioxide and related substances to the Title V permitting program could reach \$22.5 billion. *See* 75 Fed. Reg. at 31,540 & Table V-I. This only adds to EPA's own characterization of the "absurd" regulatory impacts stemming from the Endangerment Finding. *Id.* at 31,517. The genesis of the regulatory absurdity is EPA's arrogation of power over the Nation's economic life through the Endangerment Finding.

A scientist who served on the Science Advisory Board for over two decades, including years of service as Co-Chair of SAB's Clean Air Advisory Committee, offered written testimony in this case:

I am familiar with EPA's finding made in December of 2009 that greenhouse gases pose a threat to human health and welfare (the "Endangerment Finding"). The Endangerment Finding is certainly the type of regulatory action that SAB was created to review. It deals with novel, cutting edge scientific and technical issues that can have a profound impact on society. Those issues require the type of detailed expert scrutiny that SAB review was intended to provide.

McClellan Decl. ¶ 8, App E-4.

As this Court observed in connection with the issue of whether EPA had legal authority under the Clean Air Act to even consider making an Endangerment Finding for carbon dioxide, "[T]he unusual importance of the underlying issue persuaded us to grant the writ." *Massachusetts v. EPA*, 549 U.S. 497, 506 (2007). Here, the "underlying issue" is comparable in scope and effect, and is no less important: Whether EPA may refuse to comply with a nondiscretionary duty to submit to the Science Advisory Board for peer review its Endangerment Finding for carbon dioxide, the same substance at issue in *Massachusetts v. EPA*. Because of the pervasive presence of carbon dioxide, the Endangerment Finding opens the door to EPA regulation of aspects of national life that heretofore have remained untouched by federal statute or rule.

Given the extraordinary societal impacts of the Endangerment Finding, the instant Petition for Writ of Certiorari provides this Court with an opportunity to re-establish and emphasize with clarity for lower courts, as well as for administrative agencies, the

salutary principle that nondiscretionary statutory rulemaking procedures may not be ignored simply because an agency wishes to ignore them. *See Bennett v. Spear*, 520 U.S. 154, 172 (1997) (“It is rudimentary administrative law that discretion as to the substance of the ultimate decision does not confer discretion to ignore the required procedures of decisionmaking.”).

**B. By Violating the SAB Submittal Requirement, EPA Has Illegally Arrogated to Itself Authority to Regulate The Nation’s Economy**

A brief summary of the genesis of the Endangerment Finding, the manner in which it was promulgated, and the D.C. Circuit’s perfunctory review of EPA’s violation of the SAB submittal requirement provides insight into the importance of the issues raised by this case.

**1. *Massachusetts v. EPA*:  
The Genesis of the  
Endangerment Finding**

In *Massachusetts v. EPA*, this Court established a limited proposition: carbon dioxide and certain other substances, referred to as greenhouse gases, are covered by the broad definition of the term “air pollutants” set forth in the Clean Air Act, 42 U.S.C. § 7602(g), 549 U.S. at 529. Accordingly, the *Massachusetts v. EPA* Court opined that section 202(a)(1) of the Act authorizes EPA to regulate emissions of such substances from new motor vehicles, *id.* at 532, *see* 42 U.S.C. § 7521(a)(1), *if* EPA first makes the requisite endangerment finding. The Court underlined that, “We need not and do not reach the

question whether on remand EPA must make an endangerment finding.” 549 U.S. at 534.

In due course, EPA went on to make the Endangerment Finding, but nothing in *Massachusetts v. EPA* or any other decision of this Court authorizes EPA to refuse to comply with the requirements of any federal statute in making the finding.

## **2. The SAB Submittal Requirement Is Mandatory**

EPA was statutorily required to submit the Endangerment Finding to SAB for review before the finding was promulgated. This follows from the fact that the Endangerment Finding is a legislative-type “rule” within the meaning of the Administrative Procedure Act, 5 U.S.C. § 551(4) (“rule’ means . . . an agency statement of general . . . applicability and future effect designed to . . . prescribe law or policy”). This Court has recognized that, “[i]f EPA makes a finding of endangerment, the Clean Air Act *requires* the Agency to regulate emissions of the deleterious pollutant from new motor vehicles.” *Massachusetts v. EPA*, 549 U.S. at 533 (emphasis added). Because the Endangerment Finding binds EPA to undertake a specific action, *i.e.*, regulating motor vehicle emissions, the proposed finding constituted a regulatory proposal. Accordingly, EPA’s duty to submit the proposed Endangerment Finding to SAB was “mandatory.” *API*, 665 F.2d at 1188. The SAB statute states explicitly that EPA “shall” make regulatory proposals available to the SAB. 42 U.S.C. § 4365(c)(1). This Court has observed that when a statute uses the term “shall” in prescribing a duty, one is not at liberty to refuse to perform the duty. *See, e.g., Alabama v. Bozeman*, 533 U.S. 146, 153 (2001) (Congress’s specification of an

obligation that uses the word “shall” usually connotes a mandatory command.) *See also* Joint Explanatory Statement, H.R. Conf. Rep. 96-722, 3296 (SAB statute “requires . . . EPA to make available to the [SAB]” regulatory proposals. (Emphasis added)).

**3. EPA Was Required To  
Submit the Endangerment  
Finding to SAB During the  
Public Comment Period**

The time for SAB submittal is no later than during the public comment period on proposed regulations. *Lead Industries Ass’n v. EPA*, 647 F.2d at 1137; *API*, 665 F.2d at 1188-89; McClellan Decl. ¶ 7, App. E-4. This is because “the intent of [the SAB statute] is to ensure that the [SAB] is able to comment in a well-informed manner on any regulation that it so desires.” Joint Explanatory Statement, H.R. Conf. Rep. 96-722, 3296 (1977). For such comments to be meaningful, SAB’s statutory authority applies specifically to “advising [EPA] on the adequacy of scientific information supporting *proposed* regulations,”—*i.e.*, before they are promulgated. *Id.* (Emphasis added). Because EPA failed to submit the proposed Endangerment Finding to SAB before it was promulgated (or at any time, for that matter), it violated the mandatory SAB submittal requirement.

Citing 49 U.S.C. § 32902(j), the D.C. Circuit observed, without explanation, that it was “not clear” whether the Endangerment Finding was subject to a “formal review and comment . . . in which other agencies are given the opportunity to provide written comments about impacts of a proposed regulation on the reviewing agency’s universe of responsibility.” *Coalition for Responsible Regulation*, 684 F.3d at 124.

But the statutory provision cited by the D.C. Circuit has nothing to do with EPA or any of the statutory authorities under which it operates. Rather, 49 U.S.C. § 32902(j) requires the Secretary of *Transportation* to consult with the Secretary of *Energy* before proposing an average fuel economy standard. Of course, that duty is irrelevant to any duty of EPA.

The D.C. Circuit itself has implicitly recognized that the only “formal” review and comment period for EPA’s regulatory proposals occurs during the general *public* comment period for such proposals. *Lead Industries Ass’n v. EPA*, 647 F.2d at 1143. Because SAB submittal is “mandatory,” *API*, 665 F.2d at 1188-89, EPA must submit proposed regulations to SAB no later than during the public comment period. That is the only time “any other federal agency” is provided with a formal opportunity to comment on EPA’s regulatory proposals. Accordingly, as a practical matter, the only way to give effect to the requirement that EPA must submit regulatory proposals to the SAB whenever they are “provided to any other Federal agency for *formal* review and comment,” 42 U.S.C. § 4365(c)(1) (emphasis added), is to require SAB submittal during the formal, general public comment period on EPA’s regulatory proposals. *See Moskal v. United States*, 498 U.S. at 109 (courts should give effect to every clause and word of a statute). Consistent with this analysis, before *Coalition for Responsible Regulation*, EPA’s long-standing custom and standard operating procedure was to submit regulatory proposals to SAB for review during public comment periods.

I have always understood that EPA’s proposed regulations under the Clean Air Act

would be made available to the SAB for review at the earliest possible time and no later than the date the regulations are first published in the Federal Register for comment by other federal agencies and the general public.

McClellan Decl. ¶ 7, App. E-4.

**4. The D.C. Circuit's Perfunctory Review of the SAB Issue Was Inadequate in Light of the Extraordinary Results Stemming From EPA's Violation of the SAB Submittal Requirement**

The broad societal implications of the Endangerment Finding merited more than the summary treatment given to the SAB issue by the decision below, which accorded to the SAB submittal obligation a total of three paragraphs. App. A-40-41. EPA should not be permitted to arrogate to itself unprecedented power to regulate the Nation's infrastructure, without careful examination of whether the Agency failed to comply with the congressional mandate of peer review. Such a careful examination was not provided by the perfunctory review of the court below, but this Court has the opportunity to do so by granting the writ.

**C. The D.C. Circuit’s Approval of EPA’s Decision To Ignore a Statutorily Mandated Rulemaking Procedure Conflicts With Both Long-Standing Precedent of This Court and Ninth Circuit Precedent**

The core holding of the opinion below was that EPA was not required to comply with its statutory duty to submit the Endangerment Finding to SAB for review “even if EPA violated its mandate.” See *Coalition for Responsible Regulation v. EPA*, 684 F.3d at 124.

This holding conflicts with the fundamental rule established by this Court that an administrative agency is not permitted to disregard with impunity a mandated statutory rulemaking procedure. *Bennett v. Spear*, 520 U.S. at 172. Until the D.C. Circuit’s decision in *Coalition for Responsible Regulation*, that axiomatic proposition of administrative law had not been questioned. Importantly, in a recent case involving a citizen suit brought under the Clean Water Act, the Ninth Circuit cited *Bennett v. Spear* for the proposition that federal courts must require administrative agencies to adhere to mandated decisionmaking procedures. *Our Children’s Earth Fund v. EPA*, 527 F.3d 842, 847 (9th Cir.), *cert denied*, 555 U.S. 1045 (2008) (“As the Supreme Court teaches, . . . ‘It is rudimentary administrative law that discretion as to the substance of the ultimate decision does not confer discretion to ignore the required procedures of decisionmaking.’”). Indeed, district courts in the D.C. Circuit have consistently followed the principle that administrative agencies must scrupulously follow statutorily mandated adminis-

trative procedures. *See, e.g., Defenders of Wildlife v. Jackson*, 284 F.R.D. 1, 4 (D.D.C. 2012); *Sierra Club v. Leavitt*, 355 F. Supp. 2d 544, 550 (D.D.C. 2005).

Because the D.C. Circuit itself has recognized that EPA's duty to submit regulatory proposals to the SAB is nothing short of mandatory, *API v. Costle*, 665 F.2d at 1188, the decision below that EPA could ignore the SAB submittal requirement in connection with the Endangerment Finding breaks with the Circuit's own precedent, and flatly contradicts this Court's pronouncements in *Bennett v. Spear*, 520 U.S. at 172, and *Alabama v. Bozeman*, 533 U.S. at 153, as well as the Ninth Circuit's articulation in *Our Children's Earth Fund*, 527 F.3d at 847.

**D. The D.C. Circuit's Decision  
Provides Administrative Agencies  
With Perverse Incentives To  
Disregard Statutory Rulemaking  
Requirements, Thereby Undermining  
Decisions of This Court**

The decision below creates incentives for administrative agencies to ignore mandated rulemaking procedures, thereby thwarting this Court's insistence that nondiscretionary procedures be followed. *Bennett v. Spear*, 520 U.S. at 172; *Alabama v. Bozeman*, 533 U.S. at 153. *See also* McClellan Decl. ¶ 9, App. E-4 (“[By withholding the Endangerment Finding from SAB,] EPA was interfering with the purposes for which SAB had been created, namely, to provide scientific and technical credibility to EPA regulatory decisions.”). Significantly, the SAB submittal requirement applies not only to EPA's regulatory proposals under the Clean Air Act but also

to its regulatory proposals under “the Federal Water Pollution Control Act, the Resource Conservation and Recovery Act of 1976, the Noise Control Act, the Toxic Substances Control Act, or the Safe Drinking Water Act, or under *any other authority* of the Administrator.” 42 U.S.C. § 4365(c)(1) (emphasis added). Thus, the SAB submittal requirement applies to each and every one of EPA’s regulatory programs.

By allowing EPA to ignore its mandatory duty to submit Clean Air Act regulatory proposals to SAB, the D.C. Circuit has implicitly signaled to the Agency that it may also ignore its mandatory duty to adhere to the SAB submittal requirement in connection with rulemakings under other statutes it implements, whenever it so chooses, thereby undercutting this Court’s overarching rule that administrative agencies must comply with nondiscretionary rulemaking procedures, no matter how inconvenient those procedures may appear to the agency. *Bennett v. Spear*, 520 U.S. at 172.

And this Court cannot ignore the potentially broader reach of the decision below. The D.C. Circuit hears a large number of appeals from administrative agency actions. *Coalition for Responsible Regulation* could be construed as an implicit invitation for other agencies to short-change nondiscretionary rulemaking procedures, thereby undercutting to an even greater degree this Court’s decisions in *Bennett v. Spear*, 520 U.S. at 172 (department of Interior must consider economic impacts before designating critical habitat for endangered or threatened species, as required by the Endangered Species Act), and *Alabama v. Bozeman*, 533 U.S. at 153-54, (violation is not “harmless” or

“technical” in light of the “absolute language” of anti-shuttling provision).

Before its decision in *Coalition for Responsible Regulation*, the D.C. Circuit itself had long held that, when an administrative agency utterly fails to comply with a statutory rulemaking requirement that does not by its own terms limit judicial review, the failure cannot be considered harmless error if there is any uncertainty regarding what the rule may have been but for the failure. *Sugar Cane Growers Coop. of Fla. v. Veneman*, 289 F.3d 89, 96 (D.C. Cir. 2002) (In promulgating a rule under the Food Security Act, 7 U.S.C. § 1308a, an “utter failure” by the Department of Agriculture to comply with notice and comment requirements under the Administrative Procedure Act “cannot be considered harmless if there is *any* uncertainty at all as to the effect of that failure.” (emphasis added)). *Accord, New Jersey Dep’t of Env’tl. Prot. v. EPA*, 626 F.2d 1038, 1039, 1049-50 (D.C. Cir. 1980) (EPA’s utter failure to comply with procedural requirements of the Administrative Procedure Act requires reversal of a rule promulgated under the Clean Air Act.).

The SAB statute, 42 U.S.C. § 4265, does not in any way limit judicial review of EPA’s failure to comply with the mandatory SAB submittal requirement. There is a strong presumption in favor of judicial review of administrative agency actions, and there must be “clear and convincing evidence” showing Congress’s intent to shield any particular administrative agency action from full judicial review. *Abbott Labs. v. Gardner*, 387 U.S. 136, 140 (1967). Nothing in the SAB statute evidences such a congressional intent. *See Sackett v. EPA*, 132 S. Ct.

1367, 1373 (2012) (presumption of judicial review may be overcome only by evidence of congressional intent to restrict or limit review).

Just as an utter failure to comply with the independent requirements of the Administrative Procedure Act required a reversal in *Sugar Cane* and *New Jersey*, so too did EPA's utter failure to comply with the independent requirements of the SAB statute. By ignoring its own precedent in *Sugar Cane* and *New Jersey*, the court below set the stage for federal administrative agencies to take liberties with statutorily mandated rulemaking procedures, contrary to the dictates of *Bennett v. Spear*. This Court has not hesitated to constrain administrative agencies who failed to discharge mandatory duties when it has found "agency officials zealously but unintelligently pursuing their environmental objectives." 520 U.S. at 176-77.

**E. By Ignoring Its Own Precedent  
and Conflating Judicial Review  
Procedures under Two Separate  
Statutes, the D.C. Circuit Has  
Sanctioned EPA's Illegal Move  
to Chart the Course of the  
Nation's Economy**

Remarkably, the D.C. Circuit did not even address the Petitioner's argument that EPA's failure to submit the Endangerment Finding to SAB violated the standards set forth by the D.C. Circuit itself in *Sugar Cane* and *New Jersey*. Rather, without analysis, the court below concluded, "Industry Petitioners have not shown that this error was 'of such central relevance to the rule that there is a substantial likelihood that the rule would have been significantly changed if such

errors had not been made.” *Coalition for Responsible Regulation*, 684 F.3d at 124.

In absolving EPA of its duty to comply with a nondiscretionary rulemaking procedure, the D.C. Circuit not only violated the standards set down by this Court in *Bennett v. Spear*, 520 U.S. at 172, the Ninth Circuit in *Our Children’s Earth Fund*, and its own standards set down in *Sugar Cane* and *New Jersey*, but also ignored its own prior decision in *Kennecott Corp. v. EPA*, 684 F.2d 1007, 1017 (D.C. Cir. 1982). In *Kennecott*, EPA had denied an administrative petition for reconsideration of a rule by asserting that its failure to include certain documents in the rulemaking record was not significant because, even if the documents had been included, EPA would have come to the same regulatory conclusion. The *Kennecott* court disagreed, stating that the “absence of those documents . . . makes impossible any meaningful comment on the merits of EPA’s assertions.” *Id.* at 1018. “EPA’s failure to include such documents constitutes reversible error, for the uncertainty that might be clarified by those documents . . . indicates a ‘substantial likelihood’ that the regulations would ‘have been significantly changed.’” *Id.* at 1018-19.

Because the purpose of the SAB submittal requirement is to provide SAB an opportunity to make available “its advice and comments [to EPA] on the adequacy of the scientific and technical basis of [regulatory proposals],” 42 U.S.C. § 4365(c)(2), Congress could not have contemplated that SAB review would be no more than a mere formality or a superfluous gesture. *Moskal v. United States*, 498 U.S. 103 (courts should give effect to every clause and word of a statute). In fact, Congress contemplated

that EPA's proposed Clean Air Act regulations would significantly evolve, mature, and otherwise change as a result of SAB's scientific and technical advice. Dwyer, *supra*, at 6-7 (SAB was created to function as a scientific and technical peer review panel to provide EPA with guidance, so that the Agency's rulemaking is not based on erroneous or untrustworthy data or conclusions). See McClellan Decl. ¶¶ 10-12, App. E-5.

In this regard, the legislative history of the statute creating SAB is instructive. SAB's role in EPA's rulemaking process is to "be able to review conflicting claims and advise the [EPA] on the adequacy and reliability of the technical basis for rules and regulations." Joint Explanatory Statement, H.R. Conf. Rep. 96-722, 3295-96. The Legislative History also states:

Much of the criticism of the Environmental Protection Agency might be avoided if the decisions of the Administrator were fully supported by technical information which had been reviewed by independent, competent scientific authorities.

. . . [T]he intent of [the SAB submittal requirement] is to ensure that the [SAB] is able to comment in a well-informed manner on any regulation that it so desires.

*Id.*

Thus, congressional contemplation of a "substantial likelihood" that EPA's regulatory proposals would undergo "significant change" as a result of SAB review is built into the fabric of the SAB statute, 42 U.S.C. § 4365, and that is why SAB submittal is "mandatory" under *API v. Costle*, 665 F.2d

at 1188. “[Courts] must reject administrative constructions which are contrary to clear congressional intent.” *Chevron, U.S.A. v. NRDC, Inc.*, 467 U.S. 837, 843 n9 (1984).

Accordingly, even under the D.C. Circuit’s own standard, uncertainty created by EPA’s failure to submit the Endangerment Finding to SAB for review indicates a “substantial likelihood” that the rule would have been “significantly changed” had the procedural error not been made. *See Coalition for Responsible Regulation*, 684 F.3d at 124 (“a substantial likelihood that the rule would have been significantly changed if such errors had not been made.”). *See also, Kennecott*, 684 F.2d at 1017. This conclusion is echoed in a declaration filed below by a long-standing member of the SAB:

Based upon my more than two decades of experience as a member of SAB, after it was established legislatively, my more than 15 years of service as a member of the SAB Executive Committee and my knowledge of how SAB interacts with EPA, I believe there is substantial likelihood that the Endangerment Finding would have been substantially changed in response to advice made available to SAB for review prior to its promulgation.

McClellan Decl. ¶ 12, App. E-5.

At bottom, the difference between the standards set forth in *Sugar Cane* and *Kennecott*, both of which were ignored by the *Coalition for Responsible Regulation* court, is one of degree. Under *Sugar Cane*, “any” uncertainty regarding the final outcome of the

rule is sufficient to invalidate the rule. 289 F.3d at 96. Under *Kennecott*, the uncertainty must raise an inference that there is a “substantial likelihood” that the rule would have been “significantly changed” had the procedural error not been made. 684 F.2d at 1017.

*Small Refiner Lead Phase-Down Task Force v. EPA*, 705 F.2d 506, explains the reason for the difference. In amending the Clean Air Act in 1977, Congress “wanted to add *new* procedural protections” to EPA rulemaking beyond those set forth in the Administrative Procedure Act (“APA”) and other statutes. *Id.* at 522 (emphasis in original). Congress “also wanted to minimize disputes over EPA’s compliance with the *new* procedures,” *id.* (emphasis added), and “did not intend to cut back” on statutory procedural safeguards located outside of the Clean Air Act. *Id.* Thus, the “substantial likelihood” standard was intended to apply to procedural violations of the additional procedural protections set forth in the Clean Air Act Amendments of 1977 and not to an utter failure to abide by rulemaking procedures required in legislation other than the Clean Air Act. *Id.* at 522-24.

Especially in light of the fact that the SAB submittal requirement applies to regulatory proposals generated by *all* of EPA’s regulatory programs and not just those arising under the Clean Air Act, it is important to underscore the relationship between the procedural requirements of the SAB statute and the substantive statutes that EPA administers, including the Clean Air Act. Consistent with this Court’s instructions regarding statutory interpretation, all of the statutes that provide EPA with either regulatory or procedural duties, or both, should be construed in a way that makes them consistent with each other, if at

all possible. *Parsons Steel, Inc. v. First Alabama Bank*, 474 U.S. 518, 524 (1986) (differing statutes should be interpreted so as to be consistent). The SAB statute contains no limitations on judicial review of the SAB submittal requirement. The Clean Air Act places limitations only on judicial review of rulemaking procedures mandated by the Clean Air Act itself. Accordingly, the Clean Air Act's limitations on judicial review of violations of that Act's procedures do not and cannot apply to judicial review of violations of procedures set forth in the entirely separate SAB statute. This follows from the fact that the SAB statute's mandatory submittal requirement does not set forth an exception for rules promulgated by EPA under the Clean Air Act. Nor does the Clean Air Act provide any hint that rules promulgated thereunder need not undergo SAB review.

Because the D.C. Circuit conflated the independent judicial review standards of the two statutes, it is now the law of the D.C. Circuit that EPA may unilaterally ignore its statutory duty to submit a regulatory proposal for peer review to the Science Advisory Board, even where the regulation deals with cutting edge scientific issues that will have profound impacts on society. The decision below, which runs counter to this Court's insistence that administrative agencies comply with nondiscretionary rulemaking procedures, *Bennett v. Spear*, 520 U.S. at 172, provides EPA with an unimpeded path to control carbon dioxide emissions throughout the Nation, thereby giving EPA a green light to broadly regulate in areas of economic and social life that heretofore have been closed to federal government involvement.

**F. The Extraordinary Impacts of  
Allowing the Endangerment Finding  
to Go into Effect Without Scientific  
Peer Review Can Be Avoided Only If  
This Court Grants Certiorari**

It is the ubiquitous nature of carbon dioxide that makes this case one of extraordinary national importance. Accordingly, just as this Court granted certiorari in *Bennett v. Spear* in order to determine whether the Department of Interior may neglect its mandatory duty to consider the economic impacts of critical habitat designation in a case involving substantial economic impacts, so too this Court should grant certiorari here so that it may determine whether EPA may neglect its mandatory duty to submit the Endangerment Finding to SAB for scientific peer review, in a case where the economic impacts are far greater. Only this Court is in a position to address this issue of national importance.

Because carbon dioxide is everywhere, the Endangerment Finding empowers EPA to regulate the Nation's physical, economic, and social infrastructure. It bears repeating: This Court in *Massachusetts v. EPA*, which also involved carbon dioxide, determined that the writ of certiorari should be granted because of "the unusual importance of the underlying issue." 549 U.S. at 506. And as Judge Tatel stated in the D.C. Circuit's earlier denial of en banc review in that same case, if the issues arising in connection with the then-future Endangerment Finding are "not a matter of exceptional importance, then those words have no meaning." *Massachusetts v. EPA*, 433 F.3d 66 (D.C. Cir. 2005) (Tatel, J., dissenting). Because the Endangerment Finding "can have a profound impact

on society,” McClellan Decl. ¶ 8, App. E-4, if ever there were an issue of exceptional importance to the Nation, it is to be found in the Endangerment Finding. The possibility that a finding of such great moment was made illegally provides ample justification for granting the writ.

---

**CONCLUSION**

The Petition for Writ of Certiorari should be granted.

DATED: March, 2013.

Respectfully submitted,

Thank you, Ted. It would be much appreciated if any other parties that have filed cert petitions so far could send around electronic copies (of the petition(s), not appendices).

## QUESTIONS PRESENTED

- 1) Did Virginia and other Petitioners below demonstrate that there was evidence of central relevance to the EPA's Endangerment Finding not available during the comment period such that the Administrator was obligated to convene a proceeding for reconsideration with procedural rights of notice and comment?
- 2) Did the EPA correctly apply the standard for demonstrating central relevance?
- 3) Did the EPA err when it found the objections material enough to require resort to extensive new evidence outside of the record while denying the rights of notice and comment on that evidence?
- 4) Did the EPA err initially and on Petition for Reconsideration by delegating its Statutory Authority to outside entities?

**PETITION FOR WRIT OF CERTIORARI**  
**OPINION BELOW**

The panel opinion affirming the rulemaking of the EPA is reported as *Coalition for Responsible Regulation, Inc. v. Environmental Protection Agency*, 684 F.3d 102 (D.C. Cir. 2012). Both the order and opinions relating to denial of rehearing are unpublished, but are available at 2012 U.S. App. LEXIS 25997, 2012 WL 6621785, and, through PACER, as U.S.C.A.

Case No. 09-1322, Doc. 1411145 (Dec. 20, 2012).<sup>1</sup> See SUP. CT. R. 12(7). And both are reprinted in the Appendix (“App.”) at App. 1-103, 104-63.

**JURISDICTION**

Section 307 of the Clean Air Act (CAA) grants exclusive jurisdiction to the United States Court of Appeals for the District of Columbia Circuit over petitions for review that challenge nationally applicable final actions of the Administrator of the EPA. 42 U.S.C. § 7607(b)(1) (“A petition for review of . . . final action taken[ ] by the Administrator under [the CAA] may be filed only in the United States Court of

---

<sup>1</sup> All references to “Doc.” are to the appellate record in case number 09-1322, and collected cases, from the United States Court of Appeals for the District of Columbia Circuit and are available via that Court’s PACER system.

Appeals for the District of Columbia”). With regard to the Endangerment Finding and follow-on rulemaking, the D.C. Circuit received a number of timely petitions, and interventions, including those of the Commonwealth of Kentucky and the State of Utah, consolidated them, and, on June 26, 2012, issued an opinion denying the petitions and affirming the EPA’s rulemaking. *Responsible Regulation*, 684 F.3d at 102, 149. Timely petitions for rehearing *en banc* were received, circulated to the circuit court, voted on, and denied on a 6 to 2 vote on December 20, 2012. *See Coalition for Responsible Regulation, Inc. v. Evtl. Protection Agency (Responsible Regulation II)*, No. 09-1322, 2012 U.S. App. LEXIS 25997, 2012 WL 6621785 (D.C. Cir. Dec. 2012) (unpublished); Doc. 1411145; App. at 104-63. This petition for certiorari has been timely filed within 90 days of the denial of rehearing, *see* SUP. CT. R. 13(1) & (3), and so is now properly within this Court’s jurisdiction. *See* 28 U.S.C. § 1254(1).

## STATUTES AND REGULATIONS

The statutes and regulations involved in this case are 42 U.S.C. §§ 7521 and 7607; 74 Fed. Reg. 66,496 (Dec. 15, 2009), 75 Fed. Reg. 49,556 (Aug. 13, 2010). Because they are lengthy, the relevant statutory provisions are reprinted in the Appendix and the Federal Register provisions are cited from the Joint Appendix below. *See* SUP. CT. R. 14(f).

## STATEMENT OF THE CASE

This Court found in *Massachusetts v. EPA*, 549 U.S. 497, 534 (2007), that the EPA had both the jurisdiction and the obligation to decide “whether sufficient information exists to make an endangerment finding” with respect to CO<sub>2</sub>. The EPA published its Endangerment Finding on December 15, 2009. *Endangerment and Cause or Contribute Findings (Endangerment Finding)*, 74 Fed. Reg. at 66,496; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 29 of 695. Petitions for review of that finding were permitted “within sixty days from the date notice” was published in the Federal Register. 42 U.S.C. § 7607(b)(1). Virginia, Texas, and others filed timely petitions for review, invoking the jurisdiction of the United States Court of Appeals for the District of Columbia Circuit. *See id.*

By statute, the EPA Administrator must “convene a proceeding for reconsideration also of the rule and provide the same procedural rights as would have been afforded had the information been available at the time the rule was proposed” if a person raising an objection to agency action can demonstrate that “the grounds for . . . objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule.” *Id.* § 7607(d)(7)(B). The comment period for the Endangerment Finding closed on June 23, 2009. *See EPA’s Response to the Petitions to Reconsider the Endangerment and Cause or Contribute Findings for Greenhouse Gases under*

*Section 202(a) of the Clean Air Act (RTP)*, 75 Fed. Reg. at 49,556, 49,560 (Aug. 13, 2010); J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), pp. 82, 86 of 695. On November 17, 2009, internal emails and documents from the Climate Research Unit (CRU) at the University of East Anglia (UEA) became available to the public. These documents were sufficiently damaging to the data upon which the EPA relied in making its Endangerment Finding that the release is now commonly known as “climategate.” See John M. Broder, *Scientists Taking Steps to Defend Work on Climate*, N.Y. Times, Mar. 2, 2012, at A11, <http://www.nytimes.com/2010/03/03/science/earth/03climate.html>. In the wake of these revelations, ten petitions for reconsideration also were timely filed within the period for appeal of the Endangerment Finding, including those of Virginia and Texas. The EPA refused to convene the statutory proceeding and flatly denied the petitions. See *RTP*, 75 Fed. Reg. at 49,557; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 83 of 695.

The Clean Air Act requires that information relied upon for rulemaking be in the administrative record, subject to public comment, and also provides for rehearing in the event additional information comes to light after the comment period has closed. With respect to the rulemaking record, Section 307(d)(4)(B) requires that “[a]ll documents which become available after the proposed rule has been published and which the Administrator determines are of central relevance to the rulemaking shall be placed in the docket as soon as possible after their availability.” 42 U.S.C. § 7607(d)(4)(B)(i). Once this

process is complete, Section 307(d)(6)(C) states that the “promulgated rule may not be based (in part or whole) on any information or data which has not been placed in the docket as of the date of such promulgation.” 42 U.S.C. § 7607(d)(6)(C). As for rehearing, Section 307(d)(7)(B) of the Act provides *inter alia*:

If the person raising an objection can demonstrate to the Administrator that . . . the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule, the Administrator shall convene a proceeding for reconsideration of the rule and provide the same procedural rights as would have been afforded had the information been available at the time the rule was proposed.

42 U.S.C. § 7607(d)(7)(B).

Ever since 1980, the EPA has consistently interpreted this rehearing standard, CAA § 307(d)(7)(B), 42 U.S.C. § 7607(d)(7)(B), as a heightened relevancy standard. That is, the EPA grants reconsideration when new evidence would “provide substantial support *for the argument* that the regulation should be revised.” *Denial of Petition to Revise NSPS for Stationary Gas Turbines*, 45 Fed. Reg. at 81,653 n.3 (Dec. 11, 1980) (emphasis added); see *Prevention of Significant Deterioration and Non-Attainment New Source Review: Reconsideration*, 68 Fed. Reg. 63,021 (Nov. 7, 2003) (codified at 40 CFR pts. 51, 52); *Denial of Petition for Reconsideration of National Ambient Air*

*Quality Standards for Particulate Matter*, 53 Fed. Reg. 52,698 (Dec. 29, 1988). Consistent with its past practice, the EPA announced that it would apply its usual standard to the petitions for reconsideration of the endangerment finding. *RTP*, 75 Fed. Reg. at 49,561.

In denying rehearing, the EPA relied in part on “a 3-volume, roughly 360-page Response to Petitions document,” which included both new information (developed after close of the comment period) and additional information not otherwise in the record and thus not subject to notice or comment. *RTP*, 75 Fed. Reg. at 49,556. The agency also relied upon investigations conducted by third parties:

Inquiries from the UK House of Commons, Science and Technology Committee, the University of East Anglia, Oxburgh Panel, the Pennsylvania State University, and the University of East Anglia, Russell Panel, all entirely independent from EPA, have examined the issues and many of the same allegations brought forward by the petitioners as a result of the disclosure of the private CRU e-mails. These inquiries are now complete. Their conclusions are in line with EPA’s review and analysis of these same CRU e-mails.

*RTP*, 75 Fed. Reg. at 49,557; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 83 of 695. However, none of these reports dealt with the central question raised by the reconsideration petitions: whether climategate undercut the reliability of the science upon which the EPA relied. *See* Pet’rs’ Opening Br. at 5-9; U.S.C.A.

Case 09-1322 Doc. 1309185, pp. 23-27 of 90. And obviously none of them addressed whether the information uncovered was of “central relevance” for purposes of 42 U.S.C. § 7607(d)(4)(B)(i) or (7)(B).

In support of rehearing, Petitioners argued that there were copious quantities of new information that had become public after the Endangerment Finding’s publication; that climategate emails suggested that the IPCC data and conclusion upon which the EPA relied were manipulated; that critical IPCC records were lost or destroyed; that the peer review process was corrupted and dissent suppressed; that IPCC personnel had conflicts of interest; and that the EPA’s reliance on IPCC data ensured that the process underlying the Endangerment Finding lacked transparency. The Rehearing Petitions also pointed out mistakes reflecting on the reliability of the underlying data, such as the EPA’s reliance on an IPCC report that purported to “distill[ IPCC’s] most important science into a form accessible to politicians and policy makers.” FoxNews.com, *Africa-Gate? U.N. fears of food shortages questioned* (Feb. 8, 2010), <http://www.foxnews.com/scitech/2010/02/08/british-scientist-says-panel-losing-credibility>; see IPCC, *Climate Change 2007: Synthesis Report*, [http://www.ipcc.ch/pdf/assessment-report/ar4/syr/ar4\\_syr.pdf](http://www.ipcc.ch/pdf/assessment-report/ar4/syr/ar4_syr.pdf). In it, IPCC claimed that anthropogenic GHGs could cut many African countries’ yields from rain-fed agriculture in half. *IPCC Synthesis Report* § 3.3.2 at 50. The source of this alarmist conclusion was a 2003 policy paper from a Canadian think tank. J.A. Vol. IX, Doc.

1339079 (Oct. 31, 2011), pp. 451-53 of 649. *See* Int'l Inst. for Sustainable Dev., *Vulnerability of North African Countries to Climate Change: Adaptation and Implementation Strategies for Climate Change* (2003) at 5, [http://www.iisd.org/cckn/pdf/north\\_africa.pdf](http://www.iisd.org/cckn/pdf/north_africa.pdf). Petitioners argued that climategate revealed other significant errors and misstatements that the EPA failed to detect and on which the public could not comment before the finding's publication, including the percentage of the Netherlands lying below sea level, J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), p. 456 of 649, errors in the projection of glacier melt in the Himalayas, J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), pp. 448-51 of 649; *see* IPCC, *Statement on the melting of Himalayan Glaciers* (Jan. 20, 2010), <http://www.ipcc.ch/pdf/presentations/himalaya-statement-20january2010.pdf>, projected Amazon rainforest die-off, J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), pp. 453-54 of 649, and projections of more violent storms. J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), pp. 459-61 of 649; *see* Pet'rs' Opening Br. at 12-13 n.14; Doc. 1341062 (Nov. 10, 2011), pp. 30-31 n.14 of 90.

Finally, the Petitioners argued that, in adopting the Endangerment Finding, the Administrator viewed the IPCC, the National Research Council (NRC), and the U.S. Global Change Research Program (USGCRP) as representing independent, mutually reinforcing data, rather than data sets heavily dependent on the IPCC, which derives from a small number of collaborative "climate scientists." In the 360-page RTP – which consisted of new material that

had never been commented upon by the public, that was added to the docket by the agency for the first time after the comment period, and that was created, in some instances, after the Endangerment Finding was finalized – the EPA rejected Petitioners’ objections raised in the rehearing petitions, without notice and comment, on the ground that the objections did not change the EPA’s own conclusions. 75 Fed. Reg. at 49,558 (“The petitioners do not provide any substantial support for the argument that the Endangerment Finding should be revised.”), 49,569; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), pp. 84, 95 of 695. After the close of the comment period, the EPA also added more than four hundred documents to the record, and cited more than fifty of these documents in its RTP. *RTP* Vols. I through III; J.A. Vol. X, Doc. 1339079 (Oct. 31, 2011), pp. 29 through 401 of 403. For example, the EPA in the RTP cited a newly published NRC study entitled “Advancing the Science of Climate Change” to reinforce the now questioned IPCC study, noting that it was “not aware of any published criticisms” of the study. *RTP* Vol. I at 50; J.A. Vol. X, Doc. 1339079 (Oct. 31, 2011), p. 85 of 403.

By procedural order, the D.C. Circuit identified denial of reconsideration as one of the issues to be briefed and argued. D.C. Cir. Order, Doc. 1357330 (Feb. 8, 2012), 4 of 5. On the merits, the panel decision minimized the significance of identified errors in light of the size of the record without discussing the overarching reliability issues arising from the politicized, agenda-driven science disclosed by climategate

and without considering whether the EPA applied the wrong standard. *Responsible Regulation*, 684 F.3d at 125. The panel also rejected the claim that the EPA had necessarily revised its Endangerment Finding by supplementing it, and the record. The D.C. Circuit rejected this argument on a mere ipse dixit basis without analysis or citation to authority. *Id.* at 126.

The court of appeals, by procedural order, also identified delegation issues arising from the Endangerment Finding as matters to be briefed and argued. D.C. Cir. Order, Doc. 1357330 (Feb. 8, 2012). However, the panel in its opinion expressed dislike of the word “delegate,” branding it as “little more than a semantic trick.” *Responsible Regulation*, 684 F.3d at 124. In any case, that court rejected the delegation claim based upon the “extreme degree of deference” afforded factual and scientific decisions by agencies, *id.* at 120, and the precautionary principle, which operates to increase deference as evidence becomes “‘more difficult to come by, uncertain, or conflicting because it is on the frontiers of scientific knowledge.’” *Responsible Regulation*, 684 F.3d at 121 (quoting *Ethyl Corp. v. EPA*, 541 F.2d 1, 28 (D.C. Cir. 1976)).

The D.C. Circuit permitted two days for oral argument on the numerous petitions challenging the Endangerment Finding and follow-on regulations. *See* D.C. Cir. Order, Doc. 1357330 (Feb. 8, 2012). However, this petition addresses only those reconsideration and delegation issues on which Virginia was lead on briefing and which Virginia argued. Other petitioners intend to present other issues by separate petitions for writs of certiorari in the coming weeks. *See*

*Chamber of Commerce v. EPA*, No. 12A871 (Mar. 5, 2013); *Am. Chemistry Council v. EPA*, No. 12A876 (Mar. 8, 2013); *Coalition for Responsible Regulation, Inc. v. EPA*, No. 12A877 (Mar. 8, 2013); *Energy-Intensive Mfrs. Working Grp. on Greenhouse Gas Regulation v. EPA*, No. 12A879 (Mar. 8, 2013); *South-eastern Legal Found. v. EPA*, No. 12A881 (Mar. 7, 2013); *Texas v. EPA*, No. 12A884 (Mar. 8, 2013). And, of course, parties below may advance only one petition each. Sup. Ct. R. 12(4). The parties to this brief pray the Court to grant petitions on all issues so that the decision of the D.C. Circuit may be comprehensively reviewed.

### **REASONS FOR GRANTING THE PETITION**

Supreme Court Rule 10 contains illustrative bases for granting certiorari. Rule 10(a)-(b) deals with issues of uniformity of Federal law. Because the D.C. Circuit had exclusive jurisdiction over this appeal, considerations of uniformity could never arise. Rule 10(c) states that certiorari is appropriate where “a United States court of appeals has decided an important question of Federal law that has not been, but should be, settled by this Court.” An example of an exercise of jurisdiction predicated on unusual public importance is provided by the predecessor case of *Massachusetts v. EPA*, 549 U.S. at 505-06, which cited “the unusual importance of the underlying issue,” authority to regulate greenhouse gases, as justification for granting a writ despite no conflict between the lower courts on the issue.

It would be difficult to overstate the importance of the decision below. The judges concurring in denial of rehearing were agreed on this:

To be sure, the stakes here are high. The underlying policy questions and the outcome of this case are undoubtedly matters of exceptional importance.

*Responsible Regulation II*, No. 09-1322, 2012 U.S. App. LEXIS 25997 at 28, 62, 2012 WL 6621785 at 3, 14; App. at 111, 139; Doc. 1411145, pp. 8 & 32 of 52. The significant regulatory and economic burden of greenhouse gas regulation has been the subject of testimony before both Houses of Congress on multiple occasions prior to and after the EPA issued the Endangerment Finding. See Testimony of Dr. Margo Thorning on The Impact of EPA Regulation of GHGs under the Clean Air Act on U.S. Investment and Job Growth before H. Subcomm. on Energy & Power (Feb. 9, 2011), American Council for Capital Formation, Publications, <http://accf.org/news/publication/the-impact-of-epa-regulation-of-ghgs-under-the-clean-air-act-on-u-s-investment-and-job-growth> (explaining the macroeconomic effect of the Endangerment Finding); Testimony of William L. Kovacs on Regulation of Greenhouse Gases under The Clean Air Act before the S. Comm. on Envt. & Public Works (Sept. 23, 2008), U.S. Chamber of Commerce, <http://www.uschamber.com/issues/testimony/2008/testimony-regulation-greenhouse-gases-under-clean-air-act> (explaining the wide range of activities that would be made subject to EPA permitting once an Endangerment Finding had been

reached); *see generally* Congressional Budget Office, The Economic Effects of Legislation to Reduce Greenhouse-Gas Emissions Report (Sept. 17, 2009), <http://www.cbo.gov/publication/41266>. It has been estimated that the EPA's regulation of greenhouse gases could decrease U.S. investment by between five to fifteen percent over the three-year period ending in 2014, with a potential reduction in employment from between one-half to 1.5 million jobs and with compliance costs ranging in the tens of billions "annually, a figure that does not include the costs of actually acquiring and implementing the Best Available Control Technology, as required under the PSD program." *See* Thorning Testimony at 4-5, 9.

And the CBO, in modeling various legislative programs deemed by some to be more efficient than the EPA approach, estimated that such regulation will reduce the annual rate of GDP growth by less than 1 percent of GDP this decade, but would rise sharply over time as the loss in wealth "multiplies." CBO Report at 12-13 (Table 1). Obviously, even a small reduction of GDP growth results in a large loss in societal wealth, jobs, and other measures of human flourishing. U.S. Dep't of Commerce, Bureau of Economic Analysis, "National Income and Product Accounts: Gross Domestic Product, 4th Quarter and Annual 2012 (second estimate)," (Feb. 28, 2013), [http://www.bea.gov/newsreleases/national/gdp/2013/gdp4q12\\_2nd.htm](http://www.bea.gov/newsreleases/national/gdp/2013/gdp4q12_2nd.htm). In sum, this Petition, challenging the EPA's adoption of regulations aimed at limiting the previous conduct of citizens in order to reduce CO<sub>2</sub>

and other greenhouse gas emissions, presents a matter of utmost importance to the vitality of our Nation. See *Responsible Regulation II*, No. 09-1322, 2012 U.S. App. LEXIS 12980 at 63; 2012 WL 6621785 at 14 (Kavanaugh, J., dissenting from denial of reh'g en banc) (“Put simply, the economic and environmental policy stakes are very high.”); App. at 139.

With respect to whether this is a case that “has not been, but should be, settled by this Court,” the judges of the panel thought that the outcome was predetermined by this Court in *Massachusetts v. EPA*. See *Responsible Regulation*, 684 F.3d at 120. But only this Court can definitely say that. Furthermore, the rehearing and delegation issues raised in this petition, and essential to public participation in the administrative process and informed agency decisionmaking, have never been decided by this Court.

Not only does this Petition raise matters of first impression, but the arguments against the EPA’s actions are weighty and substantial.

**A. The Administrator Was Obligated to Grant Reconsideration Because Petitioners Demonstrated that their Timely Objections Were Based on Evidence of Central Relevance to the Outcome of the Endangerment Finding.**

For over thirty years, the EPA has consistently held that a timely motion for reconsideration is due to be granted where new evidence would “provide

substantial support for the argument that the regulation should be revised.” See 45 Fed. Reg. at 81,653; 53 Fed. Reg. at 52,698; 68 Fed. Reg. at 63,021. Reversing the old saw “let’s not and say we did,” the EPA, in response, produced a 360-page, three-volume supplement to the Endangerment Finding and added numerous documents to shore up its scientific bases, but maintained that it had not reconsidered its original decision. Having supplemented its findings, the agency’s claim that the new information was unlikely to cause it to revise its action rang hollow. See *West Virginia v. EPA*, 362 F.3d 861 (D.C. Cir. 2004). The EPA, for foreign diplomatic reasons, had issued the Endangerment Finding as a free-standing document unassociated with any implementing rule. See John M. Broder, *Greenhouse Gases Imperil Health, E.P.A. Announces*, N.Y. Times, Dec. 7, 2009, at A18, [http://www.nytimes.com/2009/12/08/science/earth/08epa.html?\\_r=1&](http://www.nytimes.com/2009/12/08/science/earth/08epa.html?_r=1&) (“The announcement was timed to coincide with the opening of the United Nations conference on climate change in Copenhagen, strengthening President Obama’s hand as more than 190 nations struggle to reach a global accord.”). Having done so, any objection cogent enough to require a response relying on extensive new extra-record evidence plainly provided substantial support for an argument that the Finding needed reworking. Indeed, the rehearing petitions were not merely likely to lead to a revision, they in fact led to a *de facto* revision. Put another way, an Endangerment Finding whose supporting bases have to be materially supplemented and reweighed to adequately respond

to objections triggers reconsideration under notice and comment standards. This is the plain meaning of 42 U.S.C. § 7607(d)(7)(B), and the court of appeals erred in holding otherwise. *See Responsible Regulation*, 684 F.3d at 125-26.

### **B. The Administrator Misapplied the Central Relevance Standard.**

The EPA departed from its clear and consistent use of its heightened relevance standard without adequate explanation when it found that the data supplied by Petitioners did not change its mind on the Endangerment Finding. The Endangerment Finding was promulgated as the first step in rulemaking under Section 202(a) of the Clean Air Act, codified at 42 U.S.C. § 7521. *See Endangerment Finding*, 74 Fed. Reg. at 66,496; J.A. Vol. I, Doc. 1339709 (Oct. 31, 2011), p. 30 of 695. As a consequence, the associated rulemaking was required to be accompanied by “a statement of basis and purpose,” as well as “a response to each of the significant comments, criticisms, and new data submitted in written or oral presentations during the comment period.” 42 U.S.C. § 7607(d)(6)(A)(i) & (d)(6)(B). In no event could the Endangerment Finding “be based (in part or whole) on any information or data which ha[d] not been placed in the docket as of the date of such promulgation.” 42 U.S.C § 7607(d)(6)(C). Thus, after promulgation on December 15, 2009, any revision to the statement of basis and purpose or to the response to comments was a revision requiring the same

process as that required in the initial promulgation. 42 U.S.C. § 7607(d)(1)(K). See *Donner Hanna Coke Corp. v. Costle*, 464 F. Supp. 1295 (W.D.N.Y. 1979) (EPA enforcement officials cannot circumvent rule-making requirements of 42 U.S.C. § 7607 by making substantial changes in testing methods without notice and hearing).

Whatever the 360-page tome “appears to be,” *Responsible Regulation*, 684 F.3d at 126, the EPA misapplied the central relevance and likelihood of revision test because, in purporting to deny reconsideration, the EPA did, in fact, revise the statement of basis and purpose and its response to comments. This is not only an arbitrary and capricious violation of the EPA’s own standard, but is also a facial violation of the Clean Air Act, or of the APA if the Endangerment Finding is not considered a rule for purposes of 42 U.S.C. § 7607(d)(8).

**C. The EPA Administrator Erred by Making Determinations without Notice or Comment.**

42 U.S.C. § 7607(d)(3) forbids the revision of any rule without notice and comment and limits the basis for such revision to data, information, and documents contained in the docket when the revision is published. 42 U.S.C. § 7607(d)(7)(B) requires any reconsideration to be conducted with rights of notice and comment. Moreover, 42 U.S.C. § 7607(h) declares, with exceptions not here relevant, a congressional

intent, “consistent with the policy of the Administrative Procedures Act,” that the Administrator “ensure a reasonable period for public participation of at least 30 days.” Finally, 42 U.S.C. § 7607(d)(6)(A) provides that any promulgated rule “shall be accompanied by (i) a statement of basis and purpose,” among other things. A revision of the statement of basis and purpose is, therefore, a revision requiring notice and comment. The Endangerment Finding itself is nothing more than an overarching statement of basis and purpose intended to support all subsequent rulemaking on the subject.

This is well-established:

To have any reasonable prospect of obtaining judicial affirmance of a major rule, an agency must set forth the basis and purpose of the rule in a detailed statement, often several hundred pages long, in which the agency refers to the evidentiary basis for all factual predicates, explains its method of reasoning from factual predicates to the expected effects of the rule, relates the factual predicates and expected effects of the rule to each of the statutory goals or purposes the agency is required to further or to consider, responds to all major criticisms contained in the comments on its proposed rule, and explains why it has rejected at least some of the plausible alternatives to the rule it has adopted.

1 Richard J. Pierce, Jr., *Administrative Law Treatise* 593 (5th ed. 2010). “Failure to fulfill one of these

judicially prescribed requirements of a ‘concise general statement of basis and purpose’ has become the most frequent basis for judicial reversal of agency rules.” *Id.* Supplementing the statement of basis and purpose with a 360-page response to objections, which includes data not included in the Endangerment Finding and, in some cases, not even compiled prior to its publication, is a revision that violates this scheme when conducted without rights of notice and comment. In fact, procedurally and institutionally, an agency in the present context is incapable of knowing and deciding scientific matters in the absence of notice and comment, and simply permitting reconsideration petitions affords no substitute. *See Kennecott Corp. v. EPA*, 684 F.2d 1007, 1018-19 (D.C. Cir. 1982).

**D. The EPA’s Reasons for Relying on the IPCC Were Undermined by the Climategate Data Provided in the Reconsideration Petitions which Data Compel the Conclusion that the Endangerment Finding Fails to meet essential Information Quality Standards such that Reconsideration Is Required.**

The EPA Administrator sought to justify her reliance on the “assessment literature” by claiming that the agency carefully reviewed the processes by which this literature was prepared, confirming thereby that these processes met the standards to which the EPA is subject in preparing scientific findings. *Endangerment Finding*, 74 Fed. Reg. at 66,511-13; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), pp. 45-47 of

695. *EPA Response to Public Comments (RTC)* at 1-2 (based on its review of IPCC procedures, “EPA has determined that the approach taken provided the high level of transparency and consistency outlined by EPA’s” information quality requirements); J.A. Vol. VII, Doc. 1339079 (Oct. 31, 2011), at 253 of 395. Based on this review, the Administrator concluded that her reliance on this literature “is entirely reasonable and allows EPA to rely on the best available science.” *Endangerment Finding*, 74 Fed. Reg. at 66,511 (footnote omitted); J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 45 of 695. Of course, as the EPA Inspector General found, not only was this not so, but the Administrator, in making the Endangerment Finding, lacked access to the information necessary to evaluate the quality of the IPCC’s scientific conclusions, violated the agency’s own peer-review standards, and, by having no procedure for evaluating the circumstances in which it is appropriate to rely on outside data, comprehensively delegated her statutory duties to the IPCC and other outside groups. *See* Report of the EPA Inspector General, Data Quality Processes, Report 11-P-0702 (Sept. 26, 2011), <http://www.epa.gov/oig/reports/2011/20110926-11-P-0702.pdf>) (“Inspector General Report”).

As discussed in the previous section, even if IPCC’s scientific procedures had been of sterling quality, the Administrator still would have been required to exercise her own judgment on climate science, and this she did not do. In issuing the Endangerment Finding, the EPA failed to comply even with its own standards for evaluating externally

generated information, insufficient as the EPA Inspector General subsequently found them to be. Accordingly, it should come as no surprise that climategate revealed that the quality of IPCC's science was anything but sterling, and that there is a yawning gap between the way IPCC operated in reality compared with the way the EPA says it did based on its review of IPCC's written procedures. Indeed, by relying so heavily on the IPCC, the agency failed to observe basic information quality standards to which it is subject.

**1. The EPA failed to ensure that Endangerment Finding's information was "accurate, reliable and unbiased."**

The EPA is subject to rigorous data quality obligations under the Information Quality Act (IQA), Pub. L. No. 106-554, 114 Stat. 2763 (2000), and the EPA's IQA Guidelines, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency (IQA Guidelines)* (Oct. 2002), [http://www.epa.gov/QUALITY/informationguidelines/documents/EPA\\_InfoQualityGuidelines.pdf](http://www.epa.gov/QUALITY/informationguidelines/documents/EPA_InfoQualityGuidelines.pdf). Because the Endangerment Finding meets the EPA's definition of "influential information," information having "a clear and substantial impact (i.e., potential change or effect) on important public policies or private sector decisions," *id.* at 19, the Endangerment Finding is "subject to a higher degree of quality (for example, transparency about data and methods) than

[other] information.” *Id.* at 20. The substance of the information underlying the Endangerment Finding must be “accurate, reliable and unbiased,” requiring use of “the best available science and supporting studies conducted in accordance with sound and objective scientific practices, including, when available, peer reviewed science and supporting studies; and (ii) data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies the use of the data).” *Id.* at 22.

As demonstrated in detail in the petitions for reconsideration, however, the IPCC reports frequently relied on unscientific “studies” that were prepared by advocacy groups such as the World Wildlife Fund (WWF), Greenpeace, and other similar organizations. This led, among other numerous examples, to the IPCC having to retract its embarrassing assertion, which was relied on in the *Endangerment Finding*, 74 Fed. Reg. at 66,523; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 57 of 695. *TSD*, J.A. Vol. VII, Doc. 1339079 (Oct. 31, 2011), p. 202 of 395; *RTC*, J.A. Vol. X, Doc. 1339079 (Oct. 31, 2011), p. 210 of 403, that Himalyan glaciers would melt by 2035, which turned out to be based on faulty information from an unpublished, unpeered review study by an advocacy organization. J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), p. 448-51 of 649. The IPCC had been aware of the data problems in the study but had decided to rely on it anyway for public relations impact. The coordinating Lead Author of that section of the IPCC report, Dr. Murai Lai, has stated:

It related to several countries in this region and their water sources. *We thought that if we can highlight it, it will impact policy-makers and politicians and encourage them to take some concrete action.* It had importance for the region, so we thought we should put it in.

David Rose, “Glacier Scientist: I knew data hadn’t been verified,” UK Daily Mail (Jan. 24, 2010), <http://www.dailymail.co.uk/news/article-1245636/Glacier-scientists-says-knew-data-verified.html>.

This degree of goal-oriented “science” ought not, but can be expected to, inform decisions of momentous public policy import where an agency fails to follow its procedures, as the EPA did prior to the release of the Endangerment Finding TSD. *See* EPA Inspector General’s Report, *supra* at 28-29; *see also id.* at Executive Summary (reporting that the agency “did not meet all OMB requirements for peer review of a highly influential scientific assessment primarily because the review results and the EPA’s response were not publicly reported, and because 1 of the 12 reviewers was an EPA employee.”). What is more, while the EPA told the Inspector General that it engaged in ex post review in response to the petitions for reconsideration, *id.* at 29, the Inspector General found the agency’s procedures for reliance on outside entities to be inadequate and recommended that it “establish minimum review and documentation requirements for assessing and accepting data from other organizations.” *Id.*

## **2. The EPA's reliance on IPCC reports undermined the Public's right to comment.**

The EPA's reliance on the "assessment literature" rendered the public's right to comment meaningless. But ex ante the agency did not think that much of a public comment period was necessary at all. While recognizing the enormous complexity of climate science: "very wide range of risks and harms that need to be considered," *Endangerment Finding*, 74 Fed. Reg. at 66,509; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 43 of 695, the EPA limited the comment period to a mere 60 days based in part on the agency's (mistaken and irrelevant) view that the public had had an opportunity to comment previously. *Id.* at 66,503; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 37 of 695.

There was another defect with the comment process. The EPA time and again responded to public comments on a particular scientific point by saying that the "assessment literature" had reached a different conclusion. The fundamental purpose of the comment process, however, is to ensure that a "genuine interchange" is carried on between the agency and the public, where the agency makes available all the underlying studies and data and the public is able to provide "meaningful commentary." *Conn. Light & Power v. NRC*, 673 F.2d 525, 530-31 (D.C. Cir. 1982). No such interchange occurs when the Administrator dismisses public comments on the ground that a third party disagrees with them. Furthermore the EPA's reflexive citation to the "assessment literature," some of which was not part of the TSD, undermined the

substantive credibility of the agency's findings. *See Chamber of Commerce v. SEC*, 443 F.3d 890, 900 (D.C. Cir. 2006) (“By requiring the ‘most critical factual material’ used by the agency be subjected to informed comment, the APA provides a procedural device to ensure that agency regulations are tested through exposure to public comment . . .”).

Finally, in the Endangerment Finding, the EPA justified its use of third-party synthesis and assessment reports as “allow[ing] EPA to rely on the best available science.” 74 Fed. Reg. at 66,511; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 45 of 695. Now, however, the EPA argues that it was entitled to deny reconsideration in part because other institutions found “no evidence of scientific misconduct or intentional data manipulation” by the climate researchers on whom the IPCC had so extensively relied. *RTP*, 75 Fed. Reg. at 49,558; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 84 of 695. Informal reconsideration without notice or comment based on a “no evidence of scientific misconduct or intentional data manipulation” standard is nowhere authorized by the Clean Air Act.

### **3. The EPA's reliance on IPCC reports prevented public transparency.**

Under § 6.3 of the EPA's IQA Guidelines, the Endangerment Finding, as “Influential Information,” was required to have “a higher degree of transparency regarding (1) the source of the data used, (2) the various assumptions employed, (3) the analytic methods applied, and (4) the statistical procedures

employed.” *IQA Guidelines* at 21. Climategate revealed the hollowness of the EPA’s claim that IPCC met this same level of transparency, as key IPCC authors routinely relied on their own studies while simultaneously refusing to disclose to other scientists the data underlying those studies. The United Kingdom House of Commons Science and Technology report cited by the EPA in denying reconsideration found an “unacceptable” “culture of withholding information – from those perceived by CRU to be hostile to global warming.” Parliament of the United Kingdom – Science & Technology Comm., *The Disclosure of climate data from the Climatic Research Unit at the University of East Anglia: Conclusions & Recommendations* ¶13 (Mar. 31, 2010), <http://www.publications.parliament.uk/pa/cm200910/cmselect/cmstech/387/38709.htm>. Another review panel report cited by the EPA found “a consistent pattern of failing to display the proper degree of openness.” *The Independent Climate Change E-mails Review: Findings* § 1.3(15) (July 2010), <http://www.cce-review.org/pdf/FINAL%20REPORT.pdf>. As stated by the President of the National Academy of Sciences in commenting on climategate, “[f]ailure to make research data and related information accessible not only impedes science, it also breeds conflicts.” Ralph J. Cicerone, *Editorial: Ensuring Integrity in Science*, 327 *Science* 624 (2010), <http://www.nasonline.org/about-nas/leadership/president/cicerone-editorial-science.pdf>. It is also completely at odds with the “high” level of transparency demanded by the *IQA Guidelines* in order to ensure the high quality of the EPA’s science.

**E. In Issuing the Endangerment Finding and in Denying Rehearing, the EPA Impermissibly Delegated its Statutory Authority to Outside Entities.**

The EPA violated the CAA when it delegated its judgment to outside groups. Congress empowered the EPA Administrator to decide whether, “*in his judgment,*” pollutants emitted from motor vehicles endanger public health and welfare. 42 U.S.C. § 7521(a)(1) (emphasis added). But rather than independently assessing the data as required by the CAA, the EPA impermissibly delegated that responsibility to outside organizations.

By its own admission, the EPA placed “primary and significant weight on the[] assessment reports” of the IPCC, the NRC, and the USGCRP in making the endangerment finding. *Endangerment Finding*, 74 Fed. Reg. at 66,511; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 45 of 695. And rather than assessing the actual scientific data, these reports served as the EPA’s “primary scientific and technical basis” for its endangerment decision. *Id.* at 66,510; *see also* J.A. Vol. VII, TSD Executive Summary, Doc. 1339079 (Oct. 31, 2011), p. 34 of 395 (explaining that the document’s data and conclusions “are primarily drawn from the assessment reports of the Intergovernmental Panel on Climate Change (IPCC), the U.S. Climate Change Science Program (CCSP), the U.S. Global Change Research Program (USGCRP), and the National Research Council (NRC)”); *RTC* at Resp. 1-5 (“We did not develop new science to support the finding, but rather relied primarily on the conclusions of the

major assessment reports of USGCRP/CCSP, IPCC, and NRC and the evaluation of the public comments received.”); J.A. Vol. VII, Doc. 1339079 (Oct. 31, 2011), p. 256 of 394. However, to avoid an arbitrary decision, “the agency must examine the relevant data and articulate a satisfactory explanation for its action including a ‘rational connection between the facts found and the choice made.’” *Motor Vehicle Mfrs. Ass’n of the U.S., Inc. v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983) (emphasis added) (quoting *Burlington Truck Lines, Inc. v. United States*, 371 U.S. 156, 168 (1962)); see 42 U.S.C. § 7521(a)(1). The EPA failed to do so here.

Federal administrative agencies generally may not delegate their authority to outside parties. *U.S. Telecom Ass’n v. FCC*, 359 F.3d 554, 556 (D.C. Cir. 2004). An agency may look to outside groups for advice and policy recommendations, as the EPA did in proposed rulemakings, e.g., *Advance Notice of Proposed Rulemaking for Endangerment Finding*, 73 Fed. Reg. at 44,354 (July 30, 2008); J.A. Vol. I, Doc. 1339709 (Oct. 31, 2011), p. 122 of 695, but delegation is improper because “lines of accountability may blur, undermining an important democratic check on government decision-making.” *U.S. Telecom Ass’n*, 359 F.3d at 565-66, 568. Because outside sources do not necessarily “share the agency’s ‘national vision and perspective,’” the goals of the outside parties may be “inconsistent with those of the agency and the underlying statutory scheme.” *Id.* at 566 (quoting *Nat’l Park & Conservation Ass’n v. Stanton*, 54 F. Supp. 2d 7, 20 (D.D.C. 1999)).

The EPA's wrongful delegation in this case powerfully illustrates those dangers. The agency relied on the judgment of a number of outside groups, but the IPCC's Fourth Assessment Report was accorded special weight. See J.A. Vol. XI, Doc. 1339079 (Oct. 31, 2011), pp. 29 through 184 of 355. Not only did the EPA cite it more often than the others, but the USGCRP – another of EPA's major sources – also relied heavily on the IPCC Report for its “own” findings. See *Endangerment Finding*, 74 Fed. Reg. at 66,511 (noting that the “USGCRP incorporates a number of key findings from the [IPCC Report]” including “the attribution of observed climate change to human emissions of greenhouse gases, and the future projected scenarios of climate change for the global and regional scales”); J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 45 of 695. Despite the serious deficiencies of the IPCC process demonstrated in the reconsideration petitions and the fact that scientific data underlying the assessments is not in the administrative record, in violation of the CAA, see 42 U.S.C. § 7607(d)(3) (“All data, information, and documents . . . on which the proposed rule relies shall be included” in the rulemaking docket “on the date of publication of the proposed rule”), the EPA used the same assessments again to unilaterally reject reconsideration without notice or comment. 75 Fed. Reg. at 49,565-66; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), pp. 91-92 of 695; see *Nat'l Welfare Rights Org. v. Mathews*, 533 F.2d 637, 648 (D.C. Cir. 1976) (explaining that “judicial review is meaningless where the administrative record is insufficient to determine

whether the action is arbitrary and capricious”). In sum, the EPA’s delegation of its statutory duties was unreasonable and illegal.

**CONCLUSION**

Wherefore the petition should be granted and the Endangerment Finding reversed and remanded for further proceeding in accordance with law, including rehearing with rights of notice and comment.

Respectfully submitted,

KENNETH T. CUCCINELLI, II Attorney General of Virginia	PATRICIA L. WEST Chief Deputy Attorney General
E. DUNCAN GETCHELL, JR. Solicitor General of Virginia dgetchell@oag.state.va.us <i>Counsel of Record</i>	WESLEY G. RUSSELL, JR. Deputy Attorney General

Alexandra M. Walsh, Adam J. White, Jeffrey A. Lamken, Timothy K. Webster, Roger R. Martella, Neal J. Cabral, Theodore Hadzi-Antich, Ashley C. Parrish, Cynthia A.M. Stroman, Scott C. Oostdyk, Gordon R. Alphonso, Shannon L. Goessling, Edward A. Kazmarek, F. William Brownell, Norman W. Fichthorn, Henry V. Nickel, and Allison D. Wood. Paul D. Clement, Mark W. DeLaquil, Andrew M. Grossman, and David B. Rivin, Jr. entered appearances.

E. Duncan Getchell, Jr., Solicitor General, Office of the Attorney General for the Commonwealth of Virginia, argued the cause for State Petitioners Texas and Virginia on Denial of Reconsideration of the Endangerment Finding and State Petitioners and Supporting Intervenors on Endangerment Finding Delegation Issues. With him on the briefs were Kenneth T. Cuccinelli, II, Attorney General, Stephen R. McCullough, Senior Appellate Counsel, Charles E. James Jr., Chief Deputy Attorney General, and Wesley G. Russell, Jr., Deputy Attorney General.

Greg Abbott, Attorney General, Office of the Attorney General for the State of Texas, Bill Cobb, Deputy Attorney General for Civil Litigation, J. Reed Clay, Jr., Special Assistant and Senior Counsel to the Attorney General, Jonathan F. Mitchell, Solicitor General, Michael P. Murphy, Assistant Solicitor General, Luther Strange III, Attorney General, Office of the Attorney General for the State of Alabama, Pamela Jo Bondi, Attorney General, Office of the Attorney General for the State of Florida, Gregory F.

Before: SENTELLE, Chief Judge; ROGERS and TATEL, Circuit Judges.

Opinion for the Court filed PER CURIAM.

PER CURIAM:

Following the Supreme Court's decision in *Massachusetts v. EPA*, 549 U.S. 497, 127 S.Ct. 1438, 167 L.Ed.2d 248 (2007) – which clarified that greenhouse gases are an “air pollutant” subject to regulation under the Clean Air Act (CAA) – the Environmental Protection Agency promulgated a series of greenhouse gas-related rules. First, EPA issued an Endangerment Finding, in which it determined that greenhouse gases may “reasonably be anticipated to endanger public health or welfare.” *See* 42 U.S.C. § 7521(a)(1). Next, it issued the Tailpipe Rule, which set emission standards for cars and light trucks. Finally, EPA determined that the CAA requires major stationary sources of greenhouse

## App. 17

gases to obtain construction and operating permits. But because immediate regulation of all such sources would result in overwhelming permitting burdens on permitting authorities and sources, EPA issued the Timing and Tailoring Rules, in which it determined that only the largest stationary sources would initially be subject to permitting requirements.

Petitioners, various states and industry groups, challenge all these rules, arguing that they are based on improper constructions of the CAA and are otherwise arbitrary and capricious. But for the reasons set forth below, we conclude: 1) the Endangerment Finding and Tailpipe Rule are neither arbitrary nor capricious; 2) EPA's interpretation of the governing CAA provisions is unambiguously correct; and 3) no petitioner has standing to challenge the Timing and Tailoring Rules. We thus dismiss for lack of jurisdiction all petitions for review of the Timing and Tailoring Rules, and deny the remainder of the petitions.

**I.**

We begin with a brief primer on greenhouse gases. As their name suggests, when released into the atmosphere, these gases act “like the ceiling of a greenhouse, trapping solar energy and retarding the escape of reflected heat.” *Massachusetts v. EPA*, 549 U.S. at 505, 127 S.Ct. 1438. A wide variety of modern human activities result in greenhouse gas emissions; cars, power plants, and industrial sites all release

## App. 18

significant amounts of these heat-trapping gases. In recent decades “[a] well-documented rise in global temperatures has coincided with a significant increase in the concentration of [greenhouse gases] in the atmosphere.” *Id.* at 504-05, 127 S.Ct. 1438. Many scientists believe that mankind’s greenhouse gas emissions are driving this climate change. These scientists predict that global climate change will cause a host of deleterious consequences, including drought, increasingly severe weather events, and rising sea levels.

The genesis of this litigation came in 2007, when the Supreme Court held in *Massachusetts v. EPA* that greenhouse gases “unambiguous[ly]” may be regulated as an “air pollutant” under the Clean Air Act (“CAA”). *Id.* at 529, 127 S.Ct. 1438. Squarely rejecting the contention – then advanced by EPA – that “greenhouse gases cannot be ‘air pollutants’ within the meaning of the Act,” *id.* at 513, 127 S.Ct. 1438, the Court held that the CAA’s definition of “air pollutant” “embraces *all* airborne compounds of whatever stripe.” *Id.* at 529, 127 S.Ct. 1438 (emphasis added). Moreover, because the CAA requires EPA to establish motor-vehicle emission standards for “*any* air pollutant . . . which may reasonably be anticipated to endanger public health or welfare,” 42 U.S.C. § 7521(a)(1) (emphasis added), the Court held that EPA had a “statutory obligation” to regulate harmful greenhouse gases. *Id.* at 534, 127 S.Ct. 1438. “Under the clear terms of the Clean Air Act,” the Court concluded, “EPA can avoid taking further action only

## App. 19

if it determines that greenhouse gases do not contribute to climate change or if it provides some reasonable explanation as to why it cannot or will not exercise its discretion to determine whether they do.” *Id.* at 533, 127 S.Ct. 1438. The Court thus directed EPA to determine “whether sufficient information exists to make an endangerment finding” for greenhouse gases. *Id.* at 534, 127 S.Ct. 1438.

*Massachusetts v. EPA* spurred a cascading series of greenhouse gas-related rules and regulations. First, in direct response to the Supreme Court’s directive, EPA issued an Endangerment Finding for greenhouse gases. *Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act* (“Endangerment Finding”), 74 Fed. Reg. 66,496 (Dec. 15, 2009). The Endangerment Finding defined as a single “air pollutant” an “aggregate group of six long-lived and directly-emitted greenhouse gases” that are “well mixed” together in the atmosphere and cause global climate change: carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. *Id.* at 66,536-37. Following “common practice,” EPA measured the impact of these gases on a “carbon dioxide equivalent basis,” (CO<sub>2</sub>e) which is based on the gases’ “warming effect relative to carbon dioxide . . . over a specified timeframe.” *Id.* at 66,519. (Using the carbon dioxide equivalent equation, for example, a mixture of X amount of nitrous oxide and Y amount of sulfur hexafluoride is expressed as Z amount of CO<sub>2</sub>e). After compiling and

## App. 20

considering a considerable body of scientific evidence, EPA concluded that motor-vehicle emissions of these six well-mixed gases “contribute to the total greenhouse gas air pollution, and thus to the climate change problem, which is reasonably anticipated to endanger public health and welfare.” *Id.* at 66,499.

Next, and pursuant to the CAA’s requirement that EPA establish motor-vehicle emission standards for “any air pollutant . . . which may reasonably be anticipated to endanger public health or welfare,” 42 U.S.C. § 7521(a)(1), the agency promulgated its Tailpipe Rule for greenhouse gases. *Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards; Final Rule* (“Tailpipe Rule”), 75 Fed. Reg. 25,324 (May 7, 2010). Effective January 2, 2011, the Tailpipe Rule set greenhouse gas emission standards for cars and light trucks as part of a joint rulemaking with fuel economy standards issued by the National Highway Traffic Safety Administration (NHTSA). *Id.* at 25,326.

Under EPA’s longstanding interpretation of the CAA, the Tailpipe Rule automatically triggered regulation of stationary greenhouse gas emitters under two separate sections of the Act. The first, the Prevention of Significant Deterioration of Air Quality (PSD) program, requires state-issued construction permits for certain types of stationary sources – for example, iron and steel mill plants – if they have the potential to emit over 100 tons per year (tpy) of “any air pollutant.” *See* 42 U.S.C. §§ 7475; 7479(1). All other stationary sources are subject to PSD

## App. 21

permitting if they have the potential to emit over 250 tpy of “any air pollutant.” *Id.* § 7479(1). The second provision, Title V, requires state-issued operating permits for stationary sources that have the potential to emit at least 100 tpy of “any air pollutant.” *Id.* § 7602(j). EPA has long interpreted the phrase “any air pollutant” in both these provisions to mean any air pollutant that is regulated under the CAA. *See Requirements for Preparation, Adoption, and Submittal of Implementation Plans; Approval and Promulgation of Implementation Plans* (“1980 Implementation Plan Requirements”), 45 Fed. Reg. 52,676, 52,711 (Aug. 7, 1980) (PSD program); *Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule* (“Tailoring Rule”), 75 Fed. Reg. 31,514, 31,553-54 (June 3, 2010) (discussing history of Title V regulation and applicability). And once the Tailpipe Rule set motor-vehicle emission standards for greenhouse gases, they became a regulated pollutant under the Act, requiring PSD and Title V greenhouse permitting.

Acting pursuant to this longstanding interpretation of the PSD and Title V programs, EPA issued two rules phasing in stationary source greenhouse gas regulation. First, in the Timing Rule, EPA concluded that an air pollutant becomes “subject to regulation” under the Clean Air Act – and thus subject to PSD and Title V permitting – only once a regulation requiring control of that pollutant takes effect. *Reconsideration of Interpretation of Regulations That Determine Pollutants Covered by*

## App. 22

*Clean Air Act Permitting Programs* (“Timing Rule”), 75 Fed. Reg. 17,004 (Apr. 2, 2010). Therefore, EPA concluded, major stationary emitters of greenhouse gases would be subject to PSD and Title V permitting regulations on January 2, 2011 – the date on which the Tailpipe Rule became effective, and thus, the date when greenhouse gases first became regulated under the CAA. *Id.* at 17,019.

Next, EPA promulgated the Tailoring Rule. In the Tailoring Rule, EPA noted that greenhouse gases are emitted in far greater volumes than other pollutants. Indeed, millions of industrial, residential, and commercial sources exceed the 100/250 tpy statutory emissions threshold for CO<sub>2</sub>e. Tailoring Rule, 75 Fed. Reg. at 31,534-36. Immediately adding these sources to the PSD and Title V programs would, EPA predicted, result in tremendous costs to industry and state permitting authorities. *See id.* As a result, EPA announced that it was “relieving overwhelming permitting burdens that would, in the absence of this rule, fall on permitting authorities and sources.” *Id.* at 31,516. Departing from the CAA’s 100/250 tpy emissions threshold, the Tailoring Rule provided that only the largest sources – those exceeding 75,000 or 100,000 tpy CO<sub>2</sub>e, depending on the program and project – would initially be subject to greenhouse gas permitting. *Id.* at 31,523. (The Tailoring Rule further provided that regulated sources must also emit greenhouse gases at levels that exceed the 100/250 tpy emissions threshold on a *mass* basis. That is, they must emit over 100/250 tpy of actual pollutants, in

## App. 23

addition to exceeding the 75,000/100,000 tpy carbon dioxide equivalent. *Id.* at 31,523.)

A number of groups – including states and regulated industries – filed petitions for review of EPA’s greenhouse gas regulations, contending that the agency misconstrued the CAA and otherwise acted arbitrarily and capriciously. This appeal consolidates the petitions for review of the four aforementioned rules: the Endangerment Finding, the Tailpipe Rule, the Timing Rule, and the Tailoring Rule.

“The Clean Air Act empowers us to reverse the Administrator’s action in rulemaking if it is ‘arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with the law.’” *Med. Waste Inst. & Energy Recovery Council v. EPA*, 645 F.3d 420, 424 (D.C.Cir.2011) (quoting 42 U.S.C. § 7607(d)(9)(A)). Questions of statutory interpretation are governed by the familiar *Chevron* two-step: “First . . . if the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress.” *Chevron, U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 842-43, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). But “if the statute is silent or ambiguous with respect to the specific issue, the question for the court is whether the agency’s answer is based on a permissible construction of the statute.” *Id.* at 843, 104 S.Ct. 2778.

## App. 24

This opinion proceeds in several steps. Part II explains why the Endangerment Finding was neither arbitrary nor capricious, while Part III does the same for the Tailpipe Rule. Turning to stationary source regulation, Part IV examines whether any petitioners may timely challenge EPA's longstanding interpretation of the PSD statute. Because we conclude that they may, Part V addresses the merits of their statutory arguments, and explains why EPA's interpretation of the CAA was compelled by the statute. Next, Part VI explains why petitioners lack standing to challenge the Timing and Tailoring Rules themselves. Finally, Part VII disposes of several arguments that have nothing to do with the rules under review, and thus are not properly before us.

**II.**

We turn first to State and Industry Petitioners' challenges to the Endangerment Finding, the first of the series of rules EPA issued after the Supreme Court remanded *Massachusetts v. EPA*. In the decision ordering the remand, the Supreme Court held that EPA had failed in its statutory obligations when it "offered no reasoned explanation for its refusal to decide whether greenhouse gases cause or contribute to climate change." *Massachusetts v. EPA*, 549 U.S. at 534, 127 S.Ct. 1438. On remand, EPA compiled a substantial scientific record, which is before us in the present review, and determined that "greenhouse gases in the atmosphere may reasonably be anticipated both to endanger public health and to

## App. 25

endanger public welfare.” Endangerment Finding, 74 Fed. Reg. at 66,497. EPA went on to find that motor-vehicle emissions of greenhouse gases “contribute to the total greenhouse gas air pollution, and thus to the climate change problem, which is reasonably anticipated to endanger public health and welfare.” *Id.* at 66,499.

State and Industry Petitioners challenge several aspects of EPA’s decision, including (1) EPA’s interpretation of CAA § 202(a)(1), which sets out the endangerment-finding standard; (2) the adequacy of the scientific record supporting the Endangerment Finding; (3) EPA’s decision not to “quantify” the risk of endangerment to public health or welfare created by climate change; (4) EPA’s choice to define the “air pollutant” at issue as an aggregate of six greenhouse gases; (5) EPA’s failure to consult its Science Advisory Board before issuing the Endangerment Finding; and (6) EPA’s denial of all petitions for reconsideration of the Endangerment Finding. We ultimately conclude that the Endangerment Finding is consistent with *Massachusetts v. EPA* and the text and structure of the CAA, and is adequately supported by the administrative record.

**A.**

Industry Petitioners contend that EPA improperly interpreted CAA § 202(a)(1) as restricting the Endangerment Finding to a science-based judgment devoid of considerations of policy concerns

## App. 26

and regulatory consequences. They assert that CAA § 202(a)(1) requires EPA to consider, *e.g.*, the benefits of activities that require greenhouse gas emissions, the effectiveness of emissions regulation triggered by the Endangerment Finding, and the potential for societal adaptation to or mitigation of climate change. They maintain that eschewing those considerations also made the Endangerment Finding arbitrary and capricious.

These contentions are foreclosed by the language of the statute and the Supreme Court's decision in *Massachusetts v. EPA*. Section 202(a) of the CAA states in relevant part that EPA's Administrator

shall by regulation prescribe (and from time to time revise) in accordance with the provisions of this section, standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare.

42 U.S.C. § 7521(a)(1). This language requires that the endangerment evaluation “relate to whether an air pollutant ‘cause[s], or contribute[s] to, air pollution which may reasonably be anticipated to endanger public health or welfare.’” *Massachusetts v. EPA*, 549 U.S. at 532-33, 127 S.Ct. 1438. At bottom, § 202(a)(1) requires EPA to answer only two questions: whether particular “air pollution” – here,

## App. 27

greenhouse gases – “may reasonably be anticipated to endanger public health or welfare,” and whether motor-vehicle emissions “cause, or contribute to” that endangerment.

These questions require a “scientific judgment” about the potential risks greenhouse gas emissions pose to public health or welfare – not policy discussions. *Massachusetts v. EPA*, 549 U.S. at 534, 127 S.Ct. 1438. In *Massachusetts v. EPA*, the Supreme Court rebuffed an attempt by EPA itself to inject considerations of policy into its decision. At the time, EPA had “offered a laundry list of reasons not to regulate” greenhouse gases, including

that a number of voluntary Executive Branch programs already provide an effective response to the threat of global warming, that regulating greenhouse gases might impair the President’s ability to negotiate with “key developing nations” to reduce emissions, and that curtailing motor-vehicle emissions would reflect “an inefficient, piecemeal approach to address the climate change issue.”

*Id.* at 533, 127 S.Ct. 1438 (citations omitted). The Court noted that “these policy judgments . . . have nothing to do with whether greenhouse gas emissions contribute to climate change. Still less do they amount to a reasoned justification for declining to form a scientific judgment.” *Id.* at 533-34, 127 S.Ct. 1438. In the Court’s view, EPA’s policy-based explanations contained “no reasoned explanation for

## App. 28

[EPA's] refusal to decide" the key part of the endangerment inquiry: "whether greenhouse gases cause or contribute to climate change." *Id.* at 534, 127 S.Ct. 1438.

As in *Massachusetts v. EPA*, a "laundry list of reasons not to regulate" simply has "nothing to do with whether greenhouse gas emissions contribute to climate change." *Id.* at 533-34, 127 S.Ct. 1438. The additional exercises State and Industry Petitioners would have EPA undertake – *e.g.*, performing a cost-benefit analysis for greenhouse gases, gauging the effectiveness of whatever emission standards EPA would enact to limit greenhouse gases, and predicting society's adaptive response to the dangers or harms caused by climate change – do not inform the "scientific judgment" that § 202(a)(1) requires of EPA. Instead of focusing on the question whether greenhouse gas emissions may reasonably be anticipated to endanger public health or welfare, the factors State and Industry Petitioners put forth only address what might happen were EPA to answer that question in the affirmative. As EPA stated in the Endangerment Finding, such inquiries "muddle the rather straightforward scientific judgment about whether there may be endangerment by throwing the potential impact of responding to the danger into the initial question." 74 Fed. Reg. at 66,515. To be sure, the subsection following § 202(a)(1), § 202(a)(2), requires that EPA address limited questions about the cost of compliance with new emission standards and the availability of technology for meeting those

## App. 29

standards, *see infra* Part III, but these judgments are not part of the § 202(a)(1) endangerment inquiry. The Supreme Court made clear in *Massachusetts v. EPA* that it was not addressing the question “whether policy concerns can inform EPA’s actions in the event that it makes such a finding,” 549 U.S. at 534-35, 127 S.Ct. 1438, but that policy concerns were not part of the calculus for the determination of the endangerment finding in the first instance. The Supreme Court emphasized that it was holding “that EPA must ground its reasons for action or inaction in the statute.” *Id.* at 535, 127 S.Ct. 1438. The statute speaks in terms of endangerment, not in terms of policy, and EPA has complied with the statute.

State and Industry Petitioners insist that because statutes should be interpreted to avoid absurd results, EPA should have considered at least the “absurd” consequences that would follow from an endangerment finding for greenhouse gases. Specifically: having made an endangerment finding, EPA will proceed to promulgate emission standards under § 202(a)(1). Issuing those standards triggers regulation – under EPA’s PSD and Title V programs – of stationary sources that emit greenhouse gases at levels above longstanding statutory thresholds. Because greenhouse gases are emitted in much higher volumes than other air pollutants, hundreds of thousands of small stationary sources would exceed those thresholds. This would subject those sources to PSD and Title V permitting requirements despite what Petitioners claim was Congress’s clear intent

## App. 30

that the requirements apply only to large industrial sources. Petitioners assert that even EPA believed such overbroad regulation to be an absurd result, which it attempted to rectify by adopting the Tailoring Rule to raise the statutory thresholds, *see infra* Part VI.

However “absurd” Petitioners consider this consequence, though, it is still irrelevant to the endangerment inquiry. That EPA adjusted the statutory thresholds to accommodate regulation of greenhouse gases emitted by stationary sources may indicate that the CAA is a regulatory scheme less-than-perfectly tailored to dealing with greenhouse gases. But the Supreme Court has already held that EPA indeed wields the authority to regulate greenhouse gases under the CAA. *See Massachusetts v. EPA*. The plain language of § 202(a)(1) of that Act does not leave room for EPA to consider as part of the endangerment inquiry the stationary-source regulation triggered by an endangerment finding, even if the degree of regulation triggered might at a later stage be characterized as “absurd.”

**B.**

State and Industry Petitioners next challenge the adequacy of the scientific record underlying the Endangerment Finding, objecting to both the type of evidence upon which EPA relied and EPA’s decision to make an Endangerment Finding in light of what

## App. 31

Industry Petitioners view as significant scientific uncertainty. Neither objection has merit.

## 1.

As an initial matter, State and Industry Petitioners question EPA's reliance on "major assessments" addressing greenhouse gases and climate change issued by the Intergovernmental Panel on Climate Change (IPCC), the U.S. Global Climate Research Program (USGCRP), and the National Research Council (NRC). Endangerment Finding, 74 Fed. Reg. at 66,510-11. These peer-reviewed assessments synthesized thousands of individual studies on various aspects of greenhouse gases and climate change and drew "overarching conclusions" about the state of the science in this field. *Id.* at 66,511. The assessments provide data and information on, *inter alia*, "the amount of greenhouse gases being emitted by human activities"; their continued accumulation in the atmosphere; the resulting observed changes to Earth's energy balance, temperature and climate at global and regional levels, and other "climate-sensitive sectors and systems of the human and natural environment"; the extent to which these changes "can be attributed to human-induced buildup of atmospheric greenhouse gases"; "future projected climate change"; and "projected risks and impacts to human health, society and the environment." *Id.* at 66,510-11.

## App. 32

State and Industry Petitioners assert that EPA improperly “delegated” its judgment to the IPCC, USGCRP, and NRC by relying on these assessments of climate-change science. See *U.S. Telecom Ass’n v. FCC*, 359 F.3d 554, 566 (D.C.Cir.2004). This argument is little more than a semantic trick. EPA did not delegate, explicitly or otherwise, any decision-making to any of those entities. EPA simply did here what it and other decision-makers often must do to make a science-based judgment: it sought out and reviewed existing scientific evidence to determine whether a particular finding was warranted. It makes no difference that much of the scientific evidence in large part consisted of “syntheses” of individual studies and research. Even individual studies and research papers often synthesize past work in an area and then build upon it. This is how science works. EPA is not required to re-prove the existence of the atom every time it approaches a scientific question.

Moreover, it appears from the record that EPA used the assessment reports not as substitutes for its own judgment but as evidence upon which it relied to make that judgment. EPA evaluated the processes used to develop the various assessment reports, reviewed their contents, and considered the depth of the scientific consensus the reports represented. Based on these evaluations, EPA determined the assessments represented the best source material to use in deciding whether greenhouse gas emissions may be reasonably anticipated to endanger public

## App. 33

health or welfare. Endangerment Finding, 74 Fed. Reg. at 66,510-11. It then reviewed those reports along with comments relevant to the scientific considerations involved to determine whether the evidence warranted an endangerment finding for greenhouse gases as it was required to do under the Supreme Court's mandate in *Massachusetts v. EPA*.

**2.**

Industry Petitioners also assert that the scientific evidence does not adequately support the Endangerment Finding. As we have stated before in reviewing the science-based decisions of agencies such as EPA, “[a]lthough we perform a searching and careful inquiry into the facts underlying the agency’s decisions, we will presume the validity of agency action as long as a rational basis for it is presented.” *Am. Farm Bureau Fed’n v. EPA*, 559 F.3d 512, 519 (D.C.Cir.2009) (internal quotation marks omitted). In so doing, “we give an extreme degree of deference to the agency when it is evaluating scientific data within its technical expertise.” *Id.* (internal quotation marks omitted).

The body of scientific evidence marshaled by EPA in support of the Endangerment Finding is substantial. EPA’s scientific evidence of record included support for the proposition that greenhouse gases trap heat on earth that would otherwise dissipate into space; that this “greenhouse effect” warms the climate; that human activity is

## App. 34

contributing to increased atmospheric levels of greenhouse gases; and that the climate system is warming.

Based on this scientific record, EPA made the linchpin finding: in its judgment, the “root cause” of the recently observed climate change is “very likely” the observed increase in anthropogenic greenhouse gas emissions. Endangerment Finding, 74 Fed. Reg. at 66,518. EPA found support for this finding in three lines of evidence. First, it drew upon our “basic physical understanding” of the impacts of various natural and manmade changes on the climate system. For instance, EPA relied on evidence that the past half-century of warming has occurred at a time when natural forces such as solar and volcanic activity likely would have produced cooling. Endangerment Finding, Response to Comments (RTC) Vol. 3, at 20. Other evidence supports EPA’s conclusion that the observed warming pattern – warming of the bottommost layer of the atmosphere and cooling immediately above it – is consistent with greenhouse-gas causation. *Id.*

EPA further relied upon evidence of historical estimates of past climate change, supporting EPA’s conclusion that global temperatures over the last half-century are unusual. Endangerment Finding, 74 Fed. Reg. at 66,518. Scientific studies upon which EPA relied place high confidence in the assertion that global mean surface temperatures over the last few decades are higher than at any time in the last four centuries. Technical Support Document for the

## App. 35

Endangerment Finding (TSD), at 31. These studies also show, albeit with significant uncertainty, that temperatures at many individual locations were higher over the last twenty-five years than during any period of comparable length since 900 A.D. *Id.*

For its third line of evidence that anthropogenic emissions of greenhouse gases spurred the perceived warming trend, EPA turned to computer-based climate-model simulations. Scientists have used global climate models built on basic principles of physics and scientific knowledge about the climate to try to simulate the recent climate change. These models have only been able to replicate the observed warming by including anthropogenic emissions of greenhouse gases in the simulations. Endangerment Finding, 74 Fed. Reg. at 66,523.

To recap, EPA had before it substantial record evidence that anthropogenic emissions of greenhouse gases “very likely” caused warming of the climate over the last several decades. EPA further had evidence of current and future effects of this warming on public health and welfare. Relying again upon substantial scientific evidence, EPA determined that anthropogenically induced climate change threatens both public health and public welfare. It found that extreme weather events, changes in air quality, increases in food-and water-borne pathogens, and increases in temperatures are likely to have adverse health effects. *Id.* at 66,497-98. The record also supports EPA’s conclusion that climate change endangers human welfare by creating risk to food

## App. 36

production and agriculture, forestry, energy, infrastructure, ecosystems, and wildlife. Substantial evidence further supported EPA's conclusion that the warming resulting from the greenhouse gas emissions could be expected to create risks to water resources and in general to coastal areas as a result of expected increase in sea level. *Id.* at 66,498. Finally, EPA determined from substantial evidence that motor-vehicle emissions of greenhouse gases contribute to climate change and thus to the endangerment of public health and welfare.

Industry Petitioners do not find fault with much of the substantial record EPA amassed in support of the Endangerment Finding. Rather, they contend that the record evidences too much uncertainty to support that judgment. But the existence of some uncertainty does not, without more, warrant invalidation of an endangerment finding. If a statute is "precautionary in nature" and "designed to protect the public health," and the relevant evidence is "difficult to come by, uncertain, or conflicting because it is on the frontiers of scientific knowledge," EPA need not provide "rigorous step-by-step proof of cause and effect" to support an endangerment finding. *Ethyl Corp. v. EPA*, 541 F.2d 1, 28 (D.C.Cir.1976). As we have stated before, "Awaiting certainty will often allow for only reactive, not preventive, regulation." *Id.* at 25.

Congress did not restrict EPA to remedial regulation when it enacted CAA § 202(a). That section mandates that EPA promulgate new emission

## App. 37

standards if it determines that the air pollution at issue “may reasonably be anticipated to endanger public health or welfare.” 42 U.S.C. § 7521(a)(1). This language requires a precautionary, forward-looking scientific judgment about the risks of a particular air pollutant, consistent with the CAA’s “precautionary and preventive orientation.” *Lead Indus. Ass’n, Inc. v. EPA*, 647 F.2d 1130, 1155 (D.C.Cir.1980). Requiring that EPA find “certain” endangerment of public health or welfare before regulating greenhouse gases would effectively prevent EPA from doing the job Congress gave it in § 202(a) – utilizing emission standards to prevent reasonably anticipated endangerment from maturing into concrete harm. *Cf. id.* (“[R]equiring EPA to wait until it can conclusively demonstrate that a particular effect is adverse to health before it acts is inconsistent with both the [CAA]’s precautionary and preventive orientation and the nature of the Administrator’s statutory responsibilities. Congress provided that the Administrator is to use his judgment in setting air quality standards precisely to permit him to act in the face of uncertainty.”).

In *Massachusetts v. EPA* the Supreme Court confirmed that EPA may make an endangerment finding despite lingering scientific uncertainty. Indeed, the Court held that the existence of “some residual uncertainty” did not excuse EPA’s decision to decline to regulate greenhouse gases. *Massachusetts v. EPA*, 549 U.S. at 534, 127 S.Ct. 1438. To avoid regulating emissions of greenhouse gases, EPA would

## App. 38

need to show “scientific uncertainty . . . so profound that it precludes EPA from making a reasoned judgment as to whether greenhouse gases contribute to global warming.” *Id.* Clearly, then, EPA may issue an endangerment finding even while the scientific record still contains at least “some residual uncertainty.” Industry Petitioners have shown no more than that.

In the end, Petitioners are asking us to re-weigh the scientific evidence before EPA and reach our own conclusion. This is not our role. As with other reviews of administrative proceedings, we do not determine the convincing force of evidence, nor the conclusion it should support, but only whether the conclusion reached by EPA is supported by substantial evidence when considered on the record as a whole. *See, e.g., New York v. EPA*, 413 F.3d 3, 30 (D.C.Cir.2005). When EPA evaluates scientific evidence in its bailiwick, we ask only that it take the scientific record into account “in a rational manner.” *Am. Petroleum Inst. v. Costle*, 665 F.2d 1176, 1187 (D.C.Cir.1981). Industry Petitioners have not shown that EPA failed to do so here.

**C.**

State Petitioners, here led by Texas, contend that the Endangerment Finding is arbitrary and capricious because EPA did not “define,” “measure,” or “quantify” either the atmospheric concentration at which greenhouse gases endanger public health or

## App. 39

welfare, the rate or type of climate change that it anticipates will endanger public health or welfare, or the risks or impacts of climate change. According to Texas, without defining these thresholds and distinguishing “safe” climate change from climate change that endangers, EPA’s Endangerment Finding is just a “subjective conviction.”

It is true that EPA did not provide a quantitative threshold at which greenhouse gases or climate change will endanger or cause certain impacts to public health or welfare. The text of CAA § 202(a)(1) does not require that EPA set a precise numerical value as part of an endangerment finding. Quite the opposite; the § 202(a)(1) inquiry necessarily entails a case-by-case, sliding-scale approach to endangerment because “[d]anger . . . is not set by a fixed probability of harm, but rather is composed of reciprocal elements of risk and harm, or probability and severity.” *Ethyl*, 541 F.2d at 18. EPA need not establish a minimum threshold of risk or harm before determining whether an air pollutant endangers. It may base an endangerment finding on “a lesser risk of greater harm . . . or a greater risk of lesser harm” or any combination in between. *Id.*

*Ethyl* is instructive. There, EPA made an endangerment finding for airborne lead. During its endangerment inquiry, EPA initially tried to do what Texas asks of it here: find a specific concentration of the air pollutant below which it would be considered “safe” and above which it would endanger public health. *Id.* at 56. However, EPA abandoned that

## App. 40

approach because it failed to account for “the wide variability of dietary lead intake” and lacked predictive value. EPA substituted a “more qualitative” approach, which relied on “predictions based on uncertain data” along with clinical studies. *Id.* at 56-57. This court upheld the endangerment finding that used that qualitative approach despite the lack of a specific endangerment “threshold.”

In its essence, Texas’s call for quantification of the endangerment is no more than a specialized version of Industry Petitioners’ claim that the scientific record contains too much uncertainty to find endangerment. EPA relied on a substantial record of empirical data and scientific evidence, making many specific and often quantitative findings regarding the impacts of greenhouse gases on climate change and the effects of climate change on public health and welfare. Its failure to distill this ocean of evidence into a specific number at which greenhouse gases cause “dangerous” climate change is a function of the precautionary thrust of the CAA and the multivariate and sometimes uncertain nature of climate science, not a sign of arbitrary or capricious decision-making.

**D.**

EPA defined both the “air pollution” and the “air pollutant” that are the subject of the Endangerment Finding as an aggregate of six greenhouse gases, which EPA called “well mixed greenhouse gases”: carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide

## App. 41

(N<sub>2</sub>O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF<sub>6</sub>). Industry Petitioners argue that EPA's decision to include PFCs and SF<sub>6</sub> in this group of greenhouse gases was arbitrary and capricious primarily because motor vehicles generally do not emit these two gases.

No petitioner for review of the Endangerment Finding has established standing to make this argument. Industry Petitioners concede that EPA's decision to regulate PFCs and SF<sub>6</sub> along with the other four greenhouse gases does not injure any motor-vehicle-related petitioner. Nor has any non-motor-vehicle-related petitioner shown an injury-in-fact resulting from EPA's inclusion of these two gases in the six-gas amalgam of "well-mixed greenhouse gases." At oral argument, Industry Petitioners asserted for the first time that certain utility companies – members of associations that petitioned for review of the Endangerment Finding – own utility transformers that emit SF<sub>6</sub>. However, they never demonstrated or even definitively asserted that any of these companies would not be subject to regulation or permitting requirements but for EPA's decision to include SF<sub>6</sub> as part of the "well-mixed greenhouse gases" that are the subject of the Endangerment Finding. *See Sierra Club v. EPA*, 292 F.3d 895, 898-900 (D.C.Cir.2002) (requiring that a petitioner seeking review of agency action demonstrate standing by affidavit or other evidence if standing is not "self-evident" from the administrative record). Absent a petitioner with standing to challenge EPA's inclusion

## App. 42

of PFCs and SF<sub>6</sub> in the “air pollution” at issue, this court lacks jurisdiction to address the merits of Industry Petitioners’ contention.

**E.**

EPA did not submit the Endangerment Finding for review by its Science Advisory Board (SAB). Industry Petitioners claim that EPA’s failure to do so violates its mandate to “make available” to the SAB “any proposed criteria document, standard, limitation, or regulation under the Clean Air Act” at the time it provides the same “to any other Federal agency for formal review and comment.” 42 U.S.C. § 4365(c)(1); *see Am. Petroleum Inst.*, 665 F.2d at 1188.

To begin with, it is not clear that EPA provided the Endangerment Finding “to any other Federal agency for formal review and comment,” which triggers this duty to submit a regulation to the SAB. EPA only submitted a draft of the Endangerment Finding to the Office of Information and Regulatory Affairs pursuant to Executive Order 12,866. EPA contends that this was merely an *informal* review process, not “formal review and comment” – at least when compared with a statutory review-and-comment requirement in which other agencies are given the opportunity to provide written comments about the impacts of a proposed regulation on the reviewing agency’s universe of responsibility. *See, e.g.*,

## App. 43

49 U.S.C. § 32902(j). Industry Petitioners failed to respond to this contention.

In any event, even if EPA violated its mandate by failing to submit the Endangerment Finding to the SAB, Industry Petitioners have not shown that this error was “of such central relevance to the rule that there is a substantial likelihood that the rule would have been significantly changed if such errors had not been made.” 42 U.S.C. § 7607(d)(8); *see Am. Petroleum Inst.*, 665 F.2d at 1188-89 (applying this standard to EPA’s failure to submit an ozone standard to the SAB).

**F.**

Lastly, State Petitioners maintain that EPA erred by denying all ten petitions for reconsideration of the Endangerment Finding. Those petitions asserted that internal e-mails and documents released from the University of East Anglia’s Climate Research Unit (CRU) – a contributor to one of the global temperature records and to the IPCC’s assessment report – undermined the scientific evidence supporting the Endangerment Finding by calling into question whether the IPCC scientists adhered to “best science practices.” *EPA’s Denial of the Petitions To Reconsider the Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act* (“Reconsideration Denial”), 75 Fed. Reg. 49,556, 49,556-57 (Aug. 13, 2010). The petitions pointed to factual mistakes in

App. 44

the IPCC's assessment report resulting from the use of non-peer-reviewed studies and several scientific studies postdating the Endangerment Finding as evidence that the Endangerment Finding was flawed. *Id.*

On August 13, 2010, EPA issued a denial of the petitions for reconsideration accompanied by a 360-page response to petitions (RTP). *Id.* at 49,556. It determined that the petitions did not provide substantial support for the argument that the Endangerment Finding should be revised. According to EPA, the petitioners' claims based on the CRU documents were exaggerated, contradicted by other evidence, and not a material or reliable basis for questioning the credibility of the body of science at issue; two of the factual inaccuracies alleged in the petitions were in fact mistakes, but both were "tangential and minor" and did not change the key IPCC conclusions; and the new scientific studies raised by some petitions were either already considered by EPA, misinterpreted or misrepresented by petitioners, or put forth without acknowledging other new studies. *Id.* at 49,557-58.

1.

EPA is required to convene a proceeding for reconsideration of a rule if a party raising an objection to the rule

can demonstrate to the Administrator that it was impracticable to raise such objection

## App. 45

within such time or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule.

42 U.S.C. § 7607(d)(7)(B). For the purpose of determining whether to commence reconsideration of a rule, EPA considers an objection to be of “central relevance to the outcome” of that rule “if it provides substantial support for the argument that the regulation should be revised.” Reconsideration Denial, 75 Fed. Reg. at 49,561.

State Petitioners have not provided substantial support for their argument that the Endangerment Finding should be revised. State Petitioners point out that some studies the IPCC referenced in its assessment were not peer-reviewed, but they ignore the fact that (1) the IPCC assessment relied on around 18,000 studies that were peer-reviewed, and (2) the IPCC’s report development procedures expressly permitted the inclusion in the assessment of some non-peer-reviewed studies (“gray” literature).

Moreover, as EPA determined, the limited inaccurate information developed from the gray literature does not appear sufficient to undermine the substantial overall evidentiary support for the Endangerment Finding. State Petitioners have not, as they assert, uncovered a “pattern” of flawed science. Only two of the errors they point out seem to be errors at all, and EPA relied on neither in making the Endangerment Finding. First, as State

## App. 46

Petitioners assert, the IPCC misstated the percentage of the Netherlands that is below sea level, a statistic that was used for background information. However, the IPCC corrected the error, and EPA concluded that the error was “minor and had no impact,” and the Endangerment Finding did not refer to the statistic in any way. *Id.* at 49,576-77. Second, the IPCC acknowledged misstating the rate at which Himalayan glaciers are receding. EPA also did not rely on that projection in the Endangerment Finding. *Id.* at 49,577.

State Petitioners also contend that a new study contradicts EPA’s reliance on a projection of more violent storms in the future as a result of climate change, but the study they cite only concerns past trends, not projected future storms. The record shows that EPA considered the new studies on storm trends and concluded that the studies were consistent with the Endangerment Finding. In sum, State Petitioners have failed to show that these isolated “errors” provide substantial support for their argument to overturn the Endangerment Finding.

## 2.

State Petitioners’ further argument that EPA erred in denying reconsideration fails as well. These Petitioners claim EPA erred by failing to provide notice and comment before denying the petitions for reconsideration because EPA’s inclusion of a 360-page RTP amounted to a revision of the Endangerment

## App. 47

Finding, and revision of a rule requires notice and comment. The RTP, however, appears to be exactly what EPA called it – a response to the petitions for reconsideration, not a revision of the Endangerment Finding itself. EPA certainly may deny petitions for reconsideration of a rule and provide an explanation for that denial, including by providing support for that decision, without triggering a new round of notice and comment for the rule.

**III.**

State and Industry Petitioners contend that in promulgating the Tailpipe Rule, EPA relied on an improper interpretation of CAA § 202(a)(1), and was arbitrary and capricious in failing to justify and consider the cost impacts of its conclusion that the Rule triggers stationary-source regulation under the PSD and Title V provisions. They do not challenge the substantive standards of the Rule and focus principally on EPA's failure to consider the cost of stationary-source permitting requirements triggered by the Rule. Positing an absurd-consequences scenario, Petitioners maintain that if EPA had considered these costs it "would have been forced" to exclude carbon dioxide from the scope of the emission standards, to decline to issue greenhouse gas emission standards at all, or "to interpret the statute so as not to automatically trigger stationary source regulation." Industry Tailpipe Br. 17; *see also* Industry Tailpipe Reply Br. 8-9. Both the plain text of

App. 48

Section 202(a) and precedent refute Petitioners' contentions.

A.

Section 202(a)(1) provides:

The Administrator shall by regulation prescribe . . . standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare.

42 U.S.C. § 7521(a)(1). By employing the verb “shall,” Congress vested a non-discretionary duty in EPA. See *Sierra Club v. Jackson*, 648 F.3d 848, 856 (D.C.Cir.2011). The plain text of Section 202(a)(1) thus refutes Industry Petitioners' contention that EPA had discretion to defer issuance of motor-vehicle emission standards on the basis of stationary-source costs. Neither the adjacent text nor the statutory context otherwise condition this clear “language of command,” *id.* (citation omitted). Having made the Endangerment Finding pursuant to CAA § 202(a), 42 U.S.C. § 7521(a), EPA lacked discretion to defer promulgation of the Tailpipe Rule on the basis of its trigger of stationary-source permitting requirements under the PSD program and Title V.

The Supreme Court's decision in *Massachusetts v. EPA* compels this interpretation of Section 202(a)(1).

## App. 49

“If EPA makes a finding of endangerment, the Clean Air Act requires the [a]gency to regulate emissions of the deleterious pollutant from new motor vehicles.” 549 U.S. at 533, 127 S.Ct. 1438. “Under the clear terms of the Clean Air Act, EPA can avoid taking further action *only if* it determines that greenhouse gases do not contribute to climate change *or if* it provides some reasonable explanation as to why it cannot or will not exercise its discretion to determine whether they do.” *Id.* (emphasis added). In the Endangerment Finding, EPA determined that motor-vehicle emissions contribute to greenhouse gas emissions that, in turn, endanger the public health and welfare; the agency therefore was in no position to “avoid taking further action,” *id.*, by deferring promulgation of the Tailpipe Rule. Given the non-discretionary duty in Section 202(a)(1) and the limited flexibility available under Section 202(a)(2), which this court has held relates only to the motor-vehicle industry, *see infra* Part III.C, EPA had no statutory basis on which it could “ground [any] reasons for” further inaction, *Massachusetts v. EPA*, 549 U.S. at 535, 127 S.Ct. 1438.

The plain text of Section 202(a)(1) also negates Industry Petitioners’ contention that EPA had discretion to defer the Tailpipe Rule on the basis of NHTSA’s authority to regulate fuel economy. The Supreme Court dismissed a near-identical argument in *Massachusetts v. EPA*, rejecting the suggestion that EPA could decline to regulate carbon-dioxide emissions because the Department of Transportation

## App. 50

(DOT) had independent authority to set fuel-efficiency standards. *Id.* at 531-32, 127 S.Ct. 1438. “[T]hat DOT sets mileage standards in no way licenses EPA to shirk its environmental responsibilities,” because EPA’s duty to promulgate emission standards derives from “a statutory obligation wholly independent of DOT’s mandate to promote energy efficiency.” *Id.* at 532, 127 S.Ct. 1438. Just as EPA lacks authority to refuse to regulate on the grounds of NHTSA’s regulatory authority, EPA cannot defer regulation on that basis. A comparison of the relevant statutes bolsters this conclusion. *Compare* 49 U.S.C. § 32902(f) (“When deciding maximum feasible average fuel economy . . . , the Secretary of Transportation shall consider . . . the effect of other motor vehicle standards of the Government on fuel economy. . . .”), *with* 42 U.S.C. § 7521(a) (including no such direction). Nor, applying the same reasoning, was EPA required to treat NHTSA’s proposed regulations as establishing the baseline for the Tailpipe Rule. Furthermore, the Tailpipe Rule provides benefits above and beyond those resulting from NHTSA’s fuel-economy standards. *See, e.g.*, Tailpipe Rule, 75 Fed. Reg. at 25,490 (Table III.F.1-2), 25,636 (Table IV.G.1-4). Petitioners’ related contentions regarding the PSD permitting triggers are addressed in Part V.

**B.**

Turning to the APA, Industry Petitioners contend, relying on *Small Refiner Lead Phase-Down*

## App. 51

*Task Force v. EPA*, 705 F.2d 506, 525 (D.C.Cir.1983), and *Ethyl Corp. v. EPA*, 541 F.2d 1 (D.C.Cir.1976), that EPA failed both to justify the Tailpipe Rule in terms of the risk identified in the Endangerment Finding and to show that the proposed standards “would meaningfully mitigate the alleged endangerment,” Industry Tailpipe Br. 35. Instead, they maintain that EPA “separated these two integral steps,” *id.* at 11, and “concluded that it had no obligation to show . . . ‘the resulting emissions control strategy or strategies will have some significant degree of harm reduction or effectiveness in addressing the endangerment,’” *id.* at 11-12 (quoting Endangerment Finding, 74 Fed. Reg. at 66,508). These contentions fail.

Petitioners’ reliance on *Small Refiner*, 705 F.2d at 525, is misplaced; the court there laid out guidelines for assessing EPA’s discretion to set numerical standards and Petitioners do not challenge the substance of the emission standards. In *Ethyl*, 541 F.2d at 7, the court assessed the scope of EPA’s authority, under CAA § 211(c)(1), 42 U.S.C. § 1857f-6c(c)(1) (1970) (*currently codified as amended at 42 U.S.C. § 7545(c)(1)*), to regulate lead particulate in motor-vehicle emissions. The court rejected the argument that the regulations had to “be premised upon factual proof of actual harm,” *Ethyl*, 541 F.2d at 12, and instead deferred to EPA’s reasonable interpretation that regulations could be based on a “significant risk of harm,” *id.* at 13. Nothing in *Ethyl* implied that EPA’s authority to regulate was

## App. 52

conditioned on evidence of a particular level of mitigation; only a showing of significant *contribution* was required. EPA made such a determination in the Endangerment Finding, concluding that vehicle emissions are a significant contributor to domestic greenhouse gas emissions. *See, e.g.*, Endangerment Finding, 74 Fed. Reg. at 66,499. Further, in the preamble to the Tailpipe Rule itself, EPA found that the emission standards would result in meaningful mitigation of greenhouse gas emissions. For example, EPA estimated that the Rule would result in a reduction of about 960 million metric tons of CO<sub>2</sub>e emissions over the lifetime of the model year 2012-2016 vehicles affected by the new standards. *See* Tailpipe Rule, 75 Fed. Reg. at 25,488-90. Other precedent is likewise unhelpful to Petitioners: in *Chemical Manufacturers Association v. EPA*, 217 F.3d 861, 866 (D.C.Cir.2000), “nothing in the record” indicated that the challenged regulatory program would “directly or indirectly, further the Clean Air Act’s environmental goals,” whereas here the record is fulsome, *see supra* Part II.

**C.**

Petitioners also invoke Section 202(a)(2) as support for their contention that EPA must consider stationary-source costs in the Tailpipe Rule. Section 202(a)(2) provides:

Any regulation prescribed under paragraph (1) of this subsection . . . shall take effect

## App. 53

after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.

42 U.S.C. § 7521(a)(2). State Petitioners maintain the reference to compliance costs encompasses those experienced by stationary sources under the PSD program, while Industry Petitioners maintain stationary-source costs are a relevant factor in EPA's Section 202(a)(1) rulemaking. This court, however, has held that the Section 202(a)(2) reference to compliance costs encompasses only the cost to the motor-vehicle industry to come into compliance with the new emission standards, and does not mandate consideration of costs to other entities not directly subject to the proposed standards. *See Motor & Equip. Mfrs. Ass'n, Inc. v. EPA*, 627 F.2d 1095, 1118 (D.C.Cir.1979).

**D.**

Petitioners' remaining challenges to the Tailpipe Rule fail as well. In Part II, the court rejects the contention that the Tailpipe Rule fails due to flaws in the underlying Endangerment Finding. The record also refutes Industry Petitioners' suggestion that EPA "employed a shell game to avoid," Industry Tailpipe Reply Br. 9 (capitalization removed), responding to comments regarding stationary-source costs. Industry Tailpipe Br. 19-20; *see also* Industry Tailpipe Reply Br. 14-15. EPA adequately responded to "significant

## App. 54

comments,” 42 U.S.C. § 7607(d)(6)(B). *See, e.g.*, Tailpipe Rule, 75 Fed. Reg. at 25,401-02; Tailpipe Rule, Response to Comments at 7-65 to 7-69. And, assuming other statutory mandates provide a basis for judicial review, *see* Industry Tailpipe Br. 21-22 (listing mandates); *see, e.g.*, *Small Refiner*, 705 F.2d at 537-39, the record shows EPA’s compliance, *see* Tailpipe Rule, 75 Fed. Reg. at 25,539-42, and that EPA was not arbitrary and capricious by not considering stationary-source costs in its analyses. *See, e.g.*, *Michigan v. EPA*, 213 F.3d 663, 689 (D.C.Cir.2000); *Mid-Tex Elec. Coop., Inc. v. FERC*, 773 F.2d 327, 341-42 (D.C.Cir.1985). EPA’s economic impact assessment conducted pursuant to CAA § 317, 42 U.S.C. § 7617, does not provide grounds for granting the petitions because Petitioners’ contentions that EPA, “[i]n defiance of these requirements, . . . refused to estimate or even consider the costs of the [Tailpipe Rule] for stationary sources,” Industry Tailpipe Br. 22, are no more than another attempt to avoid the plain text of Section 202(a). *See also* 42 U.S.C. § 7617(e).

**IV.**

We turn next to the stationary source regulations. As noted *supra* in Part I, EPA’s interpretation of the CAA requires PSD and Title V permits for stationary sources whose potential emissions exceed statutory thresholds for *any* regulated pollutant – including greenhouse gases. Industry Petitioners now challenge EPA’s

## App. 55

longstanding interpretation of the scope of the permitting requirements for construction and modification of major emitting facilities under CAA Sections 165(a) and 169(1), 42 U.S.C. §§ 7475(a) & 7479(1) (“the PSD permitting triggers”). EPA maintains that this challenge is untimely because its interpretation of the PSD permitting triggers was set forth in its 1978, 1980, and 2002 Rules.

In 1978, EPA defined “major stationary source” as a source that emits major amounts of “any air pollutant regulated under the [CAA].” *Part 51 – Requirements for Preparation, Adoption, and Submittal of Implementation Plans; Prevention of Significant Air Quality Deterioration* (“1978 Implementation Plan Requirements”), 43 Fed. Reg. 26,380, 26,382 (June 19, 1978). Industry petitioners’ challenge to the 1978 Rule in *Alabama Power Co. v. Costle*, 636 F.2d 323 (D.C.Cir.1980) reflected their understanding that EPA would apply the PSD permitting program to both pollutants regulated pursuant to National Ambient Air Quality Standards (NAAQS) and other regulated pollutants. *See* Br. for Industry Pet’rs on Regulation of Pollutants other than Sulfur Dioxide and Particulates, No. 78-1006 (and consolidated cases) (Dec. 19, 1978) at 10, 12. In the 1980 Rule, EPA highlighted that to be subject to PSD review, a “source need only emit *any* pollutant in major amounts (i.e., the amounts specified in [CAA § 169(1)]) and be located in an area designated attainment or unclassifiable for that or any other pollutant.” 1980 Implementation Plan Requirements,

## App. 56

45 Fed. Reg. at 52,711 (emphasis in original). EPA explained that “any pollutant” meant “both criteria pollutants, for which national ambient air quality standards have been promulgated, and non-criteria pollutants subject to regulation under the Act.” *Id.* The same explanation of EPA’s interpretation appeared in the 2002 Rule. *Prevention of Significant Deterioration and Nonattainment New Source Review*, 67 Fed. Reg. 80,186, 80,239-40, 80,264 (Dec. 31, 2002).

CAA Section 307(b)(1) provides that a petition for review of any promulgated nationally applicable regulations:

“shall be filed within sixty days from the date notice of such promulgation . . . appears in the Federal Register, except that if such petition is based solely on grounds arising after such sixtieth day, then any petition for review . . . shall be filed within sixty days after such grounds arise.”

42 U.S.C. § 7607(b)(1). The exception encompasses the occurrence of an event that ripens a claim. See *Chamber of Commerce v. EPA*, 642 F.3d 192, 208 n. 14 (D.C.Cir.2011); *Am. Rd. & Transp. Builders Ass’n v. EPA*, 588 F.3d 1109, 1113 (D.C.Cir.2009). EPA acknowledges this precedent, but maintains that the “new grounds” exception is narrow and inapplicable because Industry Petitioners’ challenge to EPA’s interpretation of the PSD permitting triggers is based on legal arguments that were available during the normal judicial review

## App. 57

periods for the 1978, 1980, and 2002 Rules, and the “new ground” on which they now rely is a factual development, namely the regulation of greenhouse gases by the Tailpipe Rule. This is correct so far as it goes, but fails to demonstrate that Industry Petitioners’ challenge is untimely.

Industry Petitioners point out that two petitioners – the National Association of Home Builders (NAHB) and National Oilseed Processors Association (NOPA) – have newly ripened claims as a result of the Tailpipe Rule, which had the effect of expanding the PSD program to never-regulated sources:

- NAHB’s members construct single family homes, apartment buildings, and commercial buildings. According to the Vice President of Legal Affairs, prior to the Tailpipe Rule, no member of NAHB was a major source of any regulated pollutant, and thus no member was ever required to obtain a PSD permit. Decl. of Thomas J. Ward, Vice President of Legal Affairs for NAHB, ¶ 6 (May 10, 2011). Since the Tailpipe Rule rendered greenhouse gases a regulated pollutant, it is now certain that NAHB members that engage in construction projects that emit greenhouse gases in major amounts will have to obtain PSD permits sometime in the future. *Id.* at ¶¶ 7, 8. Indeed, EPA estimated that 6,397 multifamily buildings and 515 single family homes would trigger PSD review

## App. 58

annually absent the Tailoring Rule. *See Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule; Proposed Rule* (“Proposed Tailoring Rule”), 74 Fed. Reg. 55,292, 55,338 (Oct. 27, 2009).

- NOPA’s members are large companies that monthly produce millions of tons of vegetable meals and over a billion pounds of oils from oilseeds, such as soybeans. *See, e.g.,* NOPA, January 2012 Statistical Report (Feb. 14, 2012) *available at* [www.nopa.org](http://www.nopa.org) ; NOPA, February 2012 Statistical Report (Mar. 14, 2012), *available at* [www.nopa.org](http://www.nopa.org). According to the Executive Vice President of Regulatory Affairs, NOPA members operate facilities that are major sources of criteria pollutants and, for this reason, are subject to PSD review. Decl. of David C. Ailor, Executive Vice President of Regulatory Affairs of NOPA, ¶ 8 (May 10, 2011). Prior to promulgation of the Tailpipe Rule, no member’s facility had triggered PSD review by virtue of emissions of a non-criteria pollutant. *Id.* Now that greenhouse gases are a regulated non-criteria pollutant, many NOPA members will have to obtain PSD permits as result of their facilities’ emissions of a non-criteria pollutant. *Id.* at ¶¶ 9, 10. For some NOPA members this time is not far off because renovations to their facilities will result in greenhouse gas

## App. 59

emissions above the significance thresholds set by the Tailoring Rule, 75 Fed. Reg. at 31,567. *Id.* at ¶ 9.

Industry Petitioners thus maintain that because NAHB and NOPA filed their petitions on July 6, 2010, within 60 days of the promulgation of the Tailpipe Rule in the Federal Register on May 7, 2010, their challenges are timely.

“Ripeness, while often spoken of as a justiciability doctrine distinct from standing, in fact shares the constitutional requirement of standing that an injury in fact be certainly impending.” *Nat’l Treasury Emp. Union v. United States*, 101 F.3d 1423, 1427 (D.C.Cir.1996). During an initial review period, although purely legal claims may be justiciable and, thus, prudentially ripe, a party without an immediate or threatened injury lacks a constitutionally ripe claim. *See Baltimore Gas & Elec. Co. v. ICC*, 672 F.2d 146, 149 (D.C.Cir.1982). EPA’s position would conflate the constitutional and prudential considerations. Constitutional ripeness exists where a challenge “involve[s], at least in part, the existence of a live ‘Case or Controversy.’” *Duke Power Co. v. Carolina Envtl. Study Group*, 438 U.S. 59, 81, 98 S.Ct. 2620, 57 L.Ed.2d 595 (1978). Prudential considerations embodied in the ripeness doctrine relate to “the fitness of the issues for judicial decision and the hardship to the parties of withholding court consideration.” *Abbott Labs. v. Gardner*, 387 U.S. 136, 149, 87 S.Ct. 1507, 18 L.Ed.2d 681 (1967); *see Duke Power*, 438 U.S. at 81, 98 S.Ct. 2620. Standing to

## App. 60

challenge agency action exists where a petitioner can demonstrate an “injury in fact” that is fairly traceable to the challenged action and is likely to be redressed by a favorable judicial decision. *Reyblatt v. NRC*, 105 F.3d 715, 721 (D.C.Cir.1997) (citing *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560-61, 112 S.Ct. 2130, 119 L.Ed.2d 351 (1992)).

Had NAHB and NOPA challenged EPA’s interpretation of the PSD permitting triggers in 1978, 1980, or 2002, as EPA suggests, the court would have lacked jurisdiction under Article III of the Constitution because their alleged injuries were only speculative. See, e.g., *Occidental Permian Ltd. v. FERC*, 673 F.3d 1024, 1026 (D.C.Cir.2012); *Baltimore Gas & Elec. Co.*, 672 F.2d at 149. At that time, NAHB and NOPA could have shown only the possibility that their members would be injured if EPA were someday to determine that greenhouse gases were a pollutant that endangers human health and welfare and to adopt a rule regulating the greenhouse gas emissions of stationary sources. EPA does not challenge the assertions in the NAHB and NOPA declarations, which establish no such rule was promulgated prior to the Tailpipe Rule.

The NAHB and NOPA challenges ceased to be speculative when EPA promulgated the Tailpipe Rule regulating greenhouse gases and their challenges ripened because of the “substantial probability” of injury to them. See *Baltimore Gas & Elec. Co.*, 672 F.2d at 149. Although, as EPA notes, other Industry Petitioners’ challenges to EPA’s interpretation of the

## App. 61

PSD permitting triggers ripened decades earlier, this court has assured petitioners with unripe claims that “they will not be foreclosed from judicial review when the appropriate time comes,” *Grand Canyon Air Tour Coalition v. FAA*, 154 F.3d 455, 473 (D.C.Cir.1998), and that they “need not fear preclusion by reason of the 60-day stipulation [barring judicial review],” *Baltimore Gas & Elec. Co.*, 672 F.2d at 149-50. EPA expresses concern that allowing NAHB and NOPA to litigate their newly ripened claims will have far-reaching implications for finality of agency actions, but “the ripeness doctrine reflects a judgment that the disadvantages of a premature review that may prove too abstract or unnecessary ordinarily outweigh the additional costs of – even repetitive – . . . litigation.” *Ohio Forestry Ass’n, Inc. v. Sierra Club*, 523 U.S. 726, 735, 118 S.Ct. 1665, 140 L.Ed.2d 921 (1998). Some limitations inhere in doctrines such as *stare decisis* or the law-of-the-circuit doctrine, see *LaShawn A. v. Barry*, 87 F.3d 1389, 1395 (D.C.Cir.1996) (en banc).

Because petitioners NAHB and NOPA’s challenges to EPA’s PSD permitting triggers are newly ripened upon promulgation of the Tailpipe Rule and they filed petitions for review within sixty days thereof, their challenge to EPA’s interpretation of the PSD permitting triggers is timely.

## App. 62

## V.

Having established that Industry Petitioners' challenges to the PSD permitting triggers are both timely and ripe, we turn to the merits of their claims.

## A.

CAA Title I, Part C – entitled “Prevention of Significant Deterioration of Air Quality” (PSD) – largely focuses on the maintenance of national ambient air quality standards (NAAQS). Under the PSD program, EPA designates specific pollutants as “NAAQS pollutants” and sets national ambient air quality standards for those pollutants – requiring, for example, that the concentration of a given NAAQS pollutant may not exceed more than a certain number of parts per billion in the ambient air. *See generally* 42 U.S.C. § 7407. Thus far, EPA has designated six NAAQS pollutants: carbon monoxide, lead, nitrogen dioxide, ozone, particle pollution, and sulfur dioxide. None of these NAAQS pollutants is one of the six well-mixed greenhouse gases defined as an “air pollutant” in the Endangerment Finding. *See* Environmental Protection Agency, National Ambient Air Quality Standards, *available at* <http://www.epa.gov/air/criteria.html> (last visited May 3, 2012); Endangerment Finding, 74 Fed. Reg. 66,536-37.

Acting upon information submitted by states, EPA then determines whether each region of the country is in “attainment” or “nonattainment” with the promulgated air quality standard for each

## App. 63

NAAQS pollutant, or, alternatively, whether a region is “unclassifiable” for that pollutant. 42 U.S.C. § 7407(d)(1)(A). An area in attainment for a NAAQS pollutant is “any area . . . that meets the . . . ambient air quality standard for the pollutant.” *Id.* § 7407(d)(1)(A)(ii). By contrast, an area in nonattainment for a NAAQS pollutant is “any area that does not meet (or that contributes to ambient air quality in a nearby area that does not meet) the national . . . ambient air quality standard for the pollutant.” *Id.* § 7407(d)(1)(A)(i). Finally, an unclassifiable area is any area that “cannot be classified on the basis of available information as meeting or not meeting the . . . ambient air quality standard for the pollutant.” *Id.* § 7407(d)(1)(A)(iii).

The PSD program applies to those areas of the United States designated as in “attainment” or “unclassifiable” for any NAAQS pollutant, *see id.* § 7471, and requires permits for major emitting facilities embarking on construction or modification projects in those regions. *Id.* § 7475(a). A separate part of Title I of the CAA, Part D, governs the construction and modification of sources in nonattainment regions. *See id.* §§ 7501, 7502. It bears emphasis that attainment classifications are pollutant-specific: depending on the levels of each NAAQS pollutant in an area, a region can be designated as in attainment for NAAQS pollutant A, but in nonattainment for NAAQS pollutant B. If a major emitting facility in such a region wishes to undertake a construction or modification project, both

## App. 64

Part C and Part D's substantive requirements apply – that is, the source must obtain a general PSD permit and must also abide by Part D's more stringent, pollutant-specific requirements for any NAAQS pollutants for which the area is in nonattainment. *See* 1980 Implementation Plan Requirements, 45 Fed. Reg. at 52,711-12 (“where a source emits in major amounts a pollutant for which the area in which the source would locate is designated nonattainment, Part D NSR rather than Part C PSD review should apply to those pollutants.”) (emphasis added).

The key substantive provision in the PSD program is CAA Section 165(a), which establishes permitting requirements for “major emitting facilities” located in attainment or unclassifiable regions. In relevant part, section 165(a) provides that “[n]o major emitting facility . . . may be constructed in any area to which this part applies unless” the facility obtains a PSD permit. 42 U.S.C. § 7475(a). To obtain a PSD permit, a covered source must, among other things, install the “best available control technology [BACT] for each pollutant subject to regulation under [the CAA]” – regardless of whether that pollutant is a NAAQS pollutant. *Id.* § 7475(a)(4). Since the Tailpipe Rule became effective, EPA has regulated automotive greenhouse gas emissions under Title II of the Act. Thus, greenhouse gases are now a “pollutant subject to regulation under” the Act, and, as required by the statute itself, any “major emitting facility” covered by the PSD program must install BACT for greenhouse gases. *See id.*

## App. 65

The dispute in this case centers largely on the scope of the PSD program – specifically, which stationary sources count as “major emitting facilities” subject to regulation. CAA Section 169(1) defines “major emitting facility,” for the purposes of the PSD program, as a stationary source “which emit[s], or [has] the potential to emit” either 100 tons per year (tpy) or 250 tpy of “any air pollutant.” 42 U.S.C. § 7479(1) (emphasis added). As discussed *supra* in Part I, whether the 100 or 250 tpy threshold applies depends on the type of source. Certain listed categories of sources – for example, iron and steel mill plants – qualify as “major emitting facilities” if they have the potential to emit over 100 tons per year of “any air pollutant.” *Id.* All other stationary sources are “major emitting facilities” if they have the potential to emit over 250 tons per year of “any air pollutant.” *Id.*

As mentioned above, since 1978 EPA has interpreted the phrase “any air pollutant” in the definition of “major emitting facility” as “any air pollutant regulated under the CAA.” *See* 1978 Implementation Plan Requirements, 43 Fed. Reg. at 26,388, 26,403; *supra* Part IV. Thus, because the PSD program covers “major emitting facilities” in “any area to which this part applies,” 42 U.S.C. § 7475, EPA requires PSD permits for stationary sources that 1) are located in an area designated as attainment or unclassifiable for any NAAQS pollutant, and 2) emit 100/250 tpy of any regulated air pollutant, regardless of whether that pollutant is itself a NAAQS pollutant.

## App. 66

*See* 1980 Implementation Plan Requirements, 45 Fed. Reg. at 52,710-11. Consequently, once the Tailpipe Rule took effect and made greenhouse gases a regulated pollutant under Title II of the Act, the PSD program automatically applied to facilities emitting over 100/250 tpy of greenhouse gases. But because immediate regulation of greenhouse gas-emitting sources exceeding the 100/250 tpy benchmark would result in “overwhelming permitting burdens that would . . . fall on permitting authorities and sources,” Tailoring Rule, 75 Fed. Reg. at 31,516, EPA’s Tailoring Rule provided that, for now, sources are subject to PSD permitting requirements only if they have the potential to emit over 100,000 tpy of greenhouse gases (for a construction project) or 75,000 tpy (for a modification project). *Id.* at 31,523; *see also infra*, Part VI.

According to EPA, its longstanding interpretation of the phrase “any air pollutant” – “any air pollutant regulated under the CAA” – is compelled by the statute. *See id.* at 31,517. Disputing this point, Industry Petitioners argue that the phrase is capable of a far more circumscribed meaning and that EPA could have – and should have – avoided extending the PSD permitting program to major greenhouse gas emitters. For the reasons discussed below, we agree with EPA that its longstanding interpretation of the PSD permitting trigger is statutorily compelled. Thus, as EPA argues, it “must give effect to the unambiguously expressed intent of Congress,” *Chevron*, 467 U.S. at 843, 104 S.Ct. 2778, which here

## App. 67

requires PSD coverage for major emitters of any regulated air pollutant.

We begin our analysis, as we must, with the statute's plain language. *See Chevron*, 467 U.S. at 842, 104 S.Ct. 2778 (“First, always, is the question whether Congress has directly spoken to the precise question at issue.”). CAA Section 169(1) requires PSD permits for stationary sources emitting major amounts of “*any* air pollutant.” 42 U.S.C. § 7479(1) (emphasis added). On its face, “the word ‘any’ has an expansive meaning, that is, ‘one or some indiscriminately of whatever kind,’” *United States v. Gonzales*, 520 U.S. 1, 5, 117 S.Ct. 1032, 137 L.Ed.2d 132 (1997) (quoting WEBSTER’S THIRD NEW INTERNATIONAL DICTIONARY 97 (1976)). Greenhouse gases are indisputably an “air pollutant.” *See Massachusetts v. EPA*, 549 U.S. at 528-29, 127 S.Ct. 1438. Congress’s use of the broad, indiscriminate modifier “any” thus strongly suggests that the phrase “any air pollutant” encompasses greenhouse gases.

This plain-language reading of the statute is buttressed by the Supreme Court’s decision in *Massachusetts v. EPA*. There the Court determined that CAA’s overarching definition of “air pollutant” in Section 302(g) – which applies to all provisions of the Act, including the PSD program – unambiguously includes greenhouse gases. Noting that “[t]he Clean Air Act’s sweeping definition of ‘air pollutant’ includes ‘*any* air pollution agent or combination of such agents. . . . which is emitted into or otherwise enters

## App. 68

the ambient air,” the Court held that “the definition embraces *all* airborne compounds of whatever stripe, and underscores that intent through repeated use of the word ‘any.’” *Id.* at 529, 127 S.Ct. 1438 (quoting 42 U.S.C. § 7602(g)) (second and third emphases added). Crucially for purposes of the issue before us, the Court concluded that “[t]he statute is unambiguous.” *Id.*

Thus, we are faced with a statutory term – “air pollutant” – that the Supreme Court has determined unambiguously encompasses greenhouse gases. This phrase is preceded by the expansive term “any,” a word the Court held “underscores” Congress’s intent to include “all” air pollutants “of whatever stripe.” *See id.* Absent some compelling reason to think otherwise, “‘any’ . . . means any,” *Ford v. Mabus*, 629 F.3d 198, 206 (D.C.Cir.2010), and Petitioners have given us no reason to construe that word narrowly here. To the contrary: given both the statute’s plain language and the Supreme Court’s decision in *Massachusetts v. EPA*, we have little trouble concluding that the phrase “any air pollutant” includes *all* regulated air pollutants, including greenhouse gases.

In reaching this conclusion, we recognize that EPA’s definition of “any air pollutant” slightly narrows the literal statutory definition, which nowhere requires that “any air pollutant” be a *regulated* pollutant. *See* 42 U.S.C. § 7479(1). But this does not make the statutory language ambiguous. Indeed, “any regulated air pollutant” is the only logical reading of the statute. The CAA’s universal

## App. 69

definition of “air pollutant” – the one at issue in *Massachusetts v. EPA* – provides that the term includes “any physical, chemical, biological [or] radioactive . . . substance or matter which is emitted into or otherwise enters the ambient air.” *Id.* § 7602(g). Of course, nothing in the CAA requires regulation of a substance simply because it qualifies as an “air pollutant” under this broad definition. As discussed *supra* in Parts II and III, for example, the Act requires EPA to prescribe motor vehicle “standards applicable to the emission of any air pollutant” only if that pollutant “cause[s], or contribute[s] to, air pollution which may reasonably be anticipated to endanger public health or welfare.” *Id.* § 7521(a)(1). But if “any air pollutant” in the definition of “major emitting facility” was read to encompass both regulated and nonregulated air pollutants, sources could qualify as major emitting facilities – and thus be subjected to PSD permitting requirements – if they emitted 100/250 tpy of a “physical, chemical, [or] biological” substance EPA had determined was harmless. It is absurd to think that Congress intended to subject stationary sources to the PSD permitting requirements due to emissions of substances that do not “endanger public health or welfare.” *Id.* § 7521(a)(1). Thus, “any regulated air pollutant” is, in this context, the only plausible reading of “any air pollutant.”

We find further support for this definition throughout the CAA. First, as previously mentioned, the PSD program provides that all major emitting

## App. 70

facilities must install BACT for “each pollutant subject to regulation under [the CAA].” *Id.* § 7475(a)(4). “Each pollutant subject to regulation under” the Act is, of course, synonymous with “any air pollutant regulated under the Act.” Thus, EPA’s interpretation of “any air pollutant” in the definition of “major emitting facilities” harmonizes the PSD program’s scope (i.e., which pollutants trigger PSD coverage) with its substantive requirements (i.e., which pollutants must be controlled to obtain a permit). In other words, because a covered source must control greenhouse gas emissions, it makes sense that major emissions of greenhouse gases would subject that source to the PSD program.

Second, a PSD permittee is required to establish that it

will not cause, or contribute to, air pollution in excess of any (A) maximum allowable increase or maximum allowable concentration for any pollutant in any area to which this part applies more than one time per year, (B) national ambient air quality standard in any air quality control region, or (C) any other applicable emission standard or standard of performance under [the CAA].

*Id.* § 7475(a)(3). Subsections (A) and (B) prohibit a permitted source from contributing to a concentration of NAAQS pollutants that exceeds EPA’s standards. By contrast, subsection (C) has an entirely different focus: it prohibits a permitted

## App. 71

source from causing or contributing to air pollution in excess of *any* CAA emission standard. Thus, as EPA notes, “what this provision establishes is that while the PSD program was certainly directed towards NAAQS-criteria pollutants, it also was directed at maintaining air quality for other pollutants regulated under other provisions.” EPA Timing & Tailoring Br. 101. EPA’s determination that “any air pollutant” means “any air pollutant regulated under the Act” – encompassing the greenhouse gases regulated under Title II – is entirely consistent with this focus.

Finally, Congress made perfectly clear that the PSD program was meant to protect against precisely the types of harms caused by greenhouse gases. The PSD provision contains a section entitled “Congressional declaration of purpose,” which provides, in relevant part, that “[t]he purposes of this part are . . . to protect public health and welfare from any actual or potential adverse effect which in the Administrator’s judgment may reasonably be anticipated to occur from air pollution.” 42 U.S.C. § 7470(1). The CAA further provides that “[a]ll language referring to effects on welfare includes, but is not limited to, effects on . . . weather . . . and climate.” *Id.* § 7602(h). As previously noted, EPA in the Endangerment Finding “marshaled . . . substantial. . . scientific evidence . . . for the proposition that greenhouse gases trap heat on earth that would otherwise dissipate into space [and] that this ‘greenhouse effect’ warms the climate.” Part II, *supra* at 28-29. It further concluded that this

## App. 72

“anthropogenically induced climate change” was likely to threaten the public welfare through, among other things, “extreme weather events.” *Id.* at 15-16. Thus, one express purpose of the program is to protect against the harms caused by greenhouse gases.

In sum, we are faced with a statutory term – “any air pollutant” – that the Supreme Court has determined is “expansive,” and “unambiguous[ly]” includes greenhouse gases. *Massachusetts v. EPA*, 549 U.S. at 529, 127 S.Ct. 1438. Moreover, the PSD program requires covered sources to install control technology for “each pollutant” regulated under the CAA, 42 U.S.C. § 7475(a)(4), and to establish that they “will not cause, or contribute to, air pollution in excess of *any* . . . emission standard . . . under [the CAA].” *Id.* § 7475(a)(3) (emphasis added). These provisions demonstrate that the PSD program was intended to control pollutants regulated under every section of the Act. Finally, Congress’s “Declaration of Purpose” expressly states that the PSD program was meant, in part, to protect against adverse effects on “weather” and “climate” – precisely the types of harm caused by greenhouse gases. *See id.* § 7470(1). Given all this, we have little trouble concluding that “any air pollutant” in the definition of “major emitting facility” unambiguously means “any air pollutant regulated under the CAA.”

## App. 73

**B.**

Industry Petitioners offer three alternative interpretations of the PSD permitting triggers, none of which cast doubt on the unambiguous nature of the statute.

As a preliminary matter, we note that none of Petitioners' alternative interpretations applies to Title V. To the contrary, all of the proposed alternative interpretations are based on the structure of – and purported Congressional intent behind – the PSD program. Indeed, Industry Petitioners never argue that their proposed alternative interpretations are relevant to Title V. Petitioners have thus forfeited any challenges to EPA's greenhouse gas-inclusive interpretation of Title V. *See, e.g., Nat'l Steel & Shipbuilding Co. v. NLRB*, 156 F.3d 1268, 1273 (D.C.Cir.1998) (petitioners forfeit an argument by failing to raise it in their opening brief).

Industry Petitioners' first alternative is simple enough. Because the PSD program focuses on “the air people breathe in certain geographically defined . . . areas,” Coalition for Responsible Reg. Timing & Tailoring Br. 38, Industry Petitioners contend that the term “pollutant” in the PSD statute encompasses only air pollutants that, unlike greenhouse gases, “pollute locally.” *Id.* at 35. Industry Petitioners would thus apply a greenhouse gas-exclusive interpretation of “pollutant” throughout the statute's PSD provision. Under this reading, a source would qualify as a “major emitting facility” only if it emits 100/250 tpy of

## App. 74

“any air pollutant” except greenhouse gases. *See* 42 U.S.C. § 7479(1). Moreover, sources that *are* subject to PSD permitting requirements would be required to install BACT for “each pollutant subject to regulation under [the CAA]” – except greenhouse gases. *Id.* § 7475(a)(4).

We can easily dispose of Industry Petitioners’ argument that the PSD program’s “concerns with local emissions,” Coalition for Responsible Reg. Timing & Tailoring Br. 36, somehow limit the BACT provision. The statutory text provides, without qualification, that covered sources must install the “best available control technology for *each pollutant subject to regulation* under [the CAA].” 42 U.S.C. § 7475(a)(4) (emphasis added). Because greenhouse gases are indisputably a pollutant subject to regulation under the Act, it is crystal clear that PSD permittees must install BACT for greenhouse gases. “When the words of a statute are unambiguous . . . judicial inquiry is complete.” *Connecticut Nat’l Bank v. Germain*, 503 U.S. 249, 254, 112 S.Ct. 1146, 117 L.Ed.2d 391 (1992) (internal quotation marks omitted).

Equally without merit is Industry Petitioners’ argument that the PSD program’s regional focus requires a greenhouse gas-exclusive interpretation of “any air pollutant” in the definition of “major emitting facility.” In support of this contention, Industry Petitioners note that CAA Section 161 provides that states’ implementation plans for the PSD program “shall contain emission limitations and

## App. 75

such other measures as may be necessary . . . to prevent *significant deterioration of air quality in each region.*” 42 U.S.C. § 7471 (emphasis added). The term “air quality,” Industry Petitioners contend, implies a focus on “the air people breathe,” and the term “in each region” suggests that Congress was concerned about local, not global, effects. See *Coalition for Responsible Reg. Timing & Tailoring* Br. 36. Moreover, Industry Petitioners note that when Congress enacted the PSD program in 1977, it did so “against the backdrop of a known universe of CAA-regulated pollutants.” *Id.* All these pollutants, Industry Petitioners argue, “were regulated because they could cause elevated ground-level concentrations in ambient air people breathe.” *Id.* And as Industry Petitioners point out, EPA itself has concluded that greenhouse gases are problematic for reasons other than local health and environmental concerns. In EPA’s Advance Notice of Proposed Rulemaking for the regulations at issue here, for example, the agency noted that “[a] significant difference between the major [greenhouse gases] and most air pollutants regulated under the CAA is that [greenhouse gases] have much longer atmospheric lifetimes [and] . . . can remain in the atmosphere for decades to centuries.” *Regulating Greenhouse Gas Emissions Under the Clean Air Act* (“Greenhouse Gas Advance Notice”), 73 Fed. Reg. 44,354, 44,400-01 (July 30, 2008). Moreover, “unlike traditional air pollutants,” greenhouse gases “become well mixed throughout the global atmosphere so that the long-term distribution of [greenhouse gas] concentrations is not dependant [sic] on local

## App. 76

emission sources.” *Id.* Thus, Industry Petitioners conclude, greenhouse gases are problematic for reasons entirely distinct from the local concerns that provided the basis for the PSD program. Given this, the phrase “any air pollutant” cannot be applied to greenhouse gases in the context of the regionally-focused PSD program.

As an initial matter, we note that the Supreme Court rejected a very similar argument in *Massachusetts v. EPA*. There, EPA attempted to distinguish between greenhouse gases and other air pollution agents “because greenhouse gases permeate the world’s atmosphere rather than a limited area near the earth’s surface.” *Massachusetts v. EPA*, 549 U.S. at 529 n. 26, 127 S.Ct. 1438. The Court held that this was “a plainly unreasonable reading of a sweeping statutory provision designed to capture ‘any physical, chemical . . . substance or matter which is emitted into or otherwise enters the ambient air,’” *id.* (quoting 42 U.S.C. § 7602(g)), thus rejecting the dissent’s view that “EPA’s exclusion of greenhouse gases . . . is entitled to deference.” *Id.* As the Court noted, the purported distinction between greenhouse gases and “traditional” air pollutants “finds no support in the text of the statute, which uses the phrase ‘the ambient air’ without distinguishing between atmospheric layers.” *Id.* *Massachusetts v. EPA* thus forecloses Industry Petitioners’ argument that because greenhouse gases do not “cause elevated ground-level concentrations in ambient air people breathe,” Coalition for Responsible Reg. Timing &

## App. 77

Tailoring Br. 36, EPA should have adopted a greenhouse gas-exclusive interpretation of “any air pollutant.”

We also have little trouble disposing of Industry Petitioners’ argument that the PSD program is specifically focused solely on localized air pollution. True, as Industry Petitioners note, one part of the PSD program requires states to “prevent significant deterioration of air quality in each region.” 42 U.S.C. § 7471 (emphasis added). But while localized air quality is obviously one concern of the PSD program, a comprehensive reading of the statute shows it was also meant to address a much broader range of harms. As an initial matter, the PSD provision’s “Congressional declaration of purpose” section expansively provides that the program is intended “to protect public health and welfare from *any* actual or potential adverse effect . . . from air pollution.” *Id.* § 7470(1) (emphasis added). Nothing in this section limits the PSD program to adverse effects on local air quality; to the contrary, the word “any” here gives this clause an “expansive meaning” which we see “no reason to contravene.” *New York*, 443 F.3d at 885 (internal quotation marks omitted). Indeed, the CAA expressly provides that effects on “welfare” means “effects on . . . weather . . . and climate.” 42 U.S.C. § 7602(h). It seems quite clear to us, then, that the PSD program was intended to protect against precisely the types of harms caused by greenhouse gases. This broad understanding of the PSD program’s scope is buttressed by the fact that the

## App. 78

program requires covered sources to control “each pollutant subject to regulation under [the CAA],” and further requires sources to comply with “*any . . . emission standard*” under the CAA. *Id.* § 7475(a)(3); (a)(4) (emphasis added). These substantive requirements amount to further evidence that Congress wanted the PSD program to cover all regulated pollutants, regardless of the type of harm those pollutants cause.

In light of the PSD program’s broad scope of regulation and the express purposes of the program, we conclude – consistent with the Supreme Court in *Massachusetts v. EPA* – that Industry Petitioners’ greenhouse gas-exclusive interpretation of “pollutant” is “a plainly unreasonable reading” of the statute. *Massachusetts v. EPA*, 549 U.S. at 529 n. 26, 127 S.Ct. 1438.

## 1.

For their second alternative interpretation, Industry Petitioners argue that the PSD program’s definition of “major emitting facility” establishes a “pollutant-specific situs requirement.” Am. Chemistry Council Br. 33. Under this reading of the statute, a stationary source is subject to PSD permitting requirements only if “(1) a source has major emissions of a NAAQS criteria pollutant and (2) the source is located in an area attaining *that pollutant’s*” air quality standard. Coalition for Responsible Reg. Timing & Tailoring Br. 23. Thus, for example, a

## App. 79

source would be subject to the PSD permitting requirements if it 1) emits over 100/250 tpy of sulfur dioxide (a NAAQS criteria pollutant), and 2) is located in an area that is in “attainment,” or is “unclassifiable,” for sulfur dioxide. But under this approach, a stationary source could never be subject to the PSD program solely because of its greenhouse gas emissions. After all, Industry Petitioners observe, EPA declined to make greenhouse gases a NAAQS criteria pollutant. Instead, EPA regulated greenhouse gases only under Title II of the Act, dealing with motor vehicle emissions. Because “no major source of [greenhouse gases] can be located in an area attaining the nonexistent [air quality standard] for [greenhouse gases],” *id.* at 24, Industry Petitioners point out that their reading of the statute would bring no new stationary sources under the PSD program’s ambit – alleviating any “absurd results” caused by excessive permitting requirements, *id.* at 25.

Industry Petitioners emphasize that, unlike their first proposed alternative, nothing in this approach would “wholly exempt [greenhouse gases] from PSD.” Coalition for Responsible Reg. Timing & Tailoring Reply Br. 20. Although a pollutant-specific situs requirement would limit the *number* of sources subject to the PSD program, nothing in this proposed reading of the statute would alter the substantive requirements for PSD permits, including the requirement that all regulated sources install BACT “for each pollutant subject to regulation under [the

## App. 80

CAA].” 42 U.S.C. § 7475(a)(4). So, for example, under this interpretation, a hypothetical stationary source emitting more than 100/250 tpy of sulfur dioxide and located in an area designated as “in attainment” for sulfur dioxide, must still install BACT for “each pollutant subject to regulation” under the Act, including greenhouse gases. Their key point, though, is that sources emitting only major amounts of greenhouse gases – but not major amounts of a NAAQS criteria pollutant – would escape PSD permitting requirements.

Industry Petitioners’ argument in support of this interpretation proceeds in several steps. First, they argue that the term “any air pollutant,” though “capacious and flexible by itself,” “is a chameleon term” when placed in certain contexts. *Am. Chemistry Council Br. 38*. Indeed, Industry Petitioners note that EPA has already narrowed the literal meaning of the term “any air pollutant” here. After all, and as discussed *supra*, although the statutory term “air pollutant” includes “any physical [or] chemical . . . substance or matter,” 42 U.S.C. § 7602(g), EPA has long maintained that the term “any air pollutant” in the definition of “major emitting facility” encompasses only air pollutants regulated under the Act. Moreover, Industry Petitioners point out that when interpreting CAA Part C, Subpart 2, entitled “Visibility Protection,” EPA determined that the term “any pollutant” in the definition of “major stationary source” meant “any visibility-impairing pollutant.” *See Coalition for*

## App. 81

Responsible Reg. Timing & Tailoring Br. 34 (emphasis added). The statute's definition of "major stationary source" in the visibility-protection subpart is quite similar to the definition of "major emitting facility" in the PSD subpart: for the purposes of the visibility program, a "major stationary source" is defined as a "stationary source[] with the potential to emit 250 tons or more of any pollutant." 42 U.S.C. § 7491(g)(7); *compare* 42 U.S.C. § 7479(1) ("major emitting facility" for the purposes of the PSD program is a source which "emit[s], or [has] the potential to emit," either 100 or 250 tons per year "of any air pollutant"). These narrowed interpretations, Industry Petitioners argue, prove that the seemingly capacious term "any air pollutant" is, notwithstanding that the Supreme Court called this term "expansive" and "sweeping," *Massachusetts v. EPA*, 549 U.S. at 529 nn. 25-26, 127 S.Ct. 1438, capable of a far more circumscribed meaning.

According to Industry Petitioners, EPA should have adopted that more circumscribed meaning by interpreting "any air pollutant" as establishing a pollutant-specific situs requirement. As Industry Petitioners point out, the PSD program requires permits for "major emitting facilit[ies] . . . in any area to which this part applies," 42 U.S.C. § 7479(1), and defines "major emitting facilities" as stationary sources emitting 100/250 tpy of "any air pollutant." *Id.* § 7475(a). In this context, Industry Petitioners contend, the phrases "any air pollutant" and "in any area to which this part applies" must be read in

## App. 82

concert. And, Industry Petitioners argue, these phrases “*together* mean” that a source is subject to PSD permitting requirements only if it emits major amounts of “any [NAAQS] air pollutant whose NAAQS an area is attaining.” Am. Chemistry Council Br. 33.

In support of this supposedly holistic interpretation of the statute, Industry Petitioners cite CAA § 163(b), a different section of the PSD provision in which the phrase “any air pollutant” and “any area to which this part applies” are used in conjunction with one another. Unlike § 165(a), which sets permitting requirements for sources covered by the PSD program, § 163 provides guidelines for *areas* designated as “in attainment” under the program. Specifically, § 163(b) limits the “maximum allowable increase in concentrations of” airborne NAAQS pollutants that may occur in an attainment area before that area’s “attainment” status is jeopardized. *See* 42 U.S.C. § 7473(b)(1). Subsections (1) through (3) of § 163(b) – not directly relevant here – set limits on the maximum allowable increases for two specific NAAQS pollutants, sulfur dioxide and particulate matter. Subsection (4) is a catchall provision, which limits the maximum allowable increases for all other NAAQS pollutants. It is in subsection (4) that Industry Petitioners find what they believe is their payoff: the terms “any air pollutant” and “any area to which this part applies” in conjunction with one another. Section 163(b)(4) provides:

App. 83

The maximum allowable concentration of *any air pollutant in any area to which this part applies* shall not exceed a concentration for such pollutant for each period of exposure equal to –

(A) the concentration permitted under the national secondary ambient air quality standard, or

(B) the concentration permitted under the national primary ambient air quality standard,

whichever concentration is lowest for such pollutant for such period of exposure.

42 U.S.C. § 7473(b)(4) (emphasis added). As Industry Petitioners correctly point out, in this context the phrase “any air pollutant” must mean “any NAAQS pollutant,” and “in any area to which this part applies” must mean “any area that is in attainment for that NAAQS pollutant.” After all, the statute states that the “maximum allowable concentration of any air pollutant . . . shall not exceed” either the primary or secondary national ambient air quality standards. But, as Industry Petitioners observe, national ambient air standards exist only for NAAQS pollutants, so even if “any air pollutant” in CAA § 163(b)(4) was read to include non-NAAQS pollutants, the phrase, in context, would have no practical effect for those pollutants. Moreover, “any area to which this part applies” must mean “any area that is in attainment for that NAAQS pollutant,” because if an area was in nonattainment

## App. 84

for a particular pollutant, Part D – rather than the PSD program – would govern emissions limits for that specific pollutant. *See id.* § 7501 (2) (“[t]he term ‘nonattainment area’ means, for any air pollutant, an area which is designated ‘nonattainment’ with respect to that pollutant”); § 7502 (c) (setting out required “Nonattainment plan provisions”). Finally, Industry Petitioners correctly note that a pollutant-specific reading of the phrase “air pollutant” must also apply to CAA § 165(a)(3)(A), which prohibits PSD permittees from “caus[ing], or contribut[ing] to, air pollution in excess of any . . . maximum allowable concentration for *any air pollutant in any area to which this part applies* more than one time per year.” *Id.* § 7475(a)(3) (A) (emphasis added). This clause, as Industry Petitioners point out, piggybacks off the NAAQS pollutant-specific definition of “maximum allowable concentration” in § 163(b)(4), prophylactically restricting PSD permittees from endangering an area’s attainment status. *See* Am. Chemistry Council Br. 32 (describing the interplay between the two provisions as “Section 163(b)(4) (and Section 165(a)(3)(A), which implements it) . . .”).

Based on all of this, Industry Petitioners conclude that because the phrase “any air pollutant in any area to which this part applies” in § 163(b)(4) means “any NAAQS pollutant in any area in attainment for that NAAQS pollutant,” an identical reading must apply to the definition of “major emitting facility.” As a result, a stationary source may be subject to the PSD program only if it emits 100/250

## App. 85

typy of any NAAQS pollutant and is located in an area designated as in attainment for that NAAQS pollutant. We are unpersuaded.

Although we agree that the term “any air pollutant” is, in some contexts, capable of narrower interpretations, we see nothing in the definition of “major emitting facility” that would allow EPA to adopt a NAAQS pollutant-specific reading of that phrase. The contrast with the visibility program is instructive. There, EPA determined that “any pollutant” in the definition of “major stationary source” meant “any visibility-impairing pollutant.” See 40 C.F.R. pt. 51, App. Y, § II.A. But as EPA notes, the entire visibility program, codified in CAA Part C, Subpart 2, deals with visibility-impairing pollutants, as reflected in that subpart’s title: “Visibility Protection.” See 42 U.S.C. prec. § 7491. From this, “it naturally follows that EPA’s regulations under that section should address ‘visibility-impairing pollutants.’” EPA Timing & Tailoring Br. 99 n.19. No similar guidance can be garnered from Part C, Subpart 1, which contains the phrase “any air pollutant” at issue here. Dealing with far more than NAAQS pollutants, Part C, Subpart 1 requires, for example, covered sources to install BACT for “each pollutant subject to regulation under [the CAA].” 42 U.S.C. § 7475(a)(4). Indeed, Subpart 1 is simply – and expansively – entitled “Clean Air.” *Id.* prec. § 7470. Moreover, Congress designed the PSD program broadly to protect against “adverse effect[s]” on “public health and welfare,” *Id.* § 7470(1), including

## App. 86

effects on global problems like weather and climate. *Id.* § 7602(h).

Furthermore, the phrases “any air pollutant” and “in any area to which this part applies” are used differently in Section 163(b)(4) and in the PSD program’s definition of “major emitting facility.” The presumption that “[a] term appearing in several places in a statutory text is generally read the same way each time it appears,” *Ratzlaf v. United States*, 510 U.S. 135, 143, 114 S.Ct. 655, 126 L.Ed.2d 615 (1994), “readily yields whenever there is such variation in the connection in which the words are used as reasonably to warrant the conclusion that they were employed in different parts of the act with different intent,” *Atl. Cleaners & Dyers, Inc. v. United States*, 286 U.S. 427, 433, 52 S.Ct. 607, 76 L.Ed. 1204 (1933). Here, the focus and structure of § 163(b)(4) is entirely distinct from the PSD permitting trigger. Section 163(b)(4) provides that “[t]he maximum allowable concentration of any air pollutant in any area to which this part applies shall not exceed a [particular] concentration.” 42 U.S.C. § 7473(b)(4). By contrast, § 165(a) provides that “[n]o major emitting facility . . . may be constructed in any area to which this part applies” unless certain conditions are met, *id.* § 7475(a), and § 169(1) defines “major emitting facility” as any stationary source that emits or has the potential to emit threshold amounts of “any air pollutant,” *id.* § 7479(1). The differences between these two provisions are manifest. In § 163(b)(4), the phrases “any air pollutant” and “in any area to which

## App. 87

this part applies” appear next to one another, and it is the concentration of the pollutant in an area that matters. In the PSD permitting trigger, the phrases appear in different subsections and it is the location of the facility that matters. Section 163(b)(4) thus does nothing to undermine the unambiguous meaning of “any air pollutant” in the definition of “major emitting facility.”

Industry Petitioners’ pollutant-specific reading of “any air pollutant” is further undermined by contrasting Part C of the Act (the PSD program) with Part D (which regulates areas in nonattainment). Unlike Part C, Part D is expressly pollutant-specific, providing that “[t]he term ‘nonattainment area’ means, for any air pollutant, an area which is designated ‘nonattainment’ *with respect to that pollutant.*” *Id.* § 7501(2) (emphasis added). Congress thus clearly knew how to promulgate a narrow, pollutant-specific definition of “any air pollutant.” That it did so in Part D but not in Part C strongly suggests that the phrase “any air pollutant” in Part C was meant to be construed broadly. *Keene Corp. v. United States*, 508 U.S. 200, 208, 113 S.Ct. 2035, 124 L.Ed.2d 118 (1993) (“[W]here Congress includes particular language in one section of a statute but omits it in another . . . , it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.”) (quoting *Russello v. United States*, 464 U.S. 16, 23, 104 S.Ct. 296, 78 L.Ed.2d 17 (1983)).

## App. 88

A final point: Industry Petitioners observe that every area in the country has always been in attainment for at least one NAAQS criteria pollutant. *See* Tailoring Rule, 75 Fed. Reg. at 31,561. Thus, pursuant to EPA's pollutant-indifferent reading of § 165(a), under which a major emitting facility must abide by PSD requirements so long as it is located in an attainment area for *any* NAAQS pollutant, every facility in the United States has always been in an "area to which this part applies." Consequently, Industry Petitioners argue, "[i]f EPA's interpretation were right, Congress simply could have left out the phrase 'in any area to which this part applies'" in the PSD permitting trigger. Am. Chemistry Council Br. 36. But "Congress does not enact 'stillborn' laws," *id.* (quoting *Sosa v. Alvarez-Machain*, 542 U.S. 692, 714, 124 S.Ct. 2739, 159 L.Ed.2d 718 (2004)), and interpretations that render statutory language superfluous are disfavored. Am. Chemistry Council Reply Br. 19. The fact that the PSD program has applied nationwide since its inception, Industry Petitioners conclude, thus militates against EPA's pollutant-indifferent approach.

This argument fails at its premise, for Industry Petitioners confuse a lack of practical import with a lack of meaning. To say that the phrase "in any area to which this part applies" is currently without practical import is quite different than showing that the phrase means nothing. Indeed, under different circumstances, the phrase would have a significant effect. If, hypothetically, one area of the country was

## App. 89

designated as “nonattainment” for every NAAQS pollutant, the phrase “in any area to which this part applies” would limit PSD coverage, as covered sources in that area would be subject only to Part D requirements. In fact, Environmental Intervenors point out that when Congress drafted the PSD permitting triggers “the prospect that some areas could be in nonattainment for all NAAQS was not far-fetched.” *Sierra Club Historic Reg. Br. 23*. “In the years leading up to 1977, EPA air quality data identified a number of areas that failed to meet all five of the then-current [air quality standards] for which EPA had gathered data.” *Id.* Accordingly, “in any area to which this part applies” is a meaningful phrase under EPA’s pollutant-indifferent interpretation of the PSD permitting triggers: it provides that sources need not obtain PSD permits if they are located in areas designated “nonattainment” for all six NAAQS pollutants.

In short, although we agree with Industry Petitioners that phrases like “any air pollutant” are, in certain contexts, capable of a more limited meaning, they have failed to identify any reasons that the phrase should be read narrowly here. Nor do we know of one. We thus conclude that EPA’s 34-year-old interpretation of the PSD permitting triggers is statutorily compelled: a source must obtain a permit if it emits major amounts of any regulated pollutant and is located in an area that is in attainment or unclassifiable for any NAAQS pollutant.

## App. 90

## 2.

We can quickly dispose of Industry Petitioners' third alternative interpretation, namely, that in order to regulate new pollutants through the PSD program, EPA was required to go through the process prescribed by CAA § 166. Section 166 provides specific steps that EPA must take when designating new "pollutants for which national ambient air quality standards" apply. 42 U.S.C. § 7476(a). Here, Industry Petitioners argue, EPA unlawfully failed to follow the steps laid out in Section 166, including a required study of the pollutant and a one-year delay before the effective date of regulations, before adding greenhouse gases "to the PSD [c]onstellation." Coalition for Responsible Reg. Timing & Tailoring Br. 41.

This argument fails on its face. By its terms, § 166 applies only to new "pollutants *for which national ambient air quality standards*" apply, 42 U.S.C. § 7476(a) (emphasis added), i.e., NAAQS criteria pollutants for which regions may be classified as in "attainment," "non-attainment," or "unclassifiable." And EPA never classified greenhouse gases as a NAAQS criteria pollutant. Instead, it simply determined that under § 165, major emitters of greenhouse gases are subject to the PSD program and all covered sources must install BACT for greenhouse gases. Contrary to Industry Petitioners' arguments, then, § 166 has no bearing on this addition of greenhouse gases into "the PSD [c]onstellation." Coalition for Responsible Reg. Timing

## App. 91

& Tailoring Br. 41. Indeed, we rejected a nearly identical argument in *Alabama Power*, holding that there is “no implied or apparent conflict between sections 165 and 166; nor . . . must the requirements of section 165 be ‘subsumed’ with those of section 166.” *Alabama Power*, 636 F.2d at 406. Stating what should have been obvious from the text of the statute, we concluded: “[S]ection 166 has a different focus from section 165.” *Id.*

Thus, because EPA has never classified greenhouse gases as a NAAQS criteria pollutant, the § 166 requirements are entirely inapplicable here. This section of the CAA has absolutely no bearing on our conclusion that EPA’s interpretation of the PSD permitting trigger is compelled by the statute itself.

## VI.

Having concluded that the CAA requires PSD and Title V permits for major emitters of greenhouse gases, we turn to Petitioners’ challenges to the Tailoring and Timing Rules themselves.

As an initial matter, we note that Petitioners fail to make any real arguments against the Timing Rule. To be sure, at one point State Petitioners contend that the Timing Rule constitutes an attempt “to extend the PSD and Title V permitting requirements to greenhouse-gas emissions,” State Pet’rs’ Timing & Tailoring Br. 67. This is plainly incorrect. As discussed in the previous section, greenhouse gases are regulated under PSD and Title V pursuant to

## App. 92

automatic operation of the CAA. All the Timing Rule did was delay the applicability of these programs, providing that major emitters of greenhouse gases would be subject to PSD and Title V permitting requirements only once the Tailpipe Rule actually took effect on January 2, 2011. *See* Timing Rule, 75 Fed. Reg. at 17,017-19. Despite this, Petitioners confusingly urge us to vacate “[t]he Tailoring *and* Timing Rules,” *e.g.* State Pet’rs’ Timing & Tailoring Br. 24 (emphasis added), although it is unclear what practical effect vacature of the Timing Rule would have. Nonetheless, given this phrasing of their argument, and given our conclusion that Petitioners lack Article III standing to challenge *both* rules, we shall, where appropriate, discuss the Timing Rule in conjunction with the Tailoring Rule.

In the Tailoring Rule, EPA announced that it was “relieving overwhelming permitting burdens that would, in the absence of this rule, fall on permitting authorities and sources.” Tailoring Rule, 75 Fed. Reg. at 31,516. Although the PSD statute requires permits for sources with the potential to emit 100/250 tpy of “any air pollutant,” 42 U.S.C. § 7479(1), EPA noted that immediate application of that threshold to greenhouse gas-emitting sources would cause permit applications to jump from 280 per year to over 81,000 per year. Tailoring Rule, 75 Fed. Reg. at 31,554. Many of these applications would come from commercial and residential sources, which would “each incur, on average, almost \$60,000 in PSD permitting expenses.” *Id.* at 31,556. Similarly, if the Title V 100

## App. 93

tpy threshold applied immediately to greenhouse gases, sources needing operating permits would jump from 14,700 per year to 6.1 million per year. *Id.* at 31,562. “The great majority of these sources would be small commercial and residential sources” which “would incur, on average, expenses of \$23,175.” *Id.* And were permitting authorities required to hire the 230,000 full-time employees necessary to address these permit applications, “authorities would face over \$21 billion in additional permitting costs each year due to [greenhouse gases], compared to the current program cost of \$62 million each year.” *Id.* at 31,563.

Thus, instead of immediately requiring permits for all sources exceeding the 100/250 tpy emissions threshold, EPA decided to “phas[e] in the applicability of these programs to [greenhouse gas] sources, starting with the largest [greenhouse gas] emitters.” *Id.* at 31,514. The Tailoring Rule established the first two steps in this phased-in process. During Step One, only sources that were “subject to PSD requirements for their conventional pollutants anyway” (i.e., those sources that exceeded the statutory emissions threshold for non-greenhouse gas pollutants) were required to install BACT for their greenhouse gas emissions. *Id.* at 31,567. Step Two, which took effect on July 1, 2011, also requires PSD permits for sources with the potential to emit over 100,000 tpy CO<sub>2</sub>e after a proposed construction project, or 75,000 tpy CO<sub>2</sub>e after a proposed modification project. *Id.* at 31,523. Step Two further requires Title V permits for sources

## App. 94

which have the potential to emit over 100,000 tpy CO<sub>2</sub>e. *Id.* at 31,516. EPA has since proposed – but has yet to finalize – a “Step Three,” which would maintain the current thresholds while the agency evaluates the possibility of regulating smaller sources. *See* EPA’s 28(j) Letter 1-2, February 27, 2012.

In the Tailoring Rule, EPA justified its phased-in approach on three interrelated grounds, each of which rests on a distinct doctrine of administrative law. First, EPA concluded “the costs to sources and administrative burdens . . . that would result from [immediate] application of the PSD and title V programs . . . at the statutory levels . . . should be considered ‘absurd results,’” which Congress never intended. *Id.* at 31,517; *see Am. Water Works Ass’n v. EPA*, 40 F.3d 1266, 1271 (D.C.Cir.1994) (“[W]here a literal reading of a statutory term would lead to absurd results, the term simply has no meaning . . . and is the proper subject of construction by EPA and the courts.”). Thus, under the “absurd results” doctrine, EPA concluded that the PSD and Title V programs “should not [immediately] be read to apply to all [greenhouse gas] sources at or above the 100/250 tpy threshold.” Tailoring Rule, 75 Fed. Reg. at 31,554. Second, emphasizing that immediate regulation at the 100/250 tpy threshold would cause tremendous administrative burden, EPA justified its deviation from this threshold on the basis of the “administrative necessity” doctrine. *Id.* at 31,576; *see Env’tl. Def. Fund, Inc. v. EPA*, 636 F.2d 1267, 1283 (D.C.Cir.1980) (“[A]n agency may depart from the

## App. 95

requirements of a regulatory statute . . . to cope with the administrative impossibility of applying the commands of the substantive statute.”). Finally, asserting that there exists a judicial doctrine that allows agencies to implement regulatory programs in a piecemeal fashion, EPA stated that the Tailoring Rule was justified pursuant to this “one-step-at-a-time” doctrine. Tailoring Rule, 75 Fed. Reg. at 31,578; see *Massachusetts v. EPA*, 549 U.S. at 524, 127 S.Ct. 1438 (“Agencies, like legislatures, do not generally resolve massive problems in one fell regulatory swoop.”).

Petitioners – particularly State Petitioners – argue that none of these doctrines permit EPA to “depart unilaterally from the [CAA’s] permitting thresholds and replace them with numbers of its own choosing.” State Pet’rs’ Timing & Tailoring Br. 29. Admitting the “lamentable policy consequences of adhering to the unambiguous numerical thresholds in the Clean Air Act,” State Petitioners rather colorfully argue that EPA’s attempts to alleviate those burdens “establish only that EPA is acting as a benevolent dictator rather than a tyrant.” *Id.* at 26. And because EPA exceeded the boundaries of its lawful authority Petitioners urge us to vacate the Tailoring Rule.

Before we may address the merits of these claims, however, we must determine whether we have jurisdiction. “No principle,” the Supreme Court has repeatedly explained, “is more fundamental to the judiciary’s proper role in our system of government than the constitutional limitation of federal-court

## App. 96

jurisdiction to actual cases or controversies.” *Raines v. Byrd*, 521 U.S. 811, 818, 117 S.Ct. 2312, 138 L.Ed.2d 849 (1997) (internal quotation marks omitted). The doctrine of standing “is an essential and unchanging part of the case-or-controversy requirement.” *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560, 112 S.Ct. 2130, 119 L.Ed.2d 351 (1992). To establish standing, a petitioner must have suffered an “injury in fact” that is 1) “concrete and particularized . . . [and] actual or imminent, not conjectural or hypothetical,” 2) was caused by the conduct complained of, and 3) is “likely, as opposed to merely speculative [to] be redressed by a favorable decision.” *Id.* at 560-61, 112 S.Ct. 2130 (internal quotation marks and citations omitted).

Petitioners fall far short of these “irreducible constitutional . . . elements” of standing, *id.* at 560, 112 S.Ct. 2130. Simply put, Petitioners have failed to establish that the Timing and Tailoring Rules caused them “injury in fact,” much less injury that could be redressed by the Rules’ vacatur. Industry Petitioners contend that they are injured because they are subject to regulation of greenhouse gases, Coalition for Responsible Reg. Timing & Tailoring Br. 14. State Petitioners claim injury because they own some regulated sources and because they now carry a heavier administrative burden. State Pet’rs’ Timing & Tailoring Br. 22-23. But as discussed above, *see supra* Part V, the CAA mandates PSD and Title V coverage for major emitters of greenhouse gases. Thus, Industry Petitioners were regulated and State

## App. 97

Petitioners required to issue permits not because of anything EPA did in the Timing and Tailoring Rules, but by automatic operation of the statute. Given this, neither the Timing nor Tailoring Rules caused the injury Petitioners allege: having to comply with PSD and Title V for greenhouse gases.

Indeed, the Timing and Tailoring Rules actually mitigate Petitioners' purported injuries. Without the Timing Rule, Petitioners may well have been subject to PSD and Title V for greenhouse gases before January 2, 2011. Without the Tailoring Rule, an even greater number of industry and state-owned sources would be subject to PSD and Title V, and state authorities would be overwhelmed with millions of additional permit applications. Thus, Petitioners have failed to "show that, absent the government's allegedly unlawful actions, there is a substantial probability that they would not be injured and that, if the court affords the relief requested, the injury will be removed." *Chamber of Commerce v. EPA*, 642 F.3d 192, 201 (D.C.Cir.2011) (quotations and alterations omitted). Far from it. If anything, vacature of the Tailoring Rule would significantly exacerbate Petitioners' injuries.

Attempting to remedy this obvious jurisdictional defect, State Petitioners present two alternative theories, neither of which comes close to meeting the "irreducible constitutional . . . elements" of standing. *Lujan*, 504 U.S. at 560, 112 S.Ct. 2130. First, State Petitioners counterintuitively suggest that they actually want EPA to immediately "appl[y] the

## App. 98

100/250 tpy permitting thresholds to greenhouse-gas emissions.” State Pet’rs’ Timing & Tailoring Reply Br. 15. Admitting that vacature of the Tailoring Rule would result in astronomical costs and unleash chaos on permitting authorities, State Petitioners predict that Congress will be forced to enact “corrective legislation” to relieve the overwhelming permitting burdens on permitting authorities and sources, thus mitigating their purported injuries. *Id.*

This theory fails. To establish standing, plaintiffs must demonstrate that it is “likely, as opposed to merely speculative, that the injury will be redressed by a favorable decision,” *Lujan*, 504 U.S. at 561, 112 S.Ct. 2130 (internal quotation marks omitted), but here, State Petitioners simply hypothesize that Congress will enact “corrective legislation.” State Pet’rs’ Timing & Tailoring Reply Br. 15. We have serious doubts as to whether, for standing purposes, it is ever “likely” that Congress will enact legislation at all. After all, a proposed bill must make it through committees in both the House of Representatives and the Senate and garner a majority of votes in both chambers – overcoming, perhaps, a filibuster in the Senate. If passed, the bill must then be signed into law by the President, or go back to Congress so that it may attempt to override his veto. As a generation of schoolchildren knows, “by that time, it’s very unlikely that [a bill will] become a law. It’s not easy to become a law.” Schoolhouse Rock, *I’m Just a Bill*, at 2:41, available at <http://video.google.com/videoplay?docid=7266360872513258185#> (last visited June 1, 2012).

## App. 99

And even if the astronomical costs associated with a 100/250 tpy permitting threshold make *some* Congressional action likely, State Petitioners are still unable to show that it is “likely, as opposed to merely speculative,” *Lujan*, 504 U.S. at 561, 112 S.Ct. 2130, that Congress will redress their injury. State Petitioners apparently assume that if the 100/250 tpy permitting threshold was immediately applied to greenhouse gases, Congress would exempt those pollutants from the PSD and Title V programs entirely. But this is just one of many forms “corrective legislation” could take. For example, were we to vacate the Tailoring Rule, Congress could decide to readopt its key provisions in the PSD and Title V statutes. Or it could set PSD and Title V permitting thresholds at 25,000 tpy for greenhouse gases – higher than the 100/250 tpy threshold, but lower (and thus more costly to Petitioners) than the thresholds promulgated in the Tailoring Rule. Or it could do something else entirely. All of this is guesswork, which is precisely the point: State Petitioners’ faith that Congress will alleviate their injury is inherently speculative.

State Petitioners’ second alternative theory of standing fares no better. In their reply brief, they contend that even if vacating the Timing or Tailoring Rules would indeed exacerbate their costs and administrative burdens (the purported injuries they claimed in their opening brief), “then State Petitioners can establish Article III standing under *Massachusetts* by asserting injuries caused by EPA’s

## App. 100

failure to regulate sooner.” State Pet’rs’ Timing & Tailoring Reply Br. 5. Essentially, State Petitioners’ reply brief contends that, contrary to the position taken in the opening brief, they want more regulation, not less, and that they wanted regulation sooner rather than later. And because the Commonwealth of Massachusetts had standing to seek regulation of greenhouse gases in *Massachusetts v. EPA*, State Petitioners argue that they now have standing to seek more regulation of greenhouse gases as well.

This argument is completely without merit. As an initial matter, we are aware of no authority which permits a party to assert an entirely new injury (and thus, an entirely new theory of standing) in its reply brief. Quite to the contrary, we have held that, where standing is not self-evident, “[i]n its *opening* brief, the petitioner should . . . include . . . a concise recitation of the basis upon which it claims standing.” *Sierra Club v. EPA*, 292 F.3d 895, 901 (D.C.Cir.2002) (emphasis added); *see also* D.C.Cir. R. 28(a)(7) (“[i]n cases involving direct review in this court of administrative actions, the brief of the appellant or petitioner must set forth the basis for the claim of standing.”); *American Library Ass’n v. FCC*, 401 F.3d 489, 493-94 (D.C.Cir.2005) (discussing limitations on this principle). After all, “it is often the case . . . that some of the relevant facts are known only to the petitioner, to the exclusion of both the respondent and the court.” *Sierra Club*, 292 F.3d at 901. If “the petitioner does not submit evidence of those facts

## App. 101

with its opening brief,” the respondent is “left to flail at the unknown in an attempt to prove the negative.” *Id.* This principle is particularly important here, for State Petitioners’ asserted fear of global warming stands in stark contrast to the position they took throughout this litigation. In an earlier brief, for example, they characterized the Endangerment Finding as “a subjective conviction” State Pet’rs’ Endangerment Br. 19, “supported by highly uncertain climate forecasts,” *id.* at 18, and “offer[ing] no criteria for determining a harmful, as opposed to a safe, climate,” *id.* at 17. Given this, EPA could not possibly have anticipated that State Petitioners, abruptly donning what they themselves call “an environmentalist hat,” State Pet’rs’ Timing & Tailoring Reply Br. 4, would assert that global warming causes them concrete and particularized harm.

In any event, State Petitioners fail to cite any record evidence to suggest that they are adversely affected by global climate change. This is in stark contrast to the evidence put forward in *Massachusetts v. EPA*, where the Commonwealth submitted unchallenged affidavits and declarations showing that 1) rising sea tides due to global warming had “already begun to swallow Massachusetts’ coastal land,” and 2) “[t]he severity of that injury will only increase over the course of the next century.” *Massachusetts v. EPA*, 549 U.S. at 522-23, 127 S.Ct. 1438. These specific, factual submissions were key to the standing analysis in *Massachusetts v. EPA*: the

## App. 102

Court held that “petitioners’ *submissions as they pertain to Massachusetts* have satisfied the most demanding standards of the adversarial process.” *Id.* at 521, 127 S.Ct. 1438 (emphasis added). It is true, as State Petitioners emphasize, that the Supreme Court held that states are “entitled to special solicitude in our standing analysis.” *Id.* at 522, 127 S.Ct. 1438. But nothing in the Court’s opinion remotely suggests that states are somehow exempt from the burden of establishing a concrete and particularized injury in fact. State Petitioners, like Industry Petitioners, failed to do so here. We shall thus dismiss all challenges to the Timing and Tailoring Rules for lack of jurisdiction.

**VII.**

Following promulgation of the Timing and Tailoring Rules, EPA issued a series of rules ordering states to revise their PSD State Implementation Plans (SIPs) to accommodate greenhouse gas regulation. See *Action to Ensure Authority to Issue Permits Under the Prevention of Significant Deterioration Program to Sources of Greenhouse Gas Emissions: Finding of Substantial Inadequacy and SIP Call*, 75 Fed. Reg. 53,892 (Sept. 2, 2010), 75 Fed. Reg. 77,698 (Dec. 13, 2010); *Action to Ensure Authority to Issue Permits Under the Prevention of Significant Deterioration Program to Sources of Greenhouse Gas Emissions: Finding of Failure to Submit State Implementation Plan Revisions Required for Greenhouse Gases*, 75 Fed. Reg. 81,874

App. 103

(Dec. 29, 2010). Industry Petitioners present several challenges to these SIP-related rules. But our review in this case is limited to four EPA decisions: the Endangerment Finding, the Tailpipe Rule, and the Timing and Tailoring Rules. We thus lack jurisdiction over the SIP-related rules. Moreover, challenges to these rules are currently pending in at least two separate cases before this court. *See Utility Air Regulatory Group v. EPA*, No. 11-1037 (consolidating various challenges); *Texas v. EPA*, No. 10-1425 (challenge brought by Texas). We decline Industry Petitioners' invitation to rule on the merits of cases which are properly before different panels.

**VIII.**

For the foregoing reasons, we dismiss all petitions for review of the Timing and Tailoring Rules, and deny the remainder of the petitions.

*So ordered.*

On Petitions for Rehearing En Banc

---

Before: SENTELLE\*, *Chief Judge*, and  
HENDERSON, ROGERS\*, TATEL\*, GARLAND,  
BROWN\*, GRIFFITH, and KAVANAUGH\*, *Circuit  
Judges*.

**ORDER**

The petition of the Chamber of Commerce of the United States of America, joined by the State of Alaska, Peabody Energy Company, Southeastern Legal Foundation, et al., State Petitioners and Intervenors for Petitioners, for rehearing en banc; and the petition of the National Association of Manufacturers, et al. for rehearing en banc in No. 10-1073, et al. and No. 10-1167, et al., and the responses to the petitions were circulated to the full court, and a vote was requested. Thereafter, a majority of the judges eligible to participate did not vote in favor of the petitions. Upon consideration of the foregoing, it is

## App. 108

many of the arguments her dissent now presses. In particular, it rebuffed EPA's attempt to use "postenactment congressional actions and deliberations" to obscure "the meaning of an otherwise-unambiguous statute," *id.* at 529, and found EPA's reliance on *FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120 (2000), "similarly misplaced," *Massachusetts v. EPA*, 549 U.S. at 530. Seeking to revive the *Brown & Williamson* argument, Judge Brown suggests that the Court never considered the "far-reaching effects" of extending greenhouse gas regulation to stationary sources. *See* Dissenting Op. at 18 (Brown, J.). But this is inaccurate – the briefs before the Court explicitly raised the argument that interpreting "air pollutant" to include greenhouse gases could have tremendous consequences for stationary-source regulation. *See, e.g.*, Brief of Respondent CO<sub>2</sub> Litigation Group, *Massachusetts v. EPA*, 549 U.S. 497 (2007) (No. 05-1120), 2006 WL 3043971 at \*19-\*31.

To the extent Judge Brown attempts to bypass *Massachusetts v. EPA* by focusing on the statutory condition that air pollution "*reasonably be anticipated to endanger* public health or welfare," 42 U.S.C. § 7521(a)(1) (emphasis added), her quarrel is not just with the Supreme Court, but also with EPA's assessment of the science. Of course, we agree that the statute requires EPA to find a particular causal nexus between the pollutant and the harm in order to regulate. *See* Dissenting Op. at 9 (Brown, J.). But that is exactly what EPA did: it found that

## App. 109

“greenhouse gases in the atmosphere may *reasonably be anticipated* both to endanger public health and to endanger public welfare.” *Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act*, 74 Fed. Reg. 66,496, 66,497 (Dec. 15, 2009). And, as the panel opinion explains, EPA’s scientific judgment about the causal relationship between greenhouse gases and climate change is a scientific determination entitled to “an extreme degree of deference.” *Coalition for Responsible Regulation v. EPA*, 684 F.3d 102, 120 (D.C. Cir. 2012) (quoting *American Farm Bureau Federation v. EPA*, 559 F.3d 512, 519 (D.C. Cir. 2009)). The dissent’s suggestion that EPA was somehow statutorily precluded from finding the requisite nexus between greenhouse gases and harm to public health and welfare, *see* Dissenting Op. at 10-11 (Brown, J.), is belied by the Supreme Court’s decision to remand precisely this question. *See Massachusetts v. EPA*, 549 U.S. at 532-35.

Judge Kavanaugh’s dissent relates to the scope of the Prevention of Significant Deterioration (“PSD”) program, an aspect of the panel opinion Judge Brown also rejects. Specifically, Judge Kavanaugh disagrees with EPA’s longstanding interpretation of the term “any air pollutant,” 42 U.S.C. § 7479(1), arguing that, in the context of the PSD program, “any air pollutant” refers not to all pollutants regulated under the Clean Air Act, but only to the six NAAQS pollutants. Because taking the statute at its word and interpreting “any air pollutant” to include greenhouse

## App. 110

gases would lead to what he considers absurd results, Judge Kavanaugh insists that EPA and this Court are obligated to read “any air pollutant” more narrowly. *See* Dissenting Op. at 3-10 (Kavanaugh, J.). This argument, however, hinges on the proposition that both readings are plausible interpretations of an ambiguous statutory provision. *See* Dissenting Op. at 2-3, 10 (Kavanaugh, J.). But as the panel opinion explains at length, the statute is clear. *See Coalition for Responsible Regulation*, 684 F.3d at 132-44. Congress did not say “certain ‘air pollutants.’” Dissenting Op. at 2 (Kavanaugh, J.). It said “any air pollutant,” and it meant it. *See Coalition for Responsible Regulation*, 684 F.3d at 136. Thus, unlike the unreasonable interpretation rejected in *Kloeckner v. Solis*, No. 11-184, slip op. at 7-13 (U.S. 2012), the panel’s interpretation of the statute is the only plausible one.

Moreover – and again, as the panel opinion explains at length, *see Coalition for Responsible Regulation*, 684 F.3d at 135-36 – considering “any air pollutant” in context buttresses rather than undermines the panel’s interpretation. The statute frames the purpose of the PSD program in broad – not NAAQS-specific – terms, emphasizing that the program’s goal is “to protect public health and welfare from any actual or potential adverse effect which . . . may reasonably be anticipate[d] to occur from air pollution.” 42 U.S.C. § 7470(1). And although certain aspects of the program are specifically directed at NAAQS pollutants, *see, e.g., id.* § 7473(b)(4), the

## App. 111

program as a whole plainly has a more expansive scope. For instance, covered sources are required to (1) install the best available control technology for “*each* pollutant subject to regulation under [the Act],” *id.* § 7475(a)(4) (emphasis added), and (2) demonstrate that they will not cause or contribute to “*any* . . . applicable emission standard” under the Act, *id.* § 7475(a)(3) (emphasis added).

In the end, we agree that “the question here is: Who Decides?” Dissenting Op. at 18 (Kavanaugh, J.). We also agree that “Congress (with the President) sets the policy through statutes, agencies implement that policy within statutory limits, and courts in justiciable cases ensure that agencies stay within the statutory limits set by Congress.” Dissenting Op. at 18 (Kavanaugh, J.). Here, Congress spoke clearly, EPA fulfilled its statutory responsibilities, and the panel, playing its limited role, gave effect to the statute’s plain meaning. *See Chevron, U.S.A., Inc. v. NRDC*, 467 U.S. 837, 842-43 (1984) (“If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress.”).

To be sure, the stakes here are high. The underlying policy questions and the outcome of this case are undoubtedly matters of exceptional importance. The legal issues presented, however, are straightforward, requiring no more than the application of clear statutes and binding Supreme Court precedent. There is no cause for en banc review.

---

## App. 112

BROWN, *Circuit Judge*, dissenting from the denial of rehearing en banc: In the summer of 1974, while waiting to start classes at UCLA, I was lucky enough to obtain a summer job house sitting in the pleasant, upscale neighborhood of Pasadena. Known mostly for its Rose Parade and Rose Bowl, Pasadena is one of the more scenic exurbs of Los Angeles. I inhabited a sparsely furnished, modest-but-pricey bungalow set among the lush landscape typical of southern California. This is a place where Birds of Paradise grow ten feet tall and the magenta blossoms of Bougainvillea fall like lavish draperies from redwood garden trellises. After staying in the house more than a month and spending a restless night listening to the agitated thrashings of the jacaranda trees in a fitful wind, I stumbled bleary-eyed into the kitchen, looked out the window, and stopped – utterly dumbfounded. There – looking like it was but a few feet beyond the back fence – stood a mountain. Not a foothill. Not an unobtrusive mesa. A mountain! Closer inspection revealed not a lone majestic peak, but a whole mountain range I later identified as the San Gabriels. In those days, the air in the Los Angeles basin was so thick with smog that a mountain, or even a nearby mountain range, could simply disappear.

Although the Los Angeles basin was among the most notorious examples of the phenomenon, it was by no means unique and certainly not the worst. It was this crisis of ambient air quality that precipitated the enactment of the Clean Air Act (CAA). But as the CAA's history, language, and

## App. 113

structure make clear, Congress never intended the Act to serve as an environmental cure-all. It was targeted legislation designed to remedy a particular wrong: the harmful direct effects of poisoned air on human beings and their local environs. This is what Congress understood as “air pollution which may reasonably be anticipated to endanger public health” in the tailpipe emissions provision, 42 U.S.C. § 7521(a)(1). The Supreme Court in *Massachusetts v. EPA*, 549 U.S. 497 (2007), however, concluded otherwise. In dicta too suggestive to ignore, the Court implicitly assumed that climate change could provide the basis for an endangerment finding in the tailpipe context. *See id.* at 532-33.

Bound as I am by *Massachusetts*, I reluctantly concur with the Panel’s determination that EPA may regulate GHGs in tailpipe emissions. But I do not choose to go quietly. Because the most significant regulations of recent memory rest on the shakiest of foundations, Part I of this statement engages *Massachusetts’s* interpretive shortcomings in the hope that either Court or Congress will restore order to the CAA. Part II, by contrast, reflects my belief that *Massachusetts* does not compel the same result for Title V and the Prevention of Significant Deterioration of Air Quality (PSD) program. Although I agree with Judge Kavanaugh’s dissent, *Coal. for Responsible Regulation v. EPA*, Nos. 09-1322, et al. (Kavanaugh, J., dissenting from denial of rehearing en banc), I approach the inflection point from a

## App. 114

slightly different perspective. Part III concludes with a brief note on standing.

Because I would vote for the full court to consider the propriety of extending *Massachusetts* to Title V and the PSD program, I respectfully dissent from this denial of rehearing en banc.

**I.****A.**

The origins of the Clean Air Act are closely tied to fatal fogs and deadly air inversions that, for much of early postindustrial history, seemed to be the inevitable consequence of economic progress. See Arnold W. Reitze, Jr., *A Century of Air Pollution Control Law: What's Worked; What's Failed; What Might Work*, 21 ENVTL. L. 1549, 1575 (1991).<sup>1</sup> Initially regulated at the local and state level, air pollution became the focus of the federal government only after World War II. See *id.* at 1585-86. In October 1948, a severe temperature inversion in the industrial city of Donora, Pennsylvania increased air pollution to such an extent that traffic “was virtually stopped because of lack of visibility.” The inversion killed 20 people, *id.*, and prompted the federal government to begin researching air pollution. *Id.* at 1586. By 1961,

---

<sup>1</sup> Inversions, sometimes known as “Londoners,” occur “when a layer of hot air warmed by . . . water exists above cooler ground-level air and traps smoke and particulate matter under the warmer air.” *Id.*

## App. 115

President Kennedy included a plea for “an effective air pollution program” in his Special Message on the Natural Resources. *Id.* Public pressures for legislation only increased when a “Killer Smog” engulfed London in December 1962, killing at least 340, and a similar inversion in New York City allegedly claimed the lives of 200. *Id.* Eventually, legislation recommended by President Kennedy in February 1963 led to the enactment of the CAA, which President Johnson signed into law on December 17, 1963. *Id.* at 1586-87. Seven years later, President Nixon signed The Clean Air Amendments of 1970. The 1970 Amendments authorized the EPA to prescribe national ambient air quality standards (NAAQS) and created the statutory framework that still exists today.

**B.**

It was no happy accident that congressional draftsmen titled the legislation the “*Clean Air Act.*” Ambient air quality was the point, purpose, and focus of the CAA. Congress had set its sights on the “dirty, visible ‘smokestack’ emissions,” 136 CONG. REC. H2771-03 (1990) (statement of Rep. Roe), and smog caused by vehicle emissions. The CAA was the means by which Congress would grapple with urban air pollution and its attendant health effects, including impaired breathing, heart disease, lung damage and lung disease, and even death. If pollution was the problem, these ills were the specific harms Congress sought to combat. Even a cursory glance at the

## App. 116

legislative history, with its numerous charts, graphics, and statistics detailing cancer and death rates, will bear this point out. *See, e.g.*, Hearings on Air Pollution – 1968 Before the Subcomm. on Air and Water Pollution of the Sen. Comm. on Pub. Works, 90th Cong. 2nd Sess., pt. 2, 608-20 (1968) (statement of Dr. Samuel S. Epstein, Children’s Cancer Research Foundation.) (“Air Pollution – 1968”).

With the enactment of the 1990 Amendments, Congress expanded the Act beyond its singular emphasis on urban air quality to address hazardous – *i.e.*, toxic – air pollutants, acid rain, and stratospheric ozone. In regulating hazardous pollutants, Congress reemphasized the need for a close and tangible nexus between pollutant and harm. The legislative record, for example, continued to conceive of dangers in terms of their direct effects on human health and well-being. *See, e.g.*, S. Rep. No. 101-228, at 3388 (1989), *reprinted in* 1990 U.S.C.C.A.N. 3385 (“Air pollution can silently damage our lungs and heart or act swiftly in the case of exposure to toxic air pollutants. Rigorous regulation of toxic air pollutants is needed to avoid risk of serious, irreversible damage to human health.”). To the extent the regulation of stratospheric ozone and acid rain suggest a broader nexus between pollutant and harm to human health, the very particular way in which Congress handled these exceptions goes a long way toward proving the rule: Congress only expands the CAA through considered legislative acts.

## App. 117

In addressing these transnational phenomena, the legislature did not spin regulations out of whole cloth. With ozone concerns, for example, Congress developed solutions through international negotiations, the implementation of which led to the creation of a separate title of the CAA. *See NRDC v. EPA*, 464 F.3d 1, 3 (D.C. Cir. 2006). Likewise, years of contentious discussions with Canada helped bring about the acid rain provisions in the 1990 Amendments. *See generally* Dennis A. Leaf, *Intergovernmental Cooperation: Air Pollution from an U.S. Perspective*, 18 CAN.-U.S. L.J. 245 (1992). Simply put, when Congress became aware of new dangers, it acted judiciously in crafting workable remedies that, when they obtained the necessary political support, were worked into their own discrete provisions under the Act. Neither Congress nor the EPA attempted to force these distinct problems into existing, ill-suited regulatory schemes.

Congressman Waxman, one of the strongest proponents of stringent air pollution controls and a key force behind the 1990 Amendments, has stated that “in recent experience, no legislation has received more scrutiny during its consideration.” The Honorable Henry A. Waxman, *An Overview of the Clean Air Act Amendments of 1990*, 21 ENVTL. L. 1721, 1724 (1991). Hyperbole or not, the admission is telling. The history of the CAA is one of hard-fought incremental gains through which Congress remedied particular environmental wrongs with tailored remedies. Said the Congressman:

## App. 118

Discrete and extensive new programs are included to grapple with high ambient pollution levels (urban and regional smog), hazardous air pollution, acid rain, and depletion of the stratospheric ozone layer. Each of these programs [was] tailored to the problem it [sought] to address, and each [was] quite different in its approach.”

*Id.* at 1811. Political necessity has forced Congress to calibrate its amendments to the CAA with great specificity and care. Where our Representatives have acted with such caution, any suggestion that Congress has – through a single word – conferred upon EPA the authority to steamroll through Congressional gridlock, upend the Senate’s rejection of the Kyoto Protocol, and regulate GHGs for the whole of American industry must necessarily fail. The legislature, recall, does not “hide elephants in mouseholes.” *Whitman v. Am. Trucking Assocs.*, 531 U.S. 457, 468 (2001).

But we needn’t rely on interpretative canons alone to make this point. In drafting the 1990 Amendments, Congress considered – and *expressly rejected* – proposals authorizing EPA to regulate GHGs under the CAA. *See* S. Rep. No. 101-228, at 377 (1989), *as reprinted in* 1990 U.S.C.C.A.N. 3385, 3760. Even the Executive objected that an attempt to control Carbon Dioxide (CO<sub>2</sub>) emissions – emissions not harmful to health – in order to prevent global warming was premature. *See* Administration’s Amendments – Hearings Before the Subcomm. On

## App. 119

Health and the Env't of the Comm. on Energy and Commerce, 101st Cong., 1st Sess. (1989) (includes Bush Administration Report on S. 1630). The Executive's critique noted that "unilateral action aimed at addressing a global problem" through a standard limiting tailpipe emissions would not be an effective means of safeguarding the global environment and would "necessarily punish national interests." *Id.* at 792, 813.

That Congress has never deviated from its decision to not regulate GHGs under the CAA was not for lack of opportunity. Congress has considered and rejected countless other bills in the years since the 1990 Amendments that would have authorized GHG regulation. By one estimate, Congressmen have proposed over 400 bills concerning GHGs between 1990 and 2009. See Abigail R. Moncrieff, *Reincarnating the "Major Questions" Exception to Chevron Deference As A Doctrine of Noninterference (or Why Massachusetts v. EPA Got It Wrong)*, 60 ADMIN. L. REV. 593, 636-37 (2008) (tracking proposals). Congress's inability to break this nearly quarter-century long deadlock is incredibly suggestive: this is not an area of policymaking where the legislature has acted rashly or unthinkingly in delegating authority to agencies.

At bottom, Congress understood the dangers of "any air pollutant" in § 7521(a)(1) in terms of the ill-effects caused those who inhale the pollutants, not the broad, attenuated consequences of climate change. The CAA was drafted not to combat the

## App. 120

threat of flooding or the menace of heat waves, *see* Endangerment and Cause of Contribute Findings for Greenhouse Gases, 74 Fed. Reg. 66,496, 66,526 (Dec. 15, 2009) (“EPA Endangerment Finding”), but the choking, stifling, and degenerative effect of airborne pollutants on human beings and their affected localities. Congress has long quantified this harm in terms of mortality rates, *see, e.g.*, Air Pollution – 1968, 564 (statement of Dr. Roger S. Mitchell, Director, Webb-Waring Institute for Medical Research), not acreage of “costal land” lost. *Massachusetts*, 549 U.S. at 522. To put matters pointedly: the injury sufficient to establish standing need not suffice to establish endangerment as well.

Congress was of course free to circumvent this close cause-health effect nexus by devising a separate provision for GHG regulation, much as it did for stratospheric ozone, but it did no such thing. And nothing in the legislative history suggests that Congress has deviated from this status quo.

The plain language of the CAA only underscores the Act’s non-applicability to GHGs insofar as it requires the harm be of the sort “reasonably [] anticipated to endanger.” 42 U.S.C. § 7251(a)(1) – a term we know to have a discrete meaning.

**C.**

In the present case, this Court had “little trouble” disposing of the argument that the “PSD program is specifically focused solely on localized air pollution”

## App. 121

because it is “quite clear . . . the PSD program was intended to protect against precisely the types of harms caused by greenhouse gases.” CRR Slp. Op. 62-63 (emphasis added). *Massachusetts* notwithstanding, this statement is a curious thing in light of the uncontradicted legislative history just discussed.<sup>2</sup> So too is the court’s reliance on the statutory text, particularly its finding that “the CAA expressly provides that effects on ‘welfare’ means ‘effects on . . . weather . . . and climate.’” Slp. Op. 62-63 (citing 42 U.S.C. § 7602(h)).

As a textual matter, there is nothing “quite clear” about it. The Supreme Court has declared that GHGs like CO<sub>2</sub> are pollutants within the meaning of the Act. Under the CAA, however, EPA can regulate a pollutant only if the administrator finds that the GHG causes or contributes to “air pollution which *may reasonably be anticipated to endanger* public health or welfare.” 42 U.S.C. § 7251(a)(1) (emphasis added). But in locating the CAA’s conception of “harm” in § 7602(h), the definition of “welfare,” and not § 7251(a)(1) generally, this court effectively skirted the operative statutory language – “may reasonably be anticipated” – and rendered it nugatory. This was in error. Section 7602(h) defines only the potential *objects* of harm; the “reasonably be

---

<sup>2</sup> As noted, the weather and climate issues targeted by the CAA involve direct, deleterious, localized effects caused by polluted air people breathe or suspended pollutants that may be deposited on land and crops by precipitation.

## App. 122

anticipated” language of § 7251(a)(1) supplies the requisite *nexus* between the pollutant and the objects of its harm. The two provisions must be read together if the statute is to be interpreted faithfully. To put matters another way, the “may reasonably be anticipated” language must do some analytical work in the endangerment determination lest it be deemed surplusage. *See, e.g., Conference of State Bank Supervisors v. Conover*, 715 F.2d 604, 627 (D.C. Cir. 1983) (“[I]n construing a statute, we ‘are obliged to give effect, if possible, to every word Congress used.’” (quoting *Reiter v. Sonotone Corp.*, 442 U.S. 330, 339 (1979))). And in view of the CAA’s legislative history, the nature of that work is clear.

In order to reasonably anticipate that a pollutant will contribute to air pollution that endangers public health or welfare, the Agency would have to conclude that pollution created by CO<sub>2</sub> or another GHG is a reasonably direct cause of the damage to public health and welfare. To find that CO<sub>2</sub> may ultimately endanger public health and welfare because sea levels will rise tells us nothing about whether CO<sub>2</sub> concentrations in the ambient air directly harm public health and welfare. The ingredients of a Killer Smog are few and specific; the process through which an air inversion traps particulate matter close to the ground is well understood. With both there is a direct correlation between reducing the concentration of the pollutant and reducing the negative health effects. Questions of public health impacts from air pollution have consistently been based on the direct – that is,

## App. 123

inhalational – effects of exposure to the pollutant. *See, e.g.*, Joint Opening Brief of Non-State Petitioners and Supporting Intervenors at 58, *Coal. for Responsible Regulation v. EPA*, No. 09-1322 (May 20, 2011); *NRDC, Inc. v. EPA*, 902 F.2d 962, 973 (D.C. Cir. 1990) (concluding that EPA may not consider the health effects of increased unemployment when setting new health-based NAAQS).

In contrast, any harm to human health and welfare flowing from climate change comes at the end of a long speculative chain. The dissent in *Massachusetts* pointed out that EPA had described in great detail the scientific uncertainty that precluded even forming a judgment as to whether greenhouse gases endanger public welfare. *See* 549 U.S. at 553-55 (Scalia, J., dissenting). In that earlier defense of its refusal to form a judgment, EPA explained how predicting climate change involved a “complex web of economic and physical factors,” including:

[o]ur ability to predict future global anthropogenic emissions of GHGs and aerosols; the fate of these emissions once they enter the atmosphere (*e.g.*, what percentage are absorbed by vegetation or are taken up by the oceans); the impact of those emissions that remain in the atmosphere on the radiative properties of the atmosphere; changes in critically important climate feedbacks (*e.g.*, changes in cloud cover and ocean circulation); change in temperature characteristics (*e.g.*, average temperatures, shifts in daytime and evening temperatures);

## App. 124

changes in other climatic parameters (*e.g.*, shifts in precipitation, storms); and ultimately the impact of such changes on human health and welfare (*e.g.*, increases or decreases in agricultural productivity, human health impacts).

*Id.* If there can be this much logical daylight between the pollutant and the anticipated harm, there is nothing EPA is not authorized to do. If this finding is valid, in a world where six degrees of separation is the compass of all humankind, the right endangerment finding would allow EPA to rule the world. But as this Court has noted before, EPA's authority to regulate is constrained, not enlarged, by the relationship of the term "will endanger" to other sections of the CAA. See *Ethyl v. EPA*, 541 F.2d 1, 29 (D.C. Cir. 1976) (*en banc*).

Of course, nothing here should be taken to imply that a particular GHG does not contribute to climate change. I mean only to suggest that a pollutant might contribute to the nebulous mélange of potential drivers of climate change without having any direct, deleterious impact within the meaning of the CAA. I emphasize too that this is not a problem with science. This is a problem of statutory interpretation. Climate change, with its geologic timeframe and its many uncertainties and imponderables, is and will probably remain a subject of some controversy. EPA finds the science sufficiently convincing for its purposes and it is entitled to a certain amount of deference on questions related to its technical expertise. But it is

## App. 125

not necessary to quibble with the science of climate change to conclude that the endangerment finding fails on textual and logical terms. There is simply a point at which a difference in degree becomes a difference in kind and we have passed this point many times over in the course of this tortured litigation. The Supreme Court, however, has refused to recognize as much for tailpipe emissions.

**II.****A.**

But we need not follow *Massachusetts* off the proverbial cliff and apply its reasoning to the unique Title V and PSD provisions not considered in that case. The cascading layers of absurdity that flow from that interpretive exercise make clear that the plain language of the CAA compels no such result. As EPA's own rulemaking documents have so unabashedly explained:

To apply the statutory PSD and title V applicability thresholds literally to sources of GHG emissions would bring tens of thousands of small sources and modifications into the PSD program each year, and millions of small sources into the title V program. These extraordinary increases in scope of the permitting programs would mean that the programs would become several hundred-fold larger than what Congress appeared to contemplate.

App. 126

PSD and Title V Greenhouse Gas Tailoring Rule; Final Rule, 75 Fed. Reg. 31,514, 31,533 (Jun. 3, 2010) (“Final Tailoring Rule”). Completely oblivious to the irony, EPA added:

For our authority to take this action, we rely in part on the “absurd results” doctrine, because applying the PSD and title V requirements literally (as previously interpreted narrowly by EPA) would not only be inconsistent with congressional intent concerning the applicability of the PSD and title V programs, but in fact would severely undermine congressional purpose for those programs.

*Id.* at 31,541-42. And again:

[I]n this case because a literal reading of the PSD and title V applicability provisions results in insurmountable administrative burdens. Those insurmountable administrative burdens – along with the undue costs to sources – must be considered “absurd results” that would undermine congressional purpose for the PSD and title V programs.

*Id.* at 31,547.

In precincts outside Washington, D.C., this litany might cause a regulator to pause and consider whether results so at odds with Congressional presuppositions could ever be justified as falling within the literal meaning of an enactment. EPA, however, proposes that the absurd result can be easily eliminated by ramping up and gradually

## App. 127

phasing in the requirements. Faced with the choice of reconsidering the legitimacy of an endangerment finding that sets in motion such a cluster of chaos or rewriting the statute, the agency has blithely done the latter. This is an abuse of the absurdity and administrative necessity doctrines as neither can be invoked to preempt legislative prerogatives. Permitting a statute “to be read to avoid absurd results allows an agency to establish that seemingly clear statutory language does not express the ‘unambiguously expressed intent of Congress,’” but it does not grant the agency “a license to rewrite the statute.” *Mova Pharmaceuticals v. Shalala*, 140 F.3d 1060, 1068 (D.C. Cir. 1998).

But that is not the worst of it. The real absurdity – apparently as invisible to the EPA as the San Gabriels once were to me – cannot be cured by phase in, no matter how subtly Byzantine. The real absurdity is that this unprecedented expansion of regulatory control, this epic overreach, may very well do more damage to the wellbeing of Americans than GHGs could ever do.<sup>3</sup>

---

<sup>3</sup> *See, e.g.*, Joint Reply Br. of Non-State Petitioners and Supporting Intervenors at \*1, No. 09-1322 (Nov. 14, 2011) (“Nor does [EPA] dispute that the new rules will impose massive burdens on a struggling economy, or that its program of vehicle standards will affect global mean temperatures by no more than 0.01 degree Celsius by 2100”).

**B.**

A second, more elementary consideration counsels against the mechanical application of *Massachusetts's* tailpipe emissions determination to these distinct CAA provisions: deference to Congress.

As articulated in *Food & Drug Administration v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120 (2000), the Supreme Court's "major questions" canon gives form to the judicial intuition so strongly implicated here: Congress should not be presumed to have deferred to agencies on questions of great significance more properly resolved by the legislature. If there was ever a regulation in recent memory more befitting such a presumption than the present, I confess I do not know of it.

On familiar facts, the Supreme Court in *Brown & Williamson* rebuffed the FDA's expansionist effort to bring tobacco products within its regulatory ambit. The agency's regulation rested on a strained interpretation of the Food, Drug, and Cosmetic Act, 21 U.S.C. § 301 *et seq.*, in which it defined nicotine as a "drug" and cigarettes and smokeless tobacco as "combination products" used to deliver nicotine to the body. *See Brown & Williamson*, 529 U.S. at 125-27. Applying *Chevron U.S.A. Inc. v. Natural Resources Defense Council*, 467 U.S. 837 (1984), the Court first considered the statutory structure. "[I]f tobacco products were within the FDA's jurisdiction," the majority concluded, the normal operation of the "Act would require the FDA to remove them from the

## App. 129

market entirely,” and this would “contradict Congress’ clear intent as expressed in its more recent, tobacco-specific legislation.” *Brown & Williamson*, 359 U.S. at 143. As the present case confirms, such absurdity is all but inevitable where an agency attempts to regulate that which “simply do[es] not fit” within its regulatory scheme. *Id.* The Court next considered Congress’s 35 year history of tobacco-specific legislation, finding it “clear” that this “legislation has effectively ratified the FDA’s previous position that it lacks jurisdiction to regulate tobacco.” *Id.* at 156.

The Court then closed its lengthy *Chevron* discussion with an appeal to first principles. The “inquiry into whether Congress has directly spoken to the precise question at issue,” the Court explained, “is shaped, at least in some measure, by the nature of the question presented.” *Id.* at 159. *Chevron* deference operates on the assumption “that a statute’s ambiguity constitutes an implicit delegation,” but this tenuous fiction need not hold true in every situation. *Id.* “In extraordinary cases,” the Court went on, “there may be reason to hesitate before concluding that Congress has intended such an implicit delegation.” *Id.* (referencing Stephen Breyer, *Judicial Review of Questions of Law and Policy*, 38 ADMIN. L. REV. 363, 370 (1986) (“A court may also ask whether the legal question is an important one. Congress is more likely to have focused upon, and answered, major questions, while leaving interstitial

## App. 130

matters to answer themselves in the course of the statute's daily administration").<sup>4</sup>

Declaring *Brown & Williamson* “hardly [the] ordinary case,” the Court reasoned:

Contrary to its representations to Congress since 1914, the FDA has now asserted jurisdiction to regulate an industry constituting a significant portion of the American economy. In fact, the FDA contends that, were it to determine that tobacco products provide no “reasonable assurance of safety,” it would have the authority to ban cigarettes and smokeless tobacco entirely. Owing to its unique place in American history and society, tobacco has its own unique political history. Congress, for better or for worse, has created a distinct regulatory scheme for tobacco products, squarely rejected proposals to give the FDA jurisdiction over tobacco, and repeatedly

---

<sup>4</sup> *MCI Telecommunications Corporation v. AT&T Co.*, 512 U.S. 218 (1994), a case the *Brown & Williamson* Court found “instructive,” *Brown & Williamson*, 529 U.S. at 160, had advanced a similar logic. In concluding Congress had spoken to the meaning of the term “modify” as it appears in § 203(b) of the Communications Act of 1934, the Court rejected FCC’s far more expansive interpretation. The Court assumed in dicta that it was “highly unlikely that Congress would leave the determination of whether an industry will be entirely, or even substantially, rate-regulated to agency discretion – and even more unlikely that it would achieve that through such a subtle device as permission to ‘modify’ rate-filing requirements.” *MCI*, 512 U.S. at 231. Certainly the same might be said here as well.

## App. 131

acted to preclude any agency from exercising significant policymaking authority in the area. Given this history and the breadth of the authority that the FDA has asserted, we are obliged to defer not to the agency's expansive construction of the statute, but to Congress' consistent judgment to deny the FDA this power.

*Brown & Williamson*, 529 U.S. at 159-60.

In view of the language, structure, and history of the CAA, I am simply unable to distinguish this logic from the present case in any meaningful way. To the contrary, with only the slightest of modifications one could rework the above text to apply to GHG emissions.<sup>5</sup>

---

<sup>5</sup> Perhaps:

Contrary to its representations in *Massachusetts v. EPA*, the EPA has now asserted jurisdiction to regulate industries constituting a significant portion of the American economy. In fact, the EPA contends that, because greenhouse gases can be regulated as tailpipe emissions, it is obligated to regulate all stationary sources at admittedly "absurd" levels. Owing to its ubiquitous place in the planet's life cycle, greenhouse gases have their own unique political history. Congress, for better or for worse, has declined to create a distinct regulatory scheme for greenhouse gases, squarely rejected proposals to give the EPA jurisdiction over greenhouse gases, and repeatedly acted to preclude any agency from exercising significant policymaking authority in the area. Given this history and the breadth of the authority that the EPA has asserted, we are obliged to defer not to the

(Continued on following page)

## App. 132

Although the *Massachusetts* Court distinguished *Brown & Williamson*, it did so only in the context of tailpipe emissions. Its reasoning does not extend to Title V and the PSD program.

In the Court's view, *Brown & Williamson* had “found critical at least two considerations that have no counterpart in [*Massachusetts*].” 549 U.S. at 531. First, whereas the regulation of tobacco under the FDCA would have necessarily led to a ban on tobacco products – an outcome that clashed with the “common sense” intuition that Congress never meant to remove those products from circulation – the expansion of EPA's “jurisdiction would lead to no such extreme measures [because] EPA would only *regulate* emissions” and “there is nothing counterintuitive to the notion that EPA can curtail the emission of substances that are putting the global climate out of kilter.” *Id.* But the Court spoke too soon. In the present litigation, EPA argued – and a Panel of this Court readily agreed – that in regulating tailpipe emissions under 42 U.S.C. § 7521, it is obligated to regulate stationary sources under Title V and the PSD program as well. As a threshold matter, the *Massachusetts* Court never considered these far-reaching effects. It limited its brief discussion on the merits to the tailpipe emissions question squarely before it. In this way, the Court never considered the

---

agency's expansive construction of the statute, but to Congress' consistent judgment to deny the EPA this power.

## App. 133

differing ways in which the CAA regulates tailpipes and stationary sources.

With tailpipe emissions, the inclusion of greenhouse gasses within the term “air pollutant” does not directly expand or contract the universe of vehicles and engines subject to the new standards. Consequently, the regulation’s impact will fall primarily on those manufacturers already complying with existing emission requirements. And even then, the Court explained, EPA “would have to delay any action ‘to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance.’” *Massachusetts*, 549 U.S. at 531 (quoting § 7521(a)(2)). Not so with the regulation of stationary sources. Insofar as 42 U.S.C. § 7479(1) defines “major emitting facility” to include those facilities with the “potential to emit” either 100 or 250 “tons per year or more of *any* air pollutant,” the statutory term is necessarily tied to CAA’s jurisdictional scope. Inescapably, then, the regulation of greenhouse gasses as “air pollutants” will radically expand the universe of covered entities far beyond Congress’s intentions. EPA’s decidedly extra-textual Tailoring Rule only confirms the ludicrousness of this result. Nor can it be said that the statutory safeguards operate in the same way as § 7521(a)(2). Permitting authorities may well be able to determine on a case-by-case basis what constitutes the “best available control technology” for a particular emitting facility, 42 U.S.C. § 7479(3), but this is of little consolation for

## App. 134

the small business owner who previously fell outside the CAA. At bottom, this outcome clashes with the “common sense” understanding that Congress would not have intended such a broad, unchecked expansion of the CAA to potentially millions of businesses from all walks of industry. The Supreme Court in *Massachusetts* simply did not have occasion to consider this absurd and “counterintuitive” outcome, but we do – and we must.

Second, the Court determined that the “unbroken series of congressional enactments” referenced in *Brown & Williamson* “made sense only if adopted ‘against the backdrop of the FDA’s consistent and repeated statements that it lacked authority under the FDCA to regulate tobacco.’” *Massachusetts*, 549 U.S. at 531.<sup>6</sup> By contrast, EPA had “not identified any congressional action that conflicts in any way with the regulation of greenhouse gases from new motor vehicles.” *Id.* And even if it had, “Congress could not have acted against a regulatory ‘backdrop’ of disclaimers of regulatory authority” because “EPA had never disavowed the authority to regulate greenhouse gases, and in 1998 it in fact affirmed that it *had* such authority.” *Id.* When read in context, however, it is clear that the Court’s reasoning was

---

<sup>6</sup> The suggestion here seems to be that Congress’s decision to regulate tobacco products would not, by itself, evince its intent to proscribe agencies from doing the same. Doing so in light of FDA’s statements, however, had the effect of implicitly codifying the agency’s long-held view.

## App. 135

building toward a wholly unspectacular point: because EPA's legislative history failed to establish congressional intent with the same weight and precision as *Brown & Williamson*, it did not justify "read[ing] ambiguity into a clear statute." *Id.* That logic is inapplicable here. In the absence of lexical clarity – which the Court had found in in [sic] CAA's "sweeping definition of 'air pollutant,'" *id.* at 528 – we need legislative history and other indicia of congressional intent to inform our understanding of how GHGs are to be regulated under other CAA provisions.<sup>7</sup>

The *Massachusetts* Court's effort to distinguish *Brown & Williamson* is thus unavailing where we

---

<sup>7</sup> Consider the role of NAAQS in this regulatory system. EPA in *Massachusetts* had observed that NAAQS were established to "address air pollution problems that occur primarily at ground level" as well as "concentrations of substances in the ambient air and the related public health and welfare problems." *Massachusetts*, 549 U.S. at 558-59 (Scalia, J., dissenting). EPA thus reasoned that the regulation of the buildup of CO<sub>2</sub> in the upper reaches of the atmosphere – the process alleged to cause global climate change – was not akin to regulating the concentration of a substance that is polluting the air and was "beyond the scope of CAA's authorization to regulate." *Id.* In other words, EPA maintained that had Congress intended the CAA to regulate greenhouse gases [sic] and global climate change, it would have provided some better tool than NAAQS. That defense – offered in response to a demand to regulate tailpipe emissions – applies with even greater potency to Title V and the PSD program. In fact, although EPA now claims it is authorized to regulate greenhouse gases and global climate change, the agency acknowledges that the regulatory framework is as ill-suited to the task as ever.

## App. 136

deal not with the definitional scope of “any pollutant” and tailpipe emissions, but the particular dangers Congress sought to combat in enacting Title V and the PSD program. When read in conjunction with the CAA’s history, structure, and language, the intuitive logic of the “major questions” doctrine makes clear that the Panel erred in extending *Massachusetts*. Congress simply did not intend for EPA to convert the “Clean Air Act” to the “Warm Air Act” writ large. But that is exactly what the federal courts have done.

As the Chief Justice observed in his *Massachusetts* dissent, impatience is not a juridical principle that can be sustained under our constitutional framework. *See Massachusetts*, 549 U.S. at 535-36 (Roberts, C.J., dissenting). It certainly fares no better as a default measure of institutional choice under *Chevron*. As *Massachusetts* recognized, an agency can only exercise the authority Congress has delegated to it. *See* 549 U.S. at 534-35 (noting that EPA must “ground its reasons for action or inaction in the statute” and “exercise its discretion within defined statutory limits.”). Absurdity can never figure as an adequate substitute for authority in this threshold assessment. Nor can absurdity cure the agency’s failure to establish that the statute unambiguously compels its interpretation or that its interpretation, though discretionary, is actually consistent with statutory text, structure, and purposes. The agency seeks to avoid these pesky constraints here by invoking *Massachusetts*, but Article III judges cannot be a legitimate source of

## App. 137

legislative authority. By deferring to the distorted claim of delegation advanced here, this Court has transformed *Chevron* from a useful, albeit accidental, touchstone into an idol to which we surrender our constitutional faith.

**III.**

In rejecting State Petitioners' challenge to the Tailoring Rule for want of standing, the Panel invoked that famed preceptor of American civics, Schoolhouse Rock, to great effect. Slp. Op. at 79. ("As a generation of schoolchildren knows, 'by that time, it's very unlikely that [a bill will] become a law. It's not easy to become a law.'"). I certainly do not quarrel with such dispositive authority. Lawmaking is neither easy nor certain. In an ordinary case, the mere possibility of "corrective legislation" will not establish that redress is "likely, as opposed to merely speculative." *Lujan*, 504 U.S. at 561. But it bears repeating that this is not an ordinary case. Where the choice is between non-action or a confessedly "absurd" regulation poised to impress countless billions of dollars in costs on American industry, we have transcended the realm of the speculative. For once, the comparison with *Massachusetts* is apt. The Supreme Court found standing on the basis of an estimated rise in sea level of 20 to 70 centimeters by the year 2100, *see Massachusetts*, 549 U.S. at 542 (Roberts, C.J, dissenting) – a prediction based almost entirely on conjecture. Is it any more speculative to say that specific projections of billions of dollars in

## App. 138

actual regulatory costs would not suffice to compel Congress to act?

The Panel's alternative contention fares better: because Congress could remedy the issue in countless ways, not all of which inure to State Petitioners' benefit, the inquiry is "inherently speculative." *See Op.* at 79. This argument benefits from the genuine uncertainty in Congress over what, if any, role EPA should play in GHG regulation. But therein lies a frighteningly obtuse logic. If EPA actions are *ultra vires* precisely because disagreement on the Hill prevented Congress from altering the status quo and authorizing such regulation, how then can the very same deadlock be used to *defeat* Petitioners' standing to challenge the Rule through which EPA effectuates its absurdist scheme? The Court cannot have it both ways.

At bottom, bad decisions make bad law. In denying rehearing en banc, this Court has read *Massachusetts* to its illogical ends and it is American industry that will have to pay. That this Court did so is unsurprising, but certainly not fated. *Massachusetts* does not compel this outcome for the PSD and Title V provisions. Had this Court interrogated its own assumptions and yielded not to *Massachusetts's* telos but sound constitutional principles, it would have found that the matter properly belongs before Congress, not courts or agencies. As Schoolhouse Rock long ago explained:

App. 139

Ring one, Executive,  
Two is Legislative, that's Congress.  
Ring three, Judiciary.  
See it's kind of like my circus, circus.<sup>8</sup>

And what a circus it is.

For these reasons, I respectfully dissent from the denial of rehearing en banc.

---

KAVANAUGH, *Circuit Judge*, dissenting from the denial of rehearing en banc:

This case is plainly one of exceptional importance. A decision in either direction will have massive real-world consequences. The U.S. Chamber of Commerce describes the EPA regulations at issue here as “the most burdensome, costly, far-reaching program ever adopted by a United States regulatory agency.” Petition for Rehearing En Banc at 1. On the other hand, EPA issued these regulations to help address global warming, a policy issue of major long-term significance to the United States. Put simply, the economic and environmental policy stakes are very high.

Of course, our role is not to make the policy choices or to strike the balance between economic and environmental interests. That job is for Congress and

---

<sup>8</sup> “Three Ring Government,” Schoolhouse Rocks, *available at* <http://www.schoolhouserock.tv/ThreeRing.html>.

## App. 140

the President when considering and enacting legislation, and then as appropriate for the Executive Branch – here, EPA, under the ultimate supervision of the President – when exercising its authority within statutory constraints. Our job as a court is more limited: to ensure that EPA has acted within the authority granted to it by Congress. In this case, I conclude that EPA has exceeded its statutory authority. I respectfully disagree with the panel opinion’s contrary conclusion, and given the overall importance of the case, I respectfully dissent from the denial of rehearing en banc.

I

A

This case concerns EPA’s implementation of the Prevention of Significant Deterioration provisions of the Clean Air Act. The Prevention of Significant Deterioration program – which is codified in Sections 7470 to 7479 of Title 42 – is designed to maintain state and local compliance with the National Ambient Air Quality Standards, known as the NAAQS. The NAAQS are currently established for six air pollutants: carbon monoxide, lead, nitrogen dioxide, ozone, particle pollution, and sulfur dioxide. As relevant here, the Prevention of Significant Deterioration statute requires stationary facilities that emit certain “air pollutants” to obtain permits before beginning new construction. *See* 42 U.S.C. §§ 7475(a)(1), 7479(1). To obtain a permit, the facility

## App. 141

must undergo a lengthy, costly process to analyze the new construction's impact on air quality and to try to demonstrate its compliance with the relevant emissions limits.

A central question in this case is how to construe the term "air pollutant" for purposes of this statutory permitting requirement. In particular, the question is whether the term "air pollutant" here covers not just the NAAQS pollutants, which can cause breathing problems or other health issues, but also greenhouse gases such as carbon dioxide, which contribute to global warming. Under the broader interpretation of "air pollutant" that encompasses greenhouse gases, a far greater number of facilities would fall within the Prevention of Significant Deterioration program and have to obtain pre-construction permits. That in turn would impose significantly higher costs on businesses and individuals that are building new commercial or residential property.

In considering a different Clean Air Act program targeted at motor vehicle emissions, the Supreme Court said that the term "air pollutant" meant "all airborne compounds of whatever stripe," which included greenhouse gases such as carbon dioxide. *Massachusetts v. EPA*, 549 U.S. 497, 529 (2007). But all parties here, including EPA, agree that the *Massachusetts v. EPA* interpretation of the term "air pollutant" cannot control in this case, for purposes of this very different Clean Air Act program for stationary facilities. Rather, as the parties agree, we must look to the text and context of the Prevention of

## App. 142

Significant Deterioration statute to determine what “air pollutant” covers here.

Looking at the relevant statutory text and context, there would initially appear to be two plausible interpretations of the term “air pollutant” for purposes of the Prevention of Significant Deterioration statute: (i) more broadly, an airborne compound that is deemed harmful and is regulated by EPA in any Clean Air Act program, which would include greenhouse gases such as carbon dioxide; or (ii) more narrowly, the six air pollutants that are regulated by EPA in setting and enforcing the NAAQS, which would cover carbon monoxide, lead, nitrogen dioxide, ozone, particle pollution, and sulfur dioxide, but would not include greenhouse gases such as carbon dioxide.

EPA chose the broader interpretation of “air pollutant,” thereby greatly expanding the reach of the Prevention of Significant Deterioration statute. But that broader interpretation has a glaring problem, as EPA itself recognized. In the context of the Prevention of Significant Deterioration statute, EPA’s broader interpretation would not mesh with other provisions of the statute and would lead to absurd results. That’s because the Prevention of Significant Deterioration statute requires pre-construction permits for facilities with the potential to emit more than 250 tons per year (or, for some facilities, 100 tons per year) of any covered pollutant. *See* 42 U.S.C. §§ 7475(a)(1), 7479(1). That would be a very low trigger for emissions of greenhouse gases because

## App. 143

greenhouse gases are emitted in far greater quantities than the NAAQS pollutants. As a result, the low trigger would mean a dramatically higher number of facilities would fall within the program and have to obtain pre-construction permits.

In an unusual twist, EPA openly acknowledged the unreasonableness – indeed, the absurdity – caused by its interpretation of the statute. If the Prevention of Significant Deterioration program were interpreted to require pre-construction permits based on emissions of greenhouse gases, EPA candidly stated that the result would be “so contrary to what Congress had in mind – and that in fact so undermines what Congress attempted to accomplish with the PSD requirements – that it should be avoided under the ‘absurd results’ doctrine.” 74 Fed. Reg. 55,292, 55,310 (Oct. 27, 2009).

But faced with those absurd consequences from the broader interpretation of the statute, EPA surprisingly did not choose the seemingly obvious option of adopting the narrower and more sensible interpretation of the term “air pollutant” for the Prevention of Significant Deterioration statute – the interpretation limited to NAAQS air pollutants. Instead, EPA plowed ahead with the broader interpretation. And then, to try to deal with the absurd repercussions of that interpretation for the Prevention of Significant Deterioration statute, EPA re-wrote the very specific 250-ton trigger in the permitting requirement of the statute, unilaterally raising that trigger for greenhouse gas emissions

## App. 144

from 250 tons to 100,000 tons – a 400-fold increase. *See* 75 Fed. Reg. 31,514 (June 3, 2010). EPA believed that re-writing the statute’s permitting-triggers provision in this way would reduce the number of facilities that would require pre-construction permits and thereby “tailor” the absurdity – that is, alleviate some of the absurdity caused by interpreting “air pollutant” to cover greenhouse gases.<sup>1</sup>

This is a very strange way to interpret a statute. When an agency is faced with two initially plausible readings of a statutory term, but it turns out that one reading would cause absurd results, I am aware of no precedent that suggests the agency can still choose the absurd reading and then start rewriting other perfectly clear portions of the statute to try to make it all work out. And just recently, the Supreme Court reminded the Executive Branch and the lower courts that this is not the proper way to interpret a statute: Instead of “reading new words into the statute” to avoid absurd results, as the Government had urged in that case, the Court said that the statute should be interpreted so that “no absurdity arises in the first

---

<sup>1</sup> At the same time, EPA reserved the right to ratchet the trigger all the way back down to 250 tons, thereby bringing more and more facilities under the program at EPA’s unilateral discretion. EPA’s assertion of such extraordinary discretionary power both exacerbates the separation of powers concerns in this case and underscores the implausibility of EPA’s statutory interpretation. Put simply, the statute cannot be read to grant discretion to EPA to raise or lower the permitting triggers as EPA sees fit.

## App. 145

place.” *Kloeckner v. Solis*, No. 11-184, slip op. at 13 (U.S. 2012).

Even limited to this case alone, the practical implications of accepting EPA’s approach are obviously major. And if this case stands as a precedent that influences other agency decisionmaking, the future consequences likewise could be significant: Agencies presumably could adopt absurd or otherwise unreasonable interpretations of statutory provisions and then edit other statutory provisions to mitigate the unreasonableness. Allowing agencies to exercise that kind of statutory re-writing authority could significantly enhance the Executive Branch’s power at the expense of Congress’s and thereby alter the relative balance of powers in the administrative process. I would not go down that road.

## B

In my view, the statutory issue here is reasonably straightforward. The Prevention of Significant Deterioration statute’s definition of “major emitting facility” subjects a facility to the permitting requirement based on the facility’s emissions of “air pollutants.” See 42 U.S.C. §§ 7475(a)(1), 7479(1). In the context of the Prevention of Significant Deterioration program as a whole, it seems evident that the term “air pollutant” refers to the NAAQS air pollutants.

To begin with, as explained above, interpreting “air pollutant” in this context to refer to the NAAQS

## App. 146

air pollutants would avoid the absurd consequences that EPA's broader interpretation creates – namely, the exponential increase in the number of facilities that would be required to obtain pre-construction permits. That single point alone provides dispositive support for the narrower, NAAQS-specific interpretation. *See, e.g., Taniguchi v. Kan Pacific Saipan, Ltd.*, 132 S. Ct. 1997, 2004-05 (2012) (statutory context supports narrower rather than broader reading of statutory term).

Moreover, other provisions in the Prevention of Significant Deterioration statute likewise plainly use the term “air pollutant” to refer to the NAAQS air pollutants. The Prevention of Significant Deterioration program is codified in Sections 7470 to 7479 of Title 42. Of relevance here, Section 7473 sets guidelines for areas designated as in attainment of the NAAQS and requires that the “concentration of any air pollutant” in those areas not exceed certain concentrations permitted by the NAAQS. 42 U.S.C. § 7473(b)(4). The term “air pollutant” in Section 7473(b)(4) necessarily refers to the NAAQS air pollutants. In addition, several other provisions in the Prevention of Significant Deterioration statute similarly refer to Section 7473(b)(4)'s maximum concentrations for NAAQS pollutants. Each of those references thus also necessarily employs a NAAQS-specific use of the term “air pollutant.” *See, e.g.,* 42 U.S.C. § 7473(c)(1) (listing exclusions from “the maximum allowable increases in ambient concentrations of an air pollutant”); § 7474(a)(B)

## App. 147

(redesignations cannot cause “concentrations of any air pollutant” to exceed the maximum); *see also* § 7475(a)(3)(A) (facility may not cause air pollution in excess of “maximum allowable concentration for any pollutant”).

So it’s clear that a variety of provisions in the Prevention of Significant Deterioration statute use “air pollutant” to refer to a NAAQS air pollutant. And we presume that, unless otherwise indicated, the term “air pollutant” is used the same way throughout the Prevention of Significant Deterioration statute – and here, we have no reason to conclude otherwise. *See IBP, Inc. v. Alvarez*, 546 U.S. 21, 34 (2005) (“identical words used in different parts of the same statute are generally presumed to have the same meaning”).

By contrast, when Congress wanted, in the Prevention of Significant Deterioration statute, to refer to a broader set of pollutants than the NAAQS pollutants, it did so expressly. Thus, a facility that requires a pre-construction permit because of its emissions of NAAQS pollutants must employ the best available control technology for emissions not just of “air pollutants” but of “each pollutant subject to regulation under this chapter,” which – now that EPA has regulated greenhouse gases in other parts of the Clean Air Act – *does* include greenhouse gases. 42 U.S.C. § 7475(a)(4). By its terms, Section 7475(a)(4) thus applies to greenhouse gases, not just the NAAQS. Importantly, however, Congress did not employ the language “each pollutant subject to

## App. 148

regulation under this chapter” in the statutory provision setting forth which facilities must obtain a pre-construction permit, the provision at issue in this case. And the policy distinction drawn in Section 7475(a)(4) is rather intuitive: Congress designed the statute’s permitting requirement based on facilities’ NAAQS emissions, but, once those facilities are subject to the permitting requirement, they must also meet a range of other minimum environmental standards.<sup>2</sup>

The overall objectives of the Prevention of Significant Deterioration statute also suggest that “air pollutant” refers to the NAAQS air pollutants for purposes of the permitting requirement. Importantly, the Prevention of Significant Deterioration statute applies only in areas that have met the NAAQS – that is, areas that do not have excessive emissions of the NAAQS air pollutants. If the purpose of this statute were in part to address global warming by requiring pre-construction permits for facilities that emit greenhouse gases, as EPA’s reading suggests, why would the statute target the construction of facilities only in areas that are in *compliance* with the NAAQS – and not elsewhere in the United States?

---

<sup>2</sup> Section 7479(1) – the definition of “major emitting facility” – speaks of “any” air pollutant. But the word “any” just begs the question of what the term “air pollutant” covers in the Prevention of Significant Deterioration program. It’s either any air pollutant regulated under the Clean Air Act or any of the NAAQS air pollutants.

## App. 149

That would make little sense, which in turn further suggests that EPA has misread the statute.

Moreover, as its name indicates, the Prevention of Significant Deterioration statute is designed primarily to prevent “deterioration” of an attainment area’s air quality. The relevant air quality standards that define whether an area is in attainment are the NAAQS. In a statute expressly linked to the NAAQS and designed to ensure that air quality does not “deteriorate” with respect to the NAAQS, it is somewhat illogical to read the statute as requiring pre-construction permits simply because a facility may emit substances that will *not* affect attainment of the NAAQS. Under EPA’s approach, a facility could be covered by the permitting requirement even if it emits no NAAQS air pollutants at all. That, too, makes little sense and suggests that EPA has misread the statute.

A separate canon of interpretation further demonstrates that EPA’s broad reading of the term “air pollutant” is at odds with Congress’s design. By requiring a vastly increased number of facilities to obtain pre-construction permits, EPA’s interpretation will impose enormous costs on tens of thousands of American businesses, with corresponding effects on American jobs and workers; on many American homeowners who move into new homes or plan other home construction projects; and on the U.S. economy more generally. Yet there is literally no indication in the text or legislative record that Members of Congress ever contemplated – much less intended –

## App. 150

such a dramatic expansion of the permitting requirement of the Prevention of Significant Deterioration statute. Courts do not lightly conclude that Congress intended such major consequences absent some indication that Congress meant to do so. *See FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 159-61 (2000). Here, as elsewhere, we should not presume that Congress hid an elephant in a mousehole.

For all of those reasons – the statutory text, the absurdity principle, the statutory context as demonstrated by related statutory provisions, the overarching objectives of the statute, the major unintended consequences of a broader interpretation – the Prevention of Significant Deterioration statute as a whole overwhelmingly indicates that the permitting requirement is based on emissions of the NAAQS air pollutants.

And just to reiterate, the simple and absolutely dispositive point in this case is the following: The broader interpretation of “air pollutant” adopted by EPA produces what even EPA itself admits are absurd consequences. When an agency is faced with two plausible readings of a statutory term, but one reading would cause absurd results, the agency cannot choose the absurd reading. Here, therefore, EPA was required to adopt the narrower and more sensible interpretation of “air pollutant,” the interpretation limited to the NAAQS pollutants. As the Supreme Court has said, “interpretations of a statute which would produce absurd results are to be

## App. 151

avoided if alternative interpretations consistent with the legislative purpose are available.” *Griffin v. Oceanic Contractors, Inc.*, 458 U.S. 564, 575 (1982). Such an “alternative interpretation[ ] consistent with the legislative purpose” is readily available here.

## II

If that were the end of the analysis, I would not hesitate to conclude that EPA had adopted an impermissibly broad reading of the term “air pollutant” for purposes of the permitting provision of the Prevention of Significant Deterioration statute. But before reaching that conclusion definitively, we need to consider whether EPA’s approach was mandated by the Supreme Court’s decision in *Massachusetts v. EPA*, 549 U.S. 497 (2007). In that case, the Supreme Court considered the general statutory term “air pollutant” as applied to a different aspect of the Clean Air Act – the motor vehicle emissions program. The Court there interpreted “air pollutant” very broadly to mean “all airborne compounds of whatever stripe,” including greenhouse gases. *Id.* at 529.

Does *Massachusetts v. EPA* dictate EPA’s broader interpretation of “air pollutant” in the different context of the Prevention of Significant Deterioration statute? The panel opinion seemed to think so; its conclusion appears to have been heavily if not dispositively influenced by *Massachusetts v. EPA*. See, e.g., *Coalition for Responsible Regulation, Inc. v. EPA*,

## App. 152

684 F.3d 102, 134, 136 (D.C. Cir. 2012). In my view, however, the holding in *Massachusetts v. EPA* does not control the result in this case. Indeed, as explained more fully below, even EPA has concluded that *Massachusetts v. EPA* does not control here. The decision in *Massachusetts v. EPA* concerned the motor vehicle emissions program, a point the Supreme Court expressly noted many times in its opinion. The case did not purport to say that every other use of the term “air pollutant” throughout the sprawling and multifaceted Clean Air Act necessarily includes greenhouse gases. Each individual Clean Air Act program must be considered in context.<sup>3</sup>

---

<sup>3</sup> As an analogy, take the familiar example of “no vehicles in the park.” Assume that a court has decided that the term “vehicles” generally includes bicycles, and that no bicycles are allowed in the park. Next assume that another park regulation states that “all park service vehicles must have reinforced gas tanks.” In that latter regulation, context tells us that the term “vehicles” obviously does not include bicycles. Bicycles are still vehicles in the abstract, but the gas-tank regulation logically applies only to a specific subset of vehicles (namely, motor vehicles).

So it is with “air pollutant” as used in different parts of the Clean Air Act. *Massachusetts v. EPA* held that the term “air pollutant” generally includes greenhouse gases. But that does not mean that the term “air pollutant” can never be used in a narrower sense. Greenhouse gases may qualify as “air pollutants” in the abstract, but context tells us that the Prevention of Significant Deterioration program uses the term “air pollutant” to refer only to a subset of all air pollutants (namely, the NAAQS pollutants).

## App. 153

Importantly, in *Massachusetts v. EPA*, the Supreme Court explicitly relied on the fact that the Clean Air Act’s “capacious definition of ‘air pollutant,’” did not appear “counterintuitive” or produce “extreme” consequences in the context of motor vehicle emissions. 549 U.S. at 531-32. But, as explained above, EPA’s capacious definition of “air pollutant” *is* counterintuitive and *does* produce extreme consequences in the context of the Prevention of Significant Deterioration statute, as EPA itself acknowledges. Moreover, in this case, an alternative and sensible interpretation of the term “air pollutant” is readily discernible from the text, context, and structure of the Prevention of Significant Deterioration statute as a whole – namely, the NAAQS-specific interpretation.

To be sure, as noted earlier, the same words used in different parts of an Act are often construed to have the same meaning. See *IBP, Inc. v. Alvarez*, 546 U.S. 21, 34 (2005). If that were an inflexible command, the *Massachusetts v. EPA* interpretation of “air pollutant” would certainly control here and throughout the entire Clean Air Act. But as the Supreme Court recently reminded us – *in the context of interpreting the Clean Air Act* – “the natural presumption that identical words used in different parts of the same act are intended to have the same meaning is not rigid and readily yields whenever there is such variation in the connection in which the words are used as reasonably to warrant the conclusion that they were employed in different parts

## App. 154

of the act with different intent.” *Environmental Defense v. Duke Energy Corp.*, 549 U.S. 561, 574 (2007) (internal quotation marks and ellipsis omitted). As instructed by the Supreme Court, we must interpret statutory terms based on their context and in light of the statute as a whole, even if that approach on some occasions means that the same term applies differently in different parts of a statute. See, e.g., *General Dynamics Land Systems, Inc. v. Cline*, 540 U.S. 581, 596-97 (2004) (term “age” has different meanings within Age Discrimination in Employment Act); *United States v. Cleveland Indians Baseball Co.*, 532 U.S. 200, 212-13 (2001) (term “wages paid” has different meanings within Social Security Act Amendments of 1939); *Robinson v. Shell Oil Co.*, 519 U.S. 337, 343-44 (1997) (term “employee” has different meanings within Title VII).

The Supreme Court’s application of that interpretive principle in *Environmental Defense v. Duke Energy* – a decision issued on the same day as *Massachusetts v. EPA* – is illuminating. There, the Supreme Court confronted the Clean Air Act’s definition of a stationary source “modification.” See 549 U.S. at 567-68. That term was relevant to both the New Source Performance Standards program and the Prevention of Significant Deterioration program. The Court ruled that EPA could interpret the term “modification” differently for each of those two Clean Air Act programs, even though “the terms share a common statutory definition.” *Id.* at 574. In so holding, the Court analyzed the two programs’

## App. 155

different regulatory goals, noting that a “given term in the same statute may take on distinct characters from association with distinct statutory objects calling for different implementation strategies.” *Id.*

The Supreme Court’s interpretive approach in *Environmental Defense v. Duke Energy* – which recognizes that the meaning of a statutory term in the Clean Air Act may vary based on the particular program at issue – shows that the *Massachusetts v. EPA* interpretation of “air pollutant” in the context of the motor vehicle emissions program does not necessarily require the same interpretation of “air pollutant” in the context of the Prevention of Significant Deterioration program. In *Massachusetts v. EPA*, the Supreme Court emphasized that the regulation of greenhouse gases in the motor vehicle emissions program would not be “counterintuitive” and would not lead to any “extreme measures.” 549 U.S. at 531. Greenhouse gas standards would simply be added to the other regulations already applicable to manufacturers of new motor vehicles, and any such standards would take into account both cost and technological feasibility. *See* 42 U.S.C. § 7521(a). By contrast, the regulation of greenhouse gases in the Prevention of Significant Deterioration program would be both counterintuitive and extreme. Tens of thousands of businesses and homeowners would be swept into the Clean Air Act’s purview for the first time and hit with permitting costs averaging \$60,000, not to mention the additional costs of trying to construct and maintain the facility in compliance

## App. 156

with the relevant emissions limits and technological standards. *See* 75 Fed. Reg. 31,514, 31,556 (June 3, 2010). In addition, the costs associated with a vastly expanded permitting requirement would deter numerous projects from even starting in the first place. The major differences between the motor vehicle emissions program and the Prevention of Significant Deterioration program thus neatly fit the *Environmental Defense v. Duke Energy* paradigm of “distinct statutory objects calling for different implementation strategies.”

In reaching that conclusion, it bears mention that the Clean Air Act is a very complicated statute encompassing several distinct environmental programs. It is no surprise, then, that the motor vehicle emissions program and the Prevention of Significant Deterioration program are not the only parts of the Act to employ a term like “air pollutant” in a context-dependent way. For example, the visibility program applies to facilities based on their emissions of “any pollutant.” 42 U.S.C. § 7491(g)(7). In the context of that program, EPA has interpreted the term “any pollutant” to mean “any visibility-impairing pollutant,” which obviously does not include greenhouse gases. 40 C.F.R. pt. 51, App. Y, § II.A. Similarly, the nonattainment program applies to areas that have been designated as nonattainment “for any air pollutant.” 42 U.S.C. § 7501(2). In the context of that program, the term “air pollutant” is logically limited to the NAAQS air pollutants, which are the only pollutants for which an area can be

## App. 157

designated as nonattainment. *Id.* § 7407(d)(1)(A). All of that simply underscores that a court should exercise caution before reflexively importing the interpretations applicable to one Clean Air Act program into a distinct Clean Air Act program.

Any lingering doubt that *Massachusetts v. EPA* does not control here is dispelled when we recall that EPA itself has rejected *Massachusetts v. EPA*'s interpretation of "air pollutant" for the Prevention of Significant Deterioration statute. The Court in *Massachusetts v. EPA* said that "air pollutant" meant "all airborne compounds of whatever stripe." 549 U.S. at 529. EPA has acknowledged, however, that such a broad definition cannot possibly extend to the use of the term "air pollutant" in the Prevention of Significant Deterioration statute. EPA understood that it would be absurd to require pre-construction permits because of emissions of any airborne compound, including emissions of airborne compounds that have not been deemed harmful and regulated under the Clean Air Act. To avoid rendering the Prevention of Significant Deterioration statute an absurdity, EPA construed "air pollutant" to mean *certain* air pollutants – in particular, "any regulated air pollutant."

The critical point for present purposes – and it really is a critical point in thinking about the significance of *Massachusetts v. EPA* to the present case – is that EPA itself recognized that the *Massachusetts v. EPA* definition of "air pollutant" cannot and does not control how to interpret "air

## App. 158

pollutant” in the Prevention of Significant Deterioration context. As it tries to justify its broad interpretation of the Prevention of Significant Deterioration statute, EPA cannot simultaneously latch on to *Massachusetts v. EPA* and reject *Massachusetts v. EPA*.

If *Massachusetts v. EPA* does not control here – and even EPA admits that it does not – then we are back where we started. EPA was faced with two initially plausible interpretations of “air pollutant” for purposes of the permitting requirement of the Prevention of Significant Deterioration statute. One interpretation created patent absurdities and made little sense given the other statutory provisions. The other interpretation fit comfortably and sensibly within the statutory text and context. EPA nonetheless chose the first option. In my view, EPA’s reading of the statute was impermissible. An agency cannot adopt an admittedly absurd interpretation and discard an eminently sensible one.

Given all of this, the case seems reasonably straightforward. So how did the panel opinion reach the opposite conclusion? I respectfully have three main points of disagreement. First, as I read it, the panel opinion was decisively influenced by *Massachusetts v. EPA*’s interpretation of “air pollutant” in the context of the motor vehicle emissions program. But in light of the material differences between the motor vehicle emissions program and the Prevention of Significant Deterioration program, the *Massachusetts v. EPA*

## App. 159

interpretation cannot control here, as even EPA acknowledges. Second, the panel opinion attempted to buttress its choice of a broad interpretation of the term “air pollutant” by pointing to Section 7475(a)(4), the provision in the Prevention of Significant Deterioration program requiring covered facilities to use the best available control technology. But as explained above, Section 7475(a)(4) actually cuts the other way because it specifically refers to “each pollutant subject to regulation under this chapter,” which now does include greenhouse gases – whereas, by contrast, other statutory provisions in the Prevention of Significant Deterioration program clearly employ a NAAQS-specific interpretation of the unadorned term “air pollutant.” Third, the panel gave insufficient weight to the most critical point in this case, the absurd consequences of EPA’s broad interpretation. This was a mistake because the ultimate clincher in this case is one simple point: EPA chose an admittedly absurd reading over a perfectly natural reading of the relevant statutory text. An agency cannot do that.

## III

In finding EPA’s statutory interpretation legally impermissible, I do not in any way want to diminish EPA’s vital policy objectives. EPA’s regulations for the Prevention of Significant Deterioration statute may well be a good idea as a matter of policy. The task of dealing with global warming is urgent and important. But as in so many cases, the question here is: Who

## App. 160

Decides? The short answer is that Congress (with the President) sets the policy through statutes, agencies implement that policy within statutory limits, and courts in justiciable cases ensure that agencies stay within the statutory limits set by Congress. A court's assessment of an agency's compliance with statutory limits does not depend on whether the agency's policy is good or whether the agency's intentions are laudatory. Even when that is true, we must enforce the statutory limits. *See Hamdan v. United States*, 696 F.3d 1238 (D.C. Cir. 2012) (ruling that Executive Branch exceeded statutory authority in wartime prosecution of al Qaeda member).

In cases like this one, the bedrock underpinnings of our system of separation of powers are at stake. To be sure, courts must be wary of undue interference with an agency's action implementing its statutory responsibilities. *See American Radio Relay League, Inc. v. FCC*, 524 F.3d 227 (D.C. Cir. 2008) (separate opinion of Kavanaugh, J.); *see also Desert Citizens Against Pollution v. EPA*, 699 F.3d 524 (D.C. Cir. 2012); *National Environmental Development Association's Clean Air Project v. EPA*, 686 F.3d 803 (D.C. Cir. 2012); *American Petroleum Institute v. EPA*, 684 F.3d 1342 (D.C. Cir. 2012); *ATK Launch Systems, Inc. v. EPA*, 669 F.3d 330 (D.C. Cir. 2012); *Natural Resources Defense Council v. EPA*, 661 F.3d 662 (D.C. Cir. 2011); *Medical Waste Institute & Energy Recovery Council v. EPA*, 645 F.3d 420 (D.C. Cir. 2011). To take one salient and important example, the statutory scheme gives EPA significant discretion in setting the

## App. 161

NAAQS for the NAAQS air pollutants – a discretion the courts must respect.

But at the same time, undue deference or abdication to an agency carries its own systemic costs. If a court mistakenly allows an agency's transgression of statutory limits, then we green-light a significant shift of power from the Legislative Branch to the Executive Branch. The Framers of the Constitution did not grant the Executive Branch the authority to set economic and social policy as it sees fit. Rather, the Framers gave Congress, along with the President, that legislative role (subject to constitutional limits), and they assigned the Executive Branch the executive power to issue rules and enforce the law *within the limits set by Congress*.<sup>4</sup>

It is true that the legislative process can be cumbersome and frustrating, and the Executive Branch often is well-intentioned in wanting to address pressing policy concerns quickly, before the sometimes glacial congressional machinery can be

---

<sup>4</sup> In protecting national security, the Executive has some Article II authority to act in certain circumstances in the Nation's defense even without specific congressional authorization. This is known as *Youngstown* category two. See *Youngstown Sheet & Tube Co. v. Sawyer*, 343 U.S. 579, 637 (1952) (Jackson, J., concurring). There is no general *Youngstown* category two authority in the domestic social and economic realms, where the Executive must have statutory authority in order to act.

## App. 162

stirred to action.<sup>5</sup> The legislative process can be slow because the Constitution makes it far harder to enact legislation than to block it: Under the Constitution, three different entities must agree in order to enact legislation – the House, the Senate, and the President (or two-thirds of both the House and the Senate to override a President’s veto). But the Framers knew the legislative process would be laborious. They designed it that way. The time and difficulty of enacting new legislation has never justified an agency’s contravention of statutory limits. The Framers specifically contemplated, moreover, that there would be situations where the Executive Branch confronts a pressing need that it does not have current authority to address. In those circumstances, the Constitution’s Recommendations Clause provides that the President may “recommend” to Congress “such Measures as he shall judge necessary and expedient.” U.S. CONST. art. II, § 3.

Importantly, the separation of powers and checks and balances of our system are designed not just to ensure that the Branches operate within the proper spheres of their authority, but also to protect individual liberty. As the Supreme Court has

---

<sup>5</sup> In 2009, the House of Representatives passed a global warming bill that was supported by the President. But the Senate did not pass it. In the early 2000s, Senators McCain and Lieberman sought to pass global warming legislation, but no law was ultimately enacted. Numerous other bills have been introduced over the years, and various legislative efforts are ongoing.

## App. 163

explained many times, “while a government of opposite and rival interests may sometimes inhibit the smooth functioning of administration, the Framers recognized that, in the long term, structural protections against abuse of power were critical to preserving liberty. . . . The failures of . . . regulation may be a pressing national problem, but a judiciary that licensed extraconstitutional government with each issue of comparable gravity would, in the long run, be far worse.” *Free Enterprise Fund v. Public Company Accounting Oversight Board*, 130 S. Ct. 3138, 3157 (2010) (internal quotation marks, alterations, and citations omitted).

As a court, it is not our job to make the policy choices and set the statutory boundaries, but it is emphatically our job to carefully but firmly enforce the statutory boundaries. That bedrock separation of powers principle accounts for my concern about this case. Here, as I see it, EPA went well beyond what Congress authorized for the Prevention of Significant Deterioration statute. I respectfully disagree with the panel’s resolution of this issue, and given the overall importance of the case, I respectfully dissent from the denial of rehearing en banc.

---

App. 164

TITLE 42. THE PUBLIC HEALTH AND WELFARE  
CHAPTER 85. AIR POLLUTION PREVENTION  
AND CONTROL EMISSION STANDARDS  
FOR MOVING SOURCES MOTOR VEHICLE  
EMISSION AND FUEL STANDARDS

42 U.S.C. § 7521. Emission standards for new motor vehicles or new motor vehicle engines

(a) Authority of Administrator to prescribe by regulation. Except as otherwise provided in subsec.

(b) –

(1) The Administrator shall by regulation prescribe (and from time to time revise) in accordance with the provisions of this section, standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare. Such standards shall be applicable to such vehicles and engines for their useful life (as determined under subsection (d), relating to useful life of vehicles for purposes of certification), whether such vehicles and engines are designed as complete systems or incorporate devices to prevent or control such pollution.

(2) Any regulation prescribed under paragraph (1) of this subsection (and any revision thereof) shall take effect after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving

App. 165

appropriate consideration to the cost of compliance within such period.

(3) (A) In general.

(i) Unless the standard is changed as provided in subparagraph (B), regulations under paragraph (1) of this subsection applicable to emissions of hydrocarbons, carbon monoxide, oxides of nitrogen, and particulate matter from classes or categories of heavy-duty vehicles or engines manufactured during or after model year 1983 shall contain standards which reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to cost, energy, and safety factors associated with the application of such technology.

(ii) In establishing classes or categories of vehicles or engines for purposes of regulations under this paragraph, the Administrator may base such classes or categories on gross vehicle weight, horsepower, type of fuel used, or other appropriate factors.

(B) Revised standards for heavy duty trucks.

(i) On the basis of information available to the Administrator concerning the effect of air pollutants emitted from heavy-duty vehicles or engines and from other sources of mobile source

App. 166

related pollutants on the public health and welfare, and taking costs into account, the Administrator may promulgate regulations under paragraph (1) of this subsection revising any standard promulgated under, or before the date of, the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990] (or previously revised under this subparagraph) and applicable to classes or categories of heavy-duty vehicles or engines.

(ii) Effective for the model year 1998 and thereafter, the regulations under paragraph (1) of this subsection applicable to emissions of oxides of nitrogen (NO[X]) from gasoline and diesel-fueled heavy duty trucks shall contain standards which provide that such emissions may not exceed 4.0 grams per brake horsepower hour (gbh).

(C) Lead time and stability. Any standard promulgated or revised under this paragraph and applicable to classes or categories of heavy-duty vehicles or engines shall apply for a period of no less than 3 model years beginning no earlier than the model year commencing 4 years after such revised standard is promulgated.

(D) Rebuilding practice. The Administrator shall study the practice of rebuilding heavy-duty engines and the impact rebuilding has on engine emissions. On the basis of that study and other information available to the Administrator, the Administrator may prescribe requirements to control rebuilding practices, including standards applicable

## App. 167

to emissions from any rebuilt heavy-duty engines (whether or not the engine is past its statutory useful life), which in the Administrator's judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare taking costs into account. Any regulation shall take effect after a period the Administrator finds necessary to permit the development and application of the requisite control measures, giving appropriate consideration to the cost of compliance within the period and energy and safety factors.

(E) Motorcycles. For purposes of this paragraph, motorcycles and motorcycle engines shall be treated in the same manner as heavy-duty vehicles and engines (except as otherwise permitted under section 206(f)(1)) unless the Administrator promulgates a rule reclassifying motorcycles as light-duty vehicles within the meaning of this section or unless the Administrator promulgates regulations under subsection (a) applying standards applicable to the emission of air pollutants from motorcycles as a separate class or category. In any case in which such standards are promulgated for such emissions from motorcycles as a separate class or category, the Administrator, in promulgating such standards, shall consider the need to achieve equivalency of emission reductions between motorcycles and other motor vehicles to the maximum extent practicable.

(4) (A) Effective with respect to vehicles and engines manufactured after model year 1978, no emission control device, system, or element of design

App. 168

shall be used in a new motor vehicle or new motor vehicle engine for purposes of complying with requirements prescribed under this title if such device, system, or element of design will cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation or function.

(B) In determining whether an unreasonable risk exists under subparagraph (A), the Administrator shall consider, among other factors, (i) whether and to what extent the use of any device, system, or element of design causes, increases, reduces, or eliminates emissions of any unregulated pollutants; (ii) available methods for reducing or eliminating any risk to public health, welfare, or safety which may be associated with the use of such device, system, or element of design, and (iii) the availability of other devices, systems, or elements of design which may be used to conform to requirements prescribed under this title without causing or contributing to such unreasonable risk. The Administrator shall include in the consideration required by this paragraph all relevant information developed pursuant to section 214 [42 USCS § 7548].

(5) (A) If the Administrator promulgates final regulations which define the degree of control required and the test procedures by which compliance could be determined for gasoline vapor recovery of uncontrolled emissions from the fueling of motor vehicles, the Administrator shall, after consultation with the Secretary of Transportation with respect to motor vehicle safety, prescribe, by regulation, fill pipe

App. 169

standards for new motor vehicles in order to insure effective connection between such fill pipe and any vapor recovery system which the Administrator determines may be required to comply with such vapor recovery regulations. In promulgating such standards the Administrator shall take into consideration limits on fill pipe diameter, minimum design criteria for nozzle retainer lips, limits on the location of the unleaded fuel restrictors, a minimum access zone surrounding a fill pipe, a minimum pipe or nozzle insertion angle, and such other factors as he deems pertinent.

(B) Regulations prescribing standards under subparagraph (A) shall not become effective until the introduction of the model year for which it would be feasible to implement such standards, taking into consideration the restraints of an adequate leadtime for design and production.

(C) Nothing in subparagraph (A) shall (i) prevent the Administrator from specifying different nozzle and fill neck sizes for gasoline with additives and gasoline without additives or (ii) permit the Administrator to require a specific location, configuration, modeling, or styling of the motor vehicle body with respect to the fuel tank fill neck or fill nozzle clearance envelope.

(D) For the purpose of this paragraph, the term "fill pipe" shall include the fuel tank fill pipe, fill neck, fill inlet, and closure.

App. 170

(6) Onboard vapor recovery. Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall, after consultation with the Secretary of Transportation regarding the safety of vehicle-based (“onboard”) systems for the control of vehicle refueling emissions, promulgate standards under this section requiring that new light-duty vehicles manufactured beginning in the fourth model year after the model year in which the standards are promulgated and thereafter shall be equipped with such systems. The standards required under this paragraph shall apply to a percentage of each manufacturer’s fleet of new light-duty vehicles beginning with the fourth model year after the model year in which the standards are promulgated. The percentage shall be as specified in the following table:

**IMPLEMENTATION SCHEDULE FOR ON BOARD VAPOR RECOVERY REQUIREMENTS**

Model year commencing after standards promulgated	Percentage*
Fourth .....	40
Fifth.....	80
After Fifth .....	100

\*Percentages in the table refer to a percentage of the manufacturer’s sales volume.

The standards shall require that such systems provide a minimum evaporative emission capture efficiency of 95 percent. The requirements of section

App. 171

182(b)(3) [42 USCS § 7511a(b)(3)] (relating to stage II gasoline vapor recovery) for areas classified under section 181 [42 USCS § 7511] as moderate for ozone shall not apply after promulgation of such standards and the Administrator may, by rule, revise or waive the application of the requirements of such section 182(b)(3) [42 USCS § 7511a(b)(3)] for areas classified under section 181 [42 USCS § 7511] as Serious, Severe, or Extreme for ozone, as appropriate, after such time as the Administrator determines that onboard emissions control systems required under this paragraph are in widespread use throughout the motor vehicle fleet.

(b) Emissions of carbon monoxide, hydrocarbons, and oxides of nitrogen; annual report to Congress; waiver of emission standards; research objectives.

(1) (A) The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1977 through 1979 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.5 grams per vehicle mile of hydrocarbons and 15.0 grams per vehicle mile of carbon monoxide. The regulations under subsection (a) applicable to emissions of carbon monoxide from light-duty vehicles and engines manufactured during the model year 1980 shall contain standards which provide that such emissions may not exceed 7.0 grams per vehicle mile. The regulations under subsection (a) applicable to emissions of hydrocarbons from light-duty vehicles

## App. 172

and engines manufactured during or after model year 1980 shall contain standards which require a reduction of at least 90 percent from emissions of such pollutant allowable under the standards under this section applicable to light-duty vehicles and engines manufactured in model year 1970. Unless waived as provided in paragraph (5), regulations under subsection (a) applicable to emissions of carbon monoxide from light-duty vehicles and engines manufactured during or after the model year 1981 shall contain standards which require a reduction of at least 90 percent from emissions of such pollutant allowable under the standards under this section applicable to light-duty vehicles and engines manufactured in model year 1970.

(B) The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1977 through 1980 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per vehicle mile. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during the model year 1981 and thereafter shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.0 gram per vehicle mile. The Administrator shall prescribe standards in lieu of those required by the preceding sentence, which provide that emissions of oxides of nitrogen may not exceed 2.0 grams per vehicle mile

App. 173

for any light-duty vehicle manufactured during model years 1981 and 1982 by any manufacturer whose production, by corporate identity, for calendar year 1976 was less than three hundred thousand light-duty motor vehicles worldwide if the Administrator determines that –

(i) the ability of such manufacturer to meet emission standards in the 1975 and subsequent model years was, and is, primarily dependent upon technology developed by other manufacturers and purchased from such manufacturers; and

(ii) such manufacturer lacks the financial resources and technological ability to develop such technology.

(C) The Administrator may promulgate regulations under subsection (a)(1) revising any standard prescribed or previously revised under this subsection, as needed to protect public health or welfare, taking costs, energy, and safety into account. Any revised standard shall require a reduction of emissions from the standard that was previously applicable. Any such revision under this title may provide for a phase-in of the standard. It is the intent of Congress that the numerical emission standards specified in subsections (a)(3)(B)(ii),(g),(h), and (i) shall not be modified by the Administrator after the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990] for any model year before the model year 2004.

App. 174

(2) Emission standards under paragraph (1), and measurement techniques on which such standards are based (if not promulgated prior to the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990]), shall be promulgated by regulation within 180 days after such date.

(3) For purposes of this part [42 USCS §§ 7521 et seq.] –

(A) (i) The term “model year” with reference to any specific calendar year means the manufacturer’s annual production period (as determined by the Administrator) which includes January 1 of such calendar year. If the manufacturer has no annual production period, the term “model year” shall mean the calendar year.

(ii) For the purpose of assuring that vehicles and engines manufactured before the beginning of a model year were not manufactured for purposes of circumventing the effective date of a standard required to be prescribed by subsection (b), the Administrator may prescribe regulations defining “model year” otherwise than as provided in clause (i).

(B) [Repealed]

(C) The term “heavy duty vehicle” means a truck, bus, or other vehicle manufactured primarily for use on the public streets, roads, and highways (not including any vehicle operated exclusively on a rail or rails) which has a gross vehicle weight (as

App. 175

determined under regulations promulgated by the Administrator) in excess of six thousand pounds. Such term includes any such vehicle which has special features enabling off-street or off-highway operation and use.

[(4)](3) Upon the petition of any manufacturer, the Administrator, after notice and opportunity for public hearing, may waive the standard required under subparagraph (B) of paragraph (1) to not exceed 1.5 grams of oxides of nitrogen per vehicle mile for any class or category of light-duty vehicles or engines manufactured by such manufacturer during any period of up to four model years beginning after the model year 1980 if the manufacturer demonstrates that such waiver is necessary to permit the use of an innovative power train technology, or innovative emission control device or system, in such class or category of vehicles or engines and that such technology or system was not utilized by more than 1 percent of the light-duty vehicles sold in the United States in the 1975 model year. Such waiver may be granted only if the Administrator determines –

(A) that such waiver would not endanger public health,

(B) that there is a substantial likelihood that the vehicles or engines will be able to comply with the applicable standard under this section at the expiration of the waiver, and

(C) that the technology or system has a potential for long-term air quality benefit and has the

App. 176

potential to meet or exceed the average fuel economy standard applicable under the Energy Policy and Conservation Act upon the expiration of the waiver.

No waiver under this subparagraph [paragraph] granted to any manufacturer shall apply to more than 5 percent of such manufacturer's production or more than fifty thousand vehicles or engines, whichever is greater.

(c) Feasibility study and investigation by National Academy of Sciences; reports to Administrator and Congress; availability of information.

(1) The Administrator shall undertake to enter into appropriate arrangements with the National Academy of Sciences to conduct a comprehensive study and investigation of the technological feasibility of meeting the emissions standards required to be prescribed by the Administrator by subsection (b) of this section.

(2) Of the funds authorized to be appropriated to the Administrator by this Act, such amounts as are required shall be available to carry out the study and investigation authorized by paragraph (1) of this subsection.

(3) In entering into any arrangement with the National Academy of Sciences for conducting the study and investigation authorized by paragraph (1) of this subsection, the Administrator shall request the National Academy of Sciences to submit semiannual reports on the progress of its study and investigation

App. 177

to the Administrator and the Congress, beginning not later than July 1, 1971, and continuing until such study and investigation is completed.

(4) The Administrator shall furnish to such Academy at its request any information which the Academy deems necessary for the purpose of conducting the investigation and study authorized by paragraph (1) of this subsection. For the purpose of furnishing such information, the Administrator may use any authority he has under this Act (A) to obtain information from any person, and (B) to require such person to conduct such tests, keep such records, and make such reports respecting research or other activities conducted by such person as may be reasonably necessary to carry out this subsection.

(d) Useful life of vehicles. The Administrator shall prescribe regulations under which the useful life of vehicles and engines shall be determined for purposes of subsection (a)(1) of this section and section 207 [42 USCS § 7541]. Such regulations shall provide that except where a different useful life period is specified in this title [42 USCS §§ 7521 et seq.] useful life shall –

(1) in the case of light duty vehicles and light duty vehicle engines and light-duty trucks up to 3,750 lbs. LVW and up to 6,000 lbs. GVWR, be a period of use of five years or of fifty thousand miles (or the equivalent), whichever first occurs, except that in the case of any requirement of this section which first

App. 178

becomes applicable after the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990] where the useful life period is not otherwise specified for such vehicles and engines, the period shall be 10 years or 100,000 miles (or the equivalent), whichever first occurs, with testing for purposes of in-use compliance under section 207 [42 USCS § 7541] up to (but not beyond) 7 years or 75,000 miles (or the equivalent), whichever first occurs;

(2) in the case of any other motor vehicle or motor vehicle engine (other than motorcycles or motorcycle engines), be a period of use set forth in paragraph (1) unless the Administrator determines that a period of use of greater duration or mileage is appropriate; and

(3) in the case of any motorcycle or motorcycle engine, be a period of use the Administrator shall determine.

(e) New power sources or propulsion systems. In the event a new power source or propulsion system for new motor vehicles or new motor vehicle engines is submitted for certification pursuant to section 206(a) [42 USCS § 7525(a)], the Administrator may postpone certification until he has prescribed standards for any air pollutants emitted by such vehicle or engine which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger the public health or welfare but for which standards have not been prescribed under subsection (a).

App. 179

(f) High altitude regulations.

(1) The high altitude regulation in effect with respect to model year 1977 motor vehicles shall not apply to the manufacture, distribution, or sale of 1978 and later model year motor vehicles. Any future regulation affecting the sale or distribution of motor vehicles or engines manufactured before the model year 1984 in high altitude areas of the country shall take effect no earlier than model year 1981.

(2) Any such future regulation applicable to high altitude vehicles or engines shall not require a percentage of reduction in the emissions of such vehicles which is greater than the required percentage of reduction in emissions from motor vehicles as set forth in section 202(b) [subsec. (b) of this section]. This percentage reduction shall be determined by comparing any proposed high altitude emission standards to high altitude emissions from vehicles manufactured during model year 1970. In no event shall regulations applicable to high altitude vehicles manufactured before the model year 1984 establish a numerical standard which is more stringent than that applicable to vehicles certified under non-high altitude conditions.

(3) Section 307(d) [42 USCS § 7607(d)] shall apply to any high altitude regulation referred to in paragraph (2) and before promulgating any such regulation, the Administrator shall consider and make a finding with respect to –

App. 180

(A) the economic impact upon consumers, individual high altitude dealers, and the automobile industry of any such regulation, including the economic impact which was experienced as a result of the regulation imposed during model year 1977 with respect to high altitude certification requirements;

(B) the present and future availability of emission control technology capable of meeting the applicable vehicle and engine emission requirements without reducing model availability; and

(C) the likelihood that the adoption of such a high altitude regulation will result in any significant improvement in air quality in any area to which it shall apply.

(g) Light-duty trucks up to 6,000 GVWR and light-duty vehicles; standards for model years after 1993.

(1) NMHC, CO, and NO[X]. Effective with respect to the model year 1994 and thereafter, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC), carbon monoxide (CO), and oxides of nitrogen (NO[X]) from light-duty trucks (LDTs) of up to 6,000 lbs. gross vehicle weight rating (GVWR) and light-duty vehicles (LDVs) shall contain standards which provide that emissions from a percentage of each manufacturer's sales volume of such vehicles and trucks shall comply with the levels specified in table G. The percentage shall be as specified in the implementation schedule below:

App. 181

TABLE G. EMISSION STANDARDS FOR  
 NMHC, CO, AND NO<sub>x</sub>; FROM LIGHT-DUTY  
 TRUCKS OF UP TO 6,000 LBS. GVWR  
 AND LIGHT-DUTY VEHICLES

Vehicle type	Column A			Column B		
	(5 yrs/50,000 mi)			(10 yrs/100,000 mi)		
	NMHC	CO	NO <sub>x</sub>	NMHC	CO	NO <sub>x</sub>
LDTs (0-3,750 lbs. LVW) and light-duty vehicles.....	0.25	3.4	0.4*	0.31	4.2	0.6*
LDTs (3,751-5,750 lbs. LVW) .....	0.32	4.4	0.7**	0.40	5.5	0.97

Standards are expressed in grams per mile (gpm).

For standards under column A, for purposes of certification under section 206, the applicable useful life shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs.

For standards under column B, for purposes of certification under section 206, the applicable useful life shall be 10 years or 100,000 miles (or the equivalent), whichever first occurs.

\*In the case of diesel-fueled LDTs (0-3,750 lvw) and light-duty vehicles, before the model year 2004, in lieu of the 0.4 and 0.6 standards for NO<sub>x</sub> the applicable standards for NO<sub>x</sub> shall be 1.0 gpm for a useful life of 5 years or 50,000 miles (or the

App. 182

equivalent), whichever first occurs, and 1.25 gpm for a useful life of 10 years or 100,000 miles (or the equivalent) whichever first occurs.

\*\*This standard does not apply to diesel-fueled LDTs (3,751-5,750 lbs. LVW).

IMPLEMENTATION SCHEDULE  
FOR TABLE G STANDARD

Model year	Percentage*
1994.....	40
1995.....	80
after 1995.....	100

\*Percentages in the table refer to a percentage of each manufacturer's sales volume.

(2) PM Standard. Effective with respect to model year 1994 and thereafter in the case of light-duty vehicles and effective with respect to the model year 1995 and thereafter in the case of light-duty trucks (LDTs) of up to 6,000 lbs. gross vehicle weight rating (GVWR), the regulations under subsection (a) applicable to emissions of particulate matter (PM) from such vehicles and trucks shall contain standards which provide that such emissions from a percentage of each manufacturer's sales volume of such vehicles and trucks shall not exceed the levels specified in the table below. The percentage shall be as specified in the Implementation Schedule below.

App. 183

PM STANDARD FOR LDTs  
OF UP TO 6,000 LBS. GVWR

Usual life period	Standard
5/50,000.....	0.08 gpm
10/10,000.....	0.10 gpm

The applicable useful life, for purposes of certification under section 206 and for purposes of in-use compliance under section 207, shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs, in the case of the 5/50,000 standard.

The applicable useful life, for purposes of certification under section 206 and for purposes of in-use compliance under section 207, shall be 10 years or 100,000 miles (or the equivalent), whichever first occurs in the case of the 10/100,000 standard.

IMPLEMENTATION SCHEDULE  
FOR PM STANDARDS

Model year	Light-duty vehicles	LDTs
1994.....	40%*	
1995.....	80%*	40%*
1996.....	100%*	80%*
after 1996.....	100%*	100%*

\*Percentages in the table refer to a percentage of each manufacturer's sales volume.

App. 184

(h) Light-duty trucks of more than 6,000 lbs. GVWR; standards for model years after 1995. Effective with respect to the model year 1996 and thereafter, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC), carbon monoxide (CO), oxides of nitrogen (NO[X]), and particulate matter (PM) from light-duty trucks (LDTs) of more than 6,000 lbs. gross vehicle weight rating (GVWR) shall contain standards which provide that emissions from a specified percentage of each manufacturer's sales volume of such trucks shall comply with the levels specified in table H. The specified percentage shall be 50 percent in model year 1996 and 100 percent thereafter.

TABLE H. EMISSION STANDARDS  
FOR NMHC AND CO FROM GASOLINE  
AND DIESEL FUELED LIGHT-DUTY TRUCKS  
OF MORE THAN 6,000 LBS. GVWR

LDT Test Weight	Column A			Column B			
	(5 yrs/50,000 mi)			(11 yrs/120,000 mi)			
	NMHC	CO	NO <sub>x</sub>	NMHC	CO	NO <sub>x</sub>	PM
3,751-5,750 lbs. TW .....	0.32	4.4	0.7*	0.46	6.4	0.98	0.10
Over 5,750 lbs. TW .....	0.39	5.0	1.1*	0.56	7.3	1.53	0.12

Standards are expressed in grams per mile (gpm).

App. 185

For standards under column A, for purposes of certification under section 206, the applicable useful life shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs.

For standards under column B, for purposes of certification under section 206, the applicable useful life shall be 11 years or 120,000 miles (or the equivalent), whichever first occurs.

\*Not applicable to diesel-fueled LDTs.

(i) Phase II study for certain light-duty vehicles and light-duty trucks.

(1) The Administrator, with the participation of the Office of Technology Assessment, shall study whether or not further reductions in emissions from light-duty vehicles and light-duty trucks should be required pursuant to this title. The study shall consider whether to establish with respect to model years commencing after January 1, 2003, the standards and useful life period for gasoline and diesel-fueled light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less specified in the following table:

App. 186

TABLE 3. PENDING EMISSION STANDARDS  
FOR GASOLINE AND DIESEL FUELED  
LIGHT-DUTY VEHICLES AND LIGHT-DUTY  
TRUCKS 3,750 LBS. LVW OR LESS

Pollutant	Emission Level*
NMHC .....	0.125 GPM
NO <sub>x</sub> .....	0.2 GPM
CO .....	1.7 GPM

\*Emission levels are expressed in grams per mile (GPM). For vehicles and engines subject to this subsection for purposes of section 202(d) and any reference thereto, the useful life of such vehicles and engines shall be a period of 10 years or 100,000 miles (or the equivalent), whichever first occurs.

Such study shall also consider other standards and useful life periods which are more stringent or less stringent than those set forth in table 3 (but more stringent than those referred to in subsections (g) and (h)).

(2) (A) As part of the study under paragraph (1), the Administrator shall examine the need for further reductions in emissions in order to attain or maintain the national ambient air quality standards, taking into consideration the waiver provisions of section 209(b) [42 USCS § 7543(b)]. As part of such study, the Administrator shall also examine –

(i) the availability of technology (including the costs thereof), in the case of light-duty

App. 187

vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less, for meeting more stringent emission standards than those provided in subsections (g) and (h) for model years commencing not earlier than after January 1, 2003, and not later than model year 2006, including the lead time and safety and energy impacts of meeting more stringent emission standards; and

(ii) the need for, and cost effectiveness of, obtaining further reductions in emissions from such light-duty vehicles and light-duty trucks, taking into consideration alternative means of attaining or maintaining the national primary ambient air quality standards pursuant to State implementation plans and other requirements of this Act, including their feasibility and cost effectiveness.

(B) The Administrator shall submit a report to Congress no later than June 1, 1997, containing the results of the study under this subsection, including the results of the examination conducted under subparagraph (A). Before submittal of such report the Administrator shall provide a reasonable opportunity for public comment and shall include a summary of such comments in the report to Congress.

(3) (A) Based on the study under paragraph (1) the Administrator shall determine, by rule, within 3 calendar years after the report is submitted to Congress, but not later than December 31, 1999, whether –

App. 188

(i) there is a need for further reductions in emissions as provided in paragraph (2)(A);

(ii) the technology for meeting more stringent emission standards will be available, as provided in paragraph (2)(A)(i), in the case of light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); and

(iii) obtaining further reductions in emissions from such vehicles will be needed and cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii).

The rulemaking under this paragraph shall commence within 3 months after submission of the report to Congress under paragraph (2)(B).

(B) If the Administrator determines under subparagraph (A) that –

(i) there is no need for further reductions in emissions as provided in paragraph (2)(A);

(ii) the technology for meeting more stringent emission standards will not be available as provided in paragraph (2)(A)(i), in the case of light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less, for model years commencing not earlier than January 1,

App. 189

2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); or

(iii) obtaining further reductions in emissions from such vehicles will not be needed or cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii), the Administrator shall not promulgate more stringent standards than those in effect pursuant to subsections (g) and (h). Nothing in this paragraph shall prohibit the Administrator from exercising the Administrator's authority under subsection (a) to promulgate more stringent standards for light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less at any other time thereafter in accordance with subsection (a).

(C) If the Administrator determines under subparagraph (A) that –

(i) there is a need for further reductions in emissions as provided in paragraph (2)(A);

(ii) the technology for meeting more stringent emission standards will be available, as provided in paragraph (2)(A)(i), in the case of light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); and

## App. 190

(iii) obtaining further reductions in emissions from such vehicles will be needed and cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii), the Administrator shall either promulgate the standards (and useful life periods) set forth in Table 3 in paragraph (1) or promulgate alternative standards (and useful life periods) which are more stringent than those referred to in subsections (g) and (h). Any such standards (or useful life periods) promulgated by the Administrator shall take effect with respect to any such vehicles or engines no earlier than the model year 2003 but not later than model year 2006, as determined by the Administrator in the rule.

(D) Nothing in this paragraph shall be construed by the Administrator or by a court as a presumption that any standards (or useful life period) set forth in Table 3 shall be promulgated in the rule-making required under this paragraph. The action required of the Administrator in accordance with this paragraph shall be treated as a nondiscretionary duty for purposes of section 304(a)(2) [42 USCS § 7604(a)(2)] (relating to citizen suits).

(E) Unless the Administrator determines not to promulgate more stringent standards as provided in subparagraph (B) or to postpone the effective date of standards referred to in Table 3 in paragraph (1) or to establish alternative standards as provided in subparagraph (C), effective with respect to model years commencing after January 1,

## App. 191

2003, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC), oxides of nitrogen (NO[X]), and carbon monoxide (CO) from motor vehicles and motor vehicle engines in the classes specified in Table 3 in paragraph (1) above shall contain standards which provide that emissions may not exceed the pending emission levels specified in Table 3 in paragraph (1).

(j) Cold CO standards.

(1) Phase I. Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 5, 1990], the Administrator shall promulgate regulations under subsection (a) of this section applicable to emissions of carbon monoxide from 1994 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit. The regulations shall contain standards which provide that emissions of carbon monoxide from a manufacturer's vehicles when operated at 20 degrees Fahrenheit may not exceed, in the case of light-duty vehicles, 10.0 grams per mile, and in the case of light-duty trucks, a level comparable in stringency to the standard applicable to light-duty vehicles. The standards shall take effect after model year 1993 according to a phase-in schedule which requires a percentage of each manufacturer's sales volume of light-duty vehicles and light-duty trucks to comply with applicable standards after model year 1993. The percentage shall be as specified in the following table:

App. 192

PHASE-IN SCHEDULE FOR  
COLD START STANDARDS

Model year	Percentage
1994.....	40
1995.....	80
1996 and after.....	100

(2) Phase II.

(A) Not later than June 1, 1997, the Administrator shall complete a study assessing the need for further reductions in emissions of carbon monoxide and the maximum reductions in such emissions achievable from model year 2001 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit.

(B) (i) If as of June 1, 1997, 6 or more nonattainment areas have a carbon monoxide design value of 9.5 ppm or greater, the regulations under subsection (a)(1) of this section applicable to emissions of carbon monoxide from model year 2002 and later model year light-duty vehicles and light-duty trucks shall contain standards which provide that emissions of carbon monoxide from such vehicles and trucks when operated at 20 degrees Fahrenheit may not exceed 3.4 grams per mile (gpm) in the case of light-duty vehicles and 4.4 grams per mile (gpm) in the case of light-duty trucks up to 6,000 GVWR and a level comparable in stringency in the case of light-duty trucks 6,000 GVWR and above.

App. 193

(ii) In determining for purposes of this subparagraph whether 6 or more nonattainment areas have a carbon monoxide design value of 9.5 ppm or greater, the Administrator shall exclude the areas of Steubenville, Ohio, and Oshkosh, Wisconsin.

(3) Useful-life for phase I and phase II standards. In the case of the standards referred to in paragraphs (1) and (2), for purposes of certification under section 206 [42 USCS § 7525] and in-use compliance under section 207 [42 USCS § 7541], the applicable useful life period shall be 5 years or 50,000 miles, whichever first occurs, except that the Administrator may extend such useful life period (for purposes of section 206, or section 207 [42 USCS § 7525 or § 7541], or both) if he determines that it is feasible for vehicles and engines subject to such standards to meet such standards for a longer useful life. If the Administrator extends such useful life period, the Administrator may make an appropriate adjustment of applicable standards for such extended useful life. No such extended useful life shall extend beyond the useful life period provided in regulations under subsection (d).

(4) Heavy-duty vehicles and engines. The Administrator may also promulgate regulations under subsection (a)(1) applicable to emissions of carbon monoxide from heavy-duty vehicles and engines when operated at cold temperatures.

(k) Control of evaporative emissions. The Administrator shall promulgate (and from time

App. 194

to time revise) regulations applicable to evaporative emissions of hydrocarbons from all gasoline-fueled motor vehicles –

- (1) during operation; and
- (2) over 2 or more days of nonuse;

under ozone-prone summertime conditions (as determined by regulations of the Administrator). The regulations shall take effect as expeditiously as possible and shall require the greatest degree of emission reduction achievable by means reasonably expected to be available for production during any model year to which the regulations apply, giving appropriate consideration to fuel volatility, and to cost, energy, and safety factors associated with the application of the appropriate technology. The Administrator shall commence a rulemaking under this subsection within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990]. If final regulations are not promulgated under this subsection within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall submit a statement to the Congress containing an explanation of the reasons for the delay and a date certain for promulgation of such final regulations in accordance with this Act. Such date certain shall not be later than 15 months after the expiration of such 18 month deadline.

App. 195

(1) Mobile source-related air toxics.

(1) Study. Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall complete a study of the need for, and feasibility of, controlling emissions of toxic air pollutants which are unregulated under this Act and associated with motor vehicles and motor vehicle fuels, and the need for, and feasibility of, controlling such emissions and the means and measures for such controls. The study shall focus on those categories of emissions that pose the greatest risk to human health or about which significant uncertainties remain, including emissions of benzene, formaldehyde, and 1, 3 butadiene. The proposed report shall be available for public review and comment and shall include a summary of all comments.

(2) Standards. Within 54 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall, based on the study under paragraph (1), promulgate (and from time to time revise) regulations under subsection (a)(1) or section 211(c)(1) [42 USCS § 7545(c)(1)] containing reasonable requirements to control hazardous air pollutants from motor vehicles and motor vehicle fuels. The regulations shall contain standards for such fuels or vehicles, or both, which the Administrator determines reflect the greatest degree of emission reduction achievable through the application of technology which will be available,

App. 196

taking into consideration the standards established under subsection (a), the availability and costs of the technology, and noise, energy, and safety factors, and lead time. Such regulations shall not be inconsistent with standards under section 202(a) [subsec. (a) of this section]. The regulations shall, at a minimum, apply to emissions of benzene and formaldehyde.

(m) Emissions control diagnostics.

(1) Regulations. Within 18 months after the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall promulgate regulations under subsection (a) requiring manufacturers to install on all new light duty vehicles and light duty trucks diagnostics [sic] systems capable of –

(A) accurately identifying for the vehicle's useful life as established under this section, emission-related systems deterioration or malfunction, including, at a minimum, the catalytic converter and oxygen sensor, which could cause or result in failure of the vehicles to comply with emission standards established under this section,

(B) alerting the vehicle's owner or operator to the likely need for emission-related components or systems maintenance or repair,

(C) storing and retrieving fault codes specified by the Administrator, and

(D) providing access to stored information in a manner specified by the Administrator.

App. 197

The Administrator may, in the Administrator's discretion, promulgate regulations requiring manufacturers to install such onboard diagnostic systems on heavy-duty vehicles and engines.

(2) Effective date. The regulations required under paragraph (1) of this subsection shall take effect in model year 1994, except that the Administrator may waive the application of such regulations for model year 1994 or 1995 (or both) with respect to any class or category of motor vehicles if the Administrator determines that it would be infeasible to apply the regulations to that class or category in such model year or years, consistent with corresponding regulations or policies adopted by the California Air Resources Board for such systems.

(3) State inspection. The Administrator shall by regulation require States that have implementation plans containing motor vehicle inspection and maintenance programs to amend their plans within 2 years after promulgation of such regulations to provide for inspection of onboard diagnostics systems (as prescribed by regulations under paragraph (1) of this subsection) and for the maintenance or repair of malfunctions or system deterioration identified by or affecting such diagnostics systems. Such regulations shall not be inconsistent with the provisions for warranties promulgated under section 207(a) and (b) [42 USCS § 7541(a),(b)].

App. 198

(4) Specific requirements. In promulgating regulations under this subsection, the Administrator shall require –

(A) that any connectors through which the emission control diagnostics system is accessed for inspection, diagnosis, service, or repair shall be standard and uniform on all motor vehicles and motor vehicle engines;

(B) that access to the emission control diagnostics system through such connectors shall be unrestricted and shall not require any access code or any device which is only available from a vehicle manufacturer; and

(C) that the output of the data from the emission control diagnostics system through such connectors shall be usable without the need for any unique decoding information or device.

(5) Information availability. The Administrator, by regulation, shall require (subject to the provisions of section 208(c) [42 USCS § 7542(c)] regarding the protection of methods or processes entitled to protection as trade secrets) manufacturers to provide promptly to any person engaged in the repairing or servicing of motor vehicles or motor vehicle engines, and the Administrator for use by any such persons, with any and all information needed to make use of the emission control diagnostics system prescribed under this subsection and such other information including instructions for making emission related diagnosis and repairs. No such information may be

App. 199

withheld under section [sic] 208(c) [42 USCS § 7542(c)] if that information is provided (directly or indirectly) by the manufacturer to franchised dealers or other persons engaged in the repair, diagnosing, or servicing of motor vehicles or motor vehicle engines.

Such information shall also be available to the Administrator, subject to section 208(c) [42 USCS § 7542(c)], in carrying out the Administrator's responsibilities under this section.

[(n)](f) Model years after 1990. For model years prior to model year 1994, the regulations under section 202(a) [subsec. (a) of this section] applicable to buses other than those subject to standards under section 219 [42 USCS § 7554] shall contain a standard which provides that emissions of particulate matter (PM) from such buses may not exceed the standards set forth in the following table:

PM STANDARD FOR BUSES

Model year	Standard*
1991.....	0.25
1992.....	0.25
1993 and thereafter.....	0.10

\*Standards are expressed in grams per brake horsepower hour (g/bhp/hr).

App. 200

TITLE 42. THE PUBLIC HEALTH AND WELFARE  
CHAPTER 85. AIR POLLUTION PREVENTION  
AND CONTROL GENERAL PROVISIONS

**Go to the United States Code  
Service Archive Directory**

42 USCS § 7607

§ 7607. Administrative proceedings and judicial review

(a) Administrative subpoenas; confidentiality; witnesses. In connection with any determination under section 110(f) [42 USCS § 7410(f)], or for purposes of obtaining information under section 202(b)(4) or 211(c)(3) [42 USCS § 7521(b)(4) or 7545(c)(3)], any investigation, monitoring, reporting requirement, entry, compliance inspection, or administrative enforcement proceeding under the [this] Act (including but not limited to section 113, section 114, section 120, section 129, section 167, section 205, section 206, section 208, section 303, or section 306 [42 USCS § 7413, 7414, 7420, 7429, 7477, 7524, 7525, 7542, 7603, or 7606][,], the Administrator may issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books, and documents, and he may administer oaths. Except for emission data, upon a showing satisfactory to the Administrator by such owner or operator that such papers, books, documents, or information or particular part thereof, if made public, would divulge trade secrets or secret processes of such owner or operator,

## App. 201

the Administrator shall consider such record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code, except that such paper, book, document, or information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act, to persons carrying out the National Academy of Sciences' study and investigation provided for in section 202(c) [42 USCS § 7521(c)], or when relevant in any proceeding under this Act. Witnesses summoned shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. In case of contumacy or refusal to obey a subpoena served upon any person under this subparagraph, the district court of the United States for any district in which such person is found or resides or transacts business, upon application by the United States and after notice to such person, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the Administrator to appear and produce papers, books, and documents before the Administrator, or both, and any failure to obey such order of the court may be punished by such court as a contempt thereof.

(b) Judicial review.

(1) A petition for review of action of the Administrator in promulgating any national primary or secondary ambient air quality standard, any emission standard or requirement under section 112 [42 USCS § 7412], any standard of performance or requirement

## App. 202

under section 111 [42 USCS § 7411][,], any standard under section 202 [42 USCS § 7521] (other than a standard required to be prescribed under section 202(b)(1) [42 USCS § 7521(b)(1)]), any determination under section 202(b)(5) [42 USCS § 7521(b)(5)], any control or prohibition under section 211 [42 USCS § 7545], any standard under section 231 [42 USCS § 7571] any rule issued under section 113, 119, or under section 120 [42 USCS § 7413, 7419, or 7420], or any other nationally applicable regulations promulgated, or final action taken, by the Administrator under this Act may be filed only in the United States Court of Appeals for the District of Columbia. A petition for review of the Administrator's action in approving or promulgating any implementation plan under section 110 or section 111(d) [42 USCS § 7410 or 7411(d)], any order under section 111(j) [42 USCS § 7411(j)], under section 112 [42 USCS § 7412][,] under section 119 [42 USCS § 7419], or under section 120 [42 USCS § 7420], or his action under section 119(c)(2)(A), (B), or (C) (as in effect before the date of enactment of the Clean Air Act Amendments of 1977) or under regulations thereunder, or revising regulations for enhanced monitoring and compliance certification programs under section 114(a)(3) of this Act, or any other final action of the Administrator under this Act (including any denial or disapproval by the Administrator under title I [42 USCS §§ 7401 et seq.]) which is locally or regionally applicable may be filed only in the United States Court of Appeals for the appropriate circuit. Notwithstanding the preceding sentence a petition for review of any action referred to

## App. 203

in such sentence may be filed only in the United States Court of Appeals for the District of Columbia if such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination. Any petition for review under this subsection shall be filed within sixty days from the date notice of such promulgation, approval, or action appears in the Federal Register, except that if such petition is based solely on grounds arising after such sixtieth day, then any petition for review under this subsection shall be filed within sixty days after such grounds arise. The filing of a petition for reconsideration by the Administrator of any otherwise final rule or action shall not affect the finality of such rule or action for purposes of judicial review nor extend the time within which a petition for judicial review of such rule or action under this section may be filed, and shall not postpone the effectiveness of such rule or action.

(2) Action of the Administrator with respect to which review could have been obtained under paragraph (1) shall not be subject to judicial review in civil or criminal proceedings for enforcement. Where a final decision by the Administrator defers performance of any nondiscretionary statutory action to a later time, any person may challenge the deferral pursuant to paragraph (1).

(c) Additional evidence. In any judicial proceeding in which review is sought of a determination under this Act required to be made on the record after notice and

App. 204

opportunity for hearing, if any party applies to the court for leave to adduce additional evidence, and shows to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the proceeding before the Administrator, the court may order such additional evidence (and evidence in rebuttal thereof) to be taken before the Administrator, in such manner and upon such terms and conditions as [to] the court may deem proper. The Administrator may modify his findings as to the facts, or make new findings, by reason of the additional evidence so taken and he shall file such modified or new findings, and his recommendation, if any, for the modification or setting aside of his original determination, with the return of such additional evidence.

(d) Rulemaking.

(1) This subsection applies to –

(A) the promulgation or revision of any national ambient air quality standard under section 109 [42 USCS § 7409],

(B) the promulgation or revision of an implementation plan by the Administrator under section 110(c) [42 USCS § 7410(c)],

(C) the promulgation or revision of any standard of performance under section 111 [42 USCS § 7411], or emission standard or limitation under section 112(d) [42 USCS § 7412(d)], any standard under section 112(f) [42 USCS § 7412(f)], or any

App. 205

regulation under section 112(g)(1)(D) and (F) [42 USCS§ 7412(g)(1)(D),(F)], or any regulation under section 112(m) or (n) [42 USCS § 7412(m) or (n)],

(D) the promulgation of any requirement for solid waste combustion under section 129 [42 USCS § 7429],

(E) the promulgation or revision of any regulation pertaining to any fuel or fuel additive under section 211 [42 USCS § 7545],

(F) the promulgation or revision of any aircraft emission standard under section 231 [42 USCS § 7571],

(G) the promulgation or revision of any regulation under title IV (relating to control of acid deposition),

(H) promulgation or revision of regulations pertaining to primary nonferrous smelter orders under section 119 [42 USCS § 7419] (but not including the granting or denying of any such order),

(I) promulgation or revision of regulations under title VI [42 USCS §§ 7671 et seq.] (relating to stratosphere and ozone protection),

(J) promulgation or revision of regulations under subtitle C of title I [42 USCS §§ 7470 et seq.] (relating to prevention of significant deterioration of air quality and protection of visibility),

App. 206

(K) promulgation or revision of regulations under section 202 [42 USCS § 7521] and test procedures for new motor vehicles or engines under section 206 [42 USCS § 7525], and the revision of a standard under section 202(a)(3) [42 USCS § 7521(a)(3)],

(L) promulgation or revision of regulations for noncompliance penalties under section 120 [42 USCS § 7420],

(M) promulgation or revision of any regulations promulgated under section 207 [42 USCS § 7541] (relating to warranties and compliance by vehicles in actual use),

(N) action of the Administrator under section 126 [42 USCS § 7426] (relating to interstate pollution abatement),

(O) the promulgation or revision of any regulation pertaining to consumer and commercial products under section 183(e) [42 USCS § 7511b(e)],

(P) the promulgation or revision of any regulation pertaining to field citations under section 113(d)(3) [42 USCS § 7413(d)(3)],

(Q) the promulgation or revision of any regulation pertaining to urban buses or the clean-fuel vehicle, clean-fuel fleet, and clean fuel programs under part C of title II [42 USCS §§ 7581 et seq.],

(R) the promulgation or revision of any regulation pertaining to nonroad engines or nonroad vehicles under section 213 [42 USCS § 7547],

App. 207

(S) the promulgation or revision of any regulation relating to motor vehicle compliance program fees under section 217 [42 USCS § 7552],

(T) the promulgation or revision of any regulation under title IV [42 USCS §§ 7641 et seq.] (relating to acid deposition),

(U) the promulgation or revision of any regulation under section 183(f) [42 USCS § 7511b(f)] pertaining to marine vessels, and

(V) such other actions as the Administrator may determine.

The provisions of section 553 through 557 and section 706 of title 5 of the United States Code shall not, except as expressly provided in this subsection, apply to actions to which this subsection applies. This subsection shall not apply in the case of any rule or circumstance referred to in subparagraphs (A) or (B) of subsection 553(b) of title 5 of the United States Code.

(2) Not later than the date of proposal of any action to which this subsection applies, the Administrator shall establish a rulemaking docket for such action (hereinafter in this subsection referred to as a “rule”). Whenever a rule applies only within a particular State, a second (identical) docket shall be simultaneously established in the appropriate regional office of the Environmental Protection Agency.

(3) In the case of any rule to which this subsection applies, notice of proposed rulemaking shall be

App. 208

published in the Federal Register, as provided under section 553(b) of title 5, United States Code, shall be accompanied by a statement of its basis and purpose and shall specify the period available for public comment (hereinafter referred to as the “comment period”). The notice of proposed rulemaking shall also state the docket number, the location or locations of the docket, and the times it will be open to public inspection. The statement of basis and purpose shall include a summary of –

(A) the factual data on which the proposed rule is based;

(B) the methodology used in obtaining the data and in analyzing the data; and

(C) the major legal interpretations and policy considerations underlying the proposed rule.

The statement shall also set forth or summarize and provide a reference to any pertinent findings, recommendations, and comments by the Scientific Review Committee established under section 109(d) [42 USCS § 7409(d)] and the National Academy of Sciences, and, if the proposal differs in any important respect from any of these recommendations, an explanation of the reasons for such differences. All data, information, and documents referred to in this paragraph on which the proposed rule relies shall be included in the docket on the date of publication of the proposed rule.

App. 209

(4)(A) The rulemaking docket required under paragraph (2) shall be open for inspection by the public at reasonable times specified in the notice of proposed rulemaking. Any person may copy documents contained in the docket. The Administrator shall provide copying facilities which may be used at the expense of the person seeking copies, but the Administrator may waive or reduce such expenses in such instances as the public interest requires. Any person may request copies by mail if the person pays the expenses, including personnel costs to do the copying.

(B)(i) Promptly upon receipt by the agency, all written comments and documentary information on the proposed rule received from any person for inclusion in the docket during the comment period shall be placed in the docket. The transcript of public hearings, if any, on the proposed rule shall also be included in the docket promptly upon receipt from the person who transcribed such hearings. All documents which become available after the proposed rule has been published and which the Administrator determines are of central relevance to the rulemaking shall be placed in the docket as soon as possible after their availability.

(ii) The drafts of proposed rules submitted by the Administrator to the Office of Management and Budget for any interagency review process prior to proposal of any such rule, all documents accompanying such drafts, and all written comments thereon by other agencies and all written responses to such

## App. 210

written comments by the Administrator shall be placed in the docket no later than the date of proposal of the rule. The drafts of the final rule submitted for such review process prior to promulgation and all such written comments thereon, all documents accompanying such drafts, and written responses thereto shall be placed in the docket no later than the date of promulgation.

(5) In promulgating a rule to which this subsection applies (i) the Administrator shall allow any person to submit written comments, data, or documentary information; (ii) the Administrator shall give interested persons an opportunity for the oral presentation of data, views, or arguments, in addition to an opportunity to make written submissions; (iii) a transcript shall be kept of any oral presentation; and (iv) the Administrator shall keep the record of such proceeding open for thirty days after completion of the proceeding to provide an opportunity for submission of rebuttal and supplementary information.

(6)(A) The promulgated rule shall be accompanied by (i) a statement of basis and purpose like that referred to in paragraph (3) with respect to a proposed rule and (ii) an explanation of the reasons for any major changes in the promulgated rule from the proposed rule.

(B) The promulgated rule shall also be accompanied by a response to each of the significant comments, criticisms, and new data submitted in written or oral presentations during the comment period.

App. 211

(C) The promulgated rule may not be based (in part or whole) on any information or data which has not been placed in the docket as of the date of such promulgation.

(7)(A) The record for judicial review shall consist exclusively of the material referred to in paragraph (3), clause (i) of paragraph (4)(B), and subparagraphs (A) and (B) of paragraph (6).

(B) Only an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment (including any public hearing) may be raised during judicial review. If the person raising an objection can demonstrate to the Administrator that it was impracticable to raise such objection within such time or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule, the Administrator shall convene a proceeding for reconsideration of the rule and provide the same procedural rights as would have been afforded had the information been available at the time the rule was proposed. If the Administrator refuses to convene such a proceeding, such person may seek review of such refusal in the United States court of appeals for the appropriate circuit (as provided in subsection (b)). Such reconsideration shall not postpone the effectiveness of the rule. The effectiveness of the rule may be stayed during such reconsideration, however, by the Administrator or the court for a period not to exceed three months.

App. 212

(8) The sole forum for challenging procedural determinations made by the Administrator under this subsection shall be in the United States court of appeals for the appropriate circuit (as provided in subsection (b)) at the time of the substantive review of the rule. No interlocutory appeals shall be permitted with respect to such procedural determinations. In reviewing alleged procedural errors, the court may invalidate the rule only if the errors were so serious and related to matters of such central relevance to the rule that there is a substantial likelihood that the rule would have been significantly changed if such errors had not been made.

(9) In the case of review of any action of the Administrator to which this subsection applies, the court may reverse any such action found to be –

(A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law;

(B) contrary to constitutional right, power, privilege, or immunity;

(C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right; or

(D) without observance of procedure required by law, if (i) such failure to observe such procedure is arbitrary or capricious, (ii) the requirement of paragraph (7)(B) has been met, and (iii) the condition of the last sentence of paragraph (8) is met.

App. 213

(10) Each statutory deadline for promulgation of rules to which this subsection applies which requires promulgation less than six months after date of proposal may be extended to not more than six months after date of proposal by the Administrator upon a determination that such extension is necessary to afford the public, and the agency, adequate opportunity to carry out the purposes of this subsection.

(11) The requirements of this subsection shall take effect with respect to any rule the proposal of which occurs after ninety days after the date of enactment of the Clean Air Act Amendments of 1977 [enacted Aug. 7, 1977].

(e) Other methods of judicial review not authorized. Nothing in this Act shall be construed to authorize judicial review of regulations or orders of the Administrator under this Act, except as provided in this section.

(f) Costs. In any judicial proceeding under this section, the court may award costs of litigation (including reasonable attorney and expert witness fees) whenever it determines that such award is appropriate.

(g) Stay, injunction, or similar relief in proceedings relating to noncompliance penalties. In any action respecting the promulgation of regulations under section 120 [42 USCS § 7420] or the administration or enforcement of section 120 [42 USCS § 7420] no

App. 214

court shall grant any stay, injunctive, or similar relief before final judgment by such court in such action.

(h) Public Participation. It is the intent of Congress that, consistent with the policy of the Administrative Procedures Act [5 USCS §§ 551 et seq.], the Administrator in promulgating any regulation under this Act, including a regulation subject to a deadline, shall ensure a reasonable period for public participation of at least 30 days, except as otherwise expressly provided in section [sections] 107(d), 172(a), 181(a) and (b), and 186(a) and (b) [42 USCS § 7407(d), 7502(a), 7511(a) and (b), 7512(a) and (b)].

Frankfort, Kentucky 40601  
(502) 696-5300  
(502) 564-2894

## **QUESTIONS PRESENTED**

- 1) Did Virginia and other Petitioners below demonstrate that there was evidence of central relevance to the EPA's Endangerment Finding not available during the comment period such that the Administrator was obligated to convene a proceeding for reconsideration with procedural rights of notice and comment?
- 2) Did the EPA correctly apply the standard for demonstrating central relevance?
- 3) Did the EPA err when it found the objections material enough to require resort to extensive new evidence outside of the record while denying the rights of notice and comment on that evidence?
- 4) Did the EPA err initially and on Petition for Reconsideration by delegating its Statutory Authority to outside entities?

## **PARTIES AND CORPORATE DISCLOSURE STATEMENT**

The United States Court of Appeals for the District of Columbia Circuit consolidated the following cases for review:

09-1322 (Lead), 10-1024, 10-1025, 10-1026, 10-1030, 10-1035, 10-1036, 10-1037, 10-1038, 10-1039, 10-1040, 10-1041, 10-1042, 10-1044, 10-1045, 10-1046, 10-1234, 10-1235, 10-1239, 10-1245, 10-1281, 10-1310, 10-1318, 10-1319, 10-1320, 10-1321

**PETITION FOR WRIT OF CERTIORARI**  
**OPINION BELOW**

The panel opinion affirming the rulemaking of the EPA is reported as *Coalition for Responsible Regulation, Inc. v. Environmental Protection Agency*, 684 F.3d 102 (D.C. Cir. 2012). Both the order and opinions relating to denial of rehearing are unpublished, but are available at 2012 U.S. App. LEXIS 25997, 2012 WL 6621785, and, through PACER, as U.S.C.A.

Case No. 09-1322, Doc. 1411145 (Dec. 20, 2012).<sup>1</sup> See SUP. CT. R. 12(7). And both are reprinted in the Appendix (“App.”) at App. 1-103, 104-63.

**JURISDICTION**

Section 307 of the Clean Air Act (CAA) grants exclusive jurisdiction to the United States Court of Appeals for the District of Columbia Circuit over petitions for review that challenge nationally applicable final actions of the Administrator of the EPA. 42 U.S.C. § 7607(b)(1) (“A petition for review of . . . final action taken[ ] by the Administrator under [the CAA] may be filed only in the United States Court of

---

<sup>1</sup> All references to “Doc.” are to the appellate record in case number 09-1322, and collected cases, from the United States Court of Appeals for the District of Columbia Circuit and are available via that Court’s PACER system.

Appeals for the District of Columbia”). With regard to the Endangerment Finding and follow-on rulemaking, the D.C. Circuit received a number of timely petitions, and interventions, including those of the Commonwealth of Kentucky and the State of Utah, consolidated them, and, on June 26, 2012, issued an opinion denying the petitions and affirming the EPA’s rulemaking. *Responsible Regulation*, 684 F.3d at 102, 149. Timely petitions for rehearing *en banc* were received, circulated to the circuit court, voted on, and denied on a 6 to 2 vote on December 20, 2012. *See Coalition for Responsible Regulation, Inc. v. Evtl. Protection Agency (Responsible Regulation II)*, No. 09-1322, 2012 U.S. App. LEXIS 25997, 2012 WL 6621785 (D.C. Cir. Dec. 2012) (unpublished); Doc. 1411145; App. at 104-63. This petition for certiorari has been timely filed within 90 days of the denial of rehearing, *see* SUP. CT. R. 13(1) & (3), and so is now properly within this Court’s jurisdiction. *See* 28 U.S.C. § 1254(1).

## STATUTES AND REGULATIONS

The statutes and regulations involved in this case are 42 U.S.C. §§ 7521 and 7607; 74 Fed. Reg. 66,496 (Dec. 15, 2009), 75 Fed. Reg. 49,556 (Aug. 13, 2010). Because they are lengthy, the relevant statutory provisions are reprinted in the Appendix and the Federal Register provisions are cited from the Joint Appendix below. *See* SUP. CT. R. 14(f).

## STATEMENT OF THE CASE

This Court found in *Massachusetts v. EPA*, 549 U.S. 497, 534 (2007), that the EPA had both the jurisdiction and the obligation to decide “whether sufficient information exists to make an endangerment finding” with respect to CO<sub>2</sub>. The EPA published its Endangerment Finding on December 15, 2009. *Endangerment and Cause or Contribute Findings (Endangerment Finding)*, 74 Fed. Reg. at 66,496; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 29 of 695. Petitions for review of that finding were permitted “within sixty days from the date notice” was published in the Federal Register. 42 U.S.C. § 7607(b)(1). Virginia, Texas, and others filed timely petitions for review, invoking the jurisdiction of the United States Court of Appeals for the District of Columbia Circuit. *See id.*

By statute, the EPA Administrator must “convene a proceeding for reconsideration also of the rule and provide the same procedural rights as would have been afforded had the information been available at the time the rule was proposed” if a person raising an objection to agency action can demonstrate that “the grounds for . . . objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule.” *Id.* § 7607(d)(7)(B). The comment period for the Endangerment Finding closed on June 23, 2009. *See EPA’s Response to the Petitions to Reconsider the Endangerment and Cause or Contribute Findings for Greenhouse Gases under*

*Section 202(a) of the Clean Air Act (RTP)*, 75 Fed. Reg. at 49,556, 49,560 (Aug. 13, 2010); J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), pp. 82, 86 of 695. On November 17, 2009, internal emails and documents from the Climate Research Unit (CRU) at the University of East Anglia (UEA) became available to the public. These documents were sufficiently damaging to the data upon which the EPA relied in making its Endangerment Finding that the release is now commonly known as “climategate.” See John M. Broder, *Scientists Taking Steps to Defend Work on Climate*, N.Y. Times, Mar. 2, 2012, at A11, <http://www.nytimes.com/2010/03/03/science/earth/03climate.html>. In the wake of these revelations, ten petitions for reconsideration also were timely filed within the period for appeal of the Endangerment Finding, including those of Virginia and Texas. The EPA refused to convene the statutory proceeding and flatly denied the petitions. See *RTP*, 75 Fed. Reg. at 49,557; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 83 of 695.

The Clean Air Act requires that information relied upon for rulemaking be in the administrative record, subject to public comment, and also provides for rehearing in the event additional information comes to light after the comment period has closed. With respect to the rulemaking record, Section 307(d)(4)(B) requires that “[a]ll documents which become available after the proposed rule has been published and which the Administrator determines are of central relevance to the rulemaking shall be placed in the docket as soon as possible after their availability.” 42 U.S.C. § 7607(d)(4)(B)(i). Once this

process is complete, Section 307(d)(6)(C) states that the “promulgated rule may not be based (in part or whole) on any information or data which has not been placed in the docket as of the date of such promulgation.” 42 U.S.C. § 7607(d)(6)(C). As for rehearing, Section 307(d)(7)(B) of the Act provides *inter alia*:

If the person raising an objection can demonstrate to the Administrator that . . . the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule, the Administrator shall convene a proceeding for reconsideration of the rule and provide the same procedural rights as would have been afforded had the information been available at the time the rule was proposed.

42 U.S.C. § 7607(d)(7)(B).

Ever since 1980, the EPA has consistently interpreted this rehearing standard, CAA § 307(d)(7)(B), 42 U.S.C. § 7607(d)(7)(B), as a heightened relevancy standard. That is, the EPA grants reconsideration when new evidence would “provide substantial support *for the argument* that the regulation should be revised.” *Denial of Petition to Revise NSPS for Stationary Gas Turbines*, 45 Fed. Reg. at 81,653 n.3 (Dec. 11, 1980) (emphasis added); see *Prevention of Significant Deterioration and Non-Attainment New Source Review: Reconsideration*, 68 Fed. Reg. 63,021 (Nov. 7, 2003) (codified at 40 CFR pts. 51, 52); *Denial of Petition for Reconsideration of National Ambient Air*

*Quality Standards for Particulate Matter*, 53 Fed. Reg. 52,698 (Dec. 29, 1988). Consistent with its past practice, the EPA announced that it would apply its usual standard to the petitions for reconsideration of the endangerment finding. *RTP*, 75 Fed. Reg. at 49,561.

In denying rehearing, the EPA relied in part on “a 3-volume, roughly 360-page Response to Petitions document,” which included both new information (developed after close of the comment period) and additional information not otherwise in the record and thus not subject to notice or comment. *RTP*, 75 Fed. Reg. at 49,556. The agency also relied upon investigations conducted by third parties:

Inquiries from the UK House of Commons, Science and Technology Committee, the University of East Anglia, Oxburgh Panel, the Pennsylvania State University, and the University of East Anglia, Russell Panel, all entirely independent from EPA, have examined the issues and many of the same allegations brought forward by the petitioners as a result of the disclosure of the private CRU e-mails. These inquiries are now complete. Their conclusions are in line with EPA’s review and analysis of these same CRU e-mails.

*RTP*, 75 Fed. Reg. at 49,557; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 83 of 695. However, none of these reports dealt with the central question raised by the reconsideration petitions: whether climategate undercut the reliability of the science upon which the EPA relied. See Pet’rs’ Opening Br. at 5-9; U.S.C.A.

Case 09-1322 Doc. 1309185, pp. 23-27 of 90. And obviously none of them addressed whether the information uncovered was of “central relevance” for purposes of 42 U.S.C. § 7607(d)(4)(B)(i) or (7)(B).

In support of rehearing, Petitioners argued that there were copious quantities of new information that had become public after the Endangerment Finding’s publication; that climategate emails suggested that the IPCC data and conclusion upon which the EPA relied were manipulated; that critical IPCC records were lost or destroyed; that the peer review process was corrupted and dissent suppressed; that IPCC personnel had conflicts of interest; and that the EPA’s reliance on IPCC data ensured that the process underlying the Endangerment Finding lacked transparency. The Rehearing Petitions also pointed out mistakes reflecting on the reliability of the underlying data, such as the EPA’s reliance on an IPCC report that purported to “distill[ IPCC’s] most important science into a form accessible to politicians and policy makers.” FoxNews.com, *Africa-Gate? U.N. fears of food shortages questioned* (Feb. 8, 2010), <http://www.foxnews.com/scitech/2010/02/08/british-scientist-says-panel-losing-credibility>; see IPCC, *Climate Change 2007: Synthesis Report*, [http://www.ipcc.ch/pdf/assessment-report/ar4/syr/ar4\\_syr.pdf](http://www.ipcc.ch/pdf/assessment-report/ar4/syr/ar4_syr.pdf). In it, IPCC claimed that anthropogenic GHGs could cut many African countries’ yields from rain-fed agriculture in half. *IPCC Synthesis Report* § 3.3.2 at 50. The source of this alarmist conclusion was a 2003 policy paper from a Canadian think tank. J.A. Vol. IX, Doc.

1339079 (Oct. 31, 2011), pp. 451-53 of 649. *See* Int'l Inst. for Sustainable Dev., *Vulnerability of North African Countries to Climate Change: Adaptation and Implementation Strategies for Climate Change* (2003) at 5, [http://www.iisd.org/cckn/pdf/north\\_africa.pdf](http://www.iisd.org/cckn/pdf/north_africa.pdf). Petitioners argued that climategate revealed other significant errors and misstatements that the EPA failed to detect and on which the public could not comment before the finding's publication, including the percentage of the Netherlands lying below sea level, J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), p. 456 of 649, errors in the projection of glacier melt in the Himalayas, J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), pp. 448-51 of 649; *see* IPCC, *Statement on the melting of Himalayan Glaciers* (Jan. 20, 2010), <http://www.ipcc.ch/pdf/presentations/himalaya-statement-20january2010.pdf>, projected Amazon rainforest die-off, J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), pp. 453-54 of 649, and projections of more violent storms. J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), pp. 459-61 of 649; *see* Pet'rs' Opening Br. at 12-13 n.14; Doc. 1341062 (Nov. 10, 2011), pp. 30-31 n.14 of 90.

Finally, the Petitioners argued that, in adopting the Endangerment Finding, the Administrator viewed the IPCC, the National Research Council (NRC), and the U.S. Global Change Research Program (USGCRP) as representing independent, mutually reinforcing data, rather than data sets heavily dependent on the IPCC, which derives from a small number of collaborative "climate scientists." In the 360-page RTP – which consisted of new material that

had never been commented upon by the public, that was added to the docket by the agency for the first time after the comment period, and that was created, in some instances, after the Endangerment Finding was finalized – the EPA rejected Petitioners’ objections raised in the rehearing petitions, without notice and comment, on the ground that the objections did not change the EPA’s own conclusions. 75 Fed. Reg. at 49,558 (“The petitioners do not provide any substantial support for the argument that the Endangerment Finding should be revised.”), 49,569; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), pp. 84, 95 of 695. After the close of the comment period, the EPA also added more than four hundred documents to the record, and cited more than fifty of these documents in its RTP. *RTP* Vols. I through III; J.A. Vol. X, Doc. 1339079 (Oct. 31, 2011), pp. 29 through 401 of 403. For example, the EPA in the RTP cited a newly published NRC study entitled “Advancing the Science of Climate Change” to reinforce the now questioned IPCC study, noting that it was “not aware of any published criticisms” of the study. *RTP* Vol. I at 50; J.A. Vol. X, Doc. 1339079 (Oct. 31, 2011), p. 85 of 403.

By procedural order, the D.C. Circuit identified denial of reconsideration as one of the issues to be briefed and argued. D.C. Cir. Order, Doc. 1357330 (Feb. 8, 2012), 4 of 5. On the merits, the panel decision minimized the significance of identified errors in light of the size of the record without discussing the overarching reliability issues arising from the politicized, agenda-driven science disclosed by climategate

and without considering whether the EPA applied the wrong standard. *Responsible Regulation*, 684 F.3d at 125. The panel also rejected the claim that the EPA had necessarily revised its Endangerment Finding by supplementing it, and the record. The D.C. Circuit rejected this argument on a mere ipse dixit basis without analysis or citation to authority. *Id.* at 126.

The court of appeals, by procedural order, also identified delegation issues arising from the Endangerment Finding as matters to be briefed and argued. D.C. Cir. Order, Doc. 1357330 (Feb. 8, 2012). However, the panel in its opinion expressed dislike of the word “delegate,” branding it as “little more than a semantic trick.” *Responsible Regulation*, 684 F.3d at 124. In any case, that court rejected the delegation claim based upon the “extreme degree of deference” afforded factual and scientific decisions by agencies, *id.* at 120, and the precautionary principle, which operates to increase deference as evidence becomes “‘more difficult to come by, uncertain, or conflicting because it is on the frontiers of scientific knowledge.’” *Responsible Regulation*, 684 F.3d at 121 (quoting *Ethyl Corp. v. EPA*, 541 F.2d 1, 28 (D.C. Cir. 1976)).

The D.C. Circuit permitted two days for oral argument on the numerous petitions challenging the Endangerment Finding and follow-on regulations. *See* D.C. Cir. Order, Doc. 1357330 (Feb. 8, 2012). However, this petition addresses only those reconsideration and delegation issues on which Virginia was lead on briefing and which Virginia argued. Other petitioners intend to present other issues by separate petitions for writs of certiorari in the coming weeks. *See*

*Chamber of Commerce v. EPA*, No. 12A871 (Mar. 5, 2013); *Am. Chemistry Council v. EPA*, No. 12A876 (Mar. 8, 2013); *Coalition for Responsible Regulation, Inc. v. EPA*, No. 12A877 (Mar. 8, 2013); *Energy-Intensive Mfrs. Working Grp. on Greenhouse Gas Regulation v. EPA*, No. 12A879 (Mar. 8, 2013); *South-eastern Legal Found. v. EPA*, No. 12A881 (Mar. 7, 2013); *Texas v. EPA*, No. 12A884 (Mar. 8, 2013). And, of course, parties below may advance only one petition each. Sup. Ct. R. 12(4). The parties to this brief pray the Court to grant petitions on all issues so that the decision of the D.C. Circuit may be comprehensively reviewed.

### **REASONS FOR GRANTING THE PETITION**

Supreme Court Rule 10 contains illustrative bases for granting certiorari. Rule 10(a)-(b) deals with issues of uniformity of Federal law. Because the D.C. Circuit had exclusive jurisdiction over this appeal, considerations of uniformity could never arise. Rule 10(c) states that certiorari is appropriate where “a United States court of appeals has decided an important question of Federal law that has not been, but should be, settled by this Court.” An example of an exercise of jurisdiction predicated on unusual public importance is provided by the predecessor case of *Massachusetts v. EPA*, 549 U.S. at 505-06, which cited “the unusual importance of the underlying issue,” authority to regulate greenhouse gases, as justification for granting a writ despite no conflict between the lower courts on the issue.

It would be difficult to overstate the importance of the decision below. The judges concurring in denial of rehearing were agreed on this:

To be sure, the stakes here are high. The underlying policy questions and the outcome of this case are undoubtedly matters of exceptional importance.

*Responsible Regulation II*, No. 09-1322, 2012 U.S. App. LEXIS 25997 at 28, 62, 2012 WL 6621785 at 3, 14; App. at 111, 139; Doc. 1411145, pp. 8 & 32 of 52. The significant regulatory and economic burden of greenhouse gas regulation has been the subject of testimony before both Houses of Congress on multiple occasions prior to and after the EPA issued the Endangerment Finding. See Testimony of Dr. Margo Thorning on The Impact of EPA Regulation of GHGs under the Clean Air Act on U.S. Investment and Job Growth before H. Subcomm. on Energy & Power (Feb. 9, 2011), American Council for Capital Formation, Publications, <http://accf.org/news/publication/the-impact-of-epa-regulation-of-ghgs-under-the-clean-air-act-on-u-s-investment-and-job-growth> (explaining the macroeconomic effect of the Endangerment Finding); Testimony of William L. Kovacs on Regulation of Greenhouse Gases under The Clean Air Act before the S. Comm. on Envt. & Public Works (Sept. 23, 2008), U.S. Chamber of Commerce, <http://www.uschamber.com/issues/testimony/2008/testimony-regulation-greenhouse-gases-under-clean-air-act> (explaining the wide range of activities that would be made subject to EPA permitting once an Endangerment Finding had been

reached); *see generally* Congressional Budget Office, The Economic Effects of Legislation to Reduce Greenhouse-Gas Emissions Report (Sept. 17, 2009), <http://www.cbo.gov/publication/41266>. It has been estimated that the EPA's regulation of greenhouse gases could decrease U.S. investment by between five to fifteen percent over the three-year period ending in 2014, with a potential reduction in employment from between one-half to 1.5 million jobs and with compliance costs ranging in the tens of billions "annually, a figure that does not include the costs of actually acquiring and implementing the Best Available Control Technology, as required under the PSD program." *See* Thorning Testimony at 4-5, 9.

And the CBO, in modeling various legislative programs deemed by some to be more efficient than the EPA approach, estimated that such regulation will reduce the annual rate of GDP growth by less than 1 percent of GDP this decade, but would rise sharply over time as the loss in wealth "multiplies." CBO Report at 12-13 (Table 1). Obviously, even a small reduction of GDP growth results in a large loss in societal wealth, jobs, and other measures of human flourishing. U.S. Dep't of Commerce, Bureau of Economic Analysis, "National Income and Product Accounts: Gross Domestic Product, 4th Quarter and Annual 2012 (second estimate)," (Feb. 28, 2013), [http://www.bea.gov/newsreleases/national/gdp/2013/gdp4q12\\_2nd.htm](http://www.bea.gov/newsreleases/national/gdp/2013/gdp4q12_2nd.htm). In sum, this Petition, challenging the EPA's adoption of regulations aimed at limiting the previous conduct of citizens in order to reduce CO<sub>2</sub>

and other greenhouse gas emissions, presents a matter of utmost importance to the vitality of our Nation. See *Responsible Regulation II*, No. 09-1322, 2012 U.S. App. LEXIS 12980 at 63; 2012 WL 6621785 at 14 (Kavanaugh, J., dissenting from denial of reh’g en banc) (“Put simply, the economic and environmental policy stakes are very high.”); App. at 139.

With respect to whether this is a case that “has not been, but should be, settled by this Court,” the judges of the panel thought that the outcome was predetermined by this Court in *Massachusetts v. EPA*. See *Responsible Regulation*, 684 F.3d at 120. But only this Court can definitely say that. Furthermore, the rehearing and delegation issues raised in this petition, and essential to public participation in the administrative process and informed agency decisionmaking, have never been decided by this Court.

Not only does this Petition raise matters of first impression, but the arguments against the EPA’s actions are weighty and substantial.

**A. The Administrator Was Obligated to Grant Reconsideration Because Petitioners Demonstrated that their Timely Objections Were Based on Evidence of Central Relevance to the Outcome of the Endangerment Finding.**

For over thirty years, the EPA has consistently held that a timely motion for reconsideration is due to be granted where new evidence would “provide

substantial support for the argument that the regulation should be revised.” See 45 Fed. Reg. at 81,653; 53 Fed. Reg. at 52,698; 68 Fed. Reg. at 63,021. Reversing the old saw “let’s not and say we did,” the EPA, in response, produced a 360-page, three-volume supplement to the Endangerment Finding and added numerous documents to shore up its scientific bases, but maintained that it had not reconsidered its original decision. Having supplemented its findings, the agency’s claim that the new information was unlikely to cause it to revise its action rang hollow. See *West Virginia v. EPA*, 362 F.3d 861 (D.C. Cir. 2004). The EPA, for foreign diplomatic reasons, had issued the Endangerment Finding as a free-standing document unassociated with any implementing rule. See John M. Broder, *Greenhouse Gases Imperil Health, E.P.A. Announces*, N.Y. Times, Dec. 7, 2009, at A18, [http://www.nytimes.com/2009/12/08/science/earth/08epa.html?\\_r=1&](http://www.nytimes.com/2009/12/08/science/earth/08epa.html?_r=1&) (“The announcement was timed to coincide with the opening of the United Nations conference on climate change in Copenhagen, strengthening President Obama’s hand as more than 190 nations struggle to reach a global accord.”). Having done so, any objection cogent enough to require a response relying on extensive new extra-record evidence plainly provided substantial support for an argument that the Finding needed reworking. Indeed, the rehearing petitions were not merely likely to lead to a revision, they in fact led to a *de facto* revision. Put another way, an Endangerment Finding whose supporting bases have to be materially supplemented and reweighed to adequately respond

to objections triggers reconsideration under notice and comment standards. This is the plain meaning of 42 U.S.C. § 7607(d)(7)(B), and the court of appeals erred in holding otherwise. *See Responsible Regulation*, 684 F.3d at 125-26.

### **B. The Administrator Misapplied the Central Relevance Standard.**

The EPA departed from its clear and consistent use of its heightened relevance standard without adequate explanation when it found that the data supplied by Petitioners did not change its mind on the Endangerment Finding. The Endangerment Finding was promulgated as the first step in rulemaking under Section 202(a) of the Clean Air Act, codified at 42 U.S.C. § 7521. *See Endangerment Finding*, 74 Fed. Reg. at 66,496; J.A. Vol. I, Doc. 1339709 (Oct. 31, 2011), p. 30 of 695. As a consequence, the associated rulemaking was required to be accompanied by “a statement of basis and purpose,” as well as “a response to each of the significant comments, criticisms, and new data submitted in written or oral presentations during the comment period.” 42 U.S.C. § 7607(d)(6)(A)(i) & (d)(6)(B). In no event could the Endangerment Finding “be based (in part or whole) on any information or data which ha[d] not been placed in the docket as of the date of such promulgation.” 42 U.S.C § 7607(d)(6)(C). Thus, after promulgation on December 15, 2009, any revision to the statement of basis and purpose or to the response to comments was a revision requiring the same

process as that required in the initial promulgation. 42 U.S.C. § 7607(d)(1)(K). See *Donner Hanna Coke Corp. v. Costle*, 464 F. Supp. 1295 (W.D.N.Y. 1979) (EPA enforcement officials cannot circumvent rule-making requirements of 42 U.S.C. § 7607 by making substantial changes in testing methods without notice and hearing).

Whatever the 360-page tome “appears to be,” *Responsible Regulation*, 684 F.3d at 126, the EPA misapplied the central relevance and likelihood of revision test because, in purporting to deny reconsideration, the EPA did, in fact, revise the statement of basis and purpose and its response to comments. This is not only an arbitrary and capricious violation of the EPA’s own standard, but is also a facial violation of the Clean Air Act, or of the APA if the Endangerment Finding is not considered a rule for purposes of 42 U.S.C. § 7607(d)(8).

**C. The EPA Administrator Erred by Making Determinations without Notice or Comment.**

42 U.S.C. § 7607(d)(3) forbids the revision of any rule without notice and comment and limits the basis for such revision to data, information, and documents contained in the docket when the revision is published. 42 U.S.C. § 7607(d)(7)(B) requires any reconsideration to be conducted with rights of notice and comment. Moreover, 42 U.S.C. § 7607(h) declares, with exceptions not here relevant, a congressional

intent, “consistent with the policy of the Administrative Procedures Act,” that the Administrator “ensure a reasonable period for public participation of at least 30 days.” Finally, 42 U.S.C. § 7607(d)(6)(A) provides that any promulgated rule “shall be accompanied by (i) a statement of basis and purpose,” among other things. A revision of the statement of basis and purpose is, therefore, a revision requiring notice and comment. The Endangerment Finding itself is nothing more than an overarching statement of basis and purpose intended to support all subsequent rulemaking on the subject.

This is well-established:

To have any reasonable prospect of obtaining judicial affirmance of a major rule, an agency must set forth the basis and purpose of the rule in a detailed statement, often several hundred pages long, in which the agency refers to the evidentiary basis for all factual predicates, explains its method of reasoning from factual predicates to the expected effects of the rule, relates the factual predicates and expected effects of the rule to each of the statutory goals or purposes the agency is required to further or to consider, responds to all major criticisms contained in the comments on its proposed rule, and explains why it has rejected at least some of the plausible alternatives to the rule it has adopted.

1 Richard J. Pierce, Jr., *Administrative Law Treatise* 593 (5th ed. 2010). “Failure to fulfill one of these

judicially prescribed requirements of a ‘concise general statement of basis and purpose’ has become the most frequent basis for judicial reversal of agency rules.” *Id.* Supplementing the statement of basis and purpose with a 360-page response to objections, which includes data not included in the Endangerment Finding and, in some cases, not even compiled prior to its publication, is a revision that violates this scheme when conducted without rights of notice and comment. In fact, procedurally and institutionally, an agency in the present context is incapable of knowing and deciding scientific matters in the absence of notice and comment, and simply permitting reconsideration petitions affords no substitute. *See Kennecott Corp. v. EPA*, 684 F.2d 1007, 1018-19 (D.C. Cir. 1982).

**D. The EPA’s Reasons for Relying on the IPCC Were Undermined by the Climategate Data Provided in the Reconsideration Petitions which Data Compel the Conclusion that the Endangerment Finding Fails to meet essential Information Quality Standards such that Reconsideration Is Required.**

The EPA Administrator sought to justify her reliance on the “assessment literature” by claiming that the agency carefully reviewed the processes by which this literature was prepared, confirming thereby that these processes met the standards to which the EPA is subject in preparing scientific findings. *Endangerment Finding*, 74 Fed. Reg. at 66,511-13; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), pp. 45-47 of

695. *EPA Response to Public Comments (RTC)* at 1-2 (based on its review of IPCC procedures, “EPA has determined that the approach taken provided the high level of transparency and consistency outlined by EPA’s” information quality requirements); J.A. Vol. VII, Doc. 1339079 (Oct. 31, 2011), at 253 of 395. Based on this review, the Administrator concluded that her reliance on this literature “is entirely reasonable and allows EPA to rely on the best available science.” *Endangerment Finding*, 74 Fed. Reg. at 66,511 (footnote omitted); J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 45 of 695. Of course, as the EPA Inspector General found, not only was this not so, but the Administrator, in making the Endangerment Finding, lacked access to the information necessary to evaluate the quality of the IPCC’s scientific conclusions, violated the agency’s own peer-review standards, and, by having no procedure for evaluating the circumstances in which it is appropriate to rely on outside data, comprehensively delegated her statutory duties to the IPCC and other outside groups. *See* Report of the EPA Inspector General, Data Quality Processes, Report 11-P-0702 (Sept. 26, 2011), <http://www.epa.gov/oig/reports/2011/20110926-11-P-0702.pdf>) (“Inspector General Report”).

As discussed in the previous section, even if IPCC’s scientific procedures had been of sterling quality, the Administrator still would have been required to exercise her own judgment on climate science, and this she did not do. In issuing the Endangerment Finding, the EPA failed to comply even with its own standards for evaluating externally

generated information, insufficient as the EPA Inspector General subsequently found them to be. Accordingly, it should come as no surprise that climategate revealed that the quality of IPCC's science was anything but sterling, and that there is a yawning gap between the way IPCC operated in reality compared with the way the EPA says it did based on its review of IPCC's written procedures. Indeed, by relying so heavily on the IPCC, the agency failed to observe basic information quality standards to which it is subject.

**1. The EPA failed to ensure that Endangerment Finding's information was "accurate, reliable and unbiased."**

The EPA is subject to rigorous data quality obligations under the Information Quality Act (IQA), Pub. L. No. 106-554, 114 Stat. 2763 (2000), and the EPA's IQA Guidelines, *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency (IQA Guidelines)* (Oct. 2002), [http://www.epa.gov/QUALITY/informationguidelines/documents/EPA\\_InfoQualityGuidelines.pdf](http://www.epa.gov/QUALITY/informationguidelines/documents/EPA_InfoQualityGuidelines.pdf). Because the Endangerment Finding meets the EPA's definition of "influential information," information having "a clear and substantial impact (i.e., potential change or effect) on important public policies or private sector decisions," *id.* at 19, the Endangerment Finding is "subject to a higher degree of quality (for example, transparency about data and methods) than

[other] information.” *Id.* at 20. The substance of the information underlying the Endangerment Finding must be “accurate, reliable and unbiased,” requiring use of “the best available science and supporting studies conducted in accordance with sound and objective scientific practices, including, when available, peer reviewed science and supporting studies; and (ii) data collected by accepted methods or best available methods (if the reliability of the method and the nature of the decision justifies the use of the data).” *Id.* at 22.

As demonstrated in detail in the petitions for reconsideration, however, the IPCC reports frequently relied on unscientific “studies” that were prepared by advocacy groups such as the World Wildlife Fund (WWF), Greenpeace, and other similar organizations. This led, among other numerous examples, to the IPCC having to retract its embarrassing assertion, which was relied on in the *Endangerment Finding*, 74 Fed. Reg. at 66,523; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 57 of 695. *TSD*, J.A. Vol. VII, Doc. 1339079 (Oct. 31, 2011), p. 202 of 395; *RTC*, J.A. Vol. X, Doc. 1339079 (Oct. 31, 2011), p. 210 of 403, that Himalyan glaciers would melt by 2035, which turned out to be based on faulty information from an unpublished, unpeered review study by an advocacy organization. J.A. Vol. IX, Doc. 1339079 (Oct. 31, 2011), p. 448-51 of 649. The IPCC had been aware of the data problems in the study but had decided to rely on it anyway for public relations impact. The coordinating Lead Author of that section of the IPCC report, Dr. Murai Lai, has stated:

It related to several countries in this region and their water sources. *We thought that if we can highlight it, it will impact policy-makers and politicians and encourage them to take some concrete action.* It had importance for the region, so we thought we should put it in.

David Rose, “Glacier Scientist: I knew data hadn’t been verified,” UK Daily Mail (Jan. 24, 2010), <http://www.dailymail.co.uk/news/article-1245636/Glacier-scientists-says-knew-data-verified.html>.

This degree of goal-oriented “science” ought not, but can be expected to, inform decisions of momentous public policy import where an agency fails to follow its procedures, as the EPA did prior to the release of the Endangerment Finding TSD. *See* EPA Inspector General’s Report, *supra* at 28-29; *see also id.* at Executive Summary (reporting that the agency “did not meet all OMB requirements for peer review of a highly influential scientific assessment primarily because the review results and the EPA’s response were not publicly reported, and because 1 of the 12 reviewers was an EPA employee.”). What is more, while the EPA told the Inspector General that it engaged in ex post review in response to the petitions for reconsideration, *id.* at 29, the Inspector General found the agency’s procedures for reliance on outside entities to be inadequate and recommended that it “establish minimum review and documentation requirements for assessing and accepting data from other organizations.” *Id.*

## **2. The EPA's reliance on IPCC reports undermined the Public's right to comment.**

The EPA's reliance on the "assessment literature" rendered the public's right to comment meaningless. But ex ante the agency did not think that much of a public comment period was necessary at all. While recognizing the enormous complexity of climate science: "very wide range of risks and harms that need to be considered," *Endangerment Finding*, 74 Fed. Reg. at 66,509; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 43 of 695, the EPA limited the comment period to a mere 60 days based in part on the agency's (mistaken and irrelevant) view that the public had had an opportunity to comment previously. *Id.* at 66,503; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 37 of 695.

There was another defect with the comment process. The EPA time and again responded to public comments on a particular scientific point by saying that the "assessment literature" had reached a different conclusion. The fundamental purpose of the comment process, however, is to ensure that a "genuine interchange" is carried on between the agency and the public, where the agency makes available all the underlying studies and data and the public is able to provide "meaningful commentary." *Conn. Light & Power v. NRC*, 673 F.2d 525, 530-31 (D.C. Cir. 1982). No such interchange occurs when the Administrator dismisses public comments on the ground that a third party disagrees with them. Furthermore the EPA's reflexive citation to the "assessment literature," some of which was not part of the TSD, undermined the

substantive credibility of the agency's findings. *See Chamber of Commerce v. SEC*, 443 F.3d 890, 900 (D.C. Cir. 2006) (“By requiring the ‘most critical factual material’ used by the agency be subjected to informed comment, the APA provides a procedural device to ensure that agency regulations are tested through exposure to public comment . . .”).

Finally, in the Endangerment Finding, the EPA justified its use of third-party synthesis and assessment reports as “allow[ing] EPA to rely on the best available science.” 74 Fed. Reg. at 66,511; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 45 of 695. Now, however, the EPA argues that it was entitled to deny reconsideration in part because other institutions found “no evidence of scientific misconduct or intentional data manipulation” by the climate researchers on whom the IPCC had so extensively relied. *RTP*, 75 Fed. Reg. at 49,558; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 84 of 695. Informal reconsideration without notice or comment based on a “no evidence of scientific misconduct or intentional data manipulation” standard is nowhere authorized by the Clean Air Act.

### **3. The EPA's reliance on IPCC reports prevented public transparency.**

Under § 6.3 of the EPA's IQA Guidelines, the Endangerment Finding, as “Influential Information,” was required to have “a higher degree of transparency regarding (1) the source of the data used, (2) the various assumptions employed, (3) the analytic methods applied, and (4) the statistical procedures

employed.” *IQA Guidelines* at 21. Climategate revealed the hollowness of the EPA’s claim that IPCC met this same level of transparency, as key IPCC authors routinely relied on their own studies while simultaneously refusing to disclose to other scientists the data underlying those studies. The United Kingdom House of Commons Science and Technology report cited by the EPA in denying reconsideration found an “unacceptable” “culture of withholding information – from those perceived by CRU to be hostile to global warming.” Parliament of the United Kingdom – Science & Technology Comm., *The Disclosure of climate data from the Climatic Research Unit at the University of East Anglia: Conclusions & Recommendations* ¶13 (Mar. 31, 2010), <http://www.publications.parliament.uk/pa/cm200910/cmselect/cmstech/387/38709.htm>. Another review panel report cited by the EPA found “a consistent pattern of failing to display the proper degree of openness.” The Independent Climate Change E-mails Review: Findings § 1.3(15) (July 2010), <http://www.cce-review.org/pdf/FINAL%20REPORT.pdf>. As stated by the President of the National Academy of Sciences in commenting on climategate, “[f]ailure to make research data and related information accessible not only impedes science, it also breeds conflicts.” Ralph J. Cicerone, Editorial: Ensuring Integrity in Science, 327 *Science* 624 (2010), <http://www.nasonline.org/about-nas/leadership/president/cicerone-editorial-science.pdf>. It is also completely at odds with the “high” level of transparency demanded by the IQA Guidelines in order to ensure the high quality of the EPA’s science.

**E. In Issuing the Endangerment Finding and in Denying Rehearing, the EPA Impermissibly Delegated its Statutory Authority to Outside Entities.**

The EPA violated the CAA when it delegated its judgment to outside groups. Congress empowered the EPA Administrator to decide whether, “*in his judgment,*” pollutants emitted from motor vehicles endanger public health and welfare. 42 U.S.C. § 7521(a)(1) (emphasis added). But rather than independently assessing the data as required by the CAA, the EPA impermissibly delegated that responsibility to outside organizations.

By its own admission, the EPA placed “primary and significant weight on the[] assessment reports” of the IPCC, the NRC, and the USGCRP in making the endangerment finding. *Endangerment Finding*, 74 Fed. Reg. at 66,511; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 45 of 695. And rather than assessing the actual scientific data, these reports served as the EPA’s “primary scientific and technical basis” for its endangerment decision. *Id.* at 66,510; *see also* J.A. Vol. VII, TSD Executive Summary, Doc. 1339079 (Oct. 31, 2011), p. 34 of 395 (explaining that the document’s data and conclusions “are primarily drawn from the assessment reports of the Intergovernmental Panel on Climate Change (IPCC), the U.S. Climate Change Science Program (CCSP), the U.S. Global Change Research Program (USGCRP), and the National Research Council (NRC)”); *RTC* at Resp. 1-5 (“We did not develop new science to support the finding, but rather relied primarily on the conclusions of the

major assessment reports of USGCRP/CCSP, IPCC, and NRC and the evaluation of the public comments received.”); J.A. Vol. VII, Doc. 1339079 (Oct. 31, 2011), p. 256 of 394. However, to avoid an arbitrary decision, “the agency must examine the relevant data and articulate a satisfactory explanation for its action including a ‘rational connection between the facts found and the choice made.’” *Motor Vehicle Mfrs. Ass’n of the U.S., Inc. v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43 (1983) (emphasis added) (quoting *Burlington Truck Lines, Inc. v. United States*, 371 U.S. 156, 168 (1962)); see 42 U.S.C. § 7521(a)(1). The EPA failed to do so here.

Federal administrative agencies generally may not delegate their authority to outside parties. *U.S. Telecom Ass’n v. FCC*, 359 F.3d 554, 556 (D.C. Cir. 2004). An agency may look to outside groups for advice and policy recommendations, as the EPA did in proposed rulemakings, e.g., *Advance Notice of Proposed Rulemaking for Endangerment Finding*, 73 Fed. Reg. at 44,354 (July 30, 2008); J.A. Vol. I, Doc. 1339709 (Oct. 31, 2011), p. 122 of 695, but delegation is improper because “lines of accountability may blur, undermining an important democratic check on government decision-making.” *U.S. Telecom Ass’n*, 359 F.3d at 565-66, 568. Because outside sources do not necessarily “share the agency’s ‘national vision and perspective,’” the goals of the outside parties may be “inconsistent with those of the agency and the underlying statutory scheme.” *Id.* at 566 (quoting *Nat’l Park & Conservation Ass’n v. Stanton*, 54 F. Supp. 2d 7, 20 (D.D.C. 1999)).

The EPA's wrongful delegation in this case powerfully illustrates those dangers. The agency relied on the judgment of a number of outside groups, but the IPCC's Fourth Assessment Report was accorded special weight. See J.A. Vol. XI, Doc. 1339079 (Oct. 31, 2011), pp. 29 through 184 of 355. Not only did the EPA cite it more often than the others, but the USGCRP – another of EPA's major sources – also relied heavily on the IPCC Report for its “own” findings. See *Endangerment Finding*, 74 Fed. Reg. at 66,511 (noting that the “USGCRP incorporates a number of key findings from the [IPCC Report]” including “the attribution of observed climate change to human emissions of greenhouse gases, and the future projected scenarios of climate change for the global and regional scales”); J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), p. 45 of 695. Despite the serious deficiencies of the IPCC process demonstrated in the reconsideration petitions and the fact that scientific data underlying the assessments is not in the administrative record, in violation of the CAA, see 42 U.S.C. § 7607(d)(3) (“All data, information, and documents . . . on which the proposed rule relies shall be included” in the rulemaking docket “on the date of publication of the proposed rule”), the EPA used the same assessments again to unilaterally reject reconsideration without notice or comment. 75 Fed. Reg. at 49,565-66; J.A. Vol. I, Doc. 1339079 (Oct. 31, 2011), pp. 91-92 of 695; see *Nat'l Welfare Rights Org. v. Mathews*, 533 F.2d 637, 648 (D.C. Cir. 1976) (explaining that “judicial review is meaningless where the administrative record is insufficient to determine

whether the action is arbitrary and capricious”). In sum, the EPA’s delegation of its statutory duties was unreasonable and illegal.

**CONCLUSION**

Wherefore the petition should be granted and the Endangerment Finding reversed and remanded for further proceeding in accordance with law, including rehearing with rights of notice and comment.

Respectfully submitted,

KENNETH T. CUCCINELLI, II Attorney General of Virginia	PATRICIA L. WEST Chief Deputy Attorney General

Argued Feb. 28 and 29, 2012.

Decided June 26, 2012.

On Petitions for Review of Final Actions of the Environmental Protection Agency. Patrick R. Day, Harry W. MacDougald, and Jeffrey Bossert Clark argued the causes for Non-State Petitioners and Supporting Intervenors. With them on the briefs were John J. Burns, Attorney General, Office of the Attorney General of the State of Alaska, Steven E. Mulder, Chief Assistant Attorney General, Peter Glaser, Mark E. Nagle, Matthew Dukes, Paul D. Phillips, John A. Bryson, Ellen Steen, Eric Groten, John P. Elwood, James A. Holtkamp, Chet M. Thompson, Robin S. Conrad, Rachel L. Brand, Sheldon Gilbert, Quentin Riegel, Jeffrey A. Rosen, Robert R. Gasaway, William H. Burgess, Sam Kazman, Hans Bader, Matthew G. Paulson, Harry Moy Ng, Michele Marie Schoeppe, Michael R. Barr,

App. 3

Alexandra M. Walsh, Adam J. White, Jeffrey A. Lamken, Timothy K. Webster, Roger R. Martella, Neal J. Cabral, Theodore Hadzi-Antich, Ashley C. Parrish, Cynthia A.M. Stroman, Scott C. Oostdyk, Gordon R. Alphonso, Shannon L. Goessling, Edward A. Kazmarek, F. William Brownell, Norman W. Fichthorn, Henry V. Nickel, and Allison D. Wood. Paul D. Clement, Mark W. DeLaquil, Andrew M. Grossman, and David B. Rivin, Jr. entered appearances.

E. Duncan Getchell, Jr., Solicitor General, Office of the Attorney General for the Commonwealth of Virginia, argued the cause for State Petitioners Texas and Virginia on Denial of Reconsideration of the Endangerment Finding and State Petitioners and Supporting Intervenors on Endangerment Finding Delegation Issues. With him on the briefs were Kenneth T. Cuccinelli, II, Attorney General, Stephen R. McCullough, Senior Appellate Counsel, Charles E. James Jr., Chief Deputy Attorney General, and Wesley G. Russell, Jr., Deputy Attorney General.

Greg Abbott, Attorney General, Office of the Attorney General for the State of Texas, Bill Cobb, Deputy Attorney General for Civil Litigation, J. Reed Clay, Jr., Special Assistant and Senior Counsel to the Attorney General, Jonathan F. Mitchell, Solicitor General, Michael P. Murphy, Assistant Solicitor General, Luther Strange III, Attorney General, Office of the Attorney General for the State of Alabama, Pamela Jo Bondi, Attorney General, Office of the Attorney General for the State of Florida, Gregory F.

App. 4

Zoeller, Attorney General, Office of the Attorney General for the State of Indiana, Jack Conway, Attorney General, Office of the Attorney General for the Commonwealth of Kentucky, James D. "Buddy" Caldwell, Attorney General, Office of the Attorney General for the State of Louisiana, Bill Schuette, Attorney General, Office of the Attorney General for the State of Michigan, John J. Bursch, Solicitor General, Neil D. Gordon, Assistant Attorney General, Gary C. Rikard, Jon Bruning, Attorney General, Office of the Attorney General for the State of Nebraska, Katherine J. Spohn, Special Counsel to the Attorney General, Wayne Stenehjem, Attorney General, Office of the Attorney General for the State of North Dakota, Margaret Olson, Assistant Attorney General, Scott Pruitt, Attorney General, Office of the Attorney General for the State of Oklahoma, Alan Wilson, Attorney General, Office of the Attorney General for the State of South Carolina, Marty Jackley, Attorney General, Office of the Attorney General for the States of South Dakota, Roxanne Giedd, Chief, Civil Litigation Division, Mark L. Shurtleff, Attorney General, Office of the Attorney General for the State of Utah, and Kenneth T. Cuccinelli, II, Attorney General, Office of the Attorney General for the Commonwealth of Virginia were on the briefs for State Petitioners and Supporting Intervenors. Robert D. Tambling, Assistant Attorney General, Office of the Attorney General for the State of Alabama, entered an appearance.

App. 5

Christian J. Ward, Scott A. Keller, and April L. Farris were on the brief for amici curiae Scientists in support of Petitioners.

Derek Schmidt, Attorney General, Office of the Attorney General for the State of Kansas, and John Campbell, Chief Deputy Attorney General, were on the brief for amicus curiae State of Kansas in support of Petitioners.

Martin R. Levin, Michael J. O'Neill, Donald M. Falk, Mark S. Kaufman, Steven J. Lechner, and Richard P. Hutchison were on the brief for amici curiae Landmark Legal Foundation, et al. in support of Petitioners.

Jon M. Lipshultz and Angeline Purdy, Attorneys, U.S. Department of Justice, argued the causes for respondent. With them on the brief were John Hannon, Carol Holmes, and Steven Silverman, U.S. Environmental Protection Agency, Attorneys. Thomas A. Lorenzen, Attorney, U.S. Department of Justice, entered an appearance.

Carol Iancu, Assistant Attorney General, Office of the Attorney General for the Commonwealth of Massachusetts, argued the cause for State and Environmental Intervenors in support of respondents. With her on the briefs were Martha Coakley, Attorney General, William L. Pardee, Attorney Assistant General, Sean H. Donahue, Howard I. Fox, David S. Baron, Megan Ceronsky, Vickie L. Patton, Peter Zalzal, Kamala D. Harris, Attorney General, Office of the Attorney General for

Ann Brewster Weeks, Sean H. Donahue, Vickie Patton, Peter Zalzal, Joanne Spalding, Craig Segall, David Doniger, and Meleah Geertsma were on the brief of intervenors in support of respondents. David S. Baron, Pamela A. Campos, Colin C. O'Brien, and John D. Walke entered appearances.

Vera P. Pardee, Brendan R. Cummings, and Kevin P. Bundy were on the brief for amicus curiae Center for Biological Diversity in support of respondents.

Before: SENTELLE, Chief Judge; ROGERS and TATEL, Circuit Judges.

Opinion for the Court filed PER CURIAM.

PER CURIAM:

Following the Supreme Court's decision in *Massachusetts v. EPA*, 549 U.S. 497, 127 S.Ct. 1438, 167 L.Ed.2d 248 (2007) – which clarified that greenhouse gases are an “air pollutant” subject to regulation under the Clean Air Act (CAA) – the Environmental Protection Agency promulgated a series of greenhouse gas-related rules. First, EPA issued an Endangerment Finding, in which it determined that greenhouse gases may “reasonably be anticipated to endanger public health or welfare.” *See* 42 U.S.C. § 7521(a)(1). Next, it issued the Tailpipe Rule, which set emission standards for cars and light trucks. Finally, EPA determined that the CAA requires major stationary sources of greenhouse

## App. 17

gases to obtain construction and operating permits. But because immediate regulation of all such sources would result in overwhelming permitting burdens on permitting authorities and sources, EPA issued the Timing and Tailoring Rules, in which it determined that only the largest stationary sources would initially be subject to permitting requirements.

Petitioners, various states and industry groups, challenge all these rules, arguing that they are based on improper constructions of the CAA and are otherwise arbitrary and capricious. But for the reasons set forth below, we conclude: 1) the Endangerment Finding and Tailpipe Rule are neither arbitrary nor capricious; 2) EPA's interpretation of the governing CAA provisions is unambiguously correct; and 3) no petitioner has standing to challenge the Timing and Tailoring Rules. We thus dismiss for lack of jurisdiction all petitions for review of the Timing and Tailoring Rules, and deny the remainder of the petitions.

**I.**

We begin with a brief primer on greenhouse gases. As their name suggests, when released into the atmosphere, these gases act “like the ceiling of a greenhouse, trapping solar energy and retarding the escape of reflected heat.” *Massachusetts v. EPA*, 549 U.S. at 505, 127 S.Ct. 1438. A wide variety of modern human activities result in greenhouse gas emissions; cars, power plants, and industrial sites all release

## App. 18

significant amounts of these heat-trapping gases. In recent decades “[a] well-documented rise in global temperatures has coincided with a significant increase in the concentration of [greenhouse gases] in the atmosphere.” *Id.* at 504-05, 127 S.Ct. 1438. Many scientists believe that mankind’s greenhouse gas emissions are driving this climate change. These scientists predict that global climate change will cause a host of deleterious consequences, including drought, increasingly severe weather events, and rising sea levels.

The genesis of this litigation came in 2007, when the Supreme Court held in *Massachusetts v. EPA* that greenhouse gases “unambiguous[ly]” may be regulated as an “air pollutant” under the Clean Air Act (“CAA”). *Id.* at 529, 127 S.Ct. 1438. Squarely rejecting the contention – then advanced by EPA – that “greenhouse gases cannot be ‘air pollutants’ within the meaning of the Act,” *id.* at 513, 127 S.Ct. 1438, the Court held that the CAA’s definition of “air pollutant” “embraces *all* airborne compounds of whatever stripe.” *Id.* at 529, 127 S.Ct. 1438 (emphasis added). Moreover, because the CAA requires EPA to establish motor-vehicle emission standards for “*any* air pollutant . . . which may reasonably be anticipated to endanger public health or welfare,” 42 U.S.C. § 7521(a)(1) (emphasis added), the Court held that EPA had a “statutory obligation” to regulate harmful greenhouse gases. *Id.* at 534, 127 S.Ct. 1438. “Under the clear terms of the Clean Air Act,” the Court concluded, “EPA can avoid taking further action only

## App. 19

if it determines that greenhouse gases do not contribute to climate change or if it provides some reasonable explanation as to why it cannot or will not exercise its discretion to determine whether they do.” *Id.* at 533, 127 S.Ct. 1438. The Court thus directed EPA to determine “whether sufficient information exists to make an endangerment finding” for greenhouse gases. *Id.* at 534, 127 S.Ct. 1438.

*Massachusetts v. EPA* spurred a cascading series of greenhouse gas-related rules and regulations. First, in direct response to the Supreme Court’s directive, EPA issued an Endangerment Finding for greenhouse gases. *Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act* (“Endangerment Finding”), 74 Fed. Reg. 66,496 (Dec. 15, 2009). The Endangerment Finding defined as a single “air pollutant” an “aggregate group of six long-lived and directly-emitted greenhouse gases” that are “well mixed” together in the atmosphere and cause global climate change: carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. *Id.* at 66,536-37. Following “common practice,” EPA measured the impact of these gases on a “carbon dioxide equivalent basis,” (CO<sub>2</sub>e) which is based on the gases’ “warming effect relative to carbon dioxide . . . over a specified timeframe.” *Id.* at 66,519. (Using the carbon dioxide equivalent equation, for example, a mixture of X amount of nitrous oxide and Y amount of sulfur hexafluoride is expressed as Z amount of CO<sub>2</sub>e). After compiling and

## App. 20

considering a considerable body of scientific evidence, EPA concluded that motor-vehicle emissions of these six well-mixed gases “contribute to the total greenhouse gas air pollution, and thus to the climate change problem, which is reasonably anticipated to endanger public health and welfare.” *Id.* at 66,499.

Next, and pursuant to the CAA’s requirement that EPA establish motor-vehicle emission standards for “any air pollutant . . . which may reasonably be anticipated to endanger public health or welfare,” 42 U.S.C. § 7521(a)(1), the agency promulgated its Tailpipe Rule for greenhouse gases. *Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards; Final Rule* (“Tailpipe Rule”), 75 Fed. Reg. 25,324 (May 7, 2010). Effective January 2, 2011, the Tailpipe Rule set greenhouse gas emission standards for cars and light trucks as part of a joint rulemaking with fuel economy standards issued by the National Highway Traffic Safety Administration (NHTSA). *Id.* at 25,326.

Under EPA’s longstanding interpretation of the CAA, the Tailpipe Rule automatically triggered regulation of stationary greenhouse gas emitters under two separate sections of the Act. The first, the Prevention of Significant Deterioration of Air Quality (PSD) program, requires state-issued construction permits for certain types of stationary sources – for example, iron and steel mill plants – if they have the potential to emit over 100 tons per year (tpy) of “any air pollutant.” *See* 42 U.S.C. §§ 7475; 7479(1). All other stationary sources are subject to PSD

## App. 21

permitting if they have the potential to emit over 250 tpy of “any air pollutant.” *Id.* § 7479(1). The second provision, Title V, requires state-issued operating permits for stationary sources that have the potential to emit at least 100 tpy of “any air pollutant.” *Id.* § 7602(j). EPA has long interpreted the phrase “any air pollutant” in both these provisions to mean any air pollutant that is regulated under the CAA. *See Requirements for Preparation, Adoption, and Submittal of Implementation Plans; Approval and Promulgation of Implementation Plans* (“1980 Implementation Plan Requirements”), 45 Fed. Reg. 52,676, 52,711 (Aug. 7, 1980) (PSD program); *Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule* (“Tailoring Rule”), 75 Fed. Reg. 31,514, 31,553-54 (June 3, 2010) (discussing history of Title V regulation and applicability). And once the Tailpipe Rule set motor-vehicle emission standards for greenhouse gases, they became a regulated pollutant under the Act, requiring PSD and Title V greenhouse permitting.

Acting pursuant to this longstanding interpretation of the PSD and Title V programs, EPA issued two rules phasing in stationary source greenhouse gas regulation. First, in the Timing Rule, EPA concluded that an air pollutant becomes “subject to regulation” under the Clean Air Act – and thus subject to PSD and Title V permitting – only once a regulation requiring control of that pollutant takes effect. *Reconsideration of Interpretation of Regulations That Determine Pollutants Covered by*

## App. 22

*Clean Air Act Permitting Programs* (“Timing Rule”), 75 Fed. Reg. 17,004 (Apr. 2, 2010). Therefore, EPA concluded, major stationary emitters of greenhouse gases would be subject to PSD and Title V permitting regulations on January 2, 2011 – the date on which the Tailpipe Rule became effective, and thus, the date when greenhouse gases first became regulated under the CAA. *Id.* at 17,019.

Next, EPA promulgated the Tailoring Rule. In the Tailoring Rule, EPA noted that greenhouse gases are emitted in far greater volumes than other pollutants. Indeed, millions of industrial, residential, and commercial sources exceed the 100/250 tpy statutory emissions threshold for CO<sub>2</sub>e. Tailoring Rule, 75 Fed. Reg. at 31,534-36. Immediately adding these sources to the PSD and Title V programs would, EPA predicted, result in tremendous costs to industry and state permitting authorities. *See id.* As a result, EPA announced that it was “relieving overwhelming permitting burdens that would, in the absence of this rule, fall on permitting authorities and sources.” *Id.* at 31,516. Departing from the CAA’s 100/250 tpy emissions threshold, the Tailoring Rule provided that only the largest sources – those exceeding 75,000 or 100,000 tpy CO<sub>2</sub>e, depending on the program and project – would initially be subject to greenhouse gas permitting. *Id.* at 31,523. (The Tailoring Rule further provided that regulated sources must also emit greenhouse gases at levels that exceed the 100/250 tpy emissions threshold on a *mass* basis. That is, they must emit over 100/250 tpy of actual pollutants, in

## App. 23

addition to exceeding the 75,000/100,000 tpy carbon dioxide equivalent. *Id.* at 31,523.)

A number of groups – including states and regulated industries – filed petitions for review of EPA’s greenhouse gas regulations, contending that the agency misconstrued the CAA and otherwise acted arbitrarily and capriciously. This appeal consolidates the petitions for review of the four aforementioned rules: the Endangerment Finding, the Tailpipe Rule, the Timing Rule, and the Tailoring Rule.

“The Clean Air Act empowers us to reverse the Administrator’s action in rulemaking if it is ‘arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with the law.’” *Med. Waste Inst. & Energy Recovery Council v. EPA*, 645 F.3d 420, 424 (D.C.Cir.2011) (quoting 42 U.S.C. § 7607(d)(9)(A)). Questions of statutory interpretation are governed by the familiar *Chevron* two-step: “First . . . if the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress.” *Chevron, U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 842-43, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). But “if the statute is silent or ambiguous with respect to the specific issue, the question for the court is whether the agency’s answer is based on a permissible construction of the statute.” *Id.* at 843, 104 S.Ct. 2778.

## App. 24

This opinion proceeds in several steps. Part II explains why the Endangerment Finding was neither arbitrary nor capricious, while Part III does the same for the Tailpipe Rule. Turning to stationary source regulation, Part IV examines whether any petitioners may timely challenge EPA's longstanding interpretation of the PSD statute. Because we conclude that they may, Part V addresses the merits of their statutory arguments, and explains why EPA's interpretation of the CAA was compelled by the statute. Next, Part VI explains why petitioners lack standing to challenge the Timing and Tailoring Rules themselves. Finally, Part VII disposes of several arguments that have nothing to do with the rules under review, and thus are not properly before us.

**II.**

We turn first to State and Industry Petitioners' challenges to the Endangerment Finding, the first of the series of rules EPA issued after the Supreme Court remanded *Massachusetts v. EPA*. In the decision ordering the remand, the Supreme Court held that EPA had failed in its statutory obligations when it "offered no reasoned explanation for its refusal to decide whether greenhouse gases cause or contribute to climate change." *Massachusetts v. EPA*, 549 U.S. at 534, 127 S.Ct. 1438. On remand, EPA compiled a substantial scientific record, which is before us in the present review, and determined that "greenhouse gases in the atmosphere may reasonably be anticipated both to endanger public health and to

## App. 25

endanger public welfare.” Endangerment Finding, 74 Fed. Reg. at 66,497. EPA went on to find that motor-vehicle emissions of greenhouse gases “ contribute to the total greenhouse gas air pollution, and thus to the climate change problem, which is reasonably anticipated to endanger public health and welfare.” *Id.* at 66,499.

State and Industry Petitioners challenge several aspects of EPA’s decision, including (1) EPA’s interpretation of CAA § 202(a)(1), which sets out the endangerment-finding standard; (2) the adequacy of the scientific record supporting the Endangerment Finding; (3) EPA’s decision not to “quantify” the risk of endangerment to public health or welfare created by climate change; (4) EPA’s choice to define the “air pollutant” at issue as an aggregate of six greenhouse gases; (5) EPA’s failure to consult its Science Advisory Board before issuing the Endangerment Finding; and (6) EPA’s denial of all petitions for reconsideration of the Endangerment Finding. We ultimately conclude that the Endangerment Finding is consistent with *Massachusetts v. EPA* and the text and structure of the CAA, and is adequately supported by the administrative record.

**A.**

Industry Petitioners contend that EPA improperly interpreted CAA § 202(a)(1) as restricting the Endangerment Finding to a science-based judgment devoid of considerations of policy concerns

## App. 26

and regulatory consequences. They assert that CAA § 202(a)(1) requires EPA to consider, *e.g.*, the benefits of activities that require greenhouse gas emissions, the effectiveness of emissions regulation triggered by the Endangerment Finding, and the potential for societal adaptation to or mitigation of climate change. They maintain that eschewing those considerations also made the Endangerment Finding arbitrary and capricious.

These contentions are foreclosed by the language of the statute and the Supreme Court's decision in *Massachusetts v. EPA*. Section 202(a) of the CAA states in relevant part that EPA's Administrator

shall by regulation prescribe (and from time to time revise) in accordance with the provisions of this section, standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare.

42 U.S.C. § 7521(a)(1). This language requires that the endangerment evaluation “relate to whether an air pollutant ‘cause[s], or contribute[s] to, air pollution which may reasonably be anticipated to endanger public health or welfare.’” *Massachusetts v. EPA*, 549 U.S. at 532-33, 127 S.Ct. 1438. At bottom, § 202(a)(1) requires EPA to answer only two questions: whether particular “air pollution” – here,

## App. 27

greenhouse gases – “may reasonably be anticipated to endanger public health or welfare,” and whether motor-vehicle emissions “cause, or contribute to” that endangerment.

These questions require a “scientific judgment” about the potential risks greenhouse gas emissions pose to public health or welfare – not policy discussions. *Massachusetts v. EPA*, 549 U.S. at 534, 127 S.Ct. 1438. In *Massachusetts v. EPA*, the Supreme Court rebuffed an attempt by EPA itself to inject considerations of policy into its decision. At the time, EPA had “offered a laundry list of reasons not to regulate” greenhouse gases, including

that a number of voluntary Executive Branch programs already provide an effective response to the threat of global warming, that regulating greenhouse gases might impair the President’s ability to negotiate with “key developing nations” to reduce emissions, and that curtailing motor-vehicle emissions would reflect “an inefficient, piecemeal approach to address the climate change issue.”

*Id.* at 533, 127 S.Ct. 1438 (citations omitted). The Court noted that “these policy judgments . . . have nothing to do with whether greenhouse gas emissions contribute to climate change. Still less do they amount to a reasoned justification for declining to form a scientific judgment.” *Id.* at 533-34, 127 S.Ct. 1438. In the Court’s view, EPA’s policy-based explanations contained “no reasoned explanation for

## App. 28

[EPA's] refusal to decide" the key part of the endangerment inquiry: "whether greenhouse gases cause or contribute to climate change." *Id.* at 534, 127 S.Ct. 1438.

As in *Massachusetts v. EPA*, a "laundry list of reasons not to regulate" simply has "nothing to do with whether greenhouse gas emissions contribute to climate change." *Id.* at 533-34, 127 S.Ct. 1438. The additional exercises State and Industry Petitioners would have EPA undertake – *e.g.*, performing a cost-benefit analysis for greenhouse gases, gauging the effectiveness of whatever emission standards EPA would enact to limit greenhouse gases, and predicting society's adaptive response to the dangers or harms caused by climate change – do not inform the "scientific judgment" that § 202(a)(1) requires of EPA. Instead of focusing on the question whether greenhouse gas emissions may reasonably be anticipated to endanger public health or welfare, the factors State and Industry Petitioners put forth only address what might happen were EPA to answer that question in the affirmative. As EPA stated in the Endangerment Finding, such inquiries "muddle the rather straightforward scientific judgment about whether there may be endangerment by throwing the potential impact of responding to the danger into the initial question." 74 Fed. Reg. at 66,515. To be sure, the subsection following § 202(a)(1), § 202(a)(2), requires that EPA address limited questions about the cost of compliance with new emission standards and the availability of technology for meeting those

## App. 29

standards, *see infra* Part III, but these judgments are not part of the § 202(a)(1) endangerment inquiry. The Supreme Court made clear in *Massachusetts v. EPA* that it was not addressing the question “whether policy concerns can inform EPA’s actions in the event that it makes such a finding,” 549 U.S. at 534-35, 127 S.Ct. 1438, but that policy concerns were not part of the calculus for the determination of the endangerment finding in the first instance. The Supreme Court emphasized that it was holding “that EPA must ground its reasons for action or inaction in the statute.” *Id.* at 535, 127 S.Ct. 1438. The statute speaks in terms of endangerment, not in terms of policy, and EPA has complied with the statute.

State and Industry Petitioners insist that because statutes should be interpreted to avoid absurd results, EPA should have considered at least the “absurd” consequences that would follow from an endangerment finding for greenhouse gases. Specifically: having made an endangerment finding, EPA will proceed to promulgate emission standards under § 202(a)(1). Issuing those standards triggers regulation – under EPA’s PSD and Title V programs – of stationary sources that emit greenhouse gases at levels above longstanding statutory thresholds. Because greenhouse gases are emitted in much higher volumes than other air pollutants, hundreds of thousands of small stationary sources would exceed those thresholds. This would subject those sources to PSD and Title V permitting requirements despite what Petitioners claim was Congress’s clear intent

## App. 30

that the requirements apply only to large industrial sources. Petitioners assert that even EPA believed such overbroad regulation to be an absurd result, which it attempted to rectify by adopting the Tailoring Rule to raise the statutory thresholds, *see infra* Part VI.

However “absurd” Petitioners consider this consequence, though, it is still irrelevant to the endangerment inquiry. That EPA adjusted the statutory thresholds to accommodate regulation of greenhouse gases emitted by stationary sources may indicate that the CAA is a regulatory scheme less-than-perfectly tailored to dealing with greenhouse gases. But the Supreme Court has already held that EPA indeed wields the authority to regulate greenhouse gases under the CAA. *See Massachusetts v. EPA*. The plain language of § 202(a)(1) of that Act does not leave room for EPA to consider as part of the endangerment inquiry the stationary-source regulation triggered by an endangerment finding, even if the degree of regulation triggered might at a later stage be characterized as “absurd.”

**B.**

State and Industry Petitioners next challenge the adequacy of the scientific record underlying the Endangerment Finding, objecting to both the type of evidence upon which EPA relied and EPA’s decision to make an Endangerment Finding in light of what

## App. 31

Industry Petitioners view as significant scientific uncertainty. Neither objection has merit.

## 1.

As an initial matter, State and Industry Petitioners question EPA's reliance on "major assessments" addressing greenhouse gases and climate change issued by the Intergovernmental Panel on Climate Change (IPCC), the U.S. Global Climate Research Program (USGCRP), and the National Research Council (NRC). Endangerment Finding, 74 Fed. Reg. at 66,510-11. These peer-reviewed assessments synthesized thousands of individual studies on various aspects of greenhouse gases and climate change and drew "overarching conclusions" about the state of the science in this field. *Id.* at 66,511. The assessments provide data and information on, *inter alia*, "the amount of greenhouse gases being emitted by human activities"; their continued accumulation in the atmosphere; the resulting observed changes to Earth's energy balance, temperature and climate at global and regional levels, and other "climate-sensitive sectors and systems of the human and natural environment"; the extent to which these changes "can be attributed to human-induced buildup of atmospheric greenhouse gases"; "future projected climate change"; and "projected risks and impacts to human health, society and the environment." *Id.* at 66,510-11.

## App. 32

State and Industry Petitioners assert that EPA improperly “delegated” its judgment to the IPCC, USGCRP, and NRC by relying on these assessments of climate-change science. See *U.S. Telecom Ass’n v. FCC*, 359 F.3d 554, 566 (D.C.Cir.2004). This argument is little more than a semantic trick. EPA did not delegate, explicitly or otherwise, any decision-making to any of those entities. EPA simply did here what it and other decision-makers often must do to make a science-based judgment: it sought out and reviewed existing scientific evidence to determine whether a particular finding was warranted. It makes no difference that much of the scientific evidence in large part consisted of “syntheses” of individual studies and research. Even individual studies and research papers often synthesize past work in an area and then build upon it. This is how science works. EPA is not required to re-prove the existence of the atom every time it approaches a scientific question.

Moreover, it appears from the record that EPA used the assessment reports not as substitutes for its own judgment but as evidence upon which it relied to make that judgment. EPA evaluated the processes used to develop the various assessment reports, reviewed their contents, and considered the depth of the scientific consensus the reports represented. Based on these evaluations, EPA determined the assessments represented the best source material to use in deciding whether greenhouse gas emissions may be reasonably anticipated to endanger public

## App. 33

health or welfare. Endangerment Finding, 74 Fed. Reg. at 66,510-11. It then reviewed those reports along with comments relevant to the scientific considerations involved to determine whether the evidence warranted an endangerment finding for greenhouse gases as it was required to do under the Supreme Court's mandate in *Massachusetts v. EPA*.

**2.**

Industry Petitioners also assert that the scientific evidence does not adequately support the Endangerment Finding. As we have stated before in reviewing the science-based decisions of agencies such as EPA, “[a]lthough we perform a searching and careful inquiry into the facts underlying the agency’s decisions, we will presume the validity of agency action as long as a rational basis for it is presented.” *Am. Farm Bureau Fed’n v. EPA*, 559 F.3d 512, 519 (D.C.Cir.2009) (internal quotation marks omitted). In so doing, “we give an extreme degree of deference to the agency when it is evaluating scientific data within its technical expertise.” *Id.* (internal quotation marks omitted).

The body of scientific evidence marshaled by EPA in support of the Endangerment Finding is substantial. EPA’s scientific evidence of record included support for the proposition that greenhouse gases trap heat on earth that would otherwise dissipate into space; that this “greenhouse effect” warms the climate; that human activity is

## App. 34

contributing to increased atmospheric levels of greenhouse gases; and that the climate system is warming.

Based on this scientific record, EPA made the linchpin finding: in its judgment, the “root cause” of the recently observed climate change is “very likely” the observed increase in anthropogenic greenhouse gas emissions. Endangerment Finding, 74 Fed. Reg. at 66,518. EPA found support for this finding in three lines of evidence. First, it drew upon our “basic physical understanding” of the impacts of various natural and manmade changes on the climate system. For instance, EPA relied on evidence that the past half-century of warming has occurred at a time when natural forces such as solar and volcanic activity likely would have produced cooling. Endangerment Finding, Response to Comments (RTC) Vol. 3, at 20. Other evidence supports EPA’s conclusion that the observed warming pattern – warming of the bottommost layer of the atmosphere and cooling immediately above it – is consistent with greenhouse-gas causation. *Id.*

EPA further relied upon evidence of historical estimates of past climate change, supporting EPA’s conclusion that global temperatures over the last half-century are unusual. Endangerment Finding, 74 Fed. Reg. at 66,518. Scientific studies upon which EPA relied place high confidence in the assertion that global mean surface temperatures over the last few decades are higher than at any time in the last four centuries. Technical Support Document for the

## App. 35

Endangerment Finding (TSD), at 31. These studies also show, albeit with significant uncertainty, that temperatures at many individual locations were higher over the last twenty-five years than during any period of comparable length since 900 A.D. *Id.*

For its third line of evidence that anthropogenic emissions of greenhouse gases spurred the perceived warming trend, EPA turned to computer-based climate-model simulations. Scientists have used global climate models built on basic principles of physics and scientific knowledge about the climate to try to simulate the recent climate change. These models have only been able to replicate the observed warming by including anthropogenic emissions of greenhouse gases in the simulations. Endangerment Finding, 74 Fed. Reg. at 66,523.

To recap, EPA had before it substantial record evidence that anthropogenic emissions of greenhouse gases “very likely” caused warming of the climate over the last several decades. EPA further had evidence of current and future effects of this warming on public health and welfare. Relying again upon substantial scientific evidence, EPA determined that anthropogenically induced climate change threatens both public health and public welfare. It found that extreme weather events, changes in air quality, increases in food-and water-borne pathogens, and increases in temperatures are likely to have adverse health effects. *Id.* at 66,497-98. The record also supports EPA’s conclusion that climate change endangers human welfare by creating risk to food

## App. 36

production and agriculture, forestry, energy, infrastructure, ecosystems, and wildlife. Substantial evidence further supported EPA's conclusion that the warming resulting from the greenhouse gas emissions could be expected to create risks to water resources and in general to coastal areas as a result of expected increase in sea level. *Id.* at 66,498. Finally, EPA determined from substantial evidence that motor-vehicle emissions of greenhouse gases contribute to climate change and thus to the endangerment of public health and welfare.

Industry Petitioners do not find fault with much of the substantial record EPA amassed in support of the Endangerment Finding. Rather, they contend that the record evidences too much uncertainty to support that judgment. But the existence of some uncertainty does not, without more, warrant invalidation of an endangerment finding. If a statute is "precautionary in nature" and "designed to protect the public health," and the relevant evidence is "difficult to come by, uncertain, or conflicting because it is on the frontiers of scientific knowledge," EPA need not provide "rigorous step-by-step proof of cause and effect" to support an endangerment finding. *Ethyl Corp. v. EPA*, 541 F.2d 1, 28 (D.C.Cir.1976). As we have stated before, "Awaiting certainty will often allow for only reactive, not preventive, regulation." *Id.* at 25.

Congress did not restrict EPA to remedial regulation when it enacted CAA § 202(a). That section mandates that EPA promulgate new emission

## App. 37

standards if it determines that the air pollution at issue “may reasonably be anticipated to endanger public health or welfare.” 42 U.S.C. § 7521(a)(1). This language requires a precautionary, forward-looking scientific judgment about the risks of a particular air pollutant, consistent with the CAA’s “precautionary and preventive orientation.” *Lead Indus. Ass’n, Inc. v. EPA*, 647 F.2d 1130, 1155 (D.C.Cir.1980). Requiring that EPA find “certain” endangerment of public health or welfare before regulating greenhouse gases would effectively prevent EPA from doing the job Congress gave it in § 202(a) – utilizing emission standards to prevent reasonably anticipated endangerment from maturing into concrete harm. *Cf. id.* (“[R]equiring EPA to wait until it can conclusively demonstrate that a particular effect is adverse to health before it acts is inconsistent with both the [CAA]’s precautionary and preventive orientation and the nature of the Administrator’s statutory responsibilities. Congress provided that the Administrator is to use his judgment in setting air quality standards precisely to permit him to act in the face of uncertainty.”).

In *Massachusetts v. EPA* the Supreme Court confirmed that EPA may make an endangerment finding despite lingering scientific uncertainty. Indeed, the Court held that the existence of “some residual uncertainty” did not excuse EPA’s decision to decline to regulate greenhouse gases. *Massachusetts v. EPA*, 549 U.S. at 534, 127 S.Ct. 1438. To avoid regulating emissions of greenhouse gases, EPA would

## App. 38

need to show “scientific uncertainty . . . so profound that it precludes EPA from making a reasoned judgment as to whether greenhouse gases contribute to global warming.” *Id.* Clearly, then, EPA may issue an endangerment finding even while the scientific record still contains at least “some residual uncertainty.” Industry Petitioners have shown no more than that.

In the end, Petitioners are asking us to re-weigh the scientific evidence before EPA and reach our own conclusion. This is not our role. As with other reviews of administrative proceedings, we do not determine the convincing force of evidence, nor the conclusion it should support, but only whether the conclusion reached by EPA is supported by substantial evidence when considered on the record as a whole. *See, e.g., New York v. EPA*, 413 F.3d 3, 30 (D.C.Cir.2005). When EPA evaluates scientific evidence in its bailiwick, we ask only that it take the scientific record into account “in a rational manner.” *Am. Petroleum Inst. v. Costle*, 665 F.2d 1176, 1187 (D.C.Cir.1981). Industry Petitioners have not shown that EPA failed to do so here.

**C.**

State Petitioners, here led by Texas, contend that the Endangerment Finding is arbitrary and capricious because EPA did not “define,” “measure,” or “quantify” either the atmospheric concentration at which greenhouse gases endanger public health or

## App. 39

welfare, the rate or type of climate change that it anticipates will endanger public health or welfare, or the risks or impacts of climate change. According to Texas, without defining these thresholds and distinguishing “safe” climate change from climate change that endangers, EPA’s Endangerment Finding is just a “subjective conviction.”

It is true that EPA did not provide a quantitative threshold at which greenhouse gases or climate change will endanger or cause certain impacts to public health or welfare. The text of CAA § 202(a)(1) does not require that EPA set a precise numerical value as part of an endangerment finding. Quite the opposite; the § 202(a)(1) inquiry necessarily entails a case-by-case, sliding-scale approach to endangerment because “[d]anger . . . is not set by a fixed probability of harm, but rather is composed of reciprocal elements of risk and harm, or probability and severity.” *Ethyl*, 541 F.2d at 18. EPA need not establish a minimum threshold of risk or harm before determining whether an air pollutant endangers. It may base an endangerment finding on “a lesser risk of greater harm . . . or a greater risk of lesser harm” or any combination in between. *Id.*

*Ethyl* is instructive. There, EPA made an endangerment finding for airborne lead. During its endangerment inquiry, EPA initially tried to do what Texas asks of it here: find a specific concentration of the air pollutant below which it would be considered “safe” and above which it would endanger public health. *Id.* at 56. However, EPA abandoned that

## App. 40

approach because it failed to account for “the wide variability of dietary lead intake” and lacked predictive value. EPA substituted a “more qualitative” approach, which relied on “predictions based on uncertain data” along with clinical studies. *Id.* at 56-57. This court upheld the endangerment finding that used that qualitative approach despite the lack of a specific endangerment “threshold.”

In its essence, Texas’s call for quantification of the endangerment is no more than a specialized version of Industry Petitioners’ claim that the scientific record contains too much uncertainty to find endangerment. EPA relied on a substantial record of empirical data and scientific evidence, making many specific and often quantitative findings regarding the impacts of greenhouse gases on climate change and the effects of climate change on public health and welfare. Its failure to distill this ocean of evidence into a specific number at which greenhouse gases cause “dangerous” climate change is a function of the precautionary thrust of the CAA and the multivariate and sometimes uncertain nature of climate science, not a sign of arbitrary or capricious decision-making.

**D.**

EPA defined both the “air pollution” and the “air pollutant” that are the subject of the Endangerment Finding as an aggregate of six greenhouse gases, which EPA called “well mixed greenhouse gases”: carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide

## App. 41

(N<sub>2</sub>O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF<sub>6</sub>). Industry Petitioners argue that EPA's decision to include PFCs and SF<sub>6</sub> in this group of greenhouse gases was arbitrary and capricious primarily because motor vehicles generally do not emit these two gases.

No petitioner for review of the Endangerment Finding has established standing to make this argument. Industry Petitioners concede that EPA's decision to regulate PFCs and SF<sub>6</sub> along with the other four greenhouse gases does not injure any motor-vehicle-related petitioner. Nor has any non-motor-vehicle-related petitioner shown an injury-in-fact resulting from EPA's inclusion of these two gases in the six-gas amalgam of "well-mixed greenhouse gases." At oral argument, Industry Petitioners asserted for the first time that certain utility companies – members of associations that petitioned for review of the Endangerment Finding – own utility transformers that emit SF<sub>6</sub>. However, they never demonstrated or even definitively asserted that any of these companies would not be subject to regulation or permitting requirements but for EPA's decision to include SF<sub>6</sub> as part of the "well-mixed greenhouse gases" that are the subject of the Endangerment Finding. *See Sierra Club v. EPA*, 292 F.3d 895, 898-900 (D.C.Cir.2002) (requiring that a petitioner seeking review of agency action demonstrate standing by affidavit or other evidence if standing is not "self-evident" from the administrative record). Absent a petitioner with standing to challenge EPA's inclusion

## App. 42

of PFCs and SF<sub>6</sub> in the “air pollution” at issue, this court lacks jurisdiction to address the merits of Industry Petitioners’ contention.

**E.**

EPA did not submit the Endangerment Finding for review by its Science Advisory Board (SAB). Industry Petitioners claim that EPA’s failure to do so violates its mandate to “make available” to the SAB “any proposed criteria document, standard, limitation, or regulation under the Clean Air Act” at the time it provides the same “to any other Federal agency for formal review and comment.” 42 U.S.C. § 4365(c)(1); *see Am. Petroleum Inst.*, 665 F.2d at 1188.

To begin with, it is not clear that EPA provided the Endangerment Finding “to any other Federal agency for formal review and comment,” which triggers this duty to submit a regulation to the SAB. EPA only submitted a draft of the Endangerment Finding to the Office of Information and Regulatory Affairs pursuant to Executive Order 12,866. EPA contends that this was merely an *informal* review process, not “formal review and comment” – at least when compared with a statutory review-and-comment requirement in which other agencies are given the opportunity to provide written comments about the impacts of a proposed regulation on the reviewing agency’s universe of responsibility. *See, e.g.*,

## App. 43

49 U.S.C. § 32902(j). Industry Petitioners failed to respond to this contention.

In any event, even if EPA violated its mandate by failing to submit the Endangerment Finding to the SAB, Industry Petitioners have not shown that this error was “of such central relevance to the rule that there is a substantial likelihood that the rule would have been significantly changed if such errors had not been made.” 42 U.S.C. § 7607(d)(8); *see Am. Petroleum Inst.*, 665 F.2d at 1188-89 (applying this standard to EPA’s failure to submit an ozone standard to the SAB).

**F.**

Lastly, State Petitioners maintain that EPA erred by denying all ten petitions for reconsideration of the Endangerment Finding. Those petitions asserted that internal e-mails and documents released from the University of East Anglia’s Climate Research Unit (CRU) – a contributor to one of the global temperature records and to the IPCC’s assessment report – undermined the scientific evidence supporting the Endangerment Finding by calling into question whether the IPCC scientists adhered to “best science practices.” *EPA’s Denial of the Petitions To Reconsider the Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act* (“Reconsideration Denial”), 75 Fed. Reg. 49,556, 49,556-57 (Aug. 13, 2010). The petitions pointed to factual mistakes in

App. 44

the IPCC's assessment report resulting from the use of non-peer-reviewed studies and several scientific studies postdating the Endangerment Finding as evidence that the Endangerment Finding was flawed. *Id.*

On August 13, 2010, EPA issued a denial of the petitions for reconsideration accompanied by a 360-page response to petitions (RTP). *Id.* at 49,556. It determined that the petitions did not provide substantial support for the argument that the Endangerment Finding should be revised. According to EPA, the petitioners' claims based on the CRU documents were exaggerated, contradicted by other evidence, and not a material or reliable basis for questioning the credibility of the body of science at issue; two of the factual inaccuracies alleged in the petitions were in fact mistakes, but both were "tangential and minor" and did not change the key IPCC conclusions; and the new scientific studies raised by some petitions were either already considered by EPA, misinterpreted or misrepresented by petitioners, or put forth without acknowledging other new studies. *Id.* at 49,557-58.

1.

EPA is required to convene a proceeding for reconsideration of a rule if a party raising an objection to the rule

can demonstrate to the Administrator that it was impracticable to raise such objection

## App. 45

within such time or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule.

42 U.S.C. § 7607(d)(7)(B). For the purpose of determining whether to commence reconsideration of a rule, EPA considers an objection to be of “central relevance to the outcome” of that rule “if it provides substantial support for the argument that the regulation should be revised.” Reconsideration Denial, 75 Fed. Reg. at 49,561.

State Petitioners have not provided substantial support for their argument that the Endangerment Finding should be revised. State Petitioners point out that some studies the IPCC referenced in its assessment were not peer-reviewed, but they ignore the fact that (1) the IPCC assessment relied on around 18,000 studies that were peer-reviewed, and (2) the IPCC’s report development procedures expressly permitted the inclusion in the assessment of some non-peer-reviewed studies (“gray” literature).

Moreover, as EPA determined, the limited inaccurate information developed from the gray literature does not appear sufficient to undermine the substantial overall evidentiary support for the Endangerment Finding. State Petitioners have not, as they assert, uncovered a “pattern” of flawed science. Only two of the errors they point out seem to be errors at all, and EPA relied on neither in making the Endangerment Finding. First, as State

## App. 46

Petitioners assert, the IPCC misstated the percentage of the Netherlands that is below sea level, a statistic that was used for background information. However, the IPCC corrected the error, and EPA concluded that the error was “minor and had no impact,” and the Endangerment Finding did not refer to the statistic in any way. *Id.* at 49,576-77. Second, the IPCC acknowledged misstating the rate at which Himalayan glaciers are receding. EPA also did not rely on that projection in the Endangerment Finding. *Id.* at 49,577.

State Petitioners also contend that a new study contradicts EPA’s reliance on a projection of more violent storms in the future as a result of climate change, but the study they cite only concerns past trends, not projected future storms. The record shows that EPA considered the new studies on storm trends and concluded that the studies were consistent with the Endangerment Finding. In sum, State Petitioners have failed to show that these isolated “errors” provide substantial support for their argument to overturn the Endangerment Finding.

## 2.

State Petitioners’ further argument that EPA erred in denying reconsideration fails as well. These Petitioners claim EPA erred by failing to provide notice and comment before denying the petitions for reconsideration because EPA’s inclusion of a 360-page RTP amounted to a revision of the Endangerment

## App. 47

Finding, and revision of a rule requires notice and comment. The RTP, however, appears to be exactly what EPA called it – a response to the petitions for reconsideration, not a revision of the Endangerment Finding itself. EPA certainly may deny petitions for reconsideration of a rule and provide an explanation for that denial, including by providing support for that decision, without triggering a new round of notice and comment for the rule.

**III.**

State and Industry Petitioners contend that in promulgating the Tailpipe Rule, EPA relied on an improper interpretation of CAA § 202(a)(1), and was arbitrary and capricious in failing to justify and consider the cost impacts of its conclusion that the Rule triggers stationary-source regulation under the PSD and Title V provisions. They do not challenge the substantive standards of the Rule and focus principally on EPA's failure to consider the cost of stationary-source permitting requirements triggered by the Rule. Positing an absurd-consequences scenario, Petitioners maintain that if EPA had considered these costs it "would have been forced" to exclude carbon dioxide from the scope of the emission standards, to decline to issue greenhouse gas emission standards at all, or "to interpret the statute so as not to automatically trigger stationary source regulation." Industry Tailpipe Br. 17; *see also* Industry Tailpipe Reply Br. 8-9. Both the plain text of

App. 48

Section 202(a) and precedent refute Petitioners' contentions.

A.

Section 202(a)(1) provides:

The Administrator shall by regulation prescribe . . . standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare.

42 U.S.C. § 7521(a)(1). By employing the verb “shall,” Congress vested a non-discretionary duty in EPA. See *Sierra Club v. Jackson*, 648 F.3d 848, 856 (D.C.Cir.2011). The plain text of Section 202(a)(1) thus refutes Industry Petitioners' contention that EPA had discretion to defer issuance of motor-vehicle emission standards on the basis of stationary-source costs. Neither the adjacent text nor the statutory context otherwise condition this clear “language of command,” *id.* (citation omitted). Having made the Endangerment Finding pursuant to CAA § 202(a), 42 U.S.C. § 7521(a), EPA lacked discretion to defer promulgation of the Tailpipe Rule on the basis of its trigger of stationary-source permitting requirements under the PSD program and Title V.

The Supreme Court's decision in *Massachusetts v. EPA* compels this interpretation of Section 202(a)(1).

## App. 49

“If EPA makes a finding of endangerment, the Clean Air Act requires the [a]gency to regulate emissions of the deleterious pollutant from new motor vehicles.” 549 U.S. at 533, 127 S.Ct. 1438. “Under the clear terms of the Clean Air Act, EPA can avoid taking further action *only if* it determines that greenhouse gases do not contribute to climate change *or if* it provides some reasonable explanation as to why it cannot or will not exercise its discretion to determine whether they do.” *Id.* (emphasis added). In the Endangerment Finding, EPA determined that motor-vehicle emissions contribute to greenhouse gas emissions that, in turn, endanger the public health and welfare; the agency therefore was in no position to “avoid taking further action,” *id.*, by deferring promulgation of the Tailpipe Rule. Given the non-discretionary duty in Section 202(a)(1) and the limited flexibility available under Section 202(a)(2), which this court has held relates only to the motor-vehicle industry, *see infra* Part III.C, EPA had no statutory basis on which it could “ground [any] reasons for” further inaction, *Massachusetts v. EPA*, 549 U.S. at 535, 127 S.Ct. 1438.

The plain text of Section 202(a)(1) also negates Industry Petitioners’ contention that EPA had discretion to defer the Tailpipe Rule on the basis of NHTSA’s authority to regulate fuel economy. The Supreme Court dismissed a near-identical argument in *Massachusetts v. EPA*, rejecting the suggestion that EPA could decline to regulate carbon-dioxide emissions because the Department of Transportation

## App. 50

(DOT) had independent authority to set fuel-efficiency standards. *Id.* at 531-32, 127 S.Ct. 1438. “[T]hat DOT sets mileage standards in no way licenses EPA to shirk its environmental responsibilities,” because EPA’s duty to promulgate emission standards derives from “a statutory obligation wholly independent of DOT’s mandate to promote energy efficiency.” *Id.* at 532, 127 S.Ct. 1438. Just as EPA lacks authority to refuse to regulate on the grounds of NHTSA’s regulatory authority, EPA cannot defer regulation on that basis. A comparison of the relevant statutes bolsters this conclusion. *Compare* 49 U.S.C. § 32902(f) (“When deciding maximum feasible average fuel economy . . . , the Secretary of Transportation shall consider . . . the effect of other motor vehicle standards of the Government on fuel economy. . . .”), *with* 42 U.S.C. § 7521(a) (including no such direction). Nor, applying the same reasoning, was EPA required to treat NHTSA’s proposed regulations as establishing the baseline for the Tailpipe Rule. Furthermore, the Tailpipe Rule provides benefits above and beyond those resulting from NHTSA’s fuel-economy standards. *See, e.g.*, Tailpipe Rule, 75 Fed. Reg. at 25,490 (Table III.F.1-2), 25,636 (Table IV.G.1-4). Petitioners’ related contentions regarding the PSD permitting triggers are addressed in Part V.

**B.**

Turning to the APA, Industry Petitioners contend, relying on *Small Refiner Lead Phase-Down*

## App. 51

*Task Force v. EPA*, 705 F.2d 506, 525 (D.C.Cir.1983), and *Ethyl Corp. v. EPA*, 541 F.2d 1 (D.C.Cir.1976), that EPA failed both to justify the Tailpipe Rule in terms of the risk identified in the Endangerment Finding and to show that the proposed standards “would meaningfully mitigate the alleged endangerment,” Industry Tailpipe Br. 35. Instead, they maintain that EPA “separated these two integral steps,” *id.* at 11, and “concluded that it had no obligation to show . . . ‘the resulting emissions control strategy or strategies will have some significant degree of harm reduction or effectiveness in addressing the endangerment,’” *id.* at 11-12 (quoting Endangerment Finding, 74 Fed. Reg. at 66,508). These contentions fail.

Petitioners’ reliance on *Small Refiner*, 705 F.2d at 525, is misplaced; the court there laid out guidelines for assessing EPA’s discretion to set numerical standards and Petitioners do not challenge the substance of the emission standards. In *Ethyl*, 541 F.2d at 7, the court assessed the scope of EPA’s authority, under CAA § 211(c)(1), 42 U.S.C. § 1857f-6c(c)(1) (1970) (*currently codified as amended at 42 U.S.C. § 7545(c)(1)*), to regulate lead particulate in motor-vehicle emissions. The court rejected the argument that the regulations had to “be premised upon factual proof of actual harm,” *Ethyl*, 541 F.2d at 12, and instead deferred to EPA’s reasonable interpretation that regulations could be based on a “significant risk of harm,” *id.* at 13. Nothing in *Ethyl* implied that EPA’s authority to regulate was

## App. 52

conditioned on evidence of a particular level of mitigation; only a showing of significant *contribution* was required. EPA made such a determination in the Endangerment Finding, concluding that vehicle emissions are a significant contributor to domestic greenhouse gas emissions. *See, e.g.*, Endangerment Finding, 74 Fed. Reg. at 66,499. Further, in the preamble to the Tailpipe Rule itself, EPA found that the emission standards would result in meaningful mitigation of greenhouse gas emissions. For example, EPA estimated that the Rule would result in a reduction of about 960 million metric tons of CO<sub>2</sub>e emissions over the lifetime of the model year 2012-2016 vehicles affected by the new standards. *See* Tailpipe Rule, 75 Fed. Reg. at 25,488-90. Other precedent is likewise unhelpful to Petitioners: in *Chemical Manufacturers Association v. EPA*, 217 F.3d 861, 866 (D.C.Cir.2000), “nothing in the record” indicated that the challenged regulatory program would “directly or indirectly, further the Clean Air Act’s environmental goals,” whereas here the record is fulsome, *see supra* Part II.

## C.

Petitioners also invoke Section 202(a)(2) as support for their contention that EPA must consider stationary-source costs in the Tailpipe Rule. Section 202(a)(2) provides:

Any regulation prescribed under paragraph (1) of this subsection . . . shall take effect

## App. 53

after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.

42 U.S.C. § 7521(a)(2). State Petitioners maintain the reference to compliance costs encompasses those experienced by stationary sources under the PSD program, while Industry Petitioners maintain stationary-source costs are a relevant factor in EPA's Section 202(a)(1) rulemaking. This court, however, has held that the Section 202(a)(2) reference to compliance costs encompasses only the cost to the motor-vehicle industry to come into compliance with the new emission standards, and does not mandate consideration of costs to other entities not directly subject to the proposed standards. *See Motor & Equip. Mfrs. Ass'n, Inc. v. EPA*, 627 F.2d 1095, 1118 (D.C.Cir.1979).

**D.**

Petitioners' remaining challenges to the Tailpipe Rule fail as well. In Part II, the court rejects the contention that the Tailpipe Rule fails due to flaws in the underlying Endangerment Finding. The record also refutes Industry Petitioners' suggestion that EPA "employed a shell game to avoid," Industry Tailpipe Reply Br. 9 (capitalization removed), responding to comments regarding stationary-source costs. Industry Tailpipe Br. 19-20; *see also* Industry Tailpipe Reply Br. 14-15. EPA adequately responded to "significant

## App. 54

comments,” 42 U.S.C. § 7607(d)(6)(B). *See, e.g.*, Tailpipe Rule, 75 Fed. Reg. at 25,401-02; Tailpipe Rule, Response to Comments at 7-65 to 7-69. And, assuming other statutory mandates provide a basis for judicial review, *see* Industry Tailpipe Br. 21-22 (listing mandates); *see, e.g., Small Refiner*, 705 F.2d at 537-39, the record shows EPA’s compliance, *see* Tailpipe Rule, 75 Fed. Reg. at 25,539-42, and that EPA was not arbitrary and capricious by not considering stationary-source costs in its analyses. *See, e.g., Michigan v. EPA*, 213 F.3d 663, 689 (D.C.Cir.2000); *Mid-Tex Elec. Coop., Inc. v. FERC*, 773 F.2d 327, 341-42 (D.C.Cir.1985). EPA’s economic impact assessment conducted pursuant to CAA § 317, 42 U.S.C. § 7617, does not provide grounds for granting the petitions because Petitioners’ contentions that EPA, “[i]n defiance of these requirements, . . . refused to estimate or even consider the costs of the [Tailpipe Rule] for stationary sources,” Industry Tailpipe Br. 22, are no more than another attempt to avoid the plain text of Section 202(a). *See also* 42 U.S.C. § 7617(e).

**IV.**

We turn next to the stationary source regulations. As noted *supra* in Part I, EPA’s interpretation of the CAA requires PSD and Title V permits for stationary sources whose potential emissions exceed statutory thresholds for *any* regulated pollutant – including greenhouse gases. Industry Petitioners now challenge EPA’s

## App. 55

longstanding interpretation of the scope of the permitting requirements for construction and modification of major emitting facilities under CAA Sections 165(a) and 169(1), 42 U.S.C. §§ 7475(a) & 7479(1) (“the PSD permitting triggers”). EPA maintains that this challenge is untimely because its interpretation of the PSD permitting triggers was set forth in its 1978, 1980, and 2002 Rules.

In 1978, EPA defined “major stationary source” as a source that emits major amounts of “any air pollutant regulated under the [CAA].” *Part 51 – Requirements for Preparation, Adoption, and Submittal of Implementation Plans; Prevention of Significant Air Quality Deterioration* (“1978 Implementation Plan Requirements”), 43 Fed. Reg. 26,380, 26,382 (June 19, 1978). Industry petitioners’ challenge to the 1978 Rule in *Alabama Power Co. v. Costle*, 636 F.2d 323 (D.C.Cir.1980) reflected their understanding that EPA would apply the PSD permitting program to both pollutants regulated pursuant to National Ambient Air Quality Standards (NAAQS) and other regulated pollutants. *See* Br. for Industry Pet’rs on Regulation of Pollutants other than Sulfur Dioxide and Particulates, No. 78-1006 (and consolidated cases) (Dec. 19, 1978) at 10, 12. In the 1980 Rule, EPA highlighted that to be subject to PSD review, a “source need only emit *any* pollutant in major amounts (i.e., the amounts specified in [CAA § 169(1)]) and be located in an area designated attainment or unclassifiable for that or any other pollutant.” 1980 Implementation Plan Requirements,

## App. 56

45 Fed. Reg. at 52,711 (emphasis in original). EPA explained that “any pollutant” meant “both criteria pollutants, for which national ambient air quality standards have been promulgated, and non-criteria pollutants subject to regulation under the Act.” *Id.* The same explanation of EPA’s interpretation appeared in the 2002 Rule. *Prevention of Significant Deterioration and Nonattainment New Source Review*, 67 Fed. Reg. 80,186, 80,239-40, 80,264 (Dec. 31, 2002).

CAA Section 307(b)(1) provides that a petition for review of any promulgated nationally applicable regulations:

“shall be filed within sixty days from the date notice of such promulgation . . . appears in the Federal Register, except that if such petition is based solely on grounds arising after such sixtieth day, then any petition for review . . . shall be filed within sixty days after such grounds arise.”

42 U.S.C. § 7607(b)(1). The exception encompasses the occurrence of an event that ripens a claim. *See Chamber of Commerce v. EPA*, 642 F.3d 192, 208 n. 14 (D.C.Cir.2011); *Am. Rd. & Transp. Builders Ass’n v. EPA*, 588 F.3d 1109, 1113 (D.C.Cir.2009). EPA acknowledges this precedent, but maintains that the “new grounds” exception is narrow and inapplicable because Industry Petitioners’ challenge to EPA’s interpretation of the PSD permitting triggers is based on legal arguments that were available during the normal judicial review

## App. 57

periods for the 1978, 1980, and 2002 Rules, and the “new ground” on which they now rely is a factual development, namely the regulation of greenhouse gases by the Tailpipe Rule. This is correct so far as it goes, but fails to demonstrate that Industry Petitioners’ challenge is untimely.

Industry Petitioners point out that two petitioners – the National Association of Home Builders (NAHB) and National Oilseed Processors Association (NOPA) – have newly ripened claims as a result of the Tailpipe Rule, which had the effect of expanding the PSD program to never-regulated sources:

- NAHB’s members construct single family homes, apartment buildings, and commercial buildings. According to the Vice President of Legal Affairs, prior to the Tailpipe Rule, no member of NAHB was a major source of any regulated pollutant, and thus no member was ever required to obtain a PSD permit. Decl. of Thomas J. Ward, Vice President of Legal Affairs for NAHB, ¶ 6 (May 10, 2011). Since the Tailpipe Rule rendered greenhouse gases a regulated pollutant, it is now certain that NAHB members that engage in construction projects that emit greenhouse gases in major amounts will have to obtain PSD permits sometime in the future. *Id.* at ¶¶ 7, 8. Indeed, EPA estimated that 6,397 multifamily buildings and 515 single family homes would trigger PSD review

## App. 58

annually absent the Tailoring Rule. *See Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule; Proposed Rule* (“Proposed Tailoring Rule”), 74 Fed. Reg. 55,292, 55,338 (Oct. 27, 2009).

- NOPA’s members are large companies that monthly produce millions of tons of vegetable meals and over a billion pounds of oils from oilseeds, such as soybeans. *See, e.g.*, NOPA, January 2012 Statistical Report (Feb. 14, 2012) *available at www.nopa.org* ; NOPA, February 2012 Statistical Report (Mar. 14, 2012), *available at www.nopa.org*. According to the Executive Vice President of Regulatory Affairs, NOPA members operate facilities that are major sources of criteria pollutants and, for this reason, are subject to PSD review. Decl. of David C. Ailor, Executive Vice President of Regulatory Affairs of NOPA, ¶ 8 (May 10, 2011). Prior to promulgation of the Tailpipe Rule, no member’s facility had triggered PSD review by virtue of emissions of a non-criteria pollutant. *Id.* Now that greenhouse gases are a regulated non-criteria pollutant, many NOPA members will have to obtain PSD permits as result of their facilities’ emissions of a non-criteria pollutant. *Id.* at ¶¶ 9, 10. For some NOPA members this time is not far off because renovations to their facilities will result in greenhouse gas

## App. 59

emissions above the significance thresholds set by the Tailoring Rule, 75 Fed. Reg. at 31,567. *Id.* at ¶ 9.

Industry Petitioners thus maintain that because NAHB and NOPA filed their petitions on July 6, 2010, within 60 days of the promulgation of the Tailpipe Rule in the Federal Register on May 7, 2010, their challenges are timely.

“Ripeness, while often spoken of as a justiciability doctrine distinct from standing, in fact shares the constitutional requirement of standing that an injury in fact be certainly impending.” *Nat’l Treasury Emp. Union v. United States*, 101 F.3d 1423, 1427 (D.C.Cir.1996). During an initial review period, although purely legal claims may be justiciable and, thus, prudentially ripe, a party without an immediate or threatened injury lacks a constitutionally ripe claim. *See Baltimore Gas & Elec. Co. v. ICC*, 672 F.2d 146, 149 (D.C.Cir.1982). EPA’s position would conflate the constitutional and prudential considerations. Constitutional ripeness exists where a challenge “involve[s], at least in part, the existence of a live ‘Case or Controversy.’” *Duke Power Co. v. Carolina Envtl. Study Group*, 438 U.S. 59, 81, 98 S.Ct. 2620, 57 L.Ed.2d 595 (1978). Prudential considerations embodied in the ripeness doctrine relate to “the fitness of the issues for judicial decision and the hardship to the parties of withholding court consideration.” *Abbott Labs. v. Gardner*, 387 U.S. 136, 149, 87 S.Ct. 1507, 18 L.Ed.2d 681 (1967); *see Duke Power*, 438 U.S. at 81, 98 S.Ct. 2620. Standing to

## App. 60

challenge agency action exists where a petitioner can demonstrate an “injury in fact” that is fairly traceable to the challenged action and is likely to be redressed by a favorable judicial decision. *Reyblatt v. NRC*, 105 F.3d 715, 721 (D.C.Cir.1997) (citing *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560-61, 112 S.Ct. 2130, 119 L.Ed.2d 351 (1992)).

Had NAHB and NOPA challenged EPA’s interpretation of the PSD permitting triggers in 1978, 1980, or 2002, as EPA suggests, the court would have lacked jurisdiction under Article III of the Constitution because their alleged injuries were only speculative. See, e.g., *Occidental Permian Ltd. v. FERC*, 673 F.3d 1024, 1026 (D.C.Cir.2012); *Baltimore Gas & Elec. Co.*, 672 F.2d at 149. At that time, NAHB and NOPA could have shown only the possibility that their members would be injured if EPA were someday to determine that greenhouse gases were a pollutant that endangers human health and welfare and to adopt a rule regulating the greenhouse gas emissions of stationary sources. EPA does not challenge the assertions in the NAHB and NOPA declarations, which establish no such rule was promulgated prior to the Tailpipe Rule.

The NAHB and NOPA challenges ceased to be speculative when EPA promulgated the Tailpipe Rule regulating greenhouse gases and their challenges ripened because of the “substantial probability” of injury to them. See *Baltimore Gas & Elec. Co.*, 672 F.2d at 149. Although, as EPA notes, other Industry Petitioners’ challenges to EPA’s interpretation of the

## App. 61

PSD permitting triggers ripened decades earlier, this court has assured petitioners with unripe claims that “they will not be foreclosed from judicial review when the appropriate time comes,” *Grand Canyon Air Tour Coalition v. FAA*, 154 F.3d 455, 473 (D.C.Cir.1998), and that they “need not fear preclusion by reason of the 60-day stipulation [barring judicial review],” *Baltimore Gas & Elec. Co.*, 672 F.2d at 149-50. EPA expresses concern that allowing NAHB and NOPA to litigate their newly ripened claims will have far-reaching implications for finality of agency actions, but “the ripeness doctrine reflects a judgment that the disadvantages of a premature review that may prove too abstract or unnecessary ordinarily outweigh the additional costs of – even repetitive – . . . litigation.” *Ohio Forestry Ass’n, Inc. v. Sierra Club*, 523 U.S. 726, 735, 118 S.Ct. 1665, 140 L.Ed.2d 921 (1998). Some limitations inhere in doctrines such as *stare decisis* or the law-of-the-circuit doctrine, see *LaShawn A. v. Barry*, 87 F.3d 1389, 1395 (D.C.Cir.1996) (en banc).

Because petitioners NAHB and NOPA’s challenges to EPA’s PSD permitting triggers are newly ripened upon promulgation of the Tailpipe Rule and they filed petitions for review within sixty days thereof, their challenge to EPA’s interpretation of the PSD permitting triggers is timely.

## App. 62

## V.

Having established that Industry Petitioners' challenges to the PSD permitting triggers are both timely and ripe, we turn to the merits of their claims.

## A.

CAA Title I, Part C – entitled “Prevention of Significant Deterioration of Air Quality” (PSD) – largely focuses on the maintenance of national ambient air quality standards (NAAQS). Under the PSD program, EPA designates specific pollutants as “NAAQS pollutants” and sets national ambient air quality standards for those pollutants – requiring, for example, that the concentration of a given NAAQS pollutant may not exceed more than a certain number of parts per billion in the ambient air. *See generally* 42 U.S.C. § 7407. Thus far, EPA has designated six NAAQS pollutants: carbon monoxide, lead, nitrogen dioxide, ozone, particle pollution, and sulfur dioxide. None of these NAAQS pollutants is one of the six well-mixed greenhouse gases defined as an “air pollutant” in the Endangerment Finding. *See* Environmental Protection Agency, National Ambient Air Quality Standards, *available at* <http://www.epa.gov/air/criteria.html> (last visited May 3, 2012); Endangerment Finding, 74 Fed. Reg. 66,536-37.

Acting upon information submitted by states, EPA then determines whether each region of the country is in “attainment” or “nonattainment” with the promulgated air quality standard for each

## App. 63

NAAQS pollutant, or, alternatively, whether a region is “unclassifiable” for that pollutant. 42 U.S.C. § 7407(d)(1)(A). An area in attainment for a NAAQS pollutant is “any area . . . that meets the . . . ambient air quality standard for the pollutant.” *Id.* § 7407(d)(1)(A)(ii). By contrast, an area in nonattainment for a NAAQS pollutant is “any area that does not meet (or that contributes to ambient air quality in a nearby area that does not meet) the national . . . ambient air quality standard for the pollutant.” *Id.* § 7407(d)(1)(A)(i). Finally, an unclassifiable area is any area that “cannot be classified on the basis of available information as meeting or not meeting the . . . ambient air quality standard for the pollutant.” *Id.* § 7407(d)(1)(A)(iii).

The PSD program applies to those areas of the United States designated as in “attainment” or “unclassifiable” for any NAAQS pollutant, *see id.* § 7471, and requires permits for major emitting facilities embarking on construction or modification projects in those regions. *Id.* § 7475(a). A separate part of Title I of the CAA, Part D, governs the construction and modification of sources in nonattainment regions. *See id.* §§ 7501, 7502. It bears emphasis that attainment classifications are pollutant-specific: depending on the levels of each NAAQS pollutant in an area, a region can be designated as in attainment for NAAQS pollutant A, but in nonattainment for NAAQS pollutant B. If a major emitting facility in such a region wishes to undertake a construction or modification project, both

## App. 64

Part C and Part D's substantive requirements apply – that is, the source must obtain a general PSD permit and must also abide by Part D's more stringent, pollutant-specific requirements for any NAAQS pollutants for which the area is in nonattainment. *See* 1980 Implementation Plan Requirements, 45 Fed. Reg. at 52,711-12 (“where a source emits in major amounts a pollutant for which the area in which the source would locate is designated nonattainment, Part D NSR rather than Part C PSD review should apply to those pollutants.”) (emphasis added).

The key substantive provision in the PSD program is CAA Section 165(a), which establishes permitting requirements for “major emitting facilities” located in attainment or unclassifiable regions. In relevant part, section 165(a) provides that “[n]o major emitting facility . . . may be constructed in any area to which this part applies unless” the facility obtains a PSD permit. 42 U.S.C. § 7475(a). To obtain a PSD permit, a covered source must, among other things, install the “best available control technology [BACT] for each pollutant subject to regulation under [the CAA]” – regardless of whether that pollutant is a NAAQS pollutant. *Id.* § 7475(a)(4). Since the Tailpipe Rule became effective, EPA has regulated automotive greenhouse gas emissions under Title II of the Act. Thus, greenhouse gases are now a “pollutant subject to regulation under” the Act, and, as required by the statute itself, any “major emitting facility” covered by the PSD program must install BACT for greenhouse gases. *See id.*

## App. 65

The dispute in this case centers largely on the scope of the PSD program – specifically, which stationary sources count as “major emitting facilities” subject to regulation. CAA Section 169(1) defines “major emitting facility,” for the purposes of the PSD program, as a stationary source “which emit[s], or [has] the potential to emit” either 100 tons per year (tpy) or 250 tpy of “any air pollutant.” 42 U.S.C. § 7479(1) (emphasis added). As discussed *supra* in Part I, whether the 100 or 250 tpy threshold applies depends on the type of source. Certain listed categories of sources – for example, iron and steel mill plants – qualify as “major emitting facilities” if they have the potential to emit over 100 tons per year of “any air pollutant.” *Id.* All other stationary sources are “major emitting facilities” if they have the potential to emit over 250 tons per year of “any air pollutant.” *Id.*

As mentioned above, since 1978 EPA has interpreted the phrase “any air pollutant” in the definition of “major emitting facility” as “any air pollutant regulated under the CAA.” *See* 1978 Implementation Plan Requirements, 43 Fed. Reg. at 26,388, 26,403; *supra* Part IV. Thus, because the PSD program covers “major emitting facilities” in “any area to which this part applies,” 42 U.S.C. § 7475, EPA requires PSD permits for stationary sources that 1) are located in an area designated as attainment or unclassifiable for any NAAQS pollutant, and 2) emit 100/250 tpy of any regulated air pollutant, regardless of whether that pollutant is itself a NAAQS pollutant.

## App. 66

*See* 1980 Implementation Plan Requirements, 45 Fed. Reg. at 52,710-11. Consequently, once the Tailpipe Rule took effect and made greenhouse gases a regulated pollutant under Title II of the Act, the PSD program automatically applied to facilities emitting over 100/250 tpy of greenhouse gases. But because immediate regulation of greenhouse gas-emitting sources exceeding the 100/250 tpy benchmark would result in “overwhelming permitting burdens that would . . . fall on permitting authorities and sources,” Tailoring Rule, 75 Fed. Reg. at 31,516, EPA’s Tailoring Rule provided that, for now, sources are subject to PSD permitting requirements only if they have the potential to emit over 100,000 tpy of greenhouse gases (for a construction project) or 75,000 tpy (for a modification project). *Id.* at 31,523; *see also infra*, Part VI.

According to EPA, its longstanding interpretation of the phrase “any air pollutant” – “any air pollutant regulated under the CAA” – is compelled by the statute. *See id.* at 31,517. Disputing this point, Industry Petitioners argue that the phrase is capable of a far more circumscribed meaning and that EPA could have – and should have – avoided extending the PSD permitting program to major greenhouse gas emitters. For the reasons discussed below, we agree with EPA that its longstanding interpretation of the PSD permitting trigger is statutorily compelled. Thus, as EPA argues, it “must give effect to the unambiguously expressed intent of Congress,” *Chevron*, 467 U.S. at 843, 104 S.Ct. 2778, which here

## App. 67

requires PSD coverage for major emitters of any regulated air pollutant.

We begin our analysis, as we must, with the statute's plain language. *See Chevron*, 467 U.S. at 842, 104 S.Ct. 2778 (“First, always, is the question whether Congress has directly spoken to the precise question at issue.”). CAA Section 169(1) requires PSD permits for stationary sources emitting major amounts of “*any* air pollutant.” 42 U.S.C. § 7479(1) (emphasis added). On its face, “the word ‘any’ has an expansive meaning, that is, ‘one or some indiscriminately of whatever kind,’” *United States v. Gonzales*, 520 U.S. 1, 5, 117 S.Ct. 1032, 137 L.Ed.2d 132 (1997) (quoting WEBSTER’S THIRD NEW INTERNATIONAL DICTIONARY 97 (1976)). Greenhouse gases are indisputably an “air pollutant.” *See Massachusetts v. EPA*, 549 U.S. at 528-29, 127 S.Ct. 1438. Congress’s use of the broad, indiscriminate modifier “any” thus strongly suggests that the phrase “any air pollutant” encompasses greenhouse gases.

This plain-language reading of the statute is buttressed by the Supreme Court’s decision in *Massachusetts v. EPA*. There the Court determined that CAA’s overarching definition of “air pollutant” in Section 302(g) – which applies to all provisions of the Act, including the PSD program – unambiguously includes greenhouse gases. Noting that “[t]he Clean Air Act’s sweeping definition of ‘air pollutant’ includes ‘*any* air pollution agent or combination of such agents. . . . which is emitted into or otherwise enters

## App. 68

the ambient air,” the Court held that “the definition embraces *all* airborne compounds of whatever stripe, *and underscores that intent through repeated use of the word ‘any.’*” *Id.* at 529, 127 S.Ct. 1438 (quoting 42 U.S.C. § 7602(g)) (second and third emphases added). Crucially for purposes of the issue before us, the Court concluded that “[t]he statute is unambiguous.” *Id.*

Thus, we are faced with a statutory term – “air pollutant” – that the Supreme Court has determined unambiguously encompasses greenhouse gases. This phrase is preceded by the expansive term “any,” a word the Court held “underscores” Congress’s intent to include “all” air pollutants “of whatever stripe.” *See id.* Absent some compelling reason to think otherwise, “‘any’ . . . means any,” *Ford v. Mabus*, 629 F.3d 198, 206 (D.C.Cir.2010), and Petitioners have given us no reason to construe that word narrowly here. To the contrary: given both the statute’s plain language and the Supreme Court’s decision in *Massachusetts v. EPA*, we have little trouble concluding that the phrase “any air pollutant” includes *all* regulated air pollutants, including greenhouse gases.

In reaching this conclusion, we recognize that EPA’s definition of “any air pollutant” slightly narrows the literal statutory definition, which nowhere requires that “any air pollutant” be a *regulated* pollutant. *See* 42 U.S.C. § 7479(1). But this does not make the statutory language ambiguous. Indeed, “any regulated air pollutant” is the only logical reading of the statute. The CAA’s universal

## App. 69

definition of “air pollutant” – the one at issue in *Massachusetts v. EPA* – provides that the term includes “any physical, chemical, biological [or] radioactive . . . substance or matter which is emitted into or otherwise enters the ambient air.” *Id.* § 7602(g). Of course, nothing in the CAA requires regulation of a substance simply because it qualifies as an “air pollutant” under this broad definition. As discussed *supra* in Parts II and III, for example, the Act requires EPA to prescribe motor vehicle “standards applicable to the emission of any air pollutant” only if that pollutant “cause[s], or contribute[s] to, air pollution which may reasonably be anticipated to endanger public health or welfare.” *Id.* § 7521(a)(1). But if “any air pollutant” in the definition of “major emitting facility” was read to encompass both regulated and nonregulated air pollutants, sources could qualify as major emitting facilities – and thus be subjected to PSD permitting requirements – if they emitted 100/250 tpy of a “physical, chemical, [or] biological” substance EPA had determined was harmless. It is absurd to think that Congress intended to subject stationary sources to the PSD permitting requirements due to emissions of substances that do not “endanger public health or welfare.” *Id.* § 7521(a)(1). Thus, “any regulated air pollutant” is, in this context, the only plausible reading of “any air pollutant.”

We find further support for this definition throughout the CAA. First, as previously mentioned, the PSD program provides that all major emitting

## App. 70

facilities must install BACT for “each pollutant subject to regulation under [the CAA].” *Id.* § 7475(a)(4). “Each pollutant subject to regulation under” the Act is, of course, synonymous with “any air pollutant regulated under the Act.” Thus, EPA’s interpretation of “any air pollutant” in the definition of “major emitting facilities” harmonizes the PSD program’s scope (i.e., which pollutants trigger PSD coverage) with its substantive requirements (i.e., which pollutants must be controlled to obtain a permit). In other words, because a covered source must control greenhouse gas emissions, it makes sense that major emissions of greenhouse gases would subject that source to the PSD program.

Second, a PSD permittee is required to establish that it

will not cause, or contribute to, air pollution in excess of any (A) maximum allowable increase or maximum allowable concentration for any pollutant in any area to which this part applies more than one time per year, (B) national ambient air quality standard in any air quality control region, or (C) any other applicable emission standard or standard of performance under [the CAA].

*Id.* § 7475(a)(3). Subsections (A) and (B) prohibit a permitted source from contributing to a concentration of NAAQS pollutants that exceeds EPA’s standards. By contrast, subsection (C) has an entirely different focus: it prohibits a permitted

## App. 71

source from causing or contributing to air pollution in excess of *any* CAA emission standard. Thus, as EPA notes, “what this provision establishes is that while the PSD program was certainly directed towards NAAQS-criteria pollutants, it also was directed at maintaining air quality for other pollutants regulated under other provisions.” EPA Timing & Tailoring Br. 101. EPA’s determination that “any air pollutant” means “any air pollutant regulated under the Act” – encompassing the greenhouse gases regulated under Title II – is entirely consistent with this focus.

Finally, Congress made perfectly clear that the PSD program was meant to protect against precisely the types of harms caused by greenhouse gases. The PSD provision contains a section entitled “Congressional declaration of purpose,” which provides, in relevant part, that “[t]he purposes of this part are . . . to protect public health and welfare from any actual or potential adverse effect which in the Administrator’s judgment may reasonably be anticipated to occur from air pollution.” 42 U.S.C. § 7470(1). The CAA further provides that “[a]ll language referring to effects on welfare includes, but is not limited to, effects on . . . weather . . . and climate.” *Id.* § 7602(h). As previously noted, EPA in the Endangerment Finding “marshaled . . . substantial. . . scientific evidence . . . for the proposition that greenhouse gases trap heat on earth that would otherwise dissipate into space [and] that this ‘greenhouse effect’ warms the climate.” Part II, *supra* at 28-29. It further concluded that this

## App. 72

“anthropogenically induced climate change” was likely to threaten the public welfare through, among other things, “extreme weather events.” *Id.* at 15-16. Thus, one express purpose of the program is to protect against the harms caused by greenhouse gases.

In sum, we are faced with a statutory term – “any air pollutant” – that the Supreme Court has determined is “expansive,” and “unambiguous[ly]” includes greenhouse gases. *Massachusetts v. EPA*, 549 U.S. at 529, 127 S.Ct. 1438. Moreover, the PSD program requires covered sources to install control technology for “each pollutant” regulated under the CAA, 42 U.S.C. § 7475(a)(4), and to establish that they “will not cause, or contribute to, air pollution in excess of *any* . . . emission standard . . . under [the CAA].” *Id.* § 7475(a)(3) (emphasis added). These provisions demonstrate that the PSD program was intended to control pollutants regulated under every section of the Act. Finally, Congress’s “Declaration of Purpose” expressly states that the PSD program was meant, in part, to protect against adverse effects on “weather” and “climate” – precisely the types of harm caused by greenhouse gases. *See id.* § 7470(1). Given all this, we have little trouble concluding that “any air pollutant” in the definition of “major emitting facility” unambiguously means “any air pollutant regulated under the CAA.”

## App. 73

**B.**

Industry Petitioners offer three alternative interpretations of the PSD permitting triggers, none of which cast doubt on the unambiguous nature of the statute.

As a preliminary matter, we note that none of Petitioners' alternative interpretations applies to Title V. To the contrary, all of the proposed alternative interpretations are based on the structure of – and purported Congressional intent behind – the PSD program. Indeed, Industry Petitioners never argue that their proposed alternative interpretations are relevant to Title V. Petitioners have thus forfeited any challenges to EPA's greenhouse gas-inclusive interpretation of Title V. *See, e.g., Nat'l Steel & Shipbuilding Co. v. NLRB*, 156 F.3d 1268, 1273 (D.C.Cir.1998) (petitioners forfeit an argument by failing to raise it in their opening brief).

Industry Petitioners' first alternative is simple enough. Because the PSD program focuses on “the air people breathe in certain geographically defined . . . areas,” Coalition for Responsible Reg. Timing & Tailoring Br. 38, Industry Petitioners contend that the term “pollutant” in the PSD statute encompasses only air pollutants that, unlike greenhouse gases, “pollute locally.” *Id.* at 35. Industry Petitioners would thus apply a greenhouse gas-exclusive interpretation of “pollutant” throughout the statute's PSD provision. Under this reading, a source would qualify as a “major emitting facility” only if it emits 100/250 tpy of

## App. 74

“any air pollutant” except greenhouse gases. *See* 42 U.S.C. § 7479(1). Moreover, sources that *are* subject to PSD permitting requirements would be required to install BACT for “each pollutant subject to regulation under [the CAA]” – except greenhouse gases. *Id.* § 7475(a)(4).

We can easily dispose of Industry Petitioners’ argument that the PSD program’s “concerns with local emissions,” Coalition for Responsible Reg. Timing & Tailoring Br. 36, somehow limit the BACT provision. The statutory text provides, without qualification, that covered sources must install the “best available control technology for *each pollutant subject to regulation* under [the CAA].” 42 U.S.C. § 7475(a)(4) (emphasis added). Because greenhouse gases are indisputably a pollutant subject to regulation under the Act, it is crystal clear that PSD permittees must install BACT for greenhouse gases. “When the words of a statute are unambiguous . . . judicial inquiry is complete.” *Connecticut Nat’l Bank v. Germain*, 503 U.S. 249, 254, 112 S.Ct. 1146, 117 L.Ed.2d 391 (1992) (internal quotation marks omitted).

Equally without merit is Industry Petitioners’ argument that the PSD program’s regional focus requires a greenhouse gas-exclusive interpretation of “any air pollutant” in the definition of “major emitting facility.” In support of this contention, Industry Petitioners note that CAA Section 161 provides that states’ implementation plans for the PSD program “shall contain emission limitations and

## App. 75

such other measures as may be necessary . . . to prevent *significant deterioration of air quality in each region.*” 42 U.S.C. § 7471 (emphasis added). The term “air quality,” Industry Petitioners contend, implies a focus on “the air people breathe,” and the term “in each region” suggests that Congress was concerned about local, not global, effects. See *Coalition for Responsible Reg. Timing & Tailoring* Br. 36. Moreover, Industry Petitioners note that when Congress enacted the PSD program in 1977, it did so “against the backdrop of a known universe of CAA-regulated pollutants.” *Id.* All these pollutants, Industry Petitioners argue, “were regulated because they could cause elevated ground-level concentrations in ambient air people breathe.” *Id.* And as Industry Petitioners point out, EPA itself has concluded that greenhouse gases are problematic for reasons other than local health and environmental concerns. In EPA’s Advance Notice of Proposed Rulemaking for the regulations at issue here, for example, the agency noted that “[a] significant difference between the major [greenhouse gases] and most air pollutants regulated under the CAA is that [greenhouse gases] have much longer atmospheric lifetimes [and] . . . can remain in the atmosphere for decades to centuries.” *Regulating Greenhouse Gas Emissions Under the Clean Air Act* (“Greenhouse Gas Advance Notice”), 73 Fed. Reg. 44,354, 44,400-01 (July 30, 2008). Moreover, “unlike traditional air pollutants,” greenhouse gases “become well mixed throughout the global atmosphere so that the long-term distribution of [greenhouse gas] concentrations is not dependant [sic] on local

## App. 76

emission sources.” *Id.* Thus, Industry Petitioners conclude, greenhouse gases are problematic for reasons entirely distinct from the local concerns that provided the basis for the PSD program. Given this, the phrase “any air pollutant” cannot be applied to greenhouse gases in the context of the regionally-focused PSD program.

As an initial matter, we note that the Supreme Court rejected a very similar argument in *Massachusetts v. EPA*. There, EPA attempted to distinguish between greenhouse gases and other air pollution agents “because greenhouse gases permeate the world’s atmosphere rather than a limited area near the earth’s surface.” *Massachusetts v. EPA*, 549 U.S. at 529 n. 26, 127 S.Ct. 1438. The Court held that this was “a plainly unreasonable reading of a sweeping statutory provision designed to capture ‘any physical, chemical . . . substance or matter which is emitted into or otherwise enters the ambient air,’” *id.* (quoting 42 U.S.C. § 7602(g)), thus rejecting the dissent’s view that “EPA’s exclusion of greenhouse gases . . . is entitled to deference.” *Id.* As the Court noted, the purported distinction between greenhouse gases and “traditional” air pollutants “finds no support in the text of the statute, which uses the phrase ‘the ambient air’ without distinguishing between atmospheric layers.” *Id.* *Massachusetts v. EPA* thus forecloses Industry Petitioners’ argument that because greenhouse gases do not “cause elevated ground-level concentrations in ambient air people breathe,” Coalition for Responsible Reg. Timing &

## App. 77

Tailoring Br. 36, EPA should have adopted a greenhouse gas-exclusive interpretation of “any air pollutant.”

We also have little trouble disposing of Industry Petitioners’ argument that the PSD program is specifically focused solely on localized air pollution. True, as Industry Petitioners note, one part of the PSD program requires states to “prevent significant deterioration of air quality in each region.” 42 U.S.C. § 7471 (emphasis added). But while localized air quality is obviously one concern of the PSD program, a comprehensive reading of the statute shows it was also meant to address a much broader range of harms. As an initial matter, the PSD provision’s “Congressional declaration of purpose” section expansively provides that the program is intended “to protect public health and welfare from *any* actual or potential adverse effect . . . *from air pollution.*” *Id.* § 7470(1) (emphasis added). Nothing in this section limits the PSD program to adverse effects on local air quality; to the contrary, the word “any” here gives this clause an “expansive meaning” which we see “no reason to contravene.” *New York*, 443 F.3d at 885 (internal quotation marks omitted). Indeed, the CAA expressly provides that effects on “welfare” means “effects on . . . weather . . . and climate.” 42 U.S.C. § 7602(h). It seems quite clear to us, then, that the PSD program was intended to protect against precisely the types of harms caused by greenhouse gases. This broad understanding of the PSD program’s scope is buttressed by the fact that the

## App. 78

program requires covered sources to control “each pollutant subject to regulation under [the CAA],” and further requires sources to comply with “*any* . . . emission standard” under the CAA. *Id.* § 7475(a)(3); (a)(4) (emphasis added). These substantive requirements amount to further evidence that Congress wanted the PSD program to cover all regulated pollutants, regardless of the type of harm those pollutants cause.

In light of the PSD program’s broad scope of regulation and the express purposes of the program, we conclude – consistent with the Supreme Court in *Massachusetts v. EPA* – that Industry Petitioners’ greenhouse gas-exclusive interpretation of “pollutant” is “a plainly unreasonable reading” of the statute. *Massachusetts v. EPA*, 549 U.S. at 529 n. 26, 127 S.Ct. 1438.

## 1.

For their second alternative interpretation, Industry Petitioners argue that the PSD program’s definition of “major emitting facility” establishes a “pollutant-specific situs requirement.” Am. Chemistry Council Br. 33. Under this reading of the statute, a stationary source is subject to PSD permitting requirements only if “(1) a source has major emissions of a NAAQS criteria pollutant and (2) the source is located in an area attaining *that pollutant’s*” air quality standard. Coalition for Responsible Reg. Timing & Tailoring Br. 23. Thus, for example, a

## App. 79

source would be subject to the PSD permitting requirements if it 1) emits over 100/250 tpy of sulfur dioxide (a NAAQS criteria pollutant), and 2) is located in an area that is in “attainment,” or is “unclassifiable,” for sulfur dioxide. But under this approach, a stationary source could never be subject to the PSD program solely because of its greenhouse gas emissions. After all, Industry Petitioners observe, EPA declined to make greenhouse gases a NAAQS criteria pollutant. Instead, EPA regulated greenhouse gases only under Title II of the Act, dealing with motor vehicle emissions. Because “no major source of [greenhouse gases] can be located in an area attaining the nonexistent [air quality standard] for [greenhouse gases],” *id.* at 24, Industry Petitioners point out that their reading of the statute would bring no new stationary sources under the PSD program’s ambit – alleviating any “absurd results” caused by excessive permitting requirements, *id.* at 25.

Industry Petitioners emphasize that, unlike their first proposed alternative, nothing in this approach would “wholly exempt [greenhouse gases] from PSD.” Coalition for Responsible Reg. Timing & Tailoring Reply Br. 20. Although a pollutant-specific situs requirement would limit the *number* of sources subject to the PSD program, nothing in this proposed reading of the statute would alter the substantive requirements for PSD permits, including the requirement that all regulated sources install BACT “for each pollutant subject to regulation under [the

## App. 80

CAA].” 42 U.S.C. § 7475(a)(4). So, for example, under this interpretation, a hypothetical stationary source emitting more than 100/250 tpy of sulfur dioxide and located in an area designated as “in attainment” for sulfur dioxide, must still install BACT for “each pollutant subject to regulation” under the Act, including greenhouse gases. Their key point, though, is that sources emitting only major amounts of greenhouse gases – but not major amounts of a NAAQS criteria pollutant – would escape PSD permitting requirements.

Industry Petitioners’ argument in support of this interpretation proceeds in several steps. First, they argue that the term “any air pollutant,” though “capacious and flexible by itself,” “is a chameleon term” when placed in certain contexts. *Am. Chemistry Council Br. 38*. Indeed, Industry Petitioners note that EPA has already narrowed the literal meaning of the term “any air pollutant” here. After all, and as discussed *supra*, although the statutory term “air pollutant” includes “any physical [or] chemical . . . substance or matter,” 42 U.S.C. § 7602(g), EPA has long maintained that the term “any air pollutant” in the definition of “major emitting facility” encompasses only air pollutants regulated under the Act. Moreover, Industry Petitioners point out that when interpreting CAA Part C, Subpart 2, entitled “Visibility Protection,” EPA determined that the term “any pollutant” in the definition of “major stationary source” meant “any visibility-impairing pollutant.” *See Coalition for*

## App. 81

Responsible Reg. Timing & Tailoring Br. 34 (emphasis added). The statute’s definition of “major stationary source” in the visibility-protection subpart is quite similar to the definition of “major emitting facility” in the PSD subpart: for the purposes of the visibility program, a “major stationary source” is defined as a “stationary source[] with the potential to emit 250 tons or more of any pollutant.” 42 U.S.C. § 7491(g)(7); *compare* 42 U.S.C. § 7479(1) (“major emitting facility” for the purposes of the PSD program is a source which “emit[s], or [has] the potential to emit,” either 100 or 250 tons per year “of any air pollutant”). These narrowed interpretations, Industry Petitioners argue, prove that the seemingly capacious term “any air pollutant” is, notwithstanding that the Supreme Court called this term “expansive” and “sweeping,” *Massachusetts v. EPA*, 549 U.S. at 529 nn. 25-26, 127 S.Ct. 1438, capable of a far more circumscribed meaning.

According to Industry Petitioners, EPA should have adopted that more circumscribed meaning by interpreting “any air pollutant” as establishing a pollutant-specific situs requirement. As Industry Petitioners point out, the PSD program requires permits for “major emitting facilit[ies] . . . in any area to which this part applies,” 42 U.S.C. § 7479(1), and defines “major emitting facilities” as stationary sources emitting 100/250 tpy of “any air pollutant.” *Id.* § 7475(a). In this context, Industry Petitioners contend, the phrases “any air pollutant” and “in any area to which this part applies” must be read in

## App. 82

concert. And, Industry Petitioners argue, these phrases “*together* mean” that a source is subject to PSD permitting requirements only if it emits major amounts of “any [NAAQS] air pollutant whose NAAQS an area is attaining.” Am. Chemistry Council Br. 33.

In support of this supposedly holistic interpretation of the statute, Industry Petitioners cite CAA § 163(b), a different section of the PSD provision in which the phrase “any air pollutant” and “any area to which this part applies” are used in conjunction with one another. Unlike § 165(a), which sets permitting requirements for sources covered by the PSD program, § 163 provides guidelines for *areas* designated as “in attainment” under the program. Specifically, § 163(b) limits the “maximum allowable increase in concentrations of” airborne NAAQS pollutants that may occur in an attainment area before that area’s “attainment” status is jeopardized. *See* 42 U.S.C. § 7473(b)(1). Subsections (1) through (3) of § 163(b) – not directly relevant here – set limits on the maximum allowable increases for two specific NAAQS pollutants, sulfur dioxide and particulate matter. Subsection (4) is a catchall provision, which limits the maximum allowable increases for all other NAAQS pollutants. It is in subsection (4) that Industry Petitioners find what they believe is their payoff: the terms “any air pollutant” and “any area to which this part applies” in conjunction with one another. Section 163(b)(4) provides:

App. 83

The maximum allowable concentration of *any air pollutant in any area to which this part applies* shall not exceed a concentration for such pollutant for each period of exposure equal to –

(A) the concentration permitted under the national secondary ambient air quality standard, or

(B) the concentration permitted under the national primary ambient air quality standard,

whichever concentration is lowest for such pollutant for such period of exposure.

42 U.S.C. § 7473(b)(4) (emphasis added). As Industry Petitioners correctly point out, in this context the phrase “any air pollutant” must mean “any NAAQS pollutant,” and “in any area to which this part applies” must mean “any area that is in attainment for that NAAQS pollutant.” After all, the statute states that the “maximum allowable concentration of any air pollutant . . . shall not exceed” either the primary or secondary national ambient air quality standards. But, as Industry Petitioners observe, national ambient air standards exist only for NAAQS pollutants, so even if “any air pollutant” in CAA § 163(b)(4) was read to include non-NAAQS pollutants, the phrase, in context, would have no practical effect for those pollutants. Moreover, “any area to which this part applies” must mean “any area that is in attainment for that NAAQS pollutant,” because if an area was in nonattainment

## App. 84

for a particular pollutant, Part D – rather than the PSD program – would govern emissions limits for that specific pollutant. *See id.* § 7501 (2) (“[t]he term ‘nonattainment area’ means, for any air pollutant, an area which is designated ‘nonattainment’ with respect to that pollutant”); § 7502 (c) (setting out required “Nonattainment plan provisions”). Finally, Industry Petitioners correctly note that a pollutant-specific reading of the phrase “air pollutant” must also apply to CAA § 165(a)(3)(A), which prohibits PSD permittees from “caus[ing], or contribut[ing] to, air pollution in excess of any . . . maximum allowable concentration for *any air pollutant in any area to which this part applies* more than one time per year.” *Id.* § 7475(a)(3) (A) (emphasis added). This clause, as Industry Petitioners point out, piggybacks off the NAAQS pollutant-specific definition of “maximum allowable concentration” in § 163(b)(4), prophylactically restricting PSD permittees from endangering an area’s attainment status. *See* Am. Chemistry Council Br. 32 (describing the interplay between the two provisions as “Section 163(b)(4) (and Section 165(a)(3)(A), which implements it) . . .”).

Based on all of this, Industry Petitioners conclude that because the phrase “any air pollutant in any area to which this part applies” in § 163(b)(4) means “any NAAQS pollutant in any area in attainment for that NAAQS pollutant,” an identical reading must apply to the definition of “major emitting facility.” As a result, a stationary source may be subject to the PSD program only if it emits 100/250

## App. 85

typy of any NAAQS pollutant and is located in an area designated as in attainment for that NAAQS pollutant. We are unpersuaded.

Although we agree that the term “any air pollutant” is, in some contexts, capable of narrower interpretations, we see nothing in the definition of “major emitting facility” that would allow EPA to adopt a NAAQS pollutant-specific reading of that phrase. The contrast with the visibility program is instructive. There, EPA determined that “any pollutant” in the definition of “major stationary source” meant “any visibility-impairing pollutant.” *See* 40 C.F.R. pt. 51, App. Y, § II.A. But as EPA notes, the entire visibility program, codified in CAA Part C, Subpart 2, deals with visibility-impairing pollutants, as reflected in that subpart’s title: “Visibility Protection.” *See* 42 U.S.C. prec. § 7491. From this, “it naturally follows that EPA’s regulations under that section should address ‘visibility-impairing pollutants.’” EPA Timing & Tailoring Br. 99 n.19. No similar guidance can be garnered from Part C, Subpart 1, which contains the phrase “any air pollutant” at issue here. Dealing with far more than NAAQS pollutants, Part C, Subpart 1 requires, for example, covered sources to install BACT for “each pollutant subject to regulation under [the CAA].” 42 U.S.C. § 7475(a)(4). Indeed, Subpart 1 is simply – and expansively – entitled “Clean Air.” *Id.* prec. § 7470. Moreover, Congress designed the PSD program broadly to protect against “adverse effect[s]” on “public health and welfare,” *Id.* § 7470(1), including

## App. 86

effects on global problems like weather and climate. *Id.* § 7602(h).

Furthermore, the phrases “any air pollutant” and “in any area to which this part applies” are used differently in Section 163(b)(4) and in the PSD program’s definition of “major emitting facility.” The presumption that “[a] term appearing in several places in a statutory text is generally read the same way each time it appears,” *Ratzlaf v. United States*, 510 U.S. 135, 143, 114 S.Ct. 655, 126 L.Ed.2d 615 (1994), “readily yields whenever there is such variation in the connection in which the words are used as reasonably to warrant the conclusion that they were employed in different parts of the act with different intent,” *Atl. Cleaners & Dyers, Inc. v. United States*, 286 U.S. 427, 433, 52 S.Ct. 607, 76 L.Ed. 1204 (1933). Here, the focus and structure of § 163(b)(4) is entirely distinct from the PSD permitting trigger. Section 163(b)(4) provides that “[t]he maximum allowable concentration of any air pollutant in any area to which this part applies shall not exceed a [particular] concentration.” 42 U.S.C. § 7473(b)(4). By contrast, § 165(a) provides that “[n]o major emitting facility . . . may be constructed in any area to which this part applies” unless certain conditions are met, *id.* § 7475(a), and § 169(1) defines “major emitting facility” as any stationary source that emits or has the potential to emit threshold amounts of “any air pollutant,” *id.* § 7479(1). The differences between these two provisions are manifest. In § 163(b)(4), the phrases “any air pollutant” and “in any area to which

## App. 87

this part applies” appear next to one another, and it is the concentration of the pollutant in an area that matters. In the PSD permitting trigger, the phrases appear in different subsections and it is the location of the facility that matters. Section 163(b)(4) thus does nothing to undermine the unambiguous meaning of “any air pollutant” in the definition of “major emitting facility.”

Industry Petitioners’ pollutant-specific reading of “any air pollutant” is further undermined by contrasting Part C of the Act (the PSD program) with Part D (which regulates areas in nonattainment). Unlike Part C, Part D is expressly pollutant-specific, providing that “[t]he term ‘nonattainment area’ means, for any air pollutant, an area which is designated ‘nonattainment’ *with respect to that pollutant.*” *Id.* § 7501(2) (emphasis added). Congress thus clearly knew how to promulgate a narrow, pollutant-specific definition of “any air pollutant.” That it did so in Part D but not in Part C strongly suggests that the phrase “any air pollutant” in Part C was meant to be construed broadly. *Keene Corp. v. United States*, 508 U.S. 200, 208, 113 S.Ct. 2035, 124 L.Ed.2d 118 (1993) (“[W]here Congress includes particular language in one section of a statute but omits it in another . . . , it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.”) (quoting *Russello v. United States*, 464 U.S. 16, 23, 104 S.Ct. 296, 78 L.Ed.2d 17 (1983)).

## App. 88

A final point: Industry Petitioners observe that every area in the country has always been in attainment for at least one NAAQS criteria pollutant. *See* Tailoring Rule, 75 Fed. Reg. at 31,561. Thus, pursuant to EPA's pollutant-indifferent reading of § 165(a), under which a major emitting facility must abide by PSD requirements so long as it is located in an attainment area for *any* NAAQS pollutant, every facility in the United States has always been in an "area to which this part applies." Consequently, Industry Petitioners argue, "[i]f EPA's interpretation were right, Congress simply could have left out the phrase 'in any area to which this part applies'" in the PSD permitting trigger. Am. Chemistry Council Br. 36. But "Congress does not enact 'stillborn' laws," *id.* (quoting *Sosa v. Alvarez-Machain*, 542 U.S. 692, 714, 124 S.Ct. 2739, 159 L.Ed.2d 718 (2004)), and interpretations that render statutory language superfluous are disfavored. Am. Chemistry Council Reply Br. 19. The fact that the PSD program has applied nationwide since its inception, Industry Petitioners conclude, thus militates against EPA's pollutant-indifferent approach.

This argument fails at its premise, for Industry Petitioners confuse a lack of practical import with a lack of meaning. To say that the phrase "in any area to which this part applies" is currently without practical import is quite different than showing that the phrase means nothing. Indeed, under different circumstances, the phrase would have a significant effect. If, hypothetically, one area of the country was

## App. 89

designated as “nonattainment” for every NAAQS pollutant, the phrase “in any area to which this part applies” would limit PSD coverage, as covered sources in that area would be subject only to Part D requirements. In fact, Environmental Intervenors point out that when Congress drafted the PSD permitting triggers “the prospect that some areas could be in nonattainment for all NAAQS was not far-fetched.” *Sierra Club Historic Reg. Br. 23*. “In the years leading up to 1977, EPA air quality data identified a number of areas that failed to meet all five of the then-current [air quality standards] for which EPA had gathered data.” *Id.* Accordingly, “in any area to which this part applies” is a meaningful phrase under EPA’s pollutant-indifferent interpretation of the PSD permitting triggers: it provides that sources need not obtain PSD permits if they are located in areas designated “nonattainment” for all six NAAQS pollutants.

In short, although we agree with Industry Petitioners that phrases like “any air pollutant” are, in certain contexts, capable of a more limited meaning, they have failed to identify any reasons that the phrase should be read narrowly here. Nor do we know of one. We thus conclude that EPA’s 34-year-old interpretation of the PSD permitting triggers is statutorily compelled: a source must obtain a permit if it emits major amounts of any regulated pollutant and is located in an area that is in attainment or unclassifiable for any NAAQS pollutant.

## App. 90

## 2.

We can quickly dispose of Industry Petitioners' third alternative interpretation, namely, that in order to regulate new pollutants through the PSD program, EPA was required to go through the process prescribed by CAA § 166. Section 166 provides specific steps that EPA must take when designating new "pollutants for which national ambient air quality standards" apply. 42 U.S.C. § 7476(a). Here, Industry Petitioners argue, EPA unlawfully failed to follow the steps laid out in Section 166, including a required study of the pollutant and a one-year delay before the effective date of regulations, before adding greenhouse gases "to the PSD [c]onstellation." Coalition for Responsible Reg. Timing & Tailoring Br. 41.

This argument fails on its face. By its terms, § 166 applies only to new "pollutants *for which national ambient air quality standards*" apply, 42 U.S.C. § 7476(a) (emphasis added), i.e., NAAQS criteria pollutants for which regions may be classified as in "attainment," "non-attainment," or "unclassifiable." And EPA never classified greenhouse gases as a NAAQS criteria pollutant. Instead, it simply determined that under § 165, major emitters of greenhouse gases are subject to the PSD program and all covered sources must install BACT for greenhouse gases. Contrary to Industry Petitioners' arguments, then, § 166 has no bearing on this addition of greenhouse gases into "the PSD [c]onstellation." Coalition for Responsible Reg. Timing

## App. 91

& Tailoring Br. 41. Indeed, we rejected a nearly identical argument in *Alabama Power*, holding that there is “no implied or apparent conflict between sections 165 and 166; nor . . . must the requirements of section 165 be ‘subsumed’ with those of section 166.” *Alabama Power*, 636 F.2d at 406. Stating what should have been obvious from the text of the statute, we concluded: “[S]ection 166 has a different focus from section 165.” *Id.*

Thus, because EPA has never classified greenhouse gases as a NAAQS criteria pollutant, the § 166 requirements are entirely inapplicable here. This section of the CAA has absolutely no bearing on our conclusion that EPA’s interpretation of the PSD permitting trigger is compelled by the statute itself.

**VI.**

Having concluded that the CAA requires PSD and Title V permits for major emitters of greenhouse gases, we turn to Petitioners’ challenges to the Tailoring and Timing Rules themselves.

As an initial matter, we note that Petitioners fail to make any real arguments against the Timing Rule. To be sure, at one point State Petitioners contend that the Timing Rule constitutes an attempt “to extend the PSD and Title V permitting requirements to greenhouse-gas emissions,” State Pet’rs’ Timing & Tailoring Br. 67. This is plainly incorrect. As discussed in the previous section, greenhouse gases are regulated under PSD and Title V pursuant to

## App. 92

automatic operation of the CAA. All the Timing Rule did was delay the applicability of these programs, providing that major emitters of greenhouse gases would be subject to PSD and Title V permitting requirements only once the Tailpipe Rule actually took effect on January 2, 2011. *See* Timing Rule, 75 Fed. Reg. at 17,017-19. Despite this, Petitioners confusingly urge us to vacate “[t]he Tailoring *and* Timing Rules,” *e.g.* State Pet’rs’ Timing & Tailoring Br. 24 (emphasis added), although it is unclear what practical effect vacature of the Timing Rule would have. Nonetheless, given this phrasing of their argument, and given our conclusion that Petitioners lack Article III standing to challenge *both* rules, we shall, where appropriate, discuss the Timing Rule in conjunction with the Tailoring Rule.

In the Tailoring Rule, EPA announced that it was “relieving overwhelming permitting burdens that would, in the absence of this rule, fall on permitting authorities and sources.” Tailoring Rule, 75 Fed. Reg. at 31,516. Although the PSD statute requires permits for sources with the potential to emit 100/250 tpy of “any air pollutant,” 42 U.S.C. § 7479(1), EPA noted that immediate application of that threshold to greenhouse gas-emitting sources would cause permit applications to jump from 280 per year to over 81,000 per year. Tailoring Rule, 75 Fed. Reg. at 31,554. Many of these applications would come from commercial and residential sources, which would “each incur, on average, almost \$60,000 in PSD permitting expenses.” *Id.* at 31,556. Similarly, if the Title V 100

## App. 93

tpy threshold applied immediately to greenhouse gases, sources needing operating permits would jump from 14,700 per year to 6.1 million per year. *Id.* at 31,562. “The great majority of these sources would be small commercial and residential sources” which “would incur, on average, expenses of \$23,175.” *Id.* And were permitting authorities required to hire the 230,000 full-time employees necessary to address these permit applications, “authorities would face over \$21 billion in additional permitting costs each year due to [greenhouse gases], compared to the current program cost of \$62 million each year.” *Id.* at 31,563.

Thus, instead of immediately requiring permits for all sources exceeding the 100/250 tpy emissions threshold, EPA decided to “phas[e] in the applicability of these programs to [greenhouse gas] sources, starting with the largest [greenhouse gas] emitters.” *Id.* at 31,514. The Tailoring Rule established the first two steps in this phased-in process. During Step One, only sources that were “subject to PSD requirements for their conventional pollutants anyway” (i.e., those sources that exceeded the statutory emissions threshold for non-greenhouse gas pollutants) were required to install BACT for their greenhouse gas emissions. *Id.* at 31,567. Step Two, which took effect on July 1, 2011, also requires PSD permits for sources with the potential to emit over 100,000 tpy CO<sub>2</sub>e after a proposed construction project, or 75,000 tpy CO<sub>2</sub>e after a proposed modification project. *Id.* at 31,523. Step Two further requires Title V permits for sources

## App. 94

which have the potential to emit over 100,000 tpy CO<sub>2</sub>e. *Id.* at 31,516. EPA has since proposed – but has yet to finalize – a “Step Three,” which would maintain the current thresholds while the agency evaluates the possibility of regulating smaller sources. *See* EPA’s 28(j) Letter 1-2, February 27, 2012.

In the Tailoring Rule, EPA justified its phased-in approach on three interrelated grounds, each of which rests on a distinct doctrine of administrative law. First, EPA concluded “the costs to sources and administrative burdens . . . that would result from [immediate] application of the PSD and title V programs . . . at the statutory levels . . . should be considered ‘absurd results,’” which Congress never intended. *Id.* at 31,517; *see Am. Water Works Ass’n v. EPA*, 40 F.3d 1266, 1271 (D.C.Cir.1994) (“[W]here a literal reading of a statutory term would lead to absurd results, the term simply has no meaning . . . and is the proper subject of construction by EPA and the courts.”). Thus, under the “absurd results” doctrine, EPA concluded that the PSD and Title V programs “should not [immediately] be read to apply to all [greenhouse gas] sources at or above the 100/250 tpy threshold.” Tailoring Rule, 75 Fed. Reg. at 31,554. Second, emphasizing that immediate regulation at the 100/250 tpy threshold would cause tremendous administrative burden, EPA justified its deviation from this threshold on the basis of the “administrative necessity” doctrine. *Id.* at 31,576; *see Env’tl. Def. Fund, Inc. v. EPA*, 636 F.2d 1267, 1283 (D.C.Cir.1980) (“[A]n agency may depart from the

## App. 95

requirements of a regulatory statute . . . to cope with the administrative impossibility of applying the commands of the substantive statute.”). Finally, asserting that there exists a judicial doctrine that allows agencies to implement regulatory programs in a piecemeal fashion, EPA stated that the Tailoring Rule was justified pursuant to this “one-step-at-a-time” doctrine. Tailoring Rule, 75 Fed. Reg. at 31,578; see *Massachusetts v. EPA*, 549 U.S. at 524, 127 S.Ct. 1438 (“Agencies, like legislatures, do not generally resolve massive problems in one fell regulatory swoop.”).

Petitioners – particularly State Petitioners – argue that none of these doctrines permit EPA to “depart unilaterally from the [CAA’s] permitting thresholds and replace them with numbers of its own choosing.” State Pet’rs’ Timing & Tailoring Br. 29. Admitting the “lamentable policy consequences of adhering to the unambiguous numerical thresholds in the Clean Air Act,” State Petitioners rather colorfully argue that EPA’s attempts to alleviate those burdens “establish only that EPA is acting as a benevolent dictator rather than a tyrant.” *Id.* at 26. And because EPA exceeded the boundaries of its lawful authority Petitioners urge us to vacate the Tailoring Rule.

Before we may address the merits of these claims, however, we must determine whether we have jurisdiction. “No principle,” the Supreme Court has repeatedly explained, “is more fundamental to the judiciary’s proper role in our system of government than the constitutional limitation of federal-court

## App. 96

jurisdiction to actual cases or controversies.” *Raines v. Byrd*, 521 U.S. 811, 818, 117 S.Ct. 2312, 138 L.Ed.2d 849 (1997) (internal quotation marks omitted). The doctrine of standing “is an essential and unchanging part of the case-or-controversy requirement.” *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560, 112 S.Ct. 2130, 119 L.Ed.2d 351 (1992). To establish standing, a petitioner must have suffered an “injury in fact” that is 1) “concrete and particularized . . . [and] actual or imminent, not conjectural or hypothetical,” 2) was caused by the conduct complained of, and 3) is “likely, as opposed to merely speculative [to] be redressed by a favorable decision.” *Id.* at 560-61, 112 S.Ct. 2130 (internal quotation marks and citations omitted).

Petitioners fall far short of these “irreducible constitutional . . . elements” of standing, *id.* at 560, 112 S.Ct. 2130. Simply put, Petitioners have failed to establish that the Timing and Tailoring Rules caused them “injury in fact,” much less injury that could be redressed by the Rules’ vacatur. Industry Petitioners contend that they are injured because they are subject to regulation of greenhouse gases, Coalition for Responsible Reg. Timing & Tailoring Br. 14. State Petitioners claim injury because they own some regulated sources and because they now carry a heavier administrative burden. State Pet’rs’ Timing & Tailoring Br. 22-23. But as discussed above, *see supra* Part V, the CAA mandates PSD and Title V coverage for major emitters of greenhouse gases. Thus, Industry Petitioners were regulated and State

## App. 97

Petitioners required to issue permits not because of anything EPA did in the Timing and Tailoring Rules, but by automatic operation of the statute. Given this, neither the Timing nor Tailoring Rules caused the injury Petitioners allege: having to comply with PSD and Title V for greenhouse gases.

Indeed, the Timing and Tailoring Rules actually mitigate Petitioners' purported injuries. Without the Timing Rule, Petitioners may well have been subject to PSD and Title V for greenhouse gases before January 2, 2011. Without the Tailoring Rule, an even greater number of industry and state-owned sources would be subject to PSD and Title V, and state authorities would be overwhelmed with millions of additional permit applications. Thus, Petitioners have failed to "show that, absent the government's allegedly unlawful actions, there is a substantial probability that they would not be injured and that, if the court affords the relief requested, the injury will be removed." *Chamber of Commerce v. EPA*, 642 F.3d 192, 201 (D.C.Cir.2011) (quotations and alterations omitted). Far from it. If anything, vacature of the Tailoring Rule would significantly exacerbate Petitioners' injuries.

Attempting to remedy this obvious jurisdictional defect, State Petitioners present two alternative theories, neither of which comes close to meeting the "irreducible constitutional . . . elements" of standing. *Lujan*, 504 U.S. at 560, 112 S.Ct. 2130. First, State Petitioners counterintuitively suggest that they actually want EPA to immediately "appl[y] the

## App. 98

100/250 tpy permitting thresholds to greenhouse-gas emissions.” State Pet’rs’ Timing & Tailoring Reply Br. 15. Admitting that vacature of the Tailoring Rule would result in astronomical costs and unleash chaos on permitting authorities, State Petitioners predict that Congress will be forced to enact “corrective legislation” to relieve the overwhelming permitting burdens on permitting authorities and sources, thus mitigating their purported injuries. *Id.*

This theory fails. To establish standing, plaintiffs must demonstrate that it is “likely, as opposed to merely speculative, that the injury will be redressed by a favorable decision,” *Lujan*, 504 U.S. at 561, 112 S.Ct. 2130 (internal quotation marks omitted), but here, State Petitioners simply hypothesize that Congress will enact “corrective legislation.” State Pet’rs’ Timing & Tailoring Reply Br. 15. We have serious doubts as to whether, for standing purposes, it is ever “likely” that Congress will enact legislation at all. After all, a proposed bill must make it through committees in both the House of Representatives and the Senate and garner a majority of votes in both chambers – overcoming, perhaps, a filibuster in the Senate. If passed, the bill must then be signed into law by the President, or go back to Congress so that it may attempt to override his veto. As a generation of schoolchildren knows, “by that time, it’s very unlikely that [a bill will] become a law. It’s not easy to become a law.” Schoolhouse Rock, *I’m Just a Bill*, at 2:41, available at <http://video.google.com/videoplay?docid=7266360872513258185#> (last visited June 1, 2012).

## App. 99

And even if the astronomical costs associated with a 100/250 tpy permitting threshold make *some* Congressional action likely, State Petitioners are still unable to show that it is “likely, as opposed to merely speculative,” *Lujan*, 504 U.S. at 561, 112 S.Ct. 2130, that Congress will redress their injury. State Petitioners apparently assume that if the 100/250 tpy permitting threshold was immediately applied to greenhouse gases, Congress would exempt those pollutants from the PSD and Title V programs entirely. But this is just one of many forms “corrective legislation” could take. For example, were we to vacate the Tailoring Rule, Congress could decide to readopt its key provisions in the PSD and Title V statutes. Or it could set PSD and Title V permitting thresholds at 25,000 tpy for greenhouse gases – higher than the 100/250 tpy threshold, but lower (and thus more costly to Petitioners) than the thresholds promulgated in the Tailoring Rule. Or it could do something else entirely. All of this is guesswork, which is precisely the point: State Petitioners’ faith that Congress will alleviate their injury is inherently speculative.

State Petitioners’ second alternative theory of standing fares no better. In their reply brief, they contend that even if vacating the Timing or Tailoring Rules would indeed exacerbate their costs and administrative burdens (the purported injuries they claimed in their opening brief), “then State Petitioners can establish Article III standing under *Massachusetts* by asserting injuries caused by EPA’s

## App. 100

failure to regulate sooner.” State Pet’rs’ Timing & Tailoring Reply Br. 5. Essentially, State Petitioners’ reply brief contends that, contrary to the position taken in the opening brief, they want more regulation, not less, and that they wanted regulation sooner rather than later. And because the Commonwealth of Massachusetts had standing to seek regulation of greenhouse gases in *Massachusetts v. EPA*, State Petitioners argue that they now have standing to seek more regulation of greenhouse gases as well.

This argument is completely without merit. As an initial matter, we are aware of no authority which permits a party to assert an entirely new injury (and thus, an entirely new theory of standing) in its reply brief. Quite to the contrary, we have held that, where standing is not self-evident, “[i]n its *opening* brief, the petitioner should . . . include . . . a concise recitation of the basis upon which it claims standing.” *Sierra Club v. EPA*, 292 F.3d 895, 901 (D.C.Cir.2002) (emphasis added); *see also* D.C.Cir. R. 28(a)(7) (“[i]n cases involving direct review in this court of administrative actions, the brief of the appellant or petitioner must set forth the basis for the claim of standing.”); *American Library Ass’n v. FCC*, 401 F.3d 489, 493-94 (D.C.Cir.2005) (discussing limitations on this principle). After all, “it is often the case . . . that some of the relevant facts are known only to the petitioner, to the exclusion of both the respondent and the court.” *Sierra Club*, 292 F.3d at 901. If “the petitioner does not submit evidence of those facts

## App. 101

with its opening brief,” the respondent is “left to flail at the unknown in an attempt to prove the negative.” *Id.* This principle is particularly important here, for State Petitioners’ asserted fear of global warming stands in stark contrast to the position they took throughout this litigation. In an earlier brief, for example, they characterized the Endangerment Finding as “a subjective conviction” State Pet’rs’ Endangerment Br. 19, “supported by highly uncertain climate forecasts,” *id.* at 18, and “offer[ing] no criteria for determining a harmful, as opposed to a safe, climate,” *id.* at 17. Given this, EPA could not possibly have anticipated that State Petitioners, abruptly donning what they themselves call “an environmentalist hat,” State Pet’rs’ Timing & Tailoring Reply Br. 4, would assert that global warming causes them concrete and particularized harm.

In any event, State Petitioners fail to cite any record evidence to suggest that they are adversely affected by global climate change. This is in stark contrast to the evidence put forward in *Massachusetts v. EPA*, where the Commonwealth submitted unchallenged affidavits and declarations showing that 1) rising sea tides due to global warming had “already begun to swallow Massachusetts’ coastal land,” and 2) “[t]he severity of that injury will only increase over the course of the next century.” *Massachusetts v. EPA*, 549 U.S. at 522-23, 127 S.Ct. 1438. These specific, factual submissions were key to the standing analysis in *Massachusetts v. EPA*: the

## App. 102

Court held that “petitioners’ *submissions as they pertain to Massachusetts* have satisfied the most demanding standards of the adversarial process.” *Id.* at 521, 127 S.Ct. 1438 (emphasis added). It is true, as State Petitioners emphasize, that the Supreme Court held that states are “entitled to special solicitude in our standing analysis.” *Id.* at 522, 127 S.Ct. 1438. But nothing in the Court’s opinion remotely suggests that states are somehow exempt from the burden of establishing a concrete and particularized injury in fact. State Petitioners, like Industry Petitioners, failed to do so here. We shall thus dismiss all challenges to the Timing and Tailoring Rules for lack of jurisdiction.

**VII.**

Following promulgation of the Timing and Tailoring Rules, EPA issued a series of rules ordering states to revise their PSD State Implementation Plans (SIPs) to accommodate greenhouse gas regulation. See *Action to Ensure Authority to Issue Permits Under the Prevention of Significant Deterioration Program to Sources of Greenhouse Gas Emissions: Finding of Substantial Inadequacy and SIP Call*, 75 Fed. Reg. 53,892 (Sept. 2, 2010), 75 Fed. Reg. 77,698 (Dec. 13, 2010); *Action to Ensure Authority to Issue Permits Under the Prevention of Significant Deterioration Program to Sources of Greenhouse Gas Emissions: Finding of Failure to Submit State Implementation Plan Revisions Required for Greenhouse Gases*, 75 Fed. Reg. 81,874

App. 103

(Dec. 29, 2010). Industry Petitioners present several challenges to these SIP-related rules. But our review in this case is limited to four EPA decisions: the Endangerment Finding, the Tailpipe Rule, and the Timing and Tailoring Rules. We thus lack jurisdiction over the SIP-related rules. Moreover, challenges to these rules are currently pending in at least two separate cases before this court. *See Utility Air Regulatory Group v. EPA*, No. 11-1037 (consolidating various challenges); *Texas v. EPA*, No. 10-1425 (challenge brought by Texas). We decline Industry Petitioners' invitation to rule on the merits of cases which are properly before different panels.

**VIII.**

For the foregoing reasons, we dismiss all petitions for review of the Timing and Tailoring Rules, and deny the remainder of the petitions.

*So ordered.*

On Petitions for Rehearing En Banc

---

Before: SENTELLE\*, *Chief Judge*, and  
HENDERSON, ROGERS\*, TATEL\*, GARLAND,  
BROWN\*, GRIFFITH, and KAVANAUGH\*, *Circuit  
Judges*.

**ORDER**

The petition of the Chamber of Commerce of the United States of America, joined by the State of Alaska, Peabody Energy Company, Southeastern Legal Foundation, et al., State Petitioners and Intervenors for Petitioners, for rehearing en banc; and the petition of the National Association of Manufacturers, et al. for rehearing en banc in No. 10-1073, et al. and No. 10-1167, et al., and the responses to the petitions were circulated to the full court, and a vote was requested. Thereafter, a majority of the judges eligible to participate did not vote in favor of the petitions. Upon consideration of the foregoing, it is

## App. 108

many of the arguments her dissent now presses. In particular, it rebuffed EPA's attempt to use "postenactment congressional actions and deliberations" to obscure "the meaning of an otherwise-unambiguous statute," *id.* at 529, and found EPA's reliance on *FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120 (2000), "similarly misplaced," *Massachusetts v. EPA*, 549 U.S. at 530. Seeking to revive the *Brown & Williamson* argument, Judge Brown suggests that the Court never considered the "far-reaching effects" of extending greenhouse gas regulation to stationary sources. *See* Dissenting Op. at 18 (Brown, J.). But this is inaccurate – the briefs before the Court explicitly raised the argument that interpreting "air pollutant" to include greenhouse gases could have tremendous consequences for stationary-source regulation. *See, e.g.,* Brief of Respondent CO<sub>2</sub> Litigation Group, *Massachusetts v. EPA*, 549 U.S. 497 (2007) (No. 05-1120), 2006 WL 3043971 at \*19-\*31.

To the extent Judge Brown attempts to bypass *Massachusetts v. EPA* by focusing on the statutory condition that air pollution "*reasonably be anticipated to endanger* public health or welfare," 42 U.S.C. § 7521(a)(1) (emphasis added), her quarrel is not just with the Supreme Court, but also with EPA's assessment of the science. Of course, we agree that the statute requires EPA to find a particular causal nexus between the pollutant and the harm in order to regulate. *See* Dissenting Op. at 9 (Brown, J.). But that is exactly what EPA did: it found that

## App. 109

“greenhouse gases in the atmosphere may *reasonably be anticipated* both to endanger public health and to endanger public welfare.” *Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act*, 74 Fed. Reg. 66,496, 66,497 (Dec. 15, 2009). And, as the panel opinion explains, EPA’s scientific judgment about the causal relationship between greenhouse gases and climate change is a scientific determination entitled to “an extreme degree of deference.” *Coalition for Responsible Regulation v. EPA*, 684 F.3d 102, 120 (D.C. Cir. 2012) (quoting *American Farm Bureau Federation v. EPA*, 559 F.3d 512, 519 (D.C. Cir. 2009)). The dissent’s suggestion that EPA was somehow statutorily precluded from finding the requisite nexus between greenhouse gases and harm to public health and welfare, *see* Dissenting Op. at 10-11 (Brown, J.), is belied by the Supreme Court’s decision to remand precisely this question. *See Massachusetts v. EPA*, 549 U.S. at 532-35.

Judge Kavanaugh’s dissent relates to the scope of the Prevention of Significant Deterioration (“PSD”) program, an aspect of the panel opinion Judge Brown also rejects. Specifically, Judge Kavanaugh disagrees with EPA’s longstanding interpretation of the term “any air pollutant,” 42 U.S.C. § 7479(1), arguing that, in the context of the PSD program, “any air pollutant” refers not to all pollutants regulated under the Clean Air Act, but only to the six NAAQS pollutants. Because taking the statute at its word and interpreting “any air pollutant” to include greenhouse

## App. 110

gases would lead to what he considers absurd results, Judge Kavanaugh insists that EPA and this Court are obligated to read “any air pollutant” more narrowly. *See* Dissenting Op. at 3-10 (Kavanaugh, J.). This argument, however, hinges on the proposition that both readings are plausible interpretations of an ambiguous statutory provision. *See* Dissenting Op. at 2-3, 10 (Kavanaugh, J.). But as the panel opinion explains at length, the statute is clear. *See Coalition for Responsible Regulation*, 684 F.3d at 132-44. Congress did not say “certain ‘air pollutants.’” Dissenting Op. at 2 (Kavanaugh, J.). It said “any air pollutant,” and it meant it. *See Coalition for Responsible Regulation*, 684 F.3d at 136. Thus, unlike the unreasonable interpretation rejected in *Kloeckner v. Solis*, No. 11-184, slip op. at 7-13 (U.S. 2012), the panel’s interpretation of the statute is the only plausible one.

Moreover – and again, as the panel opinion explains at length, *see Coalition for Responsible Regulation*, 684 F.3d at 135-36 – considering “any air pollutant” in context buttresses rather than undermines the panel’s interpretation. The statute frames the purpose of the PSD program in broad – not NAAQS-specific – terms, emphasizing that the program’s goal is “to protect public health and welfare from any actual or potential adverse effect which . . . may reasonably be anticipate[d] to occur from air pollution.” 42 U.S.C. § 7470(1). And although certain aspects of the program are specifically directed at NAAQS pollutants, *see, e.g., id.* § 7473(b)(4), the

## App. 111

program as a whole plainly has a more expansive scope. For instance, covered sources are required to (1) install the best available control technology for “*each* pollutant subject to regulation under [the Act],” *id.* § 7475(a)(4) (emphasis added), and (2) demonstrate that they will not cause or contribute to “*any* . . . applicable emission standard” under the Act, *id.* § 7475(a)(3) (emphasis added).

In the end, we agree that “the question here is: Who Decides?” Dissenting Op. at 18 (Kavanaugh, J.). We also agree that “Congress (with the President) sets the policy through statutes, agencies implement that policy within statutory limits, and courts in justiciable cases ensure that agencies stay within the statutory limits set by Congress.” Dissenting Op. at 18 (Kavanaugh, J.). Here, Congress spoke clearly, EPA fulfilled its statutory responsibilities, and the panel, playing its limited role, gave effect to the statute’s plain meaning. *See Chevron, U.S.A., Inc. v. NRDC*, 467 U.S. 837, 842-43 (1984) (“If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress.”).

To be sure, the stakes here are high. The underlying policy questions and the outcome of this case are undoubtedly matters of exceptional importance. The legal issues presented, however, are straightforward, requiring no more than the application of clear statutes and binding Supreme Court precedent. There is no cause for en banc review.

---

## App. 112

BROWN, *Circuit Judge*, dissenting from the denial of rehearing en banc: In the summer of 1974, while waiting to start classes at UCLA, I was lucky enough to obtain a summer job house sitting in the pleasant, upscale neighborhood of Pasadena. Known mostly for its Rose Parade and Rose Bowl, Pasadena is one of the more scenic exurbs of Los Angeles. I inhabited a sparsely furnished, modest-but-pricey bungalow set among the lush landscape typical of southern California. This is a place where Birds of Paradise grow ten feet tall and the magenta blossoms of Bougainvillea fall like lavish draperies from redwood garden trellises. After staying in the house more than a month and spending a restless night listening to the agitated thrashings of the jacaranda trees in a fitful wind, I stumbled bleary-eyed into the kitchen, looked out the window, and stopped – utterly dumbfounded. There – looking like it was but a few feet beyond the back fence – stood a mountain. Not a foothill. Not an unobtrusive mesa. A mountain! Closer inspection revealed not a lone majestic peak, but a whole mountain range I later identified as the San Gabriels. In those days, the air in the Los Angeles basin was so thick with smog that a mountain, or even a nearby mountain range, could simply disappear.

Although the Los Angeles basin was among the most notorious examples of the phenomenon, it was by no means unique and certainly not the worst. It was this crisis of ambient air quality that precipitated the enactment of the Clean Air Act (CAA). But as the CAA's history, language, and

## App. 113

structure make clear, Congress never intended the Act to serve as an environmental cure-all. It was targeted legislation designed to remedy a particular wrong: the harmful direct effects of poisoned air on human beings and their local environs. This is what Congress understood as “air pollution which may reasonably be anticipated to endanger public health” in the tailpipe emissions provision, 42 U.S.C. § 7521(a)(1). The Supreme Court in *Massachusetts v. EPA*, 549 U.S. 497 (2007), however, concluded otherwise. In dicta too suggestive to ignore, the Court implicitly assumed that climate change could provide the basis for an endangerment finding in the tailpipe context. *See id.* at 532-33.

Bound as I am by *Massachusetts*, I reluctantly concur with the Panel’s determination that EPA may regulate GHGs in tailpipe emissions. But I do not choose to go quietly. Because the most significant regulations of recent memory rest on the shakiest of foundations, Part I of this statement engages *Massachusetts’s* interpretive shortcomings in the hope that either Court or Congress will restore order to the CAA. Part II, by contrast, reflects my belief that *Massachusetts* does not compel the same result for Title V and the Prevention of Significant Deterioration of Air Quality (PSD) program. Although I agree with Judge Kavanaugh’s dissent, *Coal. for Responsible Regulation v. EPA*, Nos. 09-1322, et al. (Kavanaugh, J., dissenting from denial of rehearing en banc), I approach the inflection point from a

## App. 114

slightly different perspective. Part III concludes with a brief note on standing.

Because I would vote for the full court to consider the propriety of extending *Massachusetts* to Title V and the PSD program, I respectfully dissent from this denial of rehearing en banc.

**I.****A.**

The origins of the Clean Air Act are closely tied to fatal fogs and deadly air inversions that, for much of early postindustrial history, seemed to be the inevitable consequence of economic progress. See Arnold W. Reitze, Jr., *A Century of Air Pollution Control Law: What's Worked; What's Failed; What Might Work*, 21 ENVTL. L. 1549, 1575 (1991).<sup>1</sup> Initially regulated at the local and state level, air pollution became the focus of the federal government only after World War II. See *id.* at 1585-86. In October 1948, a severe temperature inversion in the industrial city of Donora, Pennsylvania increased air pollution to such an extent that traffic “was virtually stopped because of lack of visibility.” The inversion killed 20 people, *id.*, and prompted the federal government to begin researching air pollution. *Id.* at 1586. By 1961,

---

<sup>1</sup> Inversions, sometimes known as “Londoners,” occur “when a layer of hot air warmed by . . . water exists above cooler ground-level air and traps smoke and particulate matter under the warmer air.” *Id.*

## App. 115

President Kennedy included a plea for “an effective air pollution program” in his Special Message on the Natural Resources. *Id.* Public pressures for legislation only increased when a “Killer Smog” engulfed London in December 1962, killing at least 340, and a similar inversion in New York City allegedly claimed the lives of 200. *Id.* Eventually, legislation recommended by President Kennedy in February 1963 led to the enactment of the CAA, which President Johnson signed into law on December 17, 1963. *Id.* at 1586-87. Seven years later, President Nixon signed The Clean Air Amendments of 1970. The 1970 Amendments authorized the EPA to prescribe national ambient air quality standards (NAAQS) and created the statutory framework that still exists today.

**B.**

It was no happy accident that congressional draftsmen titled the legislation the “*Clean Air Act.*” Ambient air quality was the point, purpose, and focus of the CAA. Congress had set its sights on the “dirty, visible ‘smokestack’ emissions,” 136 CONG. REC. H2771-03 (1990) (statement of Rep. Roe), and smog caused by vehicle emissions. The CAA was the means by which Congress would grapple with urban air pollution and its attendant health effects, including impaired breathing, heart disease, lung damage and lung disease, and even death. If pollution was the problem, these ills were the specific harms Congress sought to combat. Even a cursory glance at the

## App. 116

legislative history, with its numerous charts, graphics, and statistics detailing cancer and death rates, will bear this point out. *See, e.g.*, Hearings on Air Pollution – 1968 Before the Subcomm. on Air and Water Pollution of the Sen. Comm. on Pub. Works, 90th Cong. 2nd Sess., pt. 2, 608-20 (1968) (statement of Dr. Samuel S. Epstein, Children’s Cancer Research Foundation.) (“Air Pollution – 1968”).

With the enactment of the 1990 Amendments, Congress expanded the Act beyond its singular emphasis on urban air quality to address hazardous – *i.e.*, toxic – air pollutants, acid rain, and stratospheric ozone. In regulating hazardous pollutants, Congress reemphasized the need for a close and tangible nexus between pollutant and harm. The legislative record, for example, continued to conceive of dangers in terms of their direct effects on human health and well-being. *See, e.g.*, S. Rep. No. 101-228, at 3388 (1989), *reprinted in* 1990 U.S.C.C.A.N. 3385 (“Air pollution can silently damage our lungs and heart or act swiftly in the case of exposure to toxic air pollutants. Rigorous regulation of toxic air pollutants is needed to avoid risk of serious, irreversible damage to human health.”). To the extent the regulation of stratospheric ozone and acid rain suggest a broader nexus between pollutant and harm to human health, the very particular way in which Congress handled these exceptions goes a long way toward proving the rule: Congress only expands the CAA through considered legislative acts.

## App. 117

In addressing these transnational phenomena, the legislature did not spin regulations out of whole cloth. With ozone concerns, for example, Congress developed solutions through international negotiations, the implementation of which led to the creation of a separate title of the CAA. *See NRDC v. EPA*, 464 F.3d 1, 3 (D.C. Cir. 2006). Likewise, years of contentious discussions with Canada helped bring about the acid rain provisions in the 1990 Amendments. *See generally* Dennis A. Leaf, *Intergovernmental Cooperation: Air Pollution from an U.S. Perspective*, 18 CAN.-U.S. L.J. 245 (1992). Simply put, when Congress became aware of new dangers, it acted judiciously in crafting workable remedies that, when they obtained the necessary political support, were worked into their own discrete provisions under the Act. Neither Congress nor the EPA attempted to force these distinct problems into existing, ill-suited regulatory schemes.

Congressman Waxman, one of the strongest proponents of stringent air pollution controls and a key force behind the 1990 Amendments, has stated that “in recent experience, no legislation has received more scrutiny during its consideration.” The Honorable Henry A. Waxman, *An Overview of the Clean Air Act Amendments of 1990*, 21 ENVTL. L. 1721, 1724 (1991). Hyperbole or not, the admission is telling. The history of the CAA is one of hard-fought incremental gains through which Congress remedied particular environmental wrongs with tailored remedies. Said the Congressman:

## App. 118

Discrete and extensive new programs are included to grapple with high ambient pollution levels (urban and regional smog), hazardous air pollution, acid rain, and depletion of the stratospheric ozone layer. Each of these programs [was] tailored to the problem it [sought] to address, and each [was] quite different in its approach.”

*Id.* at 1811. Political necessity has forced Congress to calibrate its amendments to the CAA with great specificity and care. Where our Representatives have acted with such caution, any suggestion that Congress has – through a single word – conferred upon EPA the authority to steamroll through Congressional gridlock, upend the Senate’s rejection of the Kyoto Protocol, and regulate GHGs for the whole of American industry must necessarily fail. The legislature, recall, does not “hide elephants in mouseholes.” *Whitman v. Am. Trucking Assocs.*, 531 U.S. 457, 468 (2001).

But we needn’t rely on interpretative canons alone to make this point. In drafting the 1990 Amendments, Congress considered – and *expressly rejected* – proposals authorizing EPA to regulate GHGs under the CAA. *See* S. Rep. No. 101-228, at 377 (1989), *as reprinted in* 1990 U.S.C.C.A.N. 3385, 3760. Even the Executive objected that an attempt to control Carbon Dioxide (CO<sub>2</sub>) emissions – emissions not harmful to health – in order to prevent global warming was premature. *See* Administration’s Amendments – Hearings Before the Subcomm. On

## App. 119

Health and the Env't of the Comm. on Energy and Commerce, 101st Cong., 1st Sess. (1989) (includes Bush Administration Report on S. 1630). The Executive's critique noted that "unilateral action aimed at addressing a global problem" through a standard limiting tailpipe emissions would not be an effective means of safeguarding the global environment and would "necessarily punish national interests." *Id.* at 792, 813.

That Congress has never deviated from its decision to not regulate GHGs under the CAA was not for lack of opportunity. Congress has considered and rejected countless other bills in the years since the 1990 Amendments that would have authorized GHG regulation. By one estimate, Congressmen have proposed over 400 bills concerning GHGs between 1990 and 2009. See Abigail R. Moncrieff, *Reincarnating the "Major Questions" Exception to Chevron Deference As A Doctrine of Noninterference (or Why Massachusetts v. EPA Got It Wrong)*, 60 ADMIN. L. REV. 593, 636-37 (2008) (tracking proposals). Congress's inability to break this nearly quarter-century long deadlock is incredibly suggestive: this is not an area of policymaking where the legislature has acted rashly or unthinkingly in delegating authority to agencies.

At bottom, Congress understood the dangers of "any air pollutant" in § 7521(a)(1) in terms of the ill-effects caused those who inhale the pollutants, not the broad, attenuated consequences of climate change. The CAA was drafted not to combat the

## App. 120

threat of flooding or the menace of heat waves, *see* Endangerment and Cause of Contribute Findings for Greenhouse Gases, 74 Fed. Reg. 66,496, 66,526 (Dec. 15, 2009) (“EPA Endangerment Finding”), but the choking, stifling, and degenerative effect of airborne pollutants on human beings and their affected localities. Congress has long quantified this harm in terms of mortality rates, *see, e.g.*, Air Pollution – 1968, 564 (statement of Dr. Roger S. Mitchell, Director, Webb-Waring Institute for Medical Research), not acreage of “costal land” lost. *Massachusetts*, 549 U.S. at 522. To put matters pointedly: the injury sufficient to establish standing need not suffice to establish endangerment as well.

Congress was of course free to circumvent this close cause-health effect nexus by devising a separate provision for GHG regulation, much as it did for stratospheric ozone, but it did no such thing. And nothing in the legislative history suggests that Congress has deviated from this status quo.

The plain language of the CAA only underscores the Act’s non-applicability to GHGs insofar as it requires the harm be of the sort “reasonably [] anticipated to endanger.” 42 U.S.C. § 7251(a)(1) – a term we know to have a discrete meaning.

**C.**

In the present case, this Court had “little trouble” disposing of the argument that the “PSD program is specifically focused solely on localized air pollution”

## App. 121

because it is “quite clear . . . the PSD program was intended to protect against precisely the types of harms caused by greenhouse gases.” CRR Slp. Op. 62-63 (emphasis added). *Massachusetts* notwithstanding, this statement is a curious thing in light of the uncontradicted legislative history just discussed.<sup>2</sup> So too is the court’s reliance on the statutory text, particularly its finding that “the CAA expressly provides that effects on ‘welfare’ means ‘effects on . . . weather . . . and climate.’” Slp. Op. 62-63 (citing 42 U.S.C. § 7602(h)).

As a textual matter, there is nothing “quite clear” about it. The Supreme Court has declared that GHGs like CO<sub>2</sub> are pollutants within the meaning of the Act. Under the CAA, however, EPA can regulate a pollutant only if the administrator finds that the GHG causes or contributes to “air pollution which *may reasonably be anticipated to endanger* public health or welfare.” 42 U.S.C. § 7251(a)(1) (emphasis added). But in locating the CAA’s conception of “harm” in § 7602(h), the definition of “welfare,” and not § 7251(a)(1) generally, this court effectively skirted the operative statutory language – “may reasonably be anticipated” – and rendered it nugatory. This was in error. Section 7602(h) defines only the potential *objects* of harm; the “reasonably be

---

<sup>2</sup> As noted, the weather and climate issues targeted by the CAA involve direct, deleterious, localized effects caused by polluted air people breathe or suspended pollutants that may be deposited on land and crops by precipitation.

## App. 122

anticipated” language of § 7251(a)(1) supplies the requisite *nexus* between the pollutant and the objects of its harm. The two provisions must be read together if the statute is to be interpreted faithfully. To put matters another way, the “may reasonably be anticipated” language must do some analytical work in the endangerment determination lest it be deemed surplusage. *See, e.g., Conference of State Bank Supervisors v. Conover*, 715 F.2d 604, 627 (D.C. Cir. 1983) (“[I]n construing a statute, we ‘are obliged to give effect, if possible, to every word Congress used.’” (quoting *Reiter v. Sonotone Corp.*, 442 U.S. 330, 339 (1979))). And in view of the CAA’s legislative history, the nature of that work is clear.

In order to reasonably anticipate that a pollutant will contribute to air pollution that endangers public health or welfare, the Agency would have to conclude that pollution created by CO<sub>2</sub> or another GHG is a reasonably direct cause of the damage to public health and welfare. To find that CO<sub>2</sub> may ultimately endanger public health and welfare because sea levels will rise tells us nothing about whether CO<sub>2</sub> concentrations in the ambient air directly harm public health and welfare. The ingredients of a Killer Smog are few and specific; the process through which an air inversion traps particulate matter close to the ground is well understood. With both there is a direct correlation between reducing the concentration of the pollutant and reducing the negative health effects. Questions of public health impacts from air pollution have consistently been based on the direct – that is,

## App. 123

inhalational – effects of exposure to the pollutant. *See, e.g.*, Joint Opening Brief of Non-State Petitioners and Supporting Intervenors at 58, *Coal. for Responsible Regulation v. EPA*, No. 09-1322 (May 20, 2011); *NRDC, Inc. v. EPA*, 902 F.2d 962, 973 (D.C. Cir. 1990) (concluding that EPA may not consider the health effects of increased unemployment when setting new health-based NAAQS).

In contrast, any harm to human health and welfare flowing from climate change comes at the end of a long speculative chain. The dissent in *Massachusetts* pointed out that EPA had described in great detail the scientific uncertainty that precluded even forming a judgment as to whether greenhouse gases endanger public welfare. *See* 549 U.S. at 553-55 (Scalia, J., dissenting). In that earlier defense of its refusal to form a judgment, EPA explained how predicting climate change involved a “complex web of economic and physical factors,” including:

[o]ur ability to predict future global anthropogenic emissions of GHGs and aerosols; the fate of these emissions once they enter the atmosphere (*e.g.*, what percentage are absorbed by vegetation or are taken up by the oceans); the impact of those emissions that remain in the atmosphere on the radiative properties of the atmosphere; changes in critically important climate feedbacks (*e.g.*, changes in cloud cover and ocean circulation); change in temperature characteristics (*e.g.*, average temperatures, shifts in daytime and evening temperatures);

## App. 124

changes in other climatic parameters (*e.g.*, shifts in precipitation, storms); and ultimately the impact of such changes on human health and welfare (*e.g.*, increases or decreases in agricultural productivity, human health impacts).

*Id.* If there can be this much logical daylight between the pollutant and the anticipated harm, there is nothing EPA is not authorized to do. If this finding is valid, in a world where six degrees of separation is the compass of all humankind, the right endangerment finding would allow EPA to rule the world. But as this Court has noted before, EPA's authority to regulate is constrained, not enlarged, by the relationship of the term "will endanger" to other sections of the CAA. See *Ethyl v. EPA*, 541 F.2d 1, 29 (D.C. Cir. 1976) (*en banc*).

Of course, nothing here should be taken to imply that a particular GHG does not contribute to climate change. I mean only to suggest that a pollutant might contribute to the nebulous mélange of potential drivers of climate change without having any direct, deleterious impact within the meaning of the CAA. I emphasize too that this is not a problem with science. This is a problem of statutory interpretation. Climate change, with its geologic timeframe and its many uncertainties and imponderables, is and will probably remain a subject of some controversy. EPA finds the science sufficiently convincing for its purposes and it is entitled to a certain amount of deference on questions related to its technical expertise. But it is

## App. 125

not necessary to quibble with the science of climate change to conclude that the endangerment finding fails on textual and logical terms. There is simply a point at which a difference in degree becomes a difference in kind and we have passed this point many times over in the course of this tortured litigation. The Supreme Court, however, has refused to recognize as much for tailpipe emissions.

**II.****A.**

But we need not follow *Massachusetts* off the proverbial cliff and apply its reasoning to the unique Title V and PSD provisions not considered in that case. The cascading layers of absurdity that flow from that interpretive exercise make clear that the plain language of the CAA compels no such result. As EPA's own rulemaking documents have so unabashedly explained:

To apply the statutory PSD and title V applicability thresholds literally to sources of GHG emissions would bring tens of thousands of small sources and modifications into the PSD program each year, and millions of small sources into the title V program. These extraordinary increases in scope of the permitting programs would mean that the programs would become several hundred-fold larger than what Congress appeared to contemplate.

App. 126

PSD and Title V Greenhouse Gas Tailoring Rule; Final Rule, 75 Fed. Reg. 31,514, 31,533 (Jun. 3, 2010) (“Final Tailoring Rule”). Completely oblivious to the irony, EPA added:

For our authority to take this action, we rely in part on the “absurd results” doctrine, because applying the PSD and title V requirements literally (as previously interpreted narrowly by EPA) would not only be inconsistent with congressional intent concerning the applicability of the PSD and title V programs, but in fact would severely undermine congressional purpose for those programs.

*Id.* at 31,541-42. And again:

[I]n this case because a literal reading of the PSD and title V applicability provisions results in insurmountable administrative burdens. Those insurmountable administrative burdens – along with the undue costs to sources – must be considered “absurd results” that would undermine congressional purpose for the PSD and title V programs.

*Id.* at 31,547.

In precincts outside Washington, D.C., this litany might cause a regulator to pause and consider whether results so at odds with Congressional presuppositions could ever be justified as falling within the literal meaning of an enactment. EPA, however, proposes that the absurd result can be easily eliminated by ramping up and gradually

## App. 127

phasing in the requirements. Faced with the choice of reconsidering the legitimacy of an endangerment finding that sets in motion such a cluster of chaos or rewriting the statute, the agency has blithely done the latter. This is an abuse of the absurdity and administrative necessity doctrines as neither can be invoked to preempt legislative prerogatives. Permitting a statute “to be read to avoid absurd results allows an agency to establish that seemingly clear statutory language does not express the ‘unambiguously expressed intent of Congress,’” but it does not grant the agency “a license to rewrite the statute.” *Mova Pharmaceuticals v. Shalala*, 140 F.3d 1060, 1068 (D.C. Cir. 1998).

But that is not the worst of it. The real absurdity – apparently as invisible to the EPA as the San Gabriels once were to me – cannot be cured by phase in, no matter how subtly Byzantine. The real absurdity is that this unprecedented expansion of regulatory control, this epic overreach, may very well do more damage to the wellbeing of Americans than GHGs could ever do.<sup>3</sup>

---

<sup>3</sup> *See, e.g.*, Joint Reply Br. of Non-State Petitioners and Supporting Intervenors at \*1, No. 09-1322 (Nov. 14, 2011) (“Nor does [EPA] dispute that the new rules will impose massive burdens on a struggling economy, or that its program of vehicle standards will affect global mean temperatures by no more than 0.01 degree Celsius by 2100”).

**B.**

A second, more elementary consideration counsels against the mechanical application of *Massachusetts's* tailpipe emissions determination to these distinct CAA provisions: deference to Congress.

As articulated in *Food & Drug Administration v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120 (2000), the Supreme Court's "major questions" canon gives form to the judicial intuition so strongly implicated here: Congress should not be presumed to have deferred to agencies on questions of great significance more properly resolved by the legislature. If there was ever a regulation in recent memory more befitting such a presumption than the present, I confess I do not know of it.

On familiar facts, the Supreme Court in *Brown & Williamson* rebuffed the FDA's expansionist effort to bring tobacco products within its regulatory ambit. The agency's regulation rested on a strained interpretation of the Food, Drug, and Cosmetic Act, 21 U.S.C. § 301 *et seq.*, in which it defined nicotine as a "drug" and cigarettes and smokeless tobacco as "combination products" used to deliver nicotine to the body. *See Brown & Williamson*, 529 U.S. at 125-27. Applying *Chevron U.S.A. Inc. v. Natural Resources Defense Council*, 467 U.S. 837 (1984), the Court first considered the statutory structure. "[I]f tobacco products were within the FDA's jurisdiction," the majority concluded, the normal operation of the "Act would require the FDA to remove them from the

## App. 129

market entirely,” and this would “contradict Congress’ clear intent as expressed in its more recent, tobacco-specific legislation.” *Brown & Williamson*, 359 U.S. at 143. As the present case confirms, such absurdity is all but inevitable where an agency attempts to regulate that which “simply do[es] not fit” within its regulatory scheme. *Id.* The Court next considered Congress’s 35 year history of tobacco-specific legislation, finding it “clear” that this “legislation has effectively ratified the FDA’s previous position that it lacks jurisdiction to regulate tobacco.” *Id.* at 156.

The Court then closed its lengthy *Chevron* discussion with an appeal to first principles. The “inquiry into whether Congress has directly spoken to the precise question at issue,” the Court explained, “is shaped, at least in some measure, by the nature of the question presented.” *Id.* at 159. *Chevron* deference operates on the assumption “that a statute’s ambiguity constitutes an implicit delegation,” but this tenuous fiction need not hold true in every situation. *Id.* “In extraordinary cases,” the Court went on, “there may be reason to hesitate before concluding that Congress has intended such an implicit delegation.” *Id.* (referencing Stephen Breyer, *Judicial Review of Questions of Law and Policy*, 38 ADMIN. L. REV. 363, 370 (1986) (“A court may also ask whether the legal question is an important one. Congress is more likely to have focused upon, and answered, major questions, while leaving interstitial

## App. 130

matters to answer themselves in the course of the statute's daily administration").<sup>4</sup>

Declaring *Brown & Williamson* “hardly [the] ordinary case,” the Court reasoned:

Contrary to its representations to Congress since 1914, the FDA has now asserted jurisdiction to regulate an industry constituting a significant portion of the American economy. In fact, the FDA contends that, were it to determine that tobacco products provide no “reasonable assurance of safety,” it would have the authority to ban cigarettes and smokeless tobacco entirely. Owing to its unique place in American history and society, tobacco has its own unique political history. Congress, for better or for worse, has created a distinct regulatory scheme for tobacco products, squarely rejected proposals to give the FDA jurisdiction over tobacco, and repeatedly

---

<sup>4</sup> *MCI Telecommunications Corporation v. AT&T Co.*, 512 U.S. 218 (1994), a case the *Brown & Williamson* Court found “instructive,” *Brown & Williamson*, 529 U.S. at 160, had advanced a similar logic. In concluding Congress had spoken to the meaning of the term “modify” as it appears in § 203(b) of the Communications Act of 1934, the Court rejected FCC’s far more expansive interpretation. The Court assumed in dicta that it was “highly unlikely that Congress would leave the determination of whether an industry will be entirely, or even substantially, rate-regulated to agency discretion – and even more unlikely that it would achieve that through such a subtle device as permission to ‘modify’ rate-filing requirements.” *MCI*, 512 U.S. at 231. Certainly the same might be said here as well.

## App. 131

acted to preclude any agency from exercising significant policymaking authority in the area. Given this history and the breadth of the authority that the FDA has asserted, we are obliged to defer not to the agency's expansive construction of the statute, but to Congress' consistent judgment to deny the FDA this power.

*Brown & Williamson*, 529 U.S. at 159-60.

In view of the language, structure, and history of the CAA, I am simply unable to distinguish this logic from the present case in any meaningful way. To the contrary, with only the slightest of modifications one could rework the above text to apply to GHG emissions.<sup>5</sup>

---

<sup>5</sup> Perhaps:

Contrary to its representations in *Massachusetts v. EPA*, the EPA has now asserted jurisdiction to regulate industries constituting a significant portion of the American economy. In fact, the EPA contends that, because greenhouse gases can be regulated as tailpipe emissions, it is obligated to regulate all stationary sources at admittedly "absurd" levels. Owing to its ubiquitous place in the planet's life cycle, greenhouse gases have their own unique political history. Congress, for better or for worse, has declined to create a distinct regulatory scheme for greenhouse gases, squarely rejected proposals to give the EPA jurisdiction over greenhouse gases, and repeatedly acted to preclude any agency from exercising significant policymaking authority in the area. Given this history and the breadth of the authority that the EPA has asserted, we are obliged to defer not to the

(Continued on following page)

## App. 132

Although the *Massachusetts* Court distinguished *Brown & Williamson*, it did so only in the context of tailpipe emissions. Its reasoning does not extend to Title V and the PSD program.

In the Court's view, *Brown & Williamson* had “found critical at least two considerations that have no counterpart in [*Massachusetts*].” 549 U.S. at 531. First, whereas the regulation of tobacco under the FDCA would have necessarily led to a ban on tobacco products – an outcome that clashed with the “common sense” intuition that Congress never meant to remove those products from circulation – the expansion of EPA's “jurisdiction would lead to no such extreme measures [because] EPA would only *regulate* emissions” and “there is nothing counterintuitive to the notion that EPA can curtail the emission of substances that are putting the global climate out of kilter.” *Id.* But the Court spoke too soon. In the present litigation, EPA argued – and a Panel of this Court readily agreed – that in regulating tailpipe emissions under 42 U.S.C. § 7521, it is obligated to regulate stationary sources under Title V and the PSD program as well. As a threshold matter, the *Massachusetts* Court never considered these far-reaching effects. It limited its brief discussion on the merits to the tailpipe emissions question squarely before it. In this way, the Court never considered the

---

agency's expansive construction of the statute, but to Congress' consistent judgment to deny the EPA this power.

## App. 133

differing ways in which the CAA regulates tailpipes and stationary sources.

With tailpipe emissions, the inclusion of greenhouse gasses within the term “air pollutant” does not directly expand or contract the universe of vehicles and engines subject to the new standards. Consequently, the regulation’s impact will fall primarily on those manufacturers already complying with existing emission requirements. And even then, the Court explained, EPA “would have to delay any action ‘to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance.’” *Massachusetts*, 549 U.S. at 531 (quoting § 7521(a)(2)). Not so with the regulation of stationary sources. Insofar as 42 U.S.C. § 7479(1) defines “major emitting facility” to include those facilities with the “potential to emit” either 100 or 250 “tons per year or more of *any* air pollutant,” the statutory term is necessarily tied to CAA’s jurisdictional scope. Inescapably, then, the regulation of greenhouse gasses as “air pollutants” will radically expand the universe of covered entities far beyond Congress’s intentions. EPA’s decidedly extra-textual Tailoring Rule only confirms the ludicrousness of this result. Nor can it be said that the statutory safeguards operate in the same way as § 7521(a)(2). Permitting authorities may well be able to determine on a case-by-case basis what constitutes the “best available control technology” for a particular emitting facility, 42 U.S.C. § 7479(3), but this is of little consolation for

## App. 134

the small business owner who previously fell outside the CAA. At bottom, this outcome clashes with the “common sense” understanding that Congress would not have intended such a broad, unchecked expansion of the CAA to potentially millions of businesses from all walks of industry. The Supreme Court in *Massachusetts* simply did not have occasion to consider this absurd and “counterintuitive” outcome, but we do – and we must.

Second, the Court determined that the “unbroken series of congressional enactments” referenced in *Brown & Williamson* “made sense only if adopted ‘against the backdrop of the FDA’s consistent and repeated statements that it lacked authority under the FDCA to regulate tobacco.’” *Massachusetts*, 549 U.S. at 531.<sup>6</sup> By contrast, EPA had “not identified any congressional action that conflicts in any way with the regulation of greenhouse gases from new motor vehicles.” *Id.* And even if it had, “Congress could not have acted against a regulatory ‘backdrop’ of disclaimers of regulatory authority” because “EPA had never disavowed the authority to regulate greenhouse gases, and in 1998 it in fact affirmed that it *had* such authority.” *Id.* When read in context, however, it is clear that the Court’s reasoning was

---

<sup>6</sup> The suggestion here seems to be that Congress’s decision to regulate tobacco products would not, by itself, evince its intent to proscribe agencies from doing the same. Doing so in light of FDA’s statements, however, had the effect of implicitly codifying the agency’s long-held view.

## App. 135

building toward a wholly unspectacular point: because EPA's legislative history failed to establish congressional intent with the same weight and precision as *Brown & Williamson*, it did not justify "read[ing] ambiguity into a clear statute." *Id.* That logic is inapplicable here. In the absence of lexical clarity – which the Court had found in in [sic] CAA's "sweeping definition of 'air pollutant,'" *id.* at 528 – we need legislative history and other indicia of congressional intent to inform our understanding of how GHGs are to be regulated under other CAA provisions.<sup>7</sup>

The *Massachusetts* Court's effort to distinguish *Brown & Williamson* is thus unavailing where we

---

<sup>7</sup> Consider the role of NAAQS in this regulatory system. EPA in *Massachusetts* had observed that NAAQS were established to "address air pollution problems that occur primarily at ground level" as well as "concentrations of substances in the ambient air and the related public health and welfare problems." *Massachusetts*, 549 U.S. at 558-59 (Scalia, J., dissenting). EPA thus reasoned that the regulation of the buildup of CO<sub>2</sub> in the upper reaches of the atmosphere – the process alleged to cause global climate change – was not akin to regulating the concentration of a substance that is polluting the air and was "beyond the scope of CAA's authorization to regulate." *Id.* In other words, EPA maintained that had Congress intended the CAA to regulate greenhouse gases [sic] and global climate change, it would have provided some better tool than NAAQS. That defense – offered in response to a demand to regulate tailpipe emissions – applies with even greater potency to Title V and the PSD program. In fact, although EPA now claims it is authorized to regulate greenhouse gases and global climate change, the agency acknowledges that the regulatory framework is as ill-suited to the task as ever.

## App. 136

deal not with the definitional scope of “any pollutant” and tailpipe emissions, but the particular dangers Congress sought to combat in enacting Title V and the PSD program. When read in conjunction with the CAA’s history, structure, and language, the intuitive logic of the “major questions” doctrine makes clear that the Panel erred in extending *Massachusetts*. Congress simply did not intend for EPA to convert the “Clean Air Act” to the “Warm Air Act” writ large. But that is exactly what the federal courts have done.

As the Chief Justice observed in his *Massachusetts* dissent, impatience is not a juridical principle that can be sustained under our constitutional framework. *See Massachusetts*, 549 U.S. at 535-36 (Roberts, C.J., dissenting). It certainly fares no better as a default measure of institutional choice under *Chevron*. As *Massachusetts* recognized, an agency can only exercise the authority Congress has delegated to it. *See* 549 U.S. at 534-35 (noting that EPA must “ground its reasons for action or inaction in the statute” and “exercise its discretion within defined statutory limits.”). Absurdity can never figure as an adequate substitute for authority in this threshold assessment. Nor can absurdity cure the agency’s failure to establish that the statute unambiguously compels its interpretation or that its interpretation, though discretionary, is actually consistent with statutory text, structure, and purposes. The agency seeks to avoid these pesky constraints here by invoking *Massachusetts*, but Article III judges cannot be a legitimate source of

## App. 137

legislative authority. By deferring to the distorted claim of delegation advanced here, this Court has transformed *Chevron* from a useful, albeit accidental, touchstone into an idol to which we surrender our constitutional faith.

**III.**

In rejecting State Petitioners' challenge to the Tailoring Rule for want of standing, the Panel invoked that famed preceptor of American civics, Schoolhouse Rock, to great effect. Slp. Op. at 79. ("As a generation of schoolchildren knows, 'by that time, it's very unlikely that [a bill will] become a law. It's not easy to become a law.'"). I certainly do not quarrel with such dispositive authority. Lawmaking is neither easy nor certain. In an ordinary case, the mere possibility of "corrective legislation" will not establish that redress is "likely, as opposed to merely speculative." *Lujan*, 504 U.S. at 561. But it bears repeating that this is not an ordinary case. Where the choice is between non-action or a confessedly "absurd" regulation poised to impress countless billions of dollars in costs on American industry, we have transcended the realm of the speculative. For once, the comparison with *Massachusetts* is apt. The Supreme Court found standing on the basis of an estimated rise in sea level of 20 to 70 centimeters by the year 2100, *see Massachusetts*, 549 U.S. at 542 (Roberts, C.J, dissenting) – a prediction based almost entirely on conjecture. Is it any more speculative to say that specific projections of billions of dollars in

## App. 138

actual regulatory costs would not suffice to compel Congress to act?

The Panel's alternative contention fares better: because Congress could remedy the issue in countless ways, not all of which inure to State Petitioners' benefit, the inquiry is "inherently speculative." *See Op.* at 79. This argument benefits from the genuine uncertainty in Congress over what, if any, role EPA should play in GHG regulation. But therein lies a frighteningly obtuse logic. If EPA actions are *ultra vires* precisely because disagreement on the Hill prevented Congress from altering the status quo and authorizing such regulation, how then can the very same deadlock be used to *defeat* Petitioners' standing to challenge the Rule through which EPA effectuates its absurdist scheme? The Court cannot have it both ways.

At bottom, bad decisions make bad law. In denying rehearing en banc, this Court has read *Massachusetts* to its illogical ends and it is American industry that will have to pay. That this Court did so is unsurprising, but certainly not fated. *Massachusetts* does not compel this outcome for the PSD and Title V provisions. Had this Court interrogated its own assumptions and yielded not to *Massachusetts's* telos but sound constitutional principles, it would have found that the matter properly belongs before Congress, not courts or agencies. As Schoolhouse Rock long ago explained:

App. 139

Ring one, Executive,  
Two is Legislative, that's Congress.  
Ring three, Judiciary.  
See it's kind of like my circus, circus.<sup>8</sup>

And what a circus it is.

For these reasons, I respectfully dissent from the denial of rehearing en banc.

---

KAVANAUGH, *Circuit Judge*, dissenting from the denial of rehearing en banc:

This case is plainly one of exceptional importance. A decision in either direction will have massive real-world consequences. The U.S. Chamber of Commerce describes the EPA regulations at issue here as “the most burdensome, costly, far-reaching program ever adopted by a United States regulatory agency.” Petition for Rehearing En Banc at 1. On the other hand, EPA issued these regulations to help address global warming, a policy issue of major long-term significance to the United States. Put simply, the economic and environmental policy stakes are very high.

Of course, our role is not to make the policy choices or to strike the balance between economic and environmental interests. That job is for Congress and

---

## App. 140

the President when considering and enacting legislation, and then as appropriate for the Executive Branch – here, EPA, under the ultimate supervision of the President – when exercising its authority within statutory constraints. Our job as a court is more limited: to ensure that EPA has acted within the authority granted to it by Congress. In this case, I conclude that EPA has exceeded its statutory authority. I respectfully disagree with the panel opinion’s contrary conclusion, and given the overall importance of the case, I respectfully dissent from the denial of rehearing en banc.

I

A

This case concerns EPA’s implementation of the Prevention of Significant Deterioration provisions of the Clean Air Act. The Prevention of Significant Deterioration program – which is codified in Sections 7470 to 7479 of Title 42 – is designed to maintain state and local compliance with the National Ambient Air Quality Standards, known as the NAAQS. The NAAQS are currently established for six air pollutants: carbon monoxide, lead, nitrogen dioxide, ozone, particle pollution, and sulfur dioxide. As relevant here, the Prevention of Significant Deterioration statute requires stationary facilities that emit certain “air pollutants” to obtain permits before beginning new construction. *See* 42 U.S.C. §§ 7475(a)(1), 7479(1). To obtain a permit, the facility

## App. 141

must undergo a lengthy, costly process to analyze the new construction's impact on air quality and to try to demonstrate its compliance with the relevant emissions limits.

A central question in this case is how to construe the term "air pollutant" for purposes of this statutory permitting requirement. In particular, the question is whether the term "air pollutant" here covers not just the NAAQS pollutants, which can cause breathing problems or other health issues, but also greenhouse gases such as carbon dioxide, which contribute to global warming. Under the broader interpretation of "air pollutant" that encompasses greenhouse gases, a far greater number of facilities would fall within the Prevention of Significant Deterioration program and have to obtain pre-construction permits. That in turn would impose significantly higher costs on businesses and individuals that are building new commercial or residential property.

In considering a different Clean Air Act program targeted at motor vehicle emissions, the Supreme Court said that the term "air pollutant" meant "all airborne compounds of whatever stripe," which included greenhouse gases such as carbon dioxide. *Massachusetts v. EPA*, 549 U.S. 497, 529 (2007). But all parties here, including EPA, agree that the *Massachusetts v. EPA* interpretation of the term "air pollutant" cannot control in this case, for purposes of this very different Clean Air Act program for stationary facilities. Rather, as the parties agree, we must look to the text and context of the Prevention of

## App. 142

Significant Deterioration statute to determine what “air pollutant” covers here.

Looking at the relevant statutory text and context, there would initially appear to be two plausible interpretations of the term “air pollutant” for purposes of the Prevention of Significant Deterioration statute: (i) more broadly, an airborne compound that is deemed harmful and is regulated by EPA in any Clean Air Act program, which would include greenhouse gases such as carbon dioxide; or (ii) more narrowly, the six air pollutants that are regulated by EPA in setting and enforcing the NAAQS, which would cover carbon monoxide, lead, nitrogen dioxide, ozone, particle pollution, and sulfur dioxide, but would not include greenhouse gases such as carbon dioxide.

EPA chose the broader interpretation of “air pollutant,” thereby greatly expanding the reach of the Prevention of Significant Deterioration statute. But that broader interpretation has a glaring problem, as EPA itself recognized. In the context of the Prevention of Significant Deterioration statute, EPA’s broader interpretation would not mesh with other provisions of the statute and would lead to absurd results. That’s because the Prevention of Significant Deterioration statute requires pre-construction permits for facilities with the potential to emit more than 250 tons per year (or, for some facilities, 100 tons per year) of any covered pollutant. *See* 42 U.S.C. §§ 7475(a)(1), 7479(1). That would be a very low trigger for emissions of greenhouse gases because

## App. 143

greenhouse gases are emitted in far greater quantities than the NAAQS pollutants. As a result, the low trigger would mean a dramatically higher number of facilities would fall within the program and have to obtain pre-construction permits.

In an unusual twist, EPA openly acknowledged the unreasonableness – indeed, the absurdity – caused by its interpretation of the statute. If the Prevention of Significant Deterioration program were interpreted to require pre-construction permits based on emissions of greenhouse gases, EPA candidly stated that the result would be “so contrary to what Congress had in mind – and that in fact so undermines what Congress attempted to accomplish with the PSD requirements – that it should be avoided under the ‘absurd results’ doctrine.” 74 Fed. Reg. 55,292, 55,310 (Oct. 27, 2009).

But faced with those absurd consequences from the broader interpretation of the statute, EPA surprisingly did not choose the seemingly obvious option of adopting the narrower and more sensible interpretation of the term “air pollutant” for the Prevention of Significant Deterioration statute – the interpretation limited to NAAQS air pollutants. Instead, EPA plowed ahead with the broader interpretation. And then, to try to deal with the absurd repercussions of that interpretation for the Prevention of Significant Deterioration statute, EPA re-wrote the very specific 250-ton trigger in the permitting requirement of the statute, unilaterally raising that trigger for greenhouse gas emissions

## App. 144

from 250 tons to 100,000 tons – a 400-fold increase. *See* 75 Fed. Reg. 31,514 (June 3, 2010). EPA believed that re-writing the statute’s permitting-triggers provision in this way would reduce the number of facilities that would require pre-construction permits and thereby “tailor” the absurdity – that is, alleviate some of the absurdity caused by interpreting “air pollutant” to cover greenhouse gases.<sup>1</sup>

This is a very strange way to interpret a statute. When an agency is faced with two initially plausible readings of a statutory term, but it turns out that one reading would cause absurd results, I am aware of no precedent that suggests the agency can still choose the absurd reading and then start rewriting other perfectly clear portions of the statute to try to make it all work out. And just recently, the Supreme Court reminded the Executive Branch and the lower courts that this is not the proper way to interpret a statute: Instead of “reading new words into the statute” to avoid absurd results, as the Government had urged in that case, the Court said that the statute should be interpreted so that “no absurdity arises in the first

---

<sup>1</sup> At the same time, EPA reserved the right to ratchet the trigger all the way back down to 250 tons, thereby bringing more and more facilities under the program at EPA’s unilateral discretion. EPA’s assertion of such extraordinary discretionary power both exacerbates the separation of powers concerns in this case and underscores the implausibility of EPA’s statutory interpretation. Put simply, the statute cannot be read to grant discretion to EPA to raise or lower the permitting triggers as EPA sees fit.

## App. 145

place.” *Kloeckner v. Solis*, No. 11-184, slip op. at 13 (U.S. 2012).

Even limited to this case alone, the practical implications of accepting EPA’s approach are obviously major. And if this case stands as a precedent that influences other agency decisionmaking, the future consequences likewise could be significant: Agencies presumably could adopt absurd or otherwise unreasonable interpretations of statutory provisions and then edit other statutory provisions to mitigate the unreasonableness. Allowing agencies to exercise that kind of statutory re-writing authority could significantly enhance the Executive Branch’s power at the expense of Congress’s and thereby alter the relative balance of powers in the administrative process. I would not go down that road.

## B

In my view, the statutory issue here is reasonably straightforward. The Prevention of Significant Deterioration statute’s definition of “major emitting facility” subjects a facility to the permitting requirement based on the facility’s emissions of “air pollutants.” See 42 U.S.C. §§ 7475(a)(1), 7479(1). In the context of the Prevention of Significant Deterioration program as a whole, it seems evident that the term “air pollutant” refers to the NAAQS air pollutants.

To begin with, as explained above, interpreting “air pollutant” in this context to refer to the NAAQS

## App. 146

air pollutants would avoid the absurd consequences that EPA's broader interpretation creates – namely, the exponential increase in the number of facilities that would be required to obtain pre-construction permits. That single point alone provides dispositive support for the narrower, NAAQS-specific interpretation. *See, e.g., Taniguchi v. Kan Pacific Saipan, Ltd.*, 132 S. Ct. 1997, 2004-05 (2012) (statutory context supports narrower rather than broader reading of statutory term).

Moreover, other provisions in the Prevention of Significant Deterioration statute likewise plainly use the term “air pollutant” to refer to the NAAQS air pollutants. The Prevention of Significant Deterioration program is codified in Sections 7470 to 7479 of Title 42. Of relevance here, Section 7473 sets guidelines for areas designated as in attainment of the NAAQS and requires that the “concentration of any air pollutant” in those areas not exceed certain concentrations permitted by the NAAQS. 42 U.S.C. § 7473(b)(4). The term “air pollutant” in Section 7473(b)(4) necessarily refers to the NAAQS air pollutants. In addition, several other provisions in the Prevention of Significant Deterioration statute similarly refer to Section 7473(b)(4)'s maximum concentrations for NAAQS pollutants. Each of those references thus also necessarily employs a NAAQS-specific use of the term “air pollutant.” *See, e.g.,* 42 U.S.C. § 7473(c)(1) (listing exclusions from “the maximum allowable increases in ambient concentrations of an air pollutant”); § 7474(a)(B)

## App. 147

(redesignations cannot cause “concentrations of any air pollutant” to exceed the maximum); *see also* § 7475(a)(3)(A) (facility may not cause air pollution in excess of “maximum allowable concentration for any pollutant”).

So it’s clear that a variety of provisions in the Prevention of Significant Deterioration statute use “air pollutant” to refer to a NAAQS air pollutant. And we presume that, unless otherwise indicated, the term “air pollutant” is used the same way throughout the Prevention of Significant Deterioration statute – and here, we have no reason to conclude otherwise. *See IBP, Inc. v. Alvarez*, 546 U.S. 21, 34 (2005) (“identical words used in different parts of the same statute are generally presumed to have the same meaning”).

By contrast, when Congress wanted, in the Prevention of Significant Deterioration statute, to refer to a broader set of pollutants than the NAAQS pollutants, it did so expressly. Thus, a facility that requires a pre-construction permit because of its emissions of NAAQS pollutants must employ the best available control technology for emissions not just of “air pollutants” but of “each pollutant subject to regulation under this chapter,” which – now that EPA has regulated greenhouse gases in other parts of the Clean Air Act – *does* include greenhouse gases. 42 U.S.C. § 7475(a)(4). By its terms, Section 7475(a)(4) thus applies to greenhouse gases, not just the NAAQS. Importantly, however, Congress did not employ the language “each pollutant subject to

## App. 148

regulation under this chapter” in the statutory provision setting forth which facilities must obtain a pre-construction permit, the provision at issue in this case. And the policy distinction drawn in Section 7475(a)(4) is rather intuitive: Congress designed the statute’s permitting requirement based on facilities’ NAAQS emissions, but, once those facilities are subject to the permitting requirement, they must also meet a range of other minimum environmental standards.<sup>2</sup>

The overall objectives of the Prevention of Significant Deterioration statute also suggest that “air pollutant” refers to the NAAQS air pollutants for purposes of the permitting requirement. Importantly, the Prevention of Significant Deterioration statute applies only in areas that have met the NAAQS – that is, areas that do not have excessive emissions of the NAAQS air pollutants. If the purpose of this statute were in part to address global warming by requiring pre-construction permits for facilities that emit greenhouse gases, as EPA’s reading suggests, why would the statute target the construction of facilities only in areas that are in *compliance* with the NAAQS – and not elsewhere in the United States?

---

<sup>2</sup> Section 7479(1) – the definition of “major emitting facility” – speaks of “any” air pollutant. But the word “any” just begs the question of what the term “air pollutant” covers in the Prevention of Significant Deterioration program. It’s either any air pollutant regulated under the Clean Air Act or any of the NAAQS air pollutants.

## App. 149

That would make little sense, which in turn further suggests that EPA has misread the statute.

Moreover, as its name indicates, the Prevention of Significant Deterioration statute is designed primarily to prevent “deterioration” of an attainment area’s air quality. The relevant air quality standards that define whether an area is in attainment are the NAAQS. In a statute expressly linked to the NAAQS and designed to ensure that air quality does not “deteriorate” with respect to the NAAQS, it is somewhat illogical to read the statute as requiring pre-construction permits simply because a facility may emit substances that will *not* affect attainment of the NAAQS. Under EPA’s approach, a facility could be covered by the permitting requirement even if it emits no NAAQS air pollutants at all. That, too, makes little sense and suggests that EPA has misread the statute.

A separate canon of interpretation further demonstrates that EPA’s broad reading of the term “air pollutant” is at odds with Congress’s design. By requiring a vastly increased number of facilities to obtain pre-construction permits, EPA’s interpretation will impose enormous costs on tens of thousands of American businesses, with corresponding effects on American jobs and workers; on many American homeowners who move into new homes or plan other home construction projects; and on the U.S. economy more generally. Yet there is literally no indication in the text or legislative record that Members of Congress ever contemplated – much less intended –

## App. 150

such a dramatic expansion of the permitting requirement of the Prevention of Significant Deterioration statute. Courts do not lightly conclude that Congress intended such major consequences absent some indication that Congress meant to do so. *See FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 159-61 (2000). Here, as elsewhere, we should not presume that Congress hid an elephant in a mousehole.

For all of those reasons – the statutory text, the absurdity principle, the statutory context as demonstrated by related statutory provisions, the overarching objectives of the statute, the major unintended consequences of a broader interpretation – the Prevention of Significant Deterioration statute as a whole overwhelmingly indicates that the permitting requirement is based on emissions of the NAAQS air pollutants.

And just to reiterate, the simple and absolutely dispositive point in this case is the following: The broader interpretation of “air pollutant” adopted by EPA produces what even EPA itself admits are absurd consequences. When an agency is faced with two plausible readings of a statutory term, but one reading would cause absurd results, the agency cannot choose the absurd reading. Here, therefore, EPA was required to adopt the narrower and more sensible interpretation of “air pollutant,” the interpretation limited to the NAAQS pollutants. As the Supreme Court has said, “interpretations of a statute which would produce absurd results are to be

## App. 151

avoided if alternative interpretations consistent with the legislative purpose are available.” *Griffin v. Oceanic Contractors, Inc.*, 458 U.S. 564, 575 (1982). Such an “alternative interpretation[ ] consistent with the legislative purpose” is readily available here.

## II

If that were the end of the analysis, I would not hesitate to conclude that EPA had adopted an impermissibly broad reading of the term “air pollutant” for purposes of the permitting provision of the Prevention of Significant Deterioration statute. But before reaching that conclusion definitively, we need to consider whether EPA’s approach was mandated by the Supreme Court’s decision in *Massachusetts v. EPA*, 549 U.S. 497 (2007). In that case, the Supreme Court considered the general statutory term “air pollutant” as applied to a different aspect of the Clean Air Act – the motor vehicle emissions program. The Court there interpreted “air pollutant” very broadly to mean “all airborne compounds of whatever stripe,” including greenhouse gases. *Id.* at 529.

Does *Massachusetts v. EPA* dictate EPA’s broader interpretation of “air pollutant” in the different context of the Prevention of Significant Deterioration statute? The panel opinion seemed to think so; its conclusion appears to have been heavily if not dispositively influenced by *Massachusetts v. EPA*. See, e.g., *Coalition for Responsible Regulation, Inc. v. EPA*,

## App. 152

684 F.3d 102, 134, 136 (D.C. Cir. 2012). In my view, however, the holding in *Massachusetts v. EPA* does not control the result in this case. Indeed, as explained more fully below, even EPA has concluded that *Massachusetts v. EPA* does not control here. The decision in *Massachusetts v. EPA* concerned the motor vehicle emissions program, a point the Supreme Court expressly noted many times in its opinion. The case did not purport to say that every other use of the term “air pollutant” throughout the sprawling and multifaceted Clean Air Act necessarily includes greenhouse gases. Each individual Clean Air Act program must be considered in context.<sup>3</sup>

---

<sup>3</sup> As an analogy, take the familiar example of “no vehicles in the park.” Assume that a court has decided that the term “vehicles” generally includes bicycles, and that no bicycles are allowed in the park. Next assume that another park regulation states that “all park service vehicles must have reinforced gas tanks.” In that latter regulation, context tells us that the term “vehicles” obviously does not include bicycles. Bicycles are still vehicles in the abstract, but the gas-tank regulation logically applies only to a specific subset of vehicles (namely, motor vehicles).

So it is with “air pollutant” as used in different parts of the Clean Air Act. *Massachusetts v. EPA* held that the term “air pollutant” generally includes greenhouse gases. But that does not mean that the term “air pollutant” can never be used in a narrower sense. Greenhouse gases may qualify as “air pollutants” in the abstract, but context tells us that the Prevention of Significant Deterioration program uses the term “air pollutant” to refer only to a subset of all air pollutants (namely, the NAAQS pollutants).

## App. 153

Importantly, in *Massachusetts v. EPA*, the Supreme Court explicitly relied on the fact that the Clean Air Act’s “capacious definition of ‘air pollutant,’” did not appear “counterintuitive” or produce “extreme” consequences in the context of motor vehicle emissions. 549 U.S. at 531-32. But, as explained above, EPA’s capacious definition of “air pollutant” *is* counterintuitive and *does* produce extreme consequences in the context of the Prevention of Significant Deterioration statute, as EPA itself acknowledges. Moreover, in this case, an alternative and sensible interpretation of the term “air pollutant” is readily discernible from the text, context, and structure of the Prevention of Significant Deterioration statute as a whole – namely, the NAAQS-specific interpretation.

To be sure, as noted earlier, the same words used in different parts of an Act are often construed to have the same meaning. See *IBP, Inc. v. Alvarez*, 546 U.S. 21, 34 (2005). If that were an inflexible command, the *Massachusetts v. EPA* interpretation of “air pollutant” would certainly control here and throughout the entire Clean Air Act. But as the Supreme Court recently reminded us – *in the context of interpreting the Clean Air Act* – “the natural presumption that identical words used in different parts of the same act are intended to have the same meaning is not rigid and readily yields whenever there is such variation in the connection in which the words are used as reasonably to warrant the conclusion that they were employed in different parts

## App. 154

of the act with different intent.” *Environmental Defense v. Duke Energy Corp.*, 549 U.S. 561, 574 (2007) (internal quotation marks and ellipsis omitted). As instructed by the Supreme Court, we must interpret statutory terms based on their context and in light of the statute as a whole, even if that approach on some occasions means that the same term applies differently in different parts of a statute. See, e.g., *General Dynamics Land Systems, Inc. v. Cline*, 540 U.S. 581, 596-97 (2004) (term “age” has different meanings within Age Discrimination in Employment Act); *United States v. Cleveland Indians Baseball Co.*, 532 U.S. 200, 212-13 (2001) (term “wages paid” has different meanings within Social Security Act Amendments of 1939); *Robinson v. Shell Oil Co.*, 519 U.S. 337, 343-44 (1997) (term “employee” has different meanings within Title VII).

The Supreme Court’s application of that interpretive principle in *Environmental Defense v. Duke Energy* – a decision issued on the same day as *Massachusetts v. EPA* – is illuminating. There, the Supreme Court confronted the Clean Air Act’s definition of a stationary source “modification.” See 549 U.S. at 567-68. That term was relevant to both the New Source Performance Standards program and the Prevention of Significant Deterioration program. The Court ruled that EPA could interpret the term “modification” differently for each of those two Clean Air Act programs, even though “the terms share a common statutory definition.” *Id.* at 574. In so holding, the Court analyzed the two programs’

## App. 155

different regulatory goals, noting that a “given term in the same statute may take on distinct characters from association with distinct statutory objects calling for different implementation strategies.” *Id.*

The Supreme Court’s interpretive approach in *Environmental Defense v. Duke Energy* – which recognizes that the meaning of a statutory term in the Clean Air Act may vary based on the particular program at issue – shows that the *Massachusetts v. EPA* interpretation of “air pollutant” in the context of the motor vehicle emissions program does not necessarily require the same interpretation of “air pollutant” in the context of the Prevention of Significant Deterioration program. In *Massachusetts v. EPA*, the Supreme Court emphasized that the regulation of greenhouse gases in the motor vehicle emissions program would not be “counterintuitive” and would not lead to any “extreme measures.” 549 U.S. at 531. Greenhouse gas standards would simply be added to the other regulations already applicable to manufacturers of new motor vehicles, and any such standards would take into account both cost and technological feasibility. See 42 U.S.C. § 7521(a). By contrast, the regulation of greenhouse gases in the Prevention of Significant Deterioration program would be both counterintuitive and extreme. Tens of thousands of businesses and homeowners would be swept into the Clean Air Act’s purview for the first time and hit with permitting costs averaging \$60,000, not to mention the additional costs of trying to construct and maintain the facility in compliance

## App. 156

with the relevant emissions limits and technological standards. *See* 75 Fed. Reg. 31,514, 31,556 (June 3, 2010). In addition, the costs associated with a vastly expanded permitting requirement would deter numerous projects from even starting in the first place. The major differences between the motor vehicle emissions program and the Prevention of Significant Deterioration program thus neatly fit the *Environmental Defense v. Duke Energy* paradigm of “distinct statutory objects calling for different implementation strategies.”

In reaching that conclusion, it bears mention that the Clean Air Act is a very complicated statute encompassing several distinct environmental programs. It is no surprise, then, that the motor vehicle emissions program and the Prevention of Significant Deterioration program are not the only parts of the Act to employ a term like “air pollutant” in a context-dependent way. For example, the visibility program applies to facilities based on their emissions of “any pollutant.” 42 U.S.C. § 7491(g)(7). In the context of that program, EPA has interpreted the term “any pollutant” to mean “any visibility-impairing pollutant,” which obviously does not include greenhouse gases. 40 C.F.R. pt. 51, App. Y, § II.A. Similarly, the nonattainment program applies to areas that have been designated as nonattainment “for any air pollutant.” 42 U.S.C. § 7501(2). In the context of that program, the term “air pollutant” is logically limited to the NAAQS air pollutants, which are the only pollutants for which an area can be

## App. 157

designated as nonattainment. *Id.* § 7407(d)(1)(A). All of that simply underscores that a court should exercise caution before reflexively importing the interpretations applicable to one Clean Air Act program into a distinct Clean Air Act program.

Any lingering doubt that *Massachusetts v. EPA* does not control here is dispelled when we recall that EPA itself has rejected *Massachusetts v. EPA*'s interpretation of "air pollutant" for the Prevention of Significant Deterioration statute. The Court in *Massachusetts v. EPA* said that "air pollutant" meant "all airborne compounds of whatever stripe." 549 U.S. at 529. EPA has acknowledged, however, that such a broad definition cannot possibly extend to the use of the term "air pollutant" in the Prevention of Significant Deterioration statute. EPA understood that it would be absurd to require pre-construction permits because of emissions of any airborne compound, including emissions of airborne compounds that have not been deemed harmful and regulated under the Clean Air Act. To avoid rendering the Prevention of Significant Deterioration statute an absurdity, EPA construed "air pollutant" to mean *certain* air pollutants – in particular, "any regulated air pollutant."

The critical point for present purposes – and it really is a critical point in thinking about the significance of *Massachusetts v. EPA* to the present case – is that EPA itself recognized that the *Massachusetts v. EPA* definition of "air pollutant" cannot and does not control how to interpret "air

## App. 158

pollutant” in the Prevention of Significant Deterioration context. As it tries to justify its broad interpretation of the Prevention of Significant Deterioration statute, EPA cannot simultaneously latch on to *Massachusetts v. EPA* and reject *Massachusetts v. EPA*.

If *Massachusetts v. EPA* does not control here – and even EPA admits that it does not – then we are back where we started. EPA was faced with two initially plausible interpretations of “air pollutant” for purposes of the permitting requirement of the Prevention of Significant Deterioration statute. One interpretation created patent absurdities and made little sense given the other statutory provisions. The other interpretation fit comfortably and sensibly within the statutory text and context. EPA nonetheless chose the first option. In my view, EPA’s reading of the statute was impermissible. An agency cannot adopt an admittedly absurd interpretation and discard an eminently sensible one.

Given all of this, the case seems reasonably straightforward. So how did the panel opinion reach the opposite conclusion? I respectfully have three main points of disagreement. First, as I read it, the panel opinion was decisively influenced by *Massachusetts v. EPA*’s interpretation of “air pollutant” in the context of the motor vehicle emissions program. But in light of the material differences between the motor vehicle emissions program and the Prevention of Significant Deterioration program, the *Massachusetts v. EPA*

## App. 159

interpretation cannot control here, as even EPA acknowledges. Second, the panel opinion attempted to buttress its choice of a broad interpretation of the term “air pollutant” by pointing to Section 7475(a)(4), the provision in the Prevention of Significant Deterioration program requiring covered facilities to use the best available control technology. But as explained above, Section 7475(a)(4) actually cuts the other way because it specifically refers to “each pollutant subject to regulation under this chapter,” which now does include greenhouse gases – whereas, by contrast, other statutory provisions in the Prevention of Significant Deterioration program clearly employ a NAAQS-specific interpretation of the unadorned term “air pollutant.” Third, the panel gave insufficient weight to the most critical point in this case, the absurd consequences of EPA’s broad interpretation. This was a mistake because the ultimate clincher in this case is one simple point: EPA chose an admittedly absurd reading over a perfectly natural reading of the relevant statutory text. An agency cannot do that.

## III

In finding EPA’s statutory interpretation legally impermissible, I do not in any way want to diminish EPA’s vital policy objectives. EPA’s regulations for the Prevention of Significant Deterioration statute may well be a good idea as a matter of policy. The task of dealing with global warming is urgent and important. But as in so many cases, the question here is: Who

## App. 160

Decides? The short answer is that Congress (with the President) sets the policy through statutes, agencies implement that policy within statutory limits, and courts in justiciable cases ensure that agencies stay within the statutory limits set by Congress. A court's assessment of an agency's compliance with statutory limits does not depend on whether the agency's policy is good or whether the agency's intentions are laudatory. Even when that is true, we must enforce the statutory limits. *See Hamdan v. United States*, 696 F.3d 1238 (D.C. Cir. 2012) (ruling that Executive Branch exceeded statutory authority in wartime prosecution of al Qaeda member).

In cases like this one, the bedrock underpinnings of our system of separation of powers are at stake. To be sure, courts must be wary of undue interference with an agency's action implementing its statutory responsibilities. *See American Radio Relay League, Inc. v. FCC*, 524 F.3d 227 (D.C. Cir. 2008) (separate opinion of Kavanaugh, J.); *see also Desert Citizens Against Pollution v. EPA*, 699 F.3d 524 (D.C. Cir. 2012); *National Environmental Development Association's Clean Air Project v. EPA*, 686 F.3d 803 (D.C. Cir. 2012); *American Petroleum Institute v. EPA*, 684 F.3d 1342 (D.C. Cir. 2012); *ATK Launch Systems, Inc. v. EPA*, 669 F.3d 330 (D.C. Cir. 2012); *Natural Resources Defense Council v. EPA*, 661 F.3d 662 (D.C. Cir. 2011); *Medical Waste Institute & Energy Recovery Council v. EPA*, 645 F.3d 420 (D.C. Cir. 2011). To take one salient and important example, the statutory scheme gives EPA significant discretion in setting the

## App. 161

NAAQS for the NAAQS air pollutants – a discretion the courts must respect.

But at the same time, undue deference or abdication to an agency carries its own systemic costs. If a court mistakenly allows an agency's transgression of statutory limits, then we green-light a significant shift of power from the Legislative Branch to the Executive Branch. The Framers of the Constitution did not grant the Executive Branch the authority to set economic and social policy as it sees fit. Rather, the Framers gave Congress, along with the President, that legislative role (subject to constitutional limits), and they assigned the Executive Branch the executive power to issue rules and enforce the law *within the limits set by Congress*.<sup>4</sup>

It is true that the legislative process can be cumbersome and frustrating, and the Executive Branch often is well-intentioned in wanting to address pressing policy concerns quickly, before the sometimes glacial congressional machinery can be

---

<sup>4</sup> In protecting national security, the Executive has some Article II authority to act in certain circumstances in the Nation's defense even without specific congressional authorization. This is known as *Youngstown* category two. See *Youngstown Sheet & Tube Co. v. Sawyer*, 343 U.S. 579, 637 (1952) (Jackson, J., concurring). There is no general *Youngstown* category two authority in the domestic social and economic realms, where the Executive must have statutory authority in order to act.

## App. 162

stirred to action.<sup>5</sup> The legislative process can be slow because the Constitution makes it far harder to enact legislation than to block it: Under the Constitution, three different entities must agree in order to enact legislation – the House, the Senate, and the President (or two-thirds of both the House and the Senate to override a President’s veto). But the Framers knew the legislative process would be laborious. They designed it that way. The time and difficulty of enacting new legislation has never justified an agency’s contravention of statutory limits. The Framers specifically contemplated, moreover, that there would be situations where the Executive Branch confronts a pressing need that it does not have current authority to address. In those circumstances, the Constitution’s Recommendations Clause provides that the President may “recommend” to Congress “such Measures as he shall judge necessary and expedient.” U.S. CONST. art. II, § 3.

Importantly, the separation of powers and checks and balances of our system are designed not just to ensure that the Branches operate within the proper spheres of their authority, but also to protect individual liberty. As the Supreme Court has

---

<sup>5</sup> In 2009, the House of Representatives passed a global warming bill that was supported by the President. But the Senate did not pass it. In the early 2000s, Senators McCain and Lieberman sought to pass global warming legislation, but no law was ultimately enacted. Numerous other bills have been introduced over the years, and various legislative efforts are ongoing.

## App. 163

explained many times, “while a government of opposite and rival interests may sometimes inhibit the smooth functioning of administration, the Framers recognized that, in the long term, structural protections against abuse of power were critical to preserving liberty. . . . The failures of . . . regulation may be a pressing national problem, but a judiciary that licensed extraconstitutional government with each issue of comparable gravity would, in the long run, be far worse.” *Free Enterprise Fund v. Public Company Accounting Oversight Board*, 130 S. Ct. 3138, 3157 (2010) (internal quotation marks, alterations, and citations omitted).

As a court, it is not our job to make the policy choices and set the statutory boundaries, but it is emphatically our job to carefully but firmly enforce the statutory boundaries. That bedrock separation of powers principle accounts for my concern about this case. Here, as I see it, EPA went well beyond what Congress authorized for the Prevention of Significant Deterioration statute. I respectfully disagree with the panel’s resolution of this issue, and given the overall importance of the case, I respectfully dissent from the denial of rehearing en banc.

---

App. 164

TITLE 42. THE PUBLIC HEALTH AND WELFARE  
CHAPTER 85. AIR POLLUTION PREVENTION  
AND CONTROL EMISSION STANDARDS  
FOR MOVING SOURCES MOTOR VEHICLE  
EMISSION AND FUEL STANDARDS

42 U.S.C. § 7521. Emission standards for new motor vehicles or new motor vehicle engines

(a) Authority of Administrator to prescribe by regulation. Except as otherwise provided in subsec.

(b) –

(1) The Administrator shall by regulation prescribe (and from time to time revise) in accordance with the provisions of this section, standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare. Such standards shall be applicable to such vehicles and engines for their useful life (as determined under subsection (d), relating to useful life of vehicles for purposes of certification), whether such vehicles and engines are designed as complete systems or incorporate devices to prevent or control such pollution.

(2) Any regulation prescribed under paragraph (1) of this subsection (and any revision thereof) shall take effect after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving

App. 165

appropriate consideration to the cost of compliance within such period.

(3) (A) In general.

(i) Unless the standard is changed as provided in subparagraph (B), regulations under paragraph (1) of this subsection applicable to emissions of hydrocarbons, carbon monoxide, oxides of nitrogen, and particulate matter from classes or categories of heavy-duty vehicles or engines manufactured during or after model year 1983 shall contain standards which reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to cost, energy, and safety factors associated with the application of such technology.

(ii) In establishing classes or categories of vehicles or engines for purposes of regulations under this paragraph, the Administrator may base such classes or categories on gross vehicle weight, horsepower, type of fuel used, or other appropriate factors.

(B) Revised standards for heavy duty trucks.

(i) On the basis of information available to the Administrator concerning the effect of air pollutants emitted from heavy-duty vehicles or engines and from other sources of mobile source

App. 166

related pollutants on the public health and welfare, and taking costs into account, the Administrator may promulgate regulations under paragraph (1) of this subsection revising any standard promulgated under, or before the date of, the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990] (or previously revised under this subparagraph) and applicable to classes or categories of heavy-duty vehicles or engines.

(ii) Effective for the model year 1998 and thereafter, the regulations under paragraph (1) of this subsection applicable to emissions of oxides of nitrogen (NO[X]) from gasoline and diesel-fueled heavy duty trucks shall contain standards which provide that such emissions may not exceed 4.0 grams per brake horsepower hour (gbh).

(C) Lead time and stability. Any standard promulgated or revised under this paragraph and applicable to classes or categories of heavy-duty vehicles or engines shall apply for a period of no less than 3 model years beginning no earlier than the model year commencing 4 years after such revised standard is promulgated.

(D) Rebuilding practice. The Administrator shall study the practice of rebuilding heavy-duty engines and the impact rebuilding has on engine emissions. On the basis of that study and other information available to the Administrator, the Administrator may prescribe requirements to control rebuilding practices, including standards applicable

## App. 167

to emissions from any rebuilt heavy-duty engines (whether or not the engine is past its statutory useful life), which in the Administrator's judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare taking costs into account. Any regulation shall take effect after a period the Administrator finds necessary to permit the development and application of the requisite control measures, giving appropriate consideration to the cost of compliance within the period and energy and safety factors.

(E) Motorcycles. For purposes of this paragraph, motorcycles and motorcycle engines shall be treated in the same manner as heavy-duty vehicles and engines (except as otherwise permitted under section 206(f)(1)) unless the Administrator promulgates a rule reclassifying motorcycles as light-duty vehicles within the meaning of this section or unless the Administrator promulgates regulations under subsection (a) applying standards applicable to the emission of air pollutants from motorcycles as a separate class or category. In any case in which such standards are promulgated for such emissions from motorcycles as a separate class or category, the Administrator, in promulgating such standards, shall consider the need to achieve equivalency of emission reductions between motorcycles and other motor vehicles to the maximum extent practicable.

(4) (A) Effective with respect to vehicles and engines manufactured after model year 1978, no emission control device, system, or element of design

App. 168

shall be used in a new motor vehicle or new motor vehicle engine for purposes of complying with requirements prescribed under this title if such device, system, or element of design will cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation or function.

(B) In determining whether an unreasonable risk exists under subparagraph (A), the Administrator shall consider, among other factors, (i) whether and to what extent the use of any device, system, or element of design causes, increases, reduces, or eliminates emissions of any unregulated pollutants; (ii) available methods for reducing or eliminating any risk to public health, welfare, or safety which may be associated with the use of such device, system, or element of design, and (iii) the availability of other devices, systems, or elements of design which may be used to conform to requirements prescribed under this title without causing or contributing to such unreasonable risk. The Administrator shall include in the consideration required by this paragraph all relevant information developed pursuant to section 214 [42 USCS § 7548].

(5) (A) If the Administrator promulgates final regulations which define the degree of control required and the test procedures by which compliance could be determined for gasoline vapor recovery of uncontrolled emissions from the fueling of motor vehicles, the Administrator shall, after consultation with the Secretary of Transportation with respect to motor vehicle safety, prescribe, by regulation, fill pipe

App. 169

standards for new motor vehicles in order to insure effective connection between such fill pipe and any vapor recovery system which the Administrator determines may be required to comply with such vapor recovery regulations. In promulgating such standards the Administrator shall take into consideration limits on fill pipe diameter, minimum design criteria for nozzle retainer lips, limits on the location of the unleaded fuel restrictors, a minimum access zone surrounding a fill pipe, a minimum pipe or nozzle insertion angle, and such other factors as he deems pertinent.

(B) Regulations prescribing standards under subparagraph (A) shall not become effective until the introduction of the model year for which it would be feasible to implement such standards, taking into consideration the restraints of an adequate leadtime for design and production.

(C) Nothing in subparagraph (A) shall (i) prevent the Administrator from specifying different nozzle and fill neck sizes for gasoline with additives and gasoline without additives or (ii) permit the Administrator to require a specific location, configuration, modeling, or styling of the motor vehicle body with respect to the fuel tank fill neck or fill nozzle clearance envelope.

(D) For the purpose of this paragraph, the term "fill pipe" shall include the fuel tank fill pipe, fill neck, fill inlet, and closure.

App. 170

(6) Onboard vapor recovery. Within 1 year after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall, after consultation with the Secretary of Transportation regarding the safety of vehicle-based (“onboard”) systems for the control of vehicle refueling emissions, promulgate standards under this section requiring that new light-duty vehicles manufactured beginning in the fourth model year after the model year in which the standards are promulgated and thereafter shall be equipped with such systems. The standards required under this paragraph shall apply to a percentage of each manufacturer’s fleet of new light-duty vehicles beginning with the fourth model year after the model year in which the standards are promulgated. The percentage shall be as specified in the following table:

**IMPLEMENTATION SCHEDULE FOR ON BOARD VAPOR RECOVERY REQUIREMENTS**

Model year commencing after standards promulgated	Percentage*
Fourth .....	40
Fifth.....	80
After Fifth .....	100

\*Percentages in the table refer to a percentage of the manufacturer’s sales volume.

The standards shall require that such systems provide a minimum evaporative emission capture efficiency of 95 percent. The requirements of section

App. 171

182(b)(3) [42 USCS § 7511a(b)(3)] (relating to stage II gasoline vapor recovery) for areas classified under section 181 [42 USCS § 7511] as moderate for ozone shall not apply after promulgation of such standards and the Administrator may, by rule, revise or waive the application of the requirements of such section 182(b)(3) [42 USCS § 7511a(b)(3)] for areas classified under section 181 [42 USCS § 7511] as Serious, Severe, or Extreme for ozone, as appropriate, after such time as the Administrator determines that onboard emissions control systems required under this paragraph are in widespread use throughout the motor vehicle fleet.

(b) Emissions of carbon monoxide, hydrocarbons, and oxides of nitrogen; annual report to Congress; waiver of emission standards; research objectives.

(1) (A) The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1977 through 1979 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.5 grams per vehicle mile of hydrocarbons and 15.0 grams per vehicle mile of carbon monoxide. The regulations under subsection (a) applicable to emissions of carbon monoxide from light-duty vehicles and engines manufactured during the model year 1980 shall contain standards which provide that such emissions may not exceed 7.0 grams per vehicle mile. The regulations under subsection (a) applicable to emissions of hydrocarbons from light-duty vehicles

## App. 172

and engines manufactured during or after model year 1980 shall contain standards which require a reduction of at least 90 percent from emissions of such pollutant allowable under the standards under this section applicable to light-duty vehicles and engines manufactured in model year 1970. Unless waived as provided in paragraph (5), regulations under subsection (a) applicable to emissions of carbon monoxide from light-duty vehicles and engines manufactured during or after the model year 1981 shall contain standards which require a reduction of at least 90 percent from emissions of such pollutant allowable under the standards under this section applicable to light-duty vehicles and engines manufactured in model year 1970.

(B) The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1977 through 1980 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per vehicle mile. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during the model year 1981 and thereafter shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.0 gram per vehicle mile. The Administrator shall prescribe standards in lieu of those required by the preceding sentence, which provide that emissions of oxides of nitrogen may not exceed 2.0 grams per vehicle mile

App. 173

for any light-duty vehicle manufactured during model years 1981 and 1982 by any manufacturer whose production, by corporate identity, for calendar year 1976 was less than three hundred thousand light-duty motor vehicles worldwide if the Administrator determines that –

(i) the ability of such manufacturer to meet emission standards in the 1975 and subsequent model years was, and is, primarily dependent upon technology developed by other manufacturers and purchased from such manufacturers; and

(ii) such manufacturer lacks the financial resources and technological ability to develop such technology.

(C) The Administrator may promulgate regulations under subsection (a)(1) revising any standard prescribed or previously revised under this subsection, as needed to protect public health or welfare, taking costs, energy, and safety into account. Any revised standard shall require a reduction of emissions from the standard that was previously applicable. Any such revision under this title may provide for a phase-in of the standard. It is the intent of Congress that the numerical emission standards specified in subsections (a)(3)(B)(ii),(g),(h), and (i) shall not be modified by the Administrator after the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990] for any model year before the model year 2004.

App. 174

(2) Emission standards under paragraph (1), and measurement techniques on which such standards are based (if not promulgated prior to the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990]), shall be promulgated by regulation within 180 days after such date.

(3) For purposes of this part [42 USCS §§ 7521 et seq.] –

(A) (i) The term “model year” with reference to any specific calendar year means the manufacturer’s annual production period (as determined by the Administrator) which includes January 1 of such calendar year. If the manufacturer has no annual production period, the term “model year” shall mean the calendar year.

(ii) For the purpose of assuring that vehicles and engines manufactured before the beginning of a model year were not manufactured for purposes of circumventing the effective date of a standard required to be prescribed by subsection (b), the Administrator may prescribe regulations defining “model year” otherwise than as provided in clause (i).

(B) [Repealed]

(C) The term “heavy duty vehicle” means a truck, bus, or other vehicle manufactured primarily for use on the public streets, roads, and highways (not including any vehicle operated exclusively on a rail or rails) which has a gross vehicle weight (as

App. 175

determined under regulations promulgated by the Administrator) in excess of six thousand pounds. Such term includes any such vehicle which has special features enabling off-street or off-highway operation and use.

[(4)](3) Upon the petition of any manufacturer, the Administrator, after notice and opportunity for public hearing, may waive the standard required under subparagraph (B) of paragraph (1) to not exceed 1.5 grams of oxides of nitrogen per vehicle mile for any class or category of light-duty vehicles or engines manufactured by such manufacturer during any period of up to four model years beginning after the model year 1980 if the manufacturer demonstrates that such waiver is necessary to permit the use of an innovative power train technology, or innovative emission control device or system, in such class or category of vehicles or engines and that such technology or system was not utilized by more than 1 percent of the light-duty vehicles sold in the United States in the 1975 model year. Such waiver may be granted only if the Administrator determines –

(A) that such waiver would not endanger public health,

(B) that there is a substantial likelihood that the vehicles or engines will be able to comply with the applicable standard under this section at the expiration of the waiver, and

(C) that the technology or system has a potential for long-term air quality benefit and has the

App. 176

potential to meet or exceed the average fuel economy standard applicable under the Energy Policy and Conservation Act upon the expiration of the waiver.

No waiver under this subparagraph [paragraph] granted to any manufacturer shall apply to more than 5 percent of such manufacturer's production or more than fifty thousand vehicles or engines, whichever is greater.

(c) Feasibility study and investigation by National Academy of Sciences; reports to Administrator and Congress; availability of information.

(1) The Administrator shall undertake to enter into appropriate arrangements with the National Academy of Sciences to conduct a comprehensive study and investigation of the technological feasibility of meeting the emissions standards required to be prescribed by the Administrator by subsection (b) of this section.

(2) Of the funds authorized to be appropriated to the Administrator by this Act, such amounts as are required shall be available to carry out the study and investigation authorized by paragraph (1) of this subsection.

(3) In entering into any arrangement with the National Academy of Sciences for conducting the study and investigation authorized by paragraph (1) of this subsection, the Administrator shall request the National Academy of Sciences to submit semiannual reports on the progress of its study and investigation

App. 177

to the Administrator and the Congress, beginning not later than July 1, 1971, and continuing until such study and investigation is completed.

(4) The Administrator shall furnish to such Academy at its request any information which the Academy deems necessary for the purpose of conducting the investigation and study authorized by paragraph (1) of this subsection. For the purpose of furnishing such information, the Administrator may use any authority he has under this Act (A) to obtain information from any person, and (B) to require such person to conduct such tests, keep such records, and make such reports respecting research or other activities conducted by such person as may be reasonably necessary to carry out this subsection.

(d) Useful life of vehicles. The Administrator shall prescribe regulations under which the useful life of vehicles and engines shall be determined for purposes of subsection (a)(1) of this section and section 207 [42 USCS § 7541]. Such regulations shall provide that except where a different useful life period is specified in this title [42 USCS §§ 7521 et seq.] useful life shall –

(1) in the case of light duty vehicles and light duty vehicle engines and light-duty trucks up to 3,750 lbs. LVW and up to 6,000 lbs. GVWR, be a period of use of five years or of fifty thousand miles (or the equivalent), whichever first occurs, except that in the case of any requirement of this section which first

App. 178

becomes applicable after the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990] where the useful life period is not otherwise specified for such vehicles and engines, the period shall be 10 years or 100,000 miles (or the equivalent), whichever first occurs, with testing for purposes of in-use compliance under section 207 [42 USCS § 7541] up to (but not beyond) 7 years or 75,000 miles (or the equivalent), whichever first occurs;

(2) in the case of any other motor vehicle or motor vehicle engine (other than motorcycles or motorcycle engines), be a period of use set forth in paragraph (1) unless the Administrator determines that a period of use of greater duration or mileage is appropriate; and

(3) in the case of any motorcycle or motorcycle engine, be a period of use the Administrator shall determine.

(e) New power sources or propulsion systems. In the event a new power source or propulsion system for new motor vehicles or new motor vehicle engines is submitted for certification pursuant to section 206(a) [42 USCS § 7525(a)], the Administrator may postpone certification until he has prescribed standards for any air pollutants emitted by such vehicle or engine which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger the public health or welfare but for which standards have not been prescribed under subsection (a).

App. 179

(f) High altitude regulations.

(1) The high altitude regulation in effect with respect to model year 1977 motor vehicles shall not apply to the manufacture, distribution, or sale of 1978 and later model year motor vehicles. Any future regulation affecting the sale or distribution of motor vehicles or engines manufactured before the model year 1984 in high altitude areas of the country shall take effect no earlier than model year 1981.

(2) Any such future regulation applicable to high altitude vehicles or engines shall not require a percentage of reduction in the emissions of such vehicles which is greater than the required percentage of reduction in emissions from motor vehicles as set forth in section 202(b) [subsec. (b) of this section]. This percentage reduction shall be determined by comparing any proposed high altitude emission standards to high altitude emissions from vehicles manufactured during model year 1970. In no event shall regulations applicable to high altitude vehicles manufactured before the model year 1984 establish a numerical standard which is more stringent than that applicable to vehicles certified under non-high altitude conditions.

(3) Section 307(d) [42 USCS § 7607(d)] shall apply to any high altitude regulation referred to in paragraph (2) and before promulgating any such regulation, the Administrator shall consider and make a finding with respect to –

App. 180

(A) the economic impact upon consumers, individual high altitude dealers, and the automobile industry of any such regulation, including the economic impact which was experienced as a result of the regulation imposed during model year 1977 with respect to high altitude certification requirements;

(B) the present and future availability of emission control technology capable of meeting the applicable vehicle and engine emission requirements without reducing model availability; and

(C) the likelihood that the adoption of such a high altitude regulation will result in any significant improvement in air quality in any area to which it shall apply.

(g) Light-duty trucks up to 6,000 GVWR and light-duty vehicles; standards for model years after 1993.

(1) NMHC, CO, and NO[X]. Effective with respect to the model year 1994 and thereafter, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC), carbon monoxide (CO), and oxides of nitrogen (NO[X]) from light-duty trucks (LDTs) of up to 6,000 lbs. gross vehicle weight rating (GVWR) and light-duty vehicles (LDVs) shall contain standards which provide that emissions from a percentage of each manufacturer's sales volume of such vehicles and trucks shall comply with the levels specified in table G. The percentage shall be as specified in the implementation schedule below:

App. 181

TABLE G. EMISSION STANDARDS FOR  
 NMHC, CO, AND NO<sub>x</sub>; FROM LIGHT-DUTY  
 TRUCKS OF UP TO 6,000 LBS. GVWR  
 AND LIGHT-DUTY VEHICLES

Vehicle type	Column A			Column B		
	(5 yrs/50,000 mi)			(10 yrs/100,000 mi)		
	NMHC	CO	NO <sub>x</sub>	NMHC	CO	NO <sub>x</sub>
LDTs (0-3,750 lbs. LVW) and light-duty vehicles.....	0.25	3.4	0.4*	0.31	4.2	0.6*
LDTs (3,751-5,750 lbs. LVW) .....	0.32	4.4	0.7**	0.40	5.5	0.97

Standards are expressed in grams per mile (gpm).

For standards under column A, for purposes of certification under section 206, the applicable useful life shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs.

For standards under column B, for purposes of certification under section 206, the applicable useful life shall be 10 years or 100,000 miles (or the equivalent), whichever first occurs.

\*In the case of diesel-fueled LDTs (0-3,750 lvw) and light-duty vehicles, before the model year 2004, in lieu of the 0.4 and 0.6 standards for NO<sub>x</sub> the applicable standards for NO<sub>x</sub> shall be 1.0 gpm for a useful life of 5 years or 50,000 miles (or the

App. 182

equivalent), whichever first occurs, and 1.25 gpm for a useful life of 10 years or 100,000 miles (or the equivalent) whichever first occurs.

\*\*This standard does not apply to diesel-fueled LDTs (3,751-5,750 lbs. LVW).

IMPLEMENTATION SCHEDULE  
FOR TABLE G STANDARD

Model year	Percentage*
1994.....	40
1995.....	80
after 1995.....	100

\*Percentages in the table refer to a percentage of each manufacturer's sales volume.

(2) PM Standard. Effective with respect to model year 1994 and thereafter in the case of light-duty vehicles and effective with respect to the model year 1995 and thereafter in the case of light-duty trucks (LDTs) of up to 6,000 lbs. gross vehicle weight rating (GVWR), the regulations under subsection (a) applicable to emissions of particulate matter (PM) from such vehicles and trucks shall contain standards which provide that such emissions from a percentage of each manufacturer's sales volume of such vehicles and trucks shall not exceed the levels specified in the table below. The percentage shall be as specified in the Implementation Schedule below.

App. 183

PM STANDARD FOR LDTs  
OF UP TO 6,000 LBS. GVWR

Usual life period	Standard
5/50,000.....	0.08 gpm
10/10,000.....	0.10 gpm

The applicable useful life, for purposes of certification under section 206 and for purposes of in-use compliance under section 207, shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs, in the case of the 5/50,000 standard.

The applicable useful life, for purposes of certification under section 206 and for purposes of in-use compliance under section 207, shall be 10 years or 100,000 miles (or the equivalent), whichever first occurs in the case of the 10/100,000 standard.

IMPLEMENTATION SCHEDULE  
FOR PM STANDARDS

Model year	Light-duty vehicles	LDTs
1994.....	40%*	
1995.....	80%*	40%*
1996.....	100%*	80%*
after 1996.....	100%*	100%*

\*Percentages in the table refer to a percentage of each manufacturer's sales volume.

App. 184

(h) Light-duty trucks of more than 6,000 lbs. GVWR; standards for model years after 1995. Effective with respect to the model year 1996 and thereafter, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC), carbon monoxide (CO), oxides of nitrogen (NO[X]), and particulate matter (PM) from light-duty trucks (LDTs) of more than 6,000 lbs. gross vehicle weight rating (GVWR) shall contain standards which provide that emissions from a specified percentage of each manufacturer's sales volume of such trucks shall comply with the levels specified in table H. The specified percentage shall be 50 percent in model year 1996 and 100 percent thereafter.

TABLE H. EMISSION STANDARDS  
FOR NMHC AND CO FROM GASOLINE  
AND DIESEL FUELED LIGHT-DUTY TRUCKS  
OF MORE THAN 6,000 LBS. GVWR

LDT Test Weight	Column A			Column B			
	(5 yrs/50,000 mi)			(11 yrs/120,000 mi)			
	NMHC	CO	NO <sub>x</sub>	NMHC	CO	NO <sub>x</sub>	PM
3,751-5,750 lbs. TW .....	0.32	4.4	0.7*	0.46	6.4	0.98	0.10
Over 5,750 lbs. TW .....	0.39	5.0	1.1*	0.56	7.3	1.53	0.12

Standards are expressed in grams per mile (gpm).

App. 185

For standards under column A, for purposes of certification under section 206, the applicable useful life shall be 5 years or 50,000 miles (or the equivalent), whichever first occurs.

For standards under column B, for purposes of certification under section 206, the applicable useful life shall be 11 years or 120,000 miles (or the equivalent), whichever first occurs.

\*Not applicable to diesel-fueled LDTs.

(i) Phase II study for certain light-duty vehicles and light-duty trucks.

(1) The Administrator, with the participation of the Office of Technology Assessment, shall study whether or not further reductions in emissions from light-duty vehicles and light-duty trucks should be required pursuant to this title. The study shall consider whether to establish with respect to model years commencing after January 1, 2003, the standards and useful life period for gasoline and diesel-fueled light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less specified in the following table:

App. 186

TABLE 3. PENDING EMISSION STANDARDS  
FOR GASOLINE AND DIESEL FUELED  
LIGHT-DUTY VEHICLES AND LIGHT-DUTY  
TRUCKS 3,750 LBS. LVW OR LESS

Pollutant	Emission Level*
NMHC .....	0.125 GPM
NO <sub>x</sub> .....	0.2 GPM
CO .....	1.7 GPM

\*Emission levels are expressed in grams per mile (GPM). For vehicles and engines subject to this subsection for purposes of section 202(d) and any reference thereto, the useful life of such vehicles and engines shall be a period of 10 years or 100,000 miles (or the equivalent), whichever first occurs.

Such study shall also consider other standards and useful life periods which are more stringent or less stringent than those set forth in table 3 (but more stringent than those referred to in subsections (g) and (h)).

(2) (A) As part of the study under paragraph (1), the Administrator shall examine the need for further reductions in emissions in order to attain or maintain the national ambient air quality standards, taking into consideration the waiver provisions of section 209(b) [42 USCS § 7543(b)]. As part of such study, the Administrator shall also examine –

(i) the availability of technology (including the costs thereof), in the case of light-duty

App. 187

vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less, for meeting more stringent emission standards than those provided in subsections (g) and (h) for model years commencing not earlier than after January 1, 2003, and not later than model year 2006, including the lead time and safety and energy impacts of meeting more stringent emission standards; and

(ii) the need for, and cost effectiveness of, obtaining further reductions in emissions from such light-duty vehicles and light-duty trucks, taking into consideration alternative means of attaining or maintaining the national primary ambient air quality standards pursuant to State implementation plans and other requirements of this Act, including their feasibility and cost effectiveness.

(B) The Administrator shall submit a report to Congress no later than June 1, 1997, containing the results of the study under this subsection, including the results of the examination conducted under subparagraph (A). Before submittal of such report the Administrator shall provide a reasonable opportunity for public comment and shall include a summary of such comments in the report to Congress.

(3) (A) Based on the study under paragraph (1) the Administrator shall determine, by rule, within 3 calendar years after the report is submitted to Congress, but not later than December 31, 1999, whether –

App. 188

(i) there is a need for further reductions in emissions as provided in paragraph (2)(A);

(ii) the technology for meeting more stringent emission standards will be available, as provided in paragraph (2)(A)(i), in the case of light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); and

(iii) obtaining further reductions in emissions from such vehicles will be needed and cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii).

The rulemaking under this paragraph shall commence within 3 months after submission of the report to Congress under paragraph (2)(B).

(B) If the Administrator determines under subparagraph (A) that –

(i) there is no need for further reductions in emissions as provided in paragraph (2)(A);

(ii) the technology for meeting more stringent emission standards will not be available as provided in paragraph (2)(A)(i), in the case of light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less, for model years commencing not earlier than January 1,

App. 189

2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); or

(iii) obtaining further reductions in emissions from such vehicles will not be needed or cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii), the Administrator shall not promulgate more stringent standards than those in effect pursuant to subsections (g) and (h). Nothing in this paragraph shall prohibit the Administrator from exercising the Administrator's authority under subsection (a) to promulgate more stringent standards for light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less at any other time thereafter in accordance with subsection (a).

(C) If the Administrator determines under subparagraph (A) that –

(i) there is a need for further reductions in emissions as provided in paragraph (2)(A);

(ii) the technology for meeting more stringent emission standards will be available, as provided in paragraph (2)(A)(i), in the case of light-duty vehicles and light-duty trucks with a loaded vehicle weight (LVW) of 3,750 lbs. or less, for model years commencing not earlier than January 1, 2003, and not later than model year 2006, considering the factors listed in paragraph (2)(A)(i); and

## App. 190

(iii) obtaining further reductions in emissions from such vehicles will be needed and cost effective, taking into consideration alternatives as provided in paragraph (2)(A)(ii), the Administrator shall either promulgate the standards (and useful life periods) set forth in Table 3 in paragraph (1) or promulgate alternative standards (and useful life periods) which are more stringent than those referred to in subsections (g) and (h). Any such standards (or useful life periods) promulgated by the Administrator shall take effect with respect to any such vehicles or engines no earlier than the model year 2003 but not later than model year 2006, as determined by the Administrator in the rule.

(D) Nothing in this paragraph shall be construed by the Administrator or by a court as a presumption that any standards (or useful life period) set forth in Table 3 shall be promulgated in the rule-making required under this paragraph. The action required of the Administrator in accordance with this paragraph shall be treated as a nondiscretionary duty for purposes of section 304(a)(2) [42 USCS § 7604(a)(2)] (relating to citizen suits).

(E) Unless the Administrator determines not to promulgate more stringent standards as provided in subparagraph (B) or to postpone the effective date of standards referred to in Table 3 in paragraph (1) or to establish alternative standards as provided in subparagraph (C), effective with respect to model years commencing after January 1,

## App. 191

2003, the regulations under subsection (a) applicable to emissions of nonmethane hydrocarbons (NMHC), oxides of nitrogen (NO[X]), and carbon monoxide (CO) from motor vehicles and motor vehicle engines in the classes specified in Table 3 in paragraph (1) above shall contain standards which provide that emissions may not exceed the pending emission levels specified in Table 3 in paragraph (1).

(j) Cold CO standards.

(1) Phase I. Not later than 12 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 5, 1990], the Administrator shall promulgate regulations under subsection (a) of this section applicable to emissions of carbon monoxide from 1994 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit. The regulations shall contain standards which provide that emissions of carbon monoxide from a manufacturer's vehicles when operated at 20 degrees Fahrenheit may not exceed, in the case of light-duty vehicles, 10.0 grams per mile, and in the case of light-duty trucks, a level comparable in stringency to the standard applicable to light-duty vehicles. The standards shall take effect after model year 1993 according to a phase-in schedule which requires a percentage of each manufacturer's sales volume of light-duty vehicles and light-duty trucks to comply with applicable standards after model year 1993. The percentage shall be as specified in the following table:

App. 192

PHASE-IN SCHEDULE FOR  
COLD START STANDARDS

Model year	Percentage
1994.....	40
1995.....	80
1996 and after.....	100

(2) Phase II.

(A) Not later than June 1, 1997, the Administrator shall complete a study assessing the need for further reductions in emissions of carbon monoxide and the maximum reductions in such emissions achievable from model year 2001 and later model year light-duty vehicles and light-duty trucks when operated at 20 degrees Fahrenheit.

(B) (i) If as of June 1, 1997, 6 or more nonattainment areas have a carbon monoxide design value of 9.5 ppm or greater, the regulations under subsection (a)(1) of this section applicable to emissions of carbon monoxide from model year 2002 and later model year light-duty vehicles and light-duty trucks shall contain standards which provide that emissions of carbon monoxide from such vehicles and trucks when operated at 20 degrees Fahrenheit may not exceed 3.4 grams per mile (gpm) in the case of light-duty vehicles and 4.4 grams per mile (gpm) in the case of light-duty trucks up to 6,000 GVWR and a level comparable in stringency in the case of light-duty trucks 6,000 GVWR and above.

App. 193

(ii) In determining for purposes of this subparagraph whether 6 or more nonattainment areas have a carbon monoxide design value of 9.5 ppm or greater, the Administrator shall exclude the areas of Steubenville, Ohio, and Oshkosh, Wisconsin.

(3) Useful-life for phase I and phase II standards. In the case of the standards referred to in paragraphs (1) and (2), for purposes of certification under section 206 [42 USCS § 7525] and in-use compliance under section 207 [42 USCS § 7541], the applicable useful life period shall be 5 years or 50,000 miles, whichever first occurs, except that the Administrator may extend such useful life period (for purposes of section 206, or section 207 [42 USCS § 7525 or § 7541], or both) if he determines that it is feasible for vehicles and engines subject to such standards to meet such standards for a longer useful life. If the Administrator extends such useful life period, the Administrator may make an appropriate adjustment of applicable standards for such extended useful life. No such extended useful life shall extend beyond the useful life period provided in regulations under subsection (d).

(4) Heavy-duty vehicles and engines. The Administrator may also promulgate regulations under subsection (a)(1) applicable to emissions of carbon monoxide from heavy-duty vehicles and engines when operated at cold temperatures.

(k) Control of evaporative emissions. The Administrator shall promulgate (and from time

App. 194

to time revise) regulations applicable to evaporative emissions of hydrocarbons from all gasoline-fueled motor vehicles –

- (1) during operation; and
- (2) over 2 or more days of nonuse;

under ozone-prone summertime conditions (as determined by regulations of the Administrator). The regulations shall take effect as expeditiously as possible and shall require the greatest degree of emission reduction achievable by means reasonably expected to be available for production during any model year to which the regulations apply, giving appropriate consideration to fuel volatility, and to cost, energy, and safety factors associated with the application of the appropriate technology. The Administrator shall commence a rulemaking under this subsection within 12 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990]. If final regulations are not promulgated under this subsection within 18 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall submit a statement to the Congress containing an explanation of the reasons for the delay and a date certain for promulgation of such final regulations in accordance with this Act. Such date certain shall not be later than 15 months after the expiration of such 18 month deadline.

App. 195

(1) Mobile source-related air toxics.

(1) Study. Not later than 18 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall complete a study of the need for, and feasibility of, controlling emissions of toxic air pollutants which are unregulated under this Act and associated with motor vehicles and motor vehicle fuels, and the need for, and feasibility of, controlling such emissions and the means and measures for such controls. The study shall focus on those categories of emissions that pose the greatest risk to human health or about which significant uncertainties remain, including emissions of benzene, formaldehyde, and 1, 3 butadiene. The proposed report shall be available for public review and comment and shall include a summary of all comments.

(2) Standards. Within 54 months after the date of the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall, based on the study under paragraph (1), promulgate (and from time to time revise) regulations under subsection (a)(1) or section 211(c)(1) [42 USCS § 7545(c)(1)] containing reasonable requirements to control hazardous air pollutants from motor vehicles and motor vehicle fuels. The regulations shall contain standards for such fuels or vehicles, or both, which the Administrator determines reflect the greatest degree of emission reduction achievable through the application of technology which will be available,

App. 196

taking into consideration the standards established under subsection (a), the availability and costs of the technology, and noise, energy, and safety factors, and lead time. Such regulations shall not be inconsistent with standards under section 202(a) [subsec. (a) of this section]. The regulations shall, at a minimum, apply to emissions of benzene and formaldehyde.

(m) Emissions control diagnostics.

(1) Regulations. Within 18 months after the enactment of the Clean Air Act Amendments of 1990 [enacted Nov. 15, 1990], the Administrator shall promulgate regulations under subsection (a) requiring manufacturers to install on all new light duty vehicles and light duty trucks diagnostics [sic] systems capable of –

(A) accurately identifying for the vehicle's useful life as established under this section, emission-related systems deterioration or malfunction, including, at a minimum, the catalytic converter and oxygen sensor, which could cause or result in failure of the vehicles to comply with emission standards established under this section,

(B) alerting the vehicle's owner or operator to the likely need for emission-related components or systems maintenance or repair,

(C) storing and retrieving fault codes specified by the Administrator, and

(D) providing access to stored information in a manner specified by the Administrator.

App. 197

The Administrator may, in the Administrator's discretion, promulgate regulations requiring manufacturers to install such onboard diagnostic systems on heavy-duty vehicles and engines.

(2) Effective date. The regulations required under paragraph (1) of this subsection shall take effect in model year 1994, except that the Administrator may waive the application of such regulations for model year 1994 or 1995 (or both) with respect to any class or category of motor vehicles if the Administrator determines that it would be infeasible to apply the regulations to that class or category in such model year or years, consistent with corresponding regulations or policies adopted by the California Air Resources Board for such systems.

(3) State inspection. The Administrator shall by regulation require States that have implementation plans containing motor vehicle inspection and maintenance programs to amend their plans within 2 years after promulgation of such regulations to provide for inspection of onboard diagnostics systems (as prescribed by regulations under paragraph (1) of this subsection) and for the maintenance or repair of malfunctions or system deterioration identified by or affecting such diagnostics systems. Such regulations shall not be inconsistent with the provisions for warranties promulgated under section 207(a) and (b) [42 USCS § 7541(a),(b)].

App. 198

(4) Specific requirements. In promulgating regulations under this subsection, the Administrator shall require –

(A) that any connectors through which the emission control diagnostics system is accessed for inspection, diagnosis, service, or repair shall be standard and uniform on all motor vehicles and motor vehicle engines;

(B) that access to the emission control diagnostics system through such connectors shall be unrestricted and shall not require any access code or any device which is only available from a vehicle manufacturer; and

(C) that the output of the data from the emission control diagnostics system through such connectors shall be usable without the need for any unique decoding information or device.

(5) Information availability. The Administrator, by regulation, shall require (subject to the provisions of section 208(c) [42 USCS § 7542(c)] regarding the protection of methods or processes entitled to protection as trade secrets) manufacturers to provide promptly to any person engaged in the repairing or servicing of motor vehicles or motor vehicle engines, and the Administrator for use by any such persons, with any and all information needed to make use of the emission control diagnostics system prescribed under this subsection and such other information including instructions for making emission related diagnosis and repairs. No such information may be

App. 199

withheld under section [sic] 208(c) [42 USCS § 7542(c)] if that information is provided (directly or indirectly) by the manufacturer to franchised dealers or other persons engaged in the repair, diagnosing, or servicing of motor vehicles or motor vehicle engines.

Such information shall also be available to the Administrator, subject to section 208(c) [42 USCS § 7542(c)], in carrying out the Administrator's responsibilities under this section.

[(n)](f) Model years after 1990. For model years prior to model year 1994, the regulations under section 202(a) [subsec. (a) of this section] applicable to buses other than those subject to standards under section 219 [42 USCS § 7554] shall contain a standard which provides that emissions of particulate matter (PM) from such buses may not exceed the standards set forth in the following table:

PM STANDARD FOR BUSES

Model year	Standard*
1991.....	0.25
1992.....	0.25
1993 and thereafter.....	0.10

\*Standards are expressed in grams per brake horsepower hour (g/bhp/hr).

TITLE 42. THE PUBLIC HEALTH AND WELFARE  
CHAPTER 85. AIR POLLUTION PREVENTION  
AND CONTROL GENERAL PROVISIONS

**Go to the United States Code  
Service Archive Directory**

42 USCS § 7607

§ 7607. Administrative proceedings and judicial review

(a) Administrative subpoenas; confidentiality; witnesses. In connection with any determination under section 110(f) [42 USCS § 7410(f)], or for purposes of obtaining information under section 202(b)(4) or 211(c)(3) [42 USCS § 7521(b)(4) or 7545(c)(3)], any investigation, monitoring, reporting requirement, entry, compliance inspection, or administrative enforcement proceeding under the [this] Act (including but not limited to section 113, section 114, section 120, section 129, section 167, section 205, section 206, section 208, section 303, or section 306 [42 USCS § 7413, 7414, 7420, 7429, 7477, 7524, 7525, 7542, 7603, or 7606][,], the Administrator may issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books, and documents, and he may administer oaths. Except for emission data, upon a showing satisfactory to the Administrator by such owner or operator that such papers, books, documents, or information or particular part thereof, if made public, would divulge trade secrets or secret processes of such owner or operator,

## App. 201

the Administrator shall consider such record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code, except that such paper, book, document, or information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act, to persons carrying out the National Academy of Sciences' study and investigation provided for in section 202(c) [42 USCS § 7521(c)], or when relevant in any proceeding under this Act. Witnesses summoned shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. In case of contumacy or refusal to obey a subpoena served upon any person under this subparagraph, the district court of the United States for any district in which such person is found or resides or transacts business, upon application by the United States and after notice to such person, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the Administrator to appear and produce papers, books, and documents before the Administrator, or both, and any failure to obey such order of the court may be punished by such court as a contempt thereof.

(b) Judicial review.

(1) A petition for review of action of the Administrator in promulgating any national primary or secondary ambient air quality standard, any emission standard or requirement under section 112 [42 USCS § 7412], any standard of performance or requirement

## App. 202

under section 111 [42 USCS § 7411][,], any standard under section 202 [42 USCS § 7521] (other than a standard required to be prescribed under section 202(b)(1) [42 USCS § 7521(b)(1)]), any determination under section 202(b)(5) [42 USCS § 7521(b)(5)], any control or prohibition under section 211 [42 USCS § 7545], any standard under section 231 [42 USCS § 7571] any rule issued under section 113, 119, or under section 120 [42 USCS § 7413, 7419, or 7420], or any other nationally applicable regulations promulgated, or final action taken, by the Administrator under this Act may be filed only in the United States Court of Appeals for the District of Columbia. A petition for review of the Administrator's action in approving or promulgating any implementation plan under section 110 or section 111(d) [42 USCS § 7410 or 7411(d)], any order under section 111(j) [42 USCS § 7411(j)], under section 112 [42 USCS § 7412][,], under section 119 [42 USCS § 7419], or under section 120 [42 USCS § 7420], or his action under section 119(c)(2)(A), (B), or (C) (as in effect before the date of enactment of the Clean Air Act Amendments of 1977) or under regulations thereunder, or revising regulations for enhanced monitoring and compliance certification programs under section 114(a)(3) of this Act, or any other final action of the Administrator under this Act (including any denial or disapproval by the Administrator under title I [42 USCS §§ 7401 et seq.]) which is locally or regionally applicable may be filed only in the United States Court of Appeals for the appropriate circuit. Notwithstanding the preceding sentence a petition for review of any action referred to

## App. 203

in such sentence may be filed only in the United States Court of Appeals for the District of Columbia if such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination. Any petition for review under this subsection shall be filed within sixty days from the date notice of such promulgation, approval, or action appears in the Federal Register, except that if such petition is based solely on grounds arising after such sixtieth day, then any petition for review under this subsection shall be filed within sixty days after such grounds arise. The filing of a petition for reconsideration by the Administrator of any otherwise final rule or action shall not affect the finality of such rule or action for purposes of judicial review nor extend the time within which a petition for judicial review of such rule or action under this section may be filed, and shall not postpone the effectiveness of such rule or action.

(2) Action of the Administrator with respect to which review could have been obtained under paragraph (1) shall not be subject to judicial review in civil or criminal proceedings for enforcement. Where a final decision by the Administrator defers performance of any nondiscretionary statutory action to a later time, any person may challenge the deferral pursuant to paragraph (1).

(c) Additional evidence. In any judicial proceeding in which review is sought of a determination under this Act required to be made on the record after notice and

App. 204

opportunity for hearing, if any party applies to the court for leave to adduce additional evidence, and shows to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the proceeding before the Administrator, the court may order such additional evidence (and evidence in rebuttal thereof) to be taken before the Administrator, in such manner and upon such terms and conditions as [to] the court may deem proper. The Administrator may modify his findings as to the facts, or make new findings, by reason of the additional evidence so taken and he shall file such modified or new findings, and his recommendation, if any, for the modification or setting aside of his original determination, with the return of such additional evidence.

(d) Rulemaking.

(1) This subsection applies to –

(A) the promulgation or revision of any national ambient air quality standard under section 109 [42 USCS § 7409],

(B) the promulgation or revision of an implementation plan by the Administrator under section 110(c) [42 USCS § 7410(c)],

(C) the promulgation or revision of any standard of performance under section 111 [42 USCS § 7411], or emission standard or limitation under section 112(d) [42 USCS § 7412(d)], any standard under section 112(f) [42 USCS § 7412(f)], or any

App. 205

regulation under section 112(g)(1)(D) and (F) [42 USCS§ 7412(g)(1)(D),(F)], or any regulation under section 112(m) or (n) [42 USCS § 7412(m) or (n)],

(D) the promulgation of any requirement for solid waste combustion under section 129 [42 USCS § 7429],

(E) the promulgation or revision of any regulation pertaining to any fuel or fuel additive under section 211 [42 USCS § 7545],

(F) the promulgation or revision of any aircraft emission standard under section 231 [42 USCS § 7571],

(G) the promulgation or revision of any regulation under title IV (relating to control of acid deposition),

(H) promulgation or revision of regulations pertaining to primary nonferrous smelter orders under section 119 [42 USCS § 7419] (but not including the granting or denying of any such order),

(I) promulgation or revision of regulations under title VI [42 USCS §§ 7671 et seq.] (relating to stratosphere and ozone protection),

(J) promulgation or revision of regulations under subtitle C of title I [42 USCS §§ 7470 et seq.] (relating to prevention of significant deterioration of air quality and protection of visibility),

App. 206

(K) promulgation or revision of regulations under section 202 [42 USCS § 7521] and test procedures for new motor vehicles or engines under section 206 [42 USCS § 7525], and the revision of a standard under section 202(a)(3) [42 USCS § 7521(a)(3)],

(L) promulgation or revision of regulations for noncompliance penalties under section 120 [42 USCS § 7420],

(M) promulgation or revision of any regulations promulgated under section 207 [42 USCS § 7541] (relating to warranties and compliance by vehicles in actual use),

(N) action of the Administrator under section 126 [42 USCS § 7426] (relating to interstate pollution abatement),

(O) the promulgation or revision of any regulation pertaining to consumer and commercial products under section 183(e) [42 USCS § 7511b(e)],

(P) the promulgation or revision of any regulation pertaining to field citations under section 113(d)(3) [42 USCS § 7413(d)(3)],

(Q) the promulgation or revision of any regulation pertaining to urban buses or the clean-fuel vehicle, clean-fuel fleet, and clean fuel programs under part C of title II [42 USCS §§ 7581 et seq.],

(R) the promulgation or revision of any regulation pertaining to nonroad engines or nonroad vehicles under section 213 [42 USCS § 7547],

App. 207

(S) the promulgation or revision of any regulation relating to motor vehicle compliance program fees under section 217 [42 USCS § 7552],

(T) the promulgation or revision of any regulation under title IV [42 USCS §§ 7641 et seq.] (relating to acid deposition),

(U) the promulgation or revision of any regulation under section 183(f) [42 USCS § 7511b(f)] pertaining to marine vessels, and

(V) such other actions as the Administrator may determine.

The provisions of section 553 through 557 and section 706 of title 5 of the United States Code shall not, except as expressly provided in this subsection, apply to actions to which this subsection applies. This subsection shall not apply in the case of any rule or circumstance referred to in subparagraphs (A) or (B) of subsection 553(b) of title 5 of the United States Code.

(2) Not later than the date of proposal of any action to which this subsection applies, the Administrator shall establish a rulemaking docket for such action (hereinafter in this subsection referred to as a “rule”). Whenever a rule applies only within a particular State, a second (identical) docket shall be simultaneously established in the appropriate regional office of the Environmental Protection Agency.

(3) In the case of any rule to which this subsection applies, notice of proposed rulemaking shall be

App. 208

published in the Federal Register, as provided under section 553(b) of title 5, United States Code, shall be accompanied by a statement of its basis and purpose and shall specify the period available for public comment (hereinafter referred to as the “comment period”). The notice of proposed rulemaking shall also state the docket number, the location or locations of the docket, and the times it will be open to public inspection. The statement of basis and purpose shall include a summary of –

(A) the factual data on which the proposed rule is based;

(B) the methodology used in obtaining the data and in analyzing the data; and

(C) the major legal interpretations and policy considerations underlying the proposed rule.

The statement shall also set forth or summarize and provide a reference to any pertinent findings, recommendations, and comments by the Scientific Review Committee established under section 109(d) [42 USCS § 7409(d)] and the National Academy of Sciences, and, if the proposal differs in any important respect from any of these recommendations, an explanation of the reasons for such differences. All data, information, and documents referred to in this paragraph on which the proposed rule relies shall be included in the docket on the date of publication of the proposed rule.

App. 209

(4)(A) The rulemaking docket required under paragraph (2) shall be open for inspection by the public at reasonable times specified in the notice of proposed rulemaking. Any person may copy documents contained in the docket. The Administrator shall provide copying facilities which may be used at the expense of the person seeking copies, but the Administrator may waive or reduce such expenses in such instances as the public interest requires. Any person may request copies by mail if the person pays the expenses, including personnel costs to do the copying.

(B)(i) Promptly upon receipt by the agency, all written comments and documentary information on the proposed rule received from any person for inclusion in the docket during the comment period shall be placed in the docket. The transcript of public hearings, if any, on the proposed rule shall also be included in the docket promptly upon receipt from the person who transcribed such hearings. All documents which become available after the proposed rule has been published and which the Administrator determines are of central relevance to the rulemaking shall be placed in the docket as soon as possible after their availability.

(ii) The drafts of proposed rules submitted by the Administrator to the Office of Management and Budget for any interagency review process prior to proposal of any such rule, all documents accompanying such drafts, and all written comments thereon by other agencies and all written responses to such

## App. 210

written comments by the Administrator shall be placed in the docket no later than the date of proposal of the rule. The drafts of the final rule submitted for such review process prior to promulgation and all such written comments thereon, all documents accompanying such drafts, and written responses thereto shall be placed in the docket no later than the date of promulgation.

(5) In promulgating a rule to which this subsection applies (i) the Administrator shall allow any person to submit written comments, data, or documentary information; (ii) the Administrator shall give interested persons an opportunity for the oral presentation of data, views, or arguments, in addition to an opportunity to make written submissions; (iii) a transcript shall be kept of any oral presentation; and (iv) the Administrator shall keep the record of such proceeding open for thirty days after completion of the proceeding to provide an opportunity for submission of rebuttal and supplementary information.

(6)(A) The promulgated rule shall be accompanied by (i) a statement of basis and purpose like that referred to in paragraph (3) with respect to a proposed rule and (ii) an explanation of the reasons for any major changes in the promulgated rule from the proposed rule.

(B) The promulgated rule shall also be accompanied by a response to each of the significant comments, criticisms, and new data submitted in written or oral presentations during the comment period.

App. 211

(C) The promulgated rule may not be based (in part or whole) on any information or data which has not been placed in the docket as of the date of such promulgation.

(7)(A) The record for judicial review shall consist exclusively of the material referred to in paragraph (3), clause (i) of paragraph (4)(B), and subparagraphs (A) and (B) of paragraph (6).

(B) Only an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment (including any public hearing) may be raised during judicial review. If the person raising an objection can demonstrate to the Administrator that it was impracticable to raise such objection within such time or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule, the Administrator shall convene a proceeding for reconsideration of the rule and provide the same procedural rights as would have been afforded had the information been available at the time the rule was proposed. If the Administrator refuses to convene such a proceeding, such person may seek review of such refusal in the United States court of appeals for the appropriate circuit (as provided in subsection (b)). Such reconsideration shall not postpone the effectiveness of the rule. The effectiveness of the rule may be stayed during such reconsideration, however, by the Administrator or the court for a period not to exceed three months.

App. 212

(8) The sole forum for challenging procedural determinations made by the Administrator under this subsection shall be in the United States court of appeals for the appropriate circuit (as provided in subsection (b)) at the time of the substantive review of the rule. No interlocutory appeals shall be permitted with respect to such procedural determinations. In reviewing alleged procedural errors, the court may invalidate the rule only if the errors were so serious and related to matters of such central relevance to the rule that there is a substantial likelihood that the rule would have been significantly changed if such errors had not been made.

(9) In the case of review of any action of the Administrator to which this subsection applies, the court may reverse any such action found to be –

(A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law;

(B) contrary to constitutional right, power, privilege, or immunity;

(C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right; or

(D) without observance of procedure required by law, if (i) such failure to observe such procedure is arbitrary or capricious, (ii) the requirement of paragraph (7)(B) has been met, and (iii) the condition of the last sentence of paragraph (8) is met.

App. 213

(10) Each statutory deadline for promulgation of rules to which this subsection applies which requires promulgation less than six months after date of proposal may be extended to not more than six months after date of proposal by the Administrator upon a determination that such extension is necessary to afford the public, and the agency, adequate opportunity to carry out the purposes of this subsection.

(11) The requirements of this subsection shall take effect with respect to any rule the proposal of which occurs after ninety days after the date of enactment of the Clean Air Act Amendments of 1977 [enacted Aug. 7, 1977].

(e) Other methods of judicial review not authorized. Nothing in this Act shall be construed to authorize judicial review of regulations or orders of the Administrator under this Act, except as provided in this section.

(f) Costs. In any judicial proceeding under this section, the court may award costs of litigation (including reasonable attorney and expert witness fees) whenever it determines that such award is appropriate.

(g) Stay, injunction, or similar relief in proceedings relating to noncompliance penalties. In any action respecting the promulgation of regulations under section 120 [42 USCS § 7420] or the administration or enforcement of section 120 [42 USCS § 7420] no

App. 214

court shall grant any stay, injunctive, or similar relief before final judgment by such court in such action.

(h) **Public Participation.** It is the intent of Congress that, consistent with the policy of the Administrative Procedures Act [5 USCS §§ 551 et seq.], the Administrator in promulgating any regulation under this Act, including a regulation subject to a deadline, shall ensure a reasonable period for public participation of at least 30 days, except as otherwise expressly provided in section [sections] 107(d), 172(a), 181(a) and (b), and 186(a) and (b) [42 USCS § 7407(d), 7502(a), 7511(a) and (b), 7512(a) and (b)].

Thank you, Ted. It would be much appreciated if any other parties that

have filed cert petitions so far could send around electronic copies (of the petition(s), not appendices).

## QUESTIONS PRESENTED

After this Court decided *Massachusetts v. EPA*, 549 U.S. 497 (2007), the Environmental Protection Agency (EPA) found that its promulgation of motor vehicle greenhouse gas (GHG) emission standards under Title II of the Clean Air Act (CAA), 42 U.S.C. § 7521(a)(1), compelled regulation of carbon dioxide and other GHGs under the CAA's Title I prevention of significant deterioration (PSD) and Title V stationary-source permitting programs. Even though EPA determined that including GHGs in these programs would vastly expand the programs contrary to Congress's intent, EPA adopted rules adding GHGs to the pollutants covered. The panel below held the CAA and *Massachusetts* compelled inclusion of GHGs and, based on that holding, dismissed all petitions to review the GHG permitting program rules on standing grounds. The questions presented are:

1. Whether *Massachusetts* compelled EPA to include GHGs in the PSD and Title V programs when inclusion of GHGs would (i) transform the size and scope of these programs into something that EPA found would be “unrecognizable to ... Congress,” Petition Appendix 345a, 380a, and (ii) expand the PSD program to cover a substance that does not deteriorate the quality of the air that people breathe.

2. Whether dismissal of the petitions to review EPA's GHG permit-program rules was inconsistent with this Court's standing jurisprudence where the panel premised its holding that standing was absent on its merits holding that GHGs are regulated “pursuant to automatic operation of the CAA.” *Id.* at 96a.

## PARTIES TO THE PROCEEDING

The following were parties to the proceedings in the U.S. Court of Appeals for the District of Columbia Circuit:

### **Challenges to 75 Fed. Reg. 17,004 (Apr. 2, 2010) (the “Timing Rule”):**

1. The Utility Air Regulatory Group, petitioner on review, was a petitioner below.

2. The United States Environmental Protection Agency, respondent on review, was a respondent below.

3. Additional petitioners below, who are nominal respondents on review, were Coalition for Responsible Regulation, Inc.; Industrial Minerals Association – North America; National Cattlemen’s Beef Association; Great Northern Project Development, L.P.; Rosebud Mining Co.; Alpha Natural Resources, Inc.; Southeastern Legal Foundation, Inc.; The Langdale Company; Langdale Forest Products Company; Langdale Farms, LLC; Langdale Fuel Company; Langdale Chevrolet-Pontiac, Inc.; Langdale Ford Company; Langboard, Inc. – MDF; Langboard, Inc. – OSB; Georgia Motor Trucking Association, Inc.; Collins Industries, Inc.; Collins Trucking Company, Inc.; Kennesaw Transportation, Inc.; J&M Tank Lines, Inc.; Southeast Trailer Mart, Inc.; Georgia Agribusiness Council, Inc.; John Linder, U.S. Representative, Georgia 7<sup>th</sup> District; Dana Rohrabacher, U.S. Representative, California 46<sup>th</sup> District; John Shimkus, U.S. Representative, Illinois 19<sup>th</sup> District; Phil Gingrey, U.S. Representative, Georgia 11<sup>th</sup> District; Lynn Westmoreland, U.S. Representative, Georgia 3<sup>rd</sup> District; Tom Price, U.S. Representative, Georgia 6<sup>th</sup> District; Paul Broun, U.S. Representative, Geor-

gia 10<sup>th</sup> District; Steve King, U.S. Representative, Iowa 5<sup>th</sup> District; Nathan Deal, U.S. Representative, Georgia 9<sup>th</sup> District; Jack Kingston, U.S. Representative, Georgia 1<sup>st</sup> District; Michele Bachmann, U.S. Representative, Minnesota 6<sup>th</sup> District; Kevin Brady, U.S. Representative, Texas 8<sup>th</sup> District; John Shadegg, U.S. Representative, Arizona 3<sup>rd</sup> District; Marsha Blackburn, U.S. Representative, Tennessee 7<sup>th</sup> District; Dan Burton, U.S. Representative, Indiana 5<sup>th</sup> District; Clean Air Implementation Project; American Iron and Steel Institute; Gerdau Ameristeel US Inc.; Energy-Intensive Manufacturers' Working Group on Greenhouse Gas Regulation; Peabody Energy Company; American Farm Bureau Federation; National Mining Association; Chamber of Commerce of the United States of America; Missouri Joint Municipal Electric Utility Commission; National Environmental Development Association's Clean Air Project; Ohio Coal Association; National Association of Manufacturers; American Frozen Food Institute; American Petroleum Institute; Brick Industry Association; Corn Refiners Association; Glass Packaging Institute; Independent Petroleum Association of America; Indiana Cast Metals Association; Michigan Manufacturers Association; Mississippi Manufacturers Association; National Association of Home Builders; National Federation of Independent Business; National Oilseed Processors Association; National Petrochemical & Refiners Association; North American Die Casting Association; Specialty Steel Industry of North America; Tennessee Chamber of Commerce and Industry; Western States Petroleum Association; West Virginia Manufacturers Association; Wisconsin Manufacturers and Commerce; State of Texas; State of Alabama; State of South Carolina; State of South Dakota; State of Ne-

braska; State of North Dakota; Commonwealth of Virginia; Rick Perry, Governor of Texas; Greg Abbott; Attorney General of Texas; Texas Commission on Environmental Quality; Texas Agriculture Commission; Texas Public Utilities Commission; Texas Railroad Commission; Texas General Land Office; Haley Barbour, Governor of the State of Mississippi; and Portland Cement Association.

4. Petitioner-intervenors below (with respect to certain petitions for review), who are nominal respondents on review, were American Frozen Food Institute; American Fuel & Petrochemical Manufacturers; American Petroleum Institute; Corn Refiners Association; Glass Association of North America; Independent Petroleum Association of America; Indiana Cast Metals Association; Louisiana Department of Environmental Quality; Michigan Manufacturers Association; National Association Manufacturers; National Association of Home Builders; National Oilseed Processors Association; Tennessee Chamber of Commerce and Industry; Western States Petroleum Association; West Virginia Manufacturers Association; and Wisconsin Manufacturers & Commerce.

5. Respondent-intervenors below (with respect to certain petitions for review), who are respondents (or, in some cases, nominal respondents) on review, were American Farm Bureau Federation; Brick Industry Association; Center for Biological Diversity; Commonwealth of Massachusetts; Conservation Law Foundation; Environmental Defense Fund; Georgia ForestWatch; Indiana Wildlife Federation; Michigan Environmental Council; National Environmental Development Association's Clean Air Project; National Mining Association; Peabody Energy Company; Natural Resources Council of Maine; Natural Re-

v

sources Defense Council; Ohio Environmental Council; Sierra Club; South Coast Air Quality Management District; State of California; State of Illinois; State of Iowa; State of Maine; State of Maryland; State of New Hampshire; State of New Mexico; State of New York; State of North Carolina; State of Oregon; State of Rhode Island; Utility Air Regulatory Group; Wild Virginia.

6. A respondent below, who is a nominal respondent on review, was Lisa Perez Jackson, Administrator, United States Environmental Protection Agency. Ms. Jackson ceased to hold the office of Administrator, United States Environmental Protection Agency, on February 15, 2013; that office is currently held in an acting capacity by Robert Perciasepe, Acting Administrator, United States Environmental Protection Agency.

**Challenges to 75 Fed. Reg. 31,514 (June 3, 2010) (the “Tailoring Rule”):**

1. The Utility Air Regulatory Group, petitioner on review, was a petitioner below.

2. The United States Environmental Protection Agency, respondent on review, was a respondent below.

3. Additional petitioners below, who are nominal respondents on review, were Southeastern Legal Foundation, Inc.; John Linder, U.S. Representative, Georgia 7<sup>th</sup> District; Dana Rohrabacher, U.S. Representative, California 46<sup>th</sup> District; John Shimkus, U.S. Representative, Illinois 19<sup>th</sup> District; Phil Gingrey, U.S. Representative, Georgia 11<sup>th</sup> District; Lynn Westmoreland, U.S. Representative, Georgia 3<sup>rd</sup> District; Tom Price, U.S. Representative, Georgia 6<sup>th</sup> District; Paul Broun, U.S. Representative, Geor-

gia 10<sup>th</sup> District; Steve King, U.S. Representative, Iowa 5<sup>th</sup> District; Jack Kingston, U.S. Representative, Georgia 1<sup>st</sup> District; Michele Bachmann, U.S. Representative, Minnesota 6<sup>th</sup> District; Kevin Brady, U.S. Representative, Texas 8<sup>th</sup> District; John Shadegg, U.S. Representative, Arizona 3<sup>rd</sup> District; Marsha Blackburn, U.S. Representative, Tennessee 7<sup>th</sup> District; Dan Burton, U.S. Representative, Indiana 5<sup>th</sup> District; The Langdale Company; Langdale Forest Products Company; Langdale Farms, LLC; Langdale Fuel Company; Langdale Chevrolet-Pontiac, Inc.; Langdale Ford Company; Langboard, Inc. – MDF; Langboard, Inc. – OSB; Georgia Motor Trucking Association, Inc.; Collins Industries, Inc.; Collins Trucking Company, Inc.; Kennesaw Transportation, Inc.; J&M Tank Lines, Inc.; Southeast Trailer Mart, Inc.; Georgia Agribusiness Council, Inc.; Coalition for Responsible Regulation, Inc.; Industrial Minerals Association – North America; National Cattlemen’s Beef Association; Great Northern Project Development, L.P.; Rosebud Mining Co.; Alpha Natural Resources, Inc.; The Ohio Coal Association; American Iron and Steel Institute; Gerdau Ameristeel US Inc.; Chamber of Commerce of the United States of America; Georgia Coalition for Sound Environmental Policy; National Mining Association; American Farm Bureau Federation; Peabody Energy Company; Energy-Intensive Manufacturers’ Working Group on Greenhouse Gas Regulation; South Carolina Public Service Authority; Mark R. Levin; Landmark Legal Foundation; National Environmental Development Association’s Clean Air Project; State of Alabama; State of North Dakota; State of South Dakota; Haley Barbour, Governor of Mississippi; State of South Carolina; State of Nebraska; Missouri Joint Municipal Electric Utility Commission; Clean Air

Implementation Project; National Association of Manufacturers; American Frozen Food Institute; American Fuel & Petrochemical Manufacturers; American Petroleum Institute; Brick Industry Association; Corn Refiners Association; Glass Association of North America; Glass Packaging Institute; Independent Petroleum Association of America; Indiana Cast Metals Association; Michigan Manufacturers Association; Mississippi Manufacturers Association; National Oilseed Processors Association; Tennessee Chamber of Commerce and Industry; Western States Petroleum Association; West Virginia Manufacturers Association; Wisconsin Manufacturers & Commerce; National Association of Home Builders; National Federation of Independent Business; Portland Cement Association; Louisiana Department of Environmental Quality; Rick Perry, Governor of Texas; Greg Abbott; Attorney General of Texas; Texas Commission on Environmental Quality; Texas Department of Agriculture; Texas Public Utilities Commission; Texas Railroad Commission; Texas General Land Office; and State of Texas.

4. Petitioner-intervenors below (with respect to certain petitions for review), who are nominal respondents on review, were American Frozen Food Institute; American Fuel & Petrochemical Manufacturers; American Petroleum Institute; Corn Refiners Association; Glass Association of North America; Independent Petroleum Association of America; Indiana Cast Metals Association; Michigan Manufacturers Association; National Association of Home Builders; National Association of Manufacturers; National Oilseed Processors Association; Tennessee Chamber of Commerce and Industry; Western States Petrole-

um Association; West Virginia Manufacturers Association; and Wisconsin Manufacturers & Commerce.

5. Respondent-intervenors below (with respect to certain petitions for review), who are respondents (or, in some cases, nominal respondents) on review, were American Farm Bureau Federation; Brick Industry Association; Center for Biological Diversity; Clean Air Implementation Project; Commonwealth of Massachusetts; Conservation Law Foundation; Environmental Defense Fund; Georgia ForestWatch; National Environmental Development Association's Clean Air Project; National Mining Association; Natural Resources Council of Maine, Inc.; Natural Resources Defense Council; Peabody Energy Company; Sierra Club; South Coast Air Quality Management District; State of California; State of Illinois; State of Iowa; State of Maine; State of Maryland; State of New Hampshire; State of New Mexico; State of New York; State of North Carolina; State of Oregon; State of Rhode Island; Utility Air Regulatory Group; and Wild Virginia.

6. A respondent below, who is a nominal respondent on review, was Lisa Perez Jackson, Administrator, United States Environmental Protection Agency. Ms. Jackson ceased to hold the office of Administrator, United States Environmental Protection Agency, on February 15, 2013; that office is currently held in an acting capacity by Robert Perciasepe, Acting Administrator, United States Environmental Protection Agency.

**RULE 29.6 DISCLOSURE STATEMENT**

Petitioner Utility Air Regulatory Group (UARG) is a not-for-profit association of individual electric utilities and electric generating companies and national trade associations that participates on behalf of its members collectively in administrative proceedings under the Clean Air Act, and in litigation arising from those proceedings, that affect electric generators. UARG has no outstanding shares or debt securities in the hands of the public and has no parent company. No publicly held company has a 10% or greater ownership interest in UARG.

EPA, Prevention of Significant Deterioration and Title V GHG Tailoring Rule: EPA’s Response to Public Comments (May 2010), Docket No. EPA-HQ-OAR-2009-0517-19181 ..... *passim*

## PETITION FOR A WRIT OF CERTIORARI

The Utility Air Regulatory Group respectfully petitions for a writ of certiorari to review the judgment of the United States Court of Appeals for the District of Columbia Circuit dismissing its petitions to review rules of the United States Environmental Protection Agency (EPA) that address (i) the date on which greenhouse gases (GHGs) emitted from stationary sources are considered regulated pollutants under the Title I prevention of significant deterioration (PSD) preconstruction permitting program and the Title V general operating permit program of the Clean Air Act (CAA or Act),<sup>1</sup> 75 Fed. Reg. 17,004 (Apr. 2, 2010) (the Timing Rule), Petition Appendix (Pet. App.) 108a-148a, and (ii) how GHG emissions from stationary sources are to be regulated under those CAA provisions, 75 Fed. Reg. 31,514 (June 3, 2010) (the Tailoring Rule), Pet. App. 149a-597a. This petition does not address other aspects of the D.C. Circuit's opinion and decision, including the aspects of the decision that concern (i) EPA's rule finding that GHG emissions from motor vehicles "endanger" public health and welfare within the meaning of 42 U.S.C. § 7521(a)(1), 74 Fed. Reg. 66,496 (Dec. 15, 2009) (Endangerment Finding), (ii) EPA's denial of reconsideration of that finding, 75 Fed. Reg. 49,556 (Aug. 13, 2010), or (iii) EPA's rule setting GHG emission standards for light-duty motor vehicles under 42

---

<sup>1</sup> The PSD preconstruction permitting program is contained in Subpart 1 of Part C of Title I of the CAA. 42 U.S.C. §§ 7470-7479. The Title V program is, as the name indicates, contained in Title V of the Act. *Id.* §§ 7661-7661f.

U.S.C. § 7521(a)(1), 75 Fed. Reg. 25,324 (May 7, 2010) (Motor Vehicle Rule).

### **OPINIONS BELOW**

The opinion of the D.C. Circuit is reported at 684 F.3d 102 and reproduced at Pet. App. 6a-107a. The D.C. Circuit's orders denying panel rehearing and rehearing en banc are reproduced at Pet. App. 598a-663a. Relevant excerpts of the Timing Rule are reproduced at Pet. App. 108a-148a, and the Tailoring Rule is reproduced at Pet. App. 149a-597a.

### **JURISDICTION**

The D.C. Circuit entered judgment dismissing the Tailoring and Timing Rule cases on June 26, 2012, Pet. App. 5a, and denied timely petitions for panel rehearing or rehearing en banc on December 20, 2012, *id.* at 602a, 607a, 663a. This Court has jurisdiction under 28 U.S.C. § 1254(1).

### **CONSTITUTIONAL, STATUTORY, AND REGULATORY PROVISIONS**

The Constitution of the United States provides, in pertinent part, that “[t]he judicial Power [of the United States] shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority ... [and] to Controversies to which the United States shall be a party.” U.S. Const. art. III, § 2, cl. 1.

Relevant provisions of the CAA, 42 U.S.C. §§ 7401 *et seq.*, are reproduced at Pet. App. 664a-680a.

Relevant provisions of EPA's regulations implementing the CAA are reproduced at Pet. App. 681a-692a.

### INTRODUCTION

Certiorari is needed to address a matter of exceptional importance: Did *Massachusetts v. EPA*, 549 U.S. 497 (2007), compel EPA to regulate GHGs under the CAA Title I PSD and Title V operating permit programs where doing so would (i) extend those programs' coverage to tens of thousands or even millions of small sources that Congress intended *not* to regulate, and (ii) expand a program focused on preventing significant deterioration to include a pollutant – carbon dioxide – that does not deteriorate air quality? As Judge Kavanaugh explained in dissenting from denial of rehearing en banc, EPA's monumental extension of CAA regulatory authority by administrative fiat puts “the bedrock underpinnings of our system of separation of powers ... at stake,” Pet. App. 658a (Kavanaugh, J., dissenting).

Beyond the CAA, this case has significant implications for all complex regulatory statutes that contain separate programs addressing different aspects of the statutes' regulatory objectives. The decision below stands for the principle that, under step one of the two-step test set forth in *Chevron, U.S.A., Inc. v. Natural Res. Def. Council, Inc.*, 467 U.S. 837 (1984), a regulatory agency must give a term that appears in each of various different programs in a given statute the same broad meaning given that term by the statute's general provisions, regardless of the focus or scope of those individual programs. Here, EPA

insisted it had no choice but to apply to specific CAA programs (*i.e.*, the PSD and Title V programs) the expansive reading this Court in *Massachusetts* gave to “air pollutant” in the Act’s general provisions. As Judge Kavanaugh observed, the fact that “[g]reenhouse gases may qualify as ‘air pollutants’ in the abstract” does not resolve how Congress intended “air pollutant” to be understood in the context of any individual, specialized CAA program. Pet. App. 650a-651a n.3 (Kavanaugh, J., dissenting).

This petition does not ask this Court to revisit its holding in *Massachusetts*. Rather, it asks this Court to address a distinct issue: whether *Massachusetts* obligated EPA to regulate GHGs, including carbon dioxide, under provisions of the Act – the Title I PSD program and the Title V operating permit program – that address regulatory requirements and standards for regulation that are fundamentally different from other CAA programs, including the mobile-source provisions (Title II) at issue in *Massachusetts*.

EPA freely acknowledged that regulation of carbon dioxide emissions under the Title I and Title V permitting programs subjects “an extraordinarily large number of sources” to the CAA for the first time, *contrary to explicit congressional intent* to cover only a limited number of large industrial facilities. Pet. App. 339a, 345a (application of PSD to GHGs would result in “more than 81,000 ... PSD [permits] each year, an increase of almost 300-fold,” “result[ing] in a program that would have been unrecognizable to the Congress that designed PSD”); see also *id.* at 380a (application of the Title V permitting program to

GHGs “would result in a program unrecognizable to the Congress that enacted title V[,] ... expand[ing] [the program] from the current 14,700 sources to some 6.1 million”). This unprecedented expansion of CAA stationary-source jurisdiction, EPA said, would in turn result in insurmountable burdens for (i) state authorities required to conduct millions of new permit proceedings,<sup>2</sup> and (ii) the countless sources that would be subject to the CAA for the first time as a result of carbon dioxide regulation (including shopping malls, hospitals, stadiums, and apartment buildings). *Id.* at 155a.

To postpone results that EPA concluded would, “as a practical matter, vitiate much of the purpose of” the statutory language limiting application of these programs to large industrial facilities, *id.* at 347a, EPA promulgated the Tailoring Rule. EPA designed that rule to exclude initially very small sources of GHG emissions but then, in phases, to expand GHG regulation “one-step-at-a-time,” *id.* at 457a-461a, until *all of the additional sources that Congress never intended to cover are in the program*. In doing so, EPA declined the invitation to interpret the term “air pollutant” as used in the Act’s PSD and Title V provisions to exclude GHGs in order to confine those programs to the bounds EPA recognized had been set by Congress. See EPA, Prevention of Significant Deterioration and Title V GHG Tailoring Rule: EPA’s

---

<sup>2</sup> States typically issue PSD and Title V permits to sources within their borders. EPA issues these permits only in the rare situation where the state delegates its responsibility to EPA or EPA disapproves the state’s plan to issue these permits.

Response to Public Comments at 34-43 (May 2010), Docket No. EPA-HQ-OAR-2009-0517-19181 (Response to Comments).

A panel of the D.C. Circuit dismissed petitioner's challenge to the Tailoring Rule after concluding that stationary-source GHG regulation was compelled by "automatic operation of the statute" and "binding Supreme Court precedent." Pet. App. 101a, 612a. According to the panel, because EPA's "one-step-at-a-time" rules would initially mitigate the extraordinarily damaging impacts that "all-at-once" GHG stationary-source regulation would produce, "Petitioners lack Article III standing to challenge" the Tailoring Rule. *Id.* at 96a (emphasis in original). Judges Brown and Kavanaugh wrote opinions dissenting from denial of petitions for en banc rehearing of the panel's decision. *Id.* at 613a-661a.

### STATEMENT OF THE CASE

1. This case concerns the decision of a panel of the lower court that EPA was bound by (i) this Court's decision in *Massachusetts* interpreting 42 U.S.C. § 7602(g) in the context of Title II of the CAA, and (ii) the term "air pollutant" in the Act's PSD and Title V provisions, to regulate stationary source emissions of GHGs under the Title I and Title V permitting programs.<sup>3</sup>

---

<sup>3</sup> Because the Title V program provides that requirements applicable to a given stationary source under the CAA be collected in an "operating permit," 42 U.S.C. § 7661a(a), and because the only GHG requirements for stationary sources that currently exist for electric generating facilities owned and operated by

2. Carbon dioxide is the most ubiquitous and the largest by volume of the six pollutants that are encompassed by EPA's definition of GHGs. Carbon dioxide is not a substance like sulfur dioxide, nitrogen oxides, or particulate matter that pollutes the air people breathe. Ground-level carbon dioxide is part of the atmosphere and is necessary to life. Carbon dioxide (like other GHGs) mixes rapidly and is distributed uniformly in the sea of carbon dioxide and other GHGs already present in the atmosphere at ground level (and above). Plants need, and people and animals exhale, carbon dioxide as part of the elementary processes of life. Because carbon dioxide is typically released by stationary sources in amounts that are orders of magnitude greater than other pollutants, hospitals, schools, apartment buildings, shopping malls, and innumerable other small sources would become CAA-regulated stationary sources *if* carbon dioxide is regulated as an air pollutant under Title I and Title V. Pet. App. 154a-155a. As a result, carbon dioxide is unique – fundamentally different from the other substances that have been regulated under the CAA Title I and Title V permitting programs.

---

members of petitioner arise from the PSD preconstruction permit program, resolution of the PSD applicability issue here will resolve their existing Title V concerns, cf. Response to Comments at 43 (“EPA agrees ... that where a source has previously been issued a Title V permit, the permit need not be revised ... if the source is not subject to any additional applicable requirements.”). Accordingly, this petition focuses principally on the Title I PSD program.

3. The CAA contains six titles, each of which establishes different programs to address different air pollution problems in different geographic areas and for different types of sources. For example, Title II of the Act addresses emission standards for mobile sources, including motor vehicles and aircraft (42 U.S.C. §§ 7521-7590); Title IV addresses acid rain, including emissions from stationary combustion sources (*id.* §§ 7651-7651o); and Title VI addresses stratospheric ozone protection (*id.* §§ 7671-7671q). Title I of the CAA establishes a variety of programs governing emissions from stationary sources, including programs addressing ambient air quality standards, emission control technology standards, air toxics regulation, visibility protection, and others. Titles I and V also include programs for preconstruction permits (PSD) and operating permits (Title V) for large industrial sources.

4. The starting point for regulating stationary sources under CAA Title I is the national ambient air quality standards (NAAQS) program. *Id.* § 7409; *Union Elec. Co. v. EPA*, 427 U.S. 246, 249 (1976) (the NAAQS program is the “heart” of the CAA). NAAQS define the maximum allowed concentrations of specific pollutants (called “criteria pollutants”) in the “ambient” air – *i.e.*, ground-level air quality concentrations of substances in the air to which people are exposed and which they breathe. See 40 C.F.R. § 50.1(e) (defining “ambient air” as “that portion of the atmosphere, external to buildings, to which the general public has access”); *Train v. Natural Res. Def. Council, Inc.*, 421 U.S. 60, 65 (1975) (ambient air is

the “statute’s term for the outdoor air used by the general public”). EPA sets NAAQS at the level that is requisite to protect public health and welfare. 42 U.S.C. § 7409(b). Following promulgation of a NAAQS, states have primary responsibility to ensure that the ambient air within their borders attains and maintains the NAAQS. *Id.* § 7407. States do this by adopting emission limitations for sources and other measures in a state implementation plan (SIP) that is submitted to EPA for its review and approval (or disapproval). *Id.* § 7410(a), (k). The CAA assigns responsibility for achieving NAAQS on a geographic basis. *Id.* § 7407. With respect to each NAAQS, EPA designates each area as “attainment” (meaning ambient air quality in the area is as good as or better than the level represented by the NAAQS), “nonattainment” (ambient air quality in the area is worse than the NAAQS), or “unclassifiable,” based on measured ambient air quality concentrations in that area. *Id.* § 7407(d)(1)(A). A single geographic area may be in attainment with one NAAQS but nonattainment with another.

The PSD program (the principal program at issue here) originated from litigation that followed EPA’s approval of the first SIPs in 1972. In *Sierra Club v. Ruckelshaus*, 344 F. Supp. 253 (D.D.C.), *aff’d per curiam*, 4 Env’t Rep. Cas. (BNA) 1815 (D.C. Cir. 1972), *aff’d per curiam by an equally divided Court sub nom. Fri v. Sierra Club*, 412 U.S. 541 (1973), EPA was ordered to disapprove any SIP that allowed ambient air quality in an area measured to be in “attainment” to deteriorate to the level of a NAAQS. *Id.*

at 257. In 1974, implementing the district court's decision, EPA established the initial PSD program through rulemaking. 39 Fed. Reg. 42,510, 42,514-17 (Dec. 5, 1974).

EPA's PSD regulations sought to "prevent significant deterioration" of local ambient air quality in attainment areas by requiring preconstruction permits before construction of major new sources or modifications of major existing sources of air pollutants that are subject to NAAQS could occur. Deterioration of local air quality would be avoided by requiring that the source (i) not cause ambient air quality impacts above specified numerical "increments" for two criteria pollutants (sulfur dioxide and particulate matter), in order to prevent the "significant deterioration" of ambient air quality, and (ii) use "best available control technology" (BACT) for these pollutants. The 1974 PSD program applied to sulfur dioxide, nitrogen oxides, and particulate matter, air pollutants that can deteriorate the quality of the air people breathe.

In 1977, Congress enacted a statutory PSD program largely based on the 1974 regulatory program. Like the 1974 regulations, the statutory PSD program required source owners and operators to obtain preconstruction permits for the proposed construction of major new sources and for proposed major modifications of major existing sources, in order to prevent significant deterioration of ambient air quality. 74 Fed. Reg. 55,292, 55,308 (Oct. 27, 2009) ("As the legislative history makes clear, Congress enacted ... PSD ... to resolve issues arising when sources of

criteria pollutants seek to build or expand in areas with air quality that meets the [NAAQS].”).

Concerned about the PSD program’s potentially adverse economic impacts, Congress set precise, numerical tonnage amounts restricting the program’s applicability to a relatively small number of large industrial facilities, which the statute refers to as “major emitting facilities.” See, e.g., S. Rep. No. 95-127, at 96-97 (1977), *reprinted in 3 A Legislative History of the Clean Air Act Amendments of 1977*, at 1375, 1470-71 (1979); see also Pet. App. 344a (“Congress paid careful attention to the types and sizes of sources that would be subject to the PSD program and designed the thresholds deliberately to limit the program’s scope...”). Congress defined “major emitting facility” as a large facility that emits (or has the potential to emit) at least 250 tons per year (tpy) of “any air pollutant,” or at least 100 tpy of “any air pollutant” if the facility is within certain, statutorily enumerated industrial source categories. 42 U.S.C. § 7479(1); see also Pet. App. 346a (“Congress did not expect PSD to apply to large numbers of small sources ... and instead expected the 100/250 tpy thresholds to limit PSD’s applicability to larger sources.”).

Reflecting the PSD program’s focus on pollutants that can deteriorate ambient air quality, Congress in 1977 enacted statutory air quality “increments” to prevent deterioration of ambient air quality with respect to sulfur dioxide and particulate matter. Congress also authorized EPA to promulgate regulations to “prevent[] ... significant deterioration of air quali-

ty” for certain other pollutants with local air quality effects. 42 U.S.C. § 7475(a). And it directed EPA to promulgate regulations for “analysis ... of *the ambient air quality* at the proposed site [of the new facility] and in areas which may be affected by emissions from such facility for each pollutant subject to regulation under this [Act] which will be emitted from such facility.” *Id.* § 7475(e)(1) (emphasis added). Finally, Congress provided that PSD permits are to contain emission limitations based on BACT for pollutants that are “subject to regulation” under the Act. *Id.* § 7475(a)(4).

5. In 1999, public interest groups filed a petition for rulemaking asking EPA to regulate emissions of GHGs, including carbon dioxide, from motor vehicles under Title II of the Act, 42 U.S.C. § 7521(a)(1). See 66 Fed. Reg. 7486 (Jan. 23, 2001). EPA denied the petition on the ground that GHGs are not an “air pollutant” under the general definitional provision in Title III of the Act, *i.e.*, 42 U.S.C. § 7602(g).<sup>4</sup> 68 Fed. Reg. 52,922 (Sept. 8, 2003).

On review, this Court rejected EPA’s arguments that (a) the Act’s general definition of “air pollutant” was not broad enough to encompass GHGs, and (b) GHGs therefore were not an “air pollutant” that was potentially eligible for regulation under Title II.

---

<sup>4</sup> 42 U.S.C. § 7602(g) provides that “[t]he term ‘air pollutant’ means any air pollution agent or combination of such agents, including any physical, chemical, biological, [or] radioactive ... substance or matter which is emitted into or otherwise enters the ambient air.”

*Massachusetts*, 549 U.S. at 528-29. According to the Court, “[o]n its face, the [42 U.S.C. § 7602(g)] definition embraces all airborne compounds of whatever stripe.” *Id.* at 529. The Court then turned its attention to Title II of the Act and found that GHG regulation would not fundamentally change the Title II program: “The broad language of § 202(a)(1) reflects an intentional effort to confer the flexibility necessary” to regulate GHG emissions from motor vehicles. *Id.* at 532 (citing 42 U.S.C. § 7521(a)(1)).

6. After this Court decided *Massachusetts*, EPA determined in 2009 in the Endangerment Finding that GHG emissions from vehicles throughout the nation “cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare,” pursuant to 42 U.S.C. § 7521(a)(1). 74 Fed. Reg. at 66,505. EPA did not, and could not, find that GHGs deteriorate local ambient air quality; rather, it found that GHGs disperse throughout the global atmosphere and affect climate. *Id.* at 66,514-16. Following issuance of its 2009 Endangerment Finding, EPA promulgated the Motor Vehicle Rule, regulating GHG emissions from passenger vehicles under 42 U.S.C. § 7521(a) of the Act. 75 Fed. Reg. at 25,324.

7. In 2010, EPA explained that “[c]urrently, EPA does not consider GHG emissions to be ‘regulated ... pollutants’ under the [Title I] PSD program.... EPA is in the process of reviewing its approach to PSD applicability.” 74 Fed. Reg. at 55,299. EPA’s review produced the Title I stationary source rules – the Timing Rule and the Tailoring Rule – at issue here.

In the Timing Rule, EPA addressed when GHGs would become “subject to regulation” for purposes of the PSD program. Pet App. 125a. According to EPA, the Timing Rule “concludes only that ... GHGs would not be considered ‘subject to regulation’ ... earlier than January 2, 2011,” the date the Motor Vehicle Rule took effect. *Id.* at 126a. EPA said it would address in a companion rule “the applicability of PSD requirements for GHG-emitting sources.” *Id.*

In the companion rule (the Tailoring Rule), EPA explained its view that once the Motor Vehicle Rule took effect, regulation of GHG emissions from stationary sources was required by operation of law under the Title I PSD permit program and the Title V operating permit program. *Id.* at 154a. According to EPA, “our legal basis for this rule is our interpretation of the PSD and Title V applicability provisions,” *id.* at 150a, which is “that GHG sources would become subject to the PSD and title V permitting programs upon finalization of the [Motor Vehicle Rule],” Response to Comments at 34.

Given the statutory 100-tpy and 250-tpy PSD applicability thresholds, however, EPA also concluded that regulating GHGs under the PSD and Title V programs would extend the programs to cover sources Congress never intended to regulate. See, e.g., Pet. App. 235a-236a, 380a-381a; 74 Fed. Reg. at 55,304 (“Congress, focused as it was [in 1977] on sources of conventional pollutants and not global warming pollutants, expected that the 100/250 tpy applicability thresholds would limit PSD to larger sources.”). According to EPA, “[t]hese results are not

consistent with other provisions of the PSD and title V requirements, and are inconsistent with – and, indeed, undermine – congressional purposes for the PSD and title V provisions.” Pet. App. 305a. EPA concluded that “applying PSD requirements literally to GHG sources ... would result in a program that would have been unrecognizable to the Congress that designed PSD.” *Id.* at 345a; see also *id.* at 380a (applying Title V requirements literally to GHG sources “would result in a program unrecognizable to the Congress that enacted title V”).

The Tailoring Rule was EPA’s response to what it viewed as a conflict between the explicit statutory 100/250 tpy applicability thresholds and clear congressional intent *not* to apply the PSD program to tens of thousands, and the Title V program to millions, of small sources. In this rule, EPA amended 40 C.F.R. § 51.166 (which provides minimum criteria for PSD provisions in SIPs) by purporting to make GHGs subject to PSD starting on January 2, 2011. This amended rule defines the GHGs regulated under PSD as those GHGs emitted in amounts above 100,000 tpy of “carbon dioxide equivalent”<sup>5</sup> for new construction (and above 75,000 tpy of carbon dioxide equivalent for modifications), *id.* at 587a, and defines the GHGs regulated under Title V as those GHGs

---

<sup>5</sup> “GHGs,” as defined by EPA, consist of six separate air pollutants. Each of those pollutants has been assigned a numerical value based on the pollutant’s “global warming potential,” which measures each pollutant relative to carbon dioxide. For example, according to EPA, one ton of methane equals twenty-one tons of carbon dioxide equivalent. Pet. App. 167a.

emitted in amounts above 100,000 tpy of carbon dioxide equivalent, *id.* at 591a. These thresholds are orders of magnitude above the CAA's 100/250-tpy thresholds for PSD and Title V permit applicability.<sup>6</sup> Because EPA interpreted the Act to require that GHGs be regulated the same as other § 7602(g) pollutants, notwithstanding that such regulation would be contrary to congressional intent for PSD and Title V, EPA determined that it would reserve authority to expand regulation of GHGs “step by step” until GHGs became subject to regulation at the statutory 100/250 tpy thresholds. *Id.* at 159a.

8. In promulgating the Tailoring Rule, EPA rejected rulemaking comments arguing that (i) *Massachusetts* did not require EPA to interpret the term “air pollutant” in the Act's PSD provisions to include GHGs, and (ii) EPA was prohibited from undertaking, step by step, to implement a program that contradicts congressional intent. See Response to Comments at 34-43; see also Comments of the Utility Air Regulatory Group on the Proposed Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule at 15, 19-40 (Dec. 28, 2009), Docket No. EPA-HQ-OAR-2009-0517-5317 (UARG Comments). A panel of the lower court agreed with EPA on the ground that this result was dictated by “binding Supreme Court precedent.” Pet. App. 612a.

---

<sup>6</sup> Under the Tailoring Rule, GHGs emitted below the rule's 75,000-tpy and 100,000-tpy PSD thresholds and the rule's 100,000-tpy Title V threshold are not “air pollutants” subject to regulation under the PSD and Title V programs, respectively.

According to the panel, “Congress made perfectly clear that the PSD program was meant to protect against precisely the types of harms caused by greenhouse gases” because the PSD program’s declaration of purpose includes a reference to the word “welfare,” which, this Court observed in *Massachusetts*, includes effects on weather and climate. *Id.* at 76a (citing 42 U.S.C. § 7602(h)). “[G]iven both the statute’s plain language and the Supreme Court’s decision in *Massachusetts v. EPA*,” the panel said it “ha[d] little trouble concluding that the phrase ‘any air pollutant’ [in PSD] includes *all* regulated air pollutants, including greenhouse gases.” *Id.* at 73a (emphasis in original).

Having concluded that “Industry Petitioners were regulated and State Petitioners required to issue permits not because of anything EPA did in the Timing and Tailoring Rules, but by automatic operation of statute,” the panel then concluded that Petitioners lacked standing to challenge either the Timing Rule or the Tailoring Rule. *Id.* at 100a-101a. According to the panel, “neither the Timing nor Tailoring Rules caused the injury Petitioners allege: having to comply with PSD and Title V for greenhouse gases.” *Id.* at 101a. These injuries, the panel said, were caused by the statute and were not remediable by any judgment of the court.

9. The D.C. Circuit denied petitions for rehearing en banc, with dissenting opinions filed by Judges Brown and Kavanaugh. In a concurring opinion filed by the original panel members, those judges reiterated their conclusions that the Court in *Massachusetts*

“expressly *held* that the Clean Air Act’s ‘sweeping definition of “air pollutant” unambiguously includes greenhouse gases,” *id.* at 609a (emphasis in original), and that, based on that reading of *Massachusetts*, “the panel’s interpretation of the statute is *the only plausible one*,” *id.* at 611a (emphasis added). By contrast, Judges Brown and Kavanaugh explained in dissent that the statute was open to other readings and that those readings, which would avoid conflicts with congressional intent, were plausible. They would have granted rehearing “for the full court to consider the propriety of extending *Massachusetts* to Title V and the PSD program,” *id.* at 614a-615a (Brown, J., dissenting), and “to carefully but firmly enforce the statutory boundaries” that they concluded EPA had transgressed, *id.* at 661a (Kavanaugh, J., dissenting).

#### **REASONS FOR GRANTING THE PETITION**

This Court should grant certiorari to address whether *Massachusetts v. EPA* compels regulation of GHGs under the PSD and Title V permitting programs of the CAA. Certiorari is also needed to clarify that petitioner has standing under this Court’s settled law on justiciability and to ensure that the regulated community can obtain judicial review of agency action regulating GHGs in the D.C. Circuit, which has exclusive jurisdiction to review many agency rulemakings, including national rulemakings under the CAA. Finally, given the expansive regulation that the rules at issue here would compel, this is an issue of great importance to the Nation.

**I. Certiorari Is Needed To Address Whether *Massachusetts* Compels Regulation of GHGs, Which Include Carbon Dioxide, Under the CAA’s Title I PSD Program and Title V of the Act.**

According to the panel, *Massachusetts* unleashed a cascade of CAA requirements automatically and by operation of law. The panel found that because under “*Massachusetts* ... greenhouse gases ‘unambiguous[ly]’ may be regulated as an ‘air pollutant’ under the Clean Air Act,” *id.* at 25a, “once [the Motor Vehicle] Rule took effect and made greenhouse gases a regulated pollutant under Title II of the Act,” that triggered application of the Title I PSD program “*automatically* ... to facilities emitting over 100/250 tpy of greenhouse gases.” *Id.* at 71a (emphasis added).

Because millions of small facilities throughout the Nation emit GHGs at rates greater than 100 tpy, EPA’s interpretation that *Massachusetts* compels regulation of GHGs under these programs would cause a radical expansion of Title I PSD and Title V jurisdiction. Programs that Congress enacted to apply to only a comparative handful of large industrial facilities would be transformed, overnight, into programs encompassing innumerable small sources. *Id.* at 345a-346a. As EPA explained, these programs would thereby become unrecognizable to the Congress that enacted them, *id.* at 345a, and this result “would, as a practical matter, vitiate much of the purpose of the 100 tpy [statutory] cut-off for [CAA applicability to] industrial sources,” *id.* at 347a.

Yet, according to the panel, “given both the statute’s plain language and the Supreme Court’s decision in *Massachusetts v. EPA*, [it had] little trouble concluding that the phrase ‘any air pollutant’ includes *all* regulated air pollutants, including greenhouse gases,” for purposes of PSD and Title V. *Id.* at 73a (emphasis in original). This, the panel held, “forecloses” any argument that EPA had authority to interpret the term “air pollutant” more narrowly for these other CAA programs. *Id.* at 81a; cf. *id.* at 650a (Kavanaugh, J., dissenting) (“The panel opinion ... appears to have been heavily if not dispositively influenced by *Massachusetts v. EPA*.”).

But *Massachusetts* does not compel the conclusion that an “air pollutant” under 42 U.S.C. § 7602(g) is necessarily an air pollutant for purposes of any individual program under the CAA. No party in *Massachusetts* argued that the scope of the term “air pollutant” under 42 U.S.C. § 7521(a)(1) was narrower than the definition of air pollutant in 42 U.S.C. § 7602(g). And this Court found no reason to adopt a narrowing interpretation, concluding that “[t]he broad language of [42 U.S.C. § 7521(a)(1) in Title II] reflects an intentional effort to confer the flexibility” needed to regulate a broad range of substances, including GHGs. *Massachusetts*, 549 U.S. at 532.

42 U.S.C. § 7602(g) defines the outer bounds of the “air pollutants” that are potentially eligible for regulation under the various CAA programs. This is understandable in a lengthy, expansive statute like the CAA, which has different programs addressing different pollution problems. In such a statute with

several titles and programs, a general definition of pollutant has to be broad enough to reflect the entire range of substances that might be regulated under any one or more of the diverse programs it establishes.

EPA's argument in *Massachusetts* that GHGs were not an "air pollutant" under 42 U.S.C. § 7602(g), if accepted, would have been sufficient to resolve the question whether GHGs were pollutants eligible for regulation under 42 U.S.C. § 7521. But, as Judge Kavanaugh observed, the fact that "[g]reenhouse gases may qualify as 'air pollutants' in the abstract" does *not* resolve the definition of "air pollutant" for each individual regulatory program of the CAA. Pet. App. 651a n.3 (Kavanaugh, J., dissenting); cf. *Envtl. Def. v. Duke Energy Corp.*, 549 U.S. 561, 574 (2007) (a CAA case decided the same day as *Massachusetts* and holding that statutory terms must be interpreted in light of their context and the statute as a whole and that the same term may mean different things in different parts of the statute).

Indeed, in implementing the CAA over the past decades, EPA has been careful to define which of the 42 U.S.C. § 7602(g) air pollutants are to be regulated under each individual CAA program. Thus, while 42 U.S.C. § 7411 provides that new source performance standards (NSPS) apply whenever a source undertakes a "physical change ... which increases the amount of *any* air pollutant emitted," 42 U.S.C. § 7411(a)(4) (emphasis added), EPA by regulation has narrowed the universe of air pollutants that trigger

NSPS to those “[air] pollutant[s] to which a standard applies” under 40 C.F.R. part 60. 40 C.F.R. § 60.14(a). Although 42 U.S.C. § 7491 defines “major stationary source[s]” to which the CAA visibility protection program applies as sources that “emit 250 tons or more of *any* pollutant,” 42 U.S.C. § 7491(g)(7) (emphasis added), EPA by regulation has defined the pollutants that trigger this program as a specific set of “visibility-impairing pollutants,” see, e.g., 40 C.F.R. Part 51, App. Y, § III.A.2. And, although 42 U.S.C. § 7479 defines “major emitting facilit[ies]” that are subject to the PSD program as those that emit more than 100 or 250 tpy of “any air pollutant,” 42 U.S.C. § 7479(1), EPA has by regulation narrowed the scope of air pollutants that can trigger PSD to “any regulated NSR [new source review] pollutant,” 40 C.F.R. § 52.21(b)(1). Finally, in the very rulemaking at issue here, although EPA (and the panel) read *Massachusetts* to compel PSD and Title V regulation of *all* GHGs, EPA defined GHGs for PSD and Title V to include only those emitted above the 100,000- or 75,000-tpy levels of carbon dioxide equivalent. Pet. App. 587a, 591a.

The historic approach that identifies which of the 42 U.S.C. § 7602(g) “air pollutants” are air pollutants subject to individual CAA programs makes eminent sense. “Of necessity, Congress selects different regulatory regimes to address different problems.” *Am. Elec. Power Co. v. Connecticut*, 131 S. Ct. 2527, 2538 (2011). And the same term appearing in different statutory programs can (indeed, must) be given different regulatory meanings where congressional in-

tent is different. See *Abbott Labs. v. Young*, 920 F.2d 984, 987 (D.C. Cir. 1990) (“[I]t is not impermissible under *Chevron* for an agency to interpret an imprecise term differently in two separate sections of a statute which have different purposes.”). “A given term in the same statute may take on distinct characters from association with distinct statutory objects calling for different implementation strategies.” *Env'tl. Def.*, 549 U.S. at 574; see also *Gen. Dynamics Land Sys., Inc. v. Cline*, 540 U.S. 581, 596-97 (2004) (“age” has different meanings within Age Discrimination in Employment Act); *United States v. Cleveland Indians Baseball Co.*, 532 U.S. 200, 212-13 (2001) (“wages paid” has different meanings within Social Security Act Amendments of 1939); *Robinson v. Shell Oil Co.*, 519 U.S. 337, 343-44 (1997) (“employee” has different meanings within Title VII of the Civil Rights Act of 1964).

The CAA is not self-implementing. Rather, rule-making is required under each of the separate CAA programs to spell out the specific elements of each, *including the pollutants to which the program applies*. When EPA – or a reviewing court – seeks to give content to the term “air pollutant” as used in each of these programs, 42 U.S.C. § 7602(g)’s broad definition of air pollutant is always the beginning, but not the end, of the analysis.

If EPA had engaged in this inquiry here, it would have narrowed the scope of “air pollutants” covered by the Title I PSD and Title V permitting programs to exclude carbon dioxide entirely from those programs, and not partially and temporarily as EPA did.

First, as EPA acknowledged, the explicit statutory 100/250-tpy “threshold limitations” for PSD applicability served as “Congress’s mechanism for limiting PSD” to a limited number of large industrial facilities. Pet. App. 343a; see also *id.* at 380a-383a (Title V). The Act’s 100/250-tpy “major source” numerical thresholds have a singular meaning that is *not* subject to alteration through “interpretation”; these numerical limitations restrict PSD and Title V’s coverage to relatively few “large industrial sources,” while excluding numerous smaller “commercial and residential sources.” *Id.* at 345a-346a; see also *id.* at 319a (“Congress had reason to expect the total size of the PSD program to be measured in the hundreds of permits a year,” not tens of thousands); *id.* at 382a (“Congress did not expect” to include “small commercial and residential sources” in Title V).

Thus, the 100/250-tpy statutory language must be read to define what pollutants are PSD and Title V-regulated: *only* those pollutants that “a relatively small number of large industrial sources” emit in amounts above the statutory thresholds. *Id.* at 345a; see also Response to Comments at 37 (The statutory “threshold for these source categories makes sense only in terms of conventional pollutants ... and cannot be reconciled with an unbounded reading of the phrase ‘any pollutant subject to regulation.’”). Because many thousands or even millions of small sources emit carbon dioxide above these statutory thresholds, carbon dioxide cannot be a PSD or Title V pollutant.

Furthermore, while 42 U.S.C. § 7521 in Title II of the CAA focuses on emissions whose presence in the atmosphere *generally* may “endanger public health or welfare,” 42 U.S.C. § 7521(a)(1), the PSD program in Title I of the Act focuses on protection of *localized* ambient “air quality” – *i.e.*, the air people breathe in certain geographically defined 42 U.S.C. § 7407 areas within a state. Thus, 42 U.S.C. § 7471 provides that “each applicable [SIP] shall contain emission limitations and such other measures as may be necessary ... to prevent significant deterioration of *air quality* in each [air quality control] region,” *i.e.*, the local air quality control regions designated pursuant to 42 U.S.C. § 7407 based on ground-level pollutant measurements. (Emphasis added). Further, 42 U.S.C. § 7475 directs EPA to promulgate regulations governing analysis of impacts on “ambient air quality” that might flow from “emissions from [the PSD] facility.” *Id.* § 7475(e)(1). Through such provisions, Congress made clear that the statute’s PSD requirements are directed *not* to regulation of emissions of air pollutants that may endanger public health or welfare due to their uniform presence throughout the global atmosphere, but rather to such regulation “as may be necessary ... to prevent significant deterioration” of the air that people breathe. *Id.* § 7471.

The PSD program addresses pollutants that deteriorate local air quality. By contrast, EPA’s regulation of carbon dioxide, the most prevalent GHG included in EPA’s definition of GHGs, is driven *not* by concerns over deterioration of local or regional ground-level air quality but by distinct environmen-

tal concerns. As EPA explained in an Advance Notice of Proposed Rulemaking published in 2008 (prior to concluding that it was compelled by the statute and *Massachusetts* to regulate stationary-source GHG emissions), “GHGs become well mixed throughout the global atmosphere so that the long-term distribution of GHG concentrations is not dependent on local emission sources. Instead, GHG concentrations tend to be relatively uniform around the world.” 73 Fed. Reg. 44,354, 44,401 (July 30, 2008). Thus, according to EPA, “GHGs emitted anywhere in the world affect climate everywhere in the world.” *Id.*

Accordingly, as EPA recognized, the “global nature and effect of GHG emissions raise questions regarding the suitability of CAA provisions [like the PSD provisions] that are designed to protect local and regional air quality by controlling local and regional emission sources.” *Id.* at 44,408. Among other things, “the geographic location of emission sources and reductions [is] generally not important to mitigating global climate change.” *Id.* Moreover, “[c]urrent and projected levels of ambient concentrations” of GHGs, including carbon dioxide, were “not expected to cause any direct adverse health effects, such as respiratory or toxic effects, which would occur as a result of the elevated GHG concentrations themselves.” *Id.* at 44,427. As a result, carbon dioxide simply does not have the characteristics of a PSD pollutant.

Finally, contrary to the panel’s suggestion, see Pet. App. 76a, the existence of the term “welfare” in

the “Congressional declaration of purpose” – a term that the Act describes (at 42 U.S.C. § 7602(h)) as including “effects on ... weather ... and climate” – does not relieve EPA of its statutory responsibility to determine whether a 42 U.S.C. § 7602(g) pollutant such as GHGs falls within the scope of the PSD program. As with “air pollutant,” the CAA broadly defines “welfare” in the general definitions section so as to be able to serve, to the degree relevant, various programs within the Act addressing regulation of specific types of pollution.

In *Massachusetts*, this Court found that regulation of GHGs under Title II, triggered by a general endangerment finding, would not lead to “extreme,” “counterintuitive” measures not contemplated by Congress. *Massachusetts*, 549 U.S. at 531. This Court observed that “EPA has not identified any congressional action that conflicts in any way with the regulation of greenhouse gases *from new motor vehicles*.” *Id.* (emphasis added). By contrast, neither EPA nor the D.C. Circuit ever examined here whether the GHG “welfare” effects targeted for regulation were welfare effects addressed by the PSD program, *i.e.*, effects related to local, ground-level pollution of the quality of the air people breathe. For all the reasons discussed above, whether GHGs present welfare concerns on a global basis is immaterial to the question before EPA here: whether GHGs are a PSD pollutant.

Certiorari should be granted to address the panel’s conclusion that this Court’s decision in *Massachusetts* compelled inclusion of a pollutant in the PSD

program that does not deteriorate air quality, where that inclusion expands regulation demonstrably beyond the bounds set by Congress.

**II. Certiorari Is Needed To Address the Panel's Decision that Petitioners Lack Standing To Challenge the Timing and Tailoring Rules.**

In the proceedings below, petitioner challenged EPA rules that, for the first time in the history of the CAA, make GHGs a regulated air pollutant under the PSD and Title V programs. EPA's Tailoring Rule definition of what GHGs are subject to PSD and Title V covers GHG emissions from facilities owned and operated by members of petitioner, subjecting petitioner's members to new regulatory restrictions. If petitioner's challenge to these rules were accepted on the merits, GHGs could not be included in the PSD program and any further harm to petitioner's members from the rules would thereby be averted.

As predicates for its rulemaking actions at issue here, EPA simultaneously embraced two incompatible principles of administrative law. See Pet. App. 642a-643a n.1. The first was a "traditional tool[] of statutory construction," *Chevron*, 467 U.S. at 843 n.9, that EPA labeled the "absurdity" doctrine. Pet. App. 150a-151a. Under this doctrine, an agency must refrain from adopting the literal – or most expansive – reading of a statutory term where such a construction would be contrary to congressional intent. See, e.g., *United States v. Ron Pair Enters.*, 489 U.S. 235, 242 (1989). The second was the so-called doctrine of "administrative necessity," which applies

where an agency cannot fully implement Congress's clear intent immediately. See, e.g., *Ala. Power Co. v. Costle*, 636 F.2d 323, 400 (D.C. Cir. 1979). The administrative necessity doctrine allows the agency to implement a program in phases – one step at a time, if need be – and thereby, by proceeding incrementally, give full effect to clear congressional intent over time.

Petitioner argued in EPA's Tailoring Rule rulemaking and to the court below that, once EPA found (as it plainly did) that defining "air pollutant" under the PSD and Title V programs to include GHGs would produce results inimical to congressional intent, EPA was obligated to interpret "air pollutant" as used in PSD and Title V more narrowly to exclude GHGs. Administrative necessity, *a doctrine designed to give effect to congressional intent*, could never be invoked to justify agency rulemaking action designed to transform – even incrementally – the PSD and Title V programs into something Congress indisputably never contemplated.

Yet, after reaching its conclusion that *Massachusetts* compelled rejection of petitioner's statutory argument, the panel dismissed for lack of subject matter jurisdiction the petitions for review of the Timing and Tailoring Rules, including the argument of petitioner that "EPA exceeded the boundaries of its lawful [statutory] authority" in adopting a phased program for GHG regulation that would end in PSD and Title V programs that Congress never intended. Pet. App. 99a. According to the panel, the CAA's definition of "air pollutant," 42 U.S.C. § 7602(g), as inter-

preted by this Court in *Massachusetts*, “requires PSD and Title V permits for major emitters of greenhouse gases.” Pet. App. 95a. As a result, the panel concluded,

Industry Petitioners were regulated ... *not* because of anything EPA did in the Timing and Tailoring Rules, *but by automatic operation of the statute*. Given this, neither the Timing nor Tailoring Rules caused the injury Petitioners allege: having to comply with PSD and Title V for greenhouse gases.

Indeed, the Timing and Tailoring Rules actually mitigate Petitioners’ purported injuries.

*Id.* at 100a-101a (emphases added). Only by reaching the merits on *Massachusetts* grounds (without even mentioning the “congressional intent” canon of construction upon which petitioner’s statutory interpretation argument was based) could the panel find that “Petitioners lack Article III standing to challenge both [the Timing and Tailoring] rules.” *Id.* at 96a (emphasis omitted).

In this case, petitioner argued that EPA’s conclusion that PSD and Title V regulation of GHGs would produce results contrary to congressional intent required a narrowing interpretation of the broad definition of “air pollutant” to exclude GHGs for purposes of the PSD and Title V programs. See UARG Comments at 34-39. The panel’s refusal – on purported standing grounds – to “address the merits of [petitioner’s] ... claims” that any EPA phase-in of

GHG requirements would produce results contrary to congressional intent, Pet. App. 99a, improperly conflated the merits with Article III standing. See *Steel Co. v. Citizens for a Better Env't*, 523 U.S. 83, 93, 95-97 (1998) (rejecting an approach that “convert[s] the merits issue in this case into a jurisdictional one”); cf. *Bell v. Hood*, 327 U.S. 678 (1946) (nonexistence of a cause of action not a proper basis for a jurisdictional dismissal).

Here, petitioner suffers injury in fact from EPA rules that require its members’ stationary sources to apply for permits that restrict their GHG emissions beginning January 2, 2011 (the date established by EPA’s Timing Rule). If petitioner’s statutory construction argument were accepted – thereby establishing that GHGs are not an air pollutant that is subject to PSD and Title V requirements – its members’ present injury caused by GHG regulation would be redressed. Nothing more is required for petitioner to demonstrate standing. See *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560-61 (1992). The panel’s decision is, thus, at odds with this Court’s settled case law on justiciability.

The panel’s standing decision is particularly troublesome insofar as it establishes precedent with respect to future phases of EPA’s PSD regulatory program for GHGs. If petitioner lacks Article III standing here – on the asserted grounds that EPA’s pursuit of an expansion of CAA stationary-source jurisdiction that is incompatible with congressional intent in steps, rather than all at once, “mitigate[s] Petitioners’ purported injuries,” Pet. App. 101a – then

petitioner's standing to object to further steps in pursuit of this unlawful end is also at risk. Certiorari is needed to clarify the law on standing for the D.C. Circuit – the court with exclusive jurisdiction to review nationally applicable rules under the CAA and many other federal regulatory statutes – in a context that is of extraordinary importance for the Nation.

### **III. This Petition Raises an Unusually Important Question of Federal Law.**

In *Massachusetts*, this Court recognized the “unusual importance” of questions concerning EPA’s authority to regulate GHG emissions under the CAA. 549 U.S. at 506. This case presents, if anything, issues of even greater importance than the questions presented in that case, given the extraordinary expansion of CAA Title I jurisdiction at stake.

The Court observed in *Massachusetts* that reading 42 U.S.C. § 7521 to encompass regulation of emissions of GHGs under Title II of the CAA from new motor vehicles “would lead to *no ... extreme measures.*” *Id.* at 531 (emphasis added). In fact, the Court observed, regulation of GHG emissions from motor vehicles and engines under Title II would “not directly expand or contract the universe of vehicles and engines subject to” that program. Pet. App. 632a. On this basis the Court distinguished its decision in *Food & Drug Administration v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120 (2000), setting aside a regulatory expansion of Food and Drug Administration authority over tobacco products. *Massachusetts*, 549 U.S. at 531 (“common sense’ intuition

tion [suggested] that Congress never meant to remove those products from circulation”).

In contrast, as EPA acknowledged, extending PSD and Title V requirements to GHG emissions from stationary sources would “subject an extraordinarily large number of sources, more than 81,000, to PSD each year, an increase of almost 300-fold” in CAA jurisdiction, Pet. App. 339a, and would “expand [the Title V program] from the current 14,700 sources to some 6.1 million,” *id.* at 380a. This, EPA observed, would impose impossible burdens on states that are responsible for issuing CAA permits and that will be confronted with a massive and unprecedented escalation in the number of permit proceedings. And because PSD permits are required prior to construction of new and modified sources, reading *Massachusetts* to mandate automatic application of PSD requirements to GHGs threatens to give rise to profound economic impacts across the Nation. As EPA recognized, if source owners and operators are unable to obtain PSD permits authorizing new construction or existing-source modifications for tens of thousands of facilities per year, for any reason – including the states’ and EPA’s inability to process a large number of permits – economic activity in many areas of the country would be seriously impaired. See 74 Fed. Reg. at 55,344 (According to EPA, once GHGs were regulated under Title II, the PSD program, “by its terms, prohibits a source that is subject to PSD from constructing or modifying without a permit.”); see also *id.* at 55,294.

EPA's action here opened uncharted vistas of CAA Title I and Title V jurisdiction over small sources across the country and for every state permitting authority – jurisdiction Congress never contemplated would exist. And because the panel below found that no petitioner had standing to challenge the merits of EPA's two rules authorizing a step-by-step expansion of CAA Title I and Title V jurisdiction to capture hosts of small sources throughout the Nation, EPA's continuing regulatory actions could wholly escape judicial review if the panel's judgment is left undisturbed.

This Court should grant certiorari to address a decision that has profound and far-reaching implications for administrative law generally, for states, for the Nation's economy, and for the present and future administration of the CAA.

35

**CONCLUSION**

For the foregoing reasons, the petition for a writ of certiorari should be granted.

Respectfully submitted,

F. WILLIAM BROWNELL

**CRS Report for Congress**  
*Prepared for Members and Committees of Congress*

FOIL 140072 003915

Page 1853 of 2671

## Summary

In the 111<sup>th</sup> Congress, both the House and Senate committees of jurisdiction are expected to give climate change legislation high priority. The House Energy and Commerce Committee has already held hearings on draft legislation, and expects to hold markup before Memorial Day. The schedule for Senate action is less certain, but presumably it will follow House consideration. With the inauguration of President Obama, there is a proponent of greenhouse gas (GHG) legislation in the White House, as well, markedly improving the prospects for enacting some sort of legislation to reduce GHG emissions.

Although new legislation to address greenhouse gases is a leading priority of the President and many members of Congress, the ability to limit these emissions already exists under various Clean Air Act authorities that Congress has enacted, a point underlined by the Supreme Court in an April 2007 decision, *Massachusetts v. EPA*. Indeed, the EPA has already begun the process that could lead to greenhouse gas regulations for motor vehicles in response to that court decision.

Thus, controlling GHGs could follow a two-track approach, with Congress and the Administration pursuing new legal authority (for cap-and-trade, carbon tax, or other mechanisms) at the same time that the Administration, through the Environmental Protection Agency (EPA), exercises existing authority under the Clean Air Act to begin regulation of greenhouse gas emissions.

The key to using the Clean Air Act's authority is for the EPA Administrator to find that GHG emissions are air pollutants that endanger public health or welfare. The Administrator proposed such an endangerment finding April 17, 2009, beginning a public comment period that is expected to run through June. It should be noted, despite EPA's apparent commitment to move forward with an endangerment finding, that EPA Administrator Jackson and others in the Administration have made clear their preference that Congress address the climate issue through new legislation.

If an endangerment finding is finalized, the agency could proceed to set GHG emission standards for motor vehicles. (A separate report, CRS Report R40506, *Cars and Climate: What Can EPA Do to Control Greenhouse Gases from Mobile Sources?*, discusses the endangerment finding and possible controls on mobile source GHGs.) The finding might also lead the agency and state permitting authorities to establish controls for stationary sources, including electric power plants and other industrial sources that account for the largest share of GHG emissions.

This report discusses EPA's authority to control GHG emissions from stationary sources under the Act, and the various options that EPA could exercise. Of these, perhaps the strongest basis for establishing a traditional regulatory approach would be Section 111 of the CAA, which provides authority to set New Source Performance Standards and, under Section 111(d), requires the states to control emissions from existing sources of the same pollutants. Other sections of the Act, not previously used, might provide authority to establish a cap-and-trade system for GHG emissions.

The report is not a legal analysis. Our intention is to describe legal issues and arguments that have been raised and to discuss potential EPA approaches to their resolution, without drawing legal conclusions.

## Introduction

In the 111<sup>th</sup> Congress, both the House and Senate committees of jurisdiction are expected to give climate change legislation high priority. The House Energy and Commerce Committee has already held hearings on draft legislation, and expects to hold markup before Memorial Day. The schedule for Senate action is less certain, but presumably it will follow House consideration. With the inauguration of President Obama, there is a proponent of greenhouse gas (GHG) legislation in the White House, as well, markedly increasing the probability for enacting some sort of legislation to reduce GHG emissions. The President has said that a new energy, environment, and climate policy will be “a leading priority of my presidency, and a defining test of our time.”

Although new legislation to address greenhouse gases is a leading priority of the President and many members of Congress, the ability to limit these emissions already exists under various Clean Air Act (CAA) authorities that Congress has enacted, a point underlined by the Supreme Court in an April 2007 decision (discussed below). Indeed, the U.S. Environmental Protection Agency (EPA) has already begun the process that could lead to greenhouse gas regulations for mobile sources in response to court decisions.

If EPA moves to regulate greenhouse gases from mobile sources, legal and policy drivers would be activated that could lead to regulation of stationary sources as well. The legal drivers are beyond the scope of this report, which is focused on the policy options and control alternatives available to EPA if it were to use existing authorities to regulate greenhouse gases from stationary sources.

Indeed, stationary sources are the major sources of the country’s greenhouse gas emissions. Overall, 72% of U.S. emissions of greenhouse gas come from stationary sources (the remainder come from mobile sources). As indicated in Table 1, relatively large sources of fossil-fuel combustion and other sources are responsible for about one-half the country’s total emissions. If EPA were to embark on a serious effort to reduce greenhouse gas emissions, stationary sources, and in particular large stationary sources, would have to be included. This concentration of greenhouse gas emissions is even more important from a policy standpoint: reductions in greenhouse gas emissions from these sectors are likely to be more timely and cost-effective than attempts to reduce emissions from the transport sector.

This report discusses three major paths and two alternate paths of statutory authorities that have been identified by EPA and others as possible avenues the agency might take in addressing greenhouse gas emissions under existing CAA provisions. After discussing the approaches, we identify categories of control options EPA could consider, including an EPA-coordinated cap-and-trade program. Then we discuss the administrative difficulties in using the Clean Air Act for greenhouse gas control, particularly New Source Review and Title V permitting requirements. Finally, we conclude by putting the issue into the context of previous environmental challenges the CAA has faced.

**Table I. Selected U.S. Stationary Sources of Greenhouse Gases**

Source	2007 Emissions	% of Total GHGs
<b>Electricity Generation (CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O)</b>		
Coal-fired	1977.7	27.8%
Natural gas-fired	374.1	5.3%
Fuel Oil-fired	55.4	0.8%
<b>Industrial fossil-fuel combustion (CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O)</b> Mostly Petroleum refineries, chemicals, primary metals, paper, food, and nonmetallic mineral products		
Coal-fired	108.1	1.5%
Natural gas-fired	385.6	5.4%
Fuel Oil-fired	353.3	5.0%
<b>Industrial Processes</b>		
Iron and Steel Production (CO <sub>2</sub> , CH <sub>4</sub> )	74.3	1.0%
Cement Production (CO <sub>2</sub> )	44.5	0.6%
Nitric Acid Production (N <sub>2</sub> O)	21.7	0.3%
Substitution of Ozone Depleting Substances (HFCs)	108.3	1.5%
<b>Other</b>		
Natural Gas Systems (CO <sub>2</sub> , CH <sub>4</sub> )	133.4	1.9%
Waste Incineration (CO <sub>2</sub> , N <sub>2</sub> O)	21.2	0.3%
<b>TOTAL</b>	<b>3657.6</b>	<b>51.3%</b>

## The Entry Point: *Massachusetts vs. EPA*

A regulatory approach using existing Clean Air Act authorities has been under consideration at EPA for more than a decade. In 1998, EPA's General Counsel, Jonathan Cannon, concluded in a memorandum to the EPA Administrator that greenhouse gases were air pollutants within the Clean Air Act's definition of the term, and therefore could be regulated under the Act.<sup>1</sup> Relying on the Cannon memorandum as well as the statute itself, on October 20, 1999, a group of 19

<sup>1</sup> Memorandum from Jonathan Z. Cannon, EPA General Counsel, to Carol M. Browner, EPA Administrator, EPA's Authority to Regulate Pollutants Emitted by Electric Power Generation Sources (April 10, 1998).

---

*Climate Change: Potential Regulation of Stationary Greenhouse Gas Sources Under the C*

---

organizations petitioned EPA to regulate greenhouse gas emissions from new motor vehicles under Section 202 of the Act.<sup>2</sup> Section 202 gives the EPA Administrator broad authority to set “standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles” if in her judgment they contribute to air pollution which “may reasonably be anticipated to endanger public health or welfare.”

EPA denied the petition in 2003<sup>3</sup> on the basis of a new General Counsel memorandum issued the same day in which the General Counsel concluded that the CAA does not grant EPA authority to regulate CO<sub>2</sub> and other GHG emissions based on their climate change impacts.<sup>4</sup> The denial was challenged by Massachusetts, eleven other states, and various other petitioners in a case that ultimately reached the Supreme Court. In an April 2, 2007 decision (*Massachusetts v. EPA*), the Court found by 5-4 that EPA *does* have authority to regulate greenhouse gas emissions, since the emissions are clearly “air pollutants” under the Clean Air Act’s definition of that term.<sup>5</sup> The Court’s majority concluded that EPA must, therefore, decide whether emissions of these pollutants from new motor vehicles contribute to air pollution that may reasonably be anticipated to endanger public health or welfare. If it makes this finding of endangerment, the Act requires the agency to establish standards for emissions of the pollutants.<sup>6</sup>

## The Advance Notice of Proposed Rulemaking (ANPR)

For nearly two years following the Court’s decision, the Bush Administration’s EPA did not respond to the original petition nor make a finding regarding endangerment. Its only formal action following the Court decision was to issue a detailed information request, called an Advance Notice of Proposed Rulemaking (ANPR), on July 30, 2008.<sup>7</sup>

The ANPR occupied 167 pages of the *Federal Register*. Besides requesting information, it took the unusual approach of presenting statements from the Office of Management and Budget, four Cabinet Departments (Agriculture, Commerce, Transportation, and Energy), the Chairman of the Council on Environmental Quality, the Director of the President’s Office of Science and Technology Policy, the Chairman of the Council of Economic Advisers, and the Chief Counsel for Advocacy at the Small Business Administration, each of whom expressed their objections to

---

<sup>2</sup> The lead petitioner was the International Center for Technology Assessment (ICTA). The petition may be found on their website at <http://www.icta.org/doc/ghgpet2.pdf>.

<sup>3</sup> The agency argued that it lacked statutory authority to regulate greenhouse gases: Congress “was well aware of the global climate change issue” when it last comprehensively amended the Clean Air Act in 1990, according to the agency, but “it declined to adopt a proposed amendment establishing binding emissions limitations.” *Massachusetts v. EPA*, 549 U.S. 497 (2007).

<sup>4</sup> Memorandum from Robert E. Fabricant, EPA General Counsel, to Marianne L. Horinko, EPA Acting Administrator, EPA’s Authority to Impose Mandatory Controls to Address Global Climate Change Under the Clean Air Act (August 28, 2003).

<sup>5</sup> *Massachusetts v. EPA*, 549 U.S. 497 (2007). The majority held: “The Clean Air Act’s sweeping definition of ‘air pollutant’ includes ‘any air pollution agent or combination of such agents, including any physical, chemical ... substance or matter which is emitted into or otherwise enters the ambient air....’ ... Carbon dioxide, methane, nitrous oxide, and hydrofluorocarbons are without a doubt ‘physical [and] chemical ... substances[s] which [are] emitted into ... the ambient air.’ The statute is unambiguous.”

<sup>6</sup> For further discussion of the Court’s decision, see CRS Report RS22665, *The Supreme Court’s Climate Change Decision: Massachusetts v. EPA*, by Robert Meltz.

<sup>7</sup> U.S. EPA, “Regulating Greenhouse Gas Emissions Under the Clean Air Act,” 73 *Federal Register* 44354, July 30, 2008.

---

regulating greenhouse gas emissions under the Clean Air Act. The OMB statement began by noting that, “The issues raised during interagency review are so significant that we have been unable to reach interagency consensus in a timely way, and as a result, this staff draft cannot be considered Administration policy or representative of the views of the Administration.”<sup>8</sup> It went on to state that “... the Clean Air Act is a deeply flawed and unsuitable vehicle for reducing greenhouse gas emissions.”<sup>9</sup> The other letters concurred. The ANPR, therefore, was of limited use in reaching a conclusion on the endangerment issue and, in any event, it presents the views of an Administration no longer in office.

The current Administration made review of the endangerment issue a high priority. On April 17, 2009, EPA proposed a finding that GHGs do endanger both public health and welfare and that GHGs from new motor vehicles contribute to that endangerment.<sup>10</sup> Publication of the proposal in the *Federal Register* on April 24 began a 60-day public comment period. In addition, public hearings will be held May 18 in Arlington, VA, and May 21 in Seattle, WA.

## Potential Implications for Stationary Sources

While there has been considerable speculation in the literature about the meaning of *Massachusetts v. EPA* for stationary sources, there have also been several attempts to invoke the various authorities of the Clean Air Act to begin controlling greenhouse gas emissions from stationary sources.<sup>11</sup> Among the legal initiatives currently underway are the following:

- In 2006, the EPA revised the New Source Performance Standard (NSPS) for electric utilities and other steam generating units without including any CO<sub>2</sub> standard, or other requirement. Led by New York, several states filed a petition for review of the new NSPS, challenging the omission of any CO<sub>2</sub> requirement. In September 2007 the D.C. Circuit Court of Appeals remanded the case back to EPA for further proceedings “in light of *Massachusetts v. EPA*.”<sup>12</sup>
- In 2007, EPA Region 8 granted a Prevention of Significant Deterioration (PSD) permit authorizing construction of a waste-coal-fired electric generating plant near Bonanza, Utah. Appealing the decision, the Sierra Club argued to the Agency’s Environmental Appeals Board (EAB) that because the Court had found in *Massachusetts v. EPA* that CO<sub>2</sub> was an air pollutant under the Act, and that EPA has imposed CO<sub>2</sub> monitoring and reporting requirements, the Bonanza plant was required to install Best Available Control Technology (BACT) for CO<sub>2</sub> emissions. The EAB rejected the Sierra Club’s interpretation of the PSD-NSR language, but remanded it back to Region 8 for reconsideration of a CO<sub>2</sub> BACT requirement.<sup>13</sup> In another PSD-NSR (New Source Review) case, EPA Region 9

<sup>9</sup> *Ibid.*

<sup>10</sup> Environmental Protection Agency, “Proposed Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act,” PrePublication Copy, April 17, 2009, at <http://epa.gov/climatechange/endangerment/downloads/GHGEndangermentProposal.pdf>.

<sup>11</sup> For a legal discussion of these initiatives, see CRS Report RL32764, *Climate Change Litigation: A Survey*, by Robert Meltz.

<sup>12</sup> *New York v. EPA*, No 06-1322 (D.C. Cir., September 24, 2007)

<sup>13</sup> The Board rejected the Region’s argument that it was limited by an historical agency interpretation to read “subject to regulation” as meaning “subject to a statutory or regulatory provision that requires actual control of emissions of that (continued...) ”

filed a motion with the EAB in April 2009 for a voluntary remand of the PSD permit for the Desert Rock coal-fired power plant in New Mexico to allow for a reconsideration of its permit to include a CO<sub>2</sub> limitation. Region 9 wants to reconsider its decision not to require Desert Rock to install “carbon-ready” integrated gasification combined-cycle technology instead of allowing current pulverized-coal technology.<sup>14</sup>

- In 2009, the Environmental Integrity Project, an environmental group, filed a complaint with the D.C. Circuit Court to force the EPA to review nitrous oxide (N<sub>2</sub>O) emissions from nitric acid plants.<sup>15</sup> The group argues that EPA has not reviewed the NSPS for such plants since 1984, despite the statutory requirements for periodic reviews.

It should be noted that amidst this legal activity and EPA’s apparent commitment to move forward with an endangerment finding, EPA Administrator Jackson and others in the Administration have made clear that their preference would be for Congress to address the climate issue through new legislation. In the press release announcing the proposed endangerment finding, the agency stated, “Notwithstanding this required regulatory process, both President Obama and Administrator Jackson have repeatedly indicated their preference for comprehensive legislation to address this issue and create the framework for a clean energy economy.”

## Potential Paths for GHG Stationary Source Control

When looking at the CAA from the point of view of reducing GHGs from stationary sources, three existing paths are available. As indicated in Table 2, the three paths are (1) to regulate GHGs as criteria air pollutants, (2) to regulate GHGs as hazardous air pollutants, or (3) to regulate GHGs as designated air pollutants. Each of these paths are discussed below, along with two lesser explored trails: Section 115 and Title VI.

---

(...continued)

pollutant.” Since EPA has yet to issue a CAA regulation requiring actual control of CO<sub>2</sub> emissions, Region 8 argued, BACT for CO<sub>2</sub> is not required. Hence, the Board remanded the permit to the Region for it to reconsider whether to impose a CO<sub>2</sub> BACT limit. Desert Power Electric Cooperative, PSD Appeal No. 07-03 (E.A.B. November 13, 2008).

<sup>14</sup> For more information on Desert Rock’s PSD-NSR permit, see <http://www.epa.gov/region09/air/permit/desert-rock/>.

<sup>15</sup> Complaint at 2, *Environmental Integrity Project v. EPA*, No. 1:09-cv-00218 (D.C. Circuit, filed February 4, 2009).

**Notes:** NAAQS stands for National Ambient Air Quality Standard and is discussed below. MACT stands for Maximum Achievable Control Technology and is discussed after the discussion of NAAQS.

## Path 1: Regulating GHG through National Ambient Air Quality Standards (NAAQS)

### Importance of NAAQS

The backbone of the Clean Air Act is the creation of National Ambient Air Quality Standards (NAAQS). The need to attain NAAQS, which are set at levels designed to protect public health without consideration of costs or economic impact, is the driving force behind much of clean air regulation.

The authority for NAAQS is found in Sections 108 and 109 of the Act. Under Section 108, EPA is to identify air pollutants that, in the Administrator's judgment, endanger public health or welfare, and whose presence in ambient air results from numerous or diverse sources. Under Section 109, EPA is required to set NAAQS for the identified pollutants.

Section 109 requires the EPA Administrator to set both primary and secondary NAAQS. Primary NAAQS must be set at a level that will protect public health with an adequate margin of safety. Secondary NAAQS are required to protect public welfare from "any known or anticipated adverse effects associated with the presence of such air pollutant in the ambient air." Public welfare covers damage to crops, vegetation, soils, wildlife, water, property, building materials, etc., and such broader variables as visibility, climate, economic values, and personal comfort and well-being.

Over the years, EPA has identified six air pollutants or categories of air pollutants for NAAQS: sulfur dioxide (SO<sub>2</sub>), particulate matter (PM<sub>2.5</sub> and PM<sub>10</sub>), nitrogen dioxide (NO<sub>2</sub>), carbon monoxide (CO), ozone, and lead. These six are referred to as "criteria" pollutants. Each of the criteria pollutants was identified for NAAQS regulation in the 1970s. Since that time, although

the specific standards (the allowed concentrations) have been reviewed and modified, no new criteria pollutants have been identified.

## **NAAQS and Controlling GHGs**

If carbon dioxide (CO<sub>2</sub>) or other greenhouse gases were identified as criteria pollutants, NAAQS would then have to be set. CO<sub>2</sub>, the most important greenhouse gas, is arguably an air pollutant that endangers public health or welfare,<sup>16</sup> and its presence in ambient air results from numerous or diverse sources. Thus, it meets the basic criteria of Section 108. But setting a NAAQS for CO<sub>2</sub> raises a number of potential issues, four of which are discussed in the following sections.

### *Setting a Standard*

An initial difficulty would arise in choosing a level at which to set a NAAQS. Primary and secondary NAAQS are expressed as concentrations of the pollutant in ambient air that endanger public health or welfare. For the six current criteria pollutants, the focus has been on setting *primary* (health-based) standards—i.e., identifying a concentration in ambient air above which ambient concentrations of the pollutant contribute to illness or death. These standards are based on both concentration-response studies undertaken in laboratory conditions (often animal studies, but some involving humans), and on epidemiology that demonstrates a correlation between greater exposure to the pollutant and higher rates of morbidity and mortality.

For CO<sub>2</sub> at current and projected levels, there are not the same direct linkages between higher concentrations and health as there are for each of the current NAAQS. A person exposed to current ambient levels of CO<sub>2</sub> will not be sickened. Nor is it likely that one could demonstrate a connection between CO<sub>2</sub> and morbidity or mortality through epidemiology, in part because CO<sub>2</sub> concentrations are relatively uniform across the globe and change very slowly. The argument that can be made is more indirect: that higher levels of CO<sub>2</sub> are likely over time to cause higher temperatures, and higher temperatures and associated changes in climate-related processes are likely to have health consequences.

If EPA concluded that this connection between CO<sub>2</sub>, higher temperatures, and human health were sufficient to justify establishing a primary NAAQS, it would still be difficult to pick out a specific CO<sub>2</sub> concentration for a standard. Among scientists concerned about greenhouse gas concentrations, some argue for a level of 350 parts per million (ppm) as the concentration that must be attained,<sup>17</sup> others argue for 450 ppm, and some for levels of 550-600 ppm. Current

<sup>16</sup> We say “arguably” because EPA has not yet made this endangerment finding (although it has proposed doing so), and there are climate skeptics who would dispute whether such a finding is justified. On the other hand, the vast majority of the climate science community, as represented by the Intergovernmental Panel on Climate Change, have concluded that “[w]arming of the climate system is unequivocal ...,” and “[m]ost of the observed increase in globally-averaged temperatures since the mid-20<sup>th</sup> century is very likely due to the observed increase in anthropogenic GHG concentrations.” Further, “Most impacts are expected to be adverse (e.g., lower agricultural productivity in many regions, drought, rising sea levels, spread of disease vectors, greater needs for cooling).” See CRS Report RL34266, *Climate Change: Science Highlights*, by Jane A. Leggett. Within EPA, it would appear that the relevant staff concluded that an endangerment finding was justified in 2007, but the agency took no action as the result of the involvement of other agencies and the White House. See Testimony of Jason Burnett, Former Associate Deputy Administrator, EPA, at Senate Environment and Public Works Committee, “Regulation of Greenhouse Gases under the Clean Air Act,” Hearing, September 23, 2008.

<sup>17</sup> The argument for 350 ppm is based largely on concern over melting glaciers, polar ice caps, and sea level, not direct (continued...)

---

*Climate Change: Potential Regulation of Stationary Greenhouse Gas Sources Under the C*

---

concentrations in the Earth's atmosphere are about 385 ppm, increasing by 1 or 2 ppm per year. The mechanics of implementing a standard will be discussed in greater detail below, but it is important to note here that unless one chose a standard at or below the current ambient level, establishing a primary NAAQS would have no consequence. It is only if ambient concentrations of the pollutant exceed the standard that action must be taken.

A further point regarding the setting of a NAAQS is the importance of distinguishing primary from secondary standards. If one were to set a NAAQS for CO<sub>2</sub> or other GHGs, it is perhaps the secondary NAAQS that is most relevant to the discussion. As noted above, secondary NAAQS are designed to prevent damage to crops, vegetation, soils, wildlife, water, property, building materials, etc. and such broader variables as visibility, climate, economic values, personal comfort and well-being.

EPA—under both Democratic and Republican Presidents—has generally given short shrift to the setting of secondary NAAQS: most have been set at a level identical to the primary standard, with little discussion of the agency's reasoning. In part, this is because secondary NAAQS have no deadlines attached to their attainment and there is no enforcement mechanism or penalty for failure to attain them.

Thus, it would hardly be worth the effort to establish a NAAQS for GHGs unless one could establish a defensible case for a specific primary standard that was below ambient levels. Primary NAAQS, unlike their secondary kin, do have deadlines: there are consequences for a failure to attain them in a timely manner.

### *Identifying Nonattainment Areas*

If a CO<sub>2</sub> or GHG NAAQS were set by EPA, the next step would be to identify nonattainment areas (i.e., areas where ambient concentrations of CO<sub>2</sub> and/or other GHGs exceed the NAAQS). The procedure for doing so is specified under Section 107 of the Act. For the six current criteria pollutants, there are distinct local and regional concentrations of each pollutant that can generally be linked to stationary or mobile sources in the area. In some cases, the sources may be relatively distant, with pollutants (or precursors) emitted hundreds of miles away. But with all of the current criteria pollutants, there are significant variations in local and regional concentrations, and only those areas with pollutant readings higher than the NAAQS are designated “nonattainment.”

For CO<sub>2</sub>, this would not be the case. Concentrations are relatively homogeneous across the entire country—indeed, across the world. Thus, the entire United States would need to be designated nonattainment if concentrations exceeded the standard.

### *Developing State Implementation Plans*

A third element of NAAQS that appears ill-suited to the regulation of GHGs is the mechanism used to bring about compliance with NAAQS, the State Implementation Plan (SIP) provisions in Section 110 and Sections 171-179B. SIPs describe the sources of pollution in a nonattainment area and the methods that will be used by the area to reduce emissions sufficiently to attain the

---

(...continued)

public health considerations.

---

*Climate Change: Potential Regulation of Stationary Greenhouse Gas Sources Under the C*

---

standard. They are required to be developed and submitted to EPA for each nonattainment area within three years of its designation.

SIPs build on some national standards (for new motor vehicles and new or modified power plants, for example), but they assume that most sources of the pollution to be controlled are local, and therefore, that the measures needed to reach attainment are measures tailored to local conditions. To the extent that significant emission sources are located in other states, downwind states are authorized under Section 126 to petition EPA for controls on such upwind sources.

If pollution is uniform throughout the country, there is no reason why the measures taken to reduce it should vary from locality to locality. Nor will a nonattainment area be able to demonstrate that its pollution control measures will have any measurable impact on the ambient concentration of most greenhouse gases. Thus, State Implementation Plans tailored to each nonattainment area would be ill-suited to the nature of the problem.

### *Attaining the Standard*

It is also unlikely that any state or nonattainment area on its own could demonstrate reasonable further progress toward attainment of the standard (as is required by Section 172), particularly within the 5- to 10-year period specified in Section 172 for attainment of a NAAQS. Greenhouse gases accumulate in the atmosphere, and some can take hundreds of years to diminish, even if current global emissions decline. Global emissions are increasing. Individual states and nonattainment areas would have little chance of reversing this trend through any set of actions they might undertake on their own.

## **Path 2: Regulating GHGs through Section 112 as Hazardous Air Pollutants**

### **Importance of Section 112**

As revised by the 1990 CAA amendments, Section 112 contains four major provisions: Maximum Achievable Control Technology (MACT) requirements for major sources; health-based standards to be imposed for the residual risks remaining after imposition of MACT standards; standards for stationary “area sources” (small, but numerous sources, such as gas stations or dry cleaners, that collectively emit significant quantities of hazardous pollutants); and requirements for the prevention of catastrophic releases. The MACT and area source provisions would appear to be the most relevant, if GHGs were to be controlled under this section.

The MACT provisions require EPA to set standards for sources of the listed pollutants that achieve “the maximum degree of reduction in emissions” taking into account cost and other non-air-quality factors. MACT standards for new sources “shall not be less stringent than the most stringent emissions level that is achieved in practice by the best controlled similar source.” The standards for existing sources may be less stringent than those for new sources, but generally must be no less stringent than the average emission limitations achieved by the best performing 12% of existing sources. Existing sources are given three years following promulgation of standards to achieve compliance, with a possible one-year extension; additional extensions may be available for special circumstances or for certain categories of sources.

In addition to the technology-based standards for major sources of hazardous air pollution, Section 112 requires EPA to establish standards for stationary “area sources” (small, but numerous, sources such as gas stations or dry cleaners, that collectively emit significant quantities of hazardous air pollutants). In setting these standards, EPA can impose less stringent “generally available” control technologies, rather than MACT.

## **Section 112 and Controlling GHGs**

Could EPA regulate GHG emissions as hazardous air pollutants under Section 112? In its comments on the ANPR, the Bush Administration’s Department of Energy stated that “... it is widely acknowledged that a positive endangerment finding could lead to ... the listing of one or more greenhouse gases as hazardous air pollutants (HAP) under section 112.”<sup>18</sup> EPA, on the other hand, was more circumspect in its analysis, stating:

The effects and findings described in section 112 are different from other sections of the CAA addressing endangerment of public health discussed in previous sections of today’s notice. Given the nature of the effects identified in section 112(b)(2), we request comment on whether the health and environmental effects attributable to GHG fall within the scope of this section.<sup>19</sup>

The language of Section 112 refers to pollutants that may present a threat of adverse human health effects or adverse environmental effects. This language might be broad enough that GHGs could be categorized as hazardous air pollutants and subjected to the regulatory tools provided by the section, but because the section was written to apply to carcinogenic and other toxic air pollutants present in emissions in small quantities, there would be questions as to whether Congress intended the use of the section’s authority for pollutants such as GHGs. The legislative history of the Act makes clear that it was designed primarily to regulate pollutants commonly referred to as “air toxics.” Hazardous air pollutants are defined as “any pollutant listed pursuant to subsection [112](b).” Congress provided an initial list of 189 hazardous air pollutants in that subsection, and it established criteria and procedures for revising the list in Section 112(b)(2). In the 18 years since the criteria were established, EPA has not added any substances to the list.

The procedures for revising the list provide that the Administrator may do so “by rule,” adding pollutants that may present, through inhalation or other routes of exposure, a threat of adverse human health effects, or, through a variety of routes of exposure, adverse environmental effects. The human health effects language is qualified with wording that suggests the type of pollutants Congress had in mind when it drafted this section: substances that include, but are not limited to, ones known or reasonably anticipated to be carcinogenic, mutagenic, teratogenic, neurotoxic, acutely or chronically toxic, or which cause reproductive dysfunction.

The section is also not well-suited to the most common GHGs, such as CO<sub>2</sub>, that are emitted in very large quantities. For example, it defines a major source as one that emits 10 tons per year or more of any hazardous air pollutant. Annual CO<sub>2</sub> emissions in the United States are about 6 billion metric tons, and hundreds of thousands, perhaps millions of sources (including large residential structures) might qualify as major sources if CO<sub>2</sub> were listed as a hazardous air pollutant under this section.

<sup>18</sup> 73 *Federal Register* 44367, July 30, 2008.

<sup>19</sup> *Ibid.*, p. 44493.

Section 112 might be useful, if at all, for regulating small volume chemicals that are very potent greenhouse gases: sulfur hexafluoride (SF<sub>6</sub>), for example. SF<sub>6</sub> has a global warming potential 22,800 times as great as CO<sub>2</sub> and accounted for about one-quarter of one percent of total U.S. GHG emissions in 2007, when measured by its global warming potential. SF<sub>6</sub> emissions were 16.5 million metric tons of CO<sub>2</sub>-equivalent in that year. Actual emissions expressed as SF<sub>6</sub>, however, were only 690 metric tons. Nitrogen trifluoride (NF<sub>3</sub>), another chemical with low emission levels but high global warming potential, might be another candidate, if EPA chose this regulatory route. Section 112 generally considers a major source of emissions to be one that emits more than 10 tons per year of a hazardous air pollutant, and it allows the Administrator to establish a lesser quantity as the major source threshold, based on the potency of the air pollutant or other relevant factors.

Once the source categories for hazardous air pollutants are identified, Section 112 establishes a presumption in favor of regulation of the designated pollutants; it requires regulation unless EPA or a petitioner is able to show “that there is adequate data on the health and environmental effects of the substance to determine that emissions, ambient concentrations, bioaccumulation or deposition of the substance may not reasonably be anticipated to cause any adverse effects to human health or adverse environmental effects.”

### **Path 3: Regulating GHGs through Sections 111 as Designated Air Pollutants**

Given the difficulties in following the first two paths, much of the attention, including EPA’s, has been on the third path. The term “designated pollutant” is a catch-all phrase for any air pollutant that isn’t either a criteria air pollutant under Section 108 or a toxic air pollutant under Section 112. Examples of these include fluorides from phosphate fertilizer manufacturing or primary aluminum reduction, or sulfuric acid mist from sulfuric acid plants.

#### **Importance of Section 111**

The authority to regulate such pollutants is Section 111.<sup>20</sup> Section 111 establishes New Source Performance Standards (NSPS), which are emission limitations imposed on designated categories

<sup>20</sup> In addition to using Section 111, in its July 2008 Advance Notice of Proposed Rulemaking EPA discussed at some length the possibility of using Section 129 of the act to regulate GHG emissions from solid waste combustion units. This would seem to be among the more unlikely routes to regulation of GHGs.

Section 129 is structured differently from most of the other CAA authorities discussed here: there is no provision for an endangerment finding, and there is no blanket authority for the Administrator to regulate pollutants that endanger public health or welfare; there is, instead, a specific list of 10 types of pollution for which the Administrator shall establish standards, with no provision for adding pollutants to the list.

Furthermore, waste incineration is a relatively small source of GHG emissions. According to the latest EPA *Inventory of Greenhouse Gas Emissions and Sinks*, incineration of waste emitted 20.8 million metric tonnes of CO<sub>2</sub> in 2007, less than 0.3% of total U.S. GHG emissions.

To the extent that Section 129 provides broader authority to the Administrator, it does so by referencing Section 111: “The Administrator shall establish performance standards and other requirements pursuant to Section 111 and this section for each category of solid waste incineration units.” Thus, the authority the Administrator has over waste combustion units is addressed in our discussion of EPA’s authority over stationary sources in general under Section 111.

of major new (or substantially modified) stationary sources of air pollution. A new source is subject to NSPS regardless of its location or ambient air conditions.<sup>21</sup>

Section 111 provides authority for EPA to impose performance standards on stationary sources—directly in the case of new (or modified) sources, and through the states in the case of existing sources (Section 111(d)). The authority to impose performance standards on new and modified sources refers to any category of sources that the Administrator judges “causes, or contributes significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare” (Sec. 111(b)(1)(A)). In establishing these standards, the Administrator has the flexibility to “distinguish among classes, types, and sizes within categories of new sources” (Sec. 111(b)(2)).

The performance standards themselves are to reflect “the degree of emission limitation achievable through the application of the best system of emission reduction which (taking into account the cost of achieving such reduction and any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated” (Sec. 111(a)(1)). Both the Administrator and the individual states have the authority to enforce the NSPS.

### **Controlling GHG through Section 111**

Section 111 appears to provide a strong basis for EPA to establish a traditional regulatory approach to controlling greenhouse gas emissions from large stationary sources. As noted, the section gives EPA considerable flexibility with respect to the source categories regulated, the size of the sources regulated, the particular greenhouse gases regulated, along with the timing and phasing in of regulations. This flexibility extends to the stringency of the regulations with respect to costs, and secondary effects, such as nonair quality, health and environmental impacts, along with energy requirements. This flexibility is encompassed within the Administrator’s authority to determine what control systems she determines have been “adequately demonstrated.” As discussed later, this determination has been used to authorize control regimes that extended beyond the merely commercially available to those technologies that have only been demonstrated, and thus are considered by many to have been “technology-forcing.”

In sum, Section 111 has several advantages in considering greenhouse gas controls including that it (1) has flexibility with respect to the size of the source controlled (Section 111(b)(2)), (2) can prioritize its schedule of performance standards (Section 111(f)(2)), (3) can consider costs and other factors in making determinations, and (4) has discretion with respect to determining technology that has been adequately demonstrated. Essentially, using Section 111, EPA can determine who gets controlled, when they get controlled, how much they get controlled, and at what price.

<sup>21</sup> The federal focus on new facilities arose from several factors. First, it is generally less expensive to design in to new construction necessary control features than to retrofit those features on existing facilities not designed to incorporate them. Second, uniform standards for new construction ensures that individual states will not be tempted to slacken environmental control requirements to compete for new industry. NSPS was also seen as enhancing the potential for long-term growth, ensuring competitiveness between low and high sulfur coals, and creating incentives for new control technologies. See Senator Edmund Muskie, Senate Consideration of the Report of the conference Committee (August 4, 1977), in U.S. Senate, Committee on Environment and Public Works, *A Legislative History of the Clean Air Act Amendments of 1977* (95<sup>th</sup> Congress., 2d session; Serial No. 95-15) (1979), vol. 3, p. 353.

## Going Off the Beaten Path: Regulating under Section 115 or Title VI

### Section 115: International Pollution

On the face of it, Section 115 would appear the ideal provision to address the global issue of climate change. It is focused on international problems and has unique international triggers. Specifically, Section 115 could be invoked by EPA on one of two bases.

First, EPA could act if it receives reports, surveys, or studies from “any duly constituted international agency” that gives EPA:

reason to believe that any air pollutant or pollutants emitted in the United States cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare in a foreign country....<sup>22</sup>

Unlike the endangerment triggers under other sections of the Act, the endangerment finding under Section 115 refers to international effects based on data from internationally recognized sources. Many would argue that reports by the Intergovernmental Panel on Climate Change (IPCC) would fit this requirement. A United Nations body, created by the World Meteorological Organization and United Nations Environment Programme, the group and its results are referenced by EPA in its ANPR and its proposed endangerment finding.

Second, in addition to a unique international endangerment trigger, Section 115 can be invoked without any EPA endangerment finding at all. Specifically, EPA is directed to act “whenever the Secretary of State requests him to do so with respect to such pollution [that endangers public health or welfare in a foreign country] which the Secretary of State alleges is of such a nature...” (Section 115(a)). Thus, an allegation by the Secretary of State is sufficient cause for EPA to act.

The action called for under Section 115 is implemented through Section 110(a)(2)(H)(ii) that requires states to revise their SIPs to prevent or eliminate the endangerment identified. Apparently, based on this reference to SIPs, EPA states in its ANPR that Section 115 could only be exercised if EPA were to promulgate a NAAQS for greenhouse gases.<sup>23</sup> However, this is arguable. Section 110(a)(2)(H)(ii) states that SIPs must be crafted to provide for revisions:

...whenever the Administrator finds on the basis of information available to the Administrator that the plan is substantially inadequate to attain the national ambient air quality standard which it implements *or to otherwise comply with any additional requirements established under this Act.* [emphasis added]

In their article arguing in favor of using Section 115 to address climate change, Martella and Paulson state their opposition to EPA’s blanket assertion that a greenhouse gas NAAQS would be necessary to invoke Section 115:

... based on the plain language of the statute, however, this is unlikely to have been what Congress intended. Section 115 is not in any way limited to criteria pollutants. In fact, the

<sup>22</sup> Section 115(a)

<sup>23</sup> 73 *Federal Register* 44483, July 30, 2008.

---

*Climate Change: Potential Regulation of Stationary Greenhouse Gas Sources Under the C*

---

opposite is true. It applies specifically to “any air pollution.” Clean Air Act Section 110(a)(2)(H)(ii) makes it clear that SIP must provide for the revision of the plan not only when the plan is inadequate to attain a NAAQS, but also to otherwise comply with any additional requirements, such as a revision required by Section 115.<sup>24</sup> [footnotes omitted]

The above actions are prefaced on a condition of reciprocity; Section 115 applies “only to a foreign country which the Administrator determines has given the United States essentially the same rights with respect to the prevention or control of air pollution occurring in that country as is given that country by this section.” (Section 115(c)) EPA notes in its ANPR that reciprocity with one or more affected countries may be sufficient to trigger Section 115.<sup>25</sup> Many countries currently attempting to comply with the Kyoto Protocol, such as the European Union, could argue that their efforts to reduce greenhouse gases are being hindered by absent or inadequate U.S. controls. Such countries could argue they meet the criteria under Section 115(c) with respect to reciprocity and point to international studies supporting their position. Secondly, countries at substantial risk from climate change, such as low-lying island countries, could argue endangerment from the lack of U.S. action. Thirdly, countries that only contribute a *de minimis* level of emissions, such as virtually all of Africa, could argue that their low emissions meet the criterion for U.S. action.

Subject to the limitations of the SIP process, EPA notes that Section 115 would provide it with some flexibility in program design. Martella and Paulson take a much more expansive view of the flexibility available, arguing:

While designating SIPs as the implementation vehicle, Section 115 otherwise does not impose strictures on the contours and requirements of any prospective program(s) to reduce greenhouse gas emissions.... A Section 115-based program could therefore include model thresholds and source categories set by EPA, similar to the Northeast Ozone Transport.

Additionally, EPA could develop a holistic model plan to be implemented by the states. Multiple model approaches also could be presented to the states allowing each state to pick the most appropriate solution for its particular mix of greenhouse gas sources....

Additionally, Section 115 provides a mechanism to limit the scope of the program in terms of the sources....<sup>26</sup>

Because EPA asserts that invoking Section 115 would require a greenhouse gas NAAQS, the action would also invoke NSR under Part C and Title V permitting requirements. One of Martella and Paulson’s primary arguments in favor of Section 115 is their belief that Section 115’s unique endangerment requirements (or no endangerment requirement if the Secretary of State alleges endangerment) should not trigger PSD-NSR or Title V permitting requirements.<sup>27</sup>

Finally, it should be noted that Section 115 has never been implemented, and many countries would prefer a negotiated settlement on climate change, rather than this approach.

**Title VI: Stratospheric Ozone Protection**

Added to the Clean Air Act in 1990, Title VI is the country's implementing legislation for the Montreal Protocol and succeeding agreements to address ozone depletion by human-made substances. Some of the substances that deplete the ozone layer also contribute to climate change (e.g., CFCs, HCFCs). In addition, some substances chosen as substitutes for ozone depleting chemicals are themselves greenhouse gases (e.g., HFC-134a, PFCs). Finally, the process of making acceptable substitutes for more powerful ozone-depleting chemicals (e.g., HCFC-22) produces greenhouse gases as a byproduct of production (e.g., HFC-23).

Beyond these chemical relationships, there is continuing research on the atmospheric relationship between the stratosphere (and the ozone layer) and climate change.

There are two provisions of Title VI that could be used to address greenhouse gas emission under certain conditions. They are discussed below.

***Section 612: Safe Alternatives Policy***

As noted above, some substitutes for ozone-depleting substances are greenhouse gases, such as HFCs and PFCs. Section 612 authorizes EPA to the maximum extent practicable, to identify substitutes for ozone-depleting chemicals that reduce overall risks to human health and the environment. Specifically, Section 612(c) requires the EPA to make it unlawful to replace an ozone-depleting substance with any substitute substance which EPA determines "may present adverse effects to human health or the environment" where EPA has identified an available, less harmful substitute. The resulting program is called the Significant New Alternatives Policy (SNAP). With appropriate substitutes identified, SNAP could be used to reduce emissions of HFCs and PFCs without invoking any other provisions of the CAA.

***Section 615: Authority of Administrator***

Like Section 115, Section 615 is potentially a powerful mechanism to control greenhouse gas emissions under certain circumstances. Like Section 115, it has a unique endangerment finding requirement and even broader discretionary authority for EPA to respond. Section 615 states:

If, in the Administrator's judgment, any substance, practice, process, or activity may reasonably be anticipated to affect the stratosphere, especially ozone in the stratosphere, and such effect may reasonably be anticipated to endanger public health or welfare, the Administrator shall promptly promulgate regulations respecting the control of such substance, practice, process or activity, and shall submit notice of the proposal and promulgation of such regulation to the Congress.

Invoking Section 615 in the case of greenhouse gases would involve a two-part judgment by the EPA: First, that greenhouse gases may reasonably be anticipated to affect the stratosphere (particularly the ozone layer) and, second, that the effect on the stratosphere may reasonably be anticipated to endanger public health or welfare. In its ANPR, EPA determined that it was beyond the scope of its ANPR to assess and analyze the available scientific information on the effects of greenhouse gases on the stratosphere.

If EPA were to judge the scientific data adequate to meet the two-part test, the authority available would be broad and deep. As stated by EPA in its ANPR: "... depending on the nature of any

finding made, section 615 authority may be broad enough to establish a cap-and-trade program for the substance, practice, process or activity covered by the finding....<sup>28</sup>

## Potential Control Approaches for Stationary Sources

In its Technical Support Document for its ANPR, EPA takes a narrow view of the alternatives available to it in imposing greenhouse gas performance standards.<sup>29</sup> For existing electric generating sources, the EPA focuses on incremental improvements in the heat rates of existing units through options that “are well known in the industry” with an overall improvement in efficiency likely to be less than 5%. For new electric generating sources, EPA noted the availability of more efficient supercritical coal units, the future availability of ultra-supercritical units, and the possibility of limited biomass co-firing.

Continuing along this line of reasoning, EPA also suggested that it could develop regulations that anticipate future technology. For example, a phase-in approach to applying CO<sub>2</sub> standards to powerplants would be to mandate that “carbon-ready” generating technology be required for new construction. The objective would be to anticipate the widespread need for some form of carbon capture technology in the future by preparing for it with compatible fossil-fuel combustion technology now. The technology most discussed is integrated-gasification, combined-cycle (IGCC). As noted earlier, EPA is considering this option with respect to the *Desert Rock* PSD-NSR permit reconsideration. With respect to some of the carbon capture technology under development, IGCC has certain advantages over pulverized coal technology. However, just how much IGCC is “carbon ready” is subject to debate. EPA states in its ANPR that it believes such a staged approach is available to it under section 111:

EPA believes that section 111 may be used to set both single-phase performance standards based upon current technology and to set two-phased or multi-phased standards with more stringent limits in future years. Future-year limits may permissibly be based on technologies that, at the time of the rulemaking, we find adequately demonstrated to be available for use at some specified future date.<sup>30</sup>

The technical support document does not mention some more aggressive options. These include a fuel-neutral standard or a technology-based standard. For example, for carbon dioxide emissions from a newly-constructed powerplant, a fuel-neutral standard could follow the example set by the 1997 and 2005 NO<sub>x</sub> NSPS and the 2005 NO<sub>x</sub> NSPS for modified existing sources. Under those regulations, the NO<sub>x</sub> emissions standard is the same, regardless of the fuel burned—solid, liquid, or gaseous.<sup>31</sup> This standard is much more expensive for coal-fired facilities to comply with than for natural-gas fired facilities, thus encouraging the lower-carbon gas-fired technologies. Likewise, EPA could choose to set a newly-constructed powerplant standard based on the performance of natural gas burnt in a combined-cycle configuration – the fuel and technology of

<sup>28</sup> 73 *Federal Register* 44519, July 30, 2008.

<sup>29</sup> U.S. Environmental Protection Agency, *Technical Support Document for the Advanced Notice of Proposed Rulemaking for Greenhouse Gases; Stationary Sources, Section VII* (June 5, 2008), final draft.

<sup>30</sup> 73 *Federal Register* 44490, July 30, 2008.

<sup>31</sup> Under Sec. 60.44Da(d)(1), the 1997-2005 NSPS is set at 1.6 lb per megawatt-hour gross energy output, based on a 20-day rolling average; it is lowered to 1.0 lb per megawatt-hour gross energy output for powerplants commencing construction after February 28, 2005 (Sec. 60.44Da(e)(1)). Under Section 60.44Da(e)(3), the 2005 NSPS for modified sources is at either 1.4 lb. A fuel-neutral standard is also set for reconstructed powerplants.

choice for construction of new powerplants for the last two decades. If EPA wanted to encourage the rollover of the existing coal-fired powerplant fleet to natural gas, nuclear, or renewable sources, it could apply a fuel-neutral standard to modified sources as well. For example, a CO<sub>2</sub> emission standard of 0.8 lb. per kilowatt-hour output could be met by a new natural gas-fired, combined-cycle facility, as well as any non-emitting generating technology, such as nuclear power or renewables. In contrast, the standard would require a 60% reduction in emissions from a new coal-fired facility – forcing the development of a carbon control technology, such as carbon capture and storage (CCS), in order for a new coal-fired facility to be built or modified.

The viability of these options, or even more aggressive technology-forcing standards, would depend on how EPA determined whether a technology had been “adequately-demonstrated” and the seriousness of its costs and energy requirements. As discussed below, EPA has used the NSPS to encourage the installation of pollution control equipment on powerplants, even while the equipment’s development status was still being debated.

## **Forcing Commercialization of Technology Through a Regulatory Requirement: An Example from the SO<sub>2</sub> New Source Performance Standards**

It is an understatement to say that the new source performance standards promulgated by the EPA were technology-forcing. Electric utilities went from having no scrubbers on their generating units to incorporating very complex chemical processes. Chemical plants and refineries had scrubbing systems that were a few feet in diameter, but not the 30- to 40-foot diameters required by the utility industry. Utilities had dealt with hot flue gases, but not with saturated flue gases that contained all sorts of contaminants. Industry, and the US EPA, has always looked upon new source performance standards as technology-forcing, because they force the development of new technologies in order to satisfy emissions requirements.<sup>32</sup>

The most direct method to encourage adoption of carbon capture technology would be to mandate it. Mandating a performance standard on stationary sources is not a new idea: The process of forcing the development of emission controls on coal-fired powerplants is illustrated by the 1971 and 1978 SO<sub>2</sub> NSPS for coal-fired electric generating plants. As noted earlier, the Clean Air Act states that NSPS should reflect “the degree of emission limitation achievable through the application of the best system of emission reduction which (taking into account the cost of achieving such reductions and any non-air quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated.”<sup>33</sup> In promulgating its first utility SO<sub>2</sub> NSPS in 1971, EPA determined that a 1.2 pound of SO<sub>2</sub> per million Btu of heat input performance standard met the criteria of Sec. 111—a standard that required, on average, a 70% reduction in new powerplant emissions, and could be met by low-sulfur coal that was available in both the eastern and western parts of the United States, or by the use of emerging flue gas desulfurization (FGD) devices.<sup>34</sup>

---

*Climate Change: Potential Regulation of Stationary Greenhouse Gas Sources Under the C*

---

At the time the 1971 Utility SO<sub>2</sub> NSPS was promulgated, there was only one FGD vendor (Combustion Engineering) and only three commercial FGD units in operation—one of which would be retired by the end of the year.<sup>35</sup> The number of units and vendors would increase rapidly, not only because of the NSPS, but also because of the promulgation of the SO<sub>2</sub> NAAQS, the 1973 Supreme Court decision preventing significant deterioration of pristine areas,<sup>36</sup> and state requirements for stringent SO<sub>2</sub> controls, which opened up a market for retrofits of existing coal-fired facilities in addition to the NSPS focus on new facilities. Indeed, most of the growth in FGD installations during the early and mid-1970s was in retrofits. Taylor estimates that between 1973 and 1976, 72% of the FGD market was in retrofits.<sup>37</sup> By 1977, there were 14 vendors offering full-scale commercial FGD installation.<sup>38</sup>

However, despite this growth, only 10% of the new coal-fired facilities constructed between 1973 and 1976 had FGD installations. In addition, the early performance of these devices was not brilliant.<sup>39</sup> In 1974, American Electric Power (AEP) spearheaded an ad campaign to have EPA reject FGD devices as “too unreliable, too impractical for electric utility use” in favor of tall stacks, supplementary controls, and low-sulfur western coal.<sup>40</sup> This effort was ultimately unsuccessful as the Congress chose to modify the NSPS requirements for coal-fired electric generators in 1977 by adding a “percentage reduction” requirement. As promulgated in 1979, the revised SO<sub>2</sub> NSPS retained the 1971 performance standard but added a requirement for a 70%-90% reduction in emissions, depending on the sulfur content of the coal.<sup>41</sup> At the time, this requirement could be met only through use of an FGD device. The effect of the “scrubber requirement” is clear from the data provided in **Figure 1**. Based on their analysis of FGD development, Taylor, Rubin, and Hounshell state the importance of demand-pull instruments:

Results indicate that: regulation and the anticipation of regulation stimulate invention; technology-push instruments appear to be less effective at prompting invention than demand-pull instruments; and regulatory stringency focuses inventive activity along certain technology pathways.<sup>42</sup>

That government policy could force the development of a technology through creating a market should not suggest that the government was limited to that role, or that the process was smooth or seamless. On the latter point, Shattuck, et al., summarize the early years of FGD development as follows:

The Standards of Performance for New Sources are technology-forcing, and for the utility industry they forced the development of a technology that had never been installed on facilities the size of utility plants. That technology had to be developed, and a number of installations completed in a short period of time. The US EPA continued to force technology through the promulgation of successive regulations. The development of the equipment was not an easy process. What may have appeared to be the simple application of an equipment item from one industry to another often turned out to be fraught with unforeseen challenges.<sup>43</sup>

The example indicates that technology-forcing regulations can be effective in pulling technology into the market—even when there remain some operational difficulties for that technology. The difference for carbon capture technology is that for long-term widespread development, a new infrastructure of pipelines and storage sites may be necessary in addition to effective carbon capture technology.<sup>44</sup> In the short-term, suitable alternatives, such as enhanced oil recovery needs and in-situ geologic storage, may be available to support early commercialization projects without the need for an integrated transport and storage system. Likewise, with economics more favorable for new facilities than for retrofits, concentrating on using new construction to introduce carbon capture technology might be one path to widespread commercialization. As an

<sup>43</sup> Shattuck, et. al., p. 15.

<sup>44</sup> See CRS Report RL33971, *Carbon Dioxide (CO<sub>2</sub>) Pipelines for Carbon Sequestration: Emerging Policy Issues*, by Paul W. Parfomak and Peter Folger.

entry point to carbon capture deployment, a regulatory approach such as NSPS may represent a first step, as suggested by the SO<sub>2</sub> NSPS example above.

## Potential for Cap-and-Trade

Whether EPA can set up a cap-and-trade program under the Clean Air Act is the subject of considerable debate in the literature.<sup>45</sup> Much of the debate surrounds the provisions of Section 111(d). However, there are other authorities in the Act that might serve as a basis for a EPA-coordinated cap-and-trade program.

### Potential Under Section 111

EPA, along with other commenters, has linked the potential effectiveness of Section 111(d) to whether it can be interpreted to allow a cap-and-trade program for CO<sub>2</sub>. As stated by EPA: “EPA also believes that because of the potential cost savings, it might be possible for the Agency to consider deeper reductions through a cap-and-trade program that allowed trading among sources in various source categories relative to other systems of emissions reduction.”<sup>46</sup> As noted, Section 111 explicitly allows EPA to take cost into consideration in developing performance standards. Whether that consideration could justify a trading program across different greenhouse gases, and across different source categories with different best available systems of emissions reduction is not known. A lead author of the winning brief in *Massachusetts v. EPA* makes a case against such authority:

Numerous parties have argued that section 111 does not authorize the creation of a cap-and-trade program. Among other things, section 111(h) provides a contingency plan in the event performance standards are “not feasible” to implement. In that case, section 111(h) gives EPA the authority to “promulgate a design, equipment, work practice, or operational standard, or combination thereof, which reflects the best technological system of continuous emissions reduction which ... the Administrator determines has been adequately demonstrated.” 42 U.S.C. Section 7411(h)(1). One of the ways a performance standard might prove “not feasible” is if “a pollutant or pollutants cannot be emitted through a conveyance designed and constructed to emit or capture such pollutants.” 42 U.S.C. 7411(h)(2)(A). Clearly, Congress thought the most likely scenario under section 111 was for pollutants to be “emitted through a conveyance designed and constructed to emit or capture such pollutant[s]” – an assumption at odds with the operation of a trading program. Other aspects of section 111 also point away from the creation of a trading program under this provision [reference omitted].<sup>47</sup>

<sup>47</sup> Lisa Heinzerling, *Testimony Before the Subcommittee on Energy and Air Quality of the Committee on Energy and Commerce*, House of Representatives (April 10, 2008), pp. 12-13.

In sum, whether this authority can be expanded to creating a comprehensive cap-and-trade program is under debate. Focused on existing sources, EPA used Sec. 111(d) to justify its promulgated rule (now vacated) to reduce mercury emissions from powerplants. Although some have argued that the court decision in this case repudiated EPA's reasoning, the case was actually not decided on the basis of Section 111(d).<sup>48</sup>

### Potential Under Other Sections

Three other sections of the Act, (Sections 110, 115, and 615) might also be considered as possible authority for establishing an economy-wide cap-and-trade program for GHG emissions, although each has its own weaknesses. Section 110 of the Act establishes requirements for State Implementation Plans (SIPs). While primarily designed to demonstrate how a state with nonattainment areas will bring those areas into attainment with NAAQS, the section also contains language that might serve as the basis for the use of broader GHG regulatory tools once emission standards were issued under any section of the Act. Specifically, Section 110(a)(2)(A) says that each SIP shall

... include enforceable emission limitations and other control measures, means, or techniques (including economic incentives such as fees, marketable permits, and auctions of emissions rights), as well as schedules and timetables for compliance, as may be necessary or appropriate to meet the applicable requirements of this Act ....

The predicate is that there must first be an applicable requirement under the Act. Thus, Section 110 would not be an authority that EPA could use to *initiate* regulation of GHGs. Also, although the section mentions economic incentives, marketable permits, and auctions, it is not clear that such authority could be used for economy-wide control measures. The precedents for the authority's use that EPA cited in the ANPR, for example, included such regulations as the NO<sub>x</sub> SIP call, which established a cap-and-trade program for powerplant emissions of NO<sub>x</sub>, and the Clean Air Interstate Rule, which also allowed trading of emission allowances by powerplants.

As stated in the ANPR:

EPA has often incorporated market-oriented emissions trading elements into the more traditional performance standard approach for mobile and stationary sources. Coupling market-oriented provisions with performance standards provides some of the cost advantages and market flexibility of market-oriented solutions while also directly incentivizing technology innovation within the particular sector, as discussed below. For example, performance standards for mobile sources under Title II have for many years been coupled with averaging, banking and trading provisions within a subsector. In general, averaging allows covered parties to meet their emissions obligation on a fleet- or unit-wide basis rather than requiring each vehicle or unit to directly comply. Banking provides direct incentives for additional reductions by giving credit for overcompliance; these credits can be used toward future compliance obligations and, as such, allow manufacturers to put technology improvements in place when they are ready for market, rather than being forced to adhere to a strict regulatory schedule that may or may not conform to industry or company

---

<sup>48</sup> *New Jersey v. EPA*, 517 F.3d 574 (D.C. Cir. 2008). The case was decided on whether EPA could delist electric generating units as a source of hazardous air pollutants without following the criteria laid out in Section 112(c). For a discussion see CRS Report RS22817, *The D.C. Circuit Rejects EPA's Mercury Rules: New Jersey v. EPA*, by Robert Meltz and James E. McCarthy.

developments. Allowing trading of excess emission reductions with other covered parties provides an incentive for reducing emissions beyond what is required.<sup>49</sup>

The two other possible authorities for a cap-and-trade program, Sections 115 and Section 615, have never been used to control any pollutant, much less to establish a cap-and-trade program. Assuming Section 115 could be invoked without a supporting NAAQS, there might be sufficient flexibility to institute a cap-and-trade program. The program would have to be created by each state under Section 110 to comply with EPA-determined state GHG emission caps in response to Section 115. Because it would function through Section 110, EPA could not impose a cap-and-trade system on the states; rather, the states would have to voluntarily agree to cooperate in a EPA-coordinated cap-and-trade scheme.

As noted earlier, if Section 615 could be successfully triggered by the science, EPA's discretion in setting up a regulatory scheme would be substantial. As stated by EPA in its ANPR: "... depending on the nature of any finding made, section 615 authority may be broad enough to establish a cap-and-trade program for the substance, practice, process or activity covered by the finding...."<sup>50</sup>

## Implementation Issues

### New Source Review

Any new or modified facility emitting (or potentially emitting) over 250 tons of any regulated pollutant must undergo preconstruction review and permitting, including the installation of Best Available Control Technology (BACT), except those pollutants regulated under Sections 112 and 211(o). New sources under the Prevention of Significant Deterioration provisions of Part C (PSD-NSR) must undergo preconstruction review and must install BACT as the minimum level of control.<sup>51</sup> State permitting agencies determine BACT on a case-by-case basis, taking into account energy, environmental, and economic impacts. BACT cannot be less stringent than the federal NSPS, but it can be more so. More stringent controls can be required if modeling indicates that BACT is insufficient to avoid violating PSD emission limitations, or the NAAQS itself.

PSD-NSR is required for any pollutant "subject to regulation" under the Clean Air Act, but there are varying interpretations of what the phrase "subject to regulation" means. Environmental groups have argued that CO<sub>2</sub> is already subject to regulation because utilities are required under Section 821 of the Clean Air Act Amendments of 1990 to monitor and report CO<sub>2</sub> emissions to EPA. Others argue that an endangerment finding would make GHGs subject to regulation, and,

<sup>49</sup> ANPR, p. 44412.

<sup>50</sup> 73 *Federal Register* 44519, July 30, 2008.

<sup>51</sup> The 1977 CAA broadened the air quality control regimen with the addition of the Prevention of Significant Deterioration (PSD) and visibility impairment provisions. The PSD program (Part C of Title I of the CAA) focuses on ambient concentrations of SO<sub>2</sub>, NO<sub>x</sub>, and PM in "clean" air areas of the country (i.e., areas where air quality is better than the NAAQS). The provision allows some increase in clean areas' pollution concentrations depending on their classification. In general, historic or recreation areas (e.g., national parks) are classified Class I with very little degradation allowed, while most other areas are classified Class II with moderate degradation allowed. States are allowed to reclassify Class II areas to Class III areas, which would be permitted to degrade up to the NAAQS, but none have ever been reclassified to Class III.

therefore, trigger PSD-NSR requirements for new sources. In its proposed endangerment finding, EPA noted its current interpretation of the law is that a final positive endangerment finding for motor vehicles under Section 202 would not *per se* make greenhouse gas emissions subject to PSD-NSR.<sup>52</sup> However, the interpretive memorandum on which this conclusion is based,<sup>53</sup> issued in December 2008, is currently under review by the new Administration.

## Issue of Case-by-Case BACT Determinations

Two aspects of the New Source Review provision create potential difficulties in using the CAA to control greenhouse gases. First, as noted earlier, PSD-NSR has specified thresholds for triggering its provisions: a “major emitting facility is generally defined as emitting or having the potential to emit 250 tons annually of a regulated pollutant (Sec. 169(1)).<sup>54</sup> With respect to greenhouse gases, this is a fairly low threshold. By comparison, several bills introduced in the 110<sup>th</sup> Congress set thresholds for inclusion in the reduction program at 10,000 metric tons annually.

The second administrative issue for PSD-NSR is the requirement that BACT be determined on a case-by-case basis. Combined with a 250 ton threshold, this could mean a massive increase in state-determinations of BACT. If the threshold was 250 tons annually, the resulting increased permit activity would be at least an order of magnitude, according to EPA (discussed below).

On this second issue, it should be noted that several commenters believe this would not be a major problem (unless a cap-and-trade program is implemented). As stated by the Institute for Policy Integrity:

Since including GHGs in the PSD program may greatly expand the number of permits issued, making case-by-case determinations for each individual source may stretch the resources of EPA and state permitting authorities. Moreover, traditional technological controls may not exist for every GHG emitted by every regulated facility. However, there is flexibility in the statute to resolve these problems.

<sup>52</sup> See Proposed Endangerment Finding, footnote 29 (p. 106).

<sup>53</sup> Memorandum from EPA Administrator Stephen L. Johnson to Regional Administrators, “EPA’s Interpretation of Regulations that Determine Pollutants Covered by Federal Prevention of Significant Deterioration (PSD) Permit Program,” December 18, 2008, 19 pages, at [http://www.epa.gov/nsr/documents/psd\\_interpretive\\_memo\\_12.18.08.pdf](http://www.epa.gov/nsr/documents/psd_interpretive_memo_12.18.08.pdf).

<sup>54</sup> It should be noted that, unlike the definition of major source, the definition of a major modification is defined by regulation, not statute. As defined under the 1970 CAA, a modification is “any physical change in, or change in the method of operation of, a stationary source which increases the amount of any air pollutant emitted by such source or which results in the emission of any air pollutant not previously emitted”(Section 111(a)(4)). In subsequent regulations issued in 1975 with respect to NSPS, EPA defined modification as any physical or operational change that resulted in any increase in the maximum hourly emission rate of any controlled air pollutant.<sup>54</sup> EPA regulations also stated that any replacement of existing components that exceeded 50% of the fixed capital costs of building a new facility placed the plant under NSPS, regardless of any change in emissions. With the advent of National Ambient Air Quality Standards non-attainment provisions (Part D), PSD provisions (Part C), and NSR in 1977, a different approach to defining modification was appropriate as the focus was shifted from enforcing NSPS emission rates to achieving attainment and compliance with PSD. In promulgating regulations for the PSD and non-attainment programs, EPA defined “significant” increase in emissions in terms of tons per year emitted by a major source. For sulfur dioxide and nitrogen oxides, the threshold is 40 tons per year. Facilities exceeding that threshold are subject to NSR.

Given this history of setting *de minimis* emission increases for triggering NSR review for modifications, it is possible EPA could set a substantially higher level for at least carbon dioxide emissions, and perhaps other greenhouse gases, if it determined such thresholds were appropriate

Though BACT determinations are generally to be made on a case-by-case basis, the D.C. Circuit recognized in *Alabama Power* that exceptions can be made if “case-by-case determinations would, as a practical matter, prevent the agency from carrying out the mission assigned to it by Congress.” The development of “presumptive BACT” determinations should be permissible and may help streamline the permitting process [footnote omitted].<sup>55</sup>

In addition, assuming PSD is triggered by regulation under Section 111, the BACT requirements may be identical to the NSPS determinations under Section 111. It is also likely that most small sources would not have an NSPS as EPA applied its discretion under Section 111 in determining the most cost-effective emissions reductions. With no NSPS floor for a BACT determination, it is possible that NSR requirements for sources not covered under Section 111 could be quite lax.

## **Title V and the Size Threshold**

In the ANPR, EPA discussed the possibility that an endangerment finding and subsequent regulation of GHGs as air pollutants under any section of the Act could trigger Title V permit requirements, and that all facilities that have the potential to emit a GHG pollutant in amounts of 100 tons per year or more would be required to obtain permits. Under this reasoning, the regulation of CO<sub>2</sub> from motor vehicles under Section 202, for example, could lead to Title V permit requirements for CO<sub>2</sub> from powerplants and other sources. In the ANPR, the agency stated:

Using available data, which we acknowledge are limited, and engineering judgment in a manner similar to what was done for PSD, EPA estimates that more than 550,000 additional sources would require Title V permits, as compared to the current universe of about 15,000–16,000 Title V sources. If actually implemented, this would be more than a tenfold increase, and many of the newly subject sources would be in categories not traditionally regulated by Title V, such as large residential and commercial buildings.<sup>56</sup>

Thus, like PSD-NSR, a major complication that Title V introduces is the potential for very small sources of greenhouse gases to need permits in order to operate. Furthermore, Title V requires that covered entities pay fees established by the permitting authority, and that the total fees be sufficient to cover the costs of running the permit program.

The potential for increased permitting activity has led to speculation on its potential extent. For example, some agricultural interests have spun the possibility that Title V could be invoked for emissions from agricultural activities and the requirement for permit fees into something they refer to as the “cow tax.” On November 18, 2008, for example, Cattle Network stated “EPA Proposes ‘Cow Tax.’” The article even generated specific amounts for the “tax”: \$175 per dairy cow and \$87.50 per beef cow.<sup>57</sup> EPA says that it has no plans to regulate agricultural activities’ GHG emissions. Indeed, the agency currently exempts most major agricultural sources from any Clean Air Act controls on conventional air pollutants under an arrangement known as the Air

---

*Climate Change: Potential Regulation of Stationary Greenhouse Gas Sources Under the C*

---

Compliance Agreement.<sup>58</sup> Thus, it would seem unlikely that the agency would now make a priority of subjecting small agricultural sources to GHG requirements.

However, the need to deal with the size issue has been noted by EPA and other commenters. Alternatives to lessen the extent and cost of these provisions fall into three categories: (1) legal or regulatory interpretations that increase EPA's flexibility to determine what sources would need permits and when; (2) the expanded use of general permits; (3) interpretation of different endangerment findings to exclude Title V and/or PSD-NSR.

### *Legal or Regulatory Interpretations that Increase Flexibility*

EPA noted two possible legal theories under which it could avoid imposing PSD-NSR or Title V permitting requirements on small sources. Under "the judicial doctrine of administrative necessity," the agency stated that it might be able "to craft relief in the form of narrowed source coverage, exemptions, streamlined approaches or procedures, or a delay of deadlines."<sup>59</sup> The agency also stated that in rare cases, the courts will apply statutory provisions in a manner other than that indicated by the plain meaning, if "absurd, futile, strange, or indeterminate results" would be produced by literal application.

If EPA has the authority, such as under Section 111, it will almost certainly focus on the large sources first. As noted in the introduction, when it comes to stationary sources, size matters. Twenty-eight percent of the country's GHGs comes from an Energy Information Administration (EIA) estimated 670 coal-fired electric powerplants. Farms, by contrast, number more than 2 million, and emit less than 4% of total GHGs. EPA could argue that either administrative necessity or "strange," perhaps "absurd" results (to use EPA's terms) justified priorities and resources being focused on the former with the latter being either substantially delayed or possibly ignored. Methane (CH<sub>4</sub>) provides another interesting contrast in potential priorities. For example, about 1.8% of GHG emissions, in the form of methane, are generated by 1,800 landfills; a slightly larger amount (2.4%) is emitted by roughly a million cattle and swine operations. As stated by the Institute for Policy Integrity:

Courts grant agencies much more leeway in deferring full implementation of a statute than in creating permanent exemptions. Invoking the doctrine of administrative necessity, EPA should be able to justify expanding NSR permit applicability to the largest sources first, and then gradually including smaller sources. The timeline set for phasing in smaller sources could not take longer than reasonably necessary given EPA's administrative burdens, but EPA will have a good deal of discretion to determine its own resources and capability [footnotes omitted].<sup>60</sup>

A second means of reducing the administrative burden is to increase the effective size of an affected source by defining "potential to emit" in terms of potential actual emissions. In particular, EPA suggested in its ANPR that determining the potential to emit in terms of actual usage instead of maximum potential could have some benefit in some cases. For example, if a small boiler's potential to emit was based on actual usage of 1000 hours a year, instead of

---

<sup>58</sup> See CRS Report RL32947, *Air Quality Issues and Animal Agriculture: EPA's Air Compliance Agreement*.

<sup>59</sup> 73 *Federal Register* 44512, July 30, 2008. Also see ensuing discussion through page 44514.

<sup>60</sup> Inimai M. Chettiar and Jason A. Schwartz, *The Road Ahead: EPA's Options and Obligations for Regulating Greenhouse Gases*, (April 2009), p. 104.

continuous potential usage (8760 hours), the effective size of the boiler under NSR would increase 8.76 times.<sup>61</sup>

### ***General Permits***

Perhaps the most straightforward method of reducing administrative burden is for EPA to adopt a general permit scheme for PSD-NSR and Title V. For categories with numerous similar sources of emissions, the Clean Air Act provides in Section 504(d) that the permitting authority—be it EPA or a delegated state agency—may issue a “general permit” covering all sources in the category. This provision substantially reduces the administrative burden of issuing permits, allowing notice and opportunity for public hearing on the category as a whole and the provisions of the general permit, rather than requiring the same for each individual source. General permits have been widely used by the agency under the Clean Water Act, and are used by about half the states for control of various air pollution sources. Thus, there is precedent for their use in a Clean Air Act greenhouse gas control program for multiple, relatively minor sources of emissions.

A general permit does not relieve the permittee from filing a permit application or from complying with permit conditions, which would include some sort of monitoring and reporting requirements. But a permit application for a general permit can be relatively simple, and since there are few costs to issuing the permit, permit fees, which are required by Section 502(b) to cover the reasonable costs of the permit program, but are to be utilized only to cover such costs, would be relatively low. A sampling of states using general permit fees for other types of air pollutants found fees ranging from \$100 to \$350 per permittee.

Such an approach may also be available to small sources potentially caught under PSD-NSR. Both EPA in the ANPR and the Institute for Policy Integrity provide arguments for PSD-NSR general permits for small sources to avoid absurd results or respond to administrative necessity.<sup>62</sup>

### **Section 304: Citizen Suits**

If an endangerment finding triggered emissions standards or limitations under the CAA (e.g., Section 111, Part C), it would also bring into play Section 304, Citizen Suits. Section 304 allows any person to commence a civil action against any other person (including government entities and instrumentalities) for violation of an emissions standard or limitation under the Act. It also provides for suits against EPA for failing to perform a nondiscretionary act or duty. Most specifically, Section 304 provides for suits

... against any person who proposes to construct or constructs any new or modified major emitting facility without a permit required under part C of title I (relating to significant deterioration of air quality) or part D of title I (relating to non-attainment) or who is alleged to have violated (if there is evidence that the alleged violation has been repeated) or to be in violation of condition of such permit.<sup>63</sup>

---

<sup>61</sup> 73 *Federal Register* 44503, July 30, 2008..

<sup>62</sup> 73 *Federal Register* 44507-44511, July 30, 2008; Inimai M. Chettiar and Jason A. Schwartz, *The Road Ahead: EPA’s Options and Obligations for Regulating Greenhouse Gases*, (April 2009), pp. 103-106.

<sup>63</sup> Section 304(a)(3).

Citizen suits have been widely used by environmental groups to force the Administrator to undertake nondiscretionary duties and to enforce the Act's requirements against emitting facilities. Should the agency fail to move forward with GHG standards following an endangerment finding, suits seeking to force action would almost certainly be filed.

## Conclusion

The current debate on the appropriateness of using the Clean Air Act to regulate greenhouse gas emissions is not the first such debate that has occurred when a new environmental challenge has been directed at the Act. During the 1980s, suggestions were made that acid rain and/or stratospheric ozone depletion could be addressed via then-existing provisions, rather than by new Amendments. For example, in 1985, the CRS stated the following with respect to addressing acid rain through the existing Clean Air Act:

*Various Clean Air Act provisions could be used to address acid precipitation, including issuing more stringent secondary ambient air quality standards, setting a sulfate standard, and enforcing SO<sub>2</sub> reductions more vigorously. (a) Typically, however, such actions require a demonstration of cause-effect relationship that has not been obtained, at least in the view of many policymakers; and/or they require actions under peripherally related provisions such as visibility protection—which are already subject to controversy on their own right. (b) Any such actions would likely be expensive, both in resources and in political/administrative capital. (c) Program administrators have therefore said they will not use the Clean Air Act aggressively and innovatively to combat acid precipitation without an explicit Congressional mandate and/or compelling new evidence linking specific damages to specific pollutants [emphasis in original].<sup>64</sup>*

In both cases, the Congress moved to add new Titles to the Act (Title IV to address acid rain, and Title VI to address stratospheric ozone depletion). In the case of Title IV, a new market-based approach to reducing pollutants was introduced to implement a statutory reduction requirement (i.e., the SO<sub>2</sub> emissions cap) in hope that the cost would be optimized. The result was so successful that it was used by states and EPA to begin addressing interstate transport of smog (i.e., the NO<sub>x</sub> SIP Call) and has been suggested by some as the optimal approach to controlling greenhouse gases.

However, controlling greenhouse gases is a substantially more complex environmental, technical, economic, and social issue than either acid rain or stratospheric ozone depletion are. It is possible that one size does not fit all in this debate. Some sources may not respond significantly to a market-based approach because they are not particularly price-sensitive. Others may be too small or dispersed to include. For example, the European Union's market-based approach covers only about 40% of the EU's emissions. Other instruments are used to address difficult sectors, such as transportation.

Thus, initiatives to use the current Clean Air Act could be designed as a substitute for what is perceived by some as a protracted congressional debate, or as a complementary effort to address sources or gases that a future market-based system may choose to exclude from its provisions. As

*Climate Change: Potential Regulation of Stationary Greenhouse Gas Sources Under the C*

---

summarized in 2008 by Lisa Heinzerling in testimony to the Subcommittee on Energy and Air Quality of the House Energy and Commerce Committee:

... the Clean Air Act contains numerous provisions that might be used to regulate greenhouse gases. The advantages of using these provisions include: they can be deployed now; they use regulatory strategies that are familiar to, indeed are the bread and butter work of, the Environmental Protection Agency; they call for regulation of numerous and diverse sources and thus, taken as a group, they have an inherent fairness to them; they do not pose unusual enforcement difficulties or untoward administrative burdens.

There are also disadvantages to using existing Clean Air Act provisions to address climate change. Most of the provisions do not have statutory deadlines.... To the extent one favors cap-and-trade as a regulatory mechanism for addressing climate change, one might worry about the lack of clear authority for such a scheme under the existing statute. The NAAQS program is an ungainly framework for regulating globally harmful pollutants. PSD requirements are triggered for sources that are “large” when it comes to conventional pollution but “small” from the perspective of global pollutants.<sup>65</sup>

A final endangerment finding would present EPA with many options. However, the ultimate decision on what the Nation’s greenhouse gas policy should be rests with the Congress. If it disagrees with any approach undertaken by EPA, it can override the agency’s decision, or respond as it did with acid rain and stratospheric ozone depletion—with new statutory authorities.

Subject: Meeting at EPA April 9 at 2:00pm EST

Thank you to those who have responded. If you have not, please let me know ASAP if you are planning to attend this meeting in person at EPA. I need to give a list to Joe's assistant.

So far I have:

David Doniger

David McCabe

Joanne Spalding

Craig Segall

Darin Schroeder

Best,

Kelly

Dear all,

I have received confirmation from Joe Goffman's team that the meeting at EPA is set for 2:00-3:30pm EST on Tuesday April 9th. Please email me back and let me know whether you plan to attend in person at EPA or if you are planning to dial in.

Best,

Kelly

I got a call back from Goffman (voice message) saying that he'd gotten messages from me, Mike, and Vickie, and that he and an EPA team (probably Patricia Embry and Peter Tsirigotis) are prepared to meet with us (in person and/or by phone) on methane/oil and gas to share our respective substantive plans and expectations. He suggests we propose a couple of times that would work for our group.

I am asking my assistant Kelly Henderson to poll you for a couple of times to then suggest to Goffman.

Meleah,

Unfortunately, I'll be on a plane on Monday afternoon. But if I can check in with you before the meeting, or if someone can circulate notes, no need to schedule around me.

-Tim

Sorry- been on a flight. We're in a meeting in St. Louis all day. It may be possible that its over by then, or that one of us can sneak away, but I can't make any promises.

Hi all – of course with so many people, there's not an ideal time slot. There are two that are close, Thurs at 5pm (when Mike isn't available) or Monday at 1pm (when Tim isn't available). Best would be Monday at 1pm (when we only lose Vignesh and Ben, not a big deal b/c we'll have 3 NRDCers on, tech and lawyers) – Tim, is there any chance you could make that slot?

Darin and McCabe, neither of you is available Thurs at 5pm – can you remind me whether you have any flexibility on that day in that time, or is it completely out?

Best,  
Meleah

Vickie, I think I may have mentioned this to you awhile ago, but Fred is doing a brownbag lunch talk to our Bureau in NYC tomorrow on climate change and air pollution efforts EDF is involved in. Do you think it would be fruitful to have a smaller group discussion while Fred is there (we could get you or Megan on the phone) either before or after his talk? It's scheduled for 1230-130 ET. My bureau chief, Lem Srolovic, is available. We could discuss strategy on the various NSPS fronts and perhaps follow up on some of the items we discussed with you by phone on January 17. I know it's a bit last minute and your schedules are tight, so if doesn't work, that's fine. Just let me know. Thanks.--Mike

All –

EPA has asked me to ask each of you to remove Acting General Counsel Brenda Mallory (Mallory.brenda@epa.gov) from your email list for this case. I believe she is being inundated. Responding in the future to this email, rather than the initial one from Jonathan Mitchell, will do the trick.

Many thanks, and best regards to each of you.

Subject: RE: GHG service via e-mail

As Peter said, thank you very much for initiating this effort. I would like to clarify that this agreement applies to all GHG petitions including those that have already been filed (by Virginia, et al., the Pacific Legal Foundation, and the Utility Air Regulatory Group) and to those that will be filed later this month.

On behalf of the Utility Air Regulatory Group, we consent to email service. Please serve the following: bbrownell@hunton.com, nfichthorn@hunton.com, hnickel@hunton.com, and awood@hunton.com.

Thanks again.

Subject: GHG service via e-mail

Counsel:

In an effort to save paper, resources, and the service delay that goes with mailing paper copies, we propose that all service copies to parties in this case be served via email.

If you agree to this proposal, please respond to all with (1) the name of the party you represent and (2) the best contact information for email service.

This email may reach numerous lawyers representing the same client(s); only one representative of each party needs to respond. If you know of any parties that did not receive this email, please forward it to them.

Feel free to contact us anytime with questions.

--Jonathan

That's fine. Do you want to check with Peter and see if you two can talk during one of these windows on Fri.: 10-1130, 1-2, 3-4? I don't think the call will take more than 10-15 min. In addition to me, Meleah, Dave M., and Ann would be on the line.

Sure, are you referring just to NSPS for OWBs and similar sources (i.e., not the NSPS for power plants, etc.)? I'm available those times as well. Did you want to include other states as well? If so, I can reach out.

For some additional context on what may happen at OMB/OIRA regardless of EPA's best intentions on a wood appliance NSPS proposal, see attached article (if you haven't seen already). It raises some things to think about even if EPA gets a final proposal out the door to OMB.

Inside EPA:  
A Former Insider's Reflections on the Relationship Between  
the Obama EPA and the Obama White House\*

Lisa Heinzerling\*\*

I will be discussing the relationship between the Environmental Protection Agency (EPA) and the White House. I will focus specifically on the role that the Office of Information and Regulatory Affairs (OIRA), within the Office of Management and Budget (OMB), plays in reviewing the EPA's regulatory output.

As I will explain, OIRA's actual practice in reviewing agency rules departs considerably from the structure created by the executive order governing OIRA's process of regulatory review.<sup>1</sup> The distribution of decision-making authority is ad hoc and chaotic rather than predictable and ordered; the rules reviewed are mostly not economically significant but rather, in many cases, are merely of special interest to OIRA staffers; rules fail OIRA review for a variety of reasons, some extra-legal and some simply mysterious; there are no longer any meaningful deadlines for OIRA review; and OIRA does not follow – or allow agencies to follow – most of the transparency requirements of the relevant executive order.<sup>2</sup>

Describing the OIRA process as it actually operates today goes a long way toward previewing the substantive problems with it. The process is utterly opaque. It rests on assertions of decision-making authority that are inconsistent with the statutes the agencies administer. The process diffuses power to such an extent – acceding, depending on the situation, to the views of other Cabinet officers, career staff in other agencies, White House economic offices, members of Congress, the White House Chief of Staff, OIRA career staff, and many more – that at the end of the day no one is accountable for the results it demands (or blocks, in the case of the many rules stalled during the OIRA process). And, through it all, environmental

---

\* This essay is an expanded version of remarks delivered on March 12, 2013, as the Lloyd K. Garrison Lecture on Environmental Law at Pace Law School.

\*\* Professor of Law, Georgetown University Law Center. The author was Senior Climate Policy Counsel to EPA Administrator Lisa P. Jackson from January to July 2009, and Associate Administrator of the Office of Policy from July 2009 to December 2010. This essay is based on public documents and the author's experience in those positions.

<sup>1</sup> EO 12866, issued by President Clinton in 1993, continues – in principle – to govern the mechanics of OIRA review. President Obama issued his own executive order, EO 13563, on OIRA review in 2011, but that order reaffirmed EO 12866 and did not by its terms change the *process* of OIRA review (such as deadlines and disclosure requirements) in any respect.

<sup>2</sup> See Part II, *infra*.

rules take a particular beating, from the number of such rules reviewed to the scrutiny they receive to the changes they suffer in the course of the process.<sup>3</sup>

These problems are significant, and they deserve serious attention. Although I discuss these problems at the end of this paper, my main project in this paper is descriptive. Misunderstandings of the OIRA process abound. Too often these misunderstandings are perpetuated by, or not contradicted by, the very personnel who have been involved in the process. Indeed, after I finished a stint as the head of the EPA office responsible for acting as the primary EPA liaison to OIRA, I did not write at any length about my experiences with OIRA review. Partly out of continuing loyalty to the administration that had made my time in government possible, partly out of respect for the sensitivity of interactions between high-level government officers, and partly out of a sense of sheer futility,<sup>4</sup> I had resolved to move on to other topics. But when accounts of OIRA's role in the Obama administration began to emerge from other quarters,<sup>5</sup> and when these accounts, in many respects, did not jibe with my own experience, I decided to resurface and to describe the OIRA process from my perspective. Hence the account that follows.

## I. The History of White House Review

It will be useful first to give a brief history of White House review of agencies' regulatory actions. Some form of centralized review of agency action has been with us for decades. Such review took place episodically in the Nixon, Ford, and Carter administrations.<sup>6</sup> But it was in the presidency of Ronald Reagan that the practice of regulatory review began to take on the shape it has today.

### A. 12,291

In one of his earliest acts as President, Ronald Reagan issued an executive order – Executive Order 12,291 – that gave centralized review more systematized form in two respects.<sup>7</sup> First, EO 12,291 put a specific office – OMB<sup>8</sup> – in charge of

Rev.* (forthcoming), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=2192639](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2192639).

<sup>6</sup> See, e.g., Oliver A. Houck, *President X and the New (Approved) Decisionmaking*, 36 *Am. U. L. Rev.* 535, 536-37 (1986) (describing “rather modest and unintrusive” efforts by the White House to control agencies during the 1970s). For a detailed discussion, see Rena Steinzor, *The Case for Abolishing Centralized White House Regulatory Review*, 1 *Mich. J. Env'tl. & Admin. L.* 209, 239-42 (2012).

<sup>7</sup> E.O. 12291, 46 *Fed. Reg.* 13193 (Feb. 17, 1981).

reviewing agency actions.<sup>9</sup> Second, it adopted cost-benefit analysis as the governing framework for this review.<sup>10</sup>

Before President Reagan issued EO 12,291, the Office of Legal Counsel (OLC) reviewed the order for legal soundness.<sup>11</sup> Notably, OLC's opinion confirming the order's legality rested on the premise that the centralized reviewers (OMB and a newly created Task Force on Regulatory Relief) would only supervise, and not displace, the exercise of discretion given to the agencies by statute. OLC wrote: "[T]he fact that the President has both constitutional and implied statutory authority to supervise decisionmaking by executive agencies ... suggest[s] ... that supervision is more readily justified when it *does not purport wholly to displace, but only to guide and limit*, discretion which Congress has allocated to a particular subordinate official. A wholesale displacement might be held inconsistent with the statute vesting authority in the relevant official.... The order *does not empower* the [OMB] Director or the Task Force to *displace* the relevant agencies in discharging their statutory functions or in assessing and weighing the costs and benefits of proposed actions."<sup>12</sup>

OLC's opinion does not state that an order displacing the agencies' discretion would certainly be illegal. But it does interpret EO 12,291 not to permit such displacement and it does suggest a potential legal problem with such displacement. Reading only EO 12,291 and the OLC's opinion on it, one would conclude that agencies retained the decision-making discretion they were given by the statutes they are charged with administering.

In practice, though, it was not that simple. During the Reagan years, critics charged that OIRA did indeed displace – and not merely supervise – agencies' decision-making discretion.<sup>13</sup> In addition, OIRA's process of review frequently

---

<sup>8</sup> Within OMB, OIRA was the office responsible for regulatory review. OMB, Report to Congress on the Costs and Benefits of Federal Regulations, Chapter I.2.c (1997), available at [http://www.whitehouse.gov/omb/infoleg\\_chap1](http://www.whitehouse.gov/omb/infoleg_chap1). From here on out in this article, I will refer to "OMB" only where I mean to distinguish OMB from OIRA or where (as in the Office of Legal Counsel opinion I am about to discuss) another party has referred to OMB rather than to OIRA.

<sup>9</sup> EO 12291, § 3.

<sup>10</sup> EO 12291, § 2(b)-(c).

<sup>11</sup> Proposed Executive Order Entitled "Federal Regulation," 5 Op. OLC 59 (Feb. 13, 1981).

<sup>12</sup> 5 Op. OLC at 62-63 (emphasis added).

<sup>13</sup> See, e.g., Robert V. Percival, *Who's in Charge? Does the President Have Directive Authority Over Agency Regulatory Decisions?*, 79 Ford. L. Rev. 2487, 2502-05 (2011). Percival cites a wealth of sources on this point. *Id.* at 2504, n. 127. Beyond OIRA, Reagan's appointees to the environmental agencies also were quite willing to take deregulatory actions on their own initiative. See Philip Weinberg, *Masquerade*

delayed agency rules for extended periods.<sup>14</sup> The process also at times degenerated into one in which OIRA served as a conduit for the views of industry on particular regulatory actions.<sup>15</sup> This feature of the process was especially troubling insofar as the process was opaque. Only in 1986 did OIRA begin to make public the documents shared by outside parties with OIRA during its review.<sup>16</sup> Even so, the bulk of the process – which agency actions went to OIRA, what happened to them while they were there, who made the decisions – was closed off to the public.<sup>17</sup> Moreover, the cost-benefit lens through which OIRA viewed agency rules proved to skew against some kinds of rules, in particular environmental rules, since so many of the benefits of environmental rules are difficult or impossible to quantify and monetize, and since so many of these benefits occur in the future and yet the settled practice of cost-benefit analysis is to steeply discount future consequences.<sup>18</sup>

Such critiques dogged the OIRA review process under EO 12,291 through the Reagan years and into the presidency of George H.W. Bush.<sup>19</sup> By the time Bill Clinton came into office in 1993, many were hoping for change.<sup>20</sup> Within months of taking office, President Clinton responded with a new executive order on regulatory review, EO 12,866.<sup>21</sup>

## B. 12,866

Although EO 12,866 preserved the status quo in that it continued to require centralized White House review of agency actions under a cost-benefit framework, it also reformed several specific features of this review that had proved troublesome. Taking on the issue of displacement, an early passage in EO 12,866 “reaffirm[ed] the

<sup>21</sup> EO 12866, Regulatory Planning and Review, 58 Fed. Reg. 51735 (Oct. 4, 1993).

primacy of Federal agencies in the regulatory decision-making process.”<sup>22</sup> At the same time, however, the order for the first time explicitly stated that if a conflict arose between OIRA and an agency over a particular matter, one that could not be resolved by the OMB Director and the agency head, it would be the President (or the Vice-President acting on the President’s behalf) who would settle the dispute – and make the “decision with respect to the matter.”<sup>23</sup> EO 12,866 also provided a specific framework for elevating decisions beyond OMB and the agency head: the Vice-President (then Al Gore) was to make recommendations to the President on how to resolve the conflict.<sup>24</sup> EO 12,866 thus gestured toward the primacy of the agencies while simultaneously – for the first time in such an order – explicitly providing that the President would decide the hardest cases and laying out the process to follow when conflicts arose.<sup>25</sup>

Addressing the problem of delay, EO 12,866 set out specific time limits on OIRA review. Advance notices of proposed rulemaking, notices of inquiry, and “other preliminary regulatory actions prior to a Notice of Proposed Rulemaking” were to be reviewed within 10 days.<sup>26</sup> Regulatory actions previously reviewed by OIRA were to be reviewed within 45 days if “there has been no material change in the facts and circumstances upon which the regulatory action is based.”<sup>27</sup> “[A]ll other regulatory actions” were to be reviewed within 90 days.<sup>28</sup> EO 12,866 also provided that the review process could be extended “(1) once by no more than 30 calendar days upon the written approval of the Director and (2) at the request of the agency head.”<sup>29</sup> This provision allowing extensions seems, with its use of the word “and” rather than “or,” to contemplate a process whereby both the OMB Director and the agency head would need to agree on the extension. Together, the new deadlines, precisely defined and tailored to specific circumstances, clearly were designed to end OIRA review that dragged on intolerably long or even indefinitely.

In addition, EO 12,866 limited the range of rules OIRA could review. Only “significant” regulatory actions were to be reviewed.<sup>30</sup> Economically significant actions – those having annual costs of \$100 million or more<sup>31</sup> – were to be accompanied by extensive cost-benefit analysis.<sup>32</sup> Beyond annual costs, other features that might make a regulatory action significant (and thus subject to OIRA

<sup>31</sup> EO 12866, § 3(f)(1).

<sup>32</sup> EO 12866, § 6(a)(3)(C).

review) were serious inconsistencies with another agency's plans,<sup>33</sup> material effects on budgetary impacts of various programs,<sup>34</sup> and the presence of "novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in this Executive order."<sup>35</sup> The OIRA Administrator was given the final say as to which regulatory actions qualify as significant and thus must be reviewed by OIRA.<sup>36</sup>

EO 12,866 also took on the problem of OIRA acting as a conduit for industry views. The order required disclosure of all contacts with outside parties during the period of OIRA review.<sup>37</sup> The order limited the conditions under which outside views could be relayed to OIRA by requiring that only the Administrator of OIRA or "a particular designee" could receive oral communications by persons outside the executive branch regarding the substance of a regulatory action under review.<sup>38</sup> The order also provided that in the case of elevation to the President or Vice-President, any communications by outside parties, directed at the President's advisors or their staffs or the staff of the Vice-President, would be in writing and would become part of the public docket.<sup>39</sup> If the communication was not in writing, the advisors or staff members were to "inform the outside party that the matter is under review and that any comments should be submitted in writing."<sup>40</sup>

In other ways as well, EO 12,866 aimed to make OIRA review far more transparent than it had been. In fact, the order requires transparency throughout the OIRA process. If an agency plans a regulatory action that OIRA thinks is inconsistent with the President's policies or priorities, OIRA must tell the agency so, in writing.<sup>41</sup> If a regulatory action is under review, OIRA must provide information – in a "publicly available log" – about the status of that action.<sup>42</sup> If a dispute arises between OIRA and an agency over whether a particular rule should issue, and one of these parties requests resolution of the dispute by the President or Vice-President, OIRA must note – in a "publicly available log" – who requested elevation and when.<sup>43</sup> If OIRA returns a rule to an agency "for further consideration of some or all of its provisions," the Administrator of OIRA must provide a "written explanation" for this return.<sup>44</sup> If a regulatory proposal changes between the time it goes to OIRA and the time it emerges from OIRA, the agency must identify those changes ("in a

complete, clear, and simple manner”).<sup>45</sup> If OIRA insists on changes to the regulatory proposal during its review, the agency must identify those changes for the public (“in plain, understandable language”).<sup>46</sup>

If followed (an important qualification, as we will see), these disclosure requirements would allow the public to know, often in real time, what actions are under review at OIRA, what the status of those actions is, and what the consequences of the review have been for any particular agency action.

A final refinement of EO 12,866 was the explicit inclusion, in the prescribed cost-benefit framework, of “qualitative measures of costs and benefits that are difficult to quantify, but nevertheless essential to consider” and of benefits such as “distributive impacts ... and equity” and “the enhancement of health and safety, the protection of the natural environment, and the elimination or reduction of discrimination or bias.”<sup>47</sup>

Even with these changes, not everyone was thrilled with EO 12,866. Some were disappointed that OIRA and cost-benefit analysis would continue to play a large role in determining regulatory policy.<sup>48</sup> Others had long fretted that little would change if the culture – and personnel – at OIRA did not change.<sup>49</sup> Still others continued to worry about displacement of agency discretion; they thought that statutes giving authority and discretion to agencies did not allow the White House to direct the agencies to make particular decisions on particular matters.<sup>50</sup>

Nevertheless, it seems fair to say – certainly in retrospect – that the Clinton years were relatively quiet ones for OIRA review. The process did not seem to involve the kinds of delays and secrecy prevalent in the Reagan-Bush years.<sup>51</sup> The one known case of a high-level elevation of an issue to the President – involving EPA’s National Ambient Air Quality Standards for particulate matter and ozone –

resulted in a decision allowing the agency to proceed with the rules.<sup>52</sup> While the OIRA process has never been free from controversy, the Clinton years were probably the least contentious.<sup>53</sup>

The period of relative quiet did not last. Upon assuming office in 2001, President George W. Bush, like his predecessors, sought to put his own stamp on regulatory policy through the OIRA process. Interestingly, however, he did not do this by issuing a significant new executive order. He did issue two executive orders on regulatory review, but they were (as these things go) relatively minor. One, EO 13,258, replaced the Vice-President-driven elevation process with a process staffed with the President's "advisors."<sup>54</sup> Another, EO 13,422, strengthened language requiring agencies to find a market failure before regulating and also directed OIRA to review significant agency guidance (that is, agency statements of policy or interpretation that do not have the legal effect of rules).<sup>55</sup> EO 13,422 generated criticism within the health, safety, and environmental community because of its tilt toward the superiority of private markets and its assertion of authority to review agency guidance.<sup>56</sup> But EO 12,866 also remained in place.

Rather than prescribing a whole new framework for regulatory review, President Bush chose an intellectually forceful and politically shrewd academic, John Graham, to head OIRA.<sup>57</sup> One of Graham's first acts as OIRA Administrator was to issue a memorandum on OIRA disclosure to OIRA staff. Acknowledging that transparency was essential to the legitimacy of the process,<sup>58</sup> Graham moved to

<sup>56</sup> See, e.g., OMB Watch, *A Failure to Govern: Bush's Attack on the Regulatory Process* (2007), available at [dev.ombwatch.org/files/regs/PDFs/FailuretoGovern.pdf](http://dev.ombwatch.org/files/regs/PDFs/FailuretoGovern.pdf).

<sup>57</sup> A sense of the reaction Dr. Graham's appointment inspired in environmental circles can be found in Steve Weinberg, Mr. Bottom Line, *OnEarth* (Spring 2003), available at <http://www.nrdc.org/onearth/03spr/graham1.asp>.

<sup>58</sup> John D. Graham, OIRA Disclosure Memo-B (Oct. 18, 2001) ("I believe that the transparency of OIRA's regulatory review process is critical to our ability to improve

increase transparency in several ways. He directed that documents related to OIRA review be made available online.<sup>59</sup> He required that notices of meetings and other communications with outside parties be made available online.<sup>60</sup> He returned rules to agencies with a written and public explanation of why they were being returned.<sup>61</sup> Each of these actions increased the public's access to information about what happened when rules went to OIRA.

Another of Graham's innovations, however, turned in the opposite direction. Graham began to insist that agencies involve OIRA early on in their deliberative processes.<sup>62</sup> This early intervention ensured both that rules would not arrive at OIRA fully baked, with little for OIRA to do but accept or reject them. It also meant that many of OIRA's early efforts would leave no public trail. The latter point requires a note of explanation. OIRA has always, so far as I know, taken the position that only when a regulatory action is sent to OIRA through official channels – which include a computer system used for the purpose of facilitating the transfer of rules between the agencies and OIRA – do the transparency requirements of EO 12,866 kick in. If an agency briefs OIRA on a rule prior to formally sending it to OIRA, or consults with OIRA before doing so, or even sends a full-fledged rule package to OIRA outside formal channels, none of this, or any of its consequences, will appear in the public record assembled for formal OIRA review. Thus Graham's emphasis on early, informal intervention had the potential to significantly undermine the transparency achieved by his initiatives on disclosure.

One episode from the Bush years, which occurred after Graham left office, well illustrates OIRA's power to secretly alter an agency's course. Shortly after the Supreme Court held, in *Massachusetts v. EPA*,<sup>63</sup> that the Clean Air Act empowers EPA to regulate greenhouse gases, President Bush held a press conference in the Rose Garden and directed EPA and the Department of Transportation to develop rules for cars that would comply with the Court's decision.<sup>64</sup> EPA would, at the same time, prepare a finding as to whether greenhouse gases endangered public health or welfare and thus triggered regulatory obligations under the Clean Air Act.<sup>65</sup> The agencies went quickly to work, and within seven months EPA had prepared a draft

endangerment finding and the agencies together had prepared rules to regulate greenhouse gases from cars. The agencies sent the rules to OIRA for review.<sup>66</sup> Then things went off the rails.

As I have mentioned, OIRA uses a computer system – known as “ROCIS” – to manage regulatory submissions from agencies. (Even for Washington, the name of the system is exceptionally acronymic: the acronym “ROCIS” contains within it two additional acronyms.<sup>67</sup>) When an agency sends an action to OIRA for review, it submits the package to ROCIS.<sup>68</sup> From its end, OIRA then – in theory – uploads the package from ROCIS. When OIRA uploads the package, it is accepted for review. At that moment, the clock starts to tick on OIRA’s review and the public disclosure requirements kick in. If OIRA does not upload the package, however, it is as if it was never sent to OIRA; no clock begins ticking, and the package does not appear on OIRA’s website listing rules under review. This is what happened to the draft endangerment finding and the proposed rules on cars: OIRA simply declined to upload them into ROCIS. A presidential promise, months of work, compliance with a Supreme Court ruling – all went out the window with OIRA’s simple refusal to be in receiving mode when the agencies sent the package over to OIRA.<sup>69</sup> The endangerment finding and the rules on cars languished at the agencies until the Obama administration came into office.

The effect on EPA of OIRA’s declination of this regulatory package is hard to overstate. EPA had become accustomed, through sheer necessity, to OIRA’s interventions in the rulemaking process. But, so far as I know, OIRA had never before simply declined to accept a fully formed regulatory package. Over a year later, by the time I arrived at EPA as the Administrator’s climate advisor, agency personnel were still reeling from OIRA’s action. During my time at EPA, when OIRA would delay uploading a package to ROCIS for any reason, worry would spread through the offices involved with the package that perhaps OIRA would – as it had with the endangerment finding and the cars rules – just not upload the documents, and it would be as if they had never been sent, or indeed as if they had never been written.

<sup>69</sup> Felicity Berringer, *White House Refused to Open Pollutants E-Mail*, N.Y. Times (June 25, 2008); Juliet Eilperin & R. Jeffrey Smith, *EPA Won’t Act on Emissions This Year; Instead of New Rules, More Comment Sought*, Wash. Post (July 22, 2008). As Eilperin and Smith report, it was not clear exactly who within the White House ordered that the regulatory package be declined.

The refusal to open the documents on endangerment and cars caused a furor in the environmental community once it became known.<sup>70</sup> It emerged as a primary example of how OIRA should not operate.<sup>71</sup> To critics, the incident bespoke disrespect for agency process and even for the rule of law. Many hoped such a thing would not happen again.

The assertiveness and opacity of OIRA during the George W. Bush administration led many to hope that when Barack Obama came into office, things would change for the better. And indeed, one of President Obama's first acts was to issue an executive order revoking the Bush-era executive orders on regulatory review.<sup>72</sup> As noted, the major substantive innovation of these orders was the assertion of OIRA authority to review agency guidance; thus, one of the major effects of the revocation of the Bush-era orders should have been to keep OIRA from reviewing agency guidance.

But this was not to be. In a little-noticed memorandum issued less than two months later, OIRA Director Peter Orszag essentially revoked President Obama's revocation of the executive order on guidance.<sup>73</sup> Orszag announced that OIRA would, despite Obama's order, continue to review agency guidance, since it had done so for many years.<sup>74</sup> The President's revocation of the Bush-era executive orders had received enthusiastic attention from progressive groups.<sup>75</sup> Perhaps not surprisingly, the OMB Director's memorandum revoking the major substantive part of the President's executive order – issued quietly, without a press release –

<sup>75</sup> See, e.g., Obama Begins Regulatory Reform, <http://www.foreffectivegov.org/node/9689>; Revoking EO 13422: An Important First Step Toward Fixing the Regulatory System, <http://www.progressivereform.org/printPage.cfm?idBlog=417B6671-1E0B-E803-CA4ED11FA8E0030C>.

received almost no attention.<sup>76</sup> In fact, so stealthy was the replacement of Obama's order with Orszag's memorandum that, even months later, I found myself having to explain to EPA personnel why they still needed to send agency guidance to OIRA for review. Quite understandably, they had read Barack Obama's executive order rather than Peter Orszag's memo.

In another gesture of potential change, in January 2009 President Obama also issued a presidential memorandum directing the Director of OMB to consult with representatives of regulatory agencies and to make recommendations to the President for a new executive order on regulatory review.<sup>77</sup> The memorandum noted that much had been learned since 1993, when EO 12,866 was issued, about both the substance of regulation ("what works and what does not") and about "how to improve the process of regulatory review."<sup>78</sup> "In this time of fundamental transformation," President Obama declared, "that process – and the principles governing regulation in general – should be revisited."<sup>79</sup> The President also laid out specific topics he wanted covered in OMB's recommendations:

[T]he recommendations should offer suggestions for the relationship between OIRA and the agencies; provide guidance on disclosure and transparency; encourage public participation in agency regulatory processes; offer suggestions on the role of cost-benefit analysis; address the role of distributional considerations, fairness, and concern for the interests of future generations; identify methods of ensuring that regulatory review does not produce undue delay; clarify the role of the behavioral sciences in formulating regulatory policy; and identify the best tools for achieving public goals through the regulatory process.<sup>80</sup>

President Obama directed OMB to produce the recommendations within 100 days.<sup>81</sup> The President also directed OMB to consult with the representatives of regulatory agencies, "as appropriate," in formulating recommendations for a new executive order.<sup>82</sup> From my time at EPA, I know that agencies did indeed submit comments to OMB. Notably, OMB never made the agencies' comments public; thus we do not know what the agencies said to OMB about regulatory review and how to improve the process. OMB also asked the public for comments on regulatory review and how

to reform it.<sup>83</sup> Public comments (183 of them)<sup>84</sup> came in by the end of March, 2009.<sup>85</sup>

And there the matter sat. Agency personnel, buoyed by the possibility of reform of a secretive, intrusive, and time-consuming process, eagerly anticipated the new executive order. Outside groups interested in health, safety, and environmental protection cheered the prospect of changes to a system that had worked disproportionately against rules in their domain. But nothing happened for almost two years, and in that time OIRA continued to assert its customary control over agency regulatory decisions.

### C. 13,563

In January 2011, a new executive order on regulatory review finally emerged.<sup>86</sup> The single most notable fact about the new order, EO 13,563, is how not-new it was; much of the order simply repeats, verbatim, the language of EO 12,866.

Another striking fact about the order is how weakly responsive it is to President Obama's own directives in his presidential memorandum of January 2009: EO 13,563 does not say a word about "the relationship between OIRA and the agencies" or "methods of ensuring that regulatory review does not produce undue delay." On "disclosure and transparency," the order says nothing about disclosure and transparency related to OIRA, but focuses only on the agencies and here simply advises them to place materials online and in an open format wherever possible.<sup>87</sup> On "public participation in agency regulatory processes," the order advises the agencies to seek out the public's views prior to proposing rules (something agencies already routinely did).<sup>88</sup> On "the role of cost-benefit analysis," the order adds nothing to EO 12,866 except for a new allowance for "human dignity" in the calculations of regulatory benefits.<sup>89</sup> As for "the role of distributional considerations, fairness, and concern for the interests of future generations," the order adds only the word "fairness" to EO 12,866's already-existing references to

<sup>88</sup> EO 13563, § 2(c).

<sup>89</sup> EO 13563, § 1(c).

distributive impacts and equity.<sup>90</sup> And as for clarifying “the role of the behavioral sciences in formulating regulatory policy” and identifying “the best tools for achieving public goals through the regulatory process,” the only new item in the new executive order was a reference to “appropriate default rules.”<sup>91</sup>

President Obama’s new executive order on regulatory review, in short, was neither very new nor very specific. Any hope that President Obama would use the new executive order as an occasion to fundamentally reshape the relationship between the White House and the agencies, or to loosen the grip of cost-benefit analysis on regulatory policy, was dashed. Yet the very vagueness of the executive order also created a large space within which OIRA could fashion a kind of common law of regulatory review. OIRA eagerly inhabited that space.

## II. The Common Law of 13,563

The common law of EO 13,563 determines the most important features of the current process of regulatory review: who is the decision maker, what is reviewed, why particular actions fail regulatory review, when actions emerge from review, and what is disclosed about the process. If one has read EOs 12,866 and 13,563, which in theory govern this process, surprises are in store once we look at the way the process actually operates.

### A. Who Decides?

Recall that EO 12,866 puts OIRA initially in charge of the process of regulatory review. But if, according to EO 12,866, a dispute arises between OIRA and the action agency, the dispute is to be resolved through a highly specified process that involves recommendations from the Vice-President and an ultimate decision by the President or by the Vice-President acting on his behalf.<sup>92</sup> (Recall that the Bush-era executive order replacing the role of the Vice-President with that of presidential “advisors” was revoked by President Obama during his first days in office.<sup>93</sup>)

This is not how regulatory review works today. In my two years at EPA, I do not recall ever hearing of Vice-Presidential involvement in a regulatory matter. Moreover, the OIRA process in the Obama administration was not structured to funnel disputes between OIRA and the agencies to Vice-President Biden for his recommendations. It was far messier and more ill-defined than that. From my perspective, it was often hard to tell who exactly was in charge of making the ultimate decision on an important regulatory matter.

---

<sup>90</sup> EO 13563, § 1(c).

<sup>91</sup> EO 13563, § 4.

<sup>92</sup> EO 12866, § 7.

<sup>93</sup> EO 13497.

A recent account of the OIRA process by former OIRA Administrator Cass Sunstein helps to explain this confusion as to some regulatory matters, but leaves a puzzle as to others.<sup>94</sup> Sunstein states that OIRA's primary role in the regulatory process is as an "information-aggregator" – compiling information from many actors in the executive branch and using that information to help get at the right regulatory result.<sup>95</sup> Observing that the White House is a "they," not an "it,"<sup>96</sup> Sunstein emphasizes the role of other White House offices and officials, beyond OIRA, in shaping regulatory policy.<sup>97</sup> Sunstein lists almost a dozen White House offices that, he says, play a significant role.<sup>98</sup> Beyond the White House, Sunstein asserts that agencies other than the agency proposing a particular regulatory action also have a large influence on regulatory policy.<sup>99</sup> Sometimes it is another Cabinet secretary who might have such influence;<sup>100</sup> often, Sunstein says, it is career staff at another agency.<sup>101</sup> Sometimes it is the Chief of Staff of the White House who plays the major role;<sup>102</sup> sometimes it is a member of Congress.<sup>103</sup> Sunstein extols the virtues of this system, arguing that the aggregation of input from all of these different sources produces better regulatory results.<sup>104</sup> Of course, Sunstein's description also explains why it was often hard, from EPA's perspective, to know who was calling the shots; perhaps it was Rahm Emanuel, the White House Chief of Staff from 2009 to 2010, or perhaps it was Tom Vilsack, the Secretary of Agriculture, or perhaps it was a career staffer at the Department of Energy. The confusion was deepened by OIRA's insistence that, once a matter was under review, all communications run through OIRA;<sup>105</sup> at one point in my tenure at EPA, it was even suggested that a conversation between members of the President's cabinet on a matter under review would be inappropriate if OIRA were not included.

Sunstein's account of the OIRA process at least helps me to understand why we were all so confused about exactly what the process was.

In another respect, though, Sunstein's account in the *Harvard Law Review* is puzzling rather than clarifying. From my vantage point at EPA, it certainly often

appeared that OIRA – not other White House offices, not other agencies – was calling the shots. OIRA decided what to review, offered line-by-line edits of regulatory proposals, convened meetings with outside parties, mediated disputes among the agencies, decided whether an agency’s cost-benefit analysis was up to snuff, and more. It often appeared, from the agency’s perspective, that other White House offices were brought in to bolster, not to question, OIRA’s position on regulatory matters.<sup>106</sup> I was not in the White House, and so I cannot confirm that the latter impression was correct. But I can say that Sunstein’s account does not jibe with my own perceptions of OIRA’s power relative to EPA or to other executive branch actors.

In his new book on his time in the government, however, Sunstein paints a somewhat different picture of the role of OIRA during his tenure. Sunstein’s book, “Simpler: The Future of Government,” makes clear just how much power he wielded as the Administrator of OIRA. Referring to OIRA as “the cockpit of the regulatory state,”<sup>107</sup> Sunstein informs us that, as OIRA Administrator, he had the power to “say no to members of the president’s Cabinet”;<sup>108</sup> to deposit “highly touted rules, beloved by regulators, onto the shit list”;<sup>109</sup> to make sure that some rules “never saw the light of day”;<sup>110</sup> to impose cost-benefit analysis “wherever the law allowed”;<sup>111</sup> and to transform cost-benefit analysis from an analytical tool into a “rule of decision,” meaning that “[a]gencies could not go forward” if their rules flunked OIRA’s cost-benefit test.<sup>112</sup> This account – in which OIRA plays a central and often decisive role in determining which rules move and which don’t – is much more consistent with my own experience at EPA than is Sunstein’s account of OIRA as a kind of neutral “information-aggregator.”

Beyond Sunstein’s account, the relative power of EPA within the OIRA process is also well illustrated by considering the increase in influence that EPA personnel enjoy when they go on detail to offices within the White House. Many White House offices depend on agency detailees to help do their work. The Council of Economic Advisors and the Council on Environmental Quality nearly always have one or more detailees from EPA. These detailees, in my experience, participate actively in the OIRA process – and, often, not by pressing for EPA’s rules but instead by offering critiques of EPA’s work. The detailees appear to have far more power when they are housed in a White House office than they do at EPA, often because their expertise – frequently it is economics – is more central to the White House

---

<sup>106</sup> This impression is consistent with EPA officials’ accounts of White House involvement in rulemaking during the Bush I and Clinton years. Bressman & Vandenberg, *Inside the Administrative State*, 105 Mich. L. Rev. at 68-69.

<sup>107</sup> Sunstein, *Simpler*, at 3.

<sup>108</sup> *Id.* at 3.

<sup>109</sup> *Id.* at 6.

<sup>110</sup> *Id.* at 7.

<sup>111</sup> *Id.* at 8.

<sup>112</sup> *Id.* at 161.

process than it is to EPA's regulatory frameworks. Going on detail to the White House increases the power of EPA personnel not because they somehow become more expert when they go to the White House, but because the White House privileges their particular expertise over other kinds of expertise. Going on detail to the White House also increases the power of agency personnel for another, very simple reason: the White House has the final say on agency rules.

The role of agency detailees in the OIRA process makes it hard to make sense of Sunstein's portrait of OIRA as an "information-aggregator." If, as I have said, an appreciable number of the people doing the work in the White House are actually employees on detail from the agencies whose work is being reviewed, what sense does it make to say that the OIRA review process increases the total amount of information gathered during a rulemaking process or that it increases the likelihood that a rule will get it right? The same agency personnel participating in the White House process have virtually identical counterparts, making the same kinds of observations, in their home agencies; yet these personnel have a power in the White House that they do not enjoy in their home agencies. More than an information-aggregator, then, OIRA is an information-sorter; economic information rises to the top, other information shakes out below.

Also relevant to the question of who is calling the shots in the OIRA process is the kind of rules OIRA reviews. Most of the rules OIRA reviews are not economically significant,<sup>113</sup> that is, they do not pass EO 12,866's economic-significance threshold of \$100 million in annual costs.<sup>114</sup> Many of the rules do not have obvious interagency dimensions. Many are continuing iterations of longstanding regulatory programs. In these cases, when the rules got into trouble in the OIRA process, it often did not appear that there was any appreciable interagency pushback on the rules or any White House resistance outside OIRA. Often, indeed, it appeared that OIRA career staff simply trumped EPA career staff when it came to rules that were neither insignificant enough, from OIRA's perspective, to pass up the opportunity for review, nor significant enough, from EPA's perspective, to elevate the issue beyond OIRA.<sup>115</sup>

In these ways, the "common law" of regulatory review under President Obama manages to muddy the seemingly simple question: who runs EPA? Long gone, it appears, is the carefully articulated power structure of EO 12,866, with its process for elevating issues and for deciding them once elevated. In its place, a free-for-all of regulatory power has emerged, with no one clearly in charge. The lack of a

---

<sup>113</sup> From January 20, 2009, to April 8, 2013, OIRA reviewed a total of 2514 regulatory actions, of which only 477 were economically significant. <http://www.reginfo.gov/public/do/eoCountsSearch>. For EPA, the numbers were 340 total rules, 66 of which were economically significant.

<sup>114</sup> EO 12866, § 3(f)(1).

<sup>115</sup> For a similar account of the Bush I and Clinton years, see Bressman & Vandenberg, *Inside the Administrative State*, 105 Mich. L. Rev. at 68.

clear power structure is, perhaps unintentionally, best captured by Sunstein's incongruent accounts of his own role in the process: was he the regulatory czar, or an information-aggregator? It depends on which account you read.

## B. What Is Reviewed?

One domain in which OIRA's powerful role is quite clear, however, is in the decisions about which regulatory actions OIRA will review. EO 12,866 states that OIRA may review not only economically significant actions, but also actions with a significant potential for interagency conflict or inconsistency and actions that raise "novel legal or policy issues."<sup>116</sup> In fact, most of the rules OIRA reviews are not economically significant. In the Obama administration so far, some 80 percent of the EPA rules that have been reviewed were not economically significant.<sup>117</sup> Moreover, many of the rules under review lack any obvious interagency dimension. So how does OIRA come to review them?

While I was at EPA, we had a routinized process for determining what went to OIRA. Every three months or so, the Assistant Administrators of the program offices (air, water, solid waste and emergency response, chemical safety and pollution prevention) and I met with representatives from OIRA to go over the regulatory actions EPA planned to announce in the coming months. We offered our own opinion as to whether any given item warranted OIRA review. But the bottom line was that it was not our decision to make. If OIRA wanted to review something, OIRA reviewed it.<sup>118</sup> Sometimes, the reason for review was a little baffling, along the lines of: we've always reviewed this kind of action, so we'd like to review this one, too. The explanation was baffling because the longstanding practice of review sometimes came straight from a prior administration with seemingly different perspectives on the role of regulation and government; the same OIRA career personnel who had "always" reviewed those kinds of actions were insisting that they should still review them, even after a change in personnel at the very top – and even though, strangely, they were often asserting such power of review under the EO provision that covered "*novel*" legal or policy issues. On occasion, EPA was able to persuade OIRA not to review a regulatory action that OIRA was inclined to review; but this was the exception, not the rule.

It is thus quite perplexing to read recent accounts of the OIRA process that argue that agencies can avoid OIRA review altogether through quite obvious and simple stratagems.<sup>119</sup> Agencies can, it is argued, separate regulatory actions into

<sup>116</sup> EO 12866, § 3(f)(4).

<sup>117</sup> Numbers are available at <http://www.reginfo.gov/public/do/eoCountsSearch>.

<sup>118</sup> This is OIRA's prerogative. See EO 12866, § 6(b)(3)(B).

<sup>119</sup> Jennifer Nou, Agency Self-Insulation under Presidential Review, Harv. L. Rev. (2013), available at [http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=2208058##](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2208058##) (page numbers in

different packages so that no one action is economically significant;<sup>120</sup> they can low-ball their estimates of regulatory costs to come in under the threshold for economic significance;<sup>121</sup> they can slip a policy out as guidance rather than as a rule;<sup>122</sup> they can do low-quality cost-benefit analysis to make OIRA review more difficult;<sup>123</sup> they can even, we are told, spring a rule on the world without warning to OIRA.<sup>124</sup>

From the perspective of EPA at least, this is not a plausible account. Most of the EPA rules OIRA reviews are not economically significant, so fussing around to make a rule or package of rules not economically significant won't help to avoid OIRA review. OIRA, in any event, lavishes skeptical attention on EPA's estimates of regulatory costs. Moreover, as discussed above, OIRA continues to review agency guidance,<sup>125</sup> so denominating an action as guidance will not avoid OIRA review. And in my experience, OIRA personnel keep an eagle eye on EPA – on its public announcements, website, etc. – to make sure EPA does not sneak something past it. From OIRA's perspective, the system appears to work: EPA receives more sustained attention from OIRA than any other federal agency. Most often, EPA is the agency with the largest number of rules under review at OIRA.<sup>126</sup>

On the issue of which regulatory actions go to OIRA, therefore, the express terms of EO 12,866 again recede and a common law emerges. OIRA reviews pretty much anything it wants to review, and fits anything it must into the catch-all category, “novel legal or policy issues.”

### C. Why Do Rules Fail?

One of the most vexing questions concerning regulatory review has to do with the basis on which regulatory actions fail this review. When a regulatory action goes to OIRA for review, it goes fully formed, reflecting the agency's best judgment about the proper path in the relevant circumstances. EPA rules go to OIRA after an extensive period of internal development and review.<sup>127</sup> In many

<sup>126</sup> Lists of rules under formal review at OIRA can be found at [www.reginfo.gov](http://www.reginfo.gov).

<sup>127</sup> EPA has a robust internal process for developing rules, described in Office of Policy, EPA's Action Development Process: Guidance for EPA Staff on Developing Quality Actions (March 2011),

cases, the rules have been under development for years, with dozens or more agency personnel working on them. In the case of the most significant rules, they have gone to the Administrator herself for initial selection of options and later for final review.<sup>128</sup> It is a matter of some consequence, then, when OIRA does not allow such rules to issue, or requires substantial changes before they may issue.

One reason why OIRA might disapprove of an agency's planned action is that it disagrees with the agency's interpretation of the statute the agency is charged with administering. Notably, neither EO 12,866 nor EO 13,563 gives OIRA the authority to second-guess agencies' interpretations of the statutes they administer. Indeed, both executive orders explicitly state that nothing in them permits a departure from existing law.<sup>129</sup> Yet, in a post-*Chevron* world, that disclaimer means less than it seems. If a statute is ambiguous – or if OIRA believes that a statute is ambiguous – then perhaps OIRA has room to press an agency to change its interpretation of a statute it administers, without running afoul of the EOs' injunction to follow existing law. After *Chevron*, “existing law” is up for grabs so long as existing law is ambiguous.<sup>130</sup>

President Obama's OIRA has aggressively moved into the space created by *Chevron*. As a law professor, Cass Sunstein had promoted “cost-benefit default principles,” according to which statutes are interpreted to allow cost-benefit analysis so long as they do not clearly forbid it;<sup>131</sup> as OIRA Administrator, Sunstein moved to lock these default principles into place.<sup>132</sup> With respect to EPA rules, OIRA actively pressed EPA to interpret its governing statutes to allow cost-benefit analysis, even where EPA had a long history of interpreting them not to allow it. Pressure like this appears to have borne public fruit when EPA announced its long-awaited proposal for addressing the ecological impacts of cooling water intake structures under the Clean Water Act. In its preamble discussing the rule, EPA noted that it was adopting an interpretation of the relevant provision of the Clean

<sup>132</sup> Sunstein, *Simpler*, at 8.

Water Act that would allow cost-benefit analysis, citing EO 13,563 as authority for this interpretation.<sup>133</sup>

I have argued elsewhere that agencies should not get deference under *Chevron* when an interpretation is foisted upon them by OIRA; OIRA is not charged by Congress with interpreting the statutes the agencies administer, and OIRA does not have the expertise of the relevant agencies.<sup>134</sup> But whatever one thinks about the legal consequences of an OIRA-driven agency interpretation, one must take note of the large degree of influence wielded by OIRA when one of the powers it asserts is to embed cost-benefit default principles into the regulatory process.

To understand the boldness of OIRA's power grab, it helps to consider a bit of history. In 1994, eyeing the first Republican takeover of the House of Representatives in forty years, Newt Gingrich proposed an aggressive series of legislative reforms, bundled together as the "Contract With America."<sup>135</sup> Among the most contentious of the proposals was the "supermandate": a requirement that all rules protecting human health, safety, or the environment pass a cost-benefit test.<sup>136</sup> Critics of what President Bill Clinton dubbed the "Contract On America"<sup>137</sup> feared that applying a cost-benefit test to health, safety, and environmental rules would often spell their doom, as these rules produce benefits — in human health, in longer life, in cleaner air and water and land — that are hard to quantify and even harder to monetize.<sup>138</sup> President Clinton vetoed bills to fund the government in part because they contained the supermandate,<sup>139</sup> leading to the government shutdowns of 1995 and likely contributing to Clinton's political renewal.

Thanks to Sunstein, though, the supermandate is back. By pressing agencies to adopt cost-benefit analysis as a decision-making framework wherever the law allows it, Sunstein's OIRA has, by executive fiat rather than legislative enactment, imposed a cost-benefit supermandate wherever the law is ambiguous (which, of

course, it often is). Presumably, then, one way that rules can fail the OIRA process is if they do not hew to OIRA's new supermandate.

Another way rules can fail the OIRA review process is to fail cost-benefit analysis. One way to fail is never to try. An important but little-remarked aspect of the relationship between EPA and OIRA is that OIRA's cost-benefit sieve leads EPA personnel to be deeply wary of developing rules that have very high costs in relation to their quantified and monetized benefits. Indeed, Sunstein himself suggests this may be one consequence of OIRA's cost-benefit test.<sup>140</sup> From the moment EPA begins even to think about proposing a rule that OIRA will likely want to see, EPA personnel wonder whether OIRA will accept it; this mindset narrows the range of rules EPA might otherwise consider.

If EPA does decide to propose a rule that has much higher costs than benefits, that rule may not make it past OIRA. Among environmental rules, non-air rules fare the worst in a cost-benefit framework. Rules governing air pollution often produce relatively (or even very) high benefits in relation to costs on account of reductions in particulate matter. Indeed, according to OMB, in the last decade clean air rules have produced a majority of the total monetized benefits conferred by all of the major regulations in the federal government.<sup>141</sup> Rules on water pollution, toxics, and hazardous waste contamination do not have a single category of benefits – like reductions in human mortality due to reductions in particulate matter – that makes it possible for them to clear the cost-benefit hurdle. These programs fare poorly in OIRA's process of review. EPA's proposal to regulate coal ash changed markedly while at OIRA, and has not seen the light of day since it was proposed.<sup>142</sup> EPA initiatives on toxics have stalled at OIRA for years.<sup>143</sup> Likewise, rules on water pollution appear permanently stuck.<sup>144</sup> While Sunstein reports that cost-benefit analysis is not a major reason why rules get stuck at OIRA,<sup>145</sup> it is hard to escape speculating that cost-benefit analysis must be one factor in the trouble these categories of rules have run into at OIRA. Indeed, Sunstein also says that rules that fail cost-benefit will in fact likely fail OIRA review.<sup>146</sup>

<sup>145</sup> Sunstein, *Myths and Realities*, at 29-30.

<sup>146</sup> Sunstein, *Simpler*, at 161.

Sunstein asserts that EO 13,563 adds qualitative texture to the generally quantitative thrust of cost-benefit analysis.<sup>147</sup> In particular, he notes, EO 13,563 introduced “dignity” into the cost-benefit equation.<sup>148</sup> Sunstein cites the Department of Justice’s rule on prison rape as an instance in which “dignity” made a difference in the regulatory process.<sup>149</sup> In its cost-benefit analysis of its rule aiming to reduce the incidence of prison rape, DOJ noted that it was very hard to quantify and monetize the benefits of reducing rape.<sup>150</sup> Nevertheless, DOJ said, reducing rape would promote human dignity, and this was a positive feature of its rule on prison rape.<sup>151</sup>

But I would venture to guess that the only reason DOJ was doing a cost-benefit analysis of rape prevention was that OIRA insisted on it. The only reason DOJ needed to reach to justify preventing rape was that OIRA’s cost-benefit vision did not easily digest, in economic terms, a human indignity like rape.<sup>152</sup> To argue, as Sunstein does, that the inclusion of “dignity” in EO 13,563 somehow made it possible to issue DOJ’s rule on prison rape is to get things very backwards.

One of the most problematic features of cost-benefit analysis, especially for future-oriented regulatory programs like those involving the environment, is its treatment of future consequences. In calling for recommendations on a new executive order, President Obama explicitly asked the OMB Director to address “concern for the interests of future generations.”<sup>153</sup> This concern did not make it into the actual executive order, and indeed, the record of the Obama administration has been disappointing in this domain. The Obama administration’s signature effort in this area – the estimation of the “social cost of carbon”<sup>154</sup> – used higher discount rates than OIRA’s own cost-benefit guidance to agencies allows when a regulatory policy has significant intergenerational effects. The Obama administration approved a “central” value for the discount rate to be used in calculating the social cost of carbon of 3 percent and an upper value of 5 percent<sup>155</sup> – yet OIRA’s own guidance allows agencies to use discount rates of 1 to 3 percent where

intergenerational effects are significant.<sup>156</sup> Increasing the discount rate means decreasing the worth of future generations.<sup>157</sup> In approving a high range of discount rates for climate consequences, the Obama administration took a step backward, not forward, in the incorporation of future generations' interests in cost-benefit analysis.

We have seen that rules might fail OIRA review because they do not have a positive enough cost-benefit profile, and that President Obama's executive order on regulatory review has not appreciably helped rules get over this hurdle. Another reason why rules might fail OIRA review is that they simply fail "on the merits." This is, in fact, Sunstein's explanation of why EPA's final rule revising the ozone standard failed: the decision to return the rule to EPA was, Sunstein asserts, "unquestionably correct"<sup>158</sup> and "made on the merits."<sup>159</sup> He does not explain what this means – on the merits, considering cost-benefit analysis? on the merits, considering the scientific evidence? on the merits, considering EPA's other priorities and activities? – but he does insist that the rejection of EPA's rule on ozone was "not motivated by politics."<sup>160</sup>

Whatever view Sunstein takes of the "merits" of the ozone rule, it is hard to understand why the President rejected it and why Sunstein thinks that decision was "unquestionably correct." If, by the "merits," Sunstein means that the rule failed a cost-benefit test, that claim would be legally irrelevant. Neither EPA nor the White House was allowed to use cost-benefit analysis to pass judgment on the rule: the Supreme Court has held (unanimously) that EPA may not consider costs in setting the National Ambient Air Quality Standards.<sup>161</sup> The President's letter to Administrator Jackson emphasized "regulatory burdens," "regulatory uncertainty," and the economic downturn in explaining the return of the rule to EPA;<sup>162</sup> if these considerations were indeed the basis for the President's decision, the decision was unlawful.

Perhaps Sunstein means that the ozone rule failed on the scientific merits. Certainly, OIRA has played an active role in adjusting EPA's discussions of technical matters in its NAAQS decisions. In a report prepared for the Administrative Conference of the United States, Professor Wendy Wagner has carefully documented

<sup>162</sup> Statement by the President on the Ozone National Ambient Air Quality Standards (September 2, 2011), available at <http://www.whitehouse.gov/the-press-office/2011/09/02/statement-president-ozone-national-ambient-air-quality-standards>.

just how often OIRA intrudes upon EPA's technical analysis in the domain of the NAAQS.<sup>163</sup> But OIRA does not have the scientific expertise necessary to make judgments about where the NAAQS should be set. Nor, it should be added, does the President. Moreover, the scientific shakiness of the decision to direct EPA to withdraw the ozone standard emerged clearly at oral argument on the EPA standard left in place by President Obama's decision. At argument, the panel of D.C. Circuit judges sharply questioned the government's lawyers as to the scientific merits of the Bush-era ozone standard, left standing after EPA withdrew its revised standard.<sup>164</sup> They seemed very skeptical that the Bush-era standard was stringent enough.<sup>165</sup> Given the lack of relevant expertise on the part of OIRA and the President, and given the hard time EPA had defending the Bush-era standard in court, it is hard to imagine that when Sunstein says Obama's decision to reject EPA's revised standard was correct "on the merits," Sunstein means that the directive to withdraw the revised standard was scientifically correct.

A final possibility is that Sunstein believes that the ozone decision was correct on the merits because it reflected good governance. The President's letter to Administrator Jackson emphasized the importance of regulatory certainty and observed that EPA was already in the process of reviewing the ozone standard in light of the very latest scientific evidence.<sup>166</sup> So perhaps Sunstein means that the decision to reject the standard was correct because EPA should just have waited for the new five-year review of the ozone standard, rather than reconsidering the Bush-era standard and replacing it with a revised standard based on the same evidence EPA had considered in the Bush administration.

The trouble with this potential explanation is that, by the time President Obama ordered the standard pulled, EPA had been working on the reconsidered ozone standard for 2-1/2 years, with the full knowledge and acquiescence of the White House. Work on the reconsidered standard was consistent with Rahm Emanuel's memorandum to agencies, written within a week of President Obama's inauguration, directing them to review new and pending regulatory actions begun in the Bush administration,<sup>167</sup> and with the President's own March 2009

<sup>166</sup> Statement by the President on Ozone, *supra* note 162.

<sup>167</sup> EPA, National Ambient Air Quality Standards for Ozone, Proposed rule, 75 Fed. Reg. 2938, 2943 (Jan. 19, 2010); Memorandum for the Heads of Executive Departments and Agencies, 74 Fed. Reg. 4435 (Jan. 26, 2009).

memorandum on scientific integrity.<sup>168</sup> The Bush-era ozone standard was widely regarded as one of the biggest environmental defaults of the Bush administration relating to the environment; many thought the standard of 0.075 parts per million was scientifically unsound. Thus, in September 2009, EPA announced that it would reconsider the Bush-era ozone standard.<sup>169</sup> In January 2010, EPA proposed revising that standard.<sup>170</sup> EPA held three public hearings and took public comment on the proposed standard in 2010.<sup>171</sup> The proposal went through OIRA.<sup>172</sup> The *upper end* of the range the agency proposed to consider was 0.070 parts per million of ozone.<sup>173</sup> In other words, no part of the range EPA proposed for the revision encompassed the Bush-era standard.

It would be bizarre to say that stopping a decision that everyone knew about, 2-1/2 years into the process, was justified on the ground that stopping it was a good way to govern. It was the opposite: it was a bad way to govern. It wasted tremendous agency resources and valuable time; it put the agency back at square one in figuring out how to manage the ozone problem under the Bush-era standard; it sent a wave of distrust and disbelief through agency ranks and outside supporters of the agency; and it put the government in the untenable position of defending the Bush-era standard left in place. Unleashing chaos cannot be what Sunstein means when he says that the ozone decision was correct “on the merits”; but that was the decision’s effect.

Under the common law of 13,563, then, rules can fail for a variety of reasons: they can reflect an OIRA-disapproved understanding of the role of cost-benefit analysis under the relevant laws; they can fail a cost-benefit test; or they can be bad ideas on some unspecified theory of the “merits.” Perhaps these are some of the reasons so many EPA rules seem permanently stuck at OIRA, as I next discuss.

#### D. When Does Review End (and Begin)?

The common law of 13,563 also determines the timelines under which OIRA operates. As discussed above, EO 13,563 explicitly reaffirms EO 12,866, which is the

<sup>168</sup> EPA, National Ambient Air Quality Standards for Ozone, Proposed rule, 75 Fed. <sup>173</sup> *Id.* at 2997.

executive order that sets forth timelines for OIRA review: 10 days for pre-rule actions, 45 days for final rules on subjects already reviewed and little changed, 90 days for everything else.<sup>174</sup> EO 12,866 also, as I have said, seems clearly to contemplate one 30-day extension if the OMB Director and the agency head agree to it.<sup>175</sup>

This is not the way the OIRA process now works. Many, many rules linger at OIRA long past the 90- or 120-day deadline.<sup>176</sup> Many pre-rule actions stay long past 10 days.<sup>177</sup> Some rules have been at OIRA for *years*.<sup>178</sup>

Sunstein explains that, in fact, the prevailing understanding of EO 12,866 holds that an agency head may, on her own, request an indefinite extension of OIRA review.<sup>179</sup> This would mean that neither the requirement that the OMB Director agree “in writing” to the extension nor the requirement that the extension be once, for 30 days only, holds under the present understanding of EO 12,866. This would, in turn, mean that if an agency head asks for an extension, there actually is no deadline for completing OIRA review.

This remodeling of EO 12,866’s structure on the timelines for review is news in and of itself. Many outside observers believe that there is in fact a deadline for OIRA review.<sup>180</sup> OIRA itself encourages this (mis)understanding by displaying 90 days as a timing benchmark on its regulatory dashboard.<sup>181</sup>

But it is worse than that. It is worse because the way that agency heads come to request extended review, in my experience, is that OIRA calls an official at the agency and *asks the agency to ask for an extension*. It is clear, in such a phone call, that the agency is not to decline to ask for such an extension. Thus, not only is there no deadline for OIRA review, but OIRA itself controls the agency’s “requests” for extensions. In this way, it comes to pass that rules can remain at OIRA for years.

Quite apart from not knowing when OIRA review ends, it is also sometimes hard for the public to know when OIRA review begins. It has been widely reported that OIRA has lately been in the habit of not allowing agencies to send rules for

<sup>174</sup> EO 12866, § 6(b)(2)(A), (B).

<sup>175</sup> EO 12866, § 6(b)(2)(C).

<sup>177</sup> [www.reginfo.gov](http://www.reginfo.gov).

<sup>178</sup> [www.reginfo.gov](http://www.reginfo.gov).

<sup>179</sup> Sunstein, *Myths and Realities*, at 10 n. 37.

<sup>180</sup> See, e.g., *Printers to Obama: please regulate our cleaning rags*, <http://thehill.com/blogs/regwatch/pending-regs/296827-printers-to-obama-please-regulate-our-cleaning-rags> (“Laws stipulate that the agency then has 90 days to review the drafts before returning them to agencies for correction or publication...”).

<sup>181</sup> <http://www.reginfo.gov/public/>.

review until OIRA has cleared them for review – a kind of pre-clearance procedure uncomfortably reminiscent of the Bush-era failure of OIRA to be in receiving mode when the endangerment finding and rules on cars went over for review.<sup>182</sup>

Some documents on publicly available websites corroborate these reports. EPA maintains a website, the Regulatory Development and Retrospective Review Tracker (“Reg DaRRT”), that is supposed to track important moments in the development of EPA rules.<sup>183</sup> Inspired by the Bush-era fiasco of the un-uploaded package on endangerment and cars, EPA designed a timeline with two dates relevant to OIRA review: one noting the date when EPA sends a regulatory package to OIRA, and one noting the date when OIRA “receives” the package.<sup>184</sup> A space of a day or two between these two dates might mean nothing; it might mean that the package went over late in the day, for example, and no one was around to upload it at OIRA. But a space of anything more than that may signal that OIRA has lapsed into non-receiving mode. Thus, for example, looking at the Reg DaRRT entry on EPA’s rule requiring electronic reporting by Clean Water Act permittees, one can see that the rule went to OIRA on December 22, 2011, but was not received by OIRA until January 20, 2012.<sup>185</sup> It would be unusual to have this long a space between sending and receipt unless OIRA had identified some problem with the package.

Comparing EO 12,866 documents on regulations.gov to OIRA’s own posted review dates can also be illuminating. On regulations.gov, one can see that EPA sent a rule relating to renewable fuels to OIRA on November 20, 2012<sup>186</sup> – but OIRA itself reports that it received this rule on January 30, 2013.<sup>187</sup> Some regulatory actions seem caught forever in email limbo between EPA and OIRA. A Notice of Data Availability on coal ash, for example, appears to have been sent to OIRA on March 12, 2012<sup>188</sup> – but the notice did not appear on OIRA’s log of items under review until April 13, 2013.<sup>189</sup> Needless to say, even if OIRA did indeed respect the EO 12,866 deadlines once items are accepted by it for review, these deadlines would mean little if OIRA simply does not accept certain regulatory actions for review or only accepts them long after they have been sent.

<sup>182</sup> See text at note 69, supra.

<sup>189</sup> [www.reginfo.gov](http://www.reginfo.gov).

To sum up, on the matter of deadlines, OIRA has broken entirely free from the constraints of EO 12,866. The 10-day, 45-day, and 90-day time limits on OIRA review perhaps survive as benchmarks, but nothing more. To maintain the fiction that deadlines still exist, OIRA extends review indefinitely at the “request” of agency heads – but these requests, in my experience, often are instigated by OIRA itself. To make matters worse, OIRA has fudged its own failure to meet the deadlines imposed by EO 12,866 by simply not “receiving” some regulatory packages until long after they are sent.

#### E. What Are We Told?

The last facet of the common law of EO 13,563 compounds the problems created by OIRA’s other innovations to the regulatory review process prescribed in EO 12,866: OIRA follows, and allows the agencies to follow, almost none of the disclosure requirements of EO 12,866. OIRA also nowhere has written down the elements of its common law of regulatory review. This is why we are left to speculate about who is in charge of regulatory review. This is why so many people think OIRA reviews only really big and important rules, and perhaps why some believe that agencies can easily evade OIRA review altogether. This is why outsiders think there actually are deadlines for OIRA review and also think OIRA’s website contains a full listing of items under OIRA scrutiny. The misconceptions about OIRA review would not be possible if OIRA either actually met the disclosure requirements of EO 12,866 or were more forthcoming about the many alterations it has made to the process described in the executive order.

OIRA does not explain in writing to agencies that items on their regulatory agenda do not fit with the President’s agenda.<sup>190</sup> OIRA does not keep a publicly available log explaining when and by whom disputes between OIRA and the agencies were elevated. Indeed, when the first elevation of an EPA rule occurred in President Obama’s first term, I drafted a brief memo for the EPA’s docket explaining that elevation had occurred and noting the outcome. OIRA told me in no uncertain terms that the memo must not be made public. Moreover, except in one instance – President Obama’s direction to then-EPA Administrator Lisa Jackson to withdraw the final rule setting a new air quality standard for ozone – OIRA has not returned rules to agencies with a written explanation about why they have not passed OIRA review.<sup>191</sup> Instead, as discussed above, OIRA simply hangs onto the rules indefinitely, and they wither quietly on the vine. This is how it comes to pass that a

---

<sup>190</sup> The next several paragraphs are drawn from Lisa Heinzerling, *Who Will Run the EPA?*, Yale J. Reg. (April 2013), <http://jreg.common.yale.edu/who-will-run-the-epa/>.

<sup>191</sup> The website on regulatory review shows only one return letter (on ozone) issued during the Obama administration. OIRA Return Letters, Office of Info. And Regulatory Affairs, <http://www.reginfo.gov/public/do/eoReturnLetters> (last visited Mar. 25, 2013).

list of chemicals of concern or a workplace rule on crystalline silica lingers at OIRA for years.

Some agencies do post “before” and “after” versions of rules that have gone to OIRA. These redlined documents often feature hundreds of changes. There is nothing here like the “complete, clear, and simple manner” of disclosure contemplated by the Executive Order. There is also often no document that explains which changes were made at OIRA’s behest. Where, as Sunstein explains, changes might come from OIRA, from another White House office, from another Cabinet head, or from a career staffer in a separate agency, the failure to follow the Executive Order’s rules on transparency means that no one is ultimately accountable for the changes that occur. Who is responsible, for example, for the hundreds of technical changes made to the EPA’s scientific analyses of air quality rules?<sup>192</sup> We simply do not know.

Here, too, OIRA is the stumbling block when it comes to transparency. Agencies know full well that they are not to be too transparent. OIRA reprimanded the EPA when the EPA accidentally posted interagency comments on its proposal to regulate coal ash impoundments.<sup>193</sup> But why shouldn’t the public know who is responsible for changing the rules? In fact, without knowing the expertise and affiliation of the kibitzers, it is hard to evaluate their comments.

The problems go deeper still. OIRA maintains a “Regulatory Review Dashboard” that contains a good deal of information about rules under review, how long they have been under review, and so on.<sup>194</sup> It is spiffy and informative, but woefully incomplete. Some rules go to OIRA “informally” and do not appear on the Dashboard at that time. Some rules go to OIRA and appear on the Dashboard only weeks after the agency has sent them.<sup>195</sup> Some rules are done, from the agency’s

---

<sup>192</sup> Wendy Wagner has painstakingly documented such changes in a study prepared for the Administrative Conference of the United States. Wendy Wagner, *Science in Regulation: A Study of Agency Decisionmaking Approaches* (2013), available at [http://www.acus.gov/sites/default/files/documents/Science%20in%20Regulation\\_Final%20Report\\_2\\_18\\_13\\_0.pdf](http://www.acus.gov/sites/default/files/documents/Science%20in%20Regulation_Final%20Report_2_18_13_0.pdf).

<sup>193</sup> See Cent. For Effective Gov’t, *Changes to Coal Ash Proposal Place Utility’s Concerns Above Public Health* (2010) (recounting the same episode), available at <http://www.foreffectivegov.org/node/11041>.

<sup>194</sup> Regulatory Review Dashboard, <http://www.reginfo.gov>.

<sup>195</sup> For example, compare the EPA’s report of when it sent its rule on electronic reporting regarding water pollution permits to OIRA, Dec. 22, 2011, to its report on when OIRA “received” the rule, Jan. 20, 2012. See NPDES Electronic Reporting Rule, U.S. Env’tl. Prot. Agency, <http://yosemite.epa.gov/opei/rulegate.nsf/byRIN/2020-AA47?opendocument> (listing dates for “NPRM: Sent to OMB for Regulatory Review” and “NPRM: Received by OMB”). See also Search Results for NPRM Review Status, Regulatory Review Dashboard, <http://www.reginfo.gov/> (search “RIN” for “2020-

perspective, but the White House prevents their transmittal to OIRA.<sup>196</sup> The truth is, the Dashboard purports to be, but is not, a full picture of the items under review at any given time. Thus it misleads at the same time it informs.

So far I have explained the ways in which OIRA review, as practiced today, departs from the executive order it purports to be following, EO 12,866. I have suggested, along the way, reasons to think OIRA's practice may not be ideal. Now, I turn to the normative perspective in earnest, and explain why I believe OIRA's process of regulatory review is deeply problematic along several different dimensions.<sup>197</sup>

### III. The Problems With OIRA

In this paper, I have focused mainly on a descriptive account of the OIRA review process as it exists today. I believe this descriptive account is essential because there is so much misunderstanding about how OIRA actually operates. But this paper would be incomplete without a discussion of the normative problems created by OIRA's current practices. Other scholars have covered these problems well;<sup>198</sup> for this article, I rest with a relatively brief discussion.

I lead off with the last topic I covered in discussing the common law of EO 13,563: transparency. The opacity of the OIRA process has two large problems. The first is that opacity in government in general is a problem. It prevents people from understanding the way their government operates, how they can intervene and at what points, what the government is up to, who is making important decisions, why the government has made those decisions. The problems with opacity are, in fact, what led President Clinton to include disclosure requirements in EO 12,866 in the first place.<sup>199</sup>

---

AA47" and search "Agency for Environmental Protection Agency) (showing OMB's received date to be Jan. 20, 2012).

<sup>196</sup> Juliet Eilperin, *Obama Administration Slows Environmental Rules as it Weighs Political Cost*, Wash. Post, Feb. 12, 2012, (stating that the White House had not given EPA permission to send a rule on cars and trucks to OMB).

<sup>197</sup> For a compelling argument that OIRA review is so problematic that it should be scrapped altogether, see Steinzor, *Abolishing Centralized Regulatory Review*.

<sup>198</sup> Indispensable articles in this literature, spanning a long period, include Steinzor, *Abolishing Centralized Regulatory Review*; Bressman & Vandenberg, *Inside the Administrative State*, 105 Mich. L. Rev. 47; Thomas O. McGarity, *Presidential Control of Regulatory Agency Decisionmaking*, 36 Am. U. L. Rev. 443 (1987); Percival, *Presidential Management of the Administrative State*, 51 Duke L.J. 963; Morrison, *OMB Interference with Agency Rulemaking*, 99 Harv. L. Rev. 1059; Olson, *The Quiet Shift of Power*, 4 Va. J. Nat. Resources L. 1.

<sup>199</sup> See, e.g., Steven Croley, *White House Review of Agency Rulemaking: An Empirical Investigation*, 70 U. Chi. L. Rev. 821, 878 (2003).

Another problem with opacity in the OIRA process is that transparency is promised but not delivered. Opacity about transparency is the worst kind of opacity; people think a lack of information on a subject means there is nothing relevant to report, when in fact it might mean they are just not being told. Thus it is especially troubling, given the gaps in transparency I have described, that Sunstein continues to tout the transparency of the OIRA process.<sup>200</sup> If believed, this claim would lull people into thinking they have all the information they might need or want about this process. But they do not. Moreover, to claim transparency but offer mostly opacity is especially bad in an administration that has made openness in government one of its signature initiatives.

A second problem with OIRA review as it is now conducted is the one flagged by OLC in 1981 when it reviewed EO 12,291. OLC cautioned, as I have said, that displacement of discretion by White House personnel might run afoul of the laws lodging discretion within a particular agency or with a particular official at a particular agency.<sup>201</sup> Since that time, the academic literature on this issue has burgeoned, with many scholars on both sides of the political divide arguing that certainly the President has the authority to order political appointees within the agencies to make particular decisions. Perhaps most famously, then-professor Elena Kagan argued that statutes that give discretion to particular agencies or to particular officials within particular agencies are best read as implicit delegations of authority to the President to dictate specific regulatory outcomes.<sup>202</sup> Other scholars have followed Kagan's lead and argued that it is nonsensical to read much of anything into Congress's particular choices about who is to make particular regulatory decisions.<sup>203</sup> What sense would it make, they ask, for Congress to give the President the authority to designate Superfund sites but not to give him directive authority over the setting of the NAAQS?<sup>204</sup> Some statutes give authority to the President, many others to agencies, and there appears to be no rhyme or reason in these choices.<sup>205</sup>

But if having rhyme or reason is a prerequisite for respecting Congress's choices, we have a lot of work to do unraveling its handiwork. Congress also has given USDA authority over meat but not cheese,<sup>206</sup> it has given FDA authority over

---

<sup>206</sup> GAO, *Testimony Before the Subcommittee on Civil Service and Agency Organization, Committee on Government Reform, House of Representatives, Federal Food Safety and Security System: Fundamental Restructuring Is Needed to Address*

eggs but not egg products,<sup>207</sup> it has given EPA authority over open waters but it requires EPA to share its authority over wetlands with the Army Corps of Engineers,<sup>208</sup> it has given DOT authority over fuel economy standards but not tailpipe standards for greenhouse gases.<sup>209</sup> The law is filled with delegations of authority that do not make obvious sense. But no one argues that FDA could just take over USDA's meat inspections, or that EPA could take over the Army Corps' functions with respect to wetlands. Even more tellingly, few other than those who believe in a strongly unitary executive believe that the President can simply ignore Congress's choices about whether the head of an agency can be removed for any reason or must only be removed for cause.<sup>210</sup> Yet it makes little sense, as far as I can tell, to have an independent SEC but a dependent EPA, or to have an independent FTC but a dependent CPSC. Why should we think nothing of ignoring Congress's instructions as to who within the executive branch should make particular decisions, but then cling tightly to its instructions about how to remove particular officials?

To delve fully into these issues would take me beyond the scope of this paper. My basic point is that it is not at all obvious that a delegation to a specific agency to make a specific decision delegates authority to the President to make that decision himself. It is even less obvious that such a delegation gives decision-making authority to OIRA career staff, other agencies' career staff, Cabinet members outside the relevant agency, the White House Chief of Staff, and others, apart from the President. Even if one believed that the President himself has decision-making power, Sunstein's account of the way the OIRA process actually works shows that it is almost never the President himself who is making the relevant calls. It is OIRA career staff and other agencies' career staff and other Cabinet officials and the Council of Economic Advisors and the White House Chief of Staff and a cast of many others.<sup>211</sup> To suggest that all of these players somehow can appropriately partake of the President's own power is ludicrous. It would be to suggest that the entire executive branch is "the President."

Thus, as in 1981, there remains a significant legal issue whether OIRA may exercise decision-making authority – not just oversight – with respect to regulatory decisions lodged by statute in particular agencies.

---

<sup>208</sup> 33 U.S.C. § 1344.

<sup>209</sup> *Massachusetts v. EPA*, 549 U.S. 497, 532 (2007).

<sup>210</sup> See, e.g., Kagan, at 2326-27.

<sup>211</sup> Sunstein, *Myths and Realities*, at 18-21; see also Bressman & Vandenberg, *Inside the Administrative State*, at 68 (counting 19 different White House offices involved in OIRA review).

A third large problem with OIRA review as it is now conducted is that it lacks accountability. No one knows who is really in charge. Sunstein's account of the process has only deepened the impression that the process is chaotic and unpredictable, lacking clear lines of authority and producing outcomes that have no clear author. The precise process set out in EO 12,866 for resolving disputes between the action agency and OIRA has given way to a blurry struggle for power in a process that remains opaque and mysterious even to the closest participants in it. Chaos, opacity, mystery: these are not the hallmarks of accountability. Since OIRA review is founded in part on a perceived need for greater accountability in the regulatory domain, the absence of accountability in this process undercuts the very reason for that review.

The accountability deficit is worsened by officials' insistence that, despite all that I have shown here, it really is the agencies who are in charge of regulatory policy. Sunstein reports that "[a]gencies decline to accept changes with which they disagree" and that "[w]hen changes are made, the agency assents to them."<sup>212</sup> "It is true, of course," Sunstein allows, "that OIRA has a good deal of formal authority under Executive Orders 12866 and 13563. That authority matters. But in important cases, the agency convinces OIRA and others, on the merits, that its position is indisputably correct, or that it is reasonable enough even if not indisputably correct."<sup>213</sup> I do not know why Sunstein believes that agencies come to understand that OIRA's positions are "indisputably correct"; I believe, instead, that they often come to understand simply that OIRA is indisputably in charge. But the continuing assertion that agencies accept OIRA's views, even welcome them, further dilutes accountability for the regulatory decisions in question.

Last but not least, the current process of OIRA review hits environmental protection especially hard. EPA most often leads the federal pack in terms of the number of its rules under review at any given time. Most of the EPA rules OIRA reviews are not economically significant. As of May 7, 2013, 15 of the 22 EPA rules under review had been there for over a year. As shown in redlined versions of EPA rules showing changes during OIRA review, OIRA devotes extreme attention – and sometimes little deference – to EPA's technical judgments.<sup>214</sup> Whole categories of rules protecting the environment fare poorly in the cost-benefit analysis OIRA demands.<sup>215</sup> Perhaps it is not surprising that a centralized structure first developed in the Nixon years to undercut protections under the new federal environmental laws would still, in 2013, save its strongest fire for these same protections. But it is a shame that so little has changed.

---

<sup>212</sup> Sunstein, *Myths and Realities*, at 10.

<sup>213</sup> Sunstein, *Myths and Realities*, at 33 (footnote omitted).

<sup>214</sup> See text at note 163 & n. 192, *supra*.

<sup>215</sup> See text at notes 142-44, *supra*.

Solving at least some of these problems with OIRA review would be simple: OIRA could just follow the rules laid down in EO 12,866. If OIRA followed EO 12,866's requirements for transparency, a good number of the issues surrounding OIRA's opacity would disappear. If OIRA followed the spirit of 12,866 and 13,563 insofar as they do not envision OIRA changing the laws under which agencies operate, the problem of OIRA interfering with the agencies' best judgments about the appropriate interpretations of the statutes they administer would go away. If OIRA followed the process EO 12,866 requires for elevation and dispute resolution at the highest levels, and if OIRA followed the disclosure requirements pertaining to such matters, some of the concerns about accountability would be mitigated. If OIRA kept to EO 12,866's deadlines, at least indefinite delay would not be one of the intrusions it visits upon the agencies. If OIRA sent return letters to agencies when it rejected rules, explaining in writing why it rejected them, there would exist a focal point for substantive discussion and accountability would be enhanced. Much can be done to improve things, in other words, simply by following the executive order President Obama himself has reaffirmed.

Other problems would be trickier to resolve. There would remain the overarching legal issue of whether it is fair to assume that statutes giving decision-making authority to executive agencies also give decision-making authority to the President (or his aides in OIRA and the larger White House). If the cast of thousands Sunstein describes still played a role in regulatory review, there would remain a serious accountability deficit. And, so long as the culture at OIRA does not change and so long as cost-benefit is the decision tool of choice, environmental protection will suffer.

I hope that the descriptive account I have provided here, aimed at correcting the misimpressions that have grown up around OIRA review, will help to renew the debate over the role of OIRA and the larger White House in agency rulemaking.

Sorry about this, but we are already seeing a critical mass of participants with conflicts on Wednesday, May 22. We have furlough issues on May 23 and 24, so we will have to reschedule for the following week. Could I ask that the states and groups please get back to Cynthia Browne with proposed times for the week of May 27 (or if need be the week after)? Thanks.

Subject: Call on power plant lawsuit

Dear all,

I would like to set up a call early next week to discuss the draft complaint (to be circulated on Thursday) and planning for the suit. Since Monday is a holiday, I am listing some times on Tuesday and Wednesday. Please let me know when you are available:

Tuesday 5/28

10-11am EST

12-1pm EST

2-3pm EST

5-6pm EST

Wednesday 5/29

12-1pm EST

3-4pm EST

4-5pm EST

5-6pm EST

Best,

Kelly

Thanks Mike – I'm checking with Becky Stanfield (rstanfield@nrdc.org) and John (jmoore@nrdc.org) about who would be the best person to discuss. Can you clarify whether you are looking at a particular aspect of the transmission and/or distribution system, or have specific questions that you'd like to explore? Becky is part of our Energy Team and has been involved in the distribution rate recovery issue, while John does more general FERC work.

Best,

Meleah

Directions and procedures: If you come by Metro the Federal Triangle metro stop is directly below the building entrances. You would leave the metro station and go up all three sets of escalators and turn right. You will see a set of stairs and glass Doors with EPA Signified on Glass. That is Ariel Rios North.

If you are coming by taxi, you would want to be dropped off on 12th NW, between Constitution Ave and Pennsylvania Ave. It is almost exactly half way between the two avenues on 12th. From 12th Street, facing the building with the EPA and American flags, walk toward the building and take the glass door on your right hand side with the escalators going down to the metro on your left. This again will be the North Lobby of the Ariel Rios bldg.

Upon entering the lobby, the meeting attendees will be asked to pass through security and provide a photo ID for entrance. Let the guards know that you were instructed to call 202-564-7400. If you are travelling in a large group, you may want to arrive 10-15 minutes early in order to be on time for the meeting.

Michael,

I have reserved a conference room for the pre meeting at 2:00 pm. When Meleah shows up let her have the guards call Ext. 564-7400 to be escorted up.

Thank you, Cynthia Browne

Good Morning All,

I just sent around an invite for a 111d lawsuit call tomorrow (Friday) at 1:30pm EST. The call in is: 212-727-4600, code: 0193688#.

Best,

Kelly

Hi all—

I thought we had set this call up for 1 p.m. tomorrow—does that still work? 1:30 is okay but I will be awaiting a high school graduation in an auditorium. So—background noise is at least a possibility.

Good morning - as you and I just discussed, I would like for you to review the support documents, particularly the RIS. I believe we need to strengthen the legal authority section of the RIS, to better explain why the statutory citations support the regulatory provisions of the program, and as you know, we are only making changes to certain aspects of the program (reduced cap, creation of Cost Containment Reserve, annual adjusted budget). The legal authority could also weave in more of the scientific studies that support using the authority to require reductions of CO2. I also would like to better explain that the NYSEDA auction provisions are not significantly affected by these regulatory revisions, thus clearly indicating that no new opportunity to challenge these provisions is opened up by this rulemaking.

Given all the analysis you have done in your brief writing to defend the RGGI program, I would really appreciate your input on the SAPA documents. Thank you. I'm sure Patty and Bill will work with you on any questions you may have.

>>> Patricia Desnoyers 6/5/2013 10:44 AM >>>

Ed and Alison, The RGGI Part 242 rulemaking package will begin routing for approval today. In order to give you a little time to review the documents before the package arrives in your in-box, I'm attaching the following: 1) Express Terms; 2) Express Terms Summary; 3) Regulatory Impact Statement (RIS); 4) RIS Summary; 5) Job Impact Statement (JIS); 6) JIS Summary; 7) Rural Area Flexibility Analysis (RAFA); 8) RAFA Summary; and 9) Regulatory Flexibility Analysis for Small Businesses and Local Governments. We're continuing to review for typos and non-material changes. Please let me know if you have any questions or comments. Thanks, Patty

6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program

## 6 NYCRR Part 200, General Provisions

## Express Terms Summary

The New York State CO<sub>2</sub> Budget Trading Program, 6 NYCRR Part 242 ( CO<sub>2</sub> Budget Trading Program or Part 242), is designed to stabilize and then reduce anthropogenic emissions of carbon dioxide ( CO<sub>2</sub>), a greenhouse gas (GHG), from CO<sub>2</sub> budget sources in an economically efficient manner. The proposed revisions to Part 242, including most notably the proposed reduction in the annual CO<sub>2</sub> emission budgets, are designed to further these objectives.

While the proposed revisions to Part 242 maintain annual base budgets for CO<sub>2</sub>, the most significant proposed revision to Part 242 is the approximately 45 percent reduction in the amount of such annual base budgets. In particular, the proposed revisions to Section 242-5.1 establish that , for allocation year 2014, the Statewide CO<sub>2</sub> Budget Trading Program base budget will be reduced from 64,310,805 tons to 35,228,822 tons<sup>1</sup>. The annual base budgets under Part 242 then decrease thereafter, as follows: to 34,348,101 tons in 2015, to 33,489,399 tons in 2016, to 32,837,536 tons in 2017, to 32,016,597 tons in 2018, to 31,216,182 tons in 2019 , and to 30,435,778 tons for 2020 . Each year thereafter, the annual CO<sub>2</sub> Budget Trading Program base budget will remain at 30,435,778 tons.

In addition to the proposed reduction in the annual CO<sub>2</sub> Budget Trading Program base budgets, the proposed revisions to Part 242 also include a new Section 242-5.2 for annual CO<sub>2</sub> Budget Trading Program adjusted budgets. The CO<sub>2</sub> Budget Trading Program adjusted budget is defined as the annual amount of CO<sub>2</sub> allowances allocated each year. In order to account for the existing private bank of CO<sub>2</sub> emissions allowances

<sup>1</sup> This amount reflects New York State's portion of the regional cap of 91,000,000 tons for 2014, proposed by the states participating in the Regional Greenhouse Gas Initiative (RGGI).

already acquired, and in order to help create a binding cap, the proposed revisions to Part 242 provides for two distinct budget adjustments. The First Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the first control period private bank of allowances (vintages 2009, 2010, and 2011) held by market participants after the first control period. The first adjustment will reduce New York's budget (the annual cap) by this amount, multiplied by New York's portion of the RGGI regional cap (approximately 38.93 percent), in each allocation year over the seven year period 2014-2020. The Second Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the surplus 2012 and 2013 vintage allowances held by market participants as of the end of 2013. The second adjustment will reduce New York's budget (the annual cap) by this amount, multiplied by New York's portion of the RGGI regional cap (approximately 38.93 percent) in each allocation year over the six year period 2015-2020. These are referred to as the CO<sub>2</sub> Budget Trading Program adjusted budget(s).

The proposed revisions to Part 242 also include the creation of the Cost Containment Reserve (CCR), which will help provide additional flexibility and cost containment for the Program. The CCR allocation and the rules for the sale of CO<sub>2</sub> CCR allowances are set forth in subdivision 242-5.3(b) of the proposed revisions to Part 242. CO<sub>2</sub> CCR allowances are separate from and additional to CO<sub>2</sub> allowances allocated from the CO<sub>2</sub> Budget Trading Program base and adjusted budgets. The CCR allowances will be triggered and released at auctions at \$4/ton in 2014, \$6/ton in 2015, \$8/ton in 2016, and \$10/ton in 2017. Each year after 2017 the CCR trigger price will increase by 2.5 percent.

If the CCR trigger price is reached, up to 10 million additional CCR allowances will be available for purchase at auction regionally under the RGGI program, except in 2014, when the reserve will be limited to five million allowances in the RGGI region. New York's portion of the regional CCR is approximately 38.93 percent, such that the State's portion of the CCR in Part 242 is limited in 2014 to 1,946,639 CO<sub>2</sub> CCR allowances in 2014 and 3,893,277 CO<sub>2</sub> CCR

allowances in 2015 and each calendar year thereafter.

The proposed revisions to Part 242 create a new interim compliance obligation, set forth in proposed paragraph 242-1.5(c)(2). An interim control period is defined as a one-year period, consisting of each of the first and second calendar years of each three year control period. In addition to demonstrating full compliance at the end of each three-year control period, at the end of each interim control period, regulated entities must now demonstrate that they are holding CO<sub>2</sub> allowances equal to at least 50 percent of their CO<sub>2</sub> emissions during the previous year.

Under the proposed revisions to Part 242, the second control period, which commenced on January 1, 2012, still concludes on December 31, 2014. Likewise, under the proposed revisions to Part 242, the CO<sub>2</sub> allowance transfer deadline for the second control period will remain March 1, 2015. Subsequent control periods begin on January 1<sup>st</sup> and conclude on the December 31<sup>st</sup> three years later. In each of the first two calendar years of each three year control period the owners and operators of each source subject to the revised Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions, as of the CO<sub>2</sub> allowance transfer deadline (midnight of March 1<sup>st</sup> or, if March 1<sup>st</sup> is not a business day, midnight of the first business day thereafter), in the source's compliance account that is not less than 50 percent of the total tons of CO<sub>2</sub> emissions for that interim control period. For example, the first interim control period will be the year 2015 and the second interim control period will be the year 2016 under the proposed revisions to Part 242, with associated CO<sub>2</sub> allowance transfer deadlines of March 1, 2016 and March 2016 respectively. At the end of the control period in 2017, all sources must demonstrate full compliance and account for 100 percent of their control period emissions with an allowance transfer deadline of March 1, 2018. Under the proposed revisions to Part 242, a compliance certification report is still required at the end of each control period, however, a report is not required at the end of each interim control period. Moreover, pursuant to the proposed revisions, the so-called treble damages provision in paragraph 242-

6.5(d)(1), which applies to excess emissions, will not apply to excess interim emissions.

The proposed revisions to Part 242 do not change the applicability provisions of the regulation, and maintain the limited exemption for units with electrical output to the electric grid restricted by permit conditions pursuant to subdivision 242-1.4(b). The proposed revisions do, however, eliminate the provision in paragraph 242-1.4(b)(4) to reduce the CO<sub>2</sub> Budget Trading Program base budget and remove the tons equal to the exempt unit's average annual emissions from the previous three calendar years. These allowances will now be available to the market.

The Department will continue to allocate most of the CO<sub>2</sub> Budget Trading Program adjusted budget to the energy efficiency and clean energy technology account. Although New York State Energy Research and Development Authority's (NYSERDA) CO<sub>2</sub> Allowance Auction Program (21 NYCRR Part 507) will not be revised as part of this rulemaking, NYSEDA will continue to administer the energy efficiency and clean technology account so that allowances will be sold in an open and transparent allowance auctions. The proceeds of the auctions will be used to promote the purposes of the energy efficiency and clean technology account and for administrative costs associated with the CO<sub>2</sub> Budget Trading Program.

The Reserve Price is the minimum acceptable price for each CO<sub>2</sub> allowance in a specific auction. Under the proposed revisions to Part 242, the reserve price at an auction is either the Minimum Reserve Price (MRP) or the CCR trigger price, depending on the level of demand for allowances at the auction. The proposed revisions to Part 242 provide that the MRP will be set at \$2.00 in 2014 and increase by 2.5 percent each year thereafter. The provisions for a current market reserve price are eliminated under the proposed revisions.

Under the proposed revisions to Part 242, the Department has maintained the inclusion of two set-asides in subdivisions 242-5.3(c) and (d). In particular,

the department shall continue to allocate 700,000 and 1,500,000 tons each year, respectively, from the CO<sub>2</sub> Budget Trading Program adjusted budgets to these two set-asides.

While the amount of allowances set-aside remains the same, the revisions to Pat 242 include a proposal to modify the existing “voluntary renewable energy market set-aside” in subdivision 242-5.3(c) to include eligible biomass. This revision expands eligibility for retiring CO<sub>2</sub> allowances from the set-aside to include CO<sub>2</sub> budget sources that co-fire eligible biomass as a compliance mechanism. Therefore, when a CO<sub>2</sub> budget source deducts CO<sub>2</sub> emissions from its compliance obligation as a result of co-firing eligible biomass, the Department proposes to also allow for the retirement of the corresponding number of CO<sub>2</sub> allowances from the set-aside. The proposed revisions to the Program maintain the existing provisions for voluntary renewable energy purchases. The Department will continue to retire allowances under the voluntary renewable energy market and eligible biomass set-aside for voluntary renewable energy purchases.

Similarly, while the amount of allowances set-aside remains the same, under the proposed revisions to Part 242, the long-term contract set-aside in subdivision 242-5.3(d) will continue to be available to CO<sub>2</sub> budget sources that can make the necessary demonstration to the Department’s satisfaction. The changes proposed in this subdivision are merely intended to clarify the operation and administration of the set-aside, consistent with the Department’s interpretation of subdivision 242-5.3(d) pursuant to Declaratory Ruling 19-18, which the Department issued on November 5, 2009.

The proposed revisions to Part 242 delete the existing stage one and stage two triggers and associated provisions. These price triggers raised the allowable percentage of offsets to be used for compliance, allowed for the use of international CO<sub>2</sub> emission credit retirements, and created the potential extension of the control period to four years. The offset price triggers and the potential extension of the control period to four years are replaced by the CCR mechanism, to provide

measurable cost control in an efficient, transparent and predictable manner. For CO<sub>2</sub> offset allowances, the proposed revisions retain the number of CO<sub>2</sub> offset allowances that are available to be deducted for compliance with a CO<sub>2</sub> budget source's CO<sub>2</sub> budget emissions limitation for a control period at 3.3 percent of the CO<sub>2</sub> budget source's CO<sub>2</sub> emissions for that control period.

The proposed revisions to Part 242 eliminate the provision to award early reduction allowances, in existing subdivision 242-5.2(b), as those provisions are no longer applicable. Finally, the proposed revisions to Part 200 include updated cites for the portions of Federal statute and regulations, as well as other documents, that are incorporated by reference into the proposed revisions to Part 242.

6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program

## 6 NYCRR Part 200, General Provisions

## Job Impact Statement Summary

1. Nature of Impact: The Regional Greenhouse Gas Initiative (RGGI) is a cooperative, historic effort among New York and eight Participating States<sup>1</sup> and is the first mandatory, market-based carbon dioxide (CO<sub>2</sub>) emissions reduction program in the United States. Since its inception in 2008, RGGI has utilized an innovative market-based mechanism to cap and cost-effectively reduce emissions that cause climate change. Recently, New York along with the Participating States, announced a proposal to lower the regional emissions cap established under RGGI to 91 million tons in 2014, declining 2.5 percent a year through 2020.<sup>2</sup> In order to implement the updated RGGI program in New York State, the Department of Environmental Conservation (Department) proposes to revise 6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program (the Program), and 6 NYCRR Part 200, General Provisions.

A macroeconomic impact study to estimate the impact of the reduced CO<sub>2</sub> emissions cap, budget adjustments and the remainder of the proposed Program revisions<sup>3</sup> on jobs in the RGGI region was conducted at the direction of the New York and the Participating States by the Northeast States Coordinated Air Use Management (NESCAUM). Utilizing the Regional Economic Models, Inc. Policy Insight™ (REMI) model, the study estimates that the cumulative change in employment in New York associated with the proposed Program revisions will be approximately 80,500 additional job-years over the period 2012 to 2040. (A job-year is equivalent to one person employed for one year.) Further, the study estimates that the cumulative changes in

<sup>1</sup> In addition to New York, the RGGI Participating States include: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, Rhode Island, and Vermont.

<sup>2</sup> The Participating States released the Updated Model Rule on February 7, 2013.

<sup>3</sup> The estimated impact of the RGGI Program is the increment calculated as the difference between the Reference Case and the “91 Cap Bank MR IPM Scenario.”

New York 's Gross State Product and Personal Income associated with the proposed Part 242 revisions will increase approximately \$5.8 billion and \$4.7 billion, respectively (2010 dollars, calculated as the present value of estimated annual changes over the period 2012 to 2040, discounted at three percent per year to account for the time-value of money). Although these cumulative changes are minimal, they represent positive impacts for total State employment, total Gross State Product and total Personal Income.

The proposed Program revisions will cap regional CO<sub>2</sub> emissions at 91 million tons annually beginning in 2014. After 2020, the cap will remain at 78 million tons annually. Further, in order to account for the existing private bank of CO<sub>2</sub> emissions allowances already acquired at auction, and in order to help create a binding cap, the proposed Program revisions provide two distinct budget adjustments. The proposed Program revisions also create the Cost Containment Reserve (CCR) which will help provide additional flexibility and cost containment for the Program. The CCR allowances will be triggered and released at auctions at \$4/ton in 2014, \$6/ton in 2015, \$8/ton in 2016, and \$10/ton in 2017. Each year after 2017 the CCR trigger price will increase by 2.5 percent. If the trigger price is reached, up to 10 million additional CCR allowances will be available for purchase at auction, except in 2014, when the reserve will be limited to 5 million allowances. Finally, the proposed Program revisions create an interim compliance obligation. In addition to demonstrating full compliance at the end of each three-year compliance period, regulated entities must now demonstrate that they are holding allowances equal to at least 50 percent of their emissions at end of each of the first two years in each three year compliance period.

2. Categories and Numbers Affected: The Department, New York State Energy Research Development Authority (NYSERDA) and the New York State Department of Public Service (DPS) analyzed costs, including impacts to jobs, total Gross State Product and total Personal Income, associated with compliance with the proposed Part 242 revisions. This section explains NYSERDA 's analysis and includes a summary of the

Integrated Planning Model (IPM®) modeling conducted by ICF International (ICF). IPM® is a nationally recognized modeling tool used by the U.S. Environmental Protection Agency (EPA), state energy and environmental agencies, and private sector firms such as utilities and generation companies. This section also discusses the Department's analysis of the costs associated with State and local government compliance and impacts from the proposed revisions to the Program on the New York economy and customer bills.<sup>4,5</sup>

Modeling analysis and review was coordinated by RGGI Inc. and New York staff, and included input from energy and environmental representatives from the Participating States and each regional ISO. In order to evaluate the potential cost impacts of the reduced CO<sub>2</sub> emissions cap and budget adjustments, including the impact on jobs, total Gross State Product and total personal income, IPM® compared a future with the revisions to the Program (Program Case) to a Reference Case (business as usual scenario) that projects how the electricity system would look if the Program remained unchanged and proposed revisions were not implemented.

Assumptions and sources of input data are specified in detail in the "RGGI DRAFT 2012 Reference Case and Sensitivity Analyses Assumptions."<sup>6</sup> Key assumptions and data include regional electricity demand, load shapes, transmission system capacities and limits, generation unit level operation and maintenance costs and performance characteristics, fuel prices, new capacity and emission control technology costs and performance characteristics, reserve margins and local reserve requirements, RPS requirements, national and state environmental regulations, and financial market assumptions. All estimates are based on 2010 dollars. Regional electricity demand growth projections, transmission capacities and limits, and near-term expected infrastructure additions/retirements were obtained from regional ISO sources. Long range Henry Hub natural

<sup>5</sup> "IPM Potential Scenario Customer Bill Analysis," by the Analysis Group, dated May 24, 2013. [http://www.dec.ny.gov/docs/administration\\_pdf/remi91cap2013.pdf](http://www.dec.ny.gov/docs/administration_pdf/remi91cap2013.pdf)

<sup>6</sup> The modeling assumptions document and the tabular results for each modeling run are located at [http://www.rggi.org/design/program\\_review](http://www.rggi.org/design/program_review)

gas prices (2020), based on forecast data from U.S. Energy Information Administration (EIA) were projected to be approximately \$4.6/MMBtu (constant 2010 dollars).

A number of assumptions were used to develop the model, including: 1) the construction of new coal-fired plants was precluded to meet projected capacity shortfalls in the United States unless they include carbon capture; 2) new nuclear plant construction was limited to build outs at existing plant sites; 3) a national 3-pollutant policy (SO<sub>2</sub>, NO<sub>x</sub> and mercury) that approximates the Cross-state Air Pollution Rule (CSAPR) and the Mercury and Air Toxics Rule (MATS) is assumed; 4) RPS targets are assumed to be met in all states except New York; and 5) partial fulfillment of the RPS target is assumed in New York based upon New York ISO certainty criteria, capacity under RPS contract, and RPS funds currently approved for future solicitations (approximately \$3 billion).

Under the Reference Case, generation from new gas-fired combined cycle units is projected to supply most of the growing electricity demand. Electric generation from gas-fired plants in New York is projected to increase by approximately 37 percent from 48,109 Gigawatt hours ( GWh) in 2013 to 65,983 GWh in 2020. Generation from new renewable resources (primarily wind units) is projected to increase significantly, largely in response to RPS requirements. While nuclear generation is projected to decrease by about 35 percent between 2013 and 2020 due to the assumed retirement of the Indian Point units upon their respective license expiration, generation from coal-fired plants is projected to increase by about eight percent between 2013 and 2020. Finally, generation from existing oil/gas steam units is projected to decrease over time, as a result of displacement by lower-cost electricity from new gas-fired units. Additionally, net imports of electricity into New York are projected to rise from approximately 24,000 GWh in 2013 to approximately 26,800 GWh in 2016 before decreasing to about 23,000 in 2020. CO<sub>2</sub> emissions in the Reference Case, from sources in New York State subject to the Program, are projected to increase from approximately 34.6 million tons in 2013 to about

41.7 million tons in 2020.

Likewise, several assumptions were used to project impacts in the Program Case. For modeling purposes, the proposed CO<sub>2</sub> cap of 91 million tons, based on the approximate amount of current emissions in the RGGI region, was applied to sources subject to the Program in the Participating States. In order to account for the existing private bank of allowances and in order to help create a binding cap, the proposed revisions to the Program create provisions for two distinct budget adjustments. In order to model the budget adjustments, the annual caps were adjusted in accordance with the model rule language and the assumption that the adjustment would account for the existing bank as well as 100 percent of the surplus (current cap and emissions) for 2013. While the Program Case allows a limited number of emissions offsets to be purchased by affected generators and used for compliance by affected generators, the model assumes that it is not economically attractive for offset suppliers to sell their products in the RGGI market until prices reached \$10 per allowance.

In order to obtain New York specific results, several components between the Program Case and the Reference Case are compared including generation mix, net electricity imports, changes in generation capacity, CO<sub>2</sub> emissions, CO<sub>2</sub> allowance prices, and wholesale and retail electricity price impacts. Electricity generation from gas-fired units in 2020 is about 1,576 GWh, or 2.4 percent lower in the Program Case than in the Reference Case. Generation from coal-fired units in 2020 is about 2,376 GWh, or 37 percent lower in the Program Case than in the Reference Case. Net imports into New York in 2020 are projected to be about 3,900 GWh, or 17 percent higher in the Program Case than in the Reference Case. Relative to the Reference Case, total capacity additions through 2020 in the Program Case are the same (5,909 MW) as in the Reference Case. Coal capacity retirements through 2020 in the Reference Case are 408 MW while the estimated value for the Program Case is 466 MW.

CO<sub>2</sub> emissions from New York generators in the Program Case are projected to be 3.2 million tons (eight

percent) lower in 2020 than in the Reference Case. Over the 2014-2020 time period, cumulative CO<sub>2</sub> emission reductions from New York generators subject to the Program are projected to be 13 million tons in the Program Case as compared to the Reference Case. Although emissions from affected sources across the RGGI region are estimated to be 15 million tons (14.6 percent ) lower under the Program Case than under the Reference Case in 2020, CO<sub>2</sub> emissions from the electricity sector in New York are projected to increase 4.9 million tons , or 14.7 percent between 2014 and 2020. Principally, emissions in New York are projected to rise because the Indian Point nuclear units are assumed to retire when their current licenses expire in 2013 and 2015. The IPM model projects that the generation from these non-CO<sub>2</sub> emitting generators is likely to be replaced with fossil fuel-fired generation, at least in part. Nevertheless, CO<sub>2</sub> emission reductions over the 2014-2020 period from affected sources across the RGGI region are estimated to be 86 million tons in the Program Case compared to the Reference Case.

Under the Reference Case, without making any proposed Program revisions, CO<sub>2</sub> allowance prices are projected to remain at the minimum reserve price through 2020. Under the Program Case, CO<sub>2</sub> allowance prices (the cost of complying with RGGI) are projected to increase from approximately \$6.02/ton (2010 dollars) in 2014 to about \$6.73/ton in 2016, and to about \$8.41/ton in 2020. Approximately 17.6 million allowances would be obtained by the marketplace between 2014 and 2020 from the Cost Containment Reserve (CCR), which would be triggered at \$4/ton in 2014 and at \$6/ton in 2015.

Under the Program Case, New York 's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.64/MWh higher in 2016 and \$2.12/MWh higher in 2020, than the Reference Case. RGGI is projected to increase wholesale electricity prices in New York State by about 3.0 percent in 2016 and 3.9 percent in 2020. For a typical New York residential customer (using 750 kWh per month), the projected increase in wholesale electricity prices in 2016 translates into a monthly retail bill increase of about 1.0 percent

or \$0.86. In 2020, the projected increase in wholesale electricity prices translates into a monthly residential retail bill increase of about 0.8 percent or \$0.71. For commercial customers, the projected retail price impact of RGGI is about 1.1 percent in 2016 and 0.7 percent in 2020 (\$7.87 and \$5.00 per month, respectively). For industrial customers, the projected retail price impact of RGGI is about 1.7 percent in 2016 and 1.2 percent in 2020.

IPM projects electricity system operations and costs with perfect foresight, which means that there is certainty of knowledge of all future market outcomes, including allowance prices and the use of the private bank. In other words, IPM calculates when and whether it is cost-effective to make on-system emissions reductions at affected sources or to use allowances from the private bank. However, market participants may make decisions related to use of banked allowances for compliance on a shorter time horizon than projected by IPM using perfect foresight (i.e., due to uncertainty, market participants may be more likely to defer emissions reductions and rely more heavily on banked allowances in the short-term). In order to assess the use of the private bank during the short-term, an alternative usage scenario (“Alt Bank”) was examined. Under the Alt Bank scenario, it is assumed that the marketplace would use the private bank of allowances at a rate roughly 40 percent faster than under the Program Case during the 2014-2017 timeframe.

CO<sub>2</sub> emissions from New York generators are projected in the Alt Bank scenario to be 4.4 million tons (10.7 percent) lower in 2020 than Reference Case. The generators are assumed to use more of the private bank by 2017 under this scenario, therefore less allowances will be available for use in later years and more emissions reductions will occur during this timeframe. Emissions from affected sources across the RGGI region are estimated to be 81.6 million tons in 2020 under the Alt Bank scenario while they are projected to be 87.8 million tons under the Program Case.

CO<sub>2</sub> allowance prices under the Alt Bank scenario are projected to increase from approximately

\$3.60/ton (2010 dollars) in 2014 to about \$6.57/ton in 2016 and about \$10.21/ton in 2020. Prices are lower in the short-term under the Alt Bank scenario than under the Program Case because the former scenario assumes that more allowances from the private bank are being used for compliances in the short term. Similarly, prices are higher in 2020 under the Alt Bank scenario because the marketplace has fewer allowances left over in the private bank relative to the Reference Case. In addition, it is estimated that approximately 10 million allowances would be obtained by the marketplace between 2014 and 2020 from the CCR.

Under the Alt Bank scenario, New York's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.62/ MWh higher in 2016 and \$2.72/ MWh higher in 2020, than the Reference Case. Wholesale electricity prices are estimated to increase by about 2.9 percent in 2016 and 4.9 percent in 2020 under the Alt Bank scenario relative to the Reference Case.

Sensitivity analyses were performed to develop bounds or collars around the Reference Case and Program Case projections. First, a Higher Emissions scenario that assumes higher natural gas prices and higher regional energy demand was evaluated. This scenario used natural gas prices from the Low Estimated Ultimate Recovery scenario in EIA's 2012 Annual Energy Outlook where Henry Hub natural gas prices are estimated to be \$5.31/MMBtu in 2020. Demand in this case is assumed to be about three percent higher in the near-term and four percent higher in the longer-term than the Reference Case. Likewise, a Lower Emissions scenario was also developed that assumes lower natural gas prices, lower regional energy demand, and the continued operation of the Indian Point nuclear power plants through the timeframe of the study. This scenario used natural gas prices from the High Technically Recoverable Resources scenario in EIA's 2012 Annual Energy Outlook where Henry Hub natural gas prices are estimated to be \$3.02/ MMBtu in 2020. In this case, demand is assumed to be about three percent lower in the near-term and four percent lower in the longer-term than the Reference Case.

The modeling case that evaluated the potential impacts of the Updated Model Rule using the Higher

Emissions assumptions was called the 91 Cap\_Bank\_Model Rule\_High Case. Under this scenario, allowance prices are estimated to be \$7.27/ton in 2014, \$8.13/ton in 2016 and \$10.15/ton in 2020. A sensitivity scenario was run to estimate the impacts of the Updated Model Rule with the Higher Emissions and Alt Bank assumptions. Under this 91 Cap Alt\_Bank\_Model\_Rule\_High Case, allowance prices are estimated to be about \$4.62/ton in 2014, \$6.90/ton in 2016, and \$16.44/ton in 2020.

In IPM, allowance prices would only be expected to rise above the minimum reserve price if the projected cumulative emissions over the time period exceed the cumulative cap level. When evaluating the impact of the Updated Model Rule using the Low Emissions scenario, emissions over the time period are projected to be 50 million tons less than the number of allowances available to the market (adjusted cap plus the emissions bank). Therefore, affected sources would not need to make any emission reductions and it is estimated that allowance prices would be at the minimum reserve price under this scenario.

A macroeconomic impact study to estimate the impact of the reduced CO<sub>2</sub> emissions cap, budget adjustments and the remainder of the proposed Program revisions<sup>7</sup> on jobs in the RGGI region was conducted at the direction of the New York and the Participating States by the Northeast States Coordinated Air Use Management (NESCAUM). Utilizing the Regional Economic Models, Inc. Policy Insight™ (REMI) model, a multi-state structural economic forecasting and policy analysis model that produces projections of annual values for employment, gross state product, and personal income, the study concluded that the economic impacts of the proposed Program revisions on the economies of New York and the Participating States are small and generally positive.

The macroeconomic impact study estimates that the cumulative change in employment in New York

---

<sup>7</sup> The estimated impact of the RGGI Program is the increment calculated as the difference between the Reference Case and the “91 Cap Bank MR IPM Scenario.”

associated with the proposed Program revisions will be about 80,500 additional job-years over the period 2012 to 2040. A job-year is equivalent to one person employed for one year. Further, it estimates that the cumulative changes in New York's Gross State Product and Personal Income associated with the proposed Program revisions will increase approximately \$5.8 billion and \$4.7 billion, respectively (2010 dollars, calculated as the present value of estimated annual changes over the period 2012 to 2040, discounted at three percent per year to account for the time-value of money). Although these cumulative changes are minimal, they represent positive impacts for total State employment, total Gross State Product and total Personal Income.

3. Regions of adverse impact: A statewide analysis was performed for the proposed revisions to the Program and the modeling predicts that under the Program Case, New York's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.64/ MWh higher in 2016 and \$2.12/ MWh higher in 2020, than the Reference Case. The proposed revisions to the Program are projected to increase wholesale electricity prices in New York State by about 3.0 percent in 2016 and 3.9 percent in 2020.

4. Minimizing Adverse Impact: The Department is implementing the proposed Program revisions through a cap-and-trade program. Allowance based cap and trade systems are the most cost effective means for implementing emission reductions from large stationary sources. By implementing the proposed Program revisions through an allowance based cap and trade system, the Department has minimized any potential adverse employment impacts of the revised Program, which revisions support the positive effects of the current Program.

5. Self-Employment Opportunities: Not applicable.

6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program

## 6 NYCRR Part 200, General Provisions

## Job Impact Statement

1. Nature of Impact: The Regional Greenhouse Gas Initiative (RGGI) is a cooperative, historic effort among New York and eight Participating States<sup>1</sup> and is the first mandatory, market-based carbon dioxide (CO<sub>2</sub>) emissions reduction program in the United States. Since its inception in 2008, RGGI has utilized an innovative market-based mechanism to cap and cost-effectively reduce emissions that cause climate change. Recently, New York along with the Participating States, completed a comprehensive program review and announced a proposal to lower the regional emissions cap established under RGGI to 91 million tons in 2014, declining 2.5 percent a year through 2020.<sup>2</sup> Accordingly, New York and the Participating States committed to propose revisions, pursuant to state-specific regulatory processes, to their respective CO<sub>2</sub> Budget Trading Programs to further reduce CO<sub>2</sub> emissions from power plants in the region. In order to implement the updated RGGI program in New York State, the Department of Environmental Conservation (Department) proposes to revise 6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program (Part 242 or the Program) and 6 NYCRR Part 200, General Provisions.

A macroeconomic impact study to estimate the impact of the reduced CO<sub>2</sub> emissions cap, budget adjustments and the remainder of the proposed Program revisions<sup>3</sup> on jobs in the RGGI region was conducted at the direction of the New York and the Participating States by the Northeast States Coordinated Air Use Management (NESCAUM). Utilizing the Regional Economic Models, Inc. Policy Insight™ (REMI) model, the

<sup>1</sup> In addition to New York, the RGGI Participating States include: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, Rhode Island, and Vermont.

<sup>2</sup> The Participating States released the Updated Model Rule on February 7, 2013.

<sup>3</sup> The estimated impact of the RGGI Program is the increment calculated as the difference between the Reference Case and the “91 Cap Bank MR IPM Scenario.”

study estimates that the cumulative change in employment in New York associated with the proposed Program revisions will be approximately 80,500 additional job-years over the period 2012 to 2040 (a job-year is equivalent to one person employed for one year.) Further, the study estimates that the cumulative changes in New York's Gross State Product and Personal Income associated with the proposed Part 242 revisions will increase approximately \$5.8 billion and \$4.7 billion, respectively (2010 dollars, calculated as the present value of estimated annual changes over the period 2012 to 2040, discounted at three percent per year to account for the time-value of money). Although these cumulative changes are minimal, they represent positive impacts for total State employment, total Gross State Product and total Personal Income.

The proposed Program revisions which will cap regional CO<sub>2</sub> emissions at 91 million tons annually beginning in 2014 represent a nearly 45 percent reduction from the existing cap currently in place under the Program. After 2020, the cap will remain at 78 million tons annually. Further, in order to account for the existing private bank of CO<sub>2</sub> emissions allowances already acquired at auction, and in order to help create a binding cap, the proposed Program revisions provide two distinct budget adjustments. The First Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the first control period private bank of allowances (vintages 2009, 2010, and 2011) held by market participants after the first control period. The Second Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the surplus 2012 and 2013 vintage allowances held by market participants as of the end of 2013.

The proposed revisions to Part 242 also create the Cost Containment Reserve (CCR) which will help provide additional flexibility and cost containment for the Program. The CCR allowances will be triggered and released at auctions at \$4/ton in 2014, \$6/ton in 2015, \$8/ton in 2016, and \$10/ton in 2017. Each year after 2017 the CCR trigger price will increase by 2.5 percent. If the trigger price is reached, up to 10 million additional CCR allowances will be available for purchase at auction, except in 2014, when the reserve will be

limited to five million allowances. The existing price triggers for expanding use of offsets and the one year compliance period extension will be eliminated in favor of the CCR.

Finally, the proposed Program revisions create an interim compliance obligation in part to align it with the annual compliance obligations under federal programs such as the Clean Air Interstate Rule and the Title IV Acid Rain Program. This program revision also helps to address the potential for a budget source to operate during the first couple of years of a three year compliance period and the potential to avoid their compliance obligation as a result of the business closing or falling into bankruptcy prior to the third year compliance obligation. In addition to demonstrating full compliance at the end of each three-year compliance period, regulated entities must now demonstrate that they are holding allowances equal to at least 50 percent of their emissions at end of each of the first two years in each three year compliance period. The proposed Program revisions also include minor revisions such as setting the reserve price at \$2.00 in 2014, to rise at 2.5 percent per year in subsequent years, updating all references, and the deleting early reduction allowance provisions. The majority of the proceeds from the sale of New York's allowances will be continue to be dedicated to strategic energy or consumer benefits, such as energy efficiency and clean energy technologies.

2. Categories and Numbers Affected: The Department, New York State Energy Research Development Authority (NYSERDA) and the New York State Department of Public Service (DPS) analyzed costs, including impacts to jobs, total Gross State Product and total Personal Income, associated with compliance with the proposed revisions to Part 242. This section explains NYSERDA's analysis and includes a summary of the Integrated Planning Model (IPM®)<sup>4</sup> modeling conducted by ICF International (ICF). This section also discusses the Department's analyses of the costs associated with State and local government compliance and impacts from the proposed revisions to Part 242 on the New York economy and customer bills.<sup>5,6</sup>

---

<sup>4</sup> IPM® is a nationally recognized modeling tool used by the U.S. Environmental Protection Agency (EPA), state energy and environmental agencies, and private sector firms such as utilities and generation companies.

## Costs to the Regulated Sources and the Public

### Reference Case v. Program Case

Modeling analysis and review was coordinated by RGGI Inc. and New York staff, and included input from energy and environmental representatives from the Participating States and each regional ISO. In order to evaluate the potential cost impacts of the reduced CO<sub>2</sub> emissions cap and budget adjustments, including the impact on jobs, total Gross State Product and total personal income, IPM® compared a future with the revisions to the Program (Program Case) to a Reference Case (business as usual scenario) that projects how the electricity system would look if the Program remained unchanged and proposed revisions were not implemented. The modeling assumptions and input data were developed through a stakeholder process with representatives from the electricity generation sector, business and industry, environmental advocates and consumer interest groups. Modeling results were then presented to stakeholders for review and comment throughout the development of the proposed revisions to the RGGI program.

### Reference Case

Assumptions and sources of input data are specified in detail in the “RGGI DRAFT 2012 Reference Case and Sensitivity Analyses Assumptions.”<sup>7</sup> Key assumptions and data include regional electricity demand, load shapes, transmission system capacities and limits, generation unit level operation and maintenance costs and performance characteristics, fuel prices, new capacity and emission control technology costs and performance characteristics, reserve margins and local reserve requirements, RPS requirements, national and state environmental regulations, and financial market assumptions. All estimates are based on 2010 dollars.

<sup>5</sup> “REMI Economic Impacts Analysis,” by the Northeast States for Coordinated Air Use Management (NESCAUM), dated May 29, 2013. [http://www.dec.ny.gov/docs/administration\\_pdf/remi91cap2013.pdf](http://www.dec.ny.gov/docs/administration_pdf/remi91cap2013.pdf)

<sup>6</sup> “IPM Potential Scenario Customer Bill Analysis,” by the Analysis Group, dated May 24, 2013. [http://www.dec.ny.gov/docs/administration\\_pdf/custbillanaly2013.pdf](http://www.dec.ny.gov/docs/administration_pdf/custbillanaly2013.pdf)

<sup>7</sup> The modeling assumptions document and the tabular results for each modeling run are located at [http://www.rggi.org/design/program\\_review](http://www.rggi.org/design/program_review)

Regional electricity demand growth projections, transmission capacities and limits, and near-term expected infrastructure additions/retirements were obtained from regional ISO sources. Long range Henry Hub natural gas prices (2020), based on forecast data from U.S. Energy Information Administration (EIA) were projected to be approximately \$4.6/MMBtu (constant 2010 dollars).

A number of assumptions were used to develop the model, including: 1) the construction of new coal-fired plants was precluded to meet projected capacity shortfalls in the United States unless they include carbon capture; 2) new nuclear plant construction was limited to build outs at existing plant sites; 3) a national 3-pollutant policy (SO<sub>2</sub>, NO<sub>x</sub> and mercury) that approximates the Cross-state Air Pollution Rule (CSAPR) and the Mercury and Air Toxics Rule (MATS) is assumed; 4) RPS targets are assumed to be met in all states except New York; and 5) partial fulfillment of the RPS target is assumed in New York based upon New York ISO certainty criteria, capacity under RPS contract, and RPS funds currently approved for future solicitations (approximately \$3 billion).

Under the Reference Case, generation from new gas-fired combined cycle units is projected to supply most of the growing electricity demand. Electric generation from gas-fired plants in New York is projected to increase by approximately 37 percent from 48,109 Gigawatt hours (GWh) in 2013 to 65,983 GWh in 2020. Generation from new renewable resources (primarily wind units) is projected to increase significantly, largely in response to RPS requirements. While nuclear generation is projected to decrease by about 35 percent between 2013 and 2020 due to the assumed retirement of the Indian Point units upon their respective license expiration, generation from coal-fired plants is projected to increase by about eight percent between 2013 and 2020. Finally, generation from existing oil/gas steam units is projected to decrease over time, as a result of displacement by lower-cost electricity from new gas-fired units. Additionally, net imports of electricity into New York are projected to rise from approximately 24,000 GWh in 2013 to approximately 26,800 GWh in 2016

before decreasing to about 23,000 in 2020. CO<sub>2</sub> emissions in the Reference Case, from sources in New York State subject to the Program, are projected to increase from approximately 34.6 million tons in 2013 to about 41.7 million tons in 2020. This increase is due primarily to increased generation from new and existing gas-fired power plants to meet projected load growth.

This generation data was based on the IPM Reference Case model runs and the table displayed below:

New York Reference Case Net Generation (in GWh)	2012	2013	2014	2015	2016	2018	2020

## Program Case

### Interim Adjustment for Banked Allowances

Likewise, several assumptions were used to project impacts in the Program Case. For modeling purposes, the proposed CO<sub>2</sub> cap of 91 million tons, based on the approximate amount of current emissions in the RGGI region, was applied to sources subject to the Program in the Participating States. In order to account for the existing private bank of allowances and in order to help create a binding cap, the proposed revisions to the Program create provisions for two distinct budget adjustments. In order to model the budget adjustments, the annual caps were adjusted in accordance with the model rule language and the assumption that the adjustment would account for the existing bank as well as 100 percent of the surplus (current cap and emissions) for 2013.

While the Program Case allows a limited number of emissions offsets to be purchased by affected generators and used for compliance by affected generators, the model assumes that it is not economically attractive for offset suppliers to sell their products in the RGGI market until prices reached \$10 per allowance. This value is based on the reserve price under the California cap-and trade program which allows for the use of offset credits. As long as offset suppliers are able to sell similar products in the California market for prices higher than those in the RGGI market, offset suppliers would not be expected to sell into the RGGI market.

In order to obtain New York specific results, several components between the Program Case and the Reference Case are compared including generation mix, net electricity imports, changes in generation capacity, CO<sub>2</sub> emissions, CO<sub>2</sub> allowance prices, and wholesale and retail electricity price impacts. Electricity generation

from gas-fired units in 2020 is about 1,576 GWh or 2.4 percent lower in the Program Case than in the Reference Case. Generation from coal-fired units in 2020 is about 2,376 GWh or 37 percent lower in the Program Case than in the Reference Case. Net imports into New York in 2020 are projected to be about 3,900 GWh or 17 percent higher in the Program Case than in the Reference Case. Relative to the Reference Case, total capacity additions through 2020 in the Program Case are the same (5,909 MW) as in the Reference Case. Coal capacity retirements through 2020 in the Reference Case are 408 MW while the estimated value for the Program Case is 466 MW.

This generation data was based on the differences between IPM Reference Case and IPM Program Case model runs and the tables displayed below:

CO<sub>2</sub> emissions from New York generators in the Program Case are projected to be 3.2 million tons (eight percent) lower in 2020 than in the Reference Case. Over the 2014-2020 time period, cumulative CO<sub>2</sub> emission reductions from New York generators subject to the Program are projected to be 13 million tons in the Program Case as compared to the Reference Case. Although emissions from affected sources across the RGGI region are estimated to be 15 million tons (14.6 percent) lower under the Program Case than under the Reference Case in 2020, CO<sub>2</sub> emissions from the electricity sector in New York are projected to increase 4.9 million tons or 14.7

percent between 2014 and 2020. Principally, emissions in New York are projected to rise because the Indian Point nuclear units are assumed to retire when their current licenses expire in 2013 and 2015. The IPM model projects that the generation from these non-CO<sub>2</sub> emitting generators is likely to be replaced with fossil fuel-fired generation, at least in part. Nevertheless, CO<sub>2</sub> emission reductions over the 2014-2020 period from affected sources across the RGGI region are estimated to be 86 million tons in the Program Case compared to the Reference Case. This emissions data was based on the differences between IPM Reference Case and IPM Program Case model runs and the tables displayed below:

Under the Reference Case, without making any proposed Program revisions, CO<sub>2</sub> allowance prices are projected to remain at the minimum reserve price through 2020. Under the Program Case, CO<sub>2</sub> allowance prices (the cost of complying with RGGI) are projected to increase from approximately \$6.02/ton (2010 dollars) in

2014 to about \$6.73/ton in 2016 and to about \$8.41/ton in 2020. Approximately 17.6 million allowances would be obtained by the marketplace between 2014 and 2020 from the Cost Containment Reserve (CCR), which would be triggered at \$4/ton in 2014 and at \$6/ton in 2015. The acquisition of these additional allowances provides price dampening which is reflected in these estimated allowance prices.

This allowance price data was based on the IPM Reference Case and IPM Program Case model runs and the tables displayed below:

Reference Case Allowance Prices (2010\$)							
	2012	2013	2014	2015	2016	2018	2020
NO <sub>x</sub> Regional (\$/ton)	450	450	450	450	450	450	450
SO <sub>2</sub> Regional Tier 1 (\$/ton)	-	50	50	50	-	-	-
SO <sub>2</sub> Regional Tier 2 (\$/ton)	-	50	50	50	-	-	-
Regional CO <sub>2</sub> (\$/ton)	1.86	1.86	1.86	1.86	1.86	1.86	1.86

	2012	2013	2014	2015	2016	2018	2020
NO <sub>x</sub> Regional (\$/ton)	600	600	600	600	600	600	600
SO <sub>2</sub> Regional Tier 1 (\$/ton)	-	6	6	7	-	-	-
SO <sub>2</sub> Regional Tier 2 (\$/ton)	-	21	22	23	-	-	-
Regional CO <sub>2</sub> (\$/ton)	1.86	1.86	6.02	6.37	6.73	7.52	8.41

Under the Program Case, New York 's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.64/MWh higher in 2016 and \$2.12/MWh higher in 2020, than the Reference Case. RGGI is projected to increase wholesale electricity prices in New York State by about 3.0 percent in 2016 and 3.9 percent in 2020. For a typical New York residential customer (using 750 kWh per month), the projected increase in wholesale electricity prices in 2016 translates into a monthly retail bill increase of about 1.0 percent or \$0.86. In 2020, the projected increase in wholesale electricity prices translates into a monthly residential retail bill increase of about 0.8 percent or \$0.71. For commercial customers, the projected retail price impact of RGGI is about 1.1 percent in 2016 and 0.7 percent in 2020 (\$7.87 and \$5.00 per month, respectively). For industrial customers, the projected retail price impact of RGGI is about 1.7 percent in 2016 and 1.2 percent in 2020.

#### Alternative Bank Scenario

IPM projects electricity system operations and costs with perfect foresight, which means that there is certainty of knowledge of all future market outcomes, including allowance prices and the use of the private bank. In other words, IPM calculates when and whether it is cost-effective to make on-system emissions reductions at affected sources or to use allowances from the private bank. However, market participants may make decisions related to use of banked allowances for compliance on a shorter time horizon than projected by IPM using perfect foresight (i.e., due to uncertainty, market participants may be more likely to defer emissions reductions and rely more heavily on banked allowances in the short-term). In order to assess the use of the private bank during the short-term, an alternative usage scenario ("Alt Bank") was examined. Under the Alt Bank scenario, it is assumed that the marketplace would use the private bank of allowances at a rate roughly 40 percent faster than under the Program Case during the 2014-2017 timeframe. This scenario is not intended to be a prediction of market behavior; rather it is intended to provide a broader sense of potential market outcomes.

CO<sub>2</sub> emissions from New York generators are projected in the Alt Bank scenario to be 4.4 million tons (10.7 percent) lower in 2020 than Reference Case. The generators are assumed to use more of the private bank by 2017 under this scenario, therefore less allowances will be available for use in later years and more emissions reductions will occur during this timeframe. Emissions from affected sources across the RGGI region are estimated to be 81.6 million tons in 2020 under the Alt Bank scenario while they are projected to be 87.8 million tons under the Program Case.

This emissions data IPM Alt Bank Case model runs and the table displayed below:

91 Alt Bank CO <sub>2</sub> Emissions							
[Million Tons]							
	2012	2013	2014	2015	2016	2018	2020
MA	17	15	16	15	13	14	15
CT	6	7	7	7	7	7	7
ME	3	3	4	4	4	3	3
NH	2	3	2	2	2	2	2
RI	3	4	4	4	4	4	4
VT	0	0	0	0	0	0	0
NY	32	35	34	34	36	36	37
DE	4	3	4	4	4	4	3
MD	25	27	26	25	23	15	14
Total RGGI	94	96	96	95	93	85	84
Total Emissions at Affected Plants	92	93	94	92	90	82	82
Eastern Interconnect without RGGI	1,514	1,548	1,598	1,610	1,578	1,617	1,665
Total Eastern Interconnect	1,608	1,643	1,694	1,705	1,671	1,702	1,750

Total Canadian	102	97	95	97	100	102	105
----------------	-----	----	----	----	-----	-----	-----

CO<sub>2</sub> allowance prices under the Alt Bank scenario are projected to increase from approximately \$3.60/ton (2010 dollars) in 2014 to about \$6.57/ton in 2016 and about \$10.21/ton in 2020. Prices are lower in the short-term under the Alt Bank scenario than under the Program Case because the former scenario assumes that more allowances from the private bank are being used for compliances in the short term. Similarly, prices are higher in 2020 under the Alt Bank scenario because the marketplace has fewer allowances left over in the private bank relative to the Reference Case, and therefore more on-system emissions reductions are required from compliance entities. In addition, it is estimated that approximately 10 million allowances would be obtained by the marketplace between 2014 and 2020 from the CCR. The acquisition of these additional allowances provides some price dampening which is reflected in these estimated allowance prices.

This allowance price data was based on IPM Alt Bank Case model runs and the table displayed below:

Alt Bank Allowance Prices (2010\$)							
	2012	2013	2014	2015	2016	2018	2020
NO <sub>x</sub> Regional (\$/ton)	600	600	600	600	600	600	600
SO <sub>2</sub> Regional Tier 1 (\$/ton)	-	6	6	7	-	-	-
SO <sub>2</sub> Regional Tier 2 (\$/ton)	-	21	22	23	-	-	-
Regional CO <sub>2</sub> (\$/ton)	1.86	1.86	3.60	5.14	6.57	8.00	10.21

Under the Alt Bank scenario, New York's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.62/MWh higher in 2016 and \$2.72/MWh higher in 2020, than the Reference Case. Wholesale electricity prices are estimated to increase by about 2.9 percent in 2016 and 4.9 percent in 2020 under the Alt Bank scenario relative to the Reference Case.

Sensitivity analyses were performed to develop bounds or collars around the Reference Case and Program Case projections. First, a Higher Emissions scenario that assumes higher natural gas prices and higher regional energy demand was evaluated. This scenario used natural gas prices from the Low Estimated Ultimate Recovery scenario in EIA's 2012 Annual Energy Outlook where Henry Hub natural gas prices are estimated to be \$5.31/MMBtu in 2020. Demand in this case is assumed to be about three percent higher in the near-term and four percent higher in the longer-term than the Reference Case. Likewise, a Lower Emissions scenario was also developed that assumes lower natural gas prices, lower regional energy demand, and the continued operation of the Indian Point nuclear power plants through the timeframe of the study. This scenario used natural gas prices from the High Technically Recoverable Resources scenario in EIA's 2012 Annual Energy Outlook where Henry Hub natural gas prices are estimated to be \$3.02/MMBtu in 2020. In this case, demand is assumed to be about three percent lower in the near-term and four percent lower in the longer-term than the Reference Case.

The modeling case that evaluated the potential impacts of the Updated Model Rule using the Higher Emissions assumptions was called the 91 Cap\_Bank\_Model Rule\_High Case. Under this scenario, allowance prices are estimated to be \$7.27/ton in 2014, \$8.13/ton in 2016 and \$10.15/ton in 2020. A sensitivity scenario was run to estimate the impacts of the Updated Model Rule with the Higher Emissions and Alt Bank assumptions. Under this 91 Cap Alt\_Bank\_Model\_Rule\_High Case, allowance prices are estimated to be about \$4.62/ton in 2014, \$6.90/ton in 2016, and \$16.44/ton in 2020.

In IPM, allowance prices would only be expected to rise above the minimum reserve price if the projected cumulative emissions over the time period exceed the cumulative cap level. When evaluating the impact of the Updated Model Rule using the Low Emissions scenario, emissions over the time period are projected to be 50 million tons less than the number of allowances available to the market (adjusted cap plus the

emissions bank). Therefore, affected sources would not need to make any emission reductions and it is estimated that allowance prices would be at the minimum reserve price under this scenario. This scenario was not actually modeled; however, ICF staff provided the assessment of the scenario described in this paragraph.

### Macroeconomic Impact Study

A macroeconomic impact study to estimate the impact of the reduced CO<sub>2</sub> emissions cap, budget adjustments and the remainder of the proposed Program revisions<sup>8</sup> on jobs in the RGGI region was conducted at the direction of the New York and the Participating States by the Northeast States Coordinated Air Use Management (NESCAUM). Utilizing the Regional Economic Models, Inc. Policy Insight™ (REMI) model, a multi-state structural economic forecasting and policy analysis model that produces projections of annual values for employment, gross state product, and personal income, the study concluded that the economic impacts of the proposed Program revisions on the economies of New York and the Participating States were very small and generally positive.

The macroeconomic impact study estimates that the cumulative change in employment in New York associated with the proposed Program revisions will be about 80,500 additional job-years over the period 2012 to 2040. A job-year is equivalent to one person employed for one year. Further, the macroeconomic impact study estimates that the cumulative changes in New York's Gross State Product and Personal Income associated with the proposed Program revisions will increase approximately \$5.8 billion and \$4.7 billion, respectively (2010 dollars, calculated as the present value of estimated annual changes over the period 2012 to 2040, discounted at three percent per year to account for the time-value of money). Although these cumulative changes are minimal, they represent positive impacts for total State employment, total Gross State Product and total Personal Income.

---

<sup>8</sup> The estimated impact of the RGGI Program is the increment calculated as the difference between the Reference Case and the "91 Cap Bank MR IPM Scenario."

3. Regions of adverse impact: A Statewide analysis was performed for the proposed revisions to Part 242 and the modeling predicts that under the Program Case, New York's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.64/MWh higher in 2016 and \$2.12/MWh higher in 2020, than the Reference Case. The proposed revisions to the Program are projected to increase wholesale electricity prices in New York State by about 3.0 percent in 2016 and 3.9 percent in 2020.

4. Minimizing Adverse Impact: The Department is implementing the proposed Program revisions through a cap-and-trade program. Allowance based cap and trade systems are the most cost effective means for implementing emission reductions from large stationary sources. By implementing the proposed Part 242 revisions through an allowance based cap and trade system, the Department has minimized any potential adverse employment impacts of the revised Program, which revisions support the positive effects of the current Program.

5. Self-Employment Opportunities: Not applicable.

## Express Terms

### 6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program

Section 242-1.1 through paragraph 242-1.2(b)(1) remains the same.

The remainder of subdivision 242-1.2(b) is revised as follows:

(2) ‘ Acid rain emissions limitation ’. As defined in 40 CFR 72.2 (see Table 1, section 200.9 of this Title), a limitation on emissions of sulfur dioxide or nitrogen oxides under the Acid Rain Program under title IV of the Clean Air Act.

(3) ‘ Acid Rain Program ’. A multi-state sulfur dioxide and nitrogen oxides air pollution control and emission reduction program established by the administrator under title IV of the CAA and 40 CFR parts 72 through 78 (see Table 1, section 200.9 of this Title).

(4) ‘ Administrator ’. Administrator means the Administrator of the United States Environmental Protection Agency or the Administrator’s authorized representative.

(5) ‘ Allocate or allocation ’. The determination by the department of the number of CO<sub>2</sub> allowances to be recorded in the compliance account of a CO<sub>2</sub> budget unit, an allocation set-aside account, the energy efficiency and clean energy technology account, or the general account of the sponsor of an approved CO<sub>2</sub> emissions offset project.

(6) ‘ Allocation year ’. A calendar year for which the department allocates or awards CO<sub>2</sub> allowances pursuant to Subparts 242-5 and 242-10 of this Part . The allocation year of each CO<sub>2</sub> allowance is

reflected in the unique identification number given to the allowance pursuant to section 242-6.4(b) of this Part.

(7) 'Allowance auction or auction' . An auction in which the New York State Research and Development Authority (NYSERDA) or its agent offers CO<sub>2</sub> allowances for sale.

[(7)](8) 'Alternate CO<sub>2</sub> authorized account representative' . For a CO<sub>2</sub> budget source and each CO<sub>2</sub> budget unit at the source, the natural person who is authorized by the owners and operators of the source and all CO<sub>2</sub> budget units at the source, in accordance with Subpart 242-2 of this Part , to represent and legally bind each owner and operator in matters pertaining to the CO<sub>2</sub> Budget Trading Program or, for a general account, the natural person who is authorized, under Subpart 242-6 of this Part, to transfer or otherwise dispose of CO<sub>2</sub> allowances held in the general account. If the CO<sub>2</sub> budget source is also subject to the CAIR NO<sub>x</sub> Ozone Season Trading Program, CAIR NO<sub>x</sub> Annual Trading Program, or CAIR SO<sub>2</sub> Trading Program then, for a CO<sub>2</sub> Budget Trading Program compliance account, this natural person shall be the same person as the alternate CAIR designated representative under such programs. If the CO<sub>2</sub> budget source is also subject to the Acid Rain Program, then for a CO<sub>2</sub> Budget Trading Program compliance account, this natural person shall be the same person as the alternate designated representative under the Acid Rain Program.

[(8)](9) ' Attribute' . A characteristic , claim, credit, benefit, emissions reduction, offset, allowance, allocation, howsoever characterized, denominated, measured or entitled, associated with electricity generated using a particular renewable fuel, such as its generation date, facility geographic location, unit vintage, emissions output, fuel, state program eligibility, or other characteristic that can be identified, accounted for, and tracked.

[(9)](10) 'Attribute credit' . An attribute credit represents the attributes related to one megawatt-hour of electricity generation.

[(10)](11) 'Automated data acquisition and handling system or DAHS'. That component of the continuous emissions monitoring system, or other emissions monitoring system approved for use under Subpart 242-8 of this Part, designed to interpret and convert individual output signals from pollutant concentration monitors, flow monitors, diluent gas monitors, and other component parts of the monitoring system to produce a continuous record of the measured parameters in the measurement units required by Subpart 242-8 of this Part.

[(11)](12) 'Award'. The determination by the department of the number of [CO<sub>2</sub> allowances to be recorded in the compliance account of a CO<sub>2</sub> budget unit for early reduction CO<sub>2</sub> allowances pursuant to section 242-5.3(b)(5) of this Part, or the determination by the department of the number of ] CO<sub>2</sub> offset allowances to be recorded in the general account of a project sponsor pursuant to 242-10.7 of this Part. Award is a type of allocation.

[(12) 'Billing meter'. To qualify as a billing meter, the measurement device must be used to measure electric or thermal output for commercial billing under a contract. The facility selling the electric or thermal output must have different owners from the owners of the party purchasing the electric or thermal output.]

(13) 'Boiler'. An enclosed fossil or other fuel-fired combustion device used to produce heat and to transfer heat to recirculating water, steam, or other medium.

(14) 'CAIR NO<sub>x</sub> Annual Trading Program'. A multi-state nitrogen oxides air pollution control and emission reduction program approved and administered by the administrator in accordance with 40 CFR part 96 subparts AA through II and 40 CFR 51.123(o)(1) or (2) or established by the administrator in accordance

with subparts AA through II of 40 CFR part 97 and 40 CFR 51.123(p) and 52.35 (see Table 1, section 200.9 of this Title), as a means of mitigating interstate transport of fine particulates and nitrogen oxides.

(15) ‘CAIR NO<sub>x</sub> Ozone Season Trading Program’. A multi-state nitrogen oxides air pollution control and emission reduction program approved and administered by the administrator in accordance with subparts AAAA through IIII of 40 CFR part 96 and 40 CFR 51.123(aa)(1) or (2) (and (bb)(1)), (bb)(2), or (dd) or established by the administrator in accordance with subparts AAAA through IIII of 40 CFR part 97 and 40 CFR 51.123(ee) and 52.35 (see Table 1, section 200.9 of this Title), as a means of mitigating interstate transport of ozone and nitrogen oxides.

(16) ‘CAIR SO<sub>2</sub> Trading Program’. A multi-state sulfur dioxide air pollution control and emission reduction program approved and administered by the administrator in accordance with subparts AAA through III of 40 CFR part 96 and 40 CFR 51.124(o)(1) or (2) or established by the administrator in accordance with subparts AAA through III of 40 CFR part 97 and 40 CFR 51.124(r) and 52.36 (see Table 1, section 200.9 of this Title), as a means of mitigating interstate transport of fine particulates and sulfur dioxide.

(17) ‘CO<sub>2</sub> allowance’. A limited authorization by the department or a participating state under the CO<sub>2</sub> Budget Trading Program to emit up to one ton of CO<sub>2</sub>, subject to all applicable limitations contained in this Part. No provision of this regulation shall be construed to limit the authority of the department or a participating state to terminate or limit such authorization to emit. This limited authorization does not constitute a property right.

(18) ‘CO<sub>2</sub> allowance deduction or deduct CO<sub>2</sub> allowances’. The permanent withdrawal of CO<sub>2</sub> allowances by the department or its agent from a CO<sub>2</sub> allowance tracking system compliance account to account

for the number of tons of CO<sub>2</sub> emitted from a CO<sub>2</sub> budget source for a control period or an interim control period, determined in accordance with Subpart 242-8 of this Part , or for the forfeit or retirement of CO<sub>2</sub> allowances as provided by this Part.

[(19) 'CO<sub>2</sub> allowance price'. The price for CO<sub>2</sub> allowances in the CO<sub>2</sub> Budget Trading Program for a particular time period as determined by the department or its agent, calculated based on a volume-weighted average of transaction prices reported to the department or its agent, and taking into account prices as reported publicly through reputable sources.]

[(20)](19) 'CO<sub>2</sub> allowances held or hold CO<sub>2</sub> allowances'. The CO<sub>2</sub> allowances recorded by the department or its agent, or submitted to the department or its agent for recordation, in accordance with Subparts 242-6 and 242-7 of this Part, in a CO<sub>2</sub> allowance tracking system account.

[(21)](20) 'CO<sub>2</sub> Allowance Tracking System'. The system by which the department or its agent records allocations, deductions, and transfers of CO<sub>2</sub> allowances under the CO<sub>2</sub> Budget Trading Program. The tracking system may also be used to track CO<sub>2</sub> emissions offset projects, CO<sub>2</sub> allowance prices and emissions from affected sources , and to determine the New York CO<sub>2</sub> Budget Trading Program adjusted budget in accordance with section 242-5.2.

[(22)](21) 'CO<sub>2</sub> Allowance Tracking System account '. An account in the CO<sub>2</sub> Allowance Tracking System established by the department or its agent for purposes of recording the allocation, holding, transferring, or deducting of CO<sub>2</sub> allowances.

[(23)](22) 'CO<sub>2</sub> allowance transfer deadline'. Midnight of the March 1<sup>st</sup> occurring after the end

of the relevant control period and each relevant interim control period or, if that March 1<sup>st</sup> is not a business day, midnight of the first business day thereafter and is the deadline by which CO<sub>2</sub> allowances must be submitted for recordation in a CO<sub>2</sub> budget source's compliance account in order for the source to meet the CO<sub>2</sub> requirements of subdivision 242-1.5(c) of this Part for the control period and each interim control period immediately preceding such deadline.

[(24)](23) 'CO<sub>2</sub> authorized account representative'. For a CO<sub>2</sub> budget source and each CO<sub>2</sub> budget unit at the source, the natural person who is authorized by the owners and operators of the source and all CO<sub>2</sub> budget units at the source, in accordance with Subpart 242-2 of this Part, to represent and legally bind each owner and operator in matters pertaining to the CO<sub>2</sub> Budget Trading Program or, for a general account, the natural person who is authorized, under Subpart 242-6 of this Part, to transfer or otherwise dispose of CO<sub>2</sub> allowances held in the general account. If the CO<sub>2</sub> budget source is also subject to the CAIR NO<sub>x</sub> Ozone Season Trading Program, CAIR NO<sub>x</sub> Annual Trading Program, or CAIR SO<sub>2</sub> Trading Program then, for a CO<sub>2</sub> Budget Trading Program compliance account, this natural person shall be the same person as the CAIR designated representative under such programs. If the CO<sub>2</sub> budget source is also subject to the Acid Rain Program, then for a CO<sub>2</sub> Budget Trading Program compliance account, this natural person shall be the same person as the designated representative under the Acid Rain Program.

[(25)](24) 'CO<sub>2</sub> budget emissions limitation'. For a CO<sub>2</sub> budget source, the tonnage equivalent, in CO<sub>2</sub> emissions in a control period or an interim control period, of the CO<sub>2</sub> allowances available for compliance deduction for the source for a control period or an interim control period.

[(26)](25) 'CO<sub>2</sub> budget permit'. The portion of the legally binding permit issued by the department pursuant to Parts 201 and 621 of this Title to a CO<sub>2</sub> budget source or CO<sub>2</sub> budget unit which specifies all applicable CO<sub>2</sub> Budget Trading Program requirements.

[(27)](26) 'CO<sub>2</sub> budget source'. A source that includes one or more CO<sub>2</sub> budget units.

[(28)](27) 'CO<sub>2</sub> Budget Trading Program'. A multi-state CO<sub>2</sub> air pollution control and emissions reduction program established pursuant to this Part and corresponding regulations in other states as a means of reducing emissions of CO<sub>2</sub> from CO<sub>2</sub> budget sources.

(28) 'CO<sub>2</sub> Budget Trading Program adjusted budget'. The New York CO<sub>2</sub> Budget Trading Program adjusted budget is determined in accordance with section 242-5.2 and is the annual amount of CO<sub>2</sub> tons available in New York for allocation in a given allocation year, in accordance with the CO<sub>2</sub> Budget Trading Program. CO<sub>2</sub> offset allowances allocated to project sponsors and CO<sub>2</sub> CCR allowances offered for sale at an auction are separate from and additional to CO<sub>2</sub> allowances allocated from the New York CO<sub>2</sub> Budget Trading Program adjusted budget.

(29) 'CO<sub>2</sub> Budget Trading Program base budget'. The New York CO<sub>2</sub> Budget Trading Program base budget is specified in section 242-5.1 of this Part. [The annual amount of CO<sub>2</sub> tons available in New York for allocation in a given allocation year, in accordance with the CO<sub>2</sub> Budget Trading Program. ] CO<sub>2</sub> offset allowances allocated to project sponsors and CO<sub>2</sub> CCR allowances offered for sale at an auction are separate from and additional to CO<sub>2</sub> allowances allocated from the CO<sub>2</sub> Budget Trading Program base budget.

(30) 'CO<sub>2</sub> budget unit'. A unit that is subject to the CO<sub>2</sub> Budget Trading Program requirements under section 242-1.4 of this Part.

(31) 'CO<sub>2</sub> cost containment reserve allowance or CO<sub>2</sub> CCR allowance'. A CO<sub>2</sub> allowance that is offered for sale at an auction by NYSERDA or its agent for the purpose of containing the cost of CO<sub>2</sub>

Allowances. CO<sub>2</sub> CCR allowances offered for sale at an auction are separate from and additional to CO<sub>2</sub> allowances allocated from the CO<sub>2</sub> Budget Trading Program base and adjusted budgets. CO<sub>2</sub> CCR allowances are subject to all applicable limitations contained in this Part.

[(31)](32) ‘ CO<sub>2</sub> equivalent ’. The quantity of a given greenhouse gas multiplied by its global warming potential (GWP).

[(32)](33) ‘ CO<sub>2</sub> offset allowance ’. A CO<sub>2</sub> allowance that is awarded to the sponsor of a CO<sub>2</sub> emissions offset project pursuant to section 242-10.7 of this Part and is subject to the relevant compliance deduction limitations of paragraph 242-6.5(a)(3) of this Part.

[(33)](34) ‘ Combined cycle system ’. A system comprised of one or more combustion turbines, heat recovery steam generators, and steam turbines configured to improve overall efficiency of electricity generation or steam production.

[(34)](35) ‘ Combustion turbine ’. An enclosed fossil or other fuel-fired device that is comprised of a compressor (if applicable), a combustor, and a turbine, and in which the flue gas resulting from the combustion of fuel in the combustor passes through the turbine, rotating the turbine.

[(35)](36) ‘ Commence commercial operation ’. With regard to a unit that serves a generator, to have begun to produce steam, gas, or other heated medium used to generate electricity for sale or use, including test generation. For a unit that is a CO<sub>2</sub> budget unit under section 242-1.4 of this Part on the date the unit commences commercial operation, such date shall remain the unit’s date of commencement of commercial operation even if the unit is subsequently modified, reconstructed, or repowered. For a unit that is not a CO<sub>2</sub>

budget unit under section 242-1.4 of this Part on the date the unit commences commercial operation, the date the unit becomes a CO<sub>2</sub> budget unit under section 242-1.4 of this Part shall be the unit's date of commencement of commercial operation.

[(36)](37) 'Commence operation'. To begin any mechanical, chemical, or electronic process, including, with regard to a unit, start-up of a unit's combustion chamber. For a unit that is a CO<sub>2</sub> budget unit under section 242-1.4 of this Part on the date of commencement of operation, such date shall remain the unit's date of commencement of operation even if the unit is subsequently modified, reconstructed, or repowered. For a unit that is not a CO<sub>2</sub> budget unit under section 242-1.4 of this Part on the date of commencement of operation, the date the unit becomes a CO<sub>2</sub> budget unit under section 242-1.4 of this Part shall be the unit's date of commencement of operation.

[(37)](38) 'Compliance account'. A CO<sub>2</sub> Allowance Tracking System account, established by the department or its agent for a CO<sub>2</sub> budget source under Subpart 242-6 of this Part, [in which the CO<sub>2</sub> allowance allocations for the source are initially recorded and ] in which are held CO<sub>2</sub> allowances available for use by the source for a control period and each interim control period for the purpose of meeting the CO<sub>2</sub> requirements of subdivision 242-1.5(c) of this Part.

[(38) 'Consumer Price Index (CPI)'. For purposes of the CO<sub>2</sub> Budget Trading Program, the U.S. Department of Labor, Bureau of Labor Statistics unadjusted Consumer Price Index for All Urban Consumers for the U.S. city average, for All Items on the latest reference base, or if such index is no longer published, such other index as the Department determines is appropriate. The CPI for any calendar year is the 12-month average of the CPI published by the United States Department of Labor, as of the close of the 12-month period ending on August 31<sup>st</sup> of each calendar year.]

(39) ‘ Continuous emissions monitoring system or CEMS ’. The equipment required under Subpart 242-8 of this Part to sample, analyze, measure, and provide, by means of readings recorded at least once every 15 minutes (using an automated DAHS), a permanent record of stack gas volumetric flow rate, stack gas moisture content, and oxygen or carbon dioxide concentration (as applicable), in a manner consistent with 40 CFR part 75 (see Table 1, section 200.9 of this Title) and Subpart 242-8 of this Part. The following systems are types of continuous emissions monitoring systems required under Subpart 242-8 of this Part.

(i) A flow monitoring system, consisting of a stack flow rate monitor and an automated data acquisition and handling system and providing a permanent, continuous record of stack gas volumetric flow rate, in standard cubic feet per hour (scfh);

(ii) A nitrogen oxides emissions rate (or NO<sub>x</sub>-diluent) monitoring system, consisting of a NO<sub>x</sub> pollutant concentration monitor, a diluent gas (CO<sub>2</sub> or O<sub>2</sub>) monitor, and an automated data acquisition and handling system and providing a permanent, continuous record of NO<sub>x</sub> concentration, in parts per million (ppm), diluent gas concentration, in percent CO<sub>2</sub> or O<sub>2</sub>; and NO<sub>x</sub> emissions rate, in pounds per million British thermal units (lb/MMBtu);

(iii) A moisture monitoring system, as defined in 40 CFR 75.11(b)(2) (see Table 1, section 200.9 of this Title) and providing a permanent, continuous record of the stack gas moisture content, in percent H<sub>2</sub>O;

(iv) A carbon dioxide monitoring system, consisting of a CO<sub>2</sub> pollutant concentration monitor (or an oxygen monitor plus suitable mathematical equations from which the CO<sub>2</sub> concentration is

derived) and an automated data acquisition and handling system and providing a permanent, continuous record of CO<sub>2</sub> emissions, in percent CO<sub>2</sub>; and

(v) An oxygen monitoring system, consisting of an O<sub>2</sub> concentration monitor and an automated data acquisition and handling system and providing a permanent, continuous record of O<sub>2</sub>, in percent O<sub>2</sub>.

(40) 'Control period'. The control period is a three-calendar-year time period, unless extended to four years upon occurrence of a stage two trigger event. The first control period [is]was from January 1, 2009 to December 31, 2011, inclusive, provided if a stage two trigger event occurs during the first control period, then the first control period will be extended one-year to December 31, 2012, inclusive. Each subsequent sequential three-calendar-year period is a separate control period [that is subject to one one-year extension upon occurrence of a stage two trigger event during the control period. In no event may a control period be longer than four ] The first two calendar years of each control period are each defined as an interim control period, beginning on January 1, 2015.

(41) 'Cost containment reserve trigger price, or CCR trigger price'. The CCR trigger price is the minimum price at which CO<sub>2</sub> CCR allowances are offered for sale by NYSERDA or its agent at an auction. The CCR trigger price shall be \$ 4.00 per CO<sub>2</sub> allowance for calendar year 2014, \$ 6.00 per CO<sub>2</sub> allowance in calendar year 2015, \$8.00 per CO<sub>2</sub> allowance in calendar year 2016, and \$10.00 per CO<sub>2</sub> allowance in calendar year 2017. Each calendar year thereafter, the CCR trigger price shall be 1.025 multiplied by the CCR trigger price from the previous calendar year, rounded to the nearest whole cent

[(41) 'Current Market Price'. The volume-weighted average of (1) transaction prices reported to the Department or its agent, (2) prices as reported publicly through reputable sources, (3) CO<sub>2</sub> allowance award

price(s) from preceding CO<sub>2</sub> Allowance Auction(s), or (4) any combination of these options.]

[(42)](42) ‘Current Market Reserve Price (CMRP)’. The monetary amount calculated to be 80 percent of the Current Market Price.]

[(43)](42) ‘Eligible biomass’. Eligible biomass includes sustainably harvested woody and herbaceous fuel sources that are available on a renewable or recurring basis (excluding old-growth timber), including dedicated energy crops and trees, agricultural food and feed crop residues, and forest and mill [aquatic plants, unadulterated wood and wood ] residue. [residues, animal wastes, other clean organic wastes not mixed with other solid wastes, and] Eligible biomass may also include biogas[,] derived from such fuel sources [.] and animal wastes and other clean organic wastes not mixed with other solid waste. Liquid biofuels do not qualify as eligible biomass. Sustainably harvested as it applies to woody and herbaceous fuel sources will be determined by the department.

[(44)](43) ‘Energy efficiency and clean energy technology account’. A general account established and administered by [the New York State Energy Research and Development Authority (NYSERDA)].

[(45)](44) ‘Excess emissions’. Any tonnage of CO<sub>2</sub> emitted by a CO<sub>2</sub> budget source during a control period that exceeds the CO<sub>2</sub> budget emissions limitation for the source.

(45) ‘Excess interim emissions’. Any tonnage of CO<sub>2</sub> emitted by a CO<sub>2</sub> budget source during an interim control period multiplied by 0.50 that exceeds the CO<sub>2</sub> budget emissions limitation for the source.

(46) 'First control period interim adjustment for banked allowances '. An adjustment applied to the New York CO<sub>2</sub> Budget Trading Program base budget for allocation years 2014 through 2020 to address the surplus allocation year 2009, 2010 and 2011 allowances held in general and compliance accounts, including compliance accounts established pursuant to the CO<sub>2</sub> Budget Trading Program, but not including accounts opened by participating states.

[(46)](47) 'Fossil fuel'. Natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material.

[(47)](48) 'Fossil fuel-fired'. One of the following:

(i) With regard to a unit that commenced operation prior to January 1, 2005, the combustion of fossil fuel, alone or in combination with any other fuel, where the fossil fuel combusted comprises, or is projected to comprise, more than 50 percent of the annual heat input on a Btu basis during any year.

(ii) With regard to a unit that commences operation on or after January 1, 2005, the combustion of fossil fuel, alone or in combination with any other fuel, where the fossil fuel combusted comprises, or is projected to comprise, more than five percent of the annual heat input on a Btu basis during any year.

[(48)](49) 'General account'. A CO<sub>2</sub> Allowance Tracking System account, established under Subpart 242-6 of this Part, that is not a compliance account.

[(49)](50) ‘ Global warming potential (GWP) ’. A measure of the radiative efficiency (heat-absorbing ability) of a particular gas relative to that of carbon dioxide (CO<sub>2</sub>) after taking into account the decay rate of each gas (the amount removed from the atmosphere over a given number of years) relative to that of CO<sub>2</sub>. Global warming potentials used in this Part are consistent with the values used in the Intergovernmental Panel on Climate Change, [Third] Fourth Assessment Report, the Physical [Scientific] Science Basis (Working Group I), chapter [6]2, [section 12, pages (385-391)] page 212, [2001]2007 (see Table 1, section 200.9 of this Title).

[(50)](51) ‘Gross generation’. The electrical output (in MWe) at the terminals of the generator.

(52) ‘Interim control period ’. An interim control period is a one-calendar-year time period, during each of the first and second calendar years of each three year control period. The first interim control period starts on January 1, 2015 and ends on December 31, 2015, inclusive. The second interim control period starts on January 1, 2016 and ends on December 31, 2016, inclusive. Each successive three year control period will have two interim control periods, comprised of each of the first two calendar years of that control period.

[(51)](53) ‘Life-of-the-unit contractual arrangement’. A unit participation power sales agreement under which a customer reserves, or is entitled to receive, a specified amount or percentage of nameplate capacity and/or associated energy from any specified unit pursuant to a contract:

(i) for the life of the unit;

(ii) for a cumulative term of no less than 25 years, including contracts that permit an election for early termination; or

(iii) for a period equal to or greater than 20 years or 70 percent of the economic useful life of the unit determined as of the time the unit is built, with option rights to purchase or release some portion of the nameplate capacity and associated energy generated by the unit at the end of the period.

[(52)](52) ‘Market settling period’. The first 14 months of any control period.]

[(53)](54) ‘Maximum design heat input’. The ability of a unit to combust a stated maximum amount of fuel per hour on a steady state basis, as determined by the physical design and physical characteristics of the unit.

[(54)](55) ‘Maximum potential hourly heat input’. An hourly heat input used for reporting purposes when a unit lacks certified monitors to report heat input. If the unit intends to use appendix D of 40 CFR part 75 (see Table 1, section 200.9 of this Title) to report heat input, this value should be calculated, in accordance with 40 CFR part 75 (see Table 1, section 200.9 of this Title), using the maximum fuel flow rate and the maximum gross calorific value. If the unit intends to use a flow monitor and a diluent gas monitor, this value should be reported, in accordance with 40 CFR part 75 (see Table 1, section 200.9 of this Title), using the maximum potential flow rate and either the maximum carbon dioxide concentration (in percent CO<sub>2</sub>) or the minimum oxygen concentration (in percent O<sub>2</sub>).

[(55)](56) ‘Minimum Reserve Price (MRP)’. The minimum reserve price in calendar year 2014 shall be \$2.00. Each calendar year thereafter the minimum reserve price shall be 1.025 multiplied by the minimum reserve price from the previous calendar year, rounded to the nearest whole cent. [ The monetary amount \$1.86 in 2008 and 2009. Thereafter, the monetary amount, established as of the first day of each calendar year, derived annually from use of the following formula:

$$\text{MRP}(2009+n) = \text{MRP}(2009+(n-1)) \times [1 + (\text{CPI}(2009+(n-1)) - \text{CPI}(2009+(n-2))) / \text{CPI}(2009+(n-2))]$$

where:

“MRP” is the Minimum Reserve Price;

“MRP(2009)” is \$1.86;

“n” is the number of years since 2009; and

“CPI” is the Consumer Price Index.]

[(56)](57) ‘Monitoring system’. Any monitoring system that meets the requirements of Subpart 242-8 of this Part , including a continuous emissions monitoring system, an excepted monitoring system, or an alternative monitoring system.

[(57)](58) ‘Nameplate capacity’. The maximum electrical output (in MWe) that a generator can sustain over a specified period of time when not restricted by seasonal or other deratings as measured in accordance with the United States Department of Energy standards.

[(58)](59) ‘Net electrical output ’. All electrical output supplied to the electric power grid or gross generation minus the electrical output used on-site by the facility (in MWe). For co-generation facilities, all electrical output supplied to the electric power grid, the host site and other industrial and commercial customers, but excluding electrical output used by the co-generation facility and fuel handling and processing equipment.

[(59)](60) ‘Non-CO2 budget unit’. A unit that does not meet the applicability criteria of section 242-1.4 of this Part.

[(60)](61) 'Operator'. Any person who operates, controls, or supervises a CO<sub>2</sub> budget unit or a CO<sub>2</sub> budget source and shall include, but not be limited to, any holding company, utility system, or plant manager of such a unit or source.

[(61)](62) 'Owner'. Any of the following persons:

(i) any holder of any portion of the legal or equitable title in a CO<sub>2</sub> budget unit; or

(ii) any holder of a leasehold interest in a CO<sub>2</sub> budget unit, other than a passive lessor, or a person who has an equitable interest through such lessor, whose rental payments are not based, either directly or indirectly, upon the revenues or income from the CO<sub>2</sub> budget unit; or

(iii) any purchaser of power from a CO<sub>2</sub> budget unit under a life-of-the-unit contractual arrangement in which the purchaser controls the dispatch of the unit; or

(iv) with respect to any general account, any person who has an ownership interest with respect to the CO<sub>2</sub> allowances held in the general account and who is subject to the binding agreement for the CO<sub>2</sub> authorized account representative to represent that person's ownership interest with respect to the CO<sub>2</sub> allowances.

[(62)](63) 'Participating state'. A state that has established a corresponding regulation as part of the CO<sub>2</sub> Budget Trading Program.

[(63)](64) 'Primary fuel'. Of the different fuels used, the fuel to which the highest proportion of

the heat input is attributable.

[(64)](65) ‘Receive or receipt of’. When referring to the department or its agent, to come into possession of a document, information, or correspondence (whether sent in writing or by authorized electronic transmission), as indicated in an official correspondence log, or by a notation made on the document, information, or correspondence, by the department or its agent in the regular course of business.

[(65)](66) ‘Recordation, record, or recorded’. With regard to CO<sub>2</sub> allowances, the movement of CO<sub>2</sub> allowances by the department or its agent from one CO<sub>2</sub> Allowance Tracking System account to another, for purposes of allocation, transfer, or deduction.

[(66)](67) ‘Reserve Price’. The minimum acceptable price for each CO<sub>2</sub> allowance in a specific auction. The reserve price at an auction is either the minimum reserve price or the CCR trigger price as specified in Subpart 242-5.3. [The minimum acceptable price for each CO<sub>2</sub> allowance in a specific auction. The Reserve Price is the monetary amount that is the higher of the MRP or CMRP unless the Department determines that there is not enough data to justify the calculation of a CMRP, in which case the Reserve Price will be the MRP.]

[(68)] ‘Second control period interim adjustment for banked allowances’. An adjustment applied to the New York CO<sub>2</sub> Budget Trading Program base budget for allocation years 2015 through 2020 to address the surplus allocation year 2012 and 2013 allowances held in general and compliance accounts, including compliance accounts established pursuant to the CO<sub>2</sub> Budget Trading Program, but not including accounts opened by participating states, that are in addition to the aggregate quantity of 2012 and 2013 emissions from all CO<sub>2</sub> budget sources in all the participating states.

[(67)](69) ‘Serial number’. When referring to CO<sub>2</sub> allowances, the unique identification number assigned to each CO<sub>2</sub> allowance by the department or its agent under subdivision 242-6.4(b) of this Part.

[(68)](70) ‘Source’. Any governmental, institutional, commercial, or industrial structure, installation, plant, building, or facility that emits or has the potential to emit any air pollutant. A “source,” including a “source” with multiple units, shall be considered a single “facility.”

[(69) ‘Stage one threshold price ’. The monetary amount, established as of the first day of each calendar year, derived annually from use of the following formula:

$$S1TP(2005+n) = S1TP(2005) \times [1 + (CPI(2005+(n-1)) - CPI(2005))/CPI(2005)]$$

where:

“S1TP” is the stage one threshold price;

“S1TP(2005)” is \$7;

“n” is the number of years since 2005; and

“CPI” is the Consumer Price Index.

(70) ‘Stage one trigger event’. The occurrence of any 12-month period that completely transpires following the market settling period and is characterized by an average CO<sub>2</sub> allowance price that is equal to or greater than the stage one threshold price.

(71) ‘Stage two threshold price ’. The monetary amount, established as of the first day of each

calendar year, derived annually from use of the following formula:

$$S2TP(2005+n) = [ S2TP(2005+(n-1)) \times \left[ \frac{CPI(2005+(n-1)) - CPI(2005+(n-2))}{CPI(2005+(n-2))} \right] + 0.02 ] + S2TP(2005+(n-1))$$

where:

“S2TP” is the stage two threshold price;

“S2TP(2005)” is \$10; and

“n” is the number of years since 2005.

“CPI” is the Consumer Price Index.

(72) ‘Stage two trigger event’. The occurrence of any 12-month period that completely transpires following the market settling period and is characterized by an average CO<sub>2</sub> allowance price that is equal to or greater than the stage two threshold price.]

[(73)](71) ‘ State’. A State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa and includes the Commonwealth of the Northern Mariana Islands.

[(74)](72) ‘Submit or serve’. To send or transmit a document, information, or correspondence to the person specified in accordance with the applicable regulation:

(i) in person;

(ii) by United States Postal Service; or

(iii) by other means of dispatch or transmission and delivery.

Compliance with any “submission,” “service,” or “mailing” deadline shall be determined by the date of dispatch, transmission, or mailing and not the date of receipt.

[(75)](73) ‘Ton or tonnage’. Any “short ton”, or 2,000 pounds. For the purpose of determining compliance with the CO<sub>2</sub> requirements of subdivision 242-1.5(c) of this Part, total tons for a control period and each interim control period shall be calculated as the sum of all recorded hourly emissions (or the tonnage equivalent of the recorded hourly emissions rates) in accordance with Subpart 242-8 of this Part , with any remaining fraction of a ton equal to or greater than 0.50 ton deemed to equal one ton and any fraction of a ton less than 0.50 ton deemed to equal zero tons. A short ton is equal to 0.9072 metric tons.

[(76)](74) ‘Total net output’. The total net megawatt hours, calculated utilizing the following formula:

$$\text{Total net output} = (\text{EO} + (\text{TO}/3.413))$$

Where:

“EO” is the total net electrical output from the CO<sub>2</sub> budget unit;

“TO” is the total useful thermal energy from the CO<sub>2</sub> budget unit in MMBtu;

“3.413” is the factor used to convert useful thermal energy from MMBtu to MWh, 3.413 MMBtu = 1 MWh.

[(77) ‘Twelve month period’. A period of 12 consecutive months determined on a rolling basis where a new 12-month period begins on the first day of each calendar month.]

(75) ‘Undistributed CO<sub>2</sub> allowance’. CO<sub>2</sub> allowances originally allocated to a set-aside account pursuant to section 242-5.3 that were not distributed.

[(78)](76) ‘Unit’. A fossil fuel-fired stationary boiler, combustion turbine, or combined cycle system.

[(79)](77) ‘Unit operating day’. A calendar day in which a unit combusts any fuel.

[(80)](78) ‘Unsold Allowance’. A CO<sub>2</sub> allowance that has been made available for sale in an auction[ conducted by NYSERDA or its agent], but not sold.

[(81)](79) ‘Voluntary renewable energy purchase’. A purchase of electricity from renewable energy generation or renewable energy attribute credits by a retail electricity customer on a voluntary basis. Renewable energy includes electricity generated from a source built on or after January 1, 2003 that is contained in the revised list of eligible electric generation technologies in the New York State Public Service Commission’s Order on Customer-Sited Tier Implementation issued and effective June 28, 2006, attached as Appendix B in the New York State Public Service Commission’s Order Regarding Retail Renewable Portfolio Standard, issued and effective September 24, 2004, except for electricity generated from a CO<sub>2</sub> budget source that co-fires eligible biomass as a compliance mechanism and for which the CO<sub>2</sub> authorized account representative requests the retirement of CO<sub>2</sub> allowances pursuant to subdivision 242-5.3(c) of this Part. The renewable energy generation or renewable energy attribute credits related to such purchases may not be used by the generator or purchaser to meet any regulatory mandate, such as a renewable portfolio standard. Existing section 242-1.3 through subdivision 242-1.4(a) remains unchanged.

Subdivision 242-1.4(b) is revised as follows:

(b) ‘Limited exemption for units with electrical output to the electric grid restricted by permit conditions’.

(1) 'Applicability'. Notwithstanding subdivision (a) of this section, any unit that, on or before December 1, 2008, [applies] applied for [a] an enforceable permit condition restricting the supply of the unit 's annual electrical output to the electric grid to less than or equal to 10 percent of the annual gross generation of the unit, and that from and after January 1, 2009 complies with the 10 percent restriction and the provisions in paragraph (b)(3) of this section, shall be exempt from the requirements of this Part, except for the provisions of this section, sections 242-1.2, 242-1.3, and 242-1.6 of this Part.

Existing paragraphs 242-1.4(b)(2) through (b)(3) remain unchanged.

Existing paragraph 242-1.4(b)(4) is deleted.

Existing subdivisions 242-1.5(a) through (b) remain unchanged.

The remainder of section 242-1.5 is amended as follows:

(c) 'CO<sub>2</sub> requirements'.

(1) The owners and operators of each CO<sub>2</sub> budget source and each CO<sub>2</sub> budget unit at the source shall hold CO<sub>2</sub> allowances available for compliance deductions under section 242-6.5 of this Part, as of the CO<sub>2</sub> allowance transfer deadline, in the source 's compliance account in an amount not less than the total CO<sub>2</sub> emissions for the control period from all CO<sub>2</sub> budget units at the source, less the CO<sub>2</sub> allowances deducted to meet the requirements of paragraph 242-1.5(c)(2) with respect to the previous two interim control periods, as determined in accordance with Subparts 242-6 and 242-8 of this Part.

(2) The owners and operators of each CO<sub>2</sub> budget source and each CO<sub>2</sub> budget unit at the source shall hold CO<sub>2</sub> allowances available for compliance deductions under section 242-6.5, as of the CO<sub>2</sub> allowance transfer deadline, in the source 's compliance account in an amount not less than the total CO<sub>2</sub> emissions for the

interim control period from all CO<sub>2</sub> budget units at the source multiplied by 0.50, as determined in accordance with Subparts 242-6 and 242-8.

[(2)](3) Each ton of CO<sub>2</sub> emitted in excess of the CO<sub>2</sub> budget emissions limitation for a control period shall constitute a separate violation of this Part and applicable state law.

(4) Each ton of excess interim emissions shall constitute a separate violation of this Part and applicable state law.

[(3)](5) A CO<sub>2</sub> budget unit shall be subject to the requirements under paragraph (c)(1) of this section starting on the later, of January 1, 2009 or the date on which the unit commences operation.

[(4)](6) CO<sub>2</sub> allowances shall be held in, deducted from, or transferred among CO<sub>2</sub> Allowance Tracking System accounts in accordance with Subparts 242-5, 242-6, and 242-7, and section 242-10.7 of this Part.

[(5)](7) A CO<sub>2</sub> allowance shall not be deducted, in order to comply with the requirements under paragraph (c)(1) or (2) of this section, for a control period or interim control period that ends prior to the allocation year for which the CO<sub>2</sub> allowance was allocated. A CO<sub>2</sub> offset allowance shall not be deducted, in order to comply with the requirements under paragraph (c)(1) or (2) of this section, beyond the applicable percent limitations set out in paragraph 242-6.5(a)(3) of this Part.

[(6)](8) A CO<sub>2</sub> allowance under the CO<sub>2</sub> Budget Trading Program is a limited authorization by the Department or a participating state to emit one ton of CO<sub>2</sub> in accordance with the CO<sub>2</sub> Budget Trading

Program. No provision of the CO<sub>2</sub> Budget Trading Program, the CO<sub>2</sub> budget permit application, or the CO<sub>2</sub> budget permit or any provision of law shall be construed to limit the authority of the Department or a participating state to terminate or limit such authorization.

[(7)](9) A CO<sub>2</sub> allowance under the CO<sub>2</sub> Budget Trading Program does not constitute a property right.

(d) 'Excess emissions requirements'. The owners and operators of a CO<sub>2</sub> budget source that has excess emissions in any control period, or excess interim emissions for any interim control period shall:

(1) forfeit the CO<sub>2</sub> allowances required for deduction under paragraph 242-6.5(d)(1) of this Part, provided CO<sub>2</sub> offset allowances may not be used to cover any part of such excess emissions; and

(2) pay any fine, penalty, or assessment or comply with any other remedy imposed under paragraph 242-6.5(d)(2) of this Part.

(e) 'Recordkeeping and reporting requirements'.

(1) Unless otherwise provided, the owners and operators of the CO<sub>2</sub> budget source and each CO<sub>2</sub> budget unit at the source shall keep on site at the source each of the following documents for a period of 10 years from the date the document is created. This period may be extended for cause, at any time prior to the end of 10 years, in writing by the department.

(i) The account certificate of representation for the CO<sub>2</sub> authorized account representative

for the source and each CO<sub>2</sub> budget unit at the source and all documents that demonstrate the truth of the statements in the account certificate of representation, in accordance with section 242-2.4 of this Part, provided that the certificate and documents shall be retained on site at the source beyond such 10-year period until such documents are superseded because of the submission of a new account certificate of representation.

(ii) All emissions monitoring information, in accordance with Subpart 242-8 of this Part and 40 CFR 75.57 (see Table 1, section 200.9 of this Title).

(iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under the CO<sub>2</sub> Budget Trading Program.

(iv) Copies of all documents used to complete a CO<sub>2</sub> budget permit application and any other submission under the CO<sub>2</sub> Budget Trading Program or to demonstrate compliance with the requirements of the CO<sub>2</sub> Budget Trading Program.

(2) The CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget source and each CO<sub>2</sub> budget unit at the source shall submit the reports and compliance certifications required under the CO<sub>2</sub> Budget Trading Program, including those under Subpart 242-4 of this Part.

(f) 'Liability'.

(1) No permit revision shall excuse any violation of the requirements of the CO<sub>2</sub> Budget Trading Program that occurs prior to the date that the revision takes effect.

(2) Any provision of the CO<sub>2</sub> Budget Trading Program that applies to a CO<sub>2</sub> budget source

(including a provision applicable to the CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget source) shall also apply to the owners and operators of such source and of the CO<sub>2</sub> budget units at the source.

(3) Any provision of the CO<sub>2</sub> Budget Trading Program that applies to a CO<sub>2</sub> budget unit (including a provision applicable to the CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget unit) shall also apply to the owners and operators of such unit.

(g) 'Effect on other authorities'.

(1) No provision of the CO<sub>2</sub> Budget Trading Program, a CO<sub>2</sub> budget permit application, or a CO<sub>2</sub> budget permit, shall be construed as exempting or excluding the owners and operators and, to the extent applicable, the CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget source or CO<sub>2</sub> budget unit from compliance with any other provisions of applicable State and federal law and regulations.

Existing section 242-1.6 through paragraph 242-2.4(a)(1) remains unchanged.

Paragraph 242-2.4(a)(2) is revised as follows:

(2) the name, address, e-mail address, and telephone number [, and facsimile transmission number] of the CO<sub>2</sub> authorized account representative and any alternate CO<sub>2</sub> authorized account representative;

Existing paragraph 242-2.4(a)(3) through subdivision 242-2.6(b) remains unchanged.

(c) In order to delegate authority to make an electronic submission to the department or its agent in accordance with subdivision (a) and (b) of this section, the CO<sub>2</sub> authorized account representative or alternate CO<sub>2</sub> authorized account representative, as appropriate, must submit to the department or its agent a notice of

delegation, in a format prescribed by the department that includes the following elements:

(1) The name, address, e-mail address, and telephone number [, and facsimile transmission number] of such CO<sub>2</sub> authorized account representative or alternate CO<sub>2</sub> authorized account representative;

(2) The name, address, e-mail address, and telephone number [and facsimile transmission number] of each such natural person, herein referred to as the “electronic submission agent”;

The remainder of section 242-2.6 through section 242-3.2 is unchanged.

242-3.3 Information requirements for CO<sub>2</sub> budget permit applications.

(a) A complete CO<sub>2</sub> budget permit application shall include the following elements concerning the CO<sub>2</sub> budget source for which the application is submitted, in a format prescribed by the department:

(1) The information required in Part 201 of this Title shall be included in the CO<sub>2</sub> Budget permit application by the owner and/or operator of the CO<sub>2</sub> budget source. Applications for modifications and revisions generally need only supply information related to the proposed change, provided such information includes a complete set of data on any emissions units affected by the modification and any facility level information required in forms developed by the department to properly ascertain the nature and extent of the modification.

(2) identification of the CO<sub>2</sub> budget source, including plant name and the ORIS (Office of Regulatory Information Systems) or facility code assigned to the source by the Energy Information Administration of the United States Department of Energy, if applicable;

(3) identification of each CO<sub>2</sub> budget unit at the CO<sub>2</sub> budget source.

#### Subpart 242-4 Compliance Certification

##### 242-4.1 Compliance certification report.

(a) ‘Applicability and deadline’. For each control period in which a CO<sub>2</sub> budget source is subject to the CO<sub>2</sub> requirements of subdivision 242-1.5(c) of this Part, the CO<sub>2</sub> authorized account representative of the source shall submit to the department by the March 1<sup>st</sup> following the relevant control period, a compliance certification report. A compliance certification report is not required as part of the compliance obligation during an interim control period.

The remainder of Subpart 242-4 remains unchanged.

#### Subpart 242-5 CO<sub>2</sub> Allowance Allocations

##### 242-5.1 CO<sub>2</sub> Budget Trading Program base budget.

(a) [Except as may be modified in accordance with paragraph 242-1.4(b)(4) and section 242-5.3(c) and (d) of this Subpart, the] The CO<sub>2</sub> Budget Trading Program base budget is [64,310,805]35,228,822 tons, [annually] for the [2009 through] 2014 allocation [years] year.

(b) [Except as may be modified in accordance with section 242-1.4(b)(4) of this Part and section 242-5.3(c) and (d) of this Subpart, the ] The CO<sub>2</sub> Budget Trading Program base budget is [62,703,035]34,348,101 tons, for the 2015 allocation year.

(c) [Except as may be modified in accordance with section 242-1.4(b)(4) of this Part and section 242-

5.3(c) and (d) of this Subpart, the] The CO<sub>2</sub> Budget Trading Program base budget is [61,095,265]33,489,399 tons, for the 2016 allocation year.

(d) [Except as may be modified in accordance with section 242-1.4(b)(4) of this Part and section 242-5.3(c) and (d) of this Subpart, the] The CO<sub>2</sub> Budget Trading Program base budget is [59,487,495]32,837,536 tons, for the 2017 allocation year.

(e) [Except as may be modified in accordance with section 242-1.4(b)(4) of this Part and section 242-5.3(c) and (d) of this Subpart, the] The CO<sub>2</sub> Budget Trading Program base budget is [57,879,725]32,016,597 tons, [annually] for the 2018 allocation [year and each succeeding allocation] year.

(f) The CO<sub>2</sub> Budget Trading Program base budget is 31,216,182 tons, for the 2019 allocation year.

(g) The CO<sub>2</sub> Budget Trading Program base budget is 30,435,778 tons, annually for the 2020 allocation year and each succeeding allocation year.

242-5.2 [RESERVED] CO<sub>2</sub> Budget Trading Program adjusted budget.

(a) For allocation years 2014 through 2020, the New York CO<sub>2</sub> Budget Trading Program adjusted budget shall be the maximum number of allowances available for allocation in a given allocation year, except for CO<sub>2</sub> offset allowance and CO<sub>2</sub> CCR allowances. For allocation year 2021 and each succeeding allocation year, the CO<sub>2</sub> Budget Trading Program adjusted budget shall be the same as the CO<sub>2</sub> Budget Trading Program base budget.

(b) 'First control period interim adjustment for banked allowances'. By January 15, 2014 the department shall determine the first control period interim adjustment for banked allowances quantity for allocation years 2014 through 2020 by the following formula:

$$\text{FCPIABA} = (\text{FCPA}/7) \times \text{RS}\%$$

Where:

FCPIABA is the first control period interim adjustment for banked allowances quantity in tons.

FCPA, the first control period adjustment, is the total quantity of allocation year 2009, 2010 and 2011 CO<sub>2</sub> allowances held in general and compliance accounts, including compliance accounts established pursuant to the CO<sub>2</sub> Budget Trading Program, but not including accounts opened by participating states, as reflected in the CO<sub>2</sub> Allowance Tracking System on January 1, 2014.

$$\text{RS}\% \text{ is } 64,310,805/165,184,246$$

(c) 'Second control period interim adjustment for banked allowances'. On March 17, 2014 the department shall determine the second control period interim adjustment for banked allowances quantity for allocation years 2015 through 2020 by the following formula:

$$\text{SCPIABA} = ((\text{SCPA}-\text{SCPE})/6) \times \text{RS}\%$$

Where:

SCPIABA is the second control period interim adjustment for banked allowances quantity in tons.

SCPA, the second control period adjustment, is the total quantity of allocation year 2012 and 2013 CO<sub>2</sub> allowances held in general and compliance accounts, including compliance accounts established pursuant to the CO<sub>2</sub> Budget Trading Program, but not including accounts opened by participating states, as reflected in the CO<sub>2</sub> Allowance Tracking System on March 17, 2014.

SCPE, the second control period emissions, is the total quantity of calendar year 2012 and 2013 emissions from all CO<sub>2</sub> budget sources in all participating states, reported pursuant to the CO<sub>2</sub> Budget Trading Program as reflected in the CO<sub>2</sub> Allowance Tracking System on March 15, 2014.

RS% is 64,310,805/165,184,246

(d) 'CO<sub>2</sub> Budget Trading Program adjusted budget for 2014'. The department shall determine the New York CO<sub>2</sub> Budget Trading Program adjusted budget for the 2014 allocation year by the following formula:

AB = BB – FCPIABA

Where:

AB is the New York CO<sub>2</sub> Budget Trading Program 2014 adjusted budget in tons.

BB is the New York CO<sub>2</sub> Budget Trading Program 2014 base budget in tons.

FCPIABA is the first control period interim adjustment for banked allowances quantity in tons.

(e) 'CO<sub>2</sub> Budget Trading Program adjusted budget s for 2015 through 2020 '. On April 15, 2014, the

department shall determine the New York CO<sub>2</sub> Budget Trading Program adjusted budgets for the 2015 through 2020 allocation years by the following formula:

$$\underline{AB = BB - (FCPIABA + SCPIABA)}$$

Where:

AB is the New York CO<sub>2</sub> Budget Trading Program 2015 through 2020 adjusted budget for each respective allocation year in tons.

BB is the New York CO<sub>2</sub> Budget Trading Program 2015 through 2020 base budget for each respective allocation year in tons.

FCPIABA is the first control period interim adjustment for banked allowances quantity in tons.

SCPIABA is the second control period interim adjustment for banked allowances quantity in tons.

(f) 'Publication of adjusted budgets'. After making the determination in subdivisions 242-5.2(d) and (e), the department or its agent will publish the CO<sub>2</sub> Budget Trading Program adjusted budgets for the 2014 through 2020 allocation years.

242-5.3 CO<sub>2</sub> allowance allocations.

(a) 'Energy efficiency and clean energy technology account'. The department will allocate the CO<sub>2</sub> Budget Trading Program [base]adjusted budget to best achieve the emissions reduction goals of the CO<sub>2</sub> Budget Trading Program by promoting or rewarding investments in energy efficiency, renewable or non-carbon-

emitting technologies, and/or innovative carbon emissions abatement technologies with significant carbon reduction potential.

(1) NYSERDA will establish and administer the energy efficiency and clean energy technology account pursuant to 21 NYCRR Part 507.

(2) The department will allocate most of the CO<sub>2</sub> Budget Trading Program base budget or adjusted budget to the energy efficiency and clean energy technology account.

(3) NYSERDA will administer the energy efficiency and clean technology account so that allowances will be sold in a transparent allowance auction or auctions. The proceeds of the auction or auctions will be used to promote the purposes of the energy efficiency and clean energy technology account and for administrative costs associated with the CO<sub>2</sub> Budget Trading Program. The auction will be carried out to achieve the following objectives: achieve fully transparent and efficient pricing of allowances; promote a liquid allowance market by making entry and trading as easy and low-cost as possible; be open to participation by the categories of bidders determined by NYSERDA or its designee in consultation with the Auction Advisory Committee which meet the minimum financial requirements; monitor for and guard against the exercise of market power and market manipulation; be held as frequently as is needed to achieve design objectives; avoid interference with existing allowance markets; align well with wholesale energy and capacity markets; and be designed to not act as a barrier to efficient investment in relatively clean existing or new electricity generating sources.

(i) NYSERDA, or its agent, will not be obligated to sell any CO<sub>2</sub> allowances for less than the reserve price.

(ii) [All unsold allowances of an allocation year will be made available for sale in the succeeding auction of that allowance's allocation year, or control period if its allocation year has ended, in

which a reserve price greater than the MRP is in effect. At the end of each control period, the Department may retire any unsold allowances from the concluding control period or offer them for sale in a subsequent auction(s) during the subsequent control period (s) in which a reserve price greater than the MRP is in effect .] The department or its agent may retire unsold CO<sub>2</sub> allowances at the end of each control period.

(iii) The department or its agent may retire undistributed CO<sub>2</sub> allowances at the end of each control period.

(b) 'Cost Containment Reserve (CCR) allocation and rules for the sale of CO<sub>2</sub> CCR allowances'. The department shall allocate CO<sub>2</sub> CCR allowances, separate from and additional to the CO<sub>2</sub> Budget Trading Program base budget set forth in section 242-5.1, to the energy efficiency and clean energy technology account. The CCR allocation is for the purpose of containing the cost of CO<sub>2</sub> allowances.

(1) The department shall allocate CO<sub>2</sub> CCR allowances in the following manner:

(i) The department shall initially allocate 1,946,639 CO<sub>2</sub> CCR allowances for allocation year 2014.

(ii) On or before January 1, 2015 and each calendar year thereafter, the department shall allocate CO<sub>2</sub> CCR allowances in an amount equal to 3,893,277, minus the number of CO<sub>2</sub> CCR allowances that remain in the energy efficiency and clean energy technology account at the end of the prior calendar year.

(2) NYSERDA or its agent shall follow these rules for the sale of CO<sub>2</sub> CCR allowances:

(i) CO<sub>2</sub> CCR allowances shall only be sold at an auction in which total demand for allowances, above the CCR trigger price, exceeds the number of CO<sub>2</sub> allowances available for purchase at the auction, not including any CO<sub>2</sub> CCR allowances;

(ii) If the condition of subparagraph (i) of this paragraph is met at an auction, then the number of CO<sub>2</sub> CCR allowances offered for sale by NYSERDA or its agent at the auction shall be equal to the number of CO<sub>2</sub> CCR allowances in the energy efficiency and clean energy technology account at the time of the auction;

(iii) After all of the CO<sub>2</sub> CCR allowances in the energy efficiency and clean energy technology account have been sold in a given calendar year, no additional CO<sub>2</sub> CCR allowances will be sold at any auction for the remainder of the calendar year, even if the condition in subparagraph (i) of this paragraph is met at an auction; and

(iv) At an auction in which CO<sub>2</sub> CCR allowances are sold, the reserve price for that auction shall be the CCR trigger price.

(v) If the condition in subparagraph (i) of this paragraph is not satisfied, no CO<sub>2</sub> CCR allowances shall be offered for sale at the auction, and the reserve price for the auction shall be equal to the minimum reserve price.

(3) NYSERDA or its agent shall implement the reserve price in the following manner:

(i) No allowances shall be sold at any auction for a price below the reserve price for that

auction; and

(ii) If the total demand for allowances at an auction is less than or equal to the number of allowances made available for sale in that auction, then the auction clearing price for the auction shall be the reserve price.

['Early reduction CO<sub>2</sub> allowances'. The department may award early reduction CO<sub>2</sub> allowances (ERAs) to a CO<sub>2</sub> budget source for reductions in the CO<sub>2</sub> budget source's CO<sub>2</sub> emissions (inclusive of all emissions from CO<sub>2</sub> budget units at the CO<sub>2</sub> budget source) that are achieved by the source during the early reduction period (2006, 2007, and 2008), subject to the requirements of this subdivision. Total facility shutdowns or reductions that result from enforcement actions shall not be eligible for ERAs.

(1) The CO<sub>2</sub> budget source must submit its application for the award of ERAs by May 1, 2009.

(2) The CO<sub>2</sub> budget source must demonstrate that all CO<sub>2</sub> budget units that existed at the source during the baseline period (2003, 2004, and 2005) are included as CO<sub>2</sub> budget units for the early reduction period. New CO<sub>2</sub> budget units added at the CO<sub>2</sub> budget source must also be accounted for during the early reduction period.

(3) The department will calculate the number of ERAs to be awarded to a particular CO<sub>2</sub> budget source for the early reduction period pursuant to the following methodology:

(i) If total heat input to all CO<sub>2</sub> budget units at the CO<sub>2</sub> budget source during the early reduction period is less than or equal to the total heat input to all the CO<sub>2</sub> budget units at the CO<sub>2</sub> budget source

during the baseline period, then:

(a) ERAs shall be calculated as follows:

$$\text{ERAs} = ((\text{AEER}_{\text{BASELINE}} - \text{AEER}_{\text{ERP}}) \times (\text{EO}_{\text{ERP}} + (\text{TO}_{\text{ERP}} / 3.413))) / 2000$$

where:

“ $\text{AEER}_{\text{BASELINE}}$ ” is the average  $\text{CO}_2$  emissions rate resulting from net electrical output and useful thermal energy for all of the  $\text{CO}_2$  budget units at the  $\text{CO}_2$  budget source during the baseline period (in pounds of  $\text{CO}_2/\text{MWh}_{\text{th+e}}$ );

“ $\text{AEER}_{\text{ERP}}$ ” is the average  $\text{CO}_2$  emissions rate resulting from net electrical output and useful thermal output for all of the  $\text{CO}_2$  budget units at the  $\text{CO}_2$  budget source during the early reduction period (in pounds of  $\text{CO}_2/\text{MWh}_{\text{th+e}}$ );

“ $\text{MWh}_{\text{th+e}}$ ” is thermal plus electrical megawatt-hours;

“ $\text{EO}_{\text{ERP}}$ ” is the total net electrical output from all  $\text{CO}_2$  budget units at the  $\text{CO}_2$  budget source during the early reduction period (in  $\text{MWh}_e$ );

“ $\text{MWh}_e$ ” is electrical megawatt-hours;

“ $\text{TO}_{\text{ERP}}$ ” is the total useful thermal energy from all  $\text{CO}_2$  budget units at the  $\text{CO}_2$  budget source during the early reduction period (in  $\text{MMBtu}$ );

(b) For the purposes of this section, useful thermal energy will be converted to units of MWh by the conversion factor  $1 \text{ MWh} = 3.413 \text{ MMBtu}$ .

(c) For the purposes of this section, output shall be monitored in accordance with Subpart 242-8 of this Part.

(ii) If total heat input to all CO<sub>2</sub> budget units at the CO<sub>2</sub> budget source during the early reduction period is greater than or equal to the total heat input to all the CO<sub>2</sub> budget units at the CO<sub>2</sub> budget source during the baseline period, then:

$$\text{ERAs} = E_{\text{BASELINE}} - E_{\text{ERP}}$$

where:

“ $E_{\text{BASELINE}}$ ” are total CO<sub>2</sub> emissions from the all of the CO<sub>2</sub> budget units at the CO<sub>2</sub> budget source during the baseline period (in tons); and

“ $E_{\text{ERP}}$ ” are total CO<sub>2</sub> emissions from the all of the CO<sub>2</sub> budget units at the CO<sub>2</sub> budget source during the early reduction period (in tons).

(4) The CO<sub>2</sub> budget source must demonstrate that the data submitted in support of the early reduction application was recorded in compliance with the requirements of Subpart 242-8 of this Part for all of the baseline years and the early reduction years for which the CO<sub>2</sub> budget source was required to report CO<sub>2</sub> data pursuant to 40 CFR part 75. A CO<sub>2</sub> budget source that was not required to submit CO<sub>2</sub> data pursuant to 40 CFR part 75 for any of the years contained in the baseline period or early reduction period may petition the department as part of its application under this Subpart for the use of an alternative data source or sources for the

calculation of early reduction allowances.

(5) Once the department confirms a CO<sub>2</sub> budget source's early reductions of CO<sub>2</sub> emissions, it shall award the ERAs to the CO<sub>2</sub> budget source's compliance account by December 31, 2009.]

(c) 'Voluntary renewable energy market and eligible biomass set-aside allocation.' The department shall allocate 700,000 tons to the voluntary renewable energy market and eligible biomass set-aside account from the CO<sub>2</sub> Budget Trading Program annual [base]adjusted budget set forth in section 242- [5.1]5.2 of this Part , as applicable. The department shall administer the voluntary renewable energy and eligible biomass set-aside account in accordance with the following procedures.

(1) The department will open and manage a general account for the voluntary renewable energy market and eligible biomass set-aside account [for each allocation year].

(2) [The sponsor for a voluntary renewable energy purchase must establish a general account under subdivision 242-6.2(b) of this Part .] All submissions to the department required for the retirement of an allowance from the voluntary renewable energy market and eligible biomass set-aside account under this [section]subdivision must be from the sponsor of a voluntary renewable energy purchase, herein referred to as the "VREP applicant" or the CO<sub>2</sub> authorized account representative for a CO<sub>2</sub> budget source co-firing eligible biomass. [for the general account, herein referred to as the "VREP applicant."]

The remainder of 242-5.3 is repealed and replaced as follows:

(3) A VREP applicant or a CO<sub>2</sub> authorized account representative for a CO<sub>2</sub> budget source co-

firing eligible biomass may submit a written request to the department to retire a specified number of CO<sub>2</sub> allowances in the voluntary renewable energy market and eligible biomass set-aside account, herein referred to as a “VREEB application.” A VREEB application must be submitted by the March 1<sup>st</sup>, immediately following the allocation year for which it is being made and must include information to assure that

(i) a voluntary renewable energy purchase demonstrates accreditable CO<sub>2</sub> emissions reductions or avoidance during the control period in accordance with department measurement and verification protocol; or

(ii) for a CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget source co-firing eligible biomass as a compliance mechanism, CO<sub>2</sub> emissions from the CO<sub>2</sub> budget source are attributable to the burning of fuel that the department has determined is eligible biomass.

(4) A VREEB application regarding a voluntary renewable energy purchase shall contain data documenting purchases of voluntary renewable energy that meet the requirements of this subdivision. Such data must be from reputable sources, which may include retail electricity providers, organizations that certify renewable energy products, and other parties as determined by the department. To be considered, data must be verifiable and document the following for voluntary renewable energy purchases:

(i) Documentation of voluntary renewable energy or renewable energy attribute credit purchases by retail customers, by customer class, in the State during the control period immediately preceding the application date.

(ii) Documentation that the renewable energy or renewable energy attributes

related to voluntary renewable energy or renewable energy attribute credit sales were procured by the retail provider.

(iii) Time period when the retail purchase(s) was made.

(iv) State where the electricity was generated or the renewable energy attribute credit was created, including documentation of facility name, unique generator identification number, and fuel type.

(v) Time period when the electricity was generated or the renewable energy attribute credit was created.

(5) By the October 31<sup>st</sup> following the March 1<sup>st</sup> application deadline established in paragraph (2) of this subdivision, the department shall determine the actual MWh of voluntary renewable energy market purchases that occurred during the allocation year. The department shall retire CO<sub>2</sub> allowances in the voluntary renewable energy and eligible biomass set-aside account in an amount up to the number of tons of CO<sub>2</sub> represented by actual voluntary renewable energy market purchases, based on actual MWh purchases demonstrated by each project sponsor as follows:

$$\text{CO}_2 \text{ tons} = \text{MP} \times \text{EF}$$

where:

CO<sub>2</sub> tons, rounded down to the nearest whole ton, is the number of allowances to be placed in the retirement account.

MP is the MWh of voluntary renewable energy purchased in the State during the control period that meets the requirements of this subdivision.

EF is the CO<sub>2</sub> emissions factor for the control area where the electricity represented by the sale was generated.

(6) A VREEB application submitted by a CO<sub>2</sub> authorized account representative for a CO<sub>2</sub> budget source co-firing eligible biomass as a compliance mechanism shall contain the following information:

(i) Documentation of the department's determination that fuel combusted at the CO<sub>2</sub> budget source is eligible biomass.

(ii) The number of tons of CO<sub>2</sub> emissions from the CO<sub>2</sub> budget source attributable to the burning of eligible biomass during the allocation year, as calculated pursuant to section 242-8.7 of this Part and any other department-approved method.

(iii) By the October 31<sup>st</sup> following the March 1<sup>st</sup> application deadline established in paragraph (2) of this subdivision, the department shall determine the actual number of tons of CO<sub>2</sub> emissions from the CO<sub>2</sub> budget source attributable to the burning of eligible biomass during the allocation year. The department shall retire CO<sub>2</sub> allowances in the voluntary renewable energy and eligible biomass set-aside account in an amount up to such number of tons of CO<sub>2</sub> emissions.

(7) If more than one VREP applicant or CO<sub>2</sub> authorized account representative requests the retirement of CO<sub>2</sub> allowances pursuant to this subdivision, and the number of CO<sub>2</sub> allowances that are subject to department approved requests exceeds the number of CO<sub>2</sub> allowances in the voluntary renewable energy market

and eligible biomass set-aside account as of December 31 of the previous calendar year , the department will retire CO<sub>2</sub> allowances from the account for the VREP applicants and CO<sub>2</sub> authorized account representatives in the order in which the VREP applicants and CO<sub>2</sub> authorized account representatives submitted approvable retirement requests. For purposes of this paragraph, VREEB applications will be considered simultaneous if they are made in the same month. Should approvable VREEB applications in excess of the allocation to the relevant voluntary renewable energy market and eligible biomass set-aside account as of December 31 of the previous calendar year be submitted in the same month by different VREP applicants and CO<sub>2</sub> authorized account representatives , the department will retire CO<sub>2</sub> allowances for those VREP applicants and CO<sub>2</sub> authorized account representatives on a basis proportional to the number of CO<sub>2</sub> allowances requested by each VREP applicant and CO<sub>2</sub> authorized account representative.

(8) 'Flow back of undistributed CO<sub>2</sub> allowances from the voluntary renewable energy market and eligible biomass set-aside account'. After retiring allowances pursuant to this subdivision for an allocation year, any remaining CO<sub>2</sub> allowances will either remain in the voluntary renewable energy market and eligible biomass set-aside account or be transferred to the energy efficiency and clean energy technology account.

(d) 'Long term contract set-aside allocation. ' The department shall allocate 1,500,000 tons to the long term contract set-aside account from the CO<sub>2</sub> Budget Trading Program annual adjusted budget set forth in section 242-5.2 of this Part , as applicable . The department shall administer the long term contract set-aside account in accordance with the following procedures.

(1) The department will open and manage a general account for the long term contract set-aside account for each allocation year.

(2) The sponsor for a long term contract hardship demonstration must establish a compliance account under subdivision 242-6.2(a) of this Part. All submissions to the department required for the reward of allowances from the long term contract set-aside account under this section must be from the CO<sub>2</sub> authorized account representative for the compliance account, herein referred to as the “LTC applicant.”

(3) The LTC applicant may submit a written request to the department for the reward of a specified number of CO<sub>2</sub> allowances in the long term contract set-aside account. This request must be submitted by the December 1<sup>st</sup>, immediately preceding the allocation year for which it is being made and must include information to assure, to the department’s satisfaction, that:

(i) the long term contract was entered into prior to March 2006;

(ii) the LTC applicant’s purchase of allowances at auction or in the secondary market leads to financial hardship, because the LTC applicant is unable to pass on the cost of CO<sub>2</sub> allowances to the purchasing party under the conditions of the long term contract; and

(iii) each CO<sub>2</sub> budget unit at the CO<sub>2</sub> budget source covered by the long term contract uses natural gas as its primary fuel, or the CO<sub>2</sub> budget source’s emission rate is no higher than 1100 lbs/MWhr.

(4) The written request submitted pursuant to paragraph (3) of this subdivision shall contain, at a minimum, the following information.

(i) A copy of the long term contract and explanation that the LTC applicant is unable to:

(‘a’) pass the cost of allowances on to the purchasing party, or

(‘b’) renegotiate the terms of the contract;

(ii) Financial statements from each of the previous five years that clearly demonstrate the revenues and expenses of the LTC applicant’s budget source;

(iii) Fuel, total net output and emissions data from the previous three year period;

(iv) The portion of emissions from the CO<sub>2</sub> budget unit or units covered by the long term contract during the upcoming year;

(v) Costs associated with the CO<sub>2</sub> Budget Trading Program compared to all other costs associated with the operation of the CO<sub>2</sub> budget unit or units; and

(vi) A demonstration that the LTC applicant will suffer losses in excess of the value of allowances sought, supported by projected costs and revenues for the allocation year for which the LTC application pertains.

(5) Except as may be modified by paragraphs (6) or (9) of this subdivision, the department will determine the number of CO<sub>2</sub> allowances to be allocated to each LTC applicant that the department determines meets the eligibility requirements of paragraph (3) of this subdivision, in accordance with the following procedures:

LTC Allowances = (((LTCer) x (TO))/2000) -RLTCA;

where:

“LTC Allowances” are the result of the calculation;

“LTCer” is the applicable emission rate

“TO” is total net output from the LTC facility;

“RLTCA” is the number of allowances remaining in an LTC applicant’s compliance account

(i) For the purposes of this subdivision, total net output shall be the greatest total net output experienced by the unit for any single calendar year among the three calendar years, for which data is submitted, proceeding the date by which the department must make the CO<sub>2</sub> allocations pursuant to this subdivision.

(ii) For the purposes of this subdivision, the “LTCer” will be the lesser of the actual emission rate included in the application and 1100 lbs/MWhr.

(iii) For the purposes of this subdivision, there will be no “RLTCA” for the first application, but for each subsequent application, the department will determine the “RLTCA” to be the difference between the allowances in the LTC applicant’s compliance account and actual emissions for that allocation year.

(6) The number of CO<sub>2</sub> allowances to be allocated to an eligible LTC applicant, as determined pursuant to paragraph (5) of this subdivision, shall be discounted by the department as follows, if applicable:

(i) by the percentage of CO<sub>2</sub> allowance cost that the LTC applicant is able to pass on to the purchasing party; and

(ii) by the percentage of CO<sub>2</sub> emissions from the CO<sub>2</sub> budget source that are not covered by the long term contract.

(7) Allowances will be allocated to the LTC applicant's compliance account.

(8) Allowances allocated pursuant to this subdivision must only be used for compliance with the CO<sub>2</sub> budget emissions limitation for the source. The sale or transfer of allowances from the LTC applicant's compliance account will be considered a violation of this subdivision.

(9) If more than one LTC applicant requests the award of CO<sub>2</sub> allowances and the number of CO<sub>2</sub> allowances that are subject to the department approved requests exceeds the number of CO<sub>2</sub> allowances in the relevant long term contract set-aside account, the department will award CO<sub>2</sub> allowances for those LTC applicants on a basis proportional to the number of CO<sub>2</sub> allowances requested by each LTC applicant.

(10) 'Flow back of undistributed CO<sub>2</sub> allowances from the long term contract set-aside account'. After allocating allowances pursuant to this subdivision for an allocation year, the department will transfer any remaining CO<sub>2</sub> allowances from the long term contract set-aside account to the energy efficiency and clean energy technology account.

Existing section 242-6.1 through subdivision 242-6.2(a) remains unchanged.

(b) 'General accounts'.

(1) 'Application for general account'. Any person may apply to open a general account for the purpose of holding and transferring CO<sub>2</sub> allowances. An application for a general account may designate one

and only one CO<sub>2</sub> authorized account representative and one and only one alternate CO<sub>2</sub> authorized account representative who may act on behalf of the CO<sub>2</sub> authorized account representative. The agreement by which the alternate CO<sub>2</sub> authorized account representative is selected shall include a procedure for authorizing the alternate CO<sub>2</sub> authorized account representative to act in lieu of the CO<sub>2</sub> authorized account representative. A complete application for a general account shall be submitted to the department or its agent and shall include the following elements in a format prescribed by the department or its agent:

(i) name, address, e-mail address, and telephone number [, and facsimile transmission number] of the CO<sub>2</sub> authorized account representative and any alternate CO<sub>2</sub> authorized account representative;

Existing subparagraph 242-6.2(b)(1)(ii) through paragraph 242-6.2(b)(4) remains unchanged.

(5) ‘Delegation by CO<sub>2</sub> authorized account representative and alternate CO<sub>2</sub> authorized account representative’.

(i) A CO<sub>2</sub> authorized account representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the department or its agent provided for under Subparts 242-6 and 242-7 of this Part.

(ii) An alternate CO<sub>2</sub> authorized account representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the department or its agent provided for under Subparts 242-6 and 242-7 of this Part.

(iii) In order to delegate authority to make an electronic submission to the department or its agent in accordance with Subparagraphs (i) and (ii) of this paragraph, the CO<sub>2</sub> authorized account representative or alternate CO<sub>2</sub> authorized account representative, as appropriate, must submit to the department or its agent a notice of delegation, in a format prescribed by the department that includes the following elements:

(a) The name, address, e-mail address, and telephone number [, and facsimile transmission number ] of such CO<sub>2</sub> authorized account representative or alternate CO<sub>2</sub> authorized account representative;

(b) The name, address, e-mail address, and telephone number [and facsimile transmission number] of each such natural person, herein referred to as “electronic submission agent”;

Existing clause 242-6.2(b)(5)(iii)(c) through section 242-6.3 remains unchanged.

#### 242-6.4 Recordation of CO<sub>2</sub> allowance allocations.

(a) By January 1 [, 2009 ]of each allocation year, the department or its agent will record the CO<sub>2</sub> allowances for that allocation year in the energy efficiency and clean energy technology account, the voluntary renewable energy market and eligible biomass set-aside account, and the long term contract set-aside account [, the CO<sub>2</sub> allowances for all allocation years]. For allocation year 2014, the department shall deduct the amount of allocation year 2014 CO<sub>2</sub> allowances held in general and compliance accounts as of January 1, 2014 from the amount of 2014 allocation year CO<sub>2</sub> allowances to be recorded in the energy efficiency and c lean energy technology account.

(b) ‘Serial numbers for allocated CO<sub>2</sub> allowances’. When allocating CO<sub>2</sub> allowances to and recording them in an account, the department or its agent will assign each CO<sub>2</sub> allowance a unique identification number that will include digits identifying the year for which the CO<sub>2</sub> allowance is allocated.

[(c) On or before December 31, 2009, the Department shall record any ERAs awarded pursuant to 242-5.3(b)(5) of this Part in the CO<sub>2</sub> budget source’s compliance account.]

#### 242-6.5 Compliance.

(a) ‘ Allowances available for compliance deduction ’. CO<sub>2</sub> allowances that meet the following criteria are available to be deducted in order for a CO<sub>2</sub> budget source to comply with the CO<sub>2</sub> requirements of 242-1.5(c) of this Part for a control period or an interim control period.

(1) The CO<sub>2</sub> allowances, other than CO<sub>2</sub> offset allowances, are of allocation years that fall within a prior control period, the same control period or the same interim control period for which the allowances will be deducted.

(2) The CO<sub>2</sub> allowances are held in the CO<sub>2</sub> budget source’s compliance account as of the CO<sub>2</sub> allowance transfer deadline for that control period or interim control period or are transferred into the compliance account by a CO<sub>2</sub> allowance transfer correctly submitted for recordation under section 242-7.1 of this Part by the CO<sub>2</sub> allowance transfer deadline for that control period or interim control period.

(3) For CO<sub>2</sub> offset allowances, the number of CO<sub>2</sub> offset allowances that are available to be deducted in order for a CO<sub>2</sub> budget source to comply with the CO<sub>2</sub> requirements under subdivision 242-1.5(c) of this Part for a control period or an interim control period may not exceed [the number of tons representing the

following percentages] 3.3 percent of the CO<sub>2</sub> budget source's CO<sub>2</sub> emissions for that control period, or of 0.50 times the CO<sub>2</sub> budget source's CO<sub>2</sub> emissions for an interim control period. as determined in accordance with Subparts 242-6 and 242-8 of this Part[.].

(i) unless the provisions of Subparagraphs (ii) or (iii) of this paragraph apply, 3.3 percent;

(ii) if the department determines that there has been a stage one trigger event, five percent;

(iii) if the department determines that there has been a stage two trigger event, 10 percent.]

(4) The CO<sub>2</sub> allowances are not necessary for deductions for excess emissions for a prior control period under subdivision (d) of this section.

(b) 'Deductions for compliance'. Following the recordation, in accordance with section 242-7.2 of this Part, of CO<sub>2</sub> allowance transfers submitted for recordation in the CO<sub>2</sub> budget source's compliance account by the CO<sub>2</sub> allowance transfer deadline for a control period or interim control period, the department or its agent will deduct CO<sub>2</sub> allowances available under subdivision (a) of this section to cover the source's CO<sub>2</sub> emissions (as determined in accordance with Subpart 242-8 of this Part) for the control period or interim control period, as follows:

(1) until the amount of CO<sub>2</sub> allowances deducted equals the number of tons of total CO<sub>2</sub> emissions[,] less the CO<sub>2</sub> allowances deducted to meet the requirements of paragraph 242-1.5(c)(2) with respect to the previous two interim control periods, or 0.50 times the number of tons of total CO<sub>2</sub> emissions for an

interim control period, less any CO<sub>2</sub> emissions attributable to the burning of eligible biomass, determined in accordance with Subpart 242-8 of this Part from all CO<sub>2</sub> budget units at the CO<sub>2</sub> budget source for the control period or interim control period; or

(2) if there are insufficient CO<sub>2</sub> allowances to complete the deductions in paragraph (1) of this subdivision, until no more CO<sub>2</sub> allowances available under subdivision (a) of this section remain in the compliance account.

(c) 'Identification of available CO<sub>2</sub> allowances by serial number; default compliance deductions'.

(1) The CO<sub>2</sub> authorized account representative for a source's compliance account may request that specific CO<sub>2</sub> allowances, identified by serial number, in the compliance account be deducted for emissions or excess emissions for a control period or interim control period in accordance with subdivision (b), or (d) of this section. Such identification shall be made in the compliance certification report submitted in accordance with section 242-4.1 of this Part.

(2) The department or its agent will deduct CO<sub>2</sub> allowances for a control period or interim control period from the CO<sub>2</sub> budget source's compliance account, in the absence of an identification or in the case of a partial identification of available CO<sub>2</sub> allowances by serial number under paragraph (1) of this subdivision, in the following order:

(i) first, subject to the relevant compliance deduction limitations under paragraphs (a)(3) and (d)(1) of this section, CO<sub>2</sub> offset allowances. CO<sub>2</sub> offset allowances shall be deducted in chronological order ('i.e.', CO<sub>2</sub> offset allowances from earlier allocation years shall be deducted before CO<sub>2</sub> offset allowances from later allocation years). In the event that some, but not all CO<sub>2</sub> offset allowances from a particular

allocation year are to be deducted, CO<sub>2</sub> allowances shall be deducted by serial number, with lower serial numbered allowances deducted before higher serial numbered allowances.

(ii) Second, any CO<sub>2</sub> allowances, other than CO<sub>2</sub> offset allowances, which are available for deduction under subdivision (a) of this section. CO<sub>2</sub> allowances shall be deducted in chronological order ('i.e.', CO<sub>2</sub> allowances from earlier allocation years shall be deducted before CO<sub>2</sub> allowances from later allocation years). In the event that some, but not all CO<sub>2</sub> allowances from a particular allocation year are to be deducted, CO<sub>2</sub> allowances shall be deducted by serial number, with lower serial numbered allowances deducted before higher serial numbered allowances.

(d) 'Deductions for excess emissions'.

(1) After making the deductions for compliance under subdivision (b) of this section, the department or its agent will deduct from the CO<sub>2</sub> budget source's compliance account a number of CO<sub>2</sub> allowances, from allocation years that occur after the control period in which the source has excess emissions, equal to three times the number of the source's excess emissions. In the event that a source has insufficient CO<sub>2</sub> allowances to cover three times the number of the source's excess emissions, the source shall be required to immediately transfer sufficient allowances into its compliance account. No CO<sub>2</sub> offset allowances may be deducted to account for the source's excess emissions.

(2) Any CO<sub>2</sub> allowance deduction required under paragraph (1) of this subdivision shall not affect the liability of the owners and operators of the CO<sub>2</sub> budget source or the CO<sub>2</sub> units at the source for any fine, penalty, or assessment, or their obligation to comply with any other remedy, for the same violation, as ordered under applicable State law. The following guidelines will be followed in assessing fines, penalties or other obligations.

(i) For purposes of determining the number of days of violation, if a CO<sub>2</sub> budget source has excess emissions for a control period, each day in the control period constitutes a day in violation unless the owners and operators of the unit demonstrate that a lesser number of days should be considered.

(ii) Each ton of excess emissions is a separate violation.

(iii) For the purposes of determining the number of days of violation, if a CO<sub>2</sub> budget source has excess interim emissions for an interim control period, each day in the interim control period constitutes a day in violation unless the owners and operators of the unit demonstrate that a lesser number of days should be considered.

(iv) Each ton of excess interim emissions is a separate violation.

Existing paragraph 242-6.5(d)(3) through section 242-7.1 remains unchanged.

#### 242-7.2 Recordation.

(a) Within five business days of receiving a CO<sub>2</sub> allowance transfer, except as provided in subdivision (b) of this section, the department or its agent will record a CO<sub>2</sub> allowance transfer by moving each CO<sub>2</sub> allowance from the transferor account to the transferee account as specified by the request, provided that:

(1) the transfer is correctly submitted under section 242-7.1 of this Part; and

(2) the transferor account includes each CO<sub>2</sub> allowance identified by serial number in the transfer.

(b) A CO<sub>2</sub> allowance transfer into or out of a compliance account that is submitted for recordation following the CO<sub>2</sub> allowance transfer deadline and that includes any CO<sub>2</sub> allowances that are of allocation years that fall within a control period or interim control period prior to or the same as the control period or interim control period to which the CO<sub>2</sub> allowance transfer deadline applies will not be recorded until after completion of the process pursuant to section 242-6.5 of this Part.

(c) Where a CO<sub>2</sub> allowance transfer submitted for recordation fails to meet the requirements of subdivision (a) of this section, the department or its agent will not record such transfer.

#### 242-7.3 Notification.

(a) 'Notification of recordation'. Within five business days of recordation of a CO<sub>2</sub> allowance transfer under section 242-7.2 of this Part, the department or its agent will notify each party to the transfer. Notice will be given to the CO<sub>2</sub> authorized account representatives of both the transferor and transferee accounts.

(b) 'Notification of non-recordation'. Within 10 business days of receipt of a CO<sub>2</sub> allowance transfer that fails to meet the requirements of section 242-7.2(a) of this Subpart, the department or its agent will notify the CO<sub>2</sub> authorized account representatives of both accounts subject to the transfer of:

(1) a decision not to record the transfer, and

(2) the reasons for such non-recordation.

(c) Nothing in this section shall preclude the submission of a CO<sub>2</sub> allowance transfer for recordation

following notification of non-recording.

## Subpart 242-8 Monitoring and Reporting

### 242-8.1 General requirements.

The owners and operators, and to the extent applicable, the CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget unit, shall comply with the monitoring, recordkeeping and reporting requirements as provided in this Subpart and all applicable sections of 40 CFR part 75 (see Table 1, section 200.9 of this Title). Where referenced in the Subpart, the monitoring requirements of 40 CFR part 75 (see Table 1, section 200.9 of this Title) shall be adhered to in a manner consistent with the purpose of monitoring and reporting CO<sub>2</sub> mass emissions pursuant to this Subpart. For purposes of complying with such requirements, the definitions in section 242-1.2 of this Part and in 40 CFR 72.2 (see Table 1, section 200.9 of this Title) shall apply, and the terms “affected unit,” “designated representative,” and “continuous emissions monitoring system” (or “CEMS”) in 40 CFR part 75 (see Table 1, section 200.9 of this Title) shall be replaced by the terms “CO<sub>2</sub> budget unit,” “CO<sub>2</sub> authorized account representative,” and “continuous emissions monitoring system” (or “CEMS”), respectively, as defined in section 242-1.2 of this Part. For units not subject to an Acid Rain emissions limitation, the term “Administrator” in 40 CFR part 75 (see Table 1, section 200.9 of this Title) shall be replaced with “the department or its agent.” Owners or operators of a CO<sub>2</sub> budget unit who monitor a non-CO<sub>2</sub> budget unit pursuant to the common, multiple, or bypass stack procedures in 40 CFR 75.72(b)(2)(ii), or 40 CFR 75.16(b)(2)(ii)(B) as pursuant to 40 CFR 75.13 (see Table 1, section 200.9 of this Title), for purposes of complying with this Part, shall monitor and report CO<sub>2</sub> mass emissions from such non-CO<sub>2</sub> budget unit according to the procedures for CO<sub>2</sub> budget units established in sections 242-8.1 through 242-8.7 of this Part.

(a) ‘ Requirements for installation, certification, and data accounting ’. The owner or operator of each CO<sub>2</sub> budget unit must meet the following requirements.

(1) Install all monitoring systems necessary to monitor CO<sub>2</sub> mass emissions in accordance with 40 CFR part 75 (see Table 1, section 200.9 of this Title), except for equation G1. Equation G1 in Appendix G shall not be used to determine CO<sub>2</sub> emissions under this Part . This may require systems to monitor CO<sub>2</sub> concentration, stack gas flow rate, O<sub>2</sub> concentration, heat input, and fuel flow rate.

(2) Successfully complete all certification tests required under section 242-8.2 of this Part and meet all other requirements of this Subpart and 40 CFR part 75 (see Table 1, section 200.9 of this Title) applicable to the monitoring systems under paragraph (1) of this subdivision.

(3) Record, report and quality-assure the data from the monitoring systems under paragraph (1) of this subdivision.

(b) 'Compliance dates'. The owner or operator shall meet the monitoring system certification and other requirements of paragraphs (a)(1) through (a)(3) of this section on or before the following dates. The owner or operator shall record, report and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section on and after the following dates.

(1) The owner or operator of a CO<sub>2</sub> budget unit, except for a CO<sub>2</sub> budget unit under paragraph (2) of this subdivision, that commences commercial operation before July 1, 2008, must comply with the requirements of this Subpart by January 1, 2009.

(2) The owner or operator of a CO<sub>2</sub> budget unit that commences commercial operation on or after July 1, 2008 must comply with the requirements of this Subpart by the later of the following dates:

(i) January 1, 2009; or

(ii) the earlier of:

(‘a’) 90 unit operating days after the date on which the unit commences commercial operation; or

(‘b’) 180 calendar days after the date on which the unit commences commercial operation.

(3) For the owner or operator of a CO<sub>2</sub> budget unit for which construction of a new stack or flue installation is completed after the applicable deadline under paragraph (1) or (2) of this subdivision by the earlier of:

(i) 90 unit operating days after the date on which emissions first exit to the atmosphere through the new stack or flue; or

(ii) 180 calendar days after the date on which emissions first exit to the atmosphere through the new stack or flue.

(c) ‘Reporting data’.

(1) Except as provided in paragraph (2) of this subdivision, the owner or operator of a CO<sub>2</sub> budget unit that does not meet the applicable compliance date set forth in paragraphs (b)(1), (2) and (3) of this section for any monitoring system under paragraph (a)(1) of this section shall, for each such monitoring system, determine, record, and report maximum potential (or as appropriate minimum potential) values for CO<sub>2</sub>

concentration, CO<sub>2</sub> emissions rate, stack gas moisture content, fuel flow rate, heat input and any other parameter required to determine CO<sub>2</sub> mass emissions in accordance with 40 CFR 75.31(b)(2) or (c)(3), or section 2.4 of appendix D of 40 CFR part 75 (see Table 1, section 200.9 of this Title) as applicable.

(2) The owner or operator of a CO<sub>2</sub> budget unit that does not meet the applicable compliance date set forth in paragraph (b)(3) of this section for any monitoring system under paragraph (a)(1) of this section shall, for each such monitoring system, determine, record, and report substitute data using the applicable missing data procedures in subpart D or appendix D of 40 CFR part 75 (see Table 1, section 200.9 of this Title), in lieu of the maximum potential (or as appropriate minimum potential) values for a parameter if the owner or operator demonstrates that there is continuity between the data streams for that parameter before and after the construction or installation under paragraph (b)(3) of this section.

(3) Low Mass Emissions Methodologies (LME).

(i) CO<sub>2</sub> budget units subject to an acid rain emissions limitation or [[state-specific annual or ozone season CAIR citation]] Parts 243, 244 and 245 of this Title that qualify for the optional SO<sub>2</sub>, NO<sub>x</sub>, and CO<sub>2</sub> (for acid rain) or NO<sub>x</sub> (for [[state-specific annual or ozone season CAIR citation]]) Parts 243, 244 and 245 of this Title) emissions calculations for LME units under 40 CFR 75.19 (see Table 1, section 200.9 of this Title) and report emissions for such programs using the calculations under 40 CFR 75.19 (see Table 1, section 200.9 of this Title), shall also use the CO<sub>2</sub> emissions calculations for LME units under 40 CFR 75.19 (see Table 1, section 200.9 of this Title) for purposes of compliance with this Subpart.

(ii) CO<sub>2</sub> budget units subject to an acid rain emissions limitation or [[state-specific annual or ozone season CAIR citation]] Parts 243, 244 and 245 of this Title that do not qualify for the optional SO<sub>2</sub>, NO<sub>x</sub>, and CO<sub>2</sub> (for acid rain) or NO<sub>x</sub> (for [[state-specific annual or ozone season CAIR citation]]) Parts 243, 244

and 245 of this Title) emissions calculations for LME units under 40 CFR 75.19 (see Table 1, section 200.9 of this Title), shall not use the CO<sub>2</sub> emissions calculations for LME units under 40 CFR 75.19 (see Table 1, section 200.9 of this Title) for purposes of compliance with this Subpart.

(iii) CO<sub>2</sub> budget units not subject to an acid rain emissions limitation or [[state-specific annual or ozone season CAIR citation]] Parts 243, 244 and 245 of this Title shall qualify for the optional CO<sub>2</sub> emissions calculation for LME units under 40 CFR 75.19 (see Table 1, section 200.9 of this Title), provided that they emit less than 100 tons of NO<sub>x</sub> annually and no more than 25 tons of SO<sub>2</sub> annually.

(d) 'Prohibitions'.

(1) No owner or operator of a CO<sub>2</sub> budget unit shall use any alternative monitoring system, alternative reference method, or any other alternative for the required continuous emissions monitoring system without having obtained prior written approval in accordance with section 242-8.6 of this Part.

(2) No owner or operator of a CO<sub>2</sub> budget unit shall operate the unit so as to discharge, or allow to be discharged, CO<sub>2</sub> emissions to the atmosphere without accounting for all such emissions in accordance with the applicable provisions of this Subpart and 40 CFR part 75 (see Table 1, section 200.9 of this Title).

(3) No owner or operator of a CO<sub>2</sub> budget unit shall disrupt the continuous emissions monitoring system, any portion thereof, or any other approved emissions monitoring method, and thereby avoid monitoring and recording CO<sub>2</sub> mass emissions discharged into the atmosphere, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in accordance with the applicable provisions of this Subpart and 40 CFR part 75 (see Table 1, section 200.9 of this Title).

(4) No owner or operator of a CO<sub>2</sub> budget unit shall retire or permanently discontinue use of the continuous emissions monitoring system, any component thereof, or any other approved emissions monitoring system under this Subpart, except under any one of the following circumstances:

(i) The owner or operator is monitoring emissions from the unit with another certified monitoring system approved, in accordance with the applicable provisions of this Subpart and 40 CFR part 75 (see Table 1, section 200.9 of this Title), by the department for use at that unit that provides emissions data for the same pollutant or parameter as the retired or discontinued monitoring system; or

(ii) The CO<sub>2</sub> authorized account representative submits notification of the date of certification testing of a replacement monitoring system in accordance with section 242-8.2(d)(3)(i) of this Subpart.

242-8.2 Initial certification and recertification procedures.

(a) The owner or operator of a CO<sub>2</sub> budget unit shall be exempt from the initial certification requirements of this section for a monitoring system under sectionh 242-8.1(a)(1) of this Subpart if the following conditions are met:

(1) the monitoring system has been previously certified in accordance with 40 CFR part 75 (see Table 1, section 200.9 of this Title); and

(2) the applicable quality-assurance and quality-control requirements of 40 CFR 75.21 and appendix B and appendix D of 40 CFR part 75 (see Table 1, section 200.9 of this Title) are fully met for the certified monitoring system described in paragraph (1) of this subdivision.

(b) The recertification provisions of this section shall apply to a monitoring system under section 242-8.1(a)(1) of this Subpart exempt from initial certification requirements under subdivision (a) of this section.

(c) Notwithstanding subdivision (a) of this section, if the administrator has previously approved a petition under 40 CFR 75.72(b)(2)(ii), or 40 CFR 75.16(b)(2)(ii)(B) as pursuant to 40 CFR 75.13 (see Table 1, section 200.9 of this Title) for apportioning the CO<sub>2</sub> emissions rate measured in a common stack or a petition under 40 CFR 75.66 (see Table 1, section 200.9 of this Title) of this chapter for an alternative requirement in 40 CFR part 75 (see Table 1, section 200.9 of this Title), the CO<sub>2</sub> authorized account representative shall submit the petition to the department under section 242-8.6(a) of this Subpart to determine whether the approval applies under this program.

(d) Except as provided in subdivision (a) of this section, the owner or operator of a CO<sub>2</sub> budget unit shall comply with the following initial certification and recertification procedures for a continuous emissions monitoring system and an excepted monitoring system under appendix D of 40 CFR part 75 (see Table 1, section 200.9 of this Title) and under section 242-8.1(a)(1) of this Subpart. The owner or operator of a unit that qualifies to use the low mass emissions excepted monitoring methodology in 40 CFR 75.19 (see Table 1, section 200.9 of this Title) or that qualifies to use an alternative monitoring system under Subpart E of 40 CFR part 75 (see Table 1, section 200.9 of this Title) shall comply with the procedures in subdivision (e) or (f) of this section, respectively.

(1) ‘ Requirements for initial certification ’. The owner or operator shall ensure that each continuous emissions monitoring system required under section 242-8.1(a)(1) of this Subpart (which includes the automated data acquisition and handling system) successfully completes all of the initial certification testing

required under 40 CFR 75.20 (see Table 1, section 200.9 of this Title) by the applicable deadlines specified in section 242-8.1(b) of this Subpart. In addition, whenever the owner or operator installs a monitoring system in order to meet the requirements of this Subpart in a location where no such monitoring system was previously installed, initial certification in accordance with 40 CFR 75.20 (see Table 1, section 200.9 of this Title) is required.

(2) ‘Requirements for recertification’.

(i) Whenever the owner or operator makes a replacement, modification, or change in a certified continuous emissions monitoring system under section 242-8.1(a)(1) of this Subpart that the administrator or the department determines significantly affects the ability of the system to accurately measure or record CO<sub>2</sub> mass emissions or heat input or to meet the quality-assurance and quality-control requirements of 40 CFR 75.21 or appendix B to 40 CFR part 75 (see Table 1, section 200.9 of this Title), the owner or operator shall recertify the monitoring system according to 40 CFR 75.20(b) (see Table 1, section 200.9 of this Title).

(ii) For systems using stack measurements such as stack flow, stack moisture content, CO<sub>2</sub> or O<sub>2</sub> monitors, whenever the owner or operator makes a replacement, modification, or change to the flue gas handling system or the unit’s operation that the administrator or the department determines to significantly change the flow or concentration profile, the owner or operator shall recertify the continuous emissions monitoring system according to 40 CFR 75.20(b) (see Table 1, section 200.9 of this Title). Examples of changes which require recertification include: replacement of the analyzer, change in location or orientation of the sampling probe or site, or changing of flow rate monitor polynomial coefficients.

(3) ‘Approval process for initial certifications and recertification’. Subparagraphs (3)(i) through (iv) of this subdivision apply to both initial certification and recertification of a monitoring system under section

242-8.1(a)(1) of this Subpart. For recertifications, replace the words “certification” and “initial certification” with the word “recertification,” replace the word “certified” with “recertified,” and proceed in the manner prescribed in 40 CFR 75.20(b)(5) and (g)(7) (see Table 1, section 200.9 of this Title) in lieu of this section.

(i) Notification of certification. The CO<sub>2</sub> authorized account representative shall submit to the department or its agent, the appropriate EPA regional office and the administrator a written notice of the dates of certification in accordance with section 242-8.4 of this Subpart.

(ii) Certification application. The CO<sub>2</sub> authorized account representative shall submit to the department or its agent a certification application for each monitoring system. A complete certification application shall include the information specified in 40 CFR 75.63 (see Table 1, section 200.9 of this Title).

(iii) Provisional certification data. The provisional certification date for a monitor shall be determined in accordance with 40 CFR 75.20(a)(3) (see Table 1, section 200.9 of this Title). A provisionally certified monitor may be used under the CO<sub>2</sub> budget Trading Program for a period not to exceed 120 days after receipt by the department of the complete certification application for the monitoring system or component thereof under subparagraph (ii) of this paragraph. Data measured and recorded by the provisionally certified monitoring system or component thereof, in accordance with the requirements of 40 CFR part 75 (see Table 1, section 200.9 of this Title), will be considered valid quality-assured data (retroactive to the date and time of provisional certification), provided that the department does not invalidate the provisional certification by issuing a notice of disapproval within 120 days of receipt of the complete certification application by the department.

(iv) Certification application approval process. The department will issue a written notice

of approval or disapproval of the certification application to the owner or operator within 120 days of receipt of the complete certification application under subparagraph (ii) of this paragraph. In the event the department does not issue such a notice within such 120-day period, each monitoring system which meets the applicable performance requirements of 40 CFR part 75 (see Table 1, section 200.9 of this Title) and is included in the certification application will be deemed certified for use under the CO<sub>2</sub> Budget Trading Program.

(‘a’) Approval notice. If the certification application is complete and shows that each monitoring system meets the applicable performance requirements of 40 CFR part 75 (see Table 1, section 200.9 of this Title), then the department will issue a written notice of approval of the certification application within 120 days of receipt.

(‘b’) Incomplete application notice. If the certification application is not complete, then the department will issue a written notice of incompleteness that sets a reasonable date by which the CO<sub>2</sub> authorized account representative must submit the additional information required to complete the certification application. If the CO<sub>2</sub> authorized account representative does not comply with the notice of incompleteness by the specified date, then the department may issue a notice of disapproval under clause (c) of this subparagraph. The 120 day review period shall not begin before receipt of a complete certification application.

(‘c’) Disapproval notice. If the certification application shows that any monitoring system or component thereof does not meet the performance requirements of 40 CFR part 75 (see Table 1, section 200.9 of this Title), or if the certification application is incomplete and the requirement for disapproval under clause (b) of this subparagraph is met, then the department will issue a written notice of disapproval of the certification application. Upon issuance of such notice of disapproval, the provisional

certification is invalidated by the department and the data measured and recorded by each uncertified monitoring system or component thereof shall not be considered valid quality assured data beginning with the date and hour of provisional certification. The owner or operator shall follow the procedures for loss of certification in subparagraph (v) of this paragraph for each monitoring system or component thereof, which is disapproved for initial certification.

(‘d’) Audit decertification. The department may issue a notice of disapproval of the certification status of a monitor in accordance with section 242-8.3(b) of this Subpart.

(v) ‘Procedures for loss of certification’. If the department issues a notice of disapproval of a certification application under clause (iv)(‘c’) of this paragraph or a notice of disapproval of certification status under clause (iv)(‘d’) of this paragraph, then:

(‘a’) the owner or operator shall substitute the following values for each disapproved monitoring system, for each hour of unit operation during the period of invalid data beginning with the date and hour of provisional certification and continuing until the time, date, and hour specified under 40 CFR 75.20(a)(5)(i) or 40 CFR 75.20(g)(7) (see Table 1, section 200.9 of this Title):

(‘1’) for units using or intending to monitor for CO<sub>2</sub> mass emissions using heat input or for units using the low mass emissions excepted methodology under 40 CFR 75.19 (see Table 1, section 200.9 of this Title), the maximum potential hourly heat input of the unit; or

(‘2’) for units intending to monitor for CO<sub>2</sub> mass emissions using a CO<sub>2</sub> pollutant concentration monitor and a flow monitor, the maximum potential concentration of CO<sub>2</sub> and the maximum potential flow rate of the unit under section 2.1 of appendix A of 40 CFR part 75 (see Table 1, section

200.9 of this Title).

(‘b’) the CO<sub>2</sub> authorized account representative shall submit a notification of certification retest dates and a new certification application in accordance with subparagraphs (i) and (ii) of this paragraph; and

(‘c’) the owner or operator shall repeat all certification tests or other requirements that were failed by the monitoring system, as indicated in the department’s notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval.

(e) ‘ Initial certification and recertification procedures for low mass emissions units using the excepted methodologies under section 242-8.1(c)[(3)](2) of this Subpart’. The owner or operator of a unit qualified to use the low mass emissions accepted methodology under section 242-8.1(c)[(3)](2) of this Part shall meet the applicable certification and recertification requirements of 40 CFR 75.19(a)(2), 40 CFR 75.20(h) (see Table 1, section 200.9 of this Title) and section 242-8.2 of this Subpart. If the owner or operator of such a unit elects to certify a fuel flow meter system for heat input determinations, the owner or operator shall also meet the certification and recertification requirements in 40 CFR 75.20(g) (see Table 1, section 200.9 of this Title).

(f) ‘ Certification/recertification procedures for alternative monitoring systems ’. The CO<sub>2</sub> authorized account of each unit for which the owner or operator intends to use an alternative monitoring system approved by the administrator and, if applicable, the department under subpart E of 40 CFR part 75 (see Table 1, section 200.9 of this Title) shall comply with the applicable notification and application procedures of 40 CFR 75.20(f) (see Table 1, section 200.9 of this Title).

### 242-8.3 Out-of-control periods.

(a) Whenever any monitoring system fails to meet the quality assurance and quality control requirements or data validation requirements of 40 CFR part 75 (see Table 1, section 200.9 of this Title), data shall be substituted using the applicable procedures in subpart D or appendix D of 40 CFR part 75 (see Table 1, section 200.9 of this Title).

(b) 'Audit decertification'. Whenever both an audit of a monitoring system and a review of the initial certification or recertification application reveal that any monitoring system should not have been certified or recertified because it did not meet a particular performance specification or other requirement under section 242-8.2 of this Subpart or the applicable provisions of 40 CFR part 75 (see Table 1, section 200.9 of this Title), both at the time of the initial certification or recertification application submission and at the time of the audit, the department or administrator will issue a notice of disapproval of the certification status of such monitoring system. For the purposes of this subdivision, an audit shall be either a field audit or an audit of any information submitted to the department or the administrator. By issuing the notice of disapproval, the department or administrator revokes prospectively the certification status of the monitoring system. The data measured and recorded by the monitoring system shall not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the owner or operator completes subsequently approved initial certification or recertification tests for the monitoring system. The owner or operator shall follow the initial certification or recertification procedures in section 242-8.2 of this Subpart for each disapproved monitoring system.

### 242-8.4 Notifications.

The CO<sub>2</sub> authorized account representative for a CO<sub>2</sub> budget unit shall submit written notice to the department and the Administrator in accordance with 40 CFR 75.61 (see Table 1, section 200.9 of this Title).

242-8.5 Recordkeeping and reporting.

(a) 'General provisions'. The CO<sub>2</sub> authorized account representative shall comply with all recordkeeping and reporting requirements in this section, the applicable record keeping and reporting requirements under 40 CFR 75.73 (see Table 1, section 200.9 of this Title) and with the requirements of section 242-2.1(e) of this Part.

(b) 'Monitoring plans'. The owner or operator of a CO<sub>2</sub> budget unit shall submit a monitoring plan in the manner prescribed in 40 CFR 75.62 (see Table 1, section 200.9 of this Title).

(c) 'Certification applications'. The CO<sub>2</sub> authorized account representative shall submit an application to the department within 45 days after completing all CO<sub>2</sub> monitoring system initial certification or recertification tests required under section 242-8.2 of this Subpart including the information required under 40 CFR 75.63 and 40 CFR 75.53(e) and (f) (see Table 1, section 200.9 of this Title).

(d) 'Quarterly reports'. The CO<sub>2</sub> authorized account representative shall submit quarterly reports, as follows:

(1) The CO<sub>2</sub> authorized account representative shall report the CO<sub>2</sub> mass emissions data and heat input data for the CO<sub>2</sub> budget unit, in an electronic format prescribed by the administrator unless otherwise prescribed by the department for each calendar quarter beginning with:

(i) for a unit that commences commercial operation before July 1, 2008, the calendar quarter covering January 1, 2009 through March 31, 2009; or

(ii) for a unit commencing commercial operation on or after July 1, 2008, the calendar quarter corresponding to, the earlier of the date of provisional certification or the applicable deadline for initial certification under section 242-8.1(b) of this Part or, unless that quarter is the third or fourth quarter of 2008, in which case reporting shall commence in the quarter covering January 1, 2009 through March 31, 2009.

(2) The CO<sub>2</sub> authorized account representative shall submit each quarterly report to the department or its agent within 30 days following the end of the calendar quarter covered by the report. Quarterly reports shall be submitted in the manner specified in Subpart H of 40 CFR part 75 and 40 CFR 75.64 (see Table 1, section 200.9 of this Title). Quarterly reports shall be submitted for each CO<sub>2</sub> budget unit (or group of units using a common stack), and shall include all of the data and information required in subpart G of 40 CFR part 75 (see Table 1, section 200.9 of this Title), except for opacity, NO<sub>x</sub>, and SO<sub>2</sub> provisions.

(3) Compliance certification. The CO<sub>2</sub> authorized account representative shall submit to the department or its agent a compliance certification in support of each quarterly report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the unit's emissions are correctly and fully monitored. The certification shall state that:

(i) the monitoring data submitted were recorded in accordance with the applicable requirements of this Subpart and 40 CFR part 75 (see Table 1, section 200.9 of this Title), including the quality assurance procedures and specifications;

(ii) for a unit with add-on CO<sub>2</sub> emissions controls and for all hours where data are substituted in accordance with 40 CFR 75.34(a)(1) (see Table 1, section 200.9 of this Title), the add-on

emissions controls were operating within the range of parameters listed in the quality assurance/quality control program under appendix B of 40 CFR part 75 (see Table 1, section 200.9 of this Title) and the substitute values do not systematically underestimate CO<sub>2</sub> emissions; and

(iii) the CO<sub>2</sub> concentration values substituted for missing data under Subpart D of 40 CFR part 75 (see Table 1, section 200.9 of this Title) do not systematically underestimate CO<sub>2</sub> emissions.

#### 242-8.6 Petitions.

(a) Except as provided in subdivision (c) of this section, the CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget unit that is subject to an acid rain emissions limitation may submit a petition under to the administrator under 40 CFR 75.66 (see Table 1, section 200.9 of this Title) and to the department requesting approval to apply an alternative to any requirement of 40 CFR Part 75 (see Table 1, section 200.9 of this Title). Application of an alternative to any requirement of 40 CFR Part 75 (see Table 1, section 200.9 of this Title) is in accordance with this Subpart only to the extent that the petition is approved in writing by the administrator, and subsequently approved in writing by the department.

(b) 'Petitions for a CO<sub>2</sub> budget unit that is not subject to an acid rain emissions limitation'.

(1) The CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget unit that is not subject to an acid rain emissions limitation may submit a petition to the administrator under 40 CFR 75.66 (see Table 1, section 200.9 of this Title) and to the department requesting approval to apply an alternative to any requirement of 40 CFR Part 75. Application of an alternative to any requirement of 40 CFR Part 75 (see Table 1, section 200.9 of this Title) is in accordance with this Subpart only to the extent that the petition is approved in writing by the administrator, and subsequently approved in writing by the department.

(2) In the event that the administrator declines to review a petition under this Subpart, the CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget unit that is not subject to an acid rain emissions limitation may submit a petition to the department requesting approval to apply an alternative to any requirement of this Subpart. That petition shall contain all of the relevant information specified in 40 CFR 75.66 (see Table 1, section 200.9 of this Title). Application of an alternative to any requirement of 40 CFR 75.66 (see Table 1, section 200.9 of this Title). Application of an alternative to any requirement of 40 CFR part 75 (see Table 1, section 200.9 of this Title) is in accordance with this Subpart only to the extent that the petition is approved in writing by the department.

(c) The CO<sub>2</sub> authorized account representative of a CO<sub>2</sub> budget unit that is subject to an acid rain emissions limitation may submit a petition under 40 CFR 75.66 (see Table 1, section 200.9 of this Title) to the administrator requesting approval to apply an alternative to a requirement concerning any additional CEMS required under the common stack provisions of 40 CFR 75.72 (see Table 1, section 200.9 of this Title) or a CO<sub>2</sub> concentration CEMS used under 40 CFR 75.71(a)(2) (see Table 1, section 200.9 of this Title). Application of an alternative to any requirement of this Subpart is in accordance with this Subpart only to the extent the petition is approved in writing by both the department and the administrator.

Existing subdivisions 242-8.7(a) through (d) remain unchanged. Subdivision (e) is amended as follows:

(e) Fuel sampling methods and fuel sampling technology shall be consistent with the New York State Renewable Portfolio Standard Biomass Power Guide[book, May 2006 ]September 2011 (see Table 1, section 200.9 of this Title).

Existing section 242-8.8 is deleted.

Subpart 242-9 RESERVED

Subpart 242-10 CO<sub>2</sub> Emissions Offset Projects

242-10.1 CO<sub>2</sub> emissions offset purpose

The department will provide for the award of CO<sub>2</sub> offset allowances to sponsors of CO<sub>2</sub> emissions offset projects [or CO<sub>2</sub> emissions credit retirements ] that have reduced or avoided atmospheric loading of CO<sub>2</sub>, CO<sub>2</sub> equivalent or sequestered carbon as demonstrated in accordance with the applicable provisions of this Subpart. The requirements of this Subpart seek to ensure that CO<sub>2</sub> offset allowances awarded represent CO<sub>2</sub> equivalent emission reductions or carbon sequestration that are real, additional, verifiable, enforceable, and permanent within the framework of a standards-based approach. Subject to the relevant compliance deduction limitations of section 242-6.5(a)(3) of this Part , CO<sub>2</sub> offset allowances may be used by any CO<sub>2</sub> budget source for compliance purposes.

Existing subdivisions 242-10.2(a) through (j) remain unchanged.

(k) ‘ Commercial building ’. A building to which the provisions of ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition) - 2010 (see Table 1, section 200.9 of this Title) apply, which includes buildings except low-rise residential buildings. Low-rise residential buildings include single family homes, multifamily structures of three stories or fewer above grade, and manufactured homes (modular and mobile).

Existing subdivisions 242-10.2(l) through (af) remain unchanged.

(ag) ‘ Residential building ’. A low-rise residential building to which the provisions of ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition) - 2010 (see Table 1, section 200.9 of this Title) do not apply. Includes single family homes, multifamily structures of three stories or fewer above grade, and manufactured homes (modular and mobile).

Existing subdivisions 242-10.2(ah) through 242-10.3(a) remain unchanged.

[(b) ‘Eligible CO<sub>2</sub> emissions credit retirements ’. To qualify for the award of CO<sub>2</sub> offset allowances a CO<sub>2</sub> emissions credit retirement shall satisfy all the applicable requirements of this Subpart.

(1) CO<sub>2</sub> emissions credit retirements include the permanent retirement of greenhouse gas allowances or credits issued pursuant to any governmental mandatory carbon constraining program outside the United States that places a specific tonnage limit on greenhouse gas emissions, or certified greenhouse gas emissions, provided the allowances or credits are acceptable and valid for use in that program at the time of the filing of the consistency application under section 242-10.4 of this Part , or certified greenhouse gas emissions reduction credits issued pursuant to the United Nations Framework Convention on Climate Change (UNFCCC) or protocols adopted through the UNFCCC process.

(2) The department may award CO<sub>2</sub> offset allowances for CO<sub>2</sub> emissions credit retirements only after the occurrence of a stage two trigger event.]

[(c)](b) ‘Project sponsor’. Any person may act as the sponsor of an eligible CO<sub>2</sub> emissions offset project [or CO<sub>2</sub> emissions credit retirement ], provided that person meets the requirements at section 242-10.4 of this Subpart.

[(d)](c) ‘General additionality requirements’. Except as provided with respect to specific offset project standards in section 242-10.5 of this Subpart, the following general requirements shall apply.

(1) CO<sub>2</sub> offset allowances shall not be awarded to an offset project [or CO<sub>2</sub> emissions credit

retirement] that is required pursuant to any local, state or federal law, regulation, or administrative or judicial order. If an offset project receives a consistency determination under section 242-10.4 of this Subpart and is later required by local, State or Federal law, regulation, or administrative or judicial order, then the offset project shall remain eligible for the award of CO<sub>2</sub> offset allowances until the end of its current allocation period but its eligibility shall not be extended for an additional allocation period.

(2) CO<sub>2</sub> offset allowances shall not be awarded to an offset project that includes an electric generation component, unless the project sponsor transfers legal rights to any and all attribute credits (other than the CO<sub>2</sub> offset allowances awarded under section 242-10.7 of this Subpart) generated from the operation of the offset project that may be used for compliance with a renewable portfolio standard or other regulatory requirement, to the department or its agent.

(3) CO<sub>2</sub> offset allowances shall not be awarded to an offset project that receives funding or other incentives from any system benefit fund, or funds or other incentives provided through the energy efficiency and clean energy technology account allocation required pursuant to section 242-5.3(a) of this Part.

(4) CO<sub>2</sub> offset allowances shall not be awarded to an offset project [or CO<sub>2</sub> emissions credit retirement] that is awarded credits or allowances under any other mandatory or voluntary greenhouse gas program.

[(e)](d) 'Maximum allocation periods for CO<sub>2</sub> emissions offset projects'.

(1) 'Maximum allocation periods'. Except as provided in paragraph (2) of this subdivision, the department may award CO<sub>2</sub> offset allowances under section 242-10.7 of this Subpart for an initial 10 -year allocation period. At the end of the initial 10 -year allocation period, the department may award CO<sub>2</sub> offset

allowances for a second 10 -year allocation period, provided the offset sponsor has submitted a consistency application pursuant to section 242-10.4 of this Subpart prior to the expiration of the initial allocation period, and the department has issued a consistency determination pursuant to section 242-10.4(e)(2) of this Subpart.

(2) ‘ Maximum afforestation allocation period ’. The department may award CO<sub>2</sub> offset allowances under section 242-10.7 of this Subpart for any afforestation offset project for an initial 20 -year allocation period. At the end of the initial 20 -year allocation period, the department may award CO<sub>2</sub> offset allowances for a second 20 -year allocation period, provided the offset sponsor has submitted a consistency application for the afforestation offset project pursuant to section 242-10.4 of this Subpart prior to the expiration of the initial allocation period, and the department has issued a consistency determination pursuant to section 242-10.4(e)(2) of this Subpart. At the end of the second 20 -year allocation period, the department may award CO<sub>2</sub> offset allowances for a third 20 -year allocation period, provided the offset sponsor has submitted a consistency application for the afforestation offset project pursuant to section 242-10.4 of this Subpart prior to the expiration of the second allocation period, and the department has issued a consistency determination pursuant to section 242-10.4(e)(2) of this Part. In no event may an afforestation offset project be awarded CO<sub>2</sub> offset allowances for more than a total of 60 allocation years.

[(f) ‘Timing of offset projects ’. The department may award CO<sub>2</sub> offset allowances under section 242-10.7 of this Part only for offset projects that are initially commenced on or after December 20, 2005.]

[(g)](e) ‘ Offset project audit ’. Project sponsors shall provide , in writing, an access agreement to the Department granting the department or its agent access to the physical location of the offset project to inspect for compliance with this Subpart. For offset projects located in any state or other U.S. jurisdiction that is not a participating state, project sponsors shall also provide , in writing, an access agreement to the department

granting the cooperating department with access to the physical location of the offset project to inspect for compliance with this Subpart.

[(h)](f) ‘ Ineligibility due to noncompliance ’. If at any time the department determines that a project sponsor has not complied with the requirements of this Subpart, then the department may revoke and retire any and all CO<sub>2</sub> offset allowances in the project sponsor’s account. If at any time the department determines that an offset project does not comply with the requirements of this Subpart, then the department may revoke any approvals it has issued relative to that offset project.

#### 242-10.4 Application process

(a) ‘ Establishment of general account ’. The sponsor of an offset project [or CO<sub>2</sub> emissions credit retirement] must establish a general account under section 242-6.2(b) of this Part . All submissions to the department required for the award of CO<sub>2</sub> offset allowances under this Subpart must be from the CO<sub>2</sub> authorized account representative for the general account of the sponsor of the relevant offset project [or CO<sub>2</sub> emissions credit retirement], herein referred to as “project sponsor.”

(b) ‘Consistency application deadlines’.

[(1) For offset projects commenced prior to January 1, 2009, the project sponsor must submit the consistency application by June 30, 2009.]

[(2)](1) [For offset projects commenced on or after January 1, 2009,] [t]The consistency application must be submitted by the date that is six months after the offset project is commenced.

[(3)](2) Any consistency application that fails to meet the deadlines of this subdivision will result in the

denial of the consistency application and the continued ineligibility of the subject offset project.

(c) 'Consistency application contents'.

(1) For an offset project, the consistency application must include the following information.

(i) The project's sponsor's name, address, e-mail address, telephone number [, facsimile transmission number,] and account number.

(ii) The offset project description as required by the relevant provisions of section 242-10.5 of this Subpart.

(iii) A demonstration that the offset project meets all applicable requirements set forth in this Subpart.

(iv) The emissions baseline determination as required by the relevant provisions of section 242-10.5 of this Subpart.

(v) An explanation of how the projected reduction or avoidance of atmospheric loading of CO<sub>2</sub> or CO<sub>2</sub> equivalent or the sequestration of carbon is to be quantified, monitored, and verified as required by the relevant provisions of section 242-10.5 of this Subpart.

(vi) A completed consistency application agreement that reads as follows: "The undersigned project sponsor recognizes and accepts that the application for, and the receipt of, CO<sub>2</sub> offset allowances under the CO<sub>2</sub> Budget Trading Program is predicated on the project sponsor following all the

requirements of Subpart 242-10. The undersigned project sponsor holds the legal rights to the offset project, or has been granted the right to act on behalf of a party that holds the legal rights to the offset project. I understand that eligibility for the award of CO<sub>2</sub> offset allowances under Subpart 242-10 is contingent on meeting the requirements of Subpart 242-10. I authorize the department or its agent to audit this offset project for purposes of verifying that the offset project, including the monitoring and verification plan, has been implemented as described in this application. I understand that this right to audit shall include the right to enter the physical location of the offset project. I submit to the legal jurisdiction of New York State.”

(vii) A statement and certification report signed by the offset project sponsor certifying that all offset projects for which the sponsor has received CO<sub>2</sub> offset allowances under this Subpart (or similar provisions in the rules of other participating states), under the sponsor’s ownership or control (or under the ownership or control of any entity which controls, is controlled by, or has common control with the sponsor) are in compliance with all applicable requirements of the CO<sub>2</sub> Budget Trading Program in all participating states.

(viii) A verification report and certification statement signed by an independent verifier accredited pursuant to section 242-10.6 of this Subpart that expresses that the independent verifier has reviewed the entire application and evaluated the following in relation to the applicable requirements at sections 242-10.3 and 242-10.5 of this Subpart, and any applicable guidance issued by the department.

(‘a’) The adequacy and validity of information supplied by the project sponsor to demonstrate that the offset project meets the applicable eligibility requirements of sections 242-10.3 and 242-10.5 of this Subpart.

(‘b’) The adequacy and validity of information supplied by the project sponsor to demonstrate baseline emissions pursuant to the applicable requirements at section 242-10.5 of this Subpart.

(‘c’) The adequacy of the monitoring and verification plan submitted pursuant to the applicable requirements at section 242-10.5 of this Subpart.

(‘d’) Such other evaluations and statements as may be required by the department.

(ix) Disclosure of any voluntary or mandatory programs, other than the CO<sub>2</sub> Budget Trading Program, to which greenhouse gas emissions data related to the offset project has been, or will be reported.

(x) For offset projects located in a state or United States jurisdiction that is not a participating state, a demonstration that the project sponsor has complied with all requirements of the cooperating department in the state or United States jurisdiction where the offset project is located.

[(2) For a CO<sub>2</sub> emissions credit retirement, the consistency application must include sufficient information to demonstrate that the CO<sub>2</sub> emissions credit is eligible pursuant to subdivision 242-10.3(b) of this Part, was lawfully held by the project sponsor, and has been permanently and irrevocably retired.]

[(3)](2) Consistency applications shall be submitted in a format approved by the department.

(d) ‘Prohibition against filing consistency applications in more than one participating state’.

[(1)] Consistency applications may not be submitted to the department if a consistency application has already been submitted for the same project, or any portion of the same project, in another participating state, unless the consistency application was rejected because more of the CO<sub>2</sub> equivalent

emissions reduction or carbon sequestration due to the offset project is projected to occur in New York than in any other participating state.

[(2) Consistency applications may not be submitted to the department if a consistency application has been already submitted for the same CO<sub>2</sub> emissions credit retirement in another participating state.]

(e) 'Department action on consistency applications'.

(1) 'Completeness determination'. Within 30 days following receipt of the consistency application filed pursuant to subdivision (b) of this section, the department will notify the project sponsor whether the consistency application is complete. A complete consistency application is one that is in an approved form and is determined by the department to be complete for the purpose of commencing review of the consistency application. In no event shall a completeness determination prevent the department from requesting additional information in order to enable the department to make a consistency determination under paragraph (2) of this subdivision.

(2) 'Consistency determination'. Within 90 days of making the completeness determination under paragraph (1) of this subdivision, the department will issue a determination as to whether the offset project is consistent with the requirements of this section and section 242-10.3 of this Subpart and the requirements of the applicable offset project standard of section 242-10.5 of this Subpart. For any offset project found to lack consistency with these requirements, the department will inform the project sponsor of the offset project's deficiencies.

#### 242-10.5 CO<sub>2</sub> emissions offset project standards

(a) 'Landfill methane capture and destruction'. In order to qualify for the award of CO<sub>2</sub> offset allowances under this Subpart, offset projects that capture and destroy methane from landfills shall meet the

requirements of this subdivision and all applicable requirements of this Subpart.

(1) 'Eligibility'. Eligible offset projects shall occur at landfills that are not subject to the New Source Performance Standards (NSPS) for municipal solid waste landfills, 40 CFR part 60, Subpart Cc and Subpart WWW (see Table 1, section 200.9 of this Title).

(2) 'Offset project description'. The offset project sponsor shall provide a detailed narrative of the offset project actions to be taken, including documentation that the offset project meets the eligibility requirements of paragraph (1) of this subdivision. The project narrative shall include the following information.

(i) owner and operator of the offset project;

(ii) location and specifications of the landfill where the offset project will occur, including waste in place;

(iii) owner and operator of the landfill where the offset project will occur; and

(iv) specifications of the equipment to be installed and a technical schematic of the offset project.

(3) Emissions baseline determination. The emissions baseline shall represent the potential fugitive landfill emissions of CH<sub>4</sub> (in tons of CO<sub>2</sub>e), as represented by the CH<sub>4</sub> collected and metered for thermal destruction as part of the offset project, and calculated in accordance with this paragraph.

$$\text{Emissions (tons CO}_2\text{e)} = (\text{V} \times \text{M} \times (1-\text{OX}) \times \text{GWP})/2000$$

where:

V = Volume of CH<sub>4</sub> collected (ft<sup>3</sup>)

M = Mass of CH<sub>4</sub> per cubic foot (0.04246 lbs/ft<sup>3</sup> default value at 1 atmosphere and 20° C)

OX = Oxidation factor (0.10), representing estimated portion of collected CH<sub>4</sub> that would have eventually oxidized to CO<sub>2</sub> if not collected

GWP = CO<sub>2</sub>e global warming potential of CH<sub>4</sub> ([23]25)

(4) Calculating emissions reductions. Emissions reductions shall be determined based on potential fugitive CH<sub>4</sub> emissions that would have occurred at the landfill if metered CH<sub>4</sub> collected from the landfill for thermal destruction as part of the offset project was not collected and destroyed. CO<sub>2</sub>e emissions reductions shall be calculated as follows:

$$\text{Emissions Reductions (tons CO}_2\text{e)} = (V \times M \times (1 - \text{OX}) \times C_{\text{ef}} \times \text{GWP})/2000$$

where:

V = Volume of CH<sub>4</sub> collected (ft<sub>3</sub>)

M = Mass of CH<sub>4</sub> per cubic foot (0.04246 lbs/ft<sup>3</sup> default value at 1 atmosphere and 20° C)

OX = Oxidation factor (0.10), representing estimated portion of collected CH<sub>4</sub> that would have eventually oxidized to CO<sub>2</sub> if not collected

C<sub>ef</sub> = Combustion efficiency of methane control technology (0.98)

GWP = CO<sub>2</sub>e global warming potential of CH<sub>4</sub> ([23]25)

(5) ‘Monitoring and verification requirements’. Offset projects shall employ a landfill gas collection system that provides continuous metering and data computation of landfill gas volumetric flow rate and CH<sub>4</sub> concentration. Annual monitoring and verification reports shall include monthly volumetric flow rate

and CH<sub>4</sub> concentration data, including documentation that the CH<sub>4</sub> was actually supplied to the combustion source. Monitoring and verification is also subject to the following requirements.

(i) The project sponsor shall submit a monitoring and verification plan as part of the consistency application that includes a quality assurance and quality control program associated with equipment used to determine landfill gas volumetric flow rate and CH<sub>4</sub> composition. The monitoring and verification plan shall also include provisions for ensuring that measuring and monitoring equipment is maintained, operated, and calibrated based on manufacturer recommendations, as well as provisions for the retention of maintenance records for audit purposes. The monitoring and verification plan shall be certified by an independent verifier accredited pursuant to section 242-10.6 of this Part.

(ii) The project sponsor shall annually verify landfill gas CH<sub>4</sub> composition through landfill gas sampling and independent laboratory analysis using applicable U.S. Environmental Protection Agency laboratory test methods.

(b) 'Reduction in emissions of sulfur hexafluoride (SF<sub>6</sub>)'. In order to qualify for the award of CO<sub>2</sub> offset allowances under this Subpart, offset projects that prevent emissions of sulfur hexafluoride to the atmosphere from equipment in the electricity transmission and distribution sector, through capture and storage, recycling, or destruction, shall meet the requirements of this subdivision and all applicable requirements of this Subpart.

(1) 'Eligibility'.

(i) Eligible offset projects shall consist of incremental actions beyond those taken during the baseline year to achieve a reduction in SF<sub>6</sub> emissions relative to the baseline year. Eligible actions may include an expansion of existing actions. The identified actions to be taken shall be consistent with the guidance

provided in [International Electrotechnical Commission (IEC) TS 61634, “High-Voltage Switchgear and Controlgear-Use and Handling of Sulfur Hexafluoride (SF<sub>6</sub>) in High-Voltage Switchgear and Controlgear - Edition 1,” (IEC TS 61634) ] High-voltage switchgear and controlgear - Part 303: Use and handling of sulfur hexafluoride (SF<sub>6</sub>) (IEC/TR 62271-303 ed1.0) and Electric Power Institute (EPRI), “SF<sub>6</sub> Management for Substations” (1020014, 2010) (see Table 1, section 200.9 of this Title).

(ii) Except as provided in subparagraph (iii) of this paragraph, eligible offset projects shall have an SF<sub>6</sub> entity-wide emissions rate for the baseline year that is less than the applicable emissions rate in Table 1. The entity-wide SF<sub>6</sub> emissions rate shall be calculated as follows:

$$\text{SF}_6 \text{ Emissions Rate (\%)} = (\text{Total SF}_6 \text{ Emissions for Reporting Year}) / (\text{Total SF}_6 \text{ Nameplate Capacity at End of Reporting Year})$$

where:

‘SF<sub>6</sub> Nameplate Capacity ’ refers to all SF<sub>6</sub>-containing equipment owned and/or operated by the entity, at full and proper SF<sub>6</sub> charge of the equipment rather than the actual charge of the equipment (which may reflect leakage).

Table 1

SF<sub>6</sub> Emissions Rate Performance Standards

A. Emission Regions

<u>Region A</u>	<u>Region B</u>	<u>Region C</u>	<u>Region D</u>	<u>Region E</u>
Connecticut	Alabama	Colorado	Arkansas	Alaska
Delaware	District of Columbia	Illinois	Iowa	Arizona
Maine	Florida	Indiana	Kansas	California

Massachusetts	Georgia	Michigan	Louisiana	Hawaii
New Jersey	Kentucky	Minnesota	Missouri	Idaho
New York	Maryland	Montana	Nebraska	Nevada
New Hampshire	Mississippi	North Dakota	New Mexico	Oregon
Pennsylvania	North Carolina	Ohio	Oklahoma	Washington
Rhode Island	South Carolina	South Dakota	Texas	
Vermont	Tennessee	Utah		
	Virginia	Wisconsin		
	West Virginia	Wyoming		

#### B. Emissions Rate Performance Standards

<u>Region</u>	<u>Emission Rate<sup>a</sup></u>
Region A	9.68%
Region B	5.22%
Region C	9.68%
Region D	5.77%
Region E	3.65%
U.S. (National)	9.68%

<sup>a</sup> Based on weighted average 2004 emissions rates for U.S. EPA SF<sub>6</sub> Partnership utilities in each region. If the weighted average emissions rate in a region is higher than the national weighted average, the default performance standard is the national weighted average emissions rate.

(iii) An SF<sub>6</sub> offset project shall be eligible even if the SF<sub>6</sub> entity-wide emissions rate in the baseline year exceeds the applicable rate in subparagraph (ii) of this paragraph, provided that the project sponsor demonstrates and the department determines that the project is being implemented at a transmission and/or distribution entity serving a predominantly urban service territory and that at least two of the following factors prevent optimal management of SF<sub>6</sub>.

(‘a’) The entity is comprised of older than average installed transmission and distribution equipment in relation to the national average age of equipment.

(‘b’) A majority of the entity’s electricity load is served by equipment that is located underground, and poor accessibility of such underground equipment precludes management of SF<sub>6</sub> emissions through regular ongoing maintenance.

(‘c’) The inability to take a substantial portion of equipment out of service, as such activity would impair system reliability.

(‘d’) Required equipment purpose or design for a substantial portion of entity transmission and distribution equipment results in inherently leak-prone equipment.

(2) Offset project description. The offset project sponsor shall provide a detailed narrative of the offset project actions to be taken, including documentation that the offset project meets the eligibility requirements of paragraph (1) of this subdivision. The offset project narrative shall include the following information:

(i) description of the transmission and/or distribution entity suitable in detail to specify

the service territory served by the entity; and

(ii) owner and operator of the transmission and/or distribution entity.

(3) Emissions baseline determination. If the consistency application is filed after [June 30]January 1, 2009, baseline SF<sub>6</sub> emissions shall be determined based on annual entity-wide reporting of SF<sub>6</sub> emissions for the calendar year immediately preceding the calendar year in which the consistency application is filed (designated the baseline year). [If the consistency application is filed by June 30, 2009, the baseline year may be 2005, but no earlier.] The reporting entity shall systematically track and account for all entity-wide uses of SF<sub>6</sub> in order to determine entity-wide emissions of SF<sub>6</sub>. The scope of such tracking and accounting shall include all electric transmission and distribution assets and all SF<sub>6</sub>-containing and SF<sub>6</sub>-handling equipment owned and/or operated by the reporting entity.

(i) Emissions shall be determined based on the following mass balance method:

$$\text{SF}_6 \text{ Emissions (lbs.)} = (\text{SF}_6 \text{ Change in Inventory}) + (\text{SF}_6 \text{ Purchases and Acquisitions}) - (\text{SF}_6 \text{ Sales and Disbursements}) - (\text{Change in Total SF}_6 \text{ Nameplate Capacity of Equipment})$$

where:

‘Change in Inventory’ is the difference between the quantity of SF<sub>6</sub> gas in storage at the beginning of the reporting year and the quantity in storage at the end of the reporting year. The term “quantity in storage” includes all SF<sub>6</sub> gas contained in cylinders (such as 115-pound storage cylinders), gas carts, and other storage containers. It does not refer to SF<sub>6</sub> gas held in SF<sub>6</sub>-using operating equipment. The change in inventory will be negative if the quantity of SF<sub>6</sub> gas in storage increases over the course of the year.

‘Purchases and Acquisitions of SF<sub>6</sub>’ is the sum of all the SF<sub>6</sub> gas acquired from other parties during the reporting year, as contained in storage containers or SF<sub>6</sub>-using operating equipment.

‘Sales and disbursements of SF<sub>6</sub>’ is the sum of all the SF<sub>6</sub> gas sold or otherwise disbursed to other parties during the reporting year, as contained in storage containers and SF<sub>6</sub>-using operating equipment.

‘Change in Total SF<sub>6</sub> Nameplate Capacity of Equipment’ is the net change in the total volume of SF<sub>6</sub>-containing operating equipment during the reporting year. The net change in nameplate capacity is equal to new equipment nameplate capacity, minus retired equipment nameplate capacity. This quantity will be negative if the retired equipment has a total nameplate capacity larger than the total nameplate capacity of the new equipment. ‘Total nameplate capacity’ refers to the full and proper SF<sub>6</sub> charge of the equipment rather than to the actual charge, which may reflect leakage.

(ii) Emissions shall be calculated as follows:

$$\text{Emissions (tons CO}_2\text{e)} = [(V_{\text{iby}} - V_{\text{iey}}) + (PA_{\text{psd}} + PA_{\text{e}} + PA_{\text{rre}}) - (SD_{\text{op}} + SD_{\text{rs}} + SD_{\text{df}} + SD_{\text{sor}}) - (CNP_{\text{ne}} - CNP_{\text{rse}})] \\ \times \text{GWP}/2000$$

where (all SF<sub>6</sub> values in lbs.):

$V_{\text{iby}}$  = SF<sub>6</sub> inventory in cylinders, gas carts, and other storage containers (not SF<sub>6</sub>-containing operating equipment) at the beginning of the reporting year

$V_{\text{iey}}$  = SF<sub>6</sub> inventory in cylinders, gas carts, and other storage containers (not SF<sub>6</sub>-containing operating equipment) at the end of the reporting year

$PA_{psd}$  = SF<sub>6</sub> purchased from suppliers or distributors in cylinders

$PA_e$  = SF<sub>6</sub> provided by equipment manufacturers with or inside SF<sub>6</sub>-containing operating equipment

$PA_{re}$  = SF<sub>6</sub> returned to the reporting entity after off-site recycling

$SD_{op}$  = Sales of SF<sub>6</sub> to other parties, including gas left in SF<sub>6</sub>-containing operating equipment that is sold

$SD_{rs}$  = Returns of SF<sub>6</sub> to supplier (producer or distributor)

$SD_{df}$  = SF<sub>6</sub> sent to destruction facilities

$SD_{sor}$  = SF<sub>6</sub> sent off-site for recycling

$CNP_{ne}$  = Total SF<sub>6</sub> nameplate capacity of new SF<sub>6</sub>-containing operating equipment at proper full charge

$CNP_{rse}$  = Total SF<sub>6</sub> nameplate capacity of retired or sold SF<sub>6</sub>-containing operating equipment at proper full charge

$GWP$  = CO<sub>2e</sub> global warming potential of SF<sub>6</sub> (22,[200]800)

(iii) As part of the consistency application required pursuant to section 242-10.4(b) and (c) of this Subpart and in annual monitoring and verification reports required pursuant to section 242-10.7(b) and (c) of this Subpart, the project sponsor shall provide the documentation required at Subparagraphs (5)(i) through (iii) of this subdivision to support emissions calculations.

(4) Calculating emissions reductions. Emissions reductions shall represent the annual entity-wide emissions reductions of SF<sub>6</sub> for the reporting entity, relative to emissions in the baseline year. Emissions reductions shall be determined as follows, using the quantification method outlined in subparagraph (3)(ii) of this subdivision to determine emissions in both the baseline year and reporting year(s):

Emissions Reduction (tons CO<sub>2e</sub>) = (Total Pounds of SF<sub>6</sub> Emissions in Baseline Reporting Year) – (Total

Pounds of SF<sub>6</sub> Emissions in Reporting Year) x GWP/2000

where:

GWP = CO<sub>2</sub>e global warming potential of SF<sub>6</sub> (22,[200]800)

Existing paragraph 242-10.5(b)(5) through clause 242-10.5(c)(3)(vii)(b) remains unchanged.

Existing subparagraph 242-10.5(c)(3)(viii) is revised as follows:

(viii) Direct measurement procedures shall be consistent with current forestry good practice and the guidance contained in U.S. Department of Energy, Technical Guidelines Voluntary Reporting of Greenhouse Gases (1605(b)) Program; Chapter 1, Emissions Inventories; Part 1 Appendix: Forestry; section 3: Measurement Protocols for Forest Carbon Sequestration (March 2006) (see Table 1, section 200.9 of this Title).

Existing paragraph 242-10.5(c)(4) through clause 242-10.5(d)(1)(i)(g) remains unchanged.

Existing subparagraph 242-10.5(d)(1)(ii) through the remainder of subpart 242-10.5 is revised as follows:

(ii) Performance standards.

(‘a’) ‘All end-use energy efficiency offset projects’. All offset projects under this subdivision shall meet the applicable performance criteria set forth in this clause.

(‘1’) Installation best practice. Any combustion equipment and related air handling equipment (HVAC systems) installed as part of an offset project shall be sized and installed in accordance with the applicable requirements and specifications outlined in this subclause.

(‘i’) Commercial HVAC systems shall meet the applicable sizing and installation requirements of ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition)-2010 [-2004]: Energy Standard for Buildings Except Low-Rise Residential Buildings and ANSI/ASHRAE Standard [62.1-2004] 62.2-2010: Ventilation for Acceptable Indoor Air Quality (see Table 1, section 200.9 of this Title).

(‘ii’) Residential HVAC systems shall meet the applicable sizing specifications of Air Conditioner Contractors of America (ACCA) Manual J: Residential Load Calculation (Eighth Edition-Full), and the applicable installation specifications of ANSI/ACCA 5 QI - 2007 “HVAC Quality Installation Specification,” [Air Conditioner Contractors of America] (see Table 1, section 200.9 of this Title).

(‘2’) ‘ Whole-building energy performance ’. Eligible new buildings or whole-building retrofits that are part of an offset project shall meet the requirements of this subclause.

(‘i’) Commercial buildings shall exceed the energy performance requirements of ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition)-2010 [-2004]: Energy Standard for Buildings Except Low-Rise Residential Buildings (see Table 1, section 200.9 of this Title) by 30 percent, with the exception of multi-family residential buildings classified as commercial by ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition)-2010 [-2004] (see Table 1, section 200.9 of this Title), which shall exceed these energy performance requirements by 20 percent.

(‘ii’) Residential buildings shall exceed the energy performance requirements of the [2004]2012 International Energy Conservation Code Supplement (see Table 1, section 200.9 of this Title) by 30 percent.

[(b) ‘Offset projects commenced before January 1, 2009 ’. Energy conservation measures implemented as part of an offset project commenced before January 1, 2009 shall meet the performance and prescriptive criteria set forth in this clause.

(1) ‘Combustion equipment’. Combustion equipment installed as part of an offset project commenced before January 1, 2009 shall meet the energy efficiency performance standards contained in this subclause.

(i) ‘Commercial boilers’. Commercial boilers shall meet or exceed the energy efficiency criteria in Table 1 below.

<u>Table 1</u>			
Minimum Commercial Boiler Energy Efficiency			
<u>Technology</u>	<u>Size (Btu/hr)</u>	<u>Rating Method</u>	<u>Minimum Efficiency</u>
Gas-fired <sup>a</sup>	125,000-300,000	AFUE	≥ 88.0%
	300,000-12,500,000	Thermal Efficiency <sup>b</sup>	≥ 90.0%
Oil-fired	>300,000	Thermal Efficiency	≥ 8.0%

<sup>a</sup> Gas-fired boilers shall be installed with controls that allow the boiler to operate in condensing mode and installed with vents designed for positive vent static pressure and vent gas temperature that leads to condensate production in the vent.

<sup>b</sup> Thermal Efficiency is defined as useful energy output (Btu) divided by energy input (Btu), and

presented as a percentage. This shall be measured under steady state conditions, at full rated useful thermal output, 140°F supply from, and 120°F return water temperature to, the boiler.

(ii) ‘ Residential combustion equipment ’. Residential combustion equipment, including furnaces, boilers, and water heaters, shall meet or exceed the energy efficiency criteria in Table 2 below.

<u>Table 2</u>		
Minimum Residential Combustion Equipment <sup>a</sup> Energy Efficiency		
<u>Technology</u>	<u>Rating Method</u>	<u>Minimum Efficiency</u>
Gas-fired furnace	AFUE	≥94%
Oil-fired furnace	AFUE	≥92%
Gas/oil-fired boiler	AFUE	≥90%
Gas/oil-fired water heater	Energy Factor	≥0.62

<sup>a</sup>For furnaces, defined as equipment with a heat input rate of less than 225,000 Btu/hr; for boilers, defined as equipment with a heat input rate of less than 300,000 Btu/hr; for water heaters, defined as equipment subject to 10 CFR 430.

(2) ‘ Other energy conservation measures ’. All other energy conservation measures implemented as part of an offset project shall meet the prescriptive requirements, as applicable, in Energy Benchmark for High Performance Buildings, Version 1.1, New Buildings Institute, 2005 (herein referred to as EBHPB), or state building energy codes, whichever result in better energy performance. Energy

conservation measures without specified performance criteria in the referenced EBHPB shall meet the requirements of Federal Energy Management Program (FEMP) Product Energy Efficiency Recommendations, issued pursuant to Executive Orders 13123 and 13221, ENERGY STAR® - qualified and FEMP-designated Products, Energy-Efficient Products - How to Buy Products with Low Standby Power, and the following FEMP products: Fluorescent Lamps and Ballasts, Fluorescent Luminaires, Downlight Luminaires, Industrial Luminaires, Air-Cooled Electric Chillers, Water-Cooled Electric Chiller, Air-Source and Water-Source Heat Pumps, Ground-Source Heat Pumps, Commercial Boilers, Electric Motors, Gas Griddles, Ice Machines, Electric Water Heaters, Gas Water Heaters, Faucets, Showerheads, Urinals (See Table 1, section 200.9 of this Title) or Energy Star criteria issued jointly by the U.S. Environmental Protection Agency and U.S. Department of Energy for Battery Charging Systems, Clothes Washers, Dishwashers, Refrigerators and Freezers - Residential, Commercial Solid Door Refrigerators and Freezers, Room Air Conditioners, Dehumidifiers, Cordless Phones, Combination Units, TVs, and VCRs, Digital-to-Analog Converter Boxes, DVD products and Home Audio, External Power Adaptors, Boilers, Ceiling Fans, Central Air Conditioners and Air-Source Heat Pumps, Furnaces, Geothermal Heat Pumps, Light Commercial Heating and Cooling, Programmable Thermostats, Ventilating Fans, Compact Fluorescent Bulbs, Exit Signs, Residential Light Fixtures, Traffic Signals, Computers, Imaging Equipment: Copiers, Fax Machines, Mailing Machines, Monitors, Commercial Fryers, Commercial Hot Food Holding Cabinets, Commercial and Industrial Transformers, Commercial Steam Cookers, Roof Products, Room Air Cleaners, Vending Machines, Water Coolers, Windows, Doors and Skylights (See Table 1, section 200.9 of this Title), whichever result in better energy performance.]

[(c)](b') Maximum market penetration rate for offset projects commenced on or after January 1, 2009. For offset projects initiated on or after January 1, 2009, the project sponsor shall demonstrate, to the satisfaction of the department, that the energy conservation measures implemented as part of the offset project have a market penetration rate of less than five percent.

(2) Offset project description. The offset project sponsor shall provide a detailed narrative of the offset project actions to be taken, including documentation that the offset project meets the eligibility requirements of paragraph (1) of this subdivision. The offset project narrative shall include the following information:

(i) location and specifications of the building(s) where the offset project actions will occur;

(ii) owner and operator of the building(s);

(iii) the parties implementing the offset project, including lead contractor(s), subcontractors, and consulting firms;

(iv) specifications of equipment and materials to be installed as part of the offset project; and

(v) building plans and offset project technical schematics, as applicable.

(3) Emissions baseline determination. The emissions baseline shall be determined in accordance with the requirements of this paragraph, based on energy usage (MMBtu) by fuel type for each energy conservation measure, derived using historic fuel use data from the most recent calendar year for which data is available, and multiplied by an emissions factor and oxidation factor for each respective fuel in Table [3]2 below.

<u>Table [3]2</u>		
Emissions and Oxidation Factors		
<u>Fuel</u>	<u>Emissions Factor</u> ( <u>lbs. CO<sub>2</sub>/MMBtu</u> )	<u>Oxidation Factor</u>
Natural Gas	116.98	0.995
Propane	139.04	0.995
Distillate Fuel Oil	161.27	0.99

(i) Isolation of applicable energy conservation measure baseline. The baseline energy usage of the application to be targeted by the energy conservation measure shall be isolated in a manner consistent with the guidance at paragraph (5) of this subdivision.

(ii) Annual baseline energy usage shall be determined as follows:

$$\text{Energy Usage (MMBtu)} = \text{BEU}_{\text{AECM}} \times A$$

where:

$\text{BEU}_{\text{AECM}}$  = Annual pre-installation baseline energy use by fuel type (MMBtu) attributable to the application(s) to be targeted by the energy conservation measure(s). If applicable building codes or equipment standards require that equipment or materials installed as part of the offset project meet certain minimum energy performance requirements, baseline energy usage for the application shall assume that equipment or materials are installed that meet such minimum requirements. For offset projects that replace existing combustion equipment, the assumed minimum energy performance required by applicable building codes or equipment standards shall be that which applies to new equipment that uses the same fuel type as the equipment being replaced. Baseline energy usage shall be determined in accordance with the applicable requirements at paragraph (5) of this subdivision.

A = Adjustments to account for differing conditions during the two time periods (pre-installation and post-installation), such as weather, building occupancy, and changes in building use or function. Adjustments shall be determined in accordance with the applicable requirements at paragraph (5) of this subdivision.

(iii) Annual baseline emissions shall be determined as follows:

$$\text{Emissions (lbs. CO}_2\text{)} = \sum_{i=1}^n \text{BEU}_i \times \text{EF}_i \times \text{OF}_i$$

where:

$\text{BEU}_i$  = Annual baseline energy usage for fuel type  $i$  (MMBtu) demonstrated pursuant to the requirements at Subparagraphs (5)(i) through (iv) of this subdivision.

$\text{EF}_i$  = Emissions factor (lbs.  $\text{CO}_2$ /MMBtu) for fuel type  $i$  listed at paragraph (3), Table [3](2) of this subdivision.

$\text{OF}_i$  = Oxidation factor for fuel type  $i$  listed at paragraph (3), Table [3](2) of this subdivision.

(4) Calculating emissions reductions. Emissions reductions shall be determined based upon annual energy savings by fuel type (MMBtu) for each energy conservation measure, multiplied by the emissions factor and oxidation factor for the respective fuel type at paragraph (3), Table [3](2) of this subdivision.

(i) Annual energy savings shall be determined as follows:

$$\text{Energy Savings (MMBtu)} = (\text{BEU}_{\text{AECM}} \times A) - (\text{PIEU}_{\text{ECM}} \times A)$$

where:

$\text{BEU}_{\text{AECM}}$  = Annual pre-installation baseline energy use by fuel type (MMBtu) calculated pursuant to Subparagraphs (5)(i) through (iv) of this subdivision.

$\text{PIEU}_{\text{ECM}}$  = Annual post-installation energy use by fuel type (MMBtu) attributable to the energy conservation measure. Post-installation energy usage shall be determined in accordance with the applicable requirements at Subparagraphs (5)(i) through (iv) of this subdivision.

A = Adjustments to account for any differing conditions during the two time periods (pre-installation and post-installation), such as weather, building occupancy, and changes in building use or function. Adjustments shall be determined in accordance with the applicable requirements at paragraph (5) of this subdivision.

(ii) Annual emissions reductions shall be determined as follows:

$$\text{Emissions Reduction (lbs. CO}_2\text{)} = \sum_{i=1}^n \text{ES}_i \times \text{EF}_i \times \text{OF}_i$$

where:

$\text{ES}_i$  = Energy savings for fuel type  $i$  (MMBtu) demonstrated pursuant to the requirements at paragraph (5) of this subdivision.

$EF_i$  = Emissions factor (lbs. CO<sub>2</sub>/MMBtu) for fuel type i listed at paragraph (3), Table [3](2) of this subdivision.

$OF_i$  = Oxidation factor for fuel type i listed at paragraph (3), Table [3](2) of this subdivision.

(5) Monitoring and verification requirements. As part of the consistency application, the project sponsor shall provide a monitoring and verification plan certified by an independent verifier accredited pursuant to section 242-10.6 of this Subpart. Annual monitoring and verification reports shall be certified by an independent verifier accredited pursuant to section 242-10.6 of this Subpart. Independent verifiers must conduct a site audit when reviewing the first monitoring and verification report submitted by the project sponsor, except for offset projects that save less than 1,500 MMBtu per year. For offset projects that save less than 1,500 MMBtu per year, the project sponsor must provide the independent verifier with equipment specifications and copies of equipment invoices and other relevant offset project-related invoices. All offset project documentation, including the consistency application and monitoring and verification reports, shall be signed by a Professional Engineer, identified by license number. Monitoring and verification shall also meet the following requirements.

(i) General energy measurement and verification requirements. Monitoring and verification of energy usage shall be demonstrated through a documented process consistent with the following protocols and procedures, as applicable.

(‘a’) For existing commercial buildings, determination of baseline energy usage shall be consistent with the ‘International Performance Measurement & Verification Protocol, Volume I: Concepts and Options for Determining Energy and Water Savings (IPMVP)’, “Option B. Retrofit Isolation” and “Option D. Calibrated Simulation.” (see Table 1, section 200.9 of this Title) If a building project involves

only energy conservation measures implemented as part of a CO<sub>2</sub> emissions offset project, a process consistent with IPMVP “Option C. Whole Facility” may be used, as applicable. Application of the IPMVP general guidance shall be consistent with the applicable detailed specifications in ‘ASHRAE Guideline 14-2002, Measurement of Energy and Demand Savings’ (see Table 1, section 200.9 of this Title).

(‘b’) For new commercial buildings, determination of baseline energy usage shall be consistent with the International Performance Measurement & Verification Protocol, Volume III: Concepts and Options for Determining Energy Savings in New Construction (IPMVP), “Option D. Calibrated Simulation.” (see Table 1, section 200.9 of this Title) Application of the IPMVP general guidance shall be consistent with the applicable detailed specifications in ASHRAE Guideline 14-2002, Measurement of Energy and Demand Savings (see Table 1, section 200.9 of this Title).

(‘c’) For existing and new residential buildings, determination of baseline energy usage shall be consistent with the requirements of the RESNET National Energy Rating Technical Standards and National Home Energy Rating Technical Guidelines, [2006]2013 (Chapter 3 and Appendix A of [2006]2013 Mortgage Industry National Home Energy Rating System Standards) (see Table 1, section 200.9 of this Title).

(ii) ‘ Isolation of applicable energy conservation measure ’. In calculating both baseline energy usage and energy savings, the applicant shall isolate the impact of each eligible energy conservation measure (ECM), either through direct metering or energy simulation modeling. For offset projects with multiple ECMs, and where individual ECMs can affect the performance of others, the sum of energy savings due to individual ECMs shall be adjusted to account for the interaction of ECMs. For commercial buildings, this process shall be consistent with the requirements of ASHRAE Guideline 14-2002, Measurement of Energy and

Demand Savings, and ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition) -2010 [2004]: Energy Standard for Buildings Except Low-Rise Residential Buildings (see Table 1, section 200.9 of this Title). For residential buildings, this process shall be consistent with the requirements of the RESNET National Energy Rating Technical Standards and National Home Energy Rating Technical Guidelines, [2006] 2013 (Chapter 3 and Appendix A of [2006]2013 Mortgage Industry National Home Energy Rating System Standards) (see Table 1, section 200.9 of this Title).

(‘a’) Reductions in energy usage due to the energy conservation measure shall be based upon actual energy usage data. Energy simulation modeling shall only be used to determine the relative percentage contribution to total fuel usage (for each respective fuel type) of the application targeted by the energy conservation measure.

(iii) Calculation of energy savings. Annual energy savings are to be determined based on the following:

$$\text{Energy Savings (MMBtu)} = (\text{BEU}_{\text{AECM}} \times A) - (\text{PIEU}_{\text{ECM}} \times A)$$

where:

$\text{BEU}_{\text{AECM}}$  = Annual pre-installation baseline energy use by fuel type (MMBtu) attributable to the application(s) to be targeted by the energy conservation measure(s), based upon annual fuel usage data for the most recent calendar year for which data is available. For new buildings, baseline energy use for a reference building equivalent in basic configuration, orientation, and location to the building in which the eligible energy conservation measure(s) is implemented shall be determined according to ASHRAE Guideline 14-2002, Measurement of Energy and Demand Savings and ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition) - 2010[2004], section 11 and Appendix G (see Table 1, section 200.9 of this Title). Where energy simulation modeling

is used to evaluate an existing building, modeling shall be conducted in accordance with ASHRAE Guideline 14-2002, Measurement of Energy and Demand Savings, and ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition) - 2010[-2004], section 11 and Appendix G (see Table 1, section 200.9 of this Title). For existing and new residential buildings, energy simulation modeling shall be conducted in accordance with the requirements of the RESNET National Energy Rating Technical Standards and National Home Energy Rating Technical Guidelines, [2006]2013 (Chapter 3 and Appendix A of [2006]2013 Mortgage Industry National Home Energy Rating System Standards) (see Table 1, section 200.9 of this Title).

$PIEU_{ECM}$  = Annual post-installation energy use by fuel type (MMBtu) attributable to the energy conservation measure, to be verified based on annual energy usage after installation of the energy conservation measure(s), consistent with the requirements of ASHRAE Guideline 14-2002, Measurement of Energy and Demand Savings. Where energy simulation modeling is used to evaluate a new or existing building, modeling shall be conducted in accordance with ASHRAE Guideline 14-2002, Measurement of Energy and Demand Savings, and ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition)[-2004], section 11 and Appendix G (see Table 1, section 200.9 of this Title). For existing and new residential buildings, energy simulation modeling shall be consistent with the requirements of the RESNET National Energy Rating Technical Standards and National Home Energy Rating Technical Guidelines, [2006] 2013 (Chapter 3 and Appendix A of [2006]2013 Mortgage Industry National Home Energy Rating System Standards) (see Table 1, section 200.9 of this Title).

A = Adjustments to account for any differing conditions during the two time periods (pre-installation and post-installation), such as weather (weather normalized energy usage based on heating and cooling degree days), building occupancy, and changes in building use or function. For commercial buildings, adjustments shall be consistent with the specifications of ASHRAE Guideline 14-2002, Measurement of Energy and Demand Savings, and ANSI/ASHRAE/IESNA Standard 90.1 (SI Edition) - 2010[-2004], section 11 and Appendix G

(see Table 1, section 200.9 of this Title). For residential buildings, adjustments shall be consistent with the specifications of the RESNET National Energy Rating Technical Standards and National Home Energy Rating Technical Guidelines, [2006] 2013 (Chapter 3 and Appendix A of [2006]2013 Mortgage Industry National Home Energy Rating System Standards) (see Table 1, section 200.9 of this Title).

(iv) 'Provision for sampling of multiple like offset projects in residential buildings'.

Offset projects that implement similar measures in multiple residential buildings may employ representative sampling of buildings to determine aggregate baseline energy usage and energy savings. Sampling protocols shall employ sound statistical methods such that there is 95 percent confidence that the reported value is within 10 percent of the true mean. Any sampling plan shall be certified by an independent verifier, accredited pursuant to section 242-10.6 of this Subpart.

(e) Avoided methane emissions from agricultural manure management operations. To Qualify for the award of CO<sub>2</sub> offset allowances under this Subpart, offset projects that capture and destroy methane from animal manure and organic food waste using anaerobic digesters shall meet the requirements of this subdivision and all applicable requirements of this Subpart.

(1) 'Eligibility'.

(i) Eligible offset projects shall consist of the destruction of that portion of methane generated by an anaerobic digester that would have been generated in the absence of the offset project through the uncontrolled anaerobic storage of manure or organic food waste.

(ii) Eligible offset projects shall employ only manure-based anaerobic digester systems using livestock manure as the majority of digester feedstock, defined as more than 50 percent of the mass input

into the digester on an annual basis. Organic food waste used by an anaerobic digester shall only be that which would have been stored in anaerobic conditions in the absence of the offset project.

(iii) The provisions of section 242-10.3[(d)](c)(2) and (3) of this Subpart shall not apply to agricultural manure management offset projects provided either of the following requirements are met.

(‘a’) The offset project is located in a state that has a market penetration rate for anaerobic digester projects of five percent or less. The market penetration determination shall utilize the most recent market data available at the time of submission of the consistency application pursuant to section 242-10.4 of this Subpart and shall be determined as follows:

$$MP (\%) = MG_{AD} / MG_{STATE}$$

where:

$MG_{AD}$  = Average annual manure generation for the number of dairy cows and swine serving all anaerobic digester projects in the applicable state at the time of submission of a consistency application pursuant to section 242-10.4 of this Subpart.

$MG_{STATE}$  = average annual manure production of all dairy cows and swine in the state at the time of submission of a consistency application pursuant to section 242-10.4 of this Subpart.

(‘b’) The offset project is located at a farm with 4,000 or less head of dairy cows, or a farm with equivalent animal units, assuming an average live weight for dairy cows (lbs/cow) of 1,400 lbs.,

or, if the project is a regional-type digester, total annual manure input to the digester is designed to be less than the average annual manure produced by a farm with 4,000 or less head of dairy cows, or a farm with equivalent animal units, assuming an average live weight for dairy cows (lbs/cow) of 1,400 lbs.

(2) Offset project description. The offset project sponsor shall provide a detailed narrative of the offset project actions to be taken, including documentation that the offset project meets the eligibility requirements of paragraph (1) of this subdivision. The offset project narrative shall include the following information:

(i) owner and operator of the offset project;

(ii) location and specifications of the facility where the offset project will occur;

(iii) owner and operator of the facility where the offset project will occur;

(iv) specifications of the equipment to be installed and a technical schematic of the offset project; and

(v) location and specifications of the facilities from which anaerobic digester influent will be received, if different from the facility where the offset project will occur.

(3) Emissions baseline determination. The emissions baseline shall represent the potential emissions of the CH<sub>4</sub> that would have been produced in a baseline scenario under uncontrolled anaerobic storage conditions and released directly to the atmosphere in the absence of the offset project.

(i) Baseline CH<sub>4</sub> emissions shall be calculated as follows:

$$\text{CO}_2\text{e (tons)} = (\text{V}_m \times \text{M}) / 2000 \times \text{GWP}$$

where:

CO<sub>2</sub>e = Potential CO<sub>2</sub>e emissions due to calculated CH<sub>4</sub> production under site-specific anaerobic storage and weather conditions

V<sub>m</sub> = Volume of CH<sub>4</sub> produced each month from degradation of volatile solids in a baseline uncontrolled anaerobic storage scenario under site-specific storage and weather conditions for the facility at which the manure or organic food waste is generated (ft<sup>3</sup>)

M = Mass of CH<sub>4</sub> per cubic foot (0.04246 lb/ft<sup>3</sup> default value at one atmosphere and 20°C)

GWP = Global warming potential of CH<sub>4</sub> ([23]25)

(ii) The estimated amount of volatile solids degraded each month under the uncontrolled anaerobic storage baseline scenario (kg) shall be calculated as follows:

$$\text{VS}_{\text{deg}} = \text{VS}_{\text{avail}} \times f$$

where:

VS = volatile solids as determined from the equation:

$$\text{VS} = \text{M}_m \times \text{TS}\% \times \text{VS}\%$$

where:

$M_m$  = mass of manure or organic food waste produced per month (kg)

$TS_{\%}$  = concentration (percent) of total solids in manure or organic food waste as determined through EPA 160.3 testing method (U.S.EPA Method Number 160.3, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020)) (see Table 1, section 200.9 of this Title)

$VS_{\%}$  = concentration (percent) of volatile solids in total solids as determined through EPA 160.4 testing method (U.S.EPA Method Number 160.4, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020)) (see Table 1, section 200.9 of this Title)

$VS_{avail}$  = volatile solids available for degradation in manure or organic food waste storage each month as determined from the equation:

$$VS_{avail} = VS_p + \frac{1}{2} VS_{in} - VS_{out}$$

where:

$VS_p$  = volatile solids present in manure or organic food waste storage at beginning of month (left over from previous month) (kg)

$VS_{in}$  = volatile solids added to manure or organic food waste storage during the course of the month (kg). The factor of  $\frac{1}{2}$  is multiplied by this number to represent the average mass of volatile solids available for degradation for the entire duration of the month.

$VS_{out}$  = volatile solids removed from the manure or organic food waste storage for land application or export (assumed value based on standard farm practice)

$f$  = van 't Hoff-Arrhenius factor for the specific month as determined using the equation below. Using a base temperature of 30° C, the equation is as follows:

$$f = \exp\{[E(T_2 - T_1)] / [(GC \times T_1 \times T_2)]\}$$

where:

$f$  = conversion efficiency of VS to CH<sub>4</sub> per month

$E$  = activation energy constant (15,175 cal/mol)

$T_2$  = average monthly ambient temperature for facility where manure or organic food waste is generated (converted from ° Celsius to ° Kelvin) as determined from the nearest National Weather Service certified weather station (if reported temperature °C > 5° C; if reported temperature °C < 5° C, then  $F = 0.104$ )

$T_1 = 303.16$  (30° C converted to °K)

$GC$  = ideal gas constant (1.987 cal/K mol)

(iii) The volume of CH<sub>4</sub> produced (ft<sup>3</sup>) from degradation of volatile solids shall be calculated as follows:

$$V_m = (VS_{deg} \times B_o) \times 35.3147$$

where:

$V_m$  = volume of CH<sub>4</sub> (ft<sup>3</sup>)

$VS_{deg}$  = volatile solids degraded (kg)

$B_o$  = manure or organic food waste type-specific maximum methane generation constant (m<sup>3</sup> CH<sub>4</sub>/kg VS degraded). For dairy cow manure,  $B_o = 0.24$  m<sup>3</sup> CH<sub>4</sub>/kg VS degraded. The methane generation constant for

other types of manure shall be those cited at U.S. EPA, Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-[2005]2010, Annex 3, Table A-[162]191 (U.S. EPA, April 15, [2007]2012) (see Table 1, section 200.9 of this Title), unless the project sponsor proposes an alternate methane generation constant. If the project sponsor proposes to use a methane generation constant other than the ones found in the above-cited reference, the project sponsor must provide justification and documentation to the department.

(4) Calculating emissions reductions. Emissions reductions shall be determined based on the potential emissions (in tons of CO<sub>2</sub>e) of the CH<sub>4</sub> that would have been produced in the absence of the offset project under a baseline scenario that represents uncontrolled anaerobic storage conditions, as calculated pursuant to subparagraphs (3)(i) through (iii) of this subdivision, and released directly to the atmosphere. Emissions reductions may not exceed the potential emissions of the anaerobic digester, as represented by the annual volume of CH<sub>4</sub> produced by the anaerobic digester, as monitored pursuant to paragraph (5) of this subdivision. If the project is a regional-type digester, CO<sub>2</sub> emissions due to transportation of manure and organic food waste from the site where the manure and organic food waste was generated to the anaerobic digester shall be subtracted from the emissions reduction calculated pursuant to subparagraphs (3)(i) through (iii) of this subdivision. Transport CO<sub>2</sub> emissions shall be determined through one of the following methods.

(i) Documentation of transport fuel use for all shipments of manure and organic food waste from off-site to the anaerobic digester during each reporting year and a log of transport miles for each shipment. CO<sub>2</sub> emissions shall be determined through the application of an emissions factor for the fuel type used. If this option is chosen, the following emissions factors shall be applied as appropriate.

(‘a’) Diesel fuel: 22.912 lbs. CO<sub>2</sub>/gallon.

(‘b’) Gasoline: 19.878 lbs. CO<sub>2</sub>/gallon.

(‘c’) Other fuel: submitted emissions factor approved by the department.

(ii) Documentation of total tons of manure and organic food waste transported from off-site for input into the anaerobic digester during each reporting year, as monitored pursuant to subparagraph (5)(i) of this subdivision, and a log of transport miles and fuel type used for each shipment. CO<sub>2</sub> emissions shall be determined through the application of a ton-mile transport emission factor for the fuel type used. If this option is chosen, the following emissions factors shall be applied as appropriate for each ton of manure delivered, and multiplied by the number of miles transported.

(‘a’) Diesel fuel: 0.131 lbs. CO<sub>2</sub> per ton-mile.

(‘b’) Gasoline: 0.133 lbs. CO<sub>2</sub> per ton-mile.

(‘c’) Other fuel: submitted emissions factor approved by the department.

(5) Monitoring and verification requirements. Offset projects shall employ a system that provides metering of biogas volumetric flow rate and determination of CH<sub>4</sub> concentration. Annual monitoring and verification reports shall include monthly biogas volumetric flow rate and CH<sub>4</sub> concentration determination. Monitoring and verification shall also meet the following requirements.

(i) If the offset project is a regional-type digester, manure and organic food waste from each distinct source supplying to the anaerobic digester shall be sampled monthly to determine the amount of

volatile solids present. Any emissions reduction will be calculated according to mass of manure and organic food waste (kg) being digested and percentage of volatile solids present before digestion, consistent with the requirements at paragraph (3) of this subdivision and subparagraph (iii) of this paragraph, and apportioned accordingly among sources. The project sponsor shall provide supporting material and receipts tracking the monthly receipt of manure and organic food waste (kg) used to supply the anaerobic digester from each supplier.

(ii) If the offset project includes the digestion of organic food waste eligible pursuant to subparagraph (1)(ii) of this subdivision, organic food waste shall be sampled monthly to determine the amount of volatile solids present before digestion, consistent with the requirements at paragraph (3) of this subdivision and subparagraph (iii) of this paragraph, and apportioned accordingly.

(iii) The project sponsor shall submit a monitoring and verification plan as part of the consistency application that includes a quality assurance and quality control program associated with equipment used to determine biogas volumetric flow rate and CH<sub>4</sub> composition. The monitoring and verification plan shall be specified in accordance with the applicable monitoring requirements listed in Table [1] below. The monitoring and verification plan shall also include provisions for ensuring that measuring and monitoring equipment is maintained, operated, and calibrated based on manufacturer's recommendations, as well as provisions for the retention of maintenance records for audit purposes. The monitoring and verification plan shall be certified by an independent verifier accredited pursuant to section 242-10.6 of this Subpart.

Table [1]

Input Monitoring Requirements

Input Parameter	Measurement Unit	Frequency of Sampling	Sampling Method(s)
-----------------	------------------	--------------------------	--------------------

Influent flow (mass) into the digester	Kilograms (kg) per month (wet weight)	Monthly total into the digester	<p>a) Recorded weight</p> <p>b) Digester influent pump flow</p> <p>c) Livestock population and application of American Society of Agricultural and Biological Engineers (ASABE) standard (ASAE D384.2, March 2005) <u>(see Table 1, section 200.9 of this Title)</u></p>
Influent total solids concentration (TS)	Percent (of sample)	Monthly, depending upon recorded variations	<p>U.S. EPA Method Number 160.3, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020) <u>(see Table 1, section 200.9 of this Title)</u></p>

Influent volatile solids (VS) concentration	Percent (of TS)	Monthly, depending upon recorded variations	USEPA Method Number 160.4, Methods for the Chemical Analysis of Water and Wastes (MCAWW) (EPA/600/4-79/020) ( <u>see Table 1, section 200.9 of this Title</u> )
Average monthly ambient temperature	Temperature °C	Monthly (based on farm averages)	Closest National Weather Service-certified weather station

(iv) The project sponsor shall verify biogas CH<sub>4</sub> composition quarterly through gas sampling and third party laboratory analysis using applicable U.S. EPA test methods.

#### 242-10.6 Accreditation of independent verifiers

(a) 'Standards for accreditation'. Independent verifiers may be accredited by the department to provide verification services as required of project sponsors under this Subpart, provided that independent verifiers meet all of the requirements of this section.

(1) Verifier minimum requirements. Each accredited independent verifier shall demonstrate knowledge of the following topics:

(i) utilizing engineering principles;

(ii) quantifying greenhouse gas emissions;

(iii) developing and evaluating air emissions inventories:

(iv) auditing and accounting principles;

(v) information management systems;

(vi) the requirements of this Subpart and other applicable requirements of this Part; and

(vii) such other qualifications as may be required by the department to provide competent verification services as required for individual offset categories specified at section 242-10.5 of this Subpart.

(2) Organizational qualifications. Accredited independent verifiers shall demonstrate that they meet the following requirements:

(i) verifiers shall have no direct or indirect financial relationship, beyond a contract for provision of verification services, with any offset project developer or project sponsor;

(ii) verifiers shall employ staff with professional licenses, knowledge, and experience appropriate to the specific category(ies) of offset projects at section 242-10.5 of this Subpart that they seek to verify;

(iii) verifiers shall hold a minimum of one million U.S. dollars of professional liability insurance. If the insurance is in the name of a related entity, the verifier shall disclose the financial relationship

between the verifier and the related entity, and provide documentation supporting the description of the relationship; and

(iv) verifiers shall demonstrate that they have implemented an adequate management protocol to identify potential conflicts of interest with regard to an offset project, offset project developer, or project sponsor, or any other party with a direct or indirect financial interest in an offset project that is seeking or has been granted approval of a consistency application pursuant to section 242-10.4(e) of this Subpart, and remedy any such conflicts of interest prior to providing verification services.

(3) Pre-qualification of verifiers. The department may require prospective verifiers to successfully complete a training course, workshop, or test developed by the department or its agent, prior to submitting an application for accreditation.

(b) ' Application for accreditation '. An application for accreditation shall not contain any proprietary information, and shall include the following:

(1) the applicant 's name, address, e-mail address, and telephone number [, and facsimile transmission number];

(2) documentation that the applicant has at least two years of experience in each of the knowledge areas specified at subparagraphs (a)(1)(i) through (v) of this section, and as may be required pursuant to subparagraph (a)(1)(vii) of this section;

(3) documentation that the applicant has successfully completed the requirements at paragraph

(a)(3) of this section, as applicable;

(4) a sample of at least one work product that provides supporting evidence that the applicant meets the requirements at paragraphs (a)(1) and (2) of this section. The work product shall have been produced, in whole or part, by the applicant and shall consist of a final report or other material provided to a client under contract in previous work. For a work product that was jointly produced by the applicant and another entity, the role of the applicant in the work product shall be clearly explained;

(5) documentation that the applicant holds professional liability insurance as required pursuant to subparagraph (a)(2)(iii) of this section.

(6) documentation that the applicant has implemented an adequate management protocol to address and remedy any conflict of interest issues that may arise, as required pursuant to subparagraph (a)(2)(iv) of this section.

(c) ' Department action on applications for accreditation '. The department shall approve or deny a complete application for accreditation within 45 days after submission. Upon approval of an application for accreditation, the independent verifier shall be accredited for a period of three years from the date of application approval.

(d) ' Reciprocity'. Independent verifiers accredited in other participating states may be deemed to be accredited in New York State, at the discretion of the department.

(e) 'Conduct of accredited verifiers'.

(1) Prior to engaging in verification services for an offset project sponsor, the accredited verifier shall disclose all relevant information to the department to allow for an evaluation of potential conflict of interest with respect to an offset project, offset project developer, or project sponsor. The accredited verifier shall disclose information concerning its ownership, past and current clients, related entities, as well as any other facts or circumstances that have the potential to create a conflict of interest.

(2) Accredited verifiers shall have an ongoing obligation to disclose to the department any facts or circumstances that may give rise to a conflict of interest with respect to an offset project, offset project developer, or project sponsor.

(3) The department may reject a verification report and certification statement from an accredited verifier, submitted as part of a consistency application required pursuant to section 242-10.4(b) of this Subpart or submitted as part of a monitoring and verification report submitted pursuant to section 242-10.7(b) of this Subpart, if the department determines that the accredited verifier has a conflict of interest related to the offset project, offset project developer, or project sponsor.

(4) The department may revoke the accreditation of a verifier at any time given cause, for the following:

(i) failure to fully disclose any issues that may lead to a conflict of interest situation with respect to an offset project, offset project developer, or project sponsor;

(ii) the verifier is no longer qualified due to changes in staffing or other criteria;

(iii) negligence or neglect of responsibilities pursuant to the requirements of this Subpart;

and

(iv) intentional misrepresentation of data or other intentional fraud.

242-10.7 Award and recordation of CO<sub>2</sub> offset allowances.

(a) 'Quantities of CO<sub>2</sub> offset allowances that may be awarded, and subsequently recorded'.

(1) Award of CO<sub>2</sub> offset allowances for [.

(i) '[CO<sub>2</sub> emissions offset projects [']'. Following the issuance of a consistency determination under section 242-10.4(e)(2) of this Subpart and the approval of a monitoring and verification report under the provisions of subdivision (e) of this section, the department will award one CO<sub>2</sub> offset allowance for each ton of demonstrated reduction in CO<sub>2</sub> or CO<sub>2</sub> equivalent emissions or sequestration of CO<sub>2</sub>.

[(ii) 'CO<sub>2</sub> emissions credit retirement '. If a project sponsor received a consistency determination pursuant to section 242-10.4(e)(2) of this Subpart, one CO<sub>2</sub> offset allowance will be awarded for each ton of reduction of CO<sub>2</sub> or CO<sub>2</sub> equivalent or sequestration of CO<sub>2</sub>, represented by the relevant credits or allowances retired. If a credit or allowance is represented in metric tons, 1.1023 tons will be awarded for every metric ton, provided that total CO<sub>2</sub> offset allowances awarded shall be rounded down to the nearest whole ton.]

(2) Recordation of CO<sub>2</sub> offset allowances. After CO<sub>2</sub> offset allowances are awarded under paragraph (1) of this subdivision, the department shall record such CO<sub>2</sub> offset allowances in the project sponsor's general account.

(b) 'Deadlines for submittal of monitoring and verification reports'.

(1) For CO<sub>2</sub> emissions offset projects undertaken prior to January 1, 2009, the project sponsor

must submit the monitoring and verification report covering the pre-2009 period by June 30, 2009.

(2) For CO<sub>2</sub> emissions offset projects undertaken on or after January 1, 2009, the monitoring and verification report must be submitted within 6 months following the completion of the last calendar year during which the offset project achieved CO<sub>2</sub> equivalent reductions or sequestration of CO<sub>2</sub> for which the project sponsor seeks the award of CO<sub>2</sub> offset allowances.

(c) Contents of monitoring and verification reports. For an offset project, the monitoring and verification report must include the following information.

(1) The project's sponsor's name, address, e-mail address, telephone number [ , facsimile transmission number,] and account number.

(2) The CO<sub>2</sub> emissions reduction or CO<sub>2</sub> sequestration determination as required by the relevant provisions of section 242-10.5 of this Subpart, including a demonstration that the project sponsor complied with the required quantification, monitoring, and verification procedures under section 242-10.5 of this Subpart, as well as those outlined in the consistency application approved pursuant to section 242-10.4(e)(2) of this Subpart.

(3) A signed statement that reads "The undersigned project sponsor hereby confirms and attests that the offset project upon which this monitoring and verification report is based is in full compliance with all of the requirements of Subpart 242-10. The project sponsor holds the legal rights to the offset project, or has been granted the right to act on behalf of a party that holds the legal rights to the offset project. I understand that eligibility for the award of CO<sub>2</sub> offset allowances under Subpart 242-10 is contingent on meeting the requirements of Subpart 242-10. I authorize the department or its agent to audit this offset project for purposes

of verifying that the offset project, including the monitoring and verification plan, has been implemented as described in the consistency application that was the subject of a consistency determination by the department. I understand that this right to audit shall include the right to enter the physical location of the offset project and to make available to the department or its agent, any and all documentation relating to the offset project at the department's request. I submit to the legal jurisdiction of New York State.”

(4) A certification signed by the offset project sponsor certifying that all offset projects for which the sponsor has received offset allowances under this Subpart (or similar provisions in the rules of other participating states), under the sponsor's ownership or control (or under the ownership or control of any entity which controls, is controlled by, or has common control with the sponsor) are in compliance with all applicable requirements of the CO<sub>2</sub> Budget Trading Program in all participating states.

(5) A verification report and certification statement signed by an independent verifier accredited pursuant to section 242-10.6 of this Subpart that documents that the independent verifier has reviewed the monitoring and verification report and evaluated the following in relation to the applicable requirements at section 242-10.5 of this Subpart, and any applicable guidance issued by the department.

(i) The adequacy and validity of information supplied by the project sponsor to determine CO<sub>2</sub> emissions reductions or CO<sub>2</sub> sequestration pursuant to the applicable requirements at section 242-10.5 of this Subpart.

(ii) The adequacy and consistency of methods used to quantify, monitor, and verify CO<sub>2</sub> emissions reductions and CO<sub>2</sub> sequestration in accordance with the applicable requirements at section 242-10.5 of this Subpart and as outlined in the consistency application approved pursuant to section 242-10.4(e)(2) of this Subpart.

(iii) Such other evaluations and verification reviews as may be required by the department. The adequacy and validity of information supplied by the project sponsor to demonstrate that the offset project meets the applicable eligibility requirements of section 242-10.5 of this Subpart.

(6) Disclosure of any voluntary or mandatory programs, other than the CO<sub>2</sub> Budget Trading Program, to which greenhouse gas emissions data related to the offset project has been, or will be reported.

(7) For offset projects located in a state or United States jurisdiction that is not a participating state, a demonstration that the project sponsor has complied with all requirements of the cooperating department in the state or United States jurisdiction where the offset project is located.

(d) 'Prohibition against filing monitoring and verification reports in more than one participating state'. Monitoring and verification reports may only be filed under this section for projects that have received consistency determinations under section 242-10.4(e)(2) of this Subpart. Monitoring and verification reports may not be filed under this section for projects that have received consistency determinations in other participating states.

(e) 'Department action on monitoring and verification reports'. The department will approve or deny a complete monitoring and verification report within 45 days following receipt of a complete report. A complete monitoring and verification report is one that is in a format approved by the department and is determined to be complete for the purposes of commencing review of the monitoring and verification report. In no event shall a completeness determination prevent the department from requesting additional information in order to enable the department to approve or deny a monitoring and verification report filed under this section.

6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program

## 6 NYCRR Part 200, General Provisions

## Rural Area Flexibility Analysis

The Regional Greenhouse Gas Initiative (RGGI) is a cooperative, historic effort among New York and eight Participating States<sup>1</sup> and is the first mandatory, market-based carbon dioxide ( CO<sub>2</sub>) emissions reduction program in the United States. Since its inception in 2008, RGGI has utilized an innovative market-based mechanism to cap and cost-effectively reduce emissions that cause climate change. Recently, New York along with the Participating States, completed a comprehensive program review and announced a proposal to lower the regional emissions cap established under RGGI to 91 million tons in 2014, declining 2.5 percent a year through 2020.<sup>2</sup> Accordingly, New York and the Participating States committed to propose revisions, pursuant to state-specific regulatory processes, to their respective CO<sub>2</sub> Budget Trading Programs to further reduce CO<sub>2</sub> emissions from power plants in the region. In order to implement the updated RGGI program in New York State, the Department of Environmental Conservation (Department) proposes to revise 6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program (the Program) and 6 NYCRR Part 200, General Provisions.

The promulgation of the proposed revisions to Part 242 and the amendments to Part 200, apply to affected sources statewide, including those located in rural areas. Since the regulations apply equally to affected facilities statewide, rural areas are not impacted any differently than other areas in the State. The Department is implementing the proposed revisions to the Program through a cap-and-trade program. Allowance based cap and trade systems are the most cost effective means for implementing emission reductions from large stationary sources, therefore the Department has minimized any potential adverse economic impacts of the revised

<sup>1</sup> In addition to New York, the RGGI Participating States include: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, Rhode Island, and Vermont.

<sup>2</sup> The Participating States released the Updated Model Rule on February 7, 2013.

Program to all sources on a statewide basis.

The proposed Program revisions which will cap regional CO<sub>2</sub> emissions at 91 million tons annually beginning in 2014 represent a nearly 45 percent reduction from the existing cap currently in place under the Program. After 2020, the cap will remain at 78 million tons annually. Further, in order to account for the existing private bank of CO<sub>2</sub> emissions allowances already acquired at auction, and in order to help create a binding cap, the proposed Program revisions provide two distinct budget adjustments. The First Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the first control period private bank of allowances (vintages 2009, 2010, and 2011) held by market participants after the first control period. The Second Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the surplus 2012 and 2013 vintage allowances held by market participants as of the end of 2013.

The proposed Program revisions also create the Cost Containment Reserve (CCR) which will help provide additional flexibility and cost containment for the Program. The CCR allowances will be triggered and released at auctions at \$4/ton in 2014, \$6/ton in 2015, \$8/ton in 2016, and \$10/ton in 2017. Each year after 2017 the CCR trigger price will increase by 2.5 percent. If the trigger price is reached, up to 10 million additional CCR allowances will be available for purchase at auction, except in 2014, when the reserve will be limited to 5 million allowances. The existing price triggers for expanding use of offsets and the one year compliance period extension will be eliminated in favor of the CCR.

Finally, the proposed Program revisions create an interim compliance obligation in part to align it with the annual compliance obligations under federal programs such as the Clean Air Interstate Rule and the Title IV Acid Rain Program. This program revision also helps to address the potential for a budget source to operate during the first couple of years of a three year compliance period and the potential to avoid their compliance

obligation as a result of the business closing or falling into bankruptcy prior to the third year compliance obligation. In addition to demonstrating full compliance at the end of each three-year compliance period, regulated entities must now demonstrate that they are holding allowances equal to at least 50 percent of their emissions at end of each of the first two years in each three year compliance period. The proposed Program revisions also include minor revisions such as setting the reserve price at \$2.00 in 2014, to rise at 2.5 percent per year in subsequent years, updating all references, and the deleting early reduction allowance provisions. The majority of the proceeds from the sale of New York's allowances will be continue to be dedicated to strategic energy or consumer benefits, such as energy efficiency and clean energy technologies.

#### TYPES AND ESTIMATED NUMBER OF RURAL AREAS AFFECTED

The promulgation of the proposed revisions to the Program and the amendments to Part 200, apply to affected sources statewide. All public and private businesses subject to the regulations regardless of location, including those in rural areas, will be affected.

#### REPORTING, RECORD KEEPING AND OTHER COMPLIANCE REQUIREMENTS

The proposed revisions to the Program do not change the applicability provisions of the current Program. Therefore, sources already subject to the current Program will remain subject to the proposed revisions to the Program. While the second control period under the current Program will remain unchanged and will include years 2012-2014 with a CO<sub>2</sub> allowance transfer deadline of March 1, 2015, the proposed Program revisions will require affected sources and units to comply with the emission limitations of the Program beginning on January 1, 2014.

The proposed revisions to the Program create a modified compliance schedule called an interim compliance period which is defined as each of the first two years of each three-year control period. The first

interim control period under the revised Program will take place in year 2015; the second interim control period will take place in year 2016. In each of the first two calendar years of each three year control period (e.g., 2015 and 2016), the owners and operators of each source subject to the revised Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions, as of the CO<sub>2</sub> allowance transfer deadline (midnight of March 1<sup>st</sup> or, if March 1<sup>st</sup> is not a business day, midnight of the first business day thereafter), in the source's compliance account that is not less than 50 percent of the total tons of CO<sub>2</sub> emissions for that interim control period. A unit is subject to the interim control period requirements of the Program starting on the later of January 1, 2015 or date the unit commences operation.

Accordingly, at the end of each control period, (e.g., 2017), the owners and operators of each source subject to the revised Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions, as of the CO<sub>2</sub> allowance transfer deadline (midnight of March 1<sup>st</sup> or, if March 1<sup>st</sup> is not a business day, midnight of the first business day thereafter), in the source's compliance account that is not less than the total tons of CO<sub>2</sub> emissions for the control period less the CO<sub>2</sub> allowances deducted for the previous two interim control periods.

Additionally, for each control period in which a CO<sub>2</sub> budget source is subject to the proposed revisions to Program, the CO<sub>2</sub> authorized account representative of the source must continue to submit to the Department by the March 1<sup>st</sup> following the relevant control period, a compliance certification report for each source covering all such units.<sup>3</sup> As noted above, since the second control period for the Program remains unchanged, the first CO<sub>2</sub> allowance transfer deadline under the proposed revisions to the Program will occur on March 1, 2015.

### COSTS

In addition to the needs analysis, the Department, NYSERDA and the New York State Department of Public Service (DPS) analyzed costs and impacts associated with compliance with the proposed revisions to the

---

<sup>3</sup> Sources will not be required to submit a compliance certification report for any interim control periods.

Program. This section explains NYSERDA's analysis and includes a summary of the Integrated Planning Model (IPM®) modeling conducted by ICF International (ICF). IPM® is a nationally recognized modeling tool used by the U.S. Environmental Protection Agency (EPA), state energy and environmental agencies, and private sector firms such as utilities and generation companies. This section also discusses the Department's analysis of the costs associated with State and local government compliance and impacts from the proposed revisions to the Program on the New York economy and customer bills.<sup>4,5</sup>

## Costs to the Regulated Sources and the Public

### Reference Case v. Program Case

Modeling analysis and review was coordinated by RGGI Inc. and New York staff, and included input from energy and environmental representatives from the Participating States and each regional ISO. To estimate the potential impacts of the revisions to the Program, IPM® compared a future with the revisions to the Program (Program Case) to a Reference Case (business as usual scenario) that projects how the electricity system would look if the Program remained unchanged and proposed revisions were not implemented. The modeling assumptions and input data were developed through a stakeholder process with representatives from the electricity generation sector, business and industry, environmental advocates and consumer interest groups. Modeling results were then presented to stakeholders for review and comment throughout the development of the proposed revisions to the RGGI program.

### Reference Case

Assumptions and sources of input data are specified in detail in the "RGGI DRAFT 2012 Reference Case and Sensitivity Analyses Assumptions."<sup>6</sup> Key assumptions and data include regional electricity demand,

<sup>4</sup> "REMI Economic Impacts Analysis," by the Northeast States for Coordinated Air Use Management (NESCAUM), dated May 29, 2013. [http://www.dec.ny.gov/docs/administration\\_pdf/remi91cap2013.pdf](http://www.dec.ny.gov/docs/administration_pdf/remi91cap2013.pdf)

<sup>5</sup> "IPM Potential Scenario Customer Bill Analysis," by the Analysis Group, dated May 24, 2013. [http://www.dec.ny.gov/docs/administration\\_pdf/custbillanaly2013.pdf](http://www.dec.ny.gov/docs/administration_pdf/custbillanaly2013.pdf)

load shapes, transmission system capacities and limits, generation unit level operation and maintenance costs and performance characteristics, fuel prices, new capacity and emission control technology costs and performance characteristics, reserve margins and local reserve requirements, RPS requirements, national and state environmental regulations, and financial market assumptions. All estimates are based on 2010 dollars. Regional electricity demand growth projections, transmission capacities and limits, and near-term expected infrastructure additions/retirements were obtained from regional ISO sources. Long range Henry Hub natural gas prices (2020), based on forecast data from U.S. Energy Information Administration (EIA) were projected to be approximately \$4.6/MMBtu (constant 2010 dollars).

A number of assumptions were used to develop the model, including: 1) the construction of new coal-fired plants was precluded to meet projected capacity shortfalls in the United States unless they include carbon capture; 2) new nuclear plant construction was limited to build outs at existing plant sites; 3) a national 3-pollutant policy (SO<sub>2</sub>, NO<sub>x</sub> and mercury) that approximates the Cross-state Air Pollution Rule (CSAPR) and the Mercury and Air Toxics Rule (MATS) is assumed; 4) RPS targets are assumed to be met in all states except New York; and 5) partial fulfillment of the RPS target is assumed in New York based upon New York ISO certainty criteria, capacity under RPS contract, and RPS funds currently approved for future solicitations (approximately \$3 billion).

Under the Reference Case, generation from new gas-fired combined cycle units is projected to supply most of the growing electricity demand. Electric generation from gas-fired plants in New York is projected to increase by approximately 37 percent from 48,109 Gigawatt hours ( GWh) in 2013 to 65,983 GWh in 2020. Generation from new renewable resources (primarily wind units) is projected to increase significantly, largely in response to RPS requirements. While nuclear generation is projected to decrease by about 35% percent between

---

<sup>6</sup> The modeling assumptions document and the tabular results for each modeling run are located at [http://www.rggi.org/design/program\\_review](http://www.rggi.org/design/program_review)

2013 and 2020 due to the assumed retirement of the Indian Point units upon their respective license expiration, generation from coal-fired plants is projected to increase by about eight percent between 2013 and 2020. Finally, generation from existing oil/gas steam units is projected to decrease over time, as a result of displacement by lower-cost electricity from new gas-fired units. Additionally, net imports of electricity into New York are projected to rise from approximately 24,000 GWh in 2013 to approximately 26,800 GWh in 2016 before decreasing to about 23,000 in 2020. CO<sub>2</sub> emissions in the Reference Case, from sources in New York State subject to the Program, are projected to increase from approximately 34.6 million tons in 2013 to about 41.7 million tons in 2020. This increase is due primarily to increased generation from new and existing gas-fired power plants to meet projected load growth.

This generation data was based on the IPM Reference Case model runs and the table displayed below:

New York Reference Case Net Generation (in GWh)	2012	2013	2014	2015	2016	2018	2020

## Program Case

### Interim Adjustment for Banked Allowances

Likewise, several assumptions were used to project impacts in the Program Case. For modeling purposes, the proposed CO<sub>2</sub> cap of 91 million tons, based on the approximate amount of current emissions in the RGGI region, was applied to sources subject to the Program in the Participating States. In order to account for the existing private bank of allowances and in order to help create a binding cap, the proposed revisions to the Program create provisions for two distinct budget adjustments. In order to model the budget adjustments, the annual caps were adjusted in accordance with the model rule language and the assumption that the adjustment would account for the existing bank as well as 100 percent of the surplus (current cap and emissions) for 2013.

While the Program Case allows a limited number of emissions offsets to be purchased by affected generators and used for compliance by affected generators, the model assumes that it is not economically attractive for offset suppliers to sell their products in the RGGI market until prices reached \$10 per allowance. This value is based on the reserve price under the California cap-and-trade program which allows for the use of

offset credits. As long as offset suppliers are able to sell similar products in the California market for prices higher than those in the RGGI market, offset suppliers would not be expected to sell into the RGGI market.

In order to obtain New York specific results, several components between the Program Case and the Reference Case are compared including generation mix, net electricity imports, changes in generation capacity, CO<sub>2</sub> emissions, CO<sub>2</sub> allowance prices, and wholesale and retail electricity price impacts. Electricity generation from gas-fired units in 2020 is about 1,576 GWh or 2.4 percent lower in the Program Case than in the Reference Case. Generation from coal-fired units in 2020 is about 2,376 GWh or 37 percent lower in the Program Case than in the Reference Case. Net imports into New York in 2020 are projected to be about 3,900 GWh or 17 percent higher in the Program Case than in the Reference Case. Relative to the Reference Case, total capacity additions through 2020 in the Program Case are the same (5,909 MW) as in the Reference Case. Coal capacity retirements through 2020 in the Reference Case are 408 MW while the estimated value for the Program Case is 466 MW.

This generation data was based on the differences between IPM Reference Case and IPM Program Case model runs and the tables displayed below:

New York Reference Case Net Generation (in GWh)	2012	2013	2014	2015	2016	2018	2020

CO<sub>2</sub> emissions from New York generators in the Program Case are projected to be 3.2 million tons (eight percent) lower in 2020 than in the Reference Case. Over the 2014-2020 time period, cumulative CO<sub>2</sub> emission reductions from New York generators subject to the Program are projected to be 13 million tons in the Program Case as compared to the Reference Case. Although emissions from affected sources across the RGGI region are estimated to be 15 million tons (14.6 percent) lower under the Program Case than under the Reference Case in 2020, CO<sub>2</sub> emissions from the electricity sector in New York are projected to increase 4.9 million tons or 14.7 percent between 2014 and 2020. Principally, emissions in New York are projected to rise because the Indian Point nuclear units are assumed to retire when their current licenses expire in 2013 and 2015. The IPM model projects that the generation from these non-CO<sub>2</sub> emitting generators is likely to be replaced with fossil fuel-fired generation, at least in part. Nevertheless, CO<sub>2</sub> emission reductions over the 2014-2020 period from affected sources across the RGGI region are estimated to be 86 million tons in the Program Case compared to the Reference Case.

This emissions data was based on the differences between IPM Reference Case and IPM Program Case model runs and the tables displayed below:

Reference Case CO2 Emissions [Million Tons]

Under the Reference Case, without making any proposed Program revisions, CO<sub>2</sub> allowance prices are projected to remain at the minimum reserve price through 2020. Under the Program Case, CO<sub>2</sub> allowance prices (the cost of complying with RGGI) are projected to increase from approximately \$6.02/ton (2010 dollars) in 2014 to about \$6.73/ton in 2016 and to about \$8.41/ton in 2020. Approximately 17.6 million allowances would be obtained by the marketplace between 2014 and 2020 from the Cost Containment Reserve (CCR), which would be triggered at \$4/ton in 2014 and at \$6/ton in 2015. The acquisition of these additional allowances provides price dampening which is reflected in these estimated allowance prices.

This allowance price data was based on the IPM Reference Case and IPM Program Case model runs and the tables displayed below:

Reference Case Allowance Prices (2010\$)							
	2012	2013	2014	2015	2016	2018	2020
NO <sub>x</sub> Regional (\$/ton)	450	450	450	450	450	450	450
SO <sub>2</sub> Regional Tier 1 (\$/ton)	-	50	50	50	-	-	-
SO <sub>2</sub> Regional Tier 2 (\$/ton)	-	50	50	50	-	-	-
Regional CO <sub>2</sub> (\$/ton)	1.86	1.86	1.86	1.86	1.86	1.86	1.86

Program Case Allowance Prices (2010\$)							
	2012	2013	2014	2015	2016	2018	2020
NO <sub>x</sub> Regional (\$/ton)	600	600	600	600	600	600	600
SO <sub>2</sub> Regional Tier 1 (\$/ton)	-	6	6	7	-	-	-
SO <sub>2</sub> Regional Tier 2 (\$/ton)	-	21	22	23	-	-	-
Regional CO <sub>2</sub> (\$/ton)	1.86	1.86	6.02	6.37	6.73	7.52	8.41

Under the Program Case, New York’s wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.64/MWh higher in 2016 and \$2.12/MWh higher in 2020, than the Reference Case. RGGI is projected to increase wholesale electricity prices in New York State by about 3.0 percent in 2016 and 3.9 percent in 2020. For a typical New York residential customer (using 750 kWh per month), the projected increase in wholesale electricity prices in 2016 translates into a monthly retail bill increase of about 1.0 percent or \$0.86. In 2020, the projected increase in wholesale electricity prices translates into a monthly residential retail bill increase of about 0.8 percent or \$0.71. For commercial customers, the projected retail price impact of RGGI is about 1.1 percent in 2016 and 0.7 percent in 2020 (\$7.87 and \$5.00 per month, respectively). For industrial customers, the projected retail price impact of RGGI is about 1.7 percent in 2016 and 1.2 percent in 2020.

#### Alternative Bank Scenario

IPM projects electricity system operations and costs with perfect foresight, which means that there is certainty of knowledge of all future market outcomes, including allowance prices and the use of the private bank. In other words, IPM calculates when and whether it is cost-effective to make on-system emissions

reductions at affected sources or to use allowances from the private bank. However, market participants may make decisions related to use of banked allowances for compliance on a shorter time horizon than projected by IPM using perfect foresight (i.e., due to uncertainty, market participants may be more likely to defer emissions reductions and rely more heavily on banked allowances in the short-term). In order to assess the use of the private bank during the short-term, an alternative usage scenario (“Alt Bank”) was examined. Under the Alt Bank scenario, it is assumed that the marketplace would use the private bank of allowances at a rate roughly 40 percent faster than under the Program Case during the 2014-2017 timeframe. This scenario is not intended to be a prediction of market behavior; rather it is intended to provide a broader sense of potential market outcomes.

CO<sub>2</sub> emissions from New York generators are projected in the Alt Bank scenario to be 4.4 million tons (10.7 percent) lower in 2020 than Reference Case. The generators are assumed to use more of the private bank by 2017 under this scenario, therefore less allowances will be available for use in later years and more emissions reductions will occur during this timeframe. Emissions from affected sources across the RGGI region are estimated to be 81.6 million tons in 2020 under the Alt Bank scenario while they are projected to be 87.8 million tons under the Program Case.

This emissions data IPM Alt Bank Case model runs and the table displayed below:

91 Alt Bank CO2 Emissions [Million Tons]							
	2012	2013	2014	2015	2016	2018	2020
MA	17	15	16	15	13	14	15

CT	6	7	7	7	7	7	7
ME	3	3	4	4	4	3	3
NH	2	3	2	2	2	2	2
RI	3	4	4	4	4	4	4
VT	0	0	0	0	0	0	0
NY	32	35	34	34	36	36	37
DE	4	3	4	4	4	4	3
MD	25	27	26	25	23	15	14
Total RGGI	94	96	96	95	93	85	84
Total Emissions at Affected Plants	92	93	94	92	90	82	82
Eastern Interconnect without RGGI	1,514	1,548	1,598	1,610	1,578	1,617	1,665
Total Eastern Interconnect	1,608	1,643	1,694	1,705	1,671	1,702	1,750
Total Canadian	102	97	95	97	100	102	105

CO<sub>2</sub> allowance prices under the Alt Bank scenario are projected to increase from approximately \$3.60/ton (2010 dollars) in 2014 to about \$6.57/ton in 2016 and about \$10.21/ton in 2020. Prices are lower in the short-term under the Alt Bank scenario than under the Program Case because the former scenario assumes that more allowances from the private bank are being used for compliances in the short term. Similarly, prices are higher in 2020 under the Alt Bank scenario because the marketplace has fewer allowances left over in the private bank relative to the Reference Case, and therefore more on-system emissions reductions are required from compliance entities. In addition, it is estimated that approximately 10 million allowances would be obtained by the marketplace between 2014 and 2020 from the CCR. The acquisition of these additional allowances provides some price dampening which is reflected in these estimated allowance prices.

This allowance price data was based on IPM Alt Bank Case model runs and the table displayed below:

Alt Bank Allowance Prices (2010\$)							
	2012	2013	2014	2015	2016	2018	2020
NO <sub>x</sub> Regional (\$/ton)	600	600	600	600	600	600	600
SO <sub>2</sub> Regional Tier 1 (\$/ton)	-	6	6	7	-	-	-
SO <sub>2</sub> Regional Tier 2 (\$/ton)	-	21	22	23	-	-	-
Regional CO <sub>2</sub> (\$/ton)	1.86	1.86	3.60	5.14	6.57	8.00	10.21

Under the Alt Bank scenario, New York's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.62/ MWh higher in 2016 and \$2.72/ MWh higher in 2020, than the Reference Case. Wholesale electricity prices are estimated to increase by about 2.9 percent in 2016 and 4.9 percent in 2020 under the Alt Bank scenario relative to the Reference Case.

Sensitivity analyses were performed to develop bounds or collars around the Reference Case and Program Case projections. First, a Higher Emissions scenario that assumes higher natural gas prices and higher regional energy demand was evaluated. This scenario used natural gas prices from the Low Estimated Ultimate Recovery scenario in EIA's 2012 Annual Energy Outlook where Henry Hub natural gas prices are estimated to be \$5.31/MMBtu in 2020. Demand in this case is assumed to be about three percent higher in the near-term and four percent higher in the longer-term than the Reference Case. Likewise, a Lower Emissions scenario was also developed that assumes lower natural gas prices, lower regional energy demand, and the continued operation of the Indian Point nuclear power plants through the timeframe of the study. This scenario used natural gas prices from the High Technically Recoverable Resources scenario in EIA's 2012 Annual Energy Outlook where Henry Hub natural gas prices are estimated to be \$3.02/ MMBtu in 2020. In this case, demand is assumed to be about three percent lower in the near-term and four percent lower in the longer-term than the Reference Case.

The modeling case that evaluated the potential impacts of the Updated Model Rule using the Higher Emissions assumptions was called the 91 Cap\_Bank\_Model Rule\_High Case. Under this scenario, allowance prices are estimated to be \$7.27/ton in 2014, \$8.13/ton in 2016 and \$10.15/ton in 2020. A sensitivity scenario was run to estimate the impacts of the Updated Model Rule with the Higher Emissions and Alt Bank assumptions. Under this 91 Cap Alt\_Bank\_Model\_Rule\_High Case, allowance prices are estimated to be about \$4.62/ton in 2014, \$6.90/ton in 2016, and \$16.44/ton in 2020.

In IPM, allowance prices would only be expected to rise off of the minimum reserve price if the projected cumulative emissions over the time period exceed the cumulative cap level. When evaluating the impact of the Updated Model Rule using the Low Emissions scenario, emissions over the time period are projected to be 50 million tons less than the number of allowances available to the market (adjusted cap plus the emissions bank). Therefore, affected sources would not need to make any emission reductions and it is estimated that allowance prices would be at the minimum reserve price under this scenario. This scenario was not actually modeled; however, ICF staff provided the assessment of the scenario described in this paragraph.

A macro-economic impact study of the Program was also conducted at the direction of the Participating States through NESCAUM to estimate the potential impact of the Program revisions on the economies of participating states. The study used the REMI computer model. As mentioned above, the study concluded that the economic impacts of RGGI on the economies of the participating states, including New York, were generally positive, albeit relatively small. For example, the cumulative changes in New York's Gross State Product and Personal Income associated with the proposed revisions to the program will be about \$5.8 billion and \$4.7 billion, respectively (2010 dollars, calculated as the present value of estimated annual changes over the period 2012 to 2040, discounted at three percent per year to account for the time-value of money). The

cumulative change in employment in New York associated with the Program will be about 80,500 job-years over the period 2012 to 2040. A job-year is equivalent to one person employed for one year.

### MINIMIZING ADVERSE IMPACT

The promulgation of the proposed revisions to the Program and the amendments to Part 200, apply to affected sources statewide, including those located in rural areas. Since the regulations apply equally to affected facilities statewide, rural areas are not impacted any differently than other areas in the State. The Department is implementing the proposed revisions to the Program through a cap-and-trade program. Allowance based cap and trade systems are the most cost effective means for implementing emission reductions from large stationary sources, therefore the Department has minimized any potential adverse economic impacts of the Program to all sources on a statewide basis.

### RURAL AREA PARTICIPATION

New York and the Participating States committed to a comprehensive program review during the initial development of RGGI and agreed to evaluate: program success; program impacts; additional emissions reductions; imports and emissions leakage; and offsets. The Participating States initiated program review in the fall of 2010 with the announcement of its first stakeholder meeting and concluded the process in February, 2013. More than a dozen stakeholder meetings and webinars were conducted during this period by the Participating States and RGGI Incorporated (RGGI, Inc.)<sup>7</sup> whereby public input was obtained on a number of program elements. Prior to each stakeholder meeting, agency staff and RGGI, Inc. distributed pertinent written material to the participants and posted meeting documents on the RGGI, Inc. web site. The stakeholder meetings were open to the public and all interested parties were encouraged to provide comment. All stakeholder comments were ultimately considered in the development of the Draft Updated Model Rule, which contained detailed

---

<sup>7</sup> RGGI, Inc. is a 501(c)(3) non-profit corporation created to provide technical and administrative services to the Participating States.

regulatory text, and was released to the stakeholders for comment on November 20, 2012 . The final version of the Updated Model Rule was released by the Participating States on February 7, 2013, which contained additional updates based on stakeholder feedback received on the Draft Updated Model Rule.

Supplemental to the regional stakeholder process, New York conducted a separate stakeholder process designed to provide updates on the status of the regional process and to afford additional opportunity for New York's stakeholders to provide comment. Seven meetings and staff availability sessions were held in New York and when possible, the Department sent list-serve notices to New York stakeholders announcing regional meetings and webinars. This included, for example, presentations by Department representatives, regarding RGGI program review and the proposed revisions to the Program, at the Business Council's <sup>8</sup> Spring Environmental Conference on April 18, 2013 and Annual Meeting in Bolton Landing on September 19, 2012.

---

<sup>8</sup> The Business Council of New York State, Inc ., is the leading business organization in New York State, representing the interests of large and small firms throughout the state. Its membership is made up of thousands of member companies, as well as local chambers of commerce and professional and trade associations.

6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program

## 6 NYCRR Part 200, General Provisions

## Rural Area Flexibility Analysis Summary

The Regional Greenhouse Gas Initiative (RGGI) is a cooperative, historic effort among New York and eight Participating States<sup>1</sup> and is the first mandatory, market-based carbon dioxide ( CO<sub>2</sub>) emissions reduction program in the United States. Since its inception in 2008, RGGI has utilized an innovative market-based mechanism to cap and cost-effectively reduce emissions that cause climate change. Recently, New York along with the Participating States, announced a proposal to lower the regional emissions cap established under RGGI to 91 million tons in 2014, declining 2.5 percent a year through 2020.<sup>2</sup> In order to implement the updated RGGI program in New York State, the Department of Environmental Conservation (Department) proposes to revise 6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program (the Program) and 6 NYCRR Part 200, General Provisions.

The promulgation of the proposed revisions to Part 242 and the amendments to Part 200, apply to affected sources statewide, including those located in rural areas. Since the regulations apply equally to affected facilities statewide, rural areas are not impacted any differently than other areas in the State. The Department is implementing the proposed revisions to the Program through a cap-and-trade program. Allowance based cap and trade systems are the most cost effective means for implementing emission reductions from large stationary sources, therefore the Department has minimized any potential adverse economic impacts of the revised Program to all sources on a statewide basis.

The proposed Program revisions will cap regional CO<sub>2</sub> emissions at 91 million tons annually beginning

---

<sup>1</sup> In addition to New York, the RGGI Participating States include: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, Rhode Island, and Vermont.

<sup>2</sup> The Participating States released the Updated Model Rule on February 7, 2013.

in 2014. After 2020, the cap will remain at 78 million tons annually. Further, in order to account for the existing private bank of CO<sub>2</sub> emissions allowances already acquired at auction, and in order to help create a binding cap, the proposed Program revisions provide two distinct budget adjustments. The proposed Program revisions also create the Cost Containment Reserve (CCR) which will help provide additional flexibility and cost containment for the Program. The CCR allowances will be triggered and released at auctions at \$4/ton in 2014, \$6/ton in 2015, \$8/ton in 2016, and \$10/ton in 2017. Each year after 2017 the CCR trigger price will increase by 2.5 percent. If the trigger price is reached, up to 10 million additional CCR allowances will be available for purchase at auction, except in 2014, when the reserve will be limited to five million allowances. Finally, the proposed Program revisions create an interim compliance obligation. In addition to demonstrating full compliance at the end of each three-year compliance period, regulated entities must now demonstrate that they are holding allowances equal to at least 50 percent of their emissions at end of each of the first two years in each three year compliance period.

#### TYPES AND ESTIMATED NUMBER OF RURAL AREAS AFFECTED

The promulgation of the proposed revisions to the Program apply to affected sources statewide. All public and private businesses subject to the regulations regardless of location, including those in rural areas, will be affected.

#### REPORTING, RECORD KEEPING AND OTHER COMPLIANCE REQUIREMENTS

The proposed revisions to the Program do not change the applicability provisions of the current Program. Therefore, sources already subject to the current Program will remain subject to the proposed revisions to the Program. While the second control period under the current Program will remain unchanged and will include years 2012-2014 with a CO<sub>2</sub> allowance transfer deadline of March 1, 2015, the proposed Program revisions will require affected sources and units to comply with the emission limitations of the Program beginning on January

1, 2014.

The proposed revisions to the Program create a modified compliance schedule called an interim compliance period which is defined as each of the first two years of each three-year control period. In each of the first two calendar years of each three year control period (e.g., 2015 and 2016 ) each source subject to the revised Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions in the source's compliance account that is not less than 50 percent of the total tons of CO<sub>2</sub> emissions for that interim control period. Accordingly, at the end of each control period, ( e.g., 2017) each source subject to the revised Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions, in the source's compliance account that is not less than the total tons of CO<sub>2</sub> emissions for the control period less the CO<sub>2</sub> allowances deducted for the previous two interim control periods. Additionally, for each control period in which a CO<sub>2</sub> budget source is subject to the proposed revisions to Program, the CO<sub>2</sub> authorized account representative of the source must continue to submit a compliance certification report for each source covering all such units.<sup>3</sup>

## COSTS

The Department, New York State Energy Research Development Authority (NYSERDA) and the New York State Department of Public Service (DPS) analyzed costs and impacts associated with compliance with the proposed revisions to the Program. This section explains NYSERDA's analysis and includes a summary of the Integrated Planning Model (IPM®) modeling conducted by ICF International (ICF). IPM® is a nationally recognized modeling tool used by the U.S. Environmental Protection Agency (EPA), state energy and environmental agencies, and private sector firms such as utilities and generation companies. This section also discusses the Department's analysis of the costs associated with State and local government compliance and impacts from the proposed revisions to the Program on the New York economy and customer bills.<sup>4</sup>

<sup>3</sup> Sources will not be required to submit a compliance certification report for any interim control periods.

<sup>4</sup> "REMI Economic Impacts Analysis," by the Northeast States for Coordinated Air Use Management

Modeling analysis and review was coordinated by RGGI Inc. and New York staff, and included input from energy and environmental representatives from the Participating States and each regional ISO. To estimate the potential impacts of the revisions to the Program, IPM® compared a future with the revisions to the Program (Program Case) to a Reference Case (business as usual scenario) that projects how the electricity system would look if the Program remained unchanged and proposed revisions were not implemented.

Assumptions and sources of input data are specified in detail in the “RGGI DRAFT 2012 Reference Case and Sensitivity Analyses Assumptions.”<sup>6</sup> Key assumptions and data include regional electricity demand, load shapes, transmission system capacities and limits, generation unit level operation and maintenance costs and performance characteristics, fuel prices, new capacity and emission control technology costs and performance characteristics, reserve margins and local reserve requirements, RPS requirements, national and state environmental regulations, and financial market assumptions. All estimates are based on 2010 dollars. Long range Henry Hub natural gas prices (2020), based on forecast data from U.S. Energy Information Administration (EIA) were projected to be approximately \$4.6/MMBtu (constant 2010 dollars).

Under the Reference Case, generation from new gas-fired combined cycle units is projected to supply most of the growing electricity demand. Electric generation from gas-fired plants in New York is projected to increase by approximately 37 percent from 48,109 Gigawatt hours ( GWh) in 2013 to 65,983 GWh in 2020. Generation from new renewable resources (primarily wind units) is projected to increase significantly, largely in

---

(NESCAUM), dated May 29, 2013. [http://www.dec.ny.gov/docs/administration\\_pdf/remi91cap2013.pdf](http://www.dec.ny.gov/docs/administration_pdf/remi91cap2013.pdf)

<sup>5</sup> “IPM Potential Scenario Customer Bill Analysis,” by the Analysis Group, dated May 24, 2013.

[http://www.dec.ny.gov/docs/administration\\_pdf/custbillanaly2013.pdf](http://www.dec.ny.gov/docs/administration_pdf/custbillanaly2013.pdf)

<sup>6</sup> The modeling assumptions document and the tabular results for each modeling run are located at [http://www.rggi.org/design/program\\_review](http://www.rggi.org/design/program_review)

response to RPS requirements. While nuclear generation is projected to decrease by about 35 percent between 2013 and 2020 due to the assumed retirement of the Indian Point units upon their respective license expiration, generation from coal-fired plants is projected to increase by about eight percent between 2013 and 2020. Finally, generation from existing oil/gas steam units is projected to decrease over time, as a result of displacement by lower-cost electricity from new gas-fired units. Additionally, net imports of electricity into New York are projected to rise from approximately 24,000 GWh in 2013 to approximately 26,800 GWh in 2016 before decreasing to about 23,000 in 2020. CO<sub>2</sub> emissions in the Reference Case, from sources in New York State subject to the Program, are projected to increase from approximately 34.6 million tons in 2013 to about 41.7 million tons in 2020.

Similar to the Reference Case analysis, several assumptions were used to project impacts in the Program Case. For modeling purposes, the proposed CO<sub>2</sub> cap of 91 million tons, based on the approximate amount of current emissions in the RGGI region, was applied. In order to model the budget adjustments, the annual caps were adjusted in accordance with the model rule language and the assumption that the adjustment would account for the existing bank as well as 100 percent of the surplus (current cap and emissions) for 2013. While the Program Case allows a limited number of emissions offsets to be purchased, the model assumes that it is not economically attractive for offset suppliers to sell their products in the RGGI market until prices reached \$10 per allowance.

In order to obtain New York specific results, several components between the Program Case and the Reference Case are compared including generation mix, net electricity imports, changes in generation capacity, CO<sub>2</sub> emissions, CO<sub>2</sub> allowance prices, and wholesale and retail electricity price impacts. Electricity generation from gas-fired units in 2020 is about 1,576 GWh or 2.4 percent lower in the Program Case than in the Reference Case. Generation from coal-fired units in 2020 is about 2,376 GWh or 37 percent lower in the Program Case

than in the Reference Case. Net imports into New York in 2020 are projected to be about 3,900 GWh or 17 percent higher in the Program Case than in the Reference Case. Relative to the Reference Case, total capacity additions through 2020 in the Program Case are the same (5,909 MW) as in the Reference Case. Coal capacity retirements through 2020 in the Reference Case are 408 MW while the estimated value for the Program Case is 466 MW.

CO<sub>2</sub> emissions from New York generators in the Program Case are projected to be 3.2 million tons (eight percent) lower in 2020 than in the Reference Case. Over the 2014-2020 time period, cumulative CO<sub>2</sub> emission reductions from New York generators subject to the Program are projected to be 13 million tons in the Program Case as compared to the Reference Case. Although emissions from affected sources across the RGGI region are estimated to be 15 million tons (14.6 percent ) lower under the Program Case than under the Reference Case in 2020, CO<sub>2</sub> emissions from the electricity sector in New York are projected to increase 4.9 million tons or 14.7 percent between 2014 and 2020. Principally, emissions in New York are projected to rise because the Indian Point nuclear units are assumed to retire when their current licenses expire in 2013 and 2015. The IPM model projects that the generation from these non-CO<sub>2</sub> emitting generators is likely to be replaced with fossil fuel-fired generation, at least in part. Nevertheless, CO<sub>2</sub> emission reductions over the 2014-2020 period from affected sources across the RGGI region are estimated to be 86 million tons compared to the Reference Case.

Under the Reference Case, without making any proposed Program revisions, CO<sub>2</sub> allowance prices are projected to remain at the minimum reserve price through 2020. Under the Program Case, CO<sub>2</sub> allowance prices (the cost of complying with RGGI) are projected to increase from approximately \$6.02/ton (2010 dollars) in 2014 to about \$6.73/ton in 2016 and to about \$8.41/ton in 2020. Approximately 17.6 million allowances would be obtained by the marketplace between 2014 and 2020 from the Cost Containment Reserve (CCR), which would be triggered at \$4/ton in 2014 and at \$6/ton in 2015.

Under the Program Case, New York's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.64/MWh higher in 2016 and \$2.12/MWh higher in 2020, than the Reference Case. RGGI is projected to increase wholesale electricity prices in New York State by about 3.0 percent in 2016 and 3.9 percent in 2020. For a typical New York residential customer (using 750 kWh per month), the projected increase in wholesale electricity prices in 2016 translates into a monthly retail bill increase of about 1.0 percent or \$0.86. In 2020, the projected increase in wholesale electricity prices translates into a monthly residential retail bill increase of about 0.8 percent or \$0.71. For commercial customers, the projected retail price impact of RGGI is about 1.1 percent in 2016 and 0.7 percent in 2020 (\$7.87 and \$5.00 per month, respectively). For industrial customers, the projected retail price impact of RGGI is about 1.7 percent in 2016 and 1.2 percent in 2020.

IPM projects electricity system operations and costs with perfect foresight, which means that there is certainty of knowledge of all future market outcomes, including allowance prices and the use of the private bank. However, market participants may make decisions related to use of banked allowances for compliance on a shorter time horizon. In order to assess the use of the private bank during the short-term, an alternative usage scenario ("Alt Bank") was examined. Under the Alt Bank scenario, it is assumed that the marketplace would use the private bank of allowances at a rate roughly 40 percent faster than under the Program Case during the 2014-2017 timeframe. CO<sub>2</sub> emissions from New York generators are projected in the Alt Bank scenario to be 4.4 million tons (10.7 percent) lower in 2020 than Reference Case. The generators are assumed to use more of the private bank by 2017 under this scenario, therefore less allowances will be available for use in later years and more emissions reductions will occur during this timeframe. Emissions from affected sources across the RGGI region are estimated to be 81.6 million tons in 2020 under the Alt Bank scenario while they are projected to be 87.8 million tons under the Program Case.

CO<sub>2</sub> allowance prices under the Alt Bank scenario are projected to increase from approximately \$3.60/ton (2010 dollars) in 2014 to about \$6.57/ton in 2016 and about \$10.21/ton in 2020. Prices are lower in the short-term under the Alt Bank scenario than under the Program Case because the former scenario assumes that more allowances from the private bank are being used for compliances in the short term. Similarly, prices are higher in 2020 under the Alt Bank scenario because the marketplace has fewer allowances left over in the private bank relative to the Reference Case. Under the Alt Bank scenario, New York's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.62/MWh higher in 2016 and \$2.72/MWh higher in 2020, than the Reference Case. Wholesale electricity prices are estimated to increase by about 2.9 percent in 2016 and 4.9 percent in 2020 under the Alt Bank scenario relative to the Reference Case.

Sensitivity analyses were performed to develop bounds or collars around the Reference Case and Program Case projections. First, a Higher Emissions scenario that assumes higher natural gas prices and higher regional energy demand was evaluated. This scenario used natural gas prices from the Low Estimated Ultimate Recovery scenario in EIA's 2012 Annual Energy Outlook where Henry Hub natural gas prices are estimated to be \$5.31/MMBtu in 2020. Demand in this case is assumed to be about three percent higher in the near-term and four percent higher in the longer-term. Likewise, a Lower Emissions scenario was also developed that assumes lower natural gas prices, lower regional energy demand, and the continued operation of the Indian Point nuclear power plants through the timeframe of the study. This scenario used natural gas prices from the High Technically Recoverable Resources scenario where Henry Hub natural gas prices are estimated to be \$3.02/MMBtu in 2020. In this case, demand is assumed to be about three percent lower in the near-term and four percent lower in the longer-term.

The modeling case that evaluated the potential impacts of the Updated Model Rule using the Higher Emissions assumptions was called the 91 Cap\_Bank\_Model Rule\_High Case. Under this scenario, allowance

prices are estimated to be \$7.27/ton in 2014, \$8.13/ton in 2016 and \$10.15/ton in 2020. A sensitivity scenario was run to estimate the impacts of the Updated Model Rule with the Higher Emissions and Alt Bank assumptions. Under this 91 Cap Alt\_Bank\_Model\_Rule\_High Case, allowance prices are estimated to be about \$4.62/ton in 2014, \$6.90/ton in 2016, and \$16.44/ton in 2020. In IPM, allowance prices would only be expected to rise off of the minimum reserve price if the projected cumulative emissions over the time period exceed the cumulative cap level. When evaluating the impact of the Updated Model Rule using the Low Emissions scenario, emissions over the time period are projected to be 50 million tons less than the number of allowances available to the market (adjusted cap plus the emissions bank). Therefore, affected sources would not need to make any emission reductions and it is estimated that allowance prices would be at the minimum reserve price under this scenario.

A macroeconomic impact study to estimate the impact of the reduced CO<sub>2</sub> emissions cap, budget adjustments and the remainder of the proposed Program revisions<sup>7</sup> on jobs in the RGGI region was conducted at the direction of the New York and the Participating States by the Northeast States Coordinated Air Use Management (NESCAUM). Utilizing the Regional Economic Models, Inc. Policy Insight™ (REMI) model the study concludes that the economic impacts of the proposed Program revisions on the economies of New York and the Participating States are small and generally positive.

The macroeconomic impact study estimates that the cumulative change in employment in New York associated with the proposed Program revisions will be about 80,500 additional job-years over the period 2012 to 2040. It also estimates that the cumulative changes in New York's Gross State Product and Personal Income associated with the proposed Program revisions will increase approximately \$5.8 billion and \$4.7 billion, respectively (2010 dollars, calculated as the present value of estimated annual changes over the period 2012 to

---

<sup>7</sup> The estimated impact of the RGGI Program is the increment calculated as the difference between the Reference Case and the "91 Cap Bank MR IPM Scenario."

2040, discounted at three percent per year to account for the time-value of money).

### MINIMIZING ADVERSE IMPACT

The promulgation of the proposed revisions to the Program and the amendments to Part 200, apply to affected sources statewide, including those located in rural areas. Since the regulations apply equally to affected facilities statewide, rural areas are not impacted any differently than other areas in the State. The Department is implementing the proposed revisions to the Program through a cap-and-trade program. Allowance based cap and trade systems are the most cost effective means for implementing emission reductions from large stationary sources, therefore the Department has minimized any potential adverse economic impacts of the Program to all sources on a statewide basis.

### RURAL AREA PARTICIPATION

New York and the Participating States committed to a comprehensive program review during the initial development of RGGI and agreed to evaluate: program success; program impacts; additional emissions reductions; imports and emissions leakage; and offsets. The Participating States initiated program review in the fall of 2010 with the announcement of its first stakeholder meeting and concluded the process in February, 2013. Supplemental to the regional stakeholder process, New York conducted a separate stakeholder process designed to provide updates on the status of the regional process and to afford additional opportunity for New York's stakeholders to provide comment.

6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program

## 6 NYCRR Part 200, General Provisions

## Regulatory Flexibility Analysis for Small Businesses and Local Governments

The Regional Greenhouse Gas Initiative (RGGI) is a cooperative, historic effort among New York and eight Participating States<sup>1</sup> and is the first mandatory, market-based carbon dioxide ( CO<sub>2</sub>) emissions reduction program in the United States. Since its inception in 2008, RGGI has utilized an innovative market-based mechanism to cap and cost-effectively reduce emissions that cause climate change. Recently, New York along with the Participating States, completed a comprehensive program review and announced a proposal to lower the regional emissions cap established under RGGI to 91 million tons in 2014, declining 2.5 percent a year through 2020.<sup>2</sup> Accordingly, New York and the Participating States committed to propose revisions, pursuant to state-specific regulatory processes, to their respective CO<sub>2</sub> Budget Trading Programs to further reduce CO<sub>2</sub> emissions from power plants in the region. In order to implement the updated RGGI program in New York State, the Department of Environmental Conservation (Department) proposes to revise 6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program (the Program) and 6 NYCRR Part 200, General Provisions.

The proposed Program revisions which will cap regional CO<sub>2</sub> emissions at 91 million tons annually beginning in 2014 represent a nearly 45 percent reduction from the existing cap currently in place under the Program. After 2020, the cap will remain at 78 million tons annually. Further, in order to account for the existing private bank of CO<sub>2</sub> emissions allowances already acquired at auction, and in order to help create a binding cap, the proposed Program revisions provide two distinct budget adjustments. The First Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the first control period

<sup>1</sup> In addition to New York, the RGGI Participating States include: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, Rhode Island, and Vermont.

<sup>2</sup> The Participating States released the Updated Model Rule on February 7, 2013.

private bank of allowances (vintages 2009, 2010, and 2011) held by market participants after the first control period. The Second Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the surplus 2012 and 2013 vintage allowances held by market participants as of the end of 2013.

The proposed Program revisions also create the Cost Containment Reserve (CCR) which will help provide additional flexibility and cost containment for the Program. The CCR allowances will be triggered and released at auctions at \$4/ton in 2014, \$6/ton in 2015, \$8/ton in 2016, and \$10/ton in 2017. Each year after 2017 the CCR trigger price will increase by 2.5 percent. If the trigger price is reached, up to 10 million additional CCR allowances will be available for purchase at auction, except in 2014, when the reserve will be limited to five million allowances. The existing price triggers for expanding use of offsets and the one year compliance period extension will be eliminated in favor of the CCR.

Finally, the proposed Program revisions create an interim compliance obligation in part to align it with the annual compliance obligations under federal programs such as the Clean Air Interstate Rule and the Title IV Acid Rain Program. This program revision also helps to address the potential for a budget source to operate during the first couple of years of a three year compliance period and the potential to avoid their compliance obligation as a result of the business closing or falling into bankruptcy prior to the third year compliance obligation. In addition to demonstrating full compliance at the end of each three-year compliance period, regulated entities must now demonstrate that they are holding allowances equal to at least 50 percent of their emissions at end of each of the first two years in each three year compliance period. The proposed Program revisions also include minor revisions such as setting the reserve price at \$2.00 in 2014, to rise at 2.5 percent per year in subsequent years, updating all references, and the deleting early reduction allowance provisions. The majority of the proceeds from the sale of New York's allowances will be continue to be dedicated to strategic energy or consumer benefits, such as energy efficiency and clean energy technologies.

The burning of fossil fuels to generate electricity is a major contributor to climate change because fossil-fuel generators emit large amounts of CO<sub>2</sub>, the principal greenhouse gas (GHG). Overwhelming scientific evidence suggests that a warming climate poses a serious threat to the environmental resources and public health of New York State - the very same resources and public health the Legislature has charged the Department to preserve and protect. The warming climate threatens the State's air quality, water quality, marine and freshwater fisheries, salt and freshwater wetlands, surface and subsurface drinking water supplies, river and stream impoundment infrastructure, and forest species and wildlife habitats. Not only will the proposed Program revisions help to further counter the threat of a warming climate, they will also produce significant environmental co-benefits in the form of improved local air quality, and a more robust, diverse and clean energy supply in the State.

1. Effects on Small Businesses and Local Governments. No small businesses will be directly affected by the adoption of the proposed revisions to 6 NYCRR Part 242 and the amendments to 6 NYCRR Part 200.

The only local government affected by the proposed revisions to the Program is the Jamestown Board of Public Utilities (JBPU), a municipally owned utility which owns and operates the S. A. Carlson Generating Station (SACGS). Emissions monitoring at SACGS currently meets the monitoring provisions of the current Program, and no additional monitoring costs will be incurred under the proposed revisions to the Program. The costs associated with the proposed revisions to the Program will be dictated by how JBPU decides to comply with the provisions of the regulation.

2. Compliance Requirements. The JBPU, as owner and operator of the SACGS, will need to comply with the proposed revisions to the Program, as described below.

The proposed revisions to the Program do not change the applicability provisions of the current Program. Therefore, sources already subject to the current Program will remain subject to the proposed revisions to the Program. While the second control period under the current Program will remain unchanged and will include years 2012-2014 with a CO<sub>2</sub> allowance transfer deadline of March 1, 2015, the proposed Program revisions will require affected sources and units to comply with the emission limitations of the Program beginning on January 1, 2014.

The proposed revisions to the Program create a modified compliance schedule called an interim compliance period which is defined as each of the first two years of each three-year control period. The first interim control period under the revised Program will take place in year 2015; the second interim control period will take place in year 2016. In each of the first two calendar years of each three year control period (e.g., 2015 and 2016), the owners and operators of each source subject to the revised Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions, as of the CO<sub>2</sub> allowance transfer deadline (midnight of March 1<sup>st</sup> or, if March 1<sup>st</sup> is not a business day, midnight of the first business day thereafter), in the source's compliance account that is not less than 50 percent of the total tons of CO<sub>2</sub> emissions for that interim control period. A unit is subject to the interim control period requirements of the Program starting on the later of January 1, 2015 or date the unit commences operation.

Accordingly, at the end of each control period, (e.g., 2017), the owners and operators of each source subject to the revised Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions, as of the CO<sub>2</sub> allowance transfer deadline (midnight of March 1<sup>st</sup> or, if March 1<sup>st</sup> is not a business day, midnight of the first business day thereafter), in the source's compliance account that is not less than the total tons of CO<sub>2</sub> emissions for the control period less the CO<sub>2</sub> allowances deducted for the previous two interim control periods.

Additionally, for each control period in which a CO<sub>2</sub> budget source is subject to the proposed revisions to Program, the CO<sub>2</sub> authorized account representative of the source must continue to submit to the Department by the March 1<sup>st</sup> following the relevant control period, a compliance certification report for each source covering all such units.<sup>3</sup> As noted above, since the second control period for the Program remains unchanged, the first CO<sub>2</sub> allowance transfer deadline under the proposed revisions to the Program will occur on March 1, 2015.

3. Professional Services. The only local government affected by the proposed revisions to the Program, the JBPU, may need to hire outside professional consultants to comply with the proposed revisions to the Program and the amendments to 6 NYCRR Part 200. This work would likely be associated with any analyses of the revised Program. If it is determined that capital investments are needed to comply, design and construction management services will likely need to be procured.

4. Compliance Costs. In addition to the costs identified for regulated parties and the public, State and local governments will also incur costs. The Jamestown Board of Public Utilities (JBPU), a municipally owned utility, owns and operates the S.A. Carlson Generating Station (SACGS). Emissions monitoring at SACGS currently meets the monitoring provisions of the current Program, and no additional monitoring costs will be incurred under the proposed revisions to the Program. Notwithstanding this, just like any other owner or operator of any source subject to the revised Program, the JBPU will need to purchase CO<sub>2</sub> allowances equal to the number of tons of CO<sub>2</sub> emitted. The Department limited the analysis of control costs to the purchase of allowances needed to comply with the proposed revisions to the Program and predicts that CO<sub>2</sub> allowances will cost between \$6.00 in 2014 and \$9.00 in 2020 (in 2010 \$) per ton for CO<sub>2</sub> under the Program Case.

In order to estimate total costs for SACGS under the proposed revisions to the Program, the Department

---

<sup>3</sup> Sources will not be required to submit a compliance certification report for any interim control periods.

reviewed 2009 through 2012 emissions from Jamestown 's affected unit. During that time period, Jamestown 's emissions ranged from a low of 4,261 tons to a high of 117,311 tons. Based on these emissions values, allowances needed to cover emissions are estimated to cost between a low of \$25,600 and a potential high of \$1 million, annually. These costs will eventually be passed on to the JBPU consumers.

The JBPU has a range of compliance options and can utilize the flexibility mechanisms inherent in the proposed revisions to the Program. Since the revised program has a three year control period with the compliance obligation at the end of the control period, the emission peaks associated with electricity generation will be averaged out and more long term planning options will be available to SACGS. Although the proposed Program revisions include an Interim Control Period that requires JBPU to cover 50 percent of their emissions in each of the first two years of a three year control period, it is not anticipated that this interim requirement will significantly reduce the flexibility available to JBPU. The JBPU will also incur costs associated with the administration of the revised Program.

5. Economic and Technical Feasibility. The JBPU has the option to do any combination of the following to comply with the proposed revisions to the Program: increase the efficiency of the natural gas-fired turbine, co-fire biofuel; purchase allowances, or purchase offsets. The addition of the CCR under the proposed Program revisions, in fact, adds more immediate relief to all affected sources, including the JBPU , by adding allowances to the market when the CCR triggers are hit. Any or all of these options are technologically and economically feasible to apply to SACGS.

6. Minimizing Adverse Impact. The promulgation of the proposed revisions to the Program and the amendments to 6 NYCRR Part 200 do not directly affect small businesses. Only one local government is affected by the proposed revisions to the Program, the JBPU. The proposed revisions to the Program constitute

an emissions allowance based cap and trade program. Cap and trade systems are the most cost effective means for implementing emission reductions from large stationary sources. By continuing to implement the Program and proposed Program revisions, the Department will minimize any associated adverse economic impacts on the JBPU.

7. Small Business and Local Government Participation. The JBPU was included on every stakeholder invitation sent to the Department's list serve. The Department is not aware if the JBPU received those notifications or if the JBPU participated in the public forums established by the Department to discuss the revisions to the Program with interested parties.

8. Cure Period. The proposed revisions to 6 NYCRR Part 242 will be effective on January 1, 2014. No additional cure period or other additional opportunity for ameliorative action is included in the revisions to 6 NYCRR Part 242. First, sources that will be subject to the proposed revisions to 6 NYCRR Part 242 are already subject to the existing Program, and have been since the regulation was initially promulgated in 2008 (or since they commenced operation). Second, because of the cap-and-trade nature of the revisions to the Program which includes periodic compliance deadlines, sources have flexibility to emit any amount of CO<sub>2</sub> during a control period, provided such emissions are covered by an adequate amount of CO<sub>2</sub> allowances by the relevant CO<sub>2</sub> allowance transfer deadline. For example, the second control period under the existing Program dates from years 2012-2014, with a CO<sub>2</sub> allowance transfer deadline of March 1, 2015. This is unchanged under the proposed revisions to the Program, and will continue to provide sources with flexibility and time to comply with the proposed revisions to the Program. Finally, while the proposed revisions include a new annual interim compliance requirement, the first interim compliance period will be year 2015 with a CO<sub>2</sub> allowance transfer deadline of March 1, 2016. This provides additional time for sources to plan for compliance with the proposed new interim compliance obligation. For these reasons, no additional cure period or other additional opportunity

for ameliorative action is necessary for the proposed revisions to 6 NYCRR Part 242.

6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program

## 6 NYCRR Part 200, General Provisions

## Regulatory Impact Statement

## INTRODUCTION

The Regional Greenhouse Gas Initiative (RGGI) is a cooperative, historic effort among New York and eight Participating States<sup>1</sup> and is the first mandatory, market-based carbon dioxide (CO<sub>2</sub>) emissions reduction program in the United States. Since its inception in 2008, RGGI has utilized an innovative market-based mechanism to cap and cost-effectively reduce emissions that cause climate change. Recently, New York along with the Participating States, completed a comprehensive program review and announced a proposal to lower the regional emissions cap established under RGGI to 91 million tons in 2014, declining 2.5 percent a year through 2020.<sup>2</sup> Accordingly, New York and the Participating States committed to propose revisions, pursuant to state-specific regulatory processes, to their respective CO<sub>2</sub> Budget Trading Programs to further reduce CO<sub>2</sub> emissions from power plants in the region. In order to implement the updated RGGI program in New York State, the Department of Environmental Conservation (Department) proposes to revise 6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program (the Program) and 6 NYCRR Part 200, General Provisions.

The proposed Program revisions which will cap regional CO<sub>2</sub> emissions at 91 million tons annually beginning in 2014 represent a nearly 45 percent reduction from the existing cap currently in place under the Program. After 2020, the cap will remain at 78 million tons annually. Further, in order to account for the existing private bank of CO<sub>2</sub> emissions allowances already acquired at auction, and in order to help create a binding cap, the proposed Program revisions provide two distinct budget adjustments. The First Control Period

<sup>1</sup> In addition to New York, the RGGI Participating States include: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, Rhode Island, and Vermont.

<sup>2</sup> The Participating States released the Updated Model Rule on February 7, 2013.

Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the first control period private bank of allowances (vintages 2009, 2010, and 2011) held by market participants after the first control period. The Second Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the surplus 2012 and 2013 vintage allowances held by market participants as of the end of 2013.

The proposed Program revisions also create the Cost Containment Reserve (CCR) which will help provide additional flexibility and cost containment for the Program. The CCR allowances will be triggered and released at auctions at \$4/ton in 2014, \$6/ton in 2015, \$8/ton in 2016, and \$10/ton in 2017. Each year after 2017 the CCR trigger price will increase by 2.5 percent. If the trigger price is reached, up to 10 million additional CCR allowances will be available for purchase at auction, except in 2014, when the reserve will be limited to five million allowances. The existing price triggers for expanding use of offsets and the one year compliance period extension will be eliminated in favor of the CCR.

Finally, the proposed Program revisions create an interim compliance obligation in part to align it with the annual compliance obligations under federal programs such as the Clean Air Interstate Rule and the Title IV Acid Rain Program. This program revision also helps to address the potential for a budget source to operate during the first couple of years of a three year compliance period and the potential to avoid their compliance obligation as a result of the business closing or falling into bankruptcy prior to the third year compliance obligation. In addition to demonstrating full compliance at the end of each three-year compliance period, regulated entities must now demonstrate that they are holding allowances equal to at least 50 percent of their emissions at end of each of the first two years in each three year compliance period. The proposed Program revisions also include minor revisions such as setting the reserve price at \$2.00 in 2014, to rise at 2.5 percent per year in subsequent years, updating all references, and the deleting early reduction allowance provisions. The majority of the proceeds from the sale of New York's allowances will be continue to be dedicated to strategic

energy or consumer benefits, such as energy efficiency and clean energy technologies.

The burning of fossil fuels to generate electricity is a major contributor to climate change because fossil-fuel generators emit large amounts of CO<sub>2</sub>, the principal greenhouse gas (GHG). Overwhelming scientific evidence suggests that a warming climate poses a serious threat to the environmental resources and public health of New York State - the very same resources and public health the Legislature has charged the Department to preserve and protect. The warming climate threatens the State's air quality, water quality, marine and freshwater fisheries, salt and freshwater wetlands, surface and subsurface drinking water supplies, river and stream impoundment infrastructure, and forest species and wildlife habitats. Not only will the proposed Program revisions help to further counter the threat of a warming climate, they will also produce significant environmental co-benefits in the form of improved local air quality, and a more robust, diverse and clean energy supply in the State.

#### STATUTORY AUTHORITY

The statutory authority to reduce the CO<sub>2</sub> emissions cap and to provide for the budget adjustments derives primarily from the Department's authority to prevent and control air pollution, as set out in the Environmental Conservation Law (ECL) at Sections 1-0101, 1-0303, 3-0301, 19-0103, 19-0105, 19-0107, 19-0301, 19-0303, 19-0305, 71-2103, 71-2105.

The general powers of the New York State Energy Research and Development Authority (NYSERDA) that are relevant to the ability to sell allowances, including CCR allowances, in a transparent auction are set forth in the Public Authorities Law Sections 1851, 1854 and 1855.

Brief synopses of the statutory sections which grant the Department authority to promulgate these

revisions to the Program and to prevent and control air pollution are outlined below.

ECL Section 1-0101. This section declares that it is a policy of New York State to conserve, improve and protect its natural resources and environment and control air pollution in order to enhance the health, safety and welfare of the people of New York State and their overall economic and social well being. Section 1-0101 further expresses, among other things, that it is the policy of New York State to coordinate the State's environmental plans, functions, powers and programs with those of the federal government and other regions and manage air resources to the end that the State may fulfill its responsibility as trustee of the environment for present and future generations. This section further declares that the Department shall promote patterns of development and technology that minimize adverse impacts on the environment.

ECL Section 1-0303. This section defines the term "pollution". Pollution is defined as "the presence in the environment of conditions and or contaminants in quantities of characteristics which are or may be injurious to human, plant or animal life or to property or which unreasonably interfere with the comfortable enjoyment of life and property throughout such areas of the state as shall be affected thereby." The reduction in the CO<sub>2</sub> emissions cap and the budget adjustments will remove conditions and contaminants from the environment which are injurious to human, plant and animal life or to property throughout the State.

ECL Section 3-0301. This section empowers the Department to coordinate and develop programs to carry out the environmental policy of New York State set forth in section 1-0101. Section 3-0301 specifically empowers the Department to: provide for the prevention and abatement of air pollution; cooperate with officials and representatives of the federal government, other States and interstate agencies regarding problems affecting the environment of New York State; encourage and undertake scientific investigation and research on the ecological process, pollution prevention and abatement, and other areas essential to understanding and

achievement of the environmental policy set forth in section 1-0101; monitor the environment to afford more effective and efficient control practices; identify changes in ecological systems and to warn of emergency conditions; enter into contracts with any person to do all things necessary or convenient to carry out the functions, powers and duties of the Department; and adopt such regulations as may be necessary, convenient or desirable to effectuate the environmental policy of the State.

ECL Section 19-0103. This section declares that it is the policy of New York State to maintain a reasonable degree of purity of air resources. In carrying out such policy, the Department is required to balance public health and welfare, the industrial development of the State, propagation and protection of flora and fauna, and the protection of personal property and other resources. To that end, the Department is required to use all available practical and reasonable methods to prevent and control air pollution in the State.

ECL Section 19-0105. This section declares that it is the purpose of Article 19 of the ECL to safeguard the air resources of New York State under a program which is consistent with the policy expressed in section 19-0103 and in accordance with other provisions of Article 19.

ECL Section 19-0107. This section defines the terms "air contaminant" and "air pollution". "Air contaminant" is defined as "a dust, fume, gas, mist, odor, smoke, vapor, pollen, noise or any combination thereof." "Air pollution" is defined as "the presence in the outdoor atmosphere of one or more air contaminants in quantities, of characteristics and of a duration which are injurious to human, plant or animal life or to property or which unreasonably interfere with the comfortable enjoyment of life and property throughout the state or throughout such areas of the state as shall be affected thereby." Further reductions of CO<sub>2</sub> emissions and budget adjustments pursuant to the proposed Program revisions fit well within these definitions because they are gases which are present in the outdoor atmosphere in quantities that engender and/or provoke climate change, which is

injurious to life and property in New York State.

ECL Section 19-0301. This section declares that the Department has the power to promulgate regulations for preventing, controlling or prohibiting air pollution, and shall include in such regulations provisions prescribing the degree of air pollution that may be permitted and the extent to which air contaminants may be emitted to the air by any source in any area of the State. The Department also has the authority to cooperate with other states, interstate agencies, or international agencies with respect to the control of air pollution or air contamination.

ECL Section 19-0303. This section provides that the terms of any air pollution control regulation promulgated by the Department may differentiate between particular types and conditions of air pollution and air contamination sources. Section 19-0303 also provides that the Department, in adopting any regulation which contains a requirement that is more stringent than the Clean Air Act or its implementing regulations, must include in the Regulatory Impact Statement, an evaluation of the cost-effectiveness of the proposed regulation in comparison to the cost-effectiveness of reasonably available alternatives and a review of the reasonably available alternative measures along with an explanation of the reasons for rejecting such alternatives (see alternatives section at pages 74-79).

ECL Section 19-0305. This section authorizes the Department to enforce the codes, rules and regulations established in accordance with Article 19. Section 19-0305 also empowers the Department to conduct or cause to be conducted studies and research with respect to air pollution control, abatement or prevention.

ECL Section 71-2103 and Section 71-2105. These sections set forth the civil and criminal penalty

structures for violations of Article 19.

Brief synopses of the statutory sections which grant NYSERDA authority to implement the proposed Program revisions are outlined below.

Public Authorities Law (PAL). The proposed Program revisions are designed to allocate the CO<sub>2</sub> allowances (including CCR allowances) to the Energy Efficiency and Clean Energy Technology (EE&CET) Account which was created and will be administered by NYSERDA. NYSERDA will continue to administer the EE&CET Account so that CO<sub>2</sub> allowances will be sold in a transparent allowance auction or auctions and the proceeds of the auction or auctions will be used to promote and reward investments in energy efficiency, renewable or non-carbon emitting technologies, and/or innovative carbon emissions abatement technologies with significant carbon reducing potential.

The proposed Program revisions will create the Cost Containment Reserve (CCR) which will help provide additional flexibility and cost containment. NYSERDA will ensure that the CCR allowances will be triggered and released at auctions at \$4/ton in 2014, \$6/ton in 2015, \$8/ton in 2016, and \$10/ton in 2017. Each year after 2017 the CCR trigger price will increase by 2.5 percent. If the trigger price is reached, up to 10 million additional CCR allowances will be available for purchase at auction, except in 2014, when the reserve will be limited to five million allowances.

NYSERDA currently administers energy efficiency and clean technology programs funded by the EE&CET allocation pursuant to its authority under PAL Section 1854 and Title 9-A of Article 8 of the PAL, and will continue to do so under the proposed revisions to the Program. Section 1854 states that “the purposes of NYSERDA shall be to develop and implement new energy technologies consistent with economic, social and

environmental objectives, to develop and encourage energy conservation technologies.”

Title 9-A establishes the green jobs - green New York program for the purposes of promoting energy efficiency, energy conservation and the installation of clean energy technologies; the reducing GHG emissions; supporting sustainable community development; to create green job opportunities, including opportunities for new entrants into the State’s workforce, the long-term unemployed and displaced workers; and to using innovative financing mechanisms to finance energy efficiency improvements through energy cost savings.

“Energy conservation technologies” are defined in PAL Section 1851(11) as “all methods of conserving energy, of improving the efficiency of energy utilization and of preserving and protecting the environment...in connection with the use of energy.” PAL Section 1891(12) defines “qualified energy efficiency services” and provides a list of qualified measures that are eligible for funding under the Program.

NYSERDA’s authority under PAL Section 1854 includes the following:

“1. Research, development and demonstration. To conduct, sponsor, assist and foster programs of research, development and demonstration in new energy technologies including but not limited to : energy conservation; production of power from new sources with emphasis on renewable energy sources such as solar, wind, bioconversion and solid waste; storage of energy with emphasis on inertial and battery storage; conversion and/or technological improvement of facilities now utilizing nuclear fission energy and fossil fuel energy technologies; transmission and distribution of power; and conversion of energy and improvements of efficiencies of such conversion, including the power after assessing and taking into account environmental considerations thereof, to establish, acquire, operate, develop and manage facilities therefor.”

“2. The provision of services. To provide services required for the development and use of new energy

technologies and related methods by the industrial, commercial, medical, scientific, public interest, educational and governmental organizations within the state, including the power to establish, acquire and develop facilities therefore not otherwise available within the state, and to operate and manage such facilities.”

“11. To advise and assist the governor and legislature in the development and implementation of state policies relating to energy and energy resources.”

“18. To provide for the deposit of all or a portion of the proceeds collected by the authority from the auction or sale of emissions allowances allocated by the department of environmental conservation to the authority pursuant to regulations adopted by the department of environmental conservation to a green jobs-green New York fund to be established in the custody of the commissioner of taxation and finance. The monies in such fund shall be available for the green jobs-green New York program pursuant to title nine-A of article eight of this chapter.”

Although NYSERDA’s Allowance Auction Program (21 NYCRR Part 507) will not be revised as part of this rulemaking, this authority allows NYSERDA to continue to administer the EE&CET Account so that the proceeds of the auctions can be used to promote and reward investments in energy efficiency, renewable or non-carbon-emitting technologies, and/or innovative carbon emissions abatement technologies with significant carbon reduction potential and similar energy conservation technologies. The stated purposes of the EE&CET Account are consistent with NYSERDA’s authority to conduct, sponsor and assist programs related to new energy technologies and qualified energy efficiency services and to provide services related to their development.

PAL Section 1855. The general powers that are relevant to NYSERDA’s authority to administer the

EE&CET Account to promote and reward investments in energy efficiency, renewable or non-carbon-emitting technologies, and/or innovative carbon emissions abatement technologies with significant carbon reduction potential, and to sell allowances (including CCR allowances) in a transparent auction are also set forth in PAL Section 1855. NYSERDA's authority under Sections 1854 and 1855 enables it to accept and sell the allowances and utilize the proceeds to promote and reward investments related to energy conservation technologies similar to the stated purposes of the EE&CET Account.

NYSERDA's authority to auction the CO<sub>2</sub> allowances and CCR allowances is enumerated in their powers:

“10. To enter into any contracts and to execute all instruments necessary or convenient for the exercise of its corporate powers and the fulfillment of its corporate purposes under this title.”

“14. To accept any gifts or grants or loans of funds or property or financial or other aid in any form from the federal government or any agency or instrumentality thereof or from the state or from any other source and to comply, subject to the provisions of this title, with the terms and conditions thereof.”

“17. To do all things necessary or convenient to carry out its corporate purposes and exercise the powers given and granted by this title.”

### LEGISLATIVE OBJECTIVES

Through numerous legislative enactments, the Legislature has directed and empowered the Department to promote the safety, health and welfare of the public, protect the State's natural environment, and also help assure a safe, dependable and economical supply of energy to the people of the State. The warming climate

represents an enormous environmental challenge for the State, because unabated, climate change will continue to have serious adverse impacts on the State's natural resources, public health and infrastructure. Power plants that burn fossil fuel emit significant quantities of CO<sub>2</sub>, a chief contributor to the unnatural warming of our climate. New York power plants represent approximately one-fifth of all GHG emissions in the State.<sup>3</sup> In 2012, New York power plants subject to the Program emitted approximately 35 million tons of CO<sub>2</sub> into the atmosphere. By continuing to impose emissions limitations on fossil fuel-fired electric generating sources under a revised flexible cap-and-trade program, the Department is acting to preserve and protect the State's environment while maintaining a reliable supply of electricity. These air quality improvements will mitigate the impacts of climate change in New York, thereby contributing to public safety, health and welfare. The regulatory flexibility provided under the revisions to the Program, including the CCR and Offset provisions, helps to ensure continued reliability and adequacy of the State's electricity supply, assists in the furtherance of public health, and is necessary for continued industrial development and preservation of physical property.

New York and the Participating States committed to a comprehensive program review during the initial development of RGGI and agreed to evaluate: program success; program impacts; additional emissions reductions; imports and emissions leakage; and offsets. The Participating States initiated program review in the fall of 2010 with the announcement of its first stakeholder meeting and concluded the process in February, 2013. More than a dozen stakeholder meetings and webinars were conducted during this period by the Participating States and RGGI Incorporated (RGGI, Inc.)<sup>4</sup> whereby public input was obtained on a number of program elements. Prior to each stakeholder meeting, agency staff and RGGI, Inc. distributed pertinent written material to the participants and posted meeting documents on the RGGI, Inc. web site. The stakeholder meetings were

<sup>3</sup> "Patterns and Trends New York State Energy Profiles: 1996-2010," Final Report, April 2012. [http://www.nyserda.ny.gov/BusinessAreas/Energy-Data-and-Prices-Planning-and-Policy/Energy-Prices-Data-and-Reports/EA-Reports-and-Studies/Patterns-and-Trends.aspx?sc\\_database=web](http://www.nyserda.ny.gov/BusinessAreas/Energy-Data-and-Prices-Planning-and-Policy/Energy-Prices-Data-and-Reports/EA-Reports-and-Studies/Patterns-and-Trends.aspx?sc_database=web)

<sup>4</sup> RGGI, Inc. is a 501(c)(3) non-profit corporation created to provide technical and administrative services to the Participating States.

open to the public and all interested parties were encouraged to provide comment. All stakeholder comments were ultimately considered in the development of the Draft Updated Model Rule, which contained detailed regulatory text, and was released to the stakeholders for comment on November 20, 2012. The final version of the Updated Model Rule was released by the Participating States on February 7, 2013, which contained additional updates based on stakeholder feedback received on the Draft Updated Model Rule.

Supplemental to the regional stakeholder process, New York conducted a separate stakeholder process designed to provide updates on the status of the regional process and to afford additional opportunity for New York's stakeholders to provide comment. Seven meetings and staff availability sessions were held in New York and when possible, the Department sent list-serve notices to New York stakeholders announcing regional meetings and webinars. This included, for example, presentations by Department representatives, regarding RGGI program review and the proposed revisions to the Program, at the Business Council's <sup>5</sup> Spring Environmental Conference on April 18, 2013 and Annual Meeting in Bolton Landing on September 19, 2012.

## NEEDS AND BENEFITS

### Introduction

Mitigating the impacts of a warming climate represents one of the most pressing environmental challenges for the State, the nation and the world. Extensive scientific data demonstrates the need for immediate worldwide action to reduce emissions from burning fossil fuels and supports the conclusion that great benefits will accrue if fossil fuel-fired emissions are reduced through programs like RGGI. This section outlines the Department's analysis of the need for the proposed Program revisions, principally the proposed reduction in the CO<sub>2</sub> emissions cap and budget adjustments, and discusses its considerable benefits.

---

<sup>5</sup> The Business Council of New York State, Inc., is the leading business organization in New York State, representing the interests of large and small firms throughout the state. Its membership is made up of thousands of member companies, as well as local chambers of commerce and professional and trade associations.

First, this section explains the updated basic science of global climate change and the greenhouse effect and forcing effect that emissions of anthropogenic GHGs have on climate change. Second, this section explains the need for a binding CO<sub>2</sub> emissions cap and budget adjustments as illustrated by the most recent scientific findings and projected future impacts of climate warming on the region. Third, this section explains the Program benefits from the revisions to the Program including the substantial reduction of power plant emissions and the benefits of the CCR and Offsets programs. Finally, it explains the benefits associated with the auctioning of allowances, including CCR allowances for purposes of energy efficiency and clean energy technologies.

### The Greenhouse Effect and the Warming Climate

A naturally occurring greenhouse effect has regulated the earth's climate system for millions of years. Solar energy from the sun that reaches the surface of the earth is radiated back out into the atmosphere as long wave or infrared radiation. CO<sub>2</sub> and other naturally occurring GHGs trap heat in our atmosphere, maintaining the average temperature of the planet approximately 50 degrees Fahrenheit (°F) higher than it normally would be. An enhanced greenhouse effect and associated climate change results as large quantities of anthropogenic GHGs, especially CO<sub>2</sub> from the burning of fossil fuels, are added to the atmosphere.

Since the mid-1700's, atmospheric concentrations of GHGs have increased substantially due to human activities such as fossil fuel use and land-use change. This is important because CO<sub>2</sub>, as well as other GHGs, persist in the atmosphere for hundreds of years and, thus, have a lasting effect on the climate. Today, atmospheric CO<sub>2</sub> concentrations exceed 398 parts per million --- nearly 40 percent higher than preindustrial levels, and according to ice core data, higher than at any point in the past 800,000 years.<sup>6</sup>

There is clear scientific consensus that anthropogenic emissions of CO<sub>2</sub> are contributing to the observed

warming of the planet as presented in the Fourth Assessment Report of the Intergovernmental Panel on Climate Change.<sup>7</sup> The large and persuasive body of research demonstrates through unequivocal evidence that the Earth's lower atmosphere, oceans, and land surfaces are warming; sea level is rising; and snow cover, mountain glaciers, and Arctic sea ice are shrinking. The Earth's climate is changing, with adverse consequences already well documented across the globe, in our nation and in the State. Extreme heat events are increasing and intense storms are occurring with greater frequency. Many of the observed climate changes are beyond what can be explained by natural variability of the climate.<sup>8,9</sup>

In 2005, the United States National Academies of Science and the national academies of 10 other industrial nations reached a number of important conclusions about the need for government action to reduce emissions.<sup>10</sup> The reduction of the emissions cap is further supported by a recent report analyzed by New York and the Participating States during Program review called "America's Climate Choices." This 2011 report by the National Academy of Sciences, recently emphasized again, the pressing need for action to reduce emissions and to limit the magnitude of climate change:

Climate change poses significant risks for a broad range of human and natural systems;

The faster emissions are reduced, the lower the risks posed by climate change. Each additional ton of GHG emitted commits us to further change and greater risks;

<sup>8</sup> American Meteorological Society (AMS). Climate Change. An Information Statement of the American Meteorological Society. Adopted by AMS Council 20 August 2012.

<sup>9</sup> Hansen, J., Sato, M., Ruedy, R. 2012. 'Perception of climate change'. Proceedings from the National Academy of Sciences. [www.pnas.org/cgi/doi/10.1073/pnas.1205276109](http://www.pnas.org/cgi/doi/10.1073/pnas.1205276109). This study found that during the period from 1951-1980, extremely hot summers covered just 1 percent of Earth's land area. This had risen to 10 percent of the Earth's land area by the period from 1981-2010, and even higher during the 2006-2010 period. Based upon statistical analysis of global summertime temperatures, the authors concluded with a high degree of confidence, "extreme anomalies were a consequence of global warming because their likelihood in the absence of global warming was exceedingly small."

<sup>10</sup> Joint Science Academies' Statement: Global Response to Climate Change, issued June 7, 2005, and available at <http://www.nationalacademies.org/onpi/06072005.pdf>.

It is imprudent to wait for unacceptable impacts to occur before taking action because the effects of GHG emissions do not fully manifest themselves for decades, and once manifested, many of these changes will persist for hundreds, even thousands of years; and

The sooner that serious efforts to reduce GHG proceed, less pressure will be made for steeper (and thus likely more expensive) emission reductions later.<sup>11</sup>

### Impacts from Emissions Already Observed in New York's Climate

The need for the reduction of CO<sub>2</sub> emissions is clearly supported by numerous direct impacts that have been observed in New York State.

**Temperature.** Temperatures in New York State have risen during the twentieth century, with the greatest warming coming in recent decades – temperatures have risen by approximately 0.6°F per decade since 1970, with winter warming more than 1.1°F per decade.<sup>12</sup> This warming includes an increase in the number of extreme hot days (days at or above 90°F) and a decrease in the number of cold days (days at or below 32°F). New York experienced record high nighttime temperatures in the summer of 2010.<sup>13</sup>

**Sea level rise.** Sea level in the coastal waters of New York State and up the Hudson River has been steadily rising over the 20th century, chiefly as a result of thermal expansion of ocean waters, melting of land ice and local changes in the height of land relative to the height of the continental

<sup>11</sup> The National Academy of Sciences. Committee on America's Climate Choices, Board on Atmospheric Sciences and Climate Division on Earth and Life Studies, National Research Council. 'America's Climate Choices Final Report'. 2011. <http://americasclimatechoices.org/>

land mass. Tide-gauge observations in New York indicate that rates of relative sea level rise were significantly greater than the global mean, ranging from 2.41 to 2.77 millimeters per year (0.9 to 1.1 inches per decade).<sup>14</sup>

#### Future Impacts from Emissions Predicted for New York's Climate

Predictions of future impacts associated with emissions in New York further support the need for a substantial reduction in the CO<sub>2</sub> emissions cap. 'Responding to Climate Change in New York State: The ClimAID Integrated Assessment for Effective Climate Change Adaptation' (ClimAID) project examines how sea level rise, changes in precipitation patterns, and more frequent severe weather conditions will affect New York's economy, environment, community life and human health. The project uses regionalized climate projections to develop adaptation recommendations and is a climate change preparedness resource for planners, policymakers, and the public.<sup>15</sup> The ClimAID project predicts the following:

**Air temperatures.** Air temperatures are expected to rise across New York, by 1.5 F° to 3°F by the 2020s, 3 F° to 5.5°F by the 2050s, and 4 F° to 9°F by the 2080s. By the end of the century, the greatest relative warming is projected for the northern regions of the State. The ranges in projected temperatures reflect potential future GHG emissions scenarios. The lower ends of the temperature ranges represent the projected outcome of lower emissions scenarios in which society dramatically reduces heat-trapping gas emissions and atmospheric GHG levels begin to stabilize. Likewise, the higher ends represent higher emissions scenarios in which emissions continue to increase and atmospheric GHG concentrations continue to rise. Sharp cuts in global emissions could result in smaller increases in temperatures, while a continuation of business as usual could result in increases greater than the highest projections.

<http://www.epa.gov/climatechange/effects/coastal/sap4-1.html>

<sup>15</sup> Rosenzweig, 'op.cit.'

Precipitation. Annual average precipitation in New York is projected to increase by up to 5 percent by the 2020s, up to 10 percent by the 2050s and up to 15 percent by the 2080s, with the greatest increases in the northern part of the State. The increased precipitation will not be evenly distributed over the course of the year; much of it is likely to occur during the winter months, while slightly reduced precipitation is possible for the late summer and early fall. The recent trend of increased heavy downpours and less light rains precipitation is expected to continue.

Sea Level Rise. A recent study based upon 60 years of tide-gauge records indicates that the rate of increase for sea level rise along approximately 1000 km of the east coast of the United States, including New York, remains at approximately three to four times higher than the global average.<sup>16</sup> The New York State Sea Level Rise Task Force, charged by the State Legislature with assessing impacts to the State's coastlines from rising seas and recommending protective and adaptive measures, projected the sea level rise values in Table 1 for two regions in New York. The projections for sea level rise represent the middle range of values from model-based probabilities (16 global climate models by three GHG emissions scenarios) rounded to the nearest inch. The projections for sea level rise with rapid ice-melt scenario assume acceleration of recent rates of ice melt in the Greenland and west Antarctic ice sheets.

Table 1. Projected Sea Level Rise in Two Regions of New York

Lower Hudson Valley & Long Island	2020s	2050s	2080s
Sea level rise	2 to 5 in	7 to 12 in	12 to 23 in
Sea level rise with rapid ice-melt scenario	5 to 10 in	19 to 29 in	41 to 55 in
Mid-Hudson Valley & Capital Region	2020s	2050s	2080s

Changes in Extreme Events. Extreme climate events, such as heat waves and heavy rainstorms, significantly impact New York’s communities and natural resources. Based on climate models, the ClimAID researchers developed probabilities of the future occurrence of extreme events in New York State. These results demonstrate that heat waves are expected to become more frequent and intense, heavy precipitation events are expected to become more frequent, and storm-related coastal flooding is expected to increase with rising sea levels.

#### Future Impacts from Emissions for New York State’s Resource Sectors

The need for the significantly reduced CO<sub>2</sub> emissions cap and budget adjustments are further supported by the ClimAID Study<sup>18</sup> which enumerates a number of predictions specifically for New York’s valued resources.

#### Water Resources

Rising air temperatures intensify the water cycle by driving increased evaporation and precipitation. The resulting altered patterns of precipitation include more rain falling in heavy events, often with longer dry periods in between. Heavy downpours have increased over the past 50 years and this trend is projected to continue, causing an increase in localized flash flooding in urban areas and hilly regions. Flooding has the potential to increase pollutants in the water supply and inundate wastewater treatment plants and other vulnerable

<sup>17</sup> “New York State Sea Level Rise Task Force Report to the Legislature,” December 31, 2010.

<sup>18</sup> Rosenzweig, ‘op.cit.’

development within floodplains. Less frequent summer rainfall is expected to result in additional, and possibly longer, summer dry periods, potentially impacting the ability of water supply systems to meet demands. Reduced summer flows on large rivers and lowered groundwater tables could lead to conflicts among competing water users. Increasing water temperatures in rivers and streams will affect aquatic health and reduce the capacity of streams to assimilate effluent from wastewater treatment plants.

### Coastal Zones

High water levels, strong winds, and heavy precipitation resulting from strong coastal storms already cause billions of dollars in damage and disrupt transportation and power distribution systems. Sea level rise will lead to more frequent and extensive coastal flooding. Warming ocean waters raise sea level through thermal expansion and have the potential to strengthen the most powerful storms.

Barrier islands are being dramatically altered by strong coastal storms, such as Hurricane Sandy, as ocean waters over wash dunes, create new inlets, and erode beaches. Sea level rise will greatly amplify risks to coastal populations and will lead to permanent inundation of low-lying areas, more frequent flooding by storm surges, and increased beach erosion. Loss of coastal wetlands reduces species diversity, including fish and shellfish populations. Some marine species, such as lobsters, are moving north from New York, while other species, such as the blue claw crab, are increasing in the warmer waters. Saltwater could reach farther up the Hudson River Estuary, potentially contaminating water supplies. Tides and storm surges may propagate farther, increasing flood risk both near and far from the coast. Sea level rise may also become the dominant stressor acting on vulnerable salt marshes.

### Ecosystems

Within the next several decades, New York State is likely to see widespread shifts in species

composition in the State's forests and other natural landscapes, with the loss of spruce-fir forests, alpine tundra and boreal plant communities. Climate change favors the expansion of some invasive species into New York, such as the aggressive weed, kudzu, and the insect pest, hemlock woolly adelgid. Some habitat and food generalists (such as white-tailed deer) may also benefit. A longer growing season and the potential fertilization effect of increasing CO<sub>2</sub> could increase the productivity of some hardwood tree species, provided growth is not limited by other factors such as drought or nutrient deficiency. CO<sub>2</sub> fertilization tends to preferentially increase the growth rate of fast growing species, which are often weeds and other invasive species. Lakes, streams, inland wetlands and associated aquatic species will be highly vulnerable to changes in the timing, supply, and intensity of rainfall and snowmelt, groundwater recharge and duration of ice cover. Increasing water temperatures will negatively affect brook trout and other native coldwater fish.

### Agriculture

Increased summer heat stress will negatively affect cool-season crops and livestock unless farmers take adaptive measures such as shifting to more heat-tolerant crop varieties and improving cooling capacity of livestock facilities. Increased weed and pest pressure associated with longer growing seasons and warmer winters will be an increasingly important challenge. Water management will be a more serious challenge for New York farmers in the future due to increased frequency of heavy rainfall events, and more frequent and intense summer water deficits by mid-to late-century.

### Public Health

Demand for health services and the need for public health surveillance and monitoring will increase as the climate continues to change. Heat-related illness and death are projected to increase, while cold-related deaths are projected to decrease. Increases in heat-related death, however, are projected to outweigh reductions

in cold-related death. More intense precipitation and flooding along the coasts and rivers could lead to increased stress and mental health impacts, impaired ability to deliver public health and medical services, increased respiratory diseases such as asthma, and increased outbreaks of gastrointestinal diseases. Cardiovascular and respiratory-related illness and death will be affected by worsening air quality, including more smog, wildfires, pollens, and molds. Vector-borne diseases, such as those spread by mosquitoes and ticks (‘e.g.’, West Nile virus and Lyme disease), may expand or their distribution patterns may change, either of which may adversely affect additional populations. Water supply, recreational water quality, and food production will be at increased risk due to increased temperatures and changing precipitation patterns. Water- and food-borne diseases are likely to increase without mitigation and adaptation intervention.

## Transportation

Over the next few decades, heat waves and heavy precipitation events are likely to dominate the causes for moderate, more frequent transportation problems such as flooded streets and delays in mass transit. By later this century, it is very likely that coastal flooding will be more frequent and intense due to sea level rise. Major adaptations are likely to be needed, not only in the coastal zones, but also in the Hudson River Estuary all the way to Troy and Albany as sea level rise and storm surge propagate up the tide-controlled Hudson River. Materials used in transportation infrastructure, such as asphalt and train rails, are vulnerable to increased temperatures and frequency of extreme heat events. Air conditioning requirements in buses, trucks, and trains, and ventilation requirements for tunnels will increase.

Low-lying transportation systems such as subways and tunnels, especially in coastal and near-coastal areas, are at particular risk of flooding as a result of sea level rise, storm surge, and heavy precipitation events. Transportation systems are vulnerable to ice and snowstorms, although requirements for salting and snow removal may decrease as precipitation tends to occur more often as rain than snow. Freeze/thaw cycles that

disturb roadbeds may increase in some regions as winter temperatures rise. Runways may need to be lengthened in some locations since hotter air provides less lift and hence requires higher speeds for takeoff. Newer, more powerful aircraft can reduce this potential impact. The Great Lakes may see a shorter season of winter ice cover, leading to a longer shipping season. However, reduced ice cover may result in an increase in “lake-effect” snow events, which cause various transportation problems.

New York State has the most days per year of freezing rain in the nation. This phenomenon affects air and ground transportation directly and indirectly through electric and communication outages. It is unknown how climate change will influence the frequency of freezing rain in the future.

#### Telecommunications

Communication service delivery is vulnerable to hurricanes, lightning, ice, snow, wind storms, and other extreme weather events, some of which are projected to change in frequency and/or intensity. The delivery of telecommunication services is sensitive to power outages, such as those resulting from the increased electrical demand associated with heat waves, which are expected to increase with climate change. Communication lines and other infrastructure are vulnerable to heavy precipitation events, flooding, and freezing rain. In coastal and near-coastal areas, sea level rise in combination with coastal storm surge flooding will be a considerable threat later this century.

#### Energy Sector

Impacts of climate change on energy demand are likely to be more significant than impacts on supply. Climate change will adversely affect system operations, increase the difficulty of ensuring adequate supply during peak demand periods, and exacerbate problematic conditions, such as the urban heat island effect. More

frequent heat waves will cause an increase in the use of air conditioning, stressing power supplies and increasing peak demand loads. Increased air and water temperatures will decrease the efficiency of power plants as they decrease cooling capacity.

Coastal infrastructure is vulnerable to flooding as a result of sea level rise and coastal storms; hydropower is vulnerable to projected increases in summer drought. The availability and reliability of solar power systems are vulnerable to changes in cloud cover although this may be offset by advances in technology; wind power systems are similarly vulnerable to changes in wind speed and direction. Biomass energy availability depends on weather conditions during the growing season which will also be affected by a changing climate.

Transformers and distribution lines for both electric and gas supply are vulnerable to extreme weather events, such as heat waves and flooding. Higher winter temperatures are expected to decrease winter heating demand, which will primarily affect natural gas markets, while increases in cooling demand will affect electricity markets; such changes will vary regionally. The indirect financial impacts of climate change may be greater than the direct impacts of climate change. These indirect impacts include those to investors and insurance companies as infrastructure becomes more vulnerable and those borne by consumers due to changing energy prices and the need to use more energy.

As outlined above, climate change is expected to impact New York's communities, economy and energy systems, affecting public health and safety, environment and natural resources, commerce and infrastructure. Consistent with its mission to protect the safety, health, and welfare of the public and the environmental resources of the State, the Department proposes the substantial reduction of the CO<sub>2</sub> emissions cap and budget adjustments, to address the specific potential harms identified and the overall nature and extent of threat of harm

to the State from climate change.

#### Emissions from Power Plants in New York

The burning of fossil fuels in New York power plants is a major contributor to increased atmospheric concentrations of CO<sub>2</sub>. In 2012, power plants in the State subject to the Program burned fossil fuels to produce approximately 35 million tons of CO<sub>2</sub> and significant amounts of other harmful pollutants that impact the health and welfare of New Yorkers. Since CO<sub>2</sub> emissions from the energy sector represent approximately one-fifth<sup>19</sup> of the State's total GHG emissions, any effort to curb the State's contribution to atmospheric concentrations of CO<sub>2</sub> must address CO<sub>2</sub> pollution from power plants.

In 1992, 154 nations, including the United States signed a treaty establishing the goal of stabilizing atmospheric GHG concentrations at a level that would prevent dangerous anthropogenic interference with the climate system. In response to scientific projections of likely severe climate impacts if global average temperatures rise more than approximately 3.6°F (2°C) above pre-industrial levels, the U.S. signed the 2009 Copenhagen CO<sub>2</sub> Accord<sup>20</sup> setting the target of limiting temperature increases to 2°C. As reported in 2007 by the IPCC, the best available scientific estimates indicate that there is an approximately 50 percent likelihood that the 2°C threshold will be exceeded when atmospheric CO<sub>2</sub> concentrations rise above 450 parts per million (ppm). Scientists project that stabilizing total atmospheric GHG concentrations (CO<sub>2</sub> plus the other long-lived GHGs, which include methane, nitrous oxide, ozone and several manmade fluorine-containing gases) at 450-500 ppm would provide a medium (approximately 50 percent) likelihood that warming will not exceed 2°C.

<sup>19</sup> "Patterns and Trends New York State Energy Profiles: 1996-2010," Final Report, April 2012. [http://www.nyserda.ny.gov/BusinessAreas/Energy-Data-and-Prices-Planning-and-Policy/Energy-Prices-Data-and-Reports/EA-Reports-and-Studies/Patterns-and-Trends.aspx?sc\\_database=web](http://www.nyserda.ny.gov/BusinessAreas/Energy-Data-and-Prices-Planning-and-Policy/Energy-Prices-Data-and-Reports/EA-Reports-and-Studies/Patterns-and-Trends.aspx?sc_database=web)

<sup>20</sup> Copenhagen Accord to the United Nations Framework Convention on Climate Change, Copenhagen Climate change Conference, December, 2009  
[http://unfccc.int/documentation/documents/advanced\\_search/items/6911.php?preref=600005735#beg](http://unfccc.int/documentation/documents/advanced_search/items/6911.php?preref=600005735#beg)

Scientific estimates of global emission levels required to maintain this concentration of atmospheric GHGs indicate that developed nations will need emission reductions of 80 percent from 1990 levels by mid-century. Given the considerable global CO<sub>2</sub> emissions already released to the atmosphere between 2000 and 2011, there is significant risk of exceeding the 2°C target unless decisive, global action is not taken within this decade.

By modeling effective GHG emissions reduction, New York can encourage other states and nations to turn around the accumulation of heat-trapping GHG in the atmosphere. New York's acknowledged leadership position confers a unique opportunity to influence the ultimate costs the State and its citizens will bear from climate change.

#### Components of the Proposed Program Revisions

The reduction in the CO<sub>2</sub> emissions cap to current levels represents a critical step to combat the significant challenges presented by climate change and to advance sound energy policies that foster energy efficiency and energy independence.

The proposed Program revisions will cap regional emissions at 91 million tons annually beginning in 2014 and will reduce that level by 2.5 percent each year through 2020. This represents a nearly 45 percent reduction from the existing cap currently in place under the program. After 2020, the cap will remain at 78 million tons annually.

Further, in order to account for the existing private bank of CO<sub>2</sub> emissions allowances already acquired at auction, and in order to help create a binding cap, the proposed Program revisions provide two distinct budget (cap) adjustments. The First Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the first control period private bank of allowances (vintages 2009, 2010, & 2011) held by

market participants after the first control period. The first adjustment will reduce New York's budget (the annual cap) by its portion of the regional cap (approximately 38.93 percent) in each allocation year over the seven year period 2014-2020. The Second Control Period Interim Adjustment for Banked Allowances will reduce the budget for 100 percent of the surplus 2012 and 2013 vintage allowances held by market participants as of the end of 2013. The second adjustment will reduce New York's budget (the annual cap) by its portion of the regional cap (approximately 38.93 percent) in each allocation year over the six year period 2015-2020.

In order to provide additional flexibility and cost containment the proposed Program revisions also create the Cost Containment Reserve (CCR). The CCR allowances will be triggered and released at auctions at \$4/ton in 2014, \$6/ton in 2015, \$8/ton in 2016, and \$10/ton in 2017. Each year after 2017 the CCR trigger price will increase by 2.5 percent. If the trigger price is reached, up to 10 million additional CCR allowances will be available for purchase at auction, except in 2014, when the reserve will be limited to 5 million allowances. The existing price triggers for expanding use of offsets and the one year compliance period extension will be eliminated in favor of the CCR.

As designed and implemented, the proposed reduction to the CO<sub>2</sub> emissions cap and budget adjustments will also achieve significant additional reductions outside of the power sector through reinvestment of auction proceeds for end-use energy efficiency and greenhouse gas emission reduction projects.

Finally, the proposed Program revisions create an interim compliance obligation in part to align it with the annual compliance obligations under federal programs such as the Clean Air Interstate Rule and the Title IV Acid Rain Program. This program revision also helps to address the potential for a budget source to operate during the first couple of years of a three year compliance period and the potential to avoid their compliance obligation as a result of the business closing or falling into bankruptcy prior to the third year compliance

obligation. In addition to demonstrating full compliance at the end of each three-year compliance period, regulated entities must now demonstrate that they are holding allowances equal to at least 50 percent of their emissions at end of the first two years in each three year compliance period. The proposed Program amendments also include minor revisions such as setting the reserve price at \$2.00 in 2014, to rise at 2.5 percent per year in subsequent years, updating all references, and the deleting early reduction allowance provisions. The majority of the proceeds from the sale of New York's allowances will be continue to be dedicated to strategic energy or consumer benefits, such as energy efficiency and clean energy technologies.

### Benefits from the Proposed Program Revisions

Global action is needed to solve climate change and renewed action in New York now will have local and Statewide benefits. Significant economic opportunities and environmental and health co-benefits such as reduced air pollution and improved public health are expected from programs that mitigate GHG emissions. First and foremost the reduction of the emissions cap and budget adjustments are projected to result in cumulative emission reductions, within the Participating States (2014 through 2020, including offsets), of 86 million tons of CO<sub>2</sub>. In addition, the Program's mandatory, market-based carbon control mechanisms will remain unchanged and will continue to function properly and deliver positive economic benefits.<sup>21,22,23,24,25</sup>

In New York, auction proceeds will continue to support additional emission reductions through investments in energy efficiency, renewable and clean energy and innovative carbon-abatement technologies, as guided by the RGGI Operating Plan.<sup>26</sup> NYSERDA regulations established the Advisory Group of stakeholders,

<sup>21</sup> Hibbard, P., Tierney, S., Okie, A., Darling, P. 'The Economic Impacts of the Regional Greenhouse Gas Initiative on Ten Northeast and Mid-Atlantic States (Review of the Use of RGGI Auction Proceeds from the First Three-Year Compliance Period)'. Analysis Group. November 15, 2011.

<sup>22</sup> [http://www.analysisgroup.com/uploadedFiles/Publishing/Articles/Economic\\_Impact\\_RGGI\\_Report.pdf](http://www.analysisgroup.com/uploadedFiles/Publishing/Articles/Economic_Impact_RGGI_Report.pdf)

<sup>26</sup> [http://www.eany.org/images/Reports/rggi\\_success\\_apr2012.pdf](http://www.eany.org/images/Reports/rggi_success_apr2012.pdf)

which will continue to represent a broad array of energy and environmental interests, to provide advice on how best to utilize auction proceeds. The Operating Plan will continue to be reviewed and revised on an annual basis and the Advisory Group is convened to provide input.

The most recent version of the Operating Plan dated November 2012 estimates that the current investment of a portion of New York's proceeds in the Green Jobs - Green New York, Residential Energy Services, Municipal Water and Wastewater, and Industrial Process Improvement programs during a three year period will result in non-discounted lifetime savings of 1.9 million tons of CO<sub>2</sub> emissions and a non-discounted lifetime savings of \$390 million on customer energy bills.

Projected benefits from the proposed revisions are detailed in a study by the Northeast States Coordinated Air Use Management (NESCAUM) that estimates the macroeconomic impacts of the program in the RGGI region. The study uses the Regional Economic Models, Inc. Policy Insight™ (REMI) model, a multi-state structural economic forecasting and policy analysis model that produces projections of employment, gross state product, and personal income.<sup>27</sup> The macroeconomic results reflect the potential impacts associated with the proposed revisions to the program (including the investment of auction proceeds in an estimated portfolio of energy efficiency, clean energy and carbon abatement programs). The study estimates that the cumulative changes in New York's Gross State Product and Personal Income associated with the proposed revisions to the program will be about \$5.8 billion and \$4.7 billion, respectively (2010 dollars, calculated as the present value of estimated annual changes over the period 2012 to 2040, discounted at three percent per year to account for the

<sup>27</sup> "REMI Economic Impacts Analysis," by the Northeast States for Coordinated Air Use Management (NESCAUM), June 3, 2013. [http://www.rggi.org/docs/ProgramReview/REMI%2091%20Cap%20Bank%20MR\\_2013\\_06\\_03.pdf](http://www.rggi.org/docs/ProgramReview/REMI%2091%20Cap%20Bank%20MR_2013_06_03.pdf)

time-value of money). In the context of New York 's total Gross State Product and total Personal Income these changes represent small but positive changes.

While the Operating Plan and macroeconomic modeling provide estimates of future benefits associated with the investment of projected auction proceeds in New York, NYSERDA will continue to prepare quarterly status reports that will include: a summary of program activities and implementation; an estimate of program benefits; and an accounting of program costs and expenditures associated with the actual receipt of proceeds through that point in time. The last quarterly progress report of the year also serves as an annual evaluation and status report. The annual report will also provide information on the geographic distribution of Program funding and benefits across the State.

The annual report for the quarter ending December 31, 2012 reflects benefits associated with spending through that date. The table below illustrates the estimated cumulative annual benefits (as of December 31, 2012) at the portfolio and program levels from all currently operational projects installed since the start of the existing Program. These metrics, prepared by NYSERDA Program evaluation and implementation staff, represent the best estimate of Program benefits to date and are adjusted over time as individual programs are evaluated and results are adjusted based on those evaluation studies.

Summary of Cumulative Portfolio Benefits through December 31, 2012<sup>28</sup>

Benefits	Results through December 31, 2012
Net Greenhouse Gas Emission Savings <sup>1</sup> (Annual Tons CO <sub>2e</sub> <sup>2</sup> )	56,764

<sup>28</sup> New York State Energy and Research Authority, "New Yorks RGGI-Funded Programs Status Report," Quarter Ending December 31, 2012. <http://www.nyserdera.ny.gov/Energy-and-the-Environment/Regional-Greenhouse-Gas-Initiative/Evaluations-of-Funds.aspx>

Net Electricity Savings (Annual MWh)	16,895
Renewable Energy Generation (Annual MWh)	4,345
Net Natural Gas Savings (Annual MMBtu)	203,118
Net Fuel Oil Savings (Annual MMBtu)	337,096
Net Propane Savings (Annual MMBtu)	16,593
Net Steam Savings (Annual MMBtu)	15,969
Net Wood Savings (Annual MMBtu)	3,079
Net Kerosene Savings (Annual MMBtu)	1,026
Net Gasoline Savings (Annual MMBtu)	-
Net Residual Oil Savings (Annual MMBtu)	144
Net Diesel Savings (Annual MMBtu)	-
Total Fuel Savings (Annual MMBtu)	577,024
Annual Energy Bill Savings to Participating Customers (\$ Million)	12.0

<sup>1</sup> These emission reductions are associated with both electric and fossil-fuel saving measures.

Under a cap-and-trade system, the total number of emission allowances is determined by regulation. Regulated entities can purchase allowances and collectively emit up to the cap that is currently in place. Therefore, in the near term, electric efficiency projects may not decrease the overall amount of emissions going into the atmosphere. Nevertheless, electric efficiency projects will reduce end-users' responsibility or footprint associated with emissions from electricity production.

<sup>2</sup> CO<sub>2</sub>e stands for carbon dioxide equivalent and describes the amount of CO<sub>2</sub> that would have the same global warming potential.

NYSERDA projects the discounted lifetime savings of the cumulative values in the table to result in approximate: fuel savings of 8.7 million MMBtu; electricity savings of 294,000 MWh; bill savings of \$223 million; and CO<sub>2</sub> emission reductions of 753,000 tons. These annual values were converted to lifetime savings by applying a measure life assumption for each program that is based on the life of the longest-lived measure for that specific program. A five percent discount rate is applied to weight the impacts of the benefits over time.

The Program portfolio also results in non-energy benefits. For instance: Program funds were leveraged to obtain \$100 million in Federal funding to support a New York based Photovoltaic (PV) Manufacturing Consortium; ten regional sustainability plans were created with the involvement of more than 2,500 New York stakeholders; and a series of technical analyses related to offshore wind development have been completed.

#### Complementary GHG Programs in New York

The Program and the proposed revisions to the Program, along with Greenhouse Gas Exhaust Emission Standards (6 NYCRR Part 218- 8), CO<sub>2</sub> Performance Standards for Major Electric Generating Facilities (6 NYCRR Part 251), and the Renewable Portfolio Standard (RPS) are key components of New York's comprehensive GHG reduction policy. Working together, these programs benefit New York by reducing GHG emissions from the electricity generating sector and the motor vehicles sector, which are the two largest contributors of GHG emissions in New York State.

First, the Department adopted California GHG exhaust emission standards (6 NYCRR Subpart 218-8) for new motor vehicles to reduce emissions of GHGs, including most recently with amendments adopted in 2012. Section 177 of the Clean Air Act (42 United States Code Section 7507) permits states other than California to adopt motor vehicle emission standards, provided those standards are identical to California's

standards. New York has chosen to adopt California's more stringent motor vehicle standards since the early 1990s, in order to obtain emission reductions from new motor vehicles not provided by Federal new motor vehicle standards.

Secondly, the Department promulgated CO<sub>2</sub> Performance Standards for Major Electric Generating Facilities (6 NYCRR Part 251) in 2012, which prevents new high carbon emitting sources in the power sector (like coal-fired plants without carbon capture and sequestration or another control technology) and establishes CO<sub>2</sub> emission standards for new major electric generating facilities. Part 251 also establishes CO<sub>2</sub> emission standards for the expansion of existing electric generating facilities that increase electrical output capacity by at least 25 MW. The Program and Part 251 work together - RGGI sets an overall cap on CO<sub>2</sub> emissions from all new and existing fossil fuel-fired sources 25 MW and larger, while Part 251 sets a specific source-level CO<sub>2</sub> emission limit on all new and expanding sources 25 MW or larger.

Finally, the primary objective of the RPS is to improve New York's environment and increase energy diversity in order to reduce reliance on fossil fueled energy sources within a competitive energy market. The RPS seeks to increase the amount of electricity purchased from renewable sources in New York to 30 percent by 2015. Eligible energy technologies include anaerobic digestion, biomass, fuel cells, hydroelectric, solar, tidal, and wind. The RPS features centralized procurement managed by NYSERDA which manages the RPS Program and solicits bids for renewable energy.

Climate change is a global problem and effective action at the national and international level is necessary in order to stabilize atmospheric GHG concentrations at acceptable levels. Notwithstanding this, action now at the State and regional level to reduce GHG emissions and to implement the revisions to the Program will benefit and reduce the risk of injury to New York and its citizens and residents from climate

change. The risks of injury from a warming climate increases with the rate and magnitude of the warming, and in turn, the rate and magnitude of warming is primarily dependent upon the level of CO<sub>2</sub> emissions. The reductions in CO<sub>2</sub> emissions from power plants under the revisions to the Program contribute to a reduction in the risk of injury to New York and its citizens and residents from global climate change. In addition, by implementing the proposed revisions to the Program now, New York and the Participating States can:

Reduce the long-term costs of addressing climate change. By acting now, states can avoid the need for more disruptive measures later.

Position the region ahead of competitors. Taking early and continued action to reduce the region's carbon-intensity will create a competitive advantage relative to other parts of the country when action at the national and international level becomes unavoidable.

Capture environmental co-benefits. Reducing power sector carbon emissions provides numerous environmental co-benefits, including reduced emissions of other pollutants associated with fossil-based electricity generation. Additional co-benefits will be realized through the offsets component of the program which encourages afforestation, reduced agricultural emissions, and reduced consumption of natural gas, propane, and home heating oil. Additionally, co-benefits will be realized by allocating almost 100 percent of the CO<sub>2</sub> allowances to the EE&CET account to be auctioned by NYSERDA and have the resulting proceeds utilized for the account's purposes.

Drive new technology. By attaching tangible financial value to avoided carbon emissions, the proposed Program revisions provides a market incentive for developing and deploying new technologies that can increase fuel efficiency, utilize non-carbon resources (including renewable technologies such as wind and solar power), and reduce or eliminate carbon emissions from combustion sources. In addition, to the extent that the auctioning of allowances will spur additional investments in clean energy technologies, the auctions drive the deployment of new technologies in the State.

Promote improved supply-side and demand-side efficiency. The proposed Program revisions create a

direct incentive to reduce the fossil fuel inputs required to produce electricity through more efficient generating technologies. The Program's offsets provisions will continue to create incentives to promote improved demand-side efficiency, including not only more efficient technologies for reducing electricity consumption, but technologies for reducing primary energy consumption - both natural gas and home heating oil - in residential and commercial buildings. In addition, the allocation of offset allowances to create incentives for energy efficiency provide s direct incentives for end-use and supply-side energy efficiency projects in the State.

Improve the region 's energy security and reduce its exposure to higher energy prices. By creating a market incentive for low-carbon and non-carbon electricity technologies and by promoting increased supply-side and demand-side efficiency, the proposed Program revisions reduce the Northeast 's long-term exposure to high fossil fuel energy prices . Efficiency improvements and advances in new energy technology fostered by the proposed Program revisions can help buffer the region from the considerable economic risks associated with continued dependence on these fuels.

Stimulate economic development. The proposed Program revisions provide a positive stimulus for economic growth in the region by creating incentives for new technologies that could be developed in-region, promoting a more efficient and cleaner electricity generating sector, prompting other activities through its offsets program and improving efficiency. NYSERDA 's investment of proceeds from the auctioning of allowances provides further economic benefits.

As outlined above, the revisions to the Program will provide numerous benefits and continue to position New York as a leader in innovative and progressive climate change policies. In the absence of a comprehensive federal program, New York must continue to monitor issues that may minimize or threaten the effectiveness of the Program such as the potential for emissions leakage.

Emissions Leakage

Emissions Leakage refers to a potential shift of electricity generation from capped sources subject to the Program, to higher-emitting sources not subject to the Program, in and outside of the State.<sup>29</sup> Emissions leakage is defined as the increase in CO<sub>2</sub> emissions outside the RGGI region that may “net out” (or partially eliminate) a portion of the emissions reductions made within the RGGI region. Emissions leakage is an important concept because electricity is routinely transmitted across regional boundaries to meet economic and reliability objectives.

The Department examined emissions leakage in the Final Generic Environmental Impact Statement for the existing Program, accepted on August 13, 2008, and has continued to evaluate the potential for emissions leakage since the Program’s inception. New York and the Participating States examined leakage for CO<sub>2</sub> and other pollutants from the electric generating sector, such as NO<sub>x</sub> and SO<sub>2</sub>. However, since the federal action under the Clean Air Interstate Rule (CAIR) resulted in emissions caps for NO<sub>x</sub> and SO<sub>2</sub>, from the electric generating sector, emissions may shift, but will not increase as a result of the Program.

Over the past few years, the RGGI Electricity Monitoring Staff Working Group (Staff Working Group) analyzed potential emissions leakage and issued two annual monitoring reports.<sup>30,31</sup> These reports summarized data for electricity generation, electricity imports, and related CO<sub>2</sub> emissions for the Participating States from 2005 through 2010 and concluded that during the first two years of RGGI Program operation (2009 and 2010), there was no increase in CO<sub>2</sub> emissions or the CO<sub>2</sub> emission rate (pounds of CO<sub>2</sub> per megawatt hour, or lb CO<sub>2</sub>/MWh) from non-RGGI electric generation serving load in the ten-state RGGI region. Thus, for that period, these reports found no evidence of emissions leakage caused by the existing Program.

<sup>29</sup> WRI White Paper: Greenhouse Gas Emissions Trading in the U.S. States: Observations and Lessons from the OTC NO<sub>x</sub> Budget Program, A. Aulisi, A.E. Farrell, J. Pershing, S. VanDeveer. 2005.

<sup>30</sup> [http://rggi.org/docs/Elec\\_monitoring\\_report\\_11\\_09\\_14.pdf](http://rggi.org/docs/Elec_monitoring_report_11_09_14.pdf)

<sup>31</sup> [http://rggi.org/docs/Market/Elec\\_Monitoring\\_Report\\_12\\_07\\_30\\_Final.pdf](http://rggi.org/docs/Market/Elec_Monitoring_Report_12_07_30_Final.pdf)

In addition to the Electricity Monitoring reports issued by the Participating States, the New York ISO Inc., (NYISO) together with researchers at Rensselaer Polytechnic Institute (RPI), evaluated whether the Program's cost of compliance has resulted in emissions leakage. The NYISO and RPI developed econometric models to explain power transfers and CO<sub>2</sub> emissions from power plants in Pennsylvania from 2008 through 2010. While the models concluded that electrical loads, fuel costs, and non-emitting generation all have statistically significant impacts on emissions and power transfers, or both, the model was not able to show a statistically significant impact from the Program costs on either of the variables.<sup>32</sup> In other words, the report concludes that there is no evidence that the existing Program has caused emissions leakage.

Thus, according to the reports and studies conducted to date, no evidence of emissions leakage associated with the existing Program has been found. In order to estimate the amount of potential leakage associated with the proposed revisions to the Program including the cap reduction, the electricity sector modeling analysis estimated CO<sub>2</sub> emissions in and outside of the region. Cumulative CO<sub>2</sub> emissions reductions were compared between the RGGI region and the Eastern Interconnection<sup>33</sup> (which includes the RGGI region) plus the eastern Canadian provinces. Cumulative emission reductions within the Participating States (2014 through 2020, including offsets) are projected to be 86 million tons of CO<sub>2</sub>. Over the same period, cumulative reductions in the entire Eastern Interconnect region are projected to be 28 million tons of CO<sub>2</sub>. While the emissions leakage reports are being offered to guide New York and the region in making critical policy decisions, if monitoring indicates that leakage associated with the Program occurs and needs to be addressed, a number of states including New York,<sup>34</sup> are already moving to implement significant energy efficiency programs which help

<sup>32</sup> An Empirical Test for Inter-State Carbon-Dioxide Emissions Leakage Resulting from the Regional Greenhouse Gas Initiative, April 20, 2011.

<sup>33</sup> The Eastern Interconnection (EI) includes the eastern two-thirds of the continental United States (excluding most of Texas and Florida). The Canadian portion includes Ontario east to the Maritime Provinces.

<sup>34</sup> CASE 07-M-0548 - Order Establishing Energy Efficiency Portfolio Standard and Approving Programs. (June

mitigate the effects of any emissions leakage.

Further, at the conclusion of the Program review, the Participating States committed to engage in a collaborative effort informed by discussions with their respective ISOs to: identify and evaluate potential imports tracking tools; conduct further modeling to ascertain energy and price implications of any potential policy on emissions associated with imported electricity; and pursue additional legal research, leading to a workable, practicable, and legal mechanism to address emissions associated with imported electricity.

Benefits Associated with the Program Revisions with Respect to the Auction and Allocation of Allowances to Energy Efficiency and Clean Energy Technologies (EE & CET).<sup>35</sup>

Like the current Program, the proposed Program revisions require the Department and NYSERDA to continue to auction almost 100 percent of the allowances to ensure that the value of the cap-and-trade program inures to the consumers who pay for the Program, while at the same time allows for the rapid distribution of allowances into the marketplace where generators subject to the Program may purchase them. In further support of these goals, the auctions will continue to achieve, but will not be limited to, the following objectives: achieving fully transparent and efficient pricing of allowances; promoting a liquid allowance market by making entry and trading as easy and low-cost as possible; being open to participation by the categories of bidders determined by NYSERDA or its designee in consultation with the Auction Advisory Committee which meet the

---

23, 2008)

<http://www3.dps.ny.gov/W/PSCWeb.nsf/ArticlesByTitle/06F2FEE55575BD8A852576E4006F9AF7?OpenDocument>

<sup>35</sup> The Program is designed to allocate most of the CO<sub>2</sub> allowances to the EE&CET Account (the “EE & CET Allocation”). The EE & CET Allocation is administered by NYSERDA, which currently administers similar energy efficiency and clean energy technology programs, and allowances in the account are sold in transparent allowance auctions. This allocation achieves the emissions reduction goals of the Program and reduces impacts on consumers by promoting or rewarding investments in energy efficiency, renewable or non-carbon-emitting technologies, innovative carbon emissions abatement technologies with significant carbon reduction potential, and/or the administration of the Program.

minimum financial requirements; monitoring for and guarding against the exercise of market power and market manipulation; being held as frequently as is needed to achieve design objectives; avoiding interference with existing allowance markets; aligning well with wholesale energy and capacity markets; and not acting as a barrier to efficient investment in relatively clean existing or new electricity generating sources.

NYSERDA's New York CO<sub>2</sub> Allowance Auction regulation, found at 21 NYCRR 507, establishes the rules for conducting auctions of CO<sub>2</sub> allowances to be administered by NYSERDA or its designee as part of the program. As stated in the regulations which will not be revised as part of this rulemaking, New York intends to continue to participate in uniform regional auctions for the allowances that it will be offering for sale. As part of the regional auction process, New York and the Participating States will continue to follow specific design elements for: reserve price; auction structure and format; allowance sale schedule; level of participation; treatment of unsold allowances; notice of auctions; monitoring; and auction results. Additional details and rules for each regional CO<sub>2</sub> allowance auction are provided in the Auction Notice issued by New York and the Participating States for each auction.

The Reserve Price is the minimum acceptable price for each CO<sub>2</sub> allowance in a specific auction. The reserve price at an auction is either the Minimum Reserve Price (MRP) or the Cost Containment Reserve (CCR)<sup>36</sup> trigger price, depending on the level of demand for allowances at the auction. Its use is important for mitigating the potential for auction prices to clear significantly below current market prices, due to tacit or explicit collusion, weak competition, or to maintain a minimum rate of progress in reducing emissions below business as usual.

The revisions to the Program provide that the MRP will be set at \$2.00 in 2014 and increases by 2.5

---

<sup>36</sup> See discussion of Cost Containment Reserve provision on page 32.

percent each year. The CCR trigger prices are set at \$4.00 in 2014, \$6.00 in 2015, \$8.00 in 2016, and \$10.00 in 2017, rising by 2.5 percent each year thereafter in order to account for inflation.

### Allowance Apportionment

Apportionment is the term used to describe the process by which the Participating States propose to distribute the regional emissions cap to individual state budgets. While there were a number of discussions surrounding apportionment during this Program review, it was agreed that a full review would not occur until the next Program review slated for 2016. Therefore, New York retains the same percentage of the regional cap established under the existing Program (approximately 38.93 percent). Notwithstanding this, in allocation years 2014, 2015, and 2016 only, New York is proposing to reduce its base budget from the amount that would otherwise result from this percentage by 200,000 allowances. Concurrently, the State of Rhode Island's base budget would increase by 200,000 allowances over that same time frame. New York is one of five RGGI states (also DE, MA, MD and VT) that has agreed to this temporary adjustment of their apportionment in order to provide more allowances to Rhode Island. When RGGI was initially established, allowances were apportioned among the states largely on the basis of emissions. While most RGGI states have experienced emissions from the affected source sector well below their portion of the regional cap between 2009 and 2012, emissions increases in Rhode Island have exceeded Rhode Island's apportioned percentage substantially in each year of the program. The temporary adjustment of allowances is intended to reduce Rhode Island's "shortfall" until the RGGI states have the opportunity for a thorough evaluation of the apportionment of allowances under the regional cap during the next program review planned for 2016. That evaluation will consider whether the apportionment formula should be changed and, if so, what criteria should govern that apportionment: emissions, electricity consumption, population etc.

It should be noted that this reduction does not change the State's percentage as it is applied to the interim

adjustments or the cost containment reserve (CCR). Each of these will be based on the existing and continuing apportionment percentage of approximately 38.93 percent. In addition, the proposed rule eliminates the Reduction in the CO<sub>2</sub> Budget Trading Program base budget currently required under the limited exemption for units with an enforceable permit condition restricting the supply of the unit's annual electrical output to the electric grid to less than or equal to 10 percent of the annual gross generation from the unit. This will result in New York having more allowances to auction, despite the temporary reappportionment of some allowances to Rhode Island, than if it retained this provision.

Further, while this temporary reduction alters the cap trajectory for New York and Rhode Island relative to the 2.5 percent annual reduction for 2014, 2015 and 2016, it does not impact the regional cap trajectory. In other words, the regional emissions cap will decline by 2.5 percent each year from 2015 through 2020. In addition, in 2017, both states' base budgets realign to the existing apportionment percentages, and thus move back to the 2.5 percent trajectory based on calculating that trajectory from the starting year of 2014.

#### Allowance Set-Asides

The Department proposes to maintain the amount of CO<sub>2</sub> allowances allocated to the two existing set-aside accounts under the Program and proposes a modification to the existing voluntary renewable energy market set-aside to include eligible biomass, and minor clarifications to the long term contract (LTC) set-aside. Accordingly, the Department will allocate 700,000 and 1,500,000 tons to the voluntary renewable energy market and eligible biomass set-aside and long term contract set-aside accounts, respectively, from the CO<sub>2</sub> Budget Trading Program annual adjusted budget.

The Department proposes to modify the existing "voluntary renewable energy market set-aside" in subdivision 242-5.3(c) to include eligible biomass. This revision expands eligibility for retiring CO<sub>2</sub> allowances

from the set-aside to include CO<sub>2</sub> budget sources that co-fire eligible biomass as a compliance mechanism. The Program currently allows CO<sub>2</sub> budget sources to deduct, as a compliance mechanism, CO<sub>2</sub> emissions attributable to the burning of eligible biomass from its CO<sub>2</sub> allowance compliance obligation. When this occurs, the amount of CO<sub>2</sub> emissions covered by the program decreases, meaning that demand for CO<sub>2</sub> allowances also decreases. Moreover, the amount of CO<sub>2</sub> allowances available to other CO<sub>2</sub> budget sources for compliance would correspondingly increase, potentially resulting in an “inflated” or over-allocated CO<sub>2</sub> emissions budget and regional CO<sub>2</sub> emissions cap. Thus, in order to help maintain the overall environmental integrity of the CO<sub>2</sub> emissions budget and regional CO<sub>2</sub> emissions cap, CO<sub>2</sub> allowances should also be retired from the Program if and when CO<sub>2</sub> emissions are exempted from the Program. Therefore, when a CO<sub>2</sub> budget source deducts CO<sub>2</sub> emissions from its compliance obligation as a result of co-firing eligible biomass, the Department proposes to also allow for the retirement of the corresponding number of CO<sub>2</sub> allowances from the set-aside.

The proposed revisions to the Program maintain the existing provisions for voluntary renewable energy purchases. A voluntary renewable energy purchase is a purchase of electricity from renewable energy generation or from renewable energy attribute credits by a retail electricity customer on a voluntary basis. Renewable energy includes electricity generated from biomass, wind, solar thermal, photovoltaic, geothermal, hydroelectric facilities certified by the Low Impact Hydropower Institute, wave and tidal action, and fuel cells powered by renewable fuels. The renewable energy generation or renewable energy attribute credits related to such purchases may not be used by the generator or purchaser to meet any regulatory mandate, such as an RPS. The Department will continue to retire allowances under the voluntary renewable energy market and eligible biomass set-aside for voluntary renewable energy purchases.

The 700,000 ton voluntary renewable energy market set-aside was calculated using information from the renewable energy market as it relates to the RPS with allowance for some market growth. Since the inception of

the program, this set-aside has been significantly under-subscribed and less than half of the annual 700,000 CO<sub>2</sub> allowance allocation has been retired each year on behalf of voluntary renewable energy purchases. The proposed expansion of eligibility in subdivision 242-5.3(c) increases the likelihood that the set-aside will be fully utilized. However, should the set-aside become over-subscribed, the Department maintains the proportional retirement provision in the set-aside, and any undistributed allowances from the set-aside may remain in the set-aside account for future retirement.

Under the proposed revisions to the Program, the LTC set-aside in subdivision 242-5.3(d) will continue to be available to CO<sub>2</sub> budget sources that can demonstrate, to the Department's satisfaction that: the LTC was entered into prior to March 2006; purchasing of allowances at auction or in the secondary market leads to substantial financial hardship because the LTC applicant is unable to pass on the cost of CO<sub>2</sub> allowances to the purchasing party under the conditions of the LTC; and source's primary fuel is natural gas or the CO<sub>2</sub> budget source's CO<sub>2</sub> emission rate is no higher than 1100 lbs/MWhr. The proposed revisions to the LTC set-aside are intended to clarify the operation and administration of the set-aside, consistent with the Department's interpretation of subdivision 242-5.3(d) pursuant to Declaratory Ruling 19-18, which the Department issued on November 5, 2009.

Pursuant to the requirements in the regulation, each year the Department has reduced the quantity of allowances available for auction pursuant to the Reduction in the CO<sub>2</sub> Budget Trading Program base budget required under the "Behind-the Meter" provisions. This limited exemption for units with an enforceable permit condition restricting the supply of the unit's annual electrical output to the electric grid to less than or equal to 10 percent of the annual gross generation from the unit requires the Department to reduce the CO<sub>2</sub> Budget Trading Program base budget to remove the tons equal to the exempt unit's average annual emissions from the previous three calendar years. The Department is proposing to eliminate this provision because the regional cap, established under the program revisions, did not account for the emissions from these sources; therefore it is no

longer necessary to subtract the emissions attributed to them from the base budget.

## Summary of Needs and Benefits

New York 's climate is changing, in part as a result of emissions from the burning of fossil fuels to generate electricity; reducing emissions now will help reduce the risk and magnitude of future climate changes. The proposed revisions to the Program will reduce the emissions from New York power plants that cause and contribute to global climate change, while at the same time promote energy efficiency and clean renewable energy in the State. The EE & CET Allocation will ensure that electricity consumers in a deregulated market receive the maximum benefits from the program at the least possible cost, and the investment of proceeds from the auction of allowances will provide further economic and environmental benefit.

## COSTS

### Introduction

In addition to the needs analysis, the Department, NYSERDA and the New York State Department of Public Service (DPS) analyzed costs and impacts associated with compliance with the proposed revisions to the Program. This section explains NYSERDA 's analysis and includes a summary of the Integrated Planning Model (IPM®) modeling conducted by ICF International (ICF). IPM® is a nationally recognized modeling tool used by the U.S. Environmental Protection Agency (EPA), state energy and environmental agencies, and private sector firms such as utilities and generation companies. This section also discusses the Department's analysis of the costs associated with State and local government compliance and impacts from the proposed revisions to the Program on the New York economy and customer bills.<sup>37,38</sup>

<sup>38</sup> "IPM Potential Scenario Customer Bill Analysis," by the Analysis Group, dated May 24, 2013. [http://www.dec.ny.gov/docs/administration\\_pdf/custbillanaly2013.pdf](http://www.dec.ny.gov/docs/administration_pdf/custbillanaly2013.pdf)

## Costs to the Regulated Sources and the Public

### Reference Case v. Program Case

Modeling analysis and review was coordinated by RGGI Inc. and New York staff, and included input from energy and environmental representatives from the Participating States and each regional ISO. To estimate the potential impacts of the revisions to the Program, IPM® compared a future with the revisions to the Program (Program Case) to a Reference Case (business as usual scenario) that projects how the electricity system would look if the Program remained unchanged and proposed revisions were not implemented. The modeling assumptions and input data were developed through a stakeholder process with representatives from the electricity generation sector, business and industry, environmental advocates and consumer interest groups. Modeling results were then presented to stakeholders for review and comment throughout the development of the proposed revisions to the RGGI program.

### Reference Case

Assumptions and sources of input data are specified in detail in the “RGGI DRAFT 2012 Reference Case and Sensitivity Analyses Assumptions.”<sup>39</sup> Key assumptions and data include regional electricity demand, load shapes, transmission system capacities and limits, generation unit level operation and maintenance costs and performance characteristics, fuel prices, new capacity and emission control technology costs and performance characteristics, reserve margins and local reserve requirements, RPS requirements, national and state environmental regulations, and financial market assumptions. All estimates are based on 2010 dollars. Regional electricity demand growth projections, transmission capacities and limits, and near-term expected infrastructure additions/retirements were obtained from regional ISO sources. Long range Henry Hub natural gas prices (2020), based on forecast data from U.S. Energy Information Administration (EIA) were projected to

---

<sup>39</sup> The modeling assumptions document and the tabular results for each modeling run are located at [http://www.rggi.org/design/program\\_review](http://www.rggi.org/design/program_review)

be approximately \$4.6/MMBtu (constant 2010 dollars).

A number of assumptions were used to develop the model, including: 1) the construction of new coal-fired plants was precluded to meet projected capacity shortfalls in the United States unless they include carbon capture; 2) new nuclear plant construction was limited to build outs at existing plant sites; 3) a national 3-pollutant policy (SO<sub>2</sub>, NO<sub>x</sub> and mercury) that approximates the Cross-state Air Pollution Rule (CSAPR) and the Mercury and Air Toxics Rule (MATS) is assumed; 4) RPS targets are assumed to be met in all states except New York; and 5) partial fulfillment of the RPS target is assumed in New York based upon New York ISO certainty criteria, capacity under RPS contract, and RPS funds currently approved for future solicitations (approximately \$3 billion).

Under the Reference Case, generation from new gas-fired combined cycle units is projected to supply most of the growing electricity demand. Electric generation from gas-fired plants in New York is projected to increase by approximately 37 percent from 48,109 Gigawatt hours (GWh) in 2013 to 65,983 GWh in 2020. Generation from new renewable resources (primarily wind units) is projected to increase significantly, largely in response to RPS requirements. While nuclear generation is projected to decrease by about 35 percent between 2013 and 2020 due to the assumed retirement of the Indian Point units upon their respective license expiration, generation from coal-fired plants is projected to increase by about eight percent between 2013 and 2020. Finally, generation from existing oil/gas steam units is projected to decrease over time, as a result of displacement by lower-cost electricity from new gas-fired units. Additionally, net imports of electricity into New York are projected to rise from approximately 24,000 GWh in 2013 to approximately 26,800 GWh in 2016 before decreasing to about 23,000 in 2020. CO<sub>2</sub> emissions in the Reference Case, from sources in New York State subject to the Program, are projected to increase from approximately 34.6 million tons in 2013 to about 41.7 million tons in 2020. This increase is due primarily to increased generation from new and existing gas-

fired power plants to meet projected load growth.

This generation data was based on the IPM Reference Case model runs and the table displayed below:

New York Reference Case Net Generation (in GWh)	2012	2013	2014	2015	2016	2018	2020

## Program Case

### Interim Adjustment for Banked Allowances

Likewise, several assumptions were used to project impacts in the Program Case. For modeling purposes, the proposed CO<sub>2</sub> cap of 91 million tons, based on the approximate amount of current emissions in the RGGI region, was applied to sources subject to the Program in the Participating States. In order to account for the existing private bank of allowances and in order to help create a binding cap, the proposed revisions to the Program create provisions for two distinct budget adjustments.<sup>40</sup> In order to model the budget adjustments, the annual caps were adjusted in accordance with the model rule language and the assumption that the adjustment would account for the existing bank as well as 100 percent of the surplus (current cap and emissions) for 2013.

While the Program Case allows a limited number of emissions offsets to be purchased by affected generators and used for compliance by affected generators, the model assumes that it is not economically attractive for offset suppliers to sell their products in the RGGI market until prices reached \$10 per allowance. This value is based on the reserve price under the California cap-and trade program which allows for the use of offset credits. As long as offset suppliers are able to sell similar products in the California market for prices higher than those in the RGGI market, offset suppliers would not be expected to sell into the RGGI market.

In order to obtain New York specific results, several components between the Program Case and the Reference Case are compared including generation mix, net electricity imports, changes in generation capacity, CO<sub>2</sub> emissions, CO<sub>2</sub> allowance prices, and wholesale and retail electricity price impacts. Electricity generation

<sup>40</sup> See discussion of the Interim Adjustment provisions on pages 31 and 32.

from gas-fired units in 2020 is about 1,576 GWh or 2.4 percent lower in the Program Case than in the Reference Case. Generation from coal-fired units in 2020 is about 2,376 GWh or 37 percent lower in the Program Case than in the Reference Case. Net imports into New York in 2020 are projected to be about 3,900 GWh or 17 percent higher in the Program Case than in the Reference Case. Relative to the Reference Case, total capacity additions through 2020 in the Program Case are the same (5,909 MW) as in the Reference Case. Coal capacity retirements through 2020 in the Reference Case are 408 MW while the estimated value for the Program Case is 466 MW.

This generation data was based on the differences between IPM Reference Case and IPM Program Case model runs and the tables displayed below:

New York Reference Case Net Generation (in GWh)	2012	2013	2014	2015	2016	2018	2020

CO<sub>2</sub> emissions from New York generators in the Program Case are projected to be 3.2 million tons (eight percent) lower in 2020 than in the Reference Case. Over the 2014-2020 time period, cumulative CO<sub>2</sub> emission reductions from New York generators subject to the Program are projected to be 13 million tons in the Program Case as compared to the Reference Case. Although emissions from affected sources across the RGGI region are estimated to be 15 million tons (14.6 percent) lower under the Program Case than under the Reference Case in 2020, CO<sub>2</sub> emissions from the electricity sector in New York are projected to increase 4.9 million tons or 14.7

percent between 2014 and 2020. Principally, emissions in New York are projected to rise because the Indian Point nuclear units are assumed to retire when their current licenses expire in 2013 and 2015. The IPM model projects that the generation from these non-CO<sub>2</sub> emitting generators is likely to be replaced with fossil fuel-fired generation, at least in part. Nevertheless, CO<sub>2</sub> emission reductions over the 2014-2020 period from affected sources across the RGGI region are estimated to be 86 million tons in the Program Case compared to the Reference Case.

This emissions data was based on the differences between IPM Reference Case and IPM Program Case model runs and the tables displayed below:

Under the Reference Case, without making any proposed Program revisions, CO<sub>2</sub> allowance prices are projected to remain at the minimum reserve price through 2020. Under the Program Case, CO<sub>2</sub> allowance prices

(the cost of complying with RGGI) are projected to increase from approximately \$6.02/ton (2010 dollars) in 2014 to about \$6.73/ton in 2016 and to about \$8.41/ton in 2020. Approximately 17.6 million allowances would be obtained by the marketplace between 2014 and 2020 from the Cost Containment Reserve (CCR), which would be triggered at \$4/ton in 2014 and at \$6/ton in 2015.<sup>41</sup> The acquisition of these additional allowances provides price dampening which is reflected in these estimated allowance prices.

This allowance price data was based on the IPM Reference Case and IPM Program Case model runs and the tables displayed below:

Reference Case Allowance Prices (2010\$)							
	2012	2013	2014	2015	2016	2018	2020
NO <sub>x</sub> Regional (\$/ton)	450	450	450	450	450	450	450
SO <sub>2</sub> Regional Tier 1 (\$/ton)	-	50	50	50	-	-	-

Under the Program Case, New York’s wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.64/MWh higher in 2016 and \$2.12/MWh higher in 2020, than the Reference Case. RGGI is projected to increase wholesale electricity prices in New York State by about 3.0 percent in 2016 and 3.9 percent in 2020. For a typical New York residential customer (using 750 kWh per month), the projected increase in wholesale electricity prices in 2016 translates into a monthly retail bill increase of about 1.0 percent or \$0.86. In 2020, the projected increase in wholesale electricity prices translates into a monthly residential retail bill increase of about 0.8 percent or \$0.71. For commercial customers, the projected retail price impact of RGGI is about 1.1 percent in 2016 and 0.7 percent in 2020 (\$7.87 and \$5.00 per month, respectively). For industrial customers, the projected retail price impact of RGGI is about 1.7 percent in 2016 and 1.2 percent in 2020.

#### Alternative Bank Scenario

IPM projects electricity system operations and costs with perfect foresight, which means that there is certainty of knowledge of all future market outcomes, including allowance prices and the use of the private bank. In other words, IPM calculates when and whether it is cost-effective to make on-system emissions reductions at affected sources or to use allowances from the private bank. However, market participants may make decisions related to use of banked allowances for compliance on a shorter time horizon than projected by IPM using perfect foresight (i.e., due to uncertainty, market participants may be more likely to defer emissions reductions and rely more heavily on banked allowances in the short-term). In order to assess the use of the private bank during the short-term, an alternative usage scenario (“Alt Bank”) was examined. Under the Alt

Bank scenario, it is assumed that the marketplace would use the private bank of allowances at a rate roughly 40 percent faster than under the Program Case during the 2014-2017 timeframe. This scenario is not intended to be a prediction of market behavior; rather it is intended to provide a broader sense of potential market outcomes.

CO<sub>2</sub> emissions from New York generators are projected in the Alt Bank scenario to be 4.4 million tons (10.7 percent) lower in 2020 than Reference Case. The generators are assumed to use more of the private bank by 2017 under this scenario, therefore less allowances will be available for use in later years and more emissions reductions will occur during this timeframe. Emissions from affected sources across the RGGI region are estimated to be 81.6 million tons in 2020 under the Alt Bank scenario while they are projected to be 87.8 million tons under the Program Case.

This emissions data IPM Alt Bank Case model runs and the table displayed below:

91 Alt Bank CO2 Emissions							
[Million Tons]							
	2012	2013	2014	2015	2016	2018	2020
MA	17	15	16	15	13	14	15
CT	6	7	7	7	7	7	7
ME	3	3	4	4	4	3	3
NH	2	3	2	2	2	2	2
RI	3	4	4	4	4	4	4
VT	0	0	0	0	0	0	0
NY	32	35	34	34	36	36	37
DE	4	3	4	4	4	4	3
MD	25	27	26	25	23	15	14

Total RGGI	94	96	96	95	93	85	84
Total Emissions at Affected Plants	92	93	94	92	90	82	82
Eastern Interconnect without RGGI	1,514	1,548	1,598	1,610	1,578	1,617	1,665
Total Eastern Interconnect	1,608	1,643	1,694	1,705	1,671	1,702	1,750
Total Canadian	102	97	95	97	100	102	105

CO<sub>2</sub> allowance prices under the Alt Bank scenario are projected to increase from approximately \$3.60/ton (2010 dollars) in 2014 to about \$6.57/ton in 2016 and about \$10.21/ton in 2020. Prices are lower in the short-term under the Alt Bank scenario than under the Program Case because the former scenario assumes that more allowances from the private bank are being used for compliances in the short term. Similarly, prices are higher in 2020 under the Alt Bank scenario because the marketplace has fewer allowances left over in the private bank relative to the Reference Case, and therefore more on-system emissions reductions are required from compliance entities. In addition, it is estimated that approximately 10 million allowances would be obtained by the marketplace between 2014 and 2020 from the CCR. The acquisition of these additional allowances provides some price dampening which is reflected in these estimated allowance prices.

This allowance price data was based on IPM Alt Bank Case model runs and the table displayed below:

Alt Bank Allowance Prices (2010\$)							
	2012	2013	2014	2015	2016	2018	2020
NO <sub>x</sub> Regional (\$/ton)	600	600	600	600	600	600	600
SO <sub>2</sub> Regional Tier 1 (\$/ton)	-	6	6	7	-	-	-
SO <sub>2</sub> Regional Tier 2 (\$/ton)	-	21	22	23	-	-	-
Regional CO <sub>2</sub> (\$/ton)	1.86	1.86	3.60	5.14	6.57	8.00	10.21

Under the Alt Bank scenario, New York's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.62/MWh higher in 2016 and \$2.72/MWh higher in 2020, than the Reference Case. Wholesale electricity prices are estimated to increase by about 2.9 percent in 2016 and 4.9 percent in 2020 under the Alt Bank scenario relative to the Reference Case.

Sensitivity analyses were performed to develop bounds or collars around the Reference Case and Program Case projections. First, a Higher Emissions scenario that assumes higher natural gas prices and higher regional energy demand was evaluated. This scenario used natural gas prices from the Low Estimated Ultimate Recovery scenario in EIA's 2012 Annual Energy Outlook where Henry Hub natural gas prices are estimated to be \$5.31/MMBtu in 2020. Demand in this case is assumed to be about three percent higher in the near-term and four percent higher in the longer-term than the Reference Case. Likewise, a Lower Emissions scenario was also developed that assumes lower natural gas prices, lower regional energy demand, and the continued operation of the Indian Point nuclear power plants through the timeframe of the study. This scenario used natural gas prices from the High Technically Recoverable Resources scenario in EIA's 2012 Annual Energy Outlook where Henry Hub natural gas prices are estimated to be \$3.02/MMBtu in 2020. In this case, demand is assumed to be about three percent lower in the near-term and four percent lower in the longer-term than the Reference Case.

The modeling case that evaluated the potential impacts of the Updated Model Rule using the Higher Emissions assumptions was called the 91 Cap\_Bank\_Model Rule\_High Case. Under this scenario, allowance prices are estimated to be \$7.27/ton in 2014, \$8.13/ton in 2016 and \$10.15/ton in 2020. A sensitivity scenario was run to estimate the impacts of the Updated Model Rule with the Higher Emissions and Alt Bank assumptions. Under this 91 Cap Alt\_Bank\_Model\_Rule\_High Case, allowance prices are estimated to be about \$4.62/ton in 2014, \$6.90/ton in 2016, and \$16.44/ton in 2020.

In IPM, allowance prices would only be expected to rise off of the minimum reserve price if the projected cumulative emissions over the time period exceed the cumulative cap level. When evaluating the impact of the Updated Model Rule using the Low Emissions scenario, emissions over the time period are projected to be 50 million tons less than the number of allowances available to the market (adjusted cap plus the emissions bank). Therefore, affected sources would not need to make any emission reductions and it is estimated that allowance prices would be at the minimum reserve price under this scenario. This scenario was not actually modeled; however, ICF staff provided the assessment of the scenario described in this paragraph.

A macro-economic impact study of the Program was also conducted at the direction of the Participating States through NESCAUM to estimate the potential impact of the Program on the economies of participating states. The study used the REMI computer model. As mentioned above, the study concluded that the economic impacts of RGGI on the economies of the participating states, including New York, were generally positive, albeit relatively small. For example, the cumulative changes in New York's Gross State Product and Personal Income associated with the proposed revisions to the program will be about \$5.8 billion and \$4.7 billion, respectively (2010 dollars, calculated as the present value of estimated annual changes over the period 2012 to 2040, discounted at three percent per year to account for the time-value of money). The cumulative change in employment in New York associated with the Program will be about 80,500 job-years over the period 2012 to 2040. A job-year is equivalent to one person employed for one year.

#### Costs to State and Local Governments

In addition to the costs identified for regulated parties and the public, State and local governments will incur costs. The Jamestown Board of Public Utilities (JBPU), a municipally owned utility, owns and operates the S.A. Carlson Generating Station (SACGS). Emissions monitoring at SACGS currently meets the monitoring provisions of the program, and no additional monitoring costs will be incurred under the proposed revisions to

the Program. Notwithstanding this, just like any other owner or operator of any source subject to the Program, the JBPU will need to purchase CO<sub>2</sub> allowances equal to the number of tons of CO<sub>2</sub> emitted. The Department limited the analysis of control costs to the purchase of allowances to comply with the Program and assumed the costs of allowances will be between \$6.00 in 2014 and \$9.00 in 2020 (in 2010 \$) per ton for CO<sub>2</sub> under the Program Case. To estimate total costs for SACGS under the program, the Department reviewed 2009 through 2012 emissions from Jamestown's affected unit. During that time period, Jamestown's emissions ranged from a low of 4,261 tons to a high of 117,311 tons. An estimate of compliance costs, based on these emissions values, indicates that purchasing allowances to cover emissions will result in estimated costs between a low of \$25,600 and a potential high of \$1 million annually. These costs will eventually be passed on to the consumers of electricity from the JBPU.

The JBPU has a range of compliance options and can utilize the flexibility inherent under the Program to comply. Since the program has a three year control period with the compliance obligation at the end of the control period, the emission peaks associated with electricity generation will be averaged out and more long term planning options will be available to SACGS. Although the program revisions include an Interim Control Period,<sup>42</sup> that will require JBPU to cover 50 percent of their emissions in each of the first two years of a three year control period, it is not anticipated that this interim requirement will significantly reduce the flexibility available to JBPU. The JBPU will also incur costs associated with the administration of the program.

#### Department Costs

The Department will continue to incur staff costs associated with the implementation of the Program, including staff resources to review monitoring plans submitted by generators and to analyze data submitted to EPA to determine emissions and compliance obligations. Specifically, the Department requires sufficient staff

---

<sup>42</sup> See discussion of Interim Control Period provision on page 33.

to: review and process set-aside and offset applications; submit set-aside award requests for execution; modify permits and inspect generator facilities, including the continuous emission monitors; and analyze the Program 's effectiveness. It should be noted, that there are no additional costs projected for the Department as a result of the Program revisions. The revised cost estimate below factors in efficiencies gained from experience relative to all tasks associated with the Department's implementation of the various aspects of the Program.

Between 10 and 15 individuals are required to permit, inspect and administer the Program across the State. In order to determine the net increase in costs to the Department associated with these requirements, the Department will first evaluate existing programs to determine if any additional resources are needed. Since all of the facilities impacted by the program are already required to obtain Title V permits pursuant to 6 NYCRR Part 201, modifications under the Program will require minimal additional staff resources. Similarly, all Title V facilities covered by the Program are currently required to determine compliance with all of the requirements in the permit; these annual evaluations currently look at compliance with reporting and monitoring requirements of Title IV and the requirements of Parts 227-3, 243, 244 and 245.

In addition to the traditional program activities associated with reviews, permitting, inspection and compliance, the Department must also continue to administer the set-aside and offset provisions in the program which require the Department to review and process applications in the CO<sub>2</sub> Allowance Tracking System (COATS) and to monitor and verify reports submitted by offset project sponsors. The Department 's administration of the offsets component of the Program will be supported by independent verification reports completed by independent verifiers to certify the adequacy of the consistency application. Thus, the Program will require office support for permitting and compliance activities and additional staff will be required to administer the set-aside and offsets provisions of the Program. The Department estimates that between two and four person years, the full time equivalent of working 100 percent on a project for a full work year expressed as 220 days are required to implement all aspects of the Program at a cost of \$150,000 per person year or up to

\$600,000 annually.

NYSERDA will also continue to incur costs to administer and evaluate the use of auction proceeds from the Program and it will continue to convene an Advisory Group to provide guidance on how to best use auction proceeds and to assist with the development of the Operating Plan. The Plan is reviewed and revised on an annual basis by NYSERDA and an Advisory Group includes: 1) program selection criteria; 2) an anticipated schedule for implementation of the programs; 3) descriptions of the measurement, verification, and evaluation methods that will be used to judge the impacts and success of the programs; and 4) a quantification of NYSERDA's costs for administration and evaluation of the programs. In the 2012 Plan, program evaluation and administration costs were budgeted at five and eight percent, respectively, of total revenues. These figures are consistent with the rates approved by the New York State Public Service Commission for public benefit energy efficiency and technology and market development programs funded by the System Benefits Charge (SBC) and are expected to be comparable to those approved by the PSC for SBC programs.

An annual State Cost Recovery Fee under Section 2975 of the PAL for general governmental services is assessed to NYSERDA which is allocated proportionately among all NYSERDA programs and funding sources. The budget in the 2012 Operating Plan includes an estimate based on the current annual assessment of the fee allocated to the RGGI funded programs (1.7 percent of revenues). Future proceeds will be assessed the New York State Cost Recovery Fee ( SCRF) at the established rate during that respective timeframe. The fee is intended to reimburse the State for the cost attributable to provision of government services to authority and public benefit corporations.

A significant portion of program costs are allocated to the operation and administration of COATS and conducting allowance auctions. From 2009 through 2012, contributions to RGGI Inc., and its agents were \$4

million. It is anticipated that these costs will not change dramatically in the future; therefore, future costs are estimated to be approximately \$900,000 per year moving forward.

### LOCAL GOVERNMENT MANDATES

This is not a mandate on local governments. The revised Program will continue to apply equally to any entity that owns or operates a subject source. Local governments have no additional compliance obligations as compared to other entities subject to the revised Program. The JBPU, a municipally owned public utility, owns and operates the SACGS. JBPU contains one combined cycle turbine at the SACGS that is currently subject to the Program and will remain subject to the revised Program ; no other additional record keeping, reporting, or other requirements will be imposed on local governments under this program.

### PAPERWORK

Under the existing Program and the proposed revisions to the Program, the owners and operators of each source and each unit at the source shall retain the following documents for a period of 10 years from the date the document is created:

- 1) Account certificate of representation form;
- 2) Emissions monitoring information. CO<sub>2</sub> budget sources are required to report emissions and allowance transfers via electronic means which will minimize the paperwork burden on sources;
- 3) Copies of all reports, compliance certifications, and other submissions and all records made or required under the program;
- 4) Copies of all documents used to complete a permit application and any other submission under the program or to demonstrate compliance with the program;
- 5) Copies of all documents used to complete a consistency application and monitoring and verification report to demonstrate compliance with the offset provisions of the program; and

6) Copies of all documents required as part of an auction application.

For each control period in which one or more units at a source are subject to the CO<sub>2</sub> budget emission limitation, the CO<sub>2</sub> authorized account representative of the source shall submit to the Department, a compliance certification report for each source covering all such units. This must be submitted by the March 1<sup>st</sup> following the relevant control period for all units subject to the Program.

### DUPLICATION

The emissions monitoring and reporting requirements of the revised Program are unchanged from those of the existing Program, and are identical to those of the Title IV program and 6 NYCRR Parts 243, 244 and 245. Since these requirements are identical, monitoring and reporting done for the federal program can be used to comply with the monitoring and reporting requirements of the revised Program.

### ALTERNATIVES

#### Alternatives Considered

#### No Action Alternative

The No Action alternative would leave the current Program in place and the Program cap and flexibility provisions within it would remain unchanged. During program review, the Department, along with DPS and NYSERDA, participated in a rigorous and comprehensive regional evaluation of the program supported by an extensive regional stakeholder process that engaged the regulated community, environmental nonprofits, consumer and industry advocates, and other interested stakeholders. Through this process, which started in late 2010, the Department sought to ensure RGGI's continued success - effectively reducing CO<sub>2</sub> emissions while

providing benefits to consumers and the State. Program review revealed:

- A significant excess supply of allowances relative to actual emission levels in the region, and
- The current cost control measures in the program, which are based upon expansion of the percentage of offset allowances allowable for compliance, would likely be ineffective in controlling costs if the emissions cap was made binding.

The excess supply of allowances or over-allocation was the result of a number of factors. As highlighted in a Draft White Paper prepared by NYSERDA <sup>43</sup>, a number of factors contributed to the observed decrease of CO<sub>2</sub> emissions from the RGGI region electricity sector in from 2005 to 2009. The Draft White Paper identified three primary drivers of the decrease: 1) lower electricity load (due to weather; energy efficiency programs and customer-sited generation; and the economy); 2) fuel-switching from petroleum and coal to natural gas (due to relatively low natural gas prices); and 3) changes in available capacity mix (due to increased nuclear capacity availability and uprates; reduced available coal capacity; increased wind capacity; and increased use of hydro capacity).

Since the intent of the Program was and is to reduce CO<sub>2</sub> emissions from the electricity sector, the proposed revision to the Program recognize that over allocation of allowances reduces the effectiveness of the cap and minimizes the impact of the Program in achieving meaningful emission reductions. “Over allocation is a problem for program success and, in the design of future programs, designers should take precautions to avoid it. The environmental effectiveness of cap-and-trade regulation will really only be proven when programs create truly constrained allowance markets that force the maximally feasible emissions reductions that our environmental laws have so often required. <sup>44</sup>” Since the No Action alternative would leave the Program

<sup>43</sup> Relative Effects of Various Factors on RGGI Electricity Sector CO<sub>2</sub> Emissions: 2009 Compared to 2005, Draft White Paper, November 2, 2010. [http://rggi.org/docs/Retrospective\\_Analysis\\_Draft\\_White\\_Paper.pdf](http://rggi.org/docs/Retrospective_Analysis_Draft_White_Paper.pdf)

unchanged and would not address the issue of over allocation, it was not selected.

### Modeling Different Cap Alternatives

The Department also considered different regional emissions cap levels as additional alternatives, rather than the 91 million ton regional emission cap that is proposed to be implemented under the revised Program. In order to determine the difference in the Program's impact under various scenarios and to support program review, the Participating States conducted REMI macroeconomic modeling, customer electricity bill analysis, and revised electricity sector modeling using the IPM. Comprehensive electricity sector modeling and economic analysis was considered to support evaluation of potential modifications to the program. The most critical of these evaluations was the assessment of different cap levels to address over allocation of allowances. As discussed above, over allocation was influenced by a number of factors and was perhaps the most important issue addressed during program review.

First, different cap levels were assessed using the IPM model to determine their effectiveness in achieving emission reductions under the program. CO<sub>2</sub> cap trajectories of 120 million tons, 115 million tons and 106 million tons were assessed starting in 2014. In each case, the cap declines from those levels at 2.5 percent per year through the modeled time horizon, or 2020. When the IPM Reference Case was updated in August 2012, projected emissions were significantly lower than previous modeling. Cumulatively, emissions dropped about 17 percent from the previous reference case and emissions at RGGI affected sources were projected to be only 91 million tons in 2012. Based on this updated information, an analysis of the March 2012 potential cap scenarios demonstrated that: the 115 and 120 cap levels and assumptions would result in prices remaining at the minimum reserve price; cumulatively, allowances would exceed emissions because emissions

---

<sup>44</sup> The Overallocation Problem In Cap-And-Trade: Moving Toward Stringency, Lesley K. McAllister, 2009. [http://www.columbiaenvironmentallaw.org/assets/pdfs/34.2/7\\_McAllister\\_34.2.pdf](http://www.columbiaenvironmentallaw.org/assets/pdfs/34.2/7_McAllister_34.2.pdf)

had fallen so significantly; the 106 cap level analysis indicated a need to address the projected private bank of allowances carried into 2014 and beyond. As a result of this, new modeling scenarios relative to the updated reference case of 106, 101, 97 and 91 million tons, with an adjustment for banked allowances, were subsequently evaluated.

Based on a review of all modeling iterations and after careful consideration, New York and the Participating States decided to propose to lower the regional CO<sub>2</sub> emissions cap to align the cap with current emissions levels, while accounting for allowances held by market participants in excess of the quantity needed to demonstrate compliance. Accordingly, New York and the Participating States selected and proposed a regional emissions cap in 2014 equal to 91 million tons declining 2.5 percent each year from 2015 through 2020.

The bank of allowances held by market participants is addressed with two interim adjustments for banked allowances. The first adjustment will be made over a seven-year period (2014-2020) for the first control period private bank of allowances and a second adjustment will be made over a six-year period (2015-2020) for the 2012 and 2013 private bank of allowances. These adjustments are necessary in order to account for the existing private bank of CO<sub>2</sub> emissions allowances already acquired at auction, and in order to help create a binding cap, the proposed Program amendments provide two distinct budget adjustments.

#### CCR, CCR Levels and Program Flexibility Alternatives

Flexibility provided under the Program maintains environmental integrity and provides compliance alternatives for regulated sources. As described above, compliance flexibility is inherent under a cap-and-trade program as compared to traditional command-and-control regulation. Under the existing Program, additional flexibility was provided through the expansion of allowable offset usage, the addition of international offsets

and an extension of the compliance period. During program review, the Participating States recognized complexity associated with these provisions and their inability to provide immediate cost containment for the Program. Accordingly, the proposed revisions to the Program include a new CCR, which is a reserved quantity of allowances, in addition to the cap, that would only be available if defined allowance price triggers are exceeded. The CCR was chosen because the no action alternative of retaining the existing flexibility provisions would not have provided measurable cost control in an efficient, transparent and predictable manner.

During program review, the following two sets of price triggers were modeled with an annual CCR limit of 10 million allowances: (1) \$5.00 in 2014, \$7.00 from 2015 to 2017 and \$10.00 from 2018 through 2020; and (2) \$4.00 in 2014, \$6.00 in 2015, \$8.00 in 2016 and \$10.00 from 2017 through 2020. The CCR allowances would be made available immediately in any auction in which demand for allowances at prices above the CCR trigger price exceeds the supply of allowances offered for sale in that auction prior to the addition of any CCR allowances. If the CCR is triggered, the CCR allowances will only be sold at or above the CCR trigger price. After careful consideration of these alternatives, the Department determined that the CCR will be equal to five million short tons in 2014 and 10 million short tons each year thereafter, and the CCR trigger prices will be \$4.00 in 2014, \$6.00 in 2015, \$8.00 in 2016, and \$10.00 in 2017. Each year after 2017, the CCR trigger price will increase by 2.5 percent.

In addition to the CCR, the existing flexibility provisions were reviewed. The proposed Program retains the allowable offset usage percentage at 3.3 percent, and deletes the existing offset price triggers that raise the allowable percentage of offsets and that allow the use of international CO<sub>2</sub> emission credit retirements. The offset price triggers and the potential extension of the control period to four years are replaced by the CCR mechanism, to provide measurable cost control in an efficient, transparent and predictable manner.

## FEDERAL STANDARDS

In December 2009, EPA issued findings concluding that current and projected concentrations of GHGs in the atmosphere endanger the public health and welfare of current and future generations (the Endangerment Finding).<sup>45</sup> Following the Endangerment Finding, EPA has taken numerous additional actions under the Clean Air Act (Act) regarding the regulation of GHG emissions. As a result of these actions, according to EPA, GHGs became “subject to regulation” under the Act as of January 2, 2011. EPA promulgated a rule to tailor the major source applicability thresholds for GHG emissions for purposes of the Prevention of Significant Deterioration (PSD) and Title V programs under the Act (the “GHG Tailoring Rule”),<sup>46</sup> which the Department subsequently incorporated in its 6 NYCRR Parts 200, 201, and 231. PSD provisions establish preconstruction permitting requirements for new major stationary sources and major modifications at existing stationary sources. Most notably, PSD includes the requirement that applicable sources are subject to Best Available Control Technology (BACT) for GHGs.

EPA is currently committed, pursuant to a litigation settlement, to propose new source performance standards (NSPS) under section 111 of the Act for GHG emissions from power plants. This would include an NSPS for new sources pursuant to section 111(b) of the Act, as well as emission guidelines for required state regulation of GHG emissions from existing power plants under section 111(d) of the Act. In March 2012, EPA proposed a GHG NSPS for new power plants under section 111(b) of the Act. EPA has not finalized this proposal, nor has it proposed any emissions guidelines for existing sources under section 111(d) of the Act. GHG NSPS for new or existing sources would likely apply to sources that are subject to the Program. The Department will continue to monitor the development of power plant GHG NSPS for both new and existing sources by EPA. If EPA ultimately adopts a GHG NSPS for new or existing sources, the Department will

<sup>45</sup> Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act, 74 FR 66496, December 15, 2009.

<sup>46</sup> Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule, 75 FR 31514, June 3, 2010.

consider any necessary or appropriate action regarding the Program.

While stationary sources may be subject to Title V and PSD permitting requirements for GHGs under the Act, provided they meet or exceed the relevant applicability thresholds established by the GHG Tailoring Rule, there are currently no specific CO<sub>2</sub> emission standards for stationary sources in the federal regulations. In addition, PSD covers only new or modified sources. Therefore, because there currently is no specific federal standard, the proposed revisions to the Program continues a regulatory program that has the effect of being more stringent than current federal standards. The proposed revisions to the Program are protective of public health and the environment in the absence of similar federal emission standards. The potential adverse impact to global air quality and New York State's environment from CO<sub>2</sub> emissions necessitates that New York State take action now to minimize CO<sub>2</sub> emissions that contribute to climate change.

Due in part to the lack of a federal program, the Department has determined that fossil fuel-fired electricity generators must reduce emissions of CO<sub>2</sub> now. As explained above, the proposed revisions to the Program - including most notably the proposed reduction in the CO<sub>2</sub> emission cap - help to further this objective. Although national and international action is needed, the efforts undertaken by New York and the Participating States as part of revising the RGGI program will slow the rate and magnitude of climate change thereby reducing the risk of injury to the State and its citizens.

As an environmental leader, New York has participated in efforts to develop national emissions reduction programs for CO<sub>2</sub>. The Department recognizes the benefits of a national program and will continue to participate on national and regional initiatives to encourage the development of such programs. In the event that a national market based trading program is developed, it will be rigorously reviewed for consistency and timing of the program.

## COMPLIANCE SCHEDULE

The proposed revisions to the Program do not change the applicability provisions of the current Program. Therefore, sources already subject to the current Program will remain subject to the proposed revisions to the Program. Moreover, pursuant to the proposed revisions, the second control period under the Program will remain from 2012-2014, with a CO<sub>2</sub> allowance transfer deadline of March 1, 2015. The revised Program will require affected sources and units to comply with the emission limitations of the Program beginning in 2014.

The proposed revisions to the Program create a modified compliance schedule called interim compliance periods which are defined as each of the first two years of a three-year control period. The first interim control period under the revised Program will be the year 2015. Accordingly, at the end of each control period, the owners and operators of each source subject to the Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions, as of the CO<sub>2</sub> allowance transfer deadline (midnight of March 1<sup>st</sup> or, if March 1<sup>st</sup> is not a business day, midnight of the first business day thereafter), in the source's compliance account that is not less than the total tons of CO<sub>2</sub> emissions for the control period less the CO<sub>2</sub> allowances deducted for the previous two interim control periods. In the first two calendar years of each three year control period (interim control period), the owners and operators of each source subject to the Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions, as of the CO<sub>2</sub> allowance transfer deadline (midnight of March 1<sup>st</sup> or, if March 1<sup>st</sup> is not a business day, midnight of the first business day thereafter), in the source's compliance account that is not less than 50 percent of the total tons of CO<sub>2</sub> emissions for that interim control period. A unit was subject to the control period requirement starting on the later of January 1, 2009 or the date the unit commences operation. A unit is subject to the interim control period requirements of the Program starting on the later of January 1, 2015 or date the unit commences operation.

For each control period in which a CO<sub>2</sub> budget source is subject to the Program, the CO<sub>2</sub> authorized account representative of the source must submit to the Department by the March 1<sup>st</sup> following the relevant control period, a compliance certification report for each source covering all such units. As noted above, the first CO<sub>2</sub> allowance transfer deadline under the proposed revisions to the Program will be March 1, 2015.

6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program

## 6 NYCRR Part 200, General Provisions

## Regulatory Impact Statement Summary

The Regional Greenhouse Gas Initiative (RGGI) is a cooperative, historic effort among New York and eight Participating States<sup>1</sup> and is the first mandatory, market-based carbon dioxide ( CO<sub>2</sub>) emissions reduction program in the United States. Recently, New York along with the Participating States, completed a comprehensive program review and announced a proposal to lower the regional emissions cap established under RGGI to 91 million tons in 2014, declining 2.5 percent a year through 2020.<sup>2</sup> In order to implement the updated RGGI program in New York State, the Department of Environmental Conservation (Department) proposes to revise 6 NYCRR Part 242, CO<sub>2</sub> Budget Trading Program (the Program) and 6 NYCRR Part 200, General Provisions.

The statutory authority to reduce the CO<sub>2</sub> emissions cap and to provide for the budget adjustments derives primarily from the Department's authority to prevent and control air pollution, as set out in the Environmental Conservation Law (ECL) at Sections 1-0101, 1-0303, 3-0301, 19-0103, 19-0105, 19-0107, 19-0301, 19-0303, 19-0305, 71-2103, 71-2105. The general powers of the New York State Energy Research and Development Authority (NYSERDA) that are relevant to the ability to sell allowances, including CCR allowances, in a transparent auction are set forth in the Public Authorities Law Sections 1851, 1854 and 1855.

The warming climate represents an enormous environmental challenge for the State, because unabated, climate change will continue to have serious adverse impacts on the State's natural resources, public health and

<sup>1</sup> In addition to New York, the RGGI Participating States include: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, Rhode Island, and Vermont.

<sup>2</sup> The Participating States released the Updated Model Rule on February 7, 2013.

infrastructure. New York power plants represent approximately one-fifth of all GHG emissions in the State.<sup>3</sup> In 2012, New York power plants subject to the Program emitted approximately 35 million tons of CO<sub>2</sub> into the atmosphere.

New York and the Participating States committed to a comprehensive program review during the initial development of RGGI and agreed to evaluate: program success; program impacts; additional emissions reductions; imports and emissions leakage; and offsets. The Participating States initiated program review in the fall of 2010 with the announcement of its first stakeholder meeting and concluded the process in February, 2013. Supplemental to the regional stakeholder process, New York conducted a separate stakeholder process designed to provide updates on the status of the regional process and to afford additional opportunity for New York's stakeholders to provide comment.

Mitigating the impacts of a warming climate represents one of the most pressing environmental challenges for the State, the nation and the world. Extensive scientific data demonstrates the need for immediate worldwide action to reduce emissions from burning fossil fuels and supports the conclusion that great benefits will accrue if fossil fuel-fired emissions are reduced through programs like RGGI.

A naturally occurring greenhouse effect has regulated the earth's climate system for millions of years. CO<sub>2</sub> and other naturally occurring GHGs trap heat in our atmosphere, maintaining the average temperature of the planet approximately 50°F higher than it normally would be. An enhanced greenhouse effect and associated climate change results as large quantities of anthropogenic GHGs, especially CO<sub>2</sub> from the burning of fossil fuels, are added to the atmosphere. Since the mid-1700's, atmospheric concentrations of GHGs have increased

---

<sup>3</sup>“Patterns and Trends New York State Energy Profiles: 1996-2010,” Final Report, April 2012. [http://www.nyserda.ny.gov/BusinessAreas/Energy-Data-and-Prices-Planning-and-Policy/Energy-Prices-Data-and-Reports/EA-Reports-and-Studies/Patterns-and-Trends.aspx?sc\\_database=web](http://www.nyserda.ny.gov/BusinessAreas/Energy-Data-and-Prices-Planning-and-Policy/Energy-Prices-Data-and-Reports/EA-Reports-and-Studies/Patterns-and-Trends.aspx?sc_database=web)

substantially due to human activities such as fossil fuel use and land-use change. Today, atmospheric CO<sub>2</sub> concentrations exceed 398 parts per million - nearly 40 percent higher than preindustrial levels.<sup>4</sup>

The need for the reduction of CO<sub>2</sub> emissions is clearly supported by numerous direct impacts that have been observed in New York State. Temperatures in New York State have risen during the twentieth century, with the greatest warming coming in recent decades - temperatures have risen by approximately 0.6°F per decade since 1970, with winter warming more than 1.1°F per decade.<sup>5</sup> This warming includes an increase in the number of extreme hot days (days at or above 90°F) and a decrease in the number of cold days (days at or below 32°F). New York experienced record high nighttime temperatures in the summer of 2010.<sup>6</sup> Sea level in the coastal waters of New York State and up the Hudson River has been steadily rising over the 20th century. Tide-gauge observations in New York indicate that rates of relative sea level rise were significantly greater than the global mean, ranging from 2.41 to 2.77 millimeters per year (0.9 to 1.1 inches per decade).<sup>7</sup>

Predictions of future impacts associated with emissions in New York further support the need for a substantial reduction in the CO<sub>2</sub> emissions cap. ‘Responding to Climate Change in New York State: The ClimAID Integrated Assessment for Effective Climate Change Adaptation’ (ClimAID) project examines how sea level rise, changes in precipitation patterns, and more frequent severe weather conditions will affect New York’s economy, environment, community life and human health. The ClimAID project predicts the following:

Air temperatures are expected to rise across New York, by 1.5°F to 3°F by the 2020s, 3°F to 5.5°F by the 2050s, and 4°F to 9°F by the 2080s . Annual average precipitation in New York is projected to increase by up to five percent by the 2020s, up to 10 percent by the 2050s and up to 15 percent by the 2080s, with the greatest increases in the northern part of the State. A recent study based upon 60 years of tide-gauge records indicates that the rate of increase for sea level rise along approximately 1000 km of the east coast of the United States , including New York, remains at approximately three to four times higher than the global average. <sup>8</sup> Extreme climate events, such as heat waves and heavy rainstorms, significantly impact New York 's communities and natural resources.

The need for the significantly reduced CO<sub>2</sub> emissions cap and budget adjustments are further supported by the ClimAID Study<sup>9</sup> which enumerates a number of predictions specifically for New York's valued resources such as: 1) Rising air temperatures intensify the water cycle by driving increased evaporation and precipitation. The resulting altered patterns of precipitation include more rain falling in heavy events, often with longer dry periods in between ; 2) high water levels, strong winds, and heavy precipitation resulting from strong coastal storms already cause billions of dollars in damage and disrupt transportation and power distribution systems. Barrier islands are being dramatically altered by strong coastal storms, such as Hurricane Sandy, as ocean waters over wash dunes, create new inlets, and erode beaches; 3) within the next several decades, New York State is likely to see widespread shifts in species composition in the State's forests and other natural landscapes; 4) lakes, streams, inland wetlands and associated aquatic species will be highly vulnerable to changes in the timing, supply, and intensity of rainfall and snowmelt, groundwater recharge and duration of ice cover ; 5) increased summer heat stress will negatively affect cool-season crops and livestock unless farmers take adaptive measures such as shifting to more heat-tolerant crop varieties and improving cooling capacity of livestock facilities; 6)

<sup>9</sup> Rosenzweig, 'op.cit.'

demand for health services and the need for public health surveillance and monitoring will increase ; 7) over the next few decades, heat waves and heavy precipitation events are likely to dominate the causes for moderate, more frequent transportation problems such as flooded streets and delays in mass transit; 8) communication service delivery is vulnerable to hurricanes, lightning, ice, snow, wind storms, and other extreme weather events, some of which are projected to change in frequency and/or intensity; 9) impacts of climate change on energy demand are likely to be more significant than impacts on supply. Climate change will adversely affect system operations, increase the difficulty of ensuring adequate supply during peak demand periods, and exacerbate problematic conditions, such as the urban heat island effect.

The reduction in the CO<sub>2</sub> emissions cap to current levels represents a critical step to combat the significant challenges presented by climate change and to advance sound energy policies that foster energy efficiency and energy independence. The proposed Program revisions will cap regional emissions at 91 million tons annually beginning in 2014 and will reduce that level by 2.5 percent each year through 2020. Further, in order to account for the existing private bank of CO<sub>2</sub> emissions allowances already acquired at auction, and in order to help create a binding cap, the proposed Program revisions provide two distinct budget (cap) adjustments. In order to provide additional flexibility and cost containment the proposed Program revisions also create the Cost Containment Reserve (CCR). Finally, the proposed Program revisions create an interim compliance obligation. The Department proposes to maintain the amount of CO<sub>2</sub> allowances allocated to the two existing set-aside accounts under the Program and proposes a modification to the existing voluntary renewable energy market set-aside to include eligible biomass, and minor clarifications to the long term contract (LTC) set-aside.

The Department, NYSERDA and the New York State Department of Public Service (DPS) analyzed costs and impacts associated with compliance with the proposed revisions to the Program. CO<sub>2</sub> allowance prices

(the cost of complying with RGGI) are projected to increase from approximately \$6.02/ton (2010 dollars) in 2014 to about \$6.73/ton in 2016 and to about \$8.41/ton in 2020. Under the Program Case, New York's wholesale electricity prices (including both energy and capacity costs) are projected to be \$1.64/ MWh higher in 2016 and \$2.12/ MWh higher in 2020, than the Reference Case. RGGI is projected to increase wholesale electricity prices in New York State by about 3.0 percent in 2016 and 3.9 percent in 2020. For a typical New York residential customer (using 750 kWh per month), the projected increase in wholesale electricity prices in 2016 translates into a monthly retail bill increase of about 1.0 percent or \$0.86. In 2020, the projected increase in wholesale electricity prices translates into a monthly residential retail bill increase of about 0.8 percent or \$0.71. For commercial customers, the projected retail price impact of RGGI is about 1.1 percent in 2016 and 0.7 percent in 2020 (\$7.87 and \$5.00 per month, respectively). For industrial customers, the projected retail price impact of RGGI is about 1.7 percent in 2016 and 1.2 percent in 2020. A macro-economic impact study of the Program was also conducted. The study concluded that the economic impacts of RGGI on the economies of the participating states, including New York, were generally positive, albeit relatively small.

There will be costs associated with the administration of the program. The Department will continue to incur staff costs associated with the implementation of the Program. It should be noted, that there are no additional costs projected for the Department as a result of the Program revisions. The revised cost estimate factors in efficiencies gained from experience relative to all tasks associated with the Department's implementation of the various aspects of the Program. The Department estimates that between two and four person years are required to implement all aspects of the Program at a cost of \$150,000 per person year or up to \$600,000 annually. NYSERDA will also continue to incur costs to administer and evaluate the use of auction proceeds from the Program. In the 2012 Operating Plan, program evaluation and administration costs were budgeted at five and eight percent, respectively, of total revenues. An annual State Cost Recovery Fee under Section 2975 of the PAL for general governmental services is assessed to NYSERDA which is allocated

proportionately among all NYSERDA programs and funding sources. The budget in the 2012 Operating Plan includes an estimate based on the current annual assessment of the fee allocated to the RGGI funded programs (1.7 percent of revenues). A significant portion of program costs are allocated to the operation and administration of COATS and conducting allowance auctions. It is anticipated that these costs will not change dramatically in the future; therefore, future costs are estimated to be approximately \$900,000 per year moving forward.

Under the existing Program and the proposed revisions to the Program, the owners and operators of each source and each unit at the source shall retain the following documents for a period of ten years from the date the document is created: account certificate of representation form; Emissions monitoring information; copies of all reports and compliance certifications; copies of all documents used to complete a permit application; copies of all documents used to complete a consistency application; and copies of all documents required as part of an auction application.

For each control period in which one or more units at a source are subject to the CO<sub>2</sub> budget emission limitation, the CO<sub>2</sub> authorized account representative of the source shall submit to the Department, a compliance certification report for each source covering all such units. This must be submitted by the March 1<sup>st</sup> following the relevant control period for all units subject to the Program.

The Department examined the “No Action” alternative which would leave the current Program in place and the Program cap and flexibility provisions within it would remain unchanged. Since the “No Action” alternative would leave the Program unchanged and would not address the issue of over allocation, it was not selected. The Department also considered different regional emissions cap levels as additional alternatives, rather than the 91 million ton regional emission cap that is proposed to be implemented under the revised

Program. Lastly, flexibility provided for under the Program provided through the expansion of allowable offset usage, the addition of international offsets and an extension of the compliance period were evaluated. During program review, the Participating States recognized complexity associated with these provisions and their inability to provide immediate cost containment for the Program. Accordingly, the proposed revisions to the Program include a new CCR.

There currently is no specific federal standard, the proposed revisions to the Program continues a regulatory program that has the effect of being more stringent than current federal standards. The proposed revisions to the Program are protective of public health and the environment in the absence of similar federal emission standards. The potential adverse impact to global air quality and New York State's environment from CO<sub>2</sub> emissions necessitates that New York State take action now to minimize CO<sub>2</sub> emissions that contribute to climate change. Due in part to the lack of a federal program, the Department has determined that fossil fuel-fired electricity generators must reduce emissions of CO<sub>2</sub> now.

The proposed revisions to the Program do not change the applicability provisions of the current Program. Therefore, sources already subject to the current Program will remain subject to the proposed revisions to the Program. While the second control period under the current Program will remain unchanged and will include years 2012-2014 with a CO<sub>2</sub> allowance transfer deadline of March 1, 2015, the proposed Program revisions will require affected sources and units to comply with the emission limitations of the Program beginning on January 1, 2014.

The proposed revisions to the Program create a modified compliance schedule called an interim compliance period which is defined as each of the first two years of each three-year control period. The first interim control period under the revised Program will take place in year 2015; the second interim control period

will take place in year 2016. In each of the first two calendar years of each three year control period (e.g., 2015 and 2016), the owners and operators of each source subject to the revised Program shall hold a number of CO<sub>2</sub> allowances available for compliance deductions, as of the CO<sub>2</sub> allowance transfer deadline (midnight of March 1<sup>st</sup> or, if March 1<sup>st</sup> is not a business day, midnight of the first business day thereafter), in the source's compliance account that is not less than 50 percent of the total tons of CO<sub>2</sub> emissions for that interim control period. A unit is subject to the interim control period requirements of the Program starting on the later of January 1, 2015 or date the unit commences operation.

Hi Ken - As we just discussed, we need 2-3 paragraphs from you which contain the following information:

- A description of the lithographic printing process and how solvents (PCE) are used in the process and in the clean up.

As we just discussed, I am forwarding you a copy of a document which was listed as one of your references in your expert report and which you may find helpful in developing this testimony. I have also attached a copy of a USEPA document, "Profile of the Printing and Publishing Industry". This is one of many USEPA "Industry Sector Notebooks" that provide general information on various industries. Although not originally included as one of your references, you may find this useful as well.

As we discussed, I am also awaiting your supplemental publications list, which will contain a listing of all of your publications in the last 10 years. I understand that you have not testified, either at deposition or trial, in the last 4 years.

Our papers are due by June 24th and we therefore, need these documents ASAP. I really appreciate your willingness to get this done by Saturday. Please feel free to call me on my cell phone if you have any questions over the weekend. My #is516 286-6090. Also, I understand that you will be running a conference all next week but please let me know where I can reach you if we have any last minute questions. Thanks Ken!

Jodi Feld, Chief Scientist  
New York State Office of the Attorney General

# **Cleaner Technologies Substitutes Assessment:**

## **Lithographic Blanket Washes**

*September 1997*

**Developed by the Design for the Environment Program  
in Cooperation with:**

The University of Tennessee Center for Clean Products and Clean Technologies,

Printing Industries of America,

The Environmental Group (formerly, the Environment Conservation Board of the  
Graphic Communications Industry), and

The Graphic Arts Technical Foundation

## Chapter 1 Introduction

---

This chapter introduces the Design for the Environment (DfE) Cleaner Technologies Substitutes Assessment (CTSA) for the lithographic printing industry. Section 1.1 contains background materials on the project, partners involved in the project, and the methodologies and assumptions used to create this CTSA. Section 1.2 discusses general aspects of the lithographic printing industry, such as what types of products are printed, how they are printed, and how the printing presses are washed. Section 1.3 discusses both traditional blanket washes and alternative blanket washes, and includes details on prices of the washes. Section 1.4 reviews the blanket wash market. Lists of blanket wash manufacturers and typical blanket wash components are presented. Section 1.5 describes the automatic blanket washing technology. The potential performance, cost, environmental impacts, and health and safety issues associated with using an automatic blanket washer are described.

### Chapter Contents

- 1.1 Project Background
  - 1.1.1 Design for the Environment Lithography Project
  - 1.1.2 Document Overview
  - 1.1.3 DfE Lithography Project Methodology
- 1.2 Overview of Lithographic Printing
  - 1.2.1 Products Printed
  - 1.2.2 Printing Mechanism
  - 1.2.3 Types of Lithography
  - 1.2.4 Blanket Washing
- 1.3 Profile of the Blanket Wash Use Cluster
  - 1.3.1 Traditional Blanket Washes
  - 1.3.2 Alternative Blanket Washes
- 1.4 Market Profile
  - 1.4.1 Blanket Wash Market
  - 1.4.2 Blanket Wash Manufacturers
  - 1.4.3 Blanket Wash Components
  - 1.4.4 Market Conditions
- 1.5 Alternative Technology - Automatic Blanket Washers

### 1.1 PROJECT BACKGROUND

#### 1.1.1 Design for the Environment Lithography Project

The Design for the Environment (DfE) Lithography Project is a unique voluntary partnership between the lithographic printing industry and the U.S. Environmental Protection Agency (EPA) dedicated to helping printers improve their efforts to protect the environment. Because the printing industry is characterized by small companies that rarely have the time or resources to gather information on alternatives to their current products and processes, few printers have access to sufficient information to choose safer or lower risk chemicals, work practices, and technologies. The DfE Lithography Project aims to help fill this information gap. The goal of the project is to provide printers with pollution prevention and chemical risk information on product and technology substitutes, so that printers are better equipped to incorporate environmental concerns into their day-to-day business decisions. Specifically, the efforts of the DfE Lithography Project have focused on the risks, costs, and performance of alternatives to the traditional, highly volatile cleaners typically used for washing the press blankets.

**1.1 PROJECT BACKGROUND****Project Considerations**

The focus of this assessment was specifically defined by the project partners and has many limitations. Some of the global limitations are listed below, other limitations, specific to a particular portion of the project, are given in the applicable sections.

- This assessment focuses on the use of manual blanket washes in small lithographic printing facilities using only one press with four color units. Exposure estimates related to blanket wash use in larger facilities may be higher.
- The exposure and risk estimates reflect a small portion of the potential exposures within a lithographic printing facility. Many of the chemicals found in these formulations may also be present in the inks or other cleaning solvents used in a shop. Incremental reduction of exposures from blanket wash use will reduce cumulative exposures from all sources in a printing facility.
- The risks associated with volatile organic compound (VOC) releases were not examined in this assessment. Because VOC releases are a driving factor behind current regulations affecting printers, VOC content for the formulations are given at the request of industry participants. The concerns associated with VOC releases are addressed by federal, state, and local regulations and were not re-evaluated here.
- The regulatory information contained in the CTSA may be useful in moving away from chemicals that trigger compliance issues, however this document is not intended to provide compliance assistance. If the reader has questions regarding compliance concerns they should contact their federal, state, or local regulatory authorities.
- The 37 blanket wash formulations assessed in this report were voluntarily submitted by participating suppliers and are not intended to be representative of the entire blanket wash market.
- The performance and cost data are not based on rigorous scientific studies. Some of this information is subjective and is based on limited data points.
- Screening-level risk characterization techniques were used. The risk characterization results, therefore, contain limitations regarding confidence.

**1.1.3 DfE Lithography Project Methodology**

The DfE Program began working with the printing industry when the Printing Industries of America (PIA) requested the EPA's assistance in evaluating some of the environmental claims of products used by printers. This effort ultimately grew into three projects, each aimed at preventing pollution in a different sector of the printing industry: Screen Printing, Lithography, and Flexography. Each project addresses a specific area of environmental concern in the printing process. The screen printing project focuses on screen reclamation, the flexography project concentrates on the various ink systems used, and the lithography project examines the blanket washing process.

To thoroughly evaluate alternative blanket washes, the DfE Lithography Project sought to form partnerships with industry representatives. The DfE Lithography partners include PIA and its regional affiliates, the Graphic Arts Technical Foundation (GATF), the Environmental Conservation Board of the Graphic Communications Industry, the University of Tennessee's Center for Clean Products and Clean Technologies, and individual printers and suppliers.

## 1.1 PROJECT BACKGROUND

The project partners were particularly concerned about the environmental and human health risks of blanket washes because traditionally these products are petroleum-based solvents with a volatile organic compound (VOC) content of greater than 60%. While these high VOC washes leave the blanket dry after cleaning, the quick-drying properties come from the VOCs that evaporate into the air where they may pose a potential risk to workers' health and to the environment. VOCs can have an adverse impact on ambient air quality because of their contribution to the formation of ground level ozone. Using the expertise of EPA, the DfE Lithography Project examined the risks of the alternative blanket washes by collecting health hazard and environmental release information (e.g., releases to air, water, land) associated with the use of the potential substitute blanket washes.

### Concentrate on the Needs of Smaller Printers

The project partners were aware that although many large printers already have access to information about new and developing systems and technologies, smaller printers may not have the time or resources to investigate the latest technology and products. To respond to the needs of smaller printers, the DfE Lithography Project partners agreed that the primary efforts of the project should focus on the manual blanket washes as they are typically used in smaller print shops; i.e., on sheetfed, non-heatset presses that are less than 26" wide. Much of the information presented here is applicable or translatable to larger facilities.

### Identify Alternative Blanket Washes

All blanket washes evaluated in this project were commercially available products, voluntarily donated by suppliers. Nineteen suppliers participated in the project, submitting a total of 36 substitute formulations to be compared with a baseline formulation.

### Choice of VM&P Naphtha as the Baseline Formulation

In the initial stages of the Lithography Project, the Project partners chose VM&P naphtha as the baseline against which to compare the 36 substitute washes. Varnish Makers & Painters (VM&P) Naphtha, composed of 100% solvent naphtha, light aliphatic and referred to as Formulation 28 in certain sections of the text, was chosen primarily because it is well known among lithographers as an effective blanket wash. Many lithographers have used VM&P naphtha in their shops and know how well it works in their applications and what it costs. VM&P naphtha is known to be highly effective at very low cost, however, because of its high VOC content (100%), printers are searching for formulations to replace it.

### Conduct Performance Demonstrations

The performance demonstrations were conducted in two phases: laboratory testing and field demonstrations. Laboratory testing of each blanket wash was conducted by GATF in Pittsburgh to ascertain certain chemical characteristics, including flash point, VOC content, and pH. Additional laboratory tests (described in Chapter 4 of this document) were conducted to determine the effectiveness of each wash and the potential for adverse effects on the blanket. Only those washes meeting minimum performance standards were used in the field demonstrations.

Once the Performance Demonstration was underway, certain suppliers who originally submitted blanket washes, later chose to withdraw from the demonstration. Their reasons included not wishing to reveal to EPA their complete formulations or concern over the potential results of the performance tests. The formulations that were withdrawn after work had already begun were numbers 2, 13, and 15. For this reason, those numbers are missing from all of the tables in the CTSA.

---

## 1.1 PROJECT BACKGROUND

proprietary formulation data. While specific methods were developed by the DfE Lithography Project team for conducting the performance demonstration and the cost analysis, the standard methodologies of the EPA Office of Pollution Prevention and Toxics (OPPT) Existing Chemicals Program were used for the Human Health Hazards, Environmental Hazards, Environmental Releases and Occupational Exposure Assessment, General Population Exposure Assessment, and Risk Assessment sections of the CTSA.

### Identify Conservation and Additional Improvement Opportunities

The project partners were interested in identifying energy and natural resource issues and improvement opportunities associated with using the various substitute blanket washes. Although the blanket washing process is not particularly energy- or resource-intensive, a printer can still help conserve energy and resources through his or her choice of blanket washing products and the manner in which the products are used.

There are a variety of techniques which may be employed at lithographic print shops to prevent pollution, to reduce chemical consumption, and to minimize waste. Results of a pollution prevention survey which asked lithographers to identify what activities they currently employ to achieve a more environmentally friendly workplace are presented. In addition, options for recycling solvents and for extracting solvents from press wipes are addressed, as are methods for treating spent solvents so that they may be reused. Solvent recycling systems used in conjunction with brush-based automatic blanket wash systems are also discussed.

### Evaluate Trade-Off Issues

The trade-off issues associated with the environmental and human health risk, cost, performance, and other analyses undertaken by the project partners are evaluated. This includes a social benefit and cost discussion and a summarization of the project's findings.

## 1.2 OVERVIEW OF LITHOGRAPHIC PRINTING

### 1.2.1 Products Printed

Lithography is currently the most prevalent printing technology in the United States. According to an estimate by A.F. Lewis & Co., Inc., a market research firm specializing in the graphic arts industry, there are over 53,000 establishments employing printing presses, and approximately 49,000 of these use lithographic presses. Lithographic printers are primarily small businesses, with roughly 85% of the plants employing fewer than 20 people. The success of lithographic printing is due to the ability of the process to produce high quality text and illustrations cheaply and effectively in short, medium, and high volume production runs. Consequently, lithography dominates the printing of books and newspapers, as well as magazines and other periodical publications. Some other applications of the lithographic printing process include advertising, envelopes, labels and tags, stationery, greeting cards, and packaging. Lithography accounts for almost 50% of the commercial printing market; however, the ascendancy of the lithographic process may soon be challenged by both improvements in flexography and relatively new plateless technologies which make up the fastest growing sector of the printing industry.

### 1.2.2 Printing Mechanism

The lithographic printing process involves a plate on which the image and non-image areas are on the same plane, as opposed to being either raised or indented. In this type of single plane, or planographic, printing, the image is maintained by taking advantage of the mutual repulsion of oil and water. Plates are treated so that the non-image area attracts water, while the image area

---

### 1.3 PROFILE OF THE BLANKET WASH USE CLUSTER

Blanket washes consist of varying types of solvent, some of which can pose risks to human health and the environment. New, potentially less harmful blanket washes are appearing on the market, giving printers the opportunity to reduce impacts on the environment and minimize risk to workers. As these alternatives to the traditional solvents become more widespread, printers have had more questions about where to find comparative risk, performance and cost information. The DfE Lithography Project addresses these concerns by providing this comparative information on a wide variety of blanket wash formulations.

### 1.3 PROFILE OF THE BLANKET WASH USE CLUSTER

#### 1.3.1 Traditional Blanket Washes

Traditional lithographic blanket washes are petroleum-based solvents, often mixed with detergent and/or water. Petroleum-based cleaners typically remove ink quickly and evaporate rapidly, requiring minimal down time for the press. The advantages of these conventional cleaners, however, come at a price. Petroleum-based cleaners often contain greater than 60% VOCs. VOCs, defined as any volatile compound containing the element carbon, have health and safety concerns associated with their use, and have been implicated in the formation of ground level ozone. Still, conventional cleaners continue to dominate the market because of their effectiveness as well as their low cost.

The price of a petroleum-based blanket wash will vary according to the quantity purchased as well as the prevailing price of crude oil. At least two major U.S. manufacturers of blanket washes in the United States have product lines dominated by petroleum-based, water-miscible solvents. Prices for these blanket washes range from \$8/gallon to \$10/gallon and average \$9/gallon when purchasing a 55-gallon drum. The market is very fractured, as the largest producers of blanket cleaner in the United States are estimated to control less than 10% of the total U.S. market. The market share attained by the largest blanket wash manufacturers is limited by competition from the many small blanket wash producers serving local markets.

Large printing operations will often benefit from bulk pricing, storing large quantities of wash in on-site storage tanks. Medium-sized printers tend to purchase blanket wash by the drum (55-gallons), while small operations typically pay the highest per unit costs by purchasing cases of single gallon containers. Per gallon prices can decrease by as much as 30% when purchasing a 55-gallon drum versus a single gallon container.

#### 1.3.2 Alternative Blanket Washes

Petroleum-based blanket washes currently dominate the market; however, as concerns regarding the release of VOCs and potential health impacts mount, increasing pressure will be placed on blanket wash manufacturers to develop alternatives. Current evidence suggests that industry has responded to concerns regarding VOC releases, with some blanket wash manufacturers devoting 100% of product development time to the production of products that are lower in hazardous materials and VOCs.<sup>1</sup> Alternative blanket cleaners have not been fully accepted, however, and printers have voiced several concerns regarding their performance. In addition, low VOC washes typically cost more than "traditional," petroleum-based cleaners due to higher ingredient costs. EPA's *Control Techniques Guideline for Offset Lithographic Printing* (CTG) estimates that lower VOC cleaners (low VOCs cleaners are defined in the CTG as products with a VOC content of less than 30% by weight as measured by EPA's test method 24) that do not contain hazardous air pollutants (HAPs) cost \$0.91 per pound versus \$0.69 per pound for a "traditional" cleaner.<sup>2</sup> Alternative washes discussed below include: water miscible solvents, vegetable oil-based cleaners, and terpene-based cleaners.

## 1.4 MARKET PROFILE

The lithographic blanket wash industry is extremely fragmented, made up of many small firms producing a host of blanket wash products, and is highly price competitive. In general, blanket wash manufacturers are chemical formulators that market a variety of pressroom products including type wash, press wash, alcohol replacers, and fountain solutions.

In response to concerns regarding the release of VOCs, blanket wash manufacturers have developed and are currently marketing low VOC alternatives to traditional, petroleum-based cleaners. For example, low VOC cleaners currently constitute a very small percentage of company sales for one of the leading producers of blanket cleaners in the United States. Their research efforts, however, are focused almost exclusively on the development of low VOC cleaners.<sup>7</sup> Small to medium size companies have had greater success in providing low VOC cleaners to the marketplace.<sup>8,9</sup>

A.F. Lewis & Company, Inc., a market research firm specializing in the graphics arts industry, has estimated the number of plants operating offset lithographic presses, and therefore the number of facilities requiring blanket wash solvents, to be 49,218 as of June 1995. A.F. Lewis also reports the total number of plants with presses (whether offset lithographic, gravure, flexographic, or letterpress) to be 53,205 plants as of June 1995.<sup>a</sup> Plants with offset lithographic presses, therefore, account for roughly 92% of printing facilities, providing some indication of the demand for blanket wash. The states with the greatest number of plants containing offset presses are: California (6,075 plants, 12.5% of the U.S. total), New York (3,617 plants, 7.4%), Illinois (3,027, 6.2%), Texas (2,947, 6.0%), Pennsylvania (2,452, 5.0%), Ohio (2,436, 5.0%), Florida (2,318, 4.8%), New Jersey (1,876, 3.9%), Michigan (1,691, 3.5%), and Massachusetts (1,388, 2.9%).<sup>10</sup>

### 1.4.2 Blanket Wash Manufacturers

Minimal documentation exists that specifically characterizes the lithographic blanket wash industry. The Standard Industrial Classification (SIC) system, established by the Bureau of the Census to track the flow of goods and services within the economy, has not assigned a specific code to the blanket wash industry, nor does the Department of Commerce specifically track the industry.<sup>11</sup> In addition, many companies that produce printing equipment also manufacture blanket washes or private label another manufacturer's wash, making it difficult to identify them specifically as blanket wash manufacturers. With multiple product lines for the industry, it is currently not possible to identify the portion of revenues attributable solely to blanket wash production.

The companies listed in Table 1-1 are known to be producers of blanket wash solvents or products based upon the input of several printing industry trade organizations. This list is not exhaustive of the total number of companies producing blanket washes. The relative market share held by each of the companies listed below is not known. Petroleum distillate producers, such as Ashland, Exxon, and Shell, also sell directly to larger printers.<sup>12</sup>

---

<sup>a</sup> Plants with presses are firms that possess any printing press or duplicator/photocopier and engage in printing as their primary business.

## 1.4 MARKET PROFILE

Table 1-2. Blanket Wash and Roller Wash Components

Ranking	Chemical	CAS Number	Annual Quantity
1	Solvent Naphtha (petroleum), medium aliphatic*	64742-88-7	655,722
2	Solvent Naphtha (petroleum), light aromatic*	64742-95-6	633,000
3	Naphtha (petroleum), hydrotreated heavy*	64742-48-9	606,125
4	Solvent Naphtha (petroleum), light aliphatic*	64742-89-8	468,508
5	2-Butoxyethanol	111-76-2	288,000
6	Solvent Naphtha (petroleum), heavy aliphatic	64742-96-7	146,497
7	Mineral Spirits (straight run naphtha)*	64741-41-9	140,000
8	Methylene Chloride	75-9-2	125,003
9	Xylene*	1330-20-7	76,503
10	1,1,1-Trichloroethane	71-55-6	66,000
11	Isopropyl Alcohol	67-63-0	60,000
12	Acetone	67-64-1	55,000
13	Mineral Spirits (light hydrotreated)*	64742-47-8	51,943
14	Toluene	108-88-3	51,000
15	Solvent Naphtha (petroleum), heavy aromatic*	64742-94-5	49,815
16	Propylene Glycol Methyl Ether Acetate	108-65-6	38,000
17	2-Propoxyethanol	2807-30-9	27,932
18	d-Limonene*	5989-27-5	22,000
19	Dipropylene Glycol Methyl Ether*	3459-94-8	12,000
20	Kerosene	8008-20-6	10,000
21	Ethyl Acetate	141-78-6	2,000
22	Perchloroethylene	127-18-4	2,000
23	Diethylene Glycol Monobutyl Ether*	112-34-5	1,879

\* Indicates those chemicals found in the formulations assessed in this project.

**Note:** Information is based upon a 1992 survey of three blanket wash producers and is estimated to represent 70% of the industry.

---

## 1.5 ALTERNATIVE TECHNOLOGY-AUTOMATIC BLANKET WASHERS

---

*Brush roller systems*, unlike spray systems, actively scrub blanket surfaces with a rotating and oscillating brush. Two types of brush systems are available: dry-type and wet-type. Wet-type brush systems dispense a controlled quantity of solvent onto the brush. Solvent is not applied directly to the blanket. Dry-type brush systems mechanically clean the blanket surface but are not wetted with cleaning solution. Dry-type systems are used only on coldset presses.

*Cloth-based systems* operate by applying a web of cloth to the rotating blanket, depositing excess ink and debris onto the cloth. After completing the cycle, the spent cloth advances and a fresh section of cloth is left in its place. Cleaning solvents are applied to the cloth and not directly to the blanket.

### Performance Issues

Reports on the performance of automatic blanket washers run the gamut from printers who say that their automatic washers work faster and better than manual washing, to those who have given up and actually removed the blanket washers from their presses. Clearly, the type of blanket washer and the type of printing being done play large roles in determining the effectiveness of the blanket washer.

Automatic blanket washers appear to be more prevalent on web presses, where they can be used for blanket washing during a press run. Some printers report that automatic blanket washers do not clean the blankets thoroughly enough to use them for end of run washing. Blanket washers seem to be less popular for sheet-fed presses, where relatively shorter run lengths allow printers to coordinate manual blanket washing with the end of production runs.

### Economics

The potential *savings* associated with using an automatic blanket washer instead of manually cleaning blankets include the following:

- In most cases, wash for wash, automatic blanket washers reportedly use less solvent than manual washing, which translates into lower solvent costs for the printer.
- Because the automatic blanket washer allows the press operator to perform other tasks during the wash cycle, there may be significant labor savings associated with automatic blanket washing.
- Make-ready time is shortened because the press does not stop during the blanket washing process.
- Wipe rag use is reduced, which confers savings in the area of rag purchasing or in rag leasing contracts. For cloth based systems, disposal or laundering of the spent cloth may be a concern.
- Some printers claim that blanket life is prolonged through the use of automatic blanket washers.

## 1.5 ALTERNATIVE TECHNOLOGY-AUTOMATIC BLANKET WASHERS

### Health/Safety Issues

Worker safety issues associated with automatic blanket washers may include:

- Direct worker dermal exposure to solvent is reduced.
- With some systems, much of the solvent can be reclaimed for re-use.
- Diminished fugitive VOC emissions in the workplace.
- Workers can lessen exposure to potentially dangerous moving press cylinders associated with manual blanket cleaning.

### Automatic Blanket Wash System Manufacturers

Manufacturers of automatic blanket washers include: AM Multigraphics; Baldwin Technology; Oxy-Dry Corporation; Printex Products Corporation; Heidelberg Harris, Inc.; and Web Printing Controls Company Inc. This list was compiled based upon discussions with industry contacts as well as the NPES *Directory of International Suppliers of Printing & Publishing Technologies*. This list is not exhaustive.

## **Sector Notebook Project**

## **Printing and Publishing**

This report is one in a series of volumes published by the U.S. Environmental Protection Agency (EPA) to provide information of general interest regarding environmental issues associated with specific industrial sectors. The documents were developed under contract by Abt Associates Inc. (Cambridge, MA), and Booz-Allen & Hamilton, Inc. (McLean, VA). This publication may be **purchased** from the Superintendent of Documents, U.S. Government Printing Office. A listing of available Sector Notebooks and document numbers are included on the following page.

### **All telephone orders should be directed to:**

Superintendent of Documents  
U.S. Government Printing Office  
Washington, DC 20402  
(202) 512-1800  
FAX (202) 512-2250  
8:00 a.m. to 4:30 p.m., ET, M-F

### **Using the form provided at the end of this document, all mail orders should be directed to:**

U.S. Government Printing Office  
P.O. Box 371954  
Pittsburgh, PA 15250-7954

**Complimentary** volumes are available to certain groups or subscribers, such as public and academic libraries, Federal, State, local, and foreign governments, and the media. For further information, and for answers to questions pertaining to these documents, please refer to the contact names and numbers provided within this volume.

**Electronic** versions of all Sector Notebooks are available free of charge at the following web address: [www.epa.gov/oeca/sector](http://www.epa.gov/oeca/sector). Direct technical questions to the "Feedback" button at the bottom of the web page.

**I. INTRODUCTION TO THE SECTOR NOTEBOOK PROJECT****I.A. Summary of the Sector Notebook Project**

Environmental policies based upon comprehensive analysis of air, water and land pollution (such as economic sector, and community-based approaches) are becoming an important supplement to traditional single-media approaches to environmental protection. Environmental regulatory agencies are beginning to embrace comprehensive, multi-statute solutions to facility permitting, compliance assurance, education/outreach, research, and regulatory development issues. The central concepts driving the new policy direction are that pollutant releases to each environmental medium (air, water and land) affect each other, and that environmental strategies must actively identify and address these inter-relationships by designing policies for the “whole” facility. One way to achieve a whole facility focus is to design environmental policies for similar industrial facilities. By doing so, environmental concerns that are common to the manufacturing of similar products can be addressed in a comprehensive manner. The desire to move forward with this “sector-based” approach within the EPA Office of Compliance led to the creation of this document.

The Sector Notebook Project was initiated by the Office of Compliance to provide its staff and managers with summary information for eighteen specific industrial sectors. As other EPA offices, states, the regulated community, and the public became interested in this project, the Office of Compliance expanded the scope of the original project. The ability to design comprehensive, common sense environmental protection measures for specific industries is dependent on knowledge of several inter-related topics. For the purposes of this project, the key elements chosen for inclusion are: general industry information (economic and geographic); a description of industrial processes; pollution outputs; pollution prevention opportunities; Federal statutory and regulatory framework; compliance history; and a description of partnerships that have been formed between regulatory agencies, the regulated community and the public.

For any given industry, each topic described above could alone be the subject of a lengthy volume. However, in order to produce a manageable document, this project focuses on providing summary information for each topic. This format provides the reader with a synopsis of each issue, and references where more in-depth information is desired. Text within each profile was researched from a variety of sources, and was usually condensed from more detailed sources pertaining to specific topics. This approach allows for a wide coverage of activities that can be further explored based upon the citations and references listed at the end of this profile. As a check on the information

included, each notebook went through an external document review process. The Office of Compliance appreciates the efforts of all those that participated in this process and enabled us to develop more complete, accurate and up-to-date summaries.

### **I.B. Additional Information**

#### Providing Comments

The Office of Compliance plans to periodically review and update notebooks and will make these updates available both in hard copy and electronically. If you have any comments on the existing notebook, or if you would like to provide additional information, please send a hard copy and computer disk to the EPA Office of Compliance, Sector Notebook Project, 401 M St., SW (2223-A), Washington, DC 20460. Comments can also be uploaded to the Enviro\$en\$e Bulletin Board or the Enviro\$en\$e World Wide Web for general access to all users of the system. Follow instructions in Appendix A for accessing these data systems. Once you have logged in, procedures for uploading text are available from the on-line Enviro\$en\$e Help System.

#### Adapting Notebooks to Particular Needs

The scope of the existing notebooks reflect an approximation of the relative national occurrence of facility types that occur within each sector. In many instances, industries within specific geographic regions or states may have unique characteristics that are not fully captured in these profiles. For this reason, the Office of Compliance encourages state and local environmental agencies and other groups to supplement or re-package the information included in this notebook to include more specific industrial and regulatory information that may be available. Additionally, interested states may want to supplement the "Summary of Applicable Federal Statutes and Regulations" section with state and local requirements. Compliance or technical assistance providers may also want to develop the "Pollution Prevention" section in more detail. Please contact the appropriate specialist listed on the opening page of this notebook if your office is interested in assisting us in the further development of the information or policies addressed within this volume.

If you are interested in assisting in the development of new notebooks for sectors not covered in the original eighteen, please contact the Office of Compliance at 202-564-2395.

**II. INTRODUCTION TO THE PRINTING AND PUBLISHING INDUSTRY**

This section provides background information on the size, geographic distribution, employment, production, sales, and economic condition of the printing and publishing industry. The type of facilities described within the document are also described in terms of their Standard Industrial Classification (SIC) codes. Additionally, this section contains a list of the largest companies in terms of sales.

**II.A. Introduction, Background, and Scope of the Notebook**

The printing and publishing industry, defined most broadly, includes firms whose business is dominated by printing operations, firms performing operations commonly associated with printing, such as platemaking or bookbinding, and publishers, whether or not they actually print their own material. This categorization corresponds to the Standard Industrial Classification (SIC) code 27 used by the Bureau of the Census to track the flow of goods and services within the economy. The Census identifies 58,000 firms and 62,000 facilities within SIC code 27.<sup>1,a</sup>

From the printing industry's perspective, the industry is organized by the type of printing process used: lithography, (roto)gravure, flexography, screen, and letterpress. Trade associations, technical foundations, suppliers, and supporting academic institutions are organized along process lines (See Section VIII.C). For example, the Screen Printing Technical Foundation supports the screen printing process and the Graphic Arts Technical Foundation supports lithographers. The Rochester Institute of Technology specifically supports gravure and flexographic printers. Facilities tend to employ one type of printing process exclusively, although some of the larger facilities may use two or more types. Based on the estimated value of shipments from the U.S. printing industry in 1990, lithography dominates the market with a 47 percent market share; gravure, 19 percent, flexography, 17 percent; letterpress, 11 percent; and screen printing, 3 percent.<sup>2</sup>

---

<sup>a</sup> Variation in facility counts occur across data sources due to many factors including, reporting and definitional differences. This notebook does not attempt to reconcile these differences, but rather reports the data as they are maintained by each source.

**II.B. Characterization of the Printing and Publishing Industry**

According to 1987 Census data, the printing and publishing industry was comprised of 58,000 firms operating 62,000 facilities. This figure does not capture the large number of “in-plant” printing operations located throughout the manufacturing sectors. The total number of printing and publishing operations, therefore, could well exceed 100,000. The printing industry has a high ratio of small operations, with nearly one-half of printing facilities employing fewer than five employees. Printing operations are most often located adjacent to population and business centers and therefore their distribution closely parallels the distribution of the U.S. population.

**II.B.1. Industry Size and Geographic Distribution**

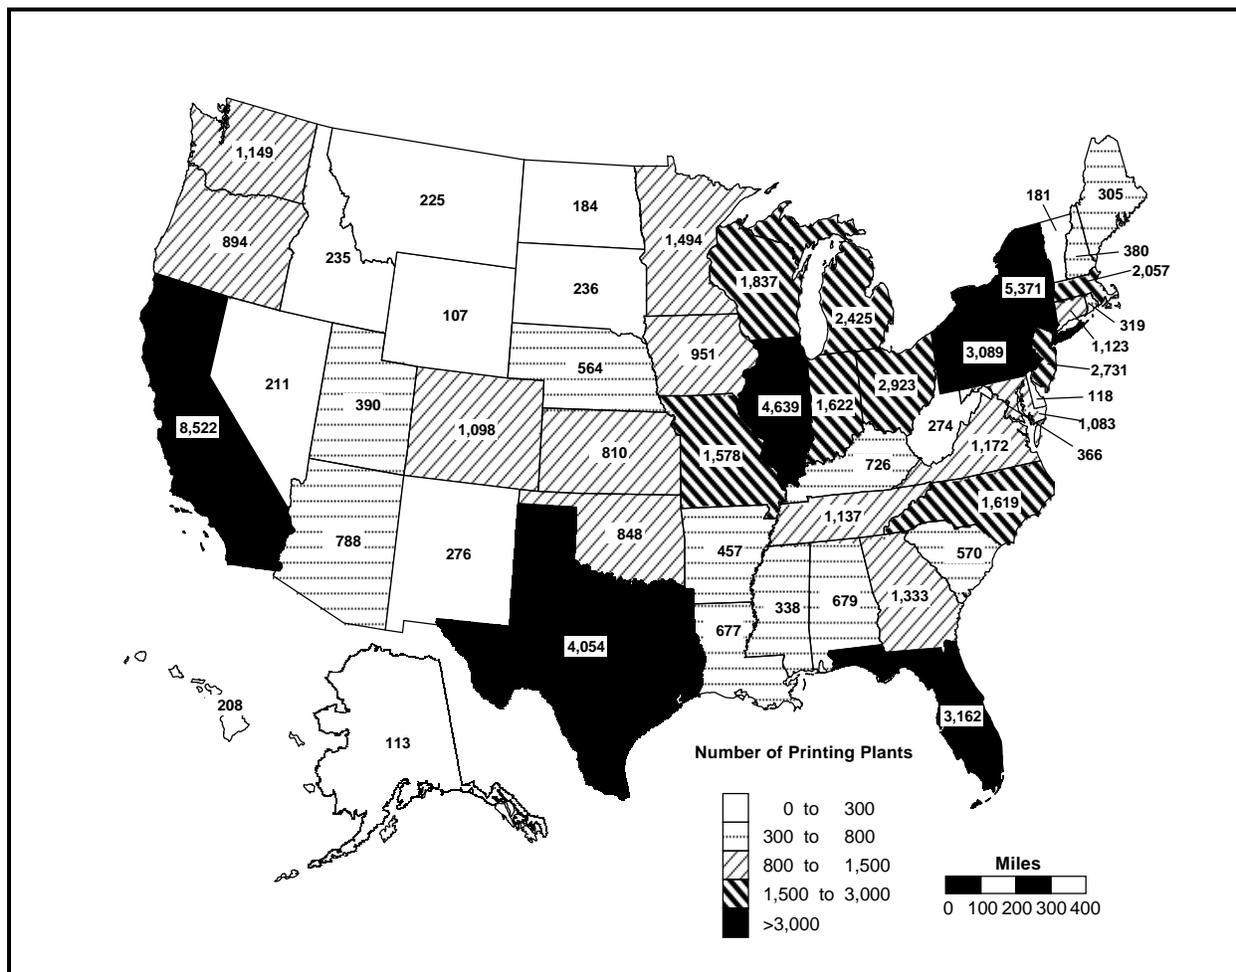

While the precise number of printing and publishing facilities is difficult to determine, 1987 Census data identified approximately 58,000 firms operating 62,000 facilities.<sup>3</sup> Other estimates of industry size are higher, in the range of 70,000, 86 percent of which are thought to have press operations, with the remainder performing printing-related operations such as publishing or platemaking.<sup>4</sup> It is important to note that because printing itself is a process used to transfer images or material to a substrate, “in-plant” printing operations are present in facilities throughout the manufacturing sectors. For example, one of the largest screen printing operations is within Boeing Corporation. Other examples include firms that print textiles, product manufacturers that print their label, and manufacturers of printed circuit boards. The number of printing and publishing operations, therefore, could well exceed 100,000.

The Bureau of the Census estimates that in 1987, 1.5 million people were employed in printing and publishing.<sup>5</sup> The value of shipments (revenue associated with product sales) generated by printing and publishing facilities totaled \$135 billion.<sup>6</sup> This value of shipments figure omits up to \$100 million associated with in-plant and quick printers (operating xerographic copiers or small lithographic presses).<sup>7</sup> Sales within the printing industry are expected to grow by 3.5 to 5.3 percent annually between 1990 and the year 2000.<sup>8</sup>

One of the most significant characteristics of the printing industry is the large proportion of very small firms. Almost one-half of all printing facilities have fewer than five employees; approximately 84 percent employ fewer than 20.<sup>9</sup> Flexographic and gravure printers, however, tend to be larger operations and to have more employees.

<b>Exhibit 1: Printing Facilities by Number of Employees</b>		
<b>Employees per Facility</b>	<b>Number of Facilities</b>	<b>Percentage of Facilities</b>
<b>1-4</b>	<b>32,158</b>	<b>46%</b>
<b>5-9</b>	<b>17,068</b>	<b>24%</b>
<b>10-19</b>	<b>9,800</b>	<b>14%</b>
<b>20-99</b>	<b>8,652</b>	<b>13%</b>
<b>100+</b>	<b>2,036</b>	<b>3%</b>
<b>Total</b>	<b>69,714</b>	<b>100%</b>
Source: U.S. Department of Commerce, Bureau of the Census. 1987 Census of Manufacturers.		

Printing facilities typically serve regional or local markets although some firms, such as those producing books and periodicals, serve national and international markets. Consequently, the geographic distribution of printing facilities closely parallels the distribution of the U.S. population. Facilities are most frequently located in light industrial areas in or adjacent to population and business centers, although smaller operations are somewhat more likely to be located in residential settings. Across the U.S., sixty percent of printing facilities are located in just ten states: California (13%), New York (8%), Illinois (7%), Texas (6%), Florida (5%), Pennsylvania (5%), Ohio (4%), New Jersey (4%), Michigan (4%), and Massachusetts (3%).<sup>10</sup>

### Exhibit 2: Printing Facilities

*Ward's Business Directory of U.S. Private and Public Companies*, produced by Gale Research Inc., compiles financial data on U.S. companies including those operating within the printing industry. Ward's ranks U.S. companies, whether they are a parent company, subsidiary or division, by sales volume within the 4-digit SIC codes that they have been assigned as their primary activity. Readers should note that: 1) companies are assigned a 4-digit SIC that most closely resembles their principal industry; and 2) sales figures include total company sales, including subsidiaries and operations not related to printing. Additional sources of company specific financial information include Standard & Poor's Stock Report Services, Dun & Bradstreet's Million Dollar Directory, Moody's Manuals, and annual reports.

<b>Exhibit 3: Top U.S. Companies with Printing Operations</b>		
<b>Rank<sup>a</sup></b>	<b>Company<sup>b</sup></b>	<b>1993 Sales (millions of dollars)</b>
1	R.R. Donnelley & Sons Company - Chicago, IL	3,915
2	Times Mirror Company - Los Angeles, CA	3,624
3	Gannett Company, Inc. - Arlington, VA	3,382
4	Hallmark Cards, Inc. - Kansas City, MO	2,800
5	Reader's Digest Association, Inc. - Pleasantville, NY	2,345
6	Cox Enterprises, Inc. - Atlanta, GA	2,300
7	Knight-Ridder, Inc. - Miami, FL	2,237
8	Tribune Company - Chicago, IL	2,035
9	McGraw-Hill, Inc. - New York, NY	1,943
10	Dow Jones and Company, Inc.	1,725

Note: <sup>a</sup> When Ward's Business Directory lists both a parent and subsidiary in the top ten, only the parent company is presented above to avoid double counting. Not all sales can be attributed to the companies printing operations.  
<sup>b</sup> Companies shown listed SIC 2711, 2721, 2731, 2732, 2741, 2752, 2754, 2759, 2761, 2771, 2782, 2789, 2791, 2796 as primary activity.

### II.B.2. Product Characterization

The printing and publishing industry produces a wide array of printed products as well as materials used in the printing process. Some of the products produced within the industry include: newspapers, books, greeting cards, checks, annual reports, magazines, and packaging. Products vary in print quality from newsprint to *National Geographic Magazine*. Also, firms performing operations commonly associated with printing, such as platemaking or bookbinding, and publishers, whether or not they actually print their own material, are included within the industry.

The SIC codes, developed by the Office of Management and Budget, divide the printing and publishing industry according to the product manufactured, such as books, newspapers, and greeting cards. Most facilities identified as

**Sector Notebook Project****Printing and Publishing**

printers by SIC code have few, if any, business lines other than those that fall within printing and publishing. However, there are tens of thousands of in-plant printing operations at facilities whose predominant lines of business are not printing. Only if data are collected for multiple SIC codes would it be evident that such facilities engaged in printing. The following list presents the three-digit SIC codes with the associated product they represent, as well as the printing process used in the product's manufacture.

- SIC 271 - Newspapers | *Processes used: lithography, flexography and letterpress*
- SIC 272 - Periodicals | *Processes used: lithography, flexography and letterpress*
- SIC 273 - Books | *Processes used: lithography, gravure and letterpress*
- SIC 274 - Miscellaneous Publishing | *Processes used: lithography, gravure, and letterpress*
- SIC 275 - Commercial Printing | *Processes used: lithography, gravure, flexography, screen and letterpress*
- SIC 276 - Manifold Business Forms | *Processes used: lithography and plateless*
- SIC 277 - Greeting Cards | *Processes used: gravure and screen*
- SIC 278 - Blankbooks, Looseleaf Binders and Bookbinding | *Primarily nonprinting*
- SIC 279 - Service Industries for the Printing Trade | *Primarily nonprinting*

Newspapers (SIC 271) and commercial printing (SIC 275) account for 57 percent of the total value of shipments for the printing and publishing industry. Newspapers (SIC 271) include establishments primarily engaged in publishing newspapers, or in publishing and printing newspapers. Newspaper printers that are not engaged in publishing are classified under Commercial Printing (SIC 275). Commercial printing products include but are not limited to the following: maps, periodicals, coupons, menus, postcards, stationary, envelopes, magazines, and custom products. Other three-digit categories comprised of firms involved primarily in printing accounted for an additional 22 percent of the value of shipments. Other SIC categories include: textile screen printing (SIC 2346) and nameplates (SIC 3993). Firms that may not be involved in printing, such as publishing of blankbooks, bookbinding and printing trade services (e.g., platemaking and typesetting), accounted for the remaining 21 percent of the value of shipments.<sup>11</sup>

**II.B.3. Economic Trends**

The following discussion has been summarized from the *U.S. Industrial Outlook*, published by the Department of Commerce, which tracks and forecasts the economic performance of most major sectors of the U.S. economy. The U.S. is the world's largest market for printed products. In aggregate, the printing and publishing industry accounts for a significant portion of the nation's goods and services; the 1991 value of shipments totaled \$161 billion with an estimated payroll of \$39 billion for 1.5 million workers. Printing and publishing is the largest conglomeration of small businesses in the domestic manufacturing sector. While the industry is large in number, many individual facilities, particularly small letterpress operations are marginally profitable. Industry growth is affected by several factors including: business formations and transactions (which drive advertising expenditures), population growth, and trends in certain characteristics of the population, such as leisure time availability and individuals' consumption patterns.<sup>12</sup>

Competitive pressures come from non-print media, such as CD-ROM, other electronic means of transferring information as well as the movement of book printing to offshore facilities where production costs are lower. In 1992, the U.S. imported \$2.1 billion worth of printed products, principally from Canada, the United Kingdom, Hong Kong, and Germany. During the same period, the U.S. exported \$3.8 billion worth of printed material. The major export markets for U.S. printed material are Canada, the United Kingdom, Japan, and Mexico.<sup>13</sup>

Once the U.S. economy emerges fully from the recession of 1990/1991, printing and publishing sales are expected to grow by 3.8 to 5.3 percent per year through the year 2000. The next five years are expected to offer printers several opportunities for business expansion due to the North American Free Trade Agreement (NAFTA) and the Uruguay Round of the General Agreement on Tariffs and Trade (GATT) which will reduce trade barriers to U.S. exports and strengthen protection of international copyrights.<sup>14</sup>

**III. INDUSTRIAL PROCESS DESCRIPTION**

This section describes the materials and equipment used, and the processes employed within the printing and publishing industry. The section is designed for those interested in gaining a general understanding of the industry, and for those interested in the inter-relationship between the industrial process and the topics described in subsequent sections of this profile -- pollutant outputs, pollution prevention opportunities, and Federal regulations. This section does not attempt to replicate published engineering information that is available for this industry. Refer to Section IX for a list of reference documents that are available.

This section specifically contains a description of commonly used production processes, associated raw materials, the byproducts produced or released, and the materials either recycled or transferred off-site. This discussion, coupled with schematic drawings of the identified processes, provide a concise description of where wastes may be produced in the process. This section also describes the potential fate (via air, water, and soil pathways) of these waste products.

**III.A. Industrial Processes in the Printing and Publishing Industry**

The diversity of technologies and products in the printing industry makes it difficult to characterize the processes and the environmental issues facing the industry as a whole. These process differences can lead to distinct environmental concerns and are critical when developing compliance assistance programs. It is estimated that 97 percent of all printing activities can be categorized within five different printing processes: lithography, gravure, flexography, letterpress, and screen printing.<sup>15</sup> The equipment, applications, and chemicals for each of these processes differ; however, they all print an image on a substrate following the same basic sequence. The fundamental steps in printing are referred to as imaging, pre-press, printing, and post-press operations. The type of printing technology that is used depends on a variety of factors, including the substrate used (e.g., paper, plastic, metal, ceramic, etc.), the length and speed of the print run, the required print image quality, and the end product produced.

The first step in the printing process, imaging, produces an image of the material to be printed. Traditionally, this image is produced photographically, but with increasing frequency the image is produced electronically. The production of a photographic image involves a variety of chemicals similar to those used in other fields of photography. The image on the film is transferred to the image carrier or plate. In pre-press operations, an image carrier is produced that can transfer the ink in the image area and can repel the ink in

non-image areas. In printing, ink is applied to the plate and the image is transferred to the substrate. In the post-press step, the printed material may receive any one of numerous finishing operations, depending on the desired form of the final product.

Each of the five predominant printing technologies differ significantly in how the image is transferred from the image carrier to the substrate in the printing step. In general, the imaging and post-press operations are fairly similar for all printing technologies. Therefore, imaging and post-press procedures are discussed for all printing technologies, and the platemaking and press operations are discussed separately for each technology.

### **III.A.1. Imaging Operations**

Imaging operations begin with composition and typesetting, and are followed by the production of a photographic negative or positive. Composition involves the arrangement of art and text into the desired format. This composition task was performed manually. Today, however, computer systems are commonly used to accomplish the task. Computers can be equipped with both optical character recognition and photographic image scanners and digitizers so that pre-typed material and images can be incorporated into the document being composed.<sup>16</sup>

Once the desired format and images are assembled, they are photographed to produce transparencies. The printing industry photographic process uses input materials very similar to those used in other fields of photography. The purpose of this step is to produce a photographic negative (for lithography and letterpress) or a positive (for gravure, screen printing, and other lithographic processes). Input materials for the process include paper, plastic film, or a glass base covered with a light-sensitive coating called a photographic emulsion. This emulsion is usually composed of silver halide salts and gelatin. The desired image is projected onto the film to produce a film negative or a film positive. When the exposed photographic emulsion is developed, the silver halide in the emulsion is converted to metallic silver, in proportion to the amount of exposure it has received. The developing action is stopped by immersing the film in a fixing bath, which is mainly composed of sodium thiosulfate ("hypo"). The fixed photographic emulsion is then rinsed. If an image is to be printed as a color reproduction, transparencies are made for each of the colors to be used on the press. Multi-color printing is done by passing the same substrate through several single-color printing operations.<sup>17</sup> Three or four basic colors are combined on the final product to yield any color desired.

### **III.A.2. Platemaking and Printing**

From photographic negative or positive, a plate is produced that is used in each printing process to carry or transfer ink in the form of the image to the substrate. The plate must pick up ink only in the areas where ink is to be applied to the final image on the substrate. The five basic printing technologies employ five different types of plates. The platemaking step and the printing operations summaries are described below for each technology.

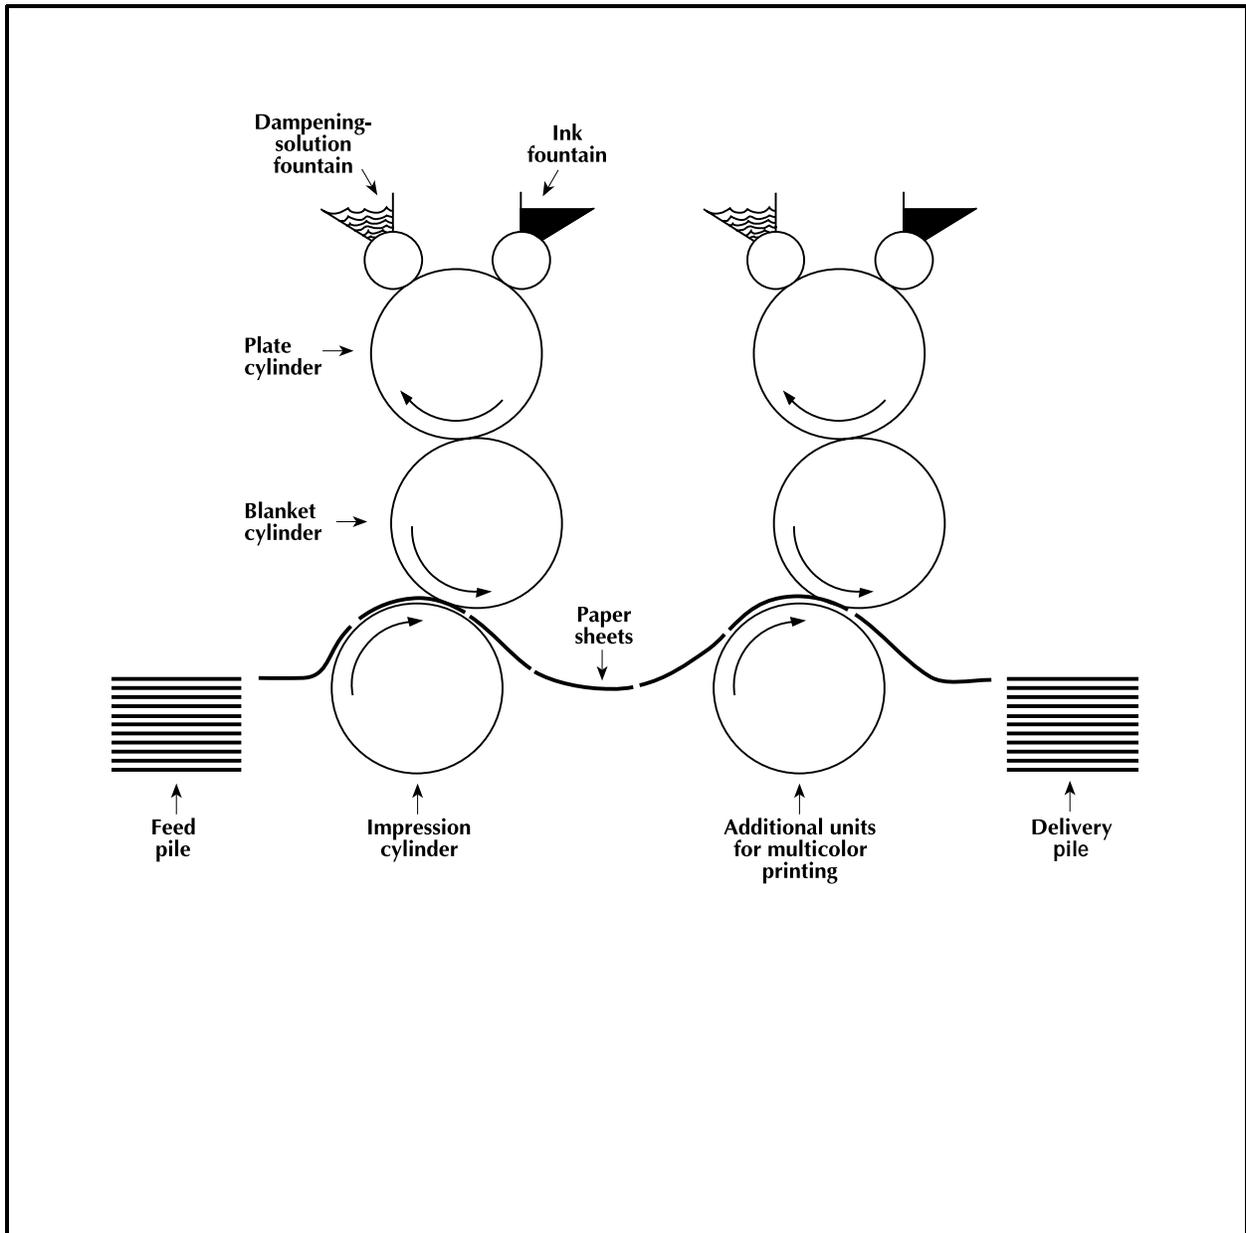

### *Lithography*

In lithography, a planographic plate is used where the image areas and the non-image areas are on the same plane (they are neither raised nor depressed) and are defined by differences in their physiochemical properties. There are several types of lithographic printing, but they all use a planographic plate and they all rely on the fundamental property that oil and water do not mix. As a result, lithographic inks are oil-based and traditionally the ink oils are petroleum based. A metal or paper or plastic printing plate is coated with a light-sensitive chemical which becomes ink receptive when exposed to light. Through the photographic negative, the coating is exposed to light chemically changing the exposed areas, making the image areas ink-receptive. The non-image areas remain water-receptive. Water-based mixtures, referred to as fountain solution, are applied to enhance the non-image area's ability to repel ink. Fountain solutions may contain five to 10 percent isopropyl alcohol or they may contain alcohol substitutes that meet the same needs but with a lower VOC content. Through the use of inking rollers, ink is applied to the plate, adhering only to the image areas. The image is transferred or offset from the plate to a rubber roller (the blanket), which then transfers the image to the substrate being printed. To accelerate drying and control ink flow characteristics, lithographic inks contain solvents. There are lithographic inks that are curable using ultraviolet energy or electron beam, and do not contain solvents.<sup>18</sup>

Depending on the type of substrate or the products printed, the lithographic process is further divided into subprocesses: sheet-fed, heatset web, and non-heatset web. In lithography, as in most printing technologies, presses are available as sheet-fed or as web-fed. On a sheet-fed press, the substrate is fed into the press one sheet at a time. A web-fed press prints on a continuous roll of substrate, known as a web, which is later cut to size. "Offset" lithography refers to the use of a rubber blanket to transfer the image from the plate to the substrate. Within the category of web offset lithography, there is heatset web offset and non-heatset web offset. In the heatset process, the ink is dried by evaporating the ink oil with indirect hot air dryers. This process is potentially the most significant source of VOC emissions in lithography.<sup>19</sup>

Sheet-fed offset lithography is typically used for printing books, posters, brochures, and artwork. Web-fed offset lithography is commonly used for high speed production of magazines, catalogs, and other periodicals, newspapers, magazines and catalogs.

**Exhibit 4: Simplified Lithographic Press Layout**

Source: EPA 1994

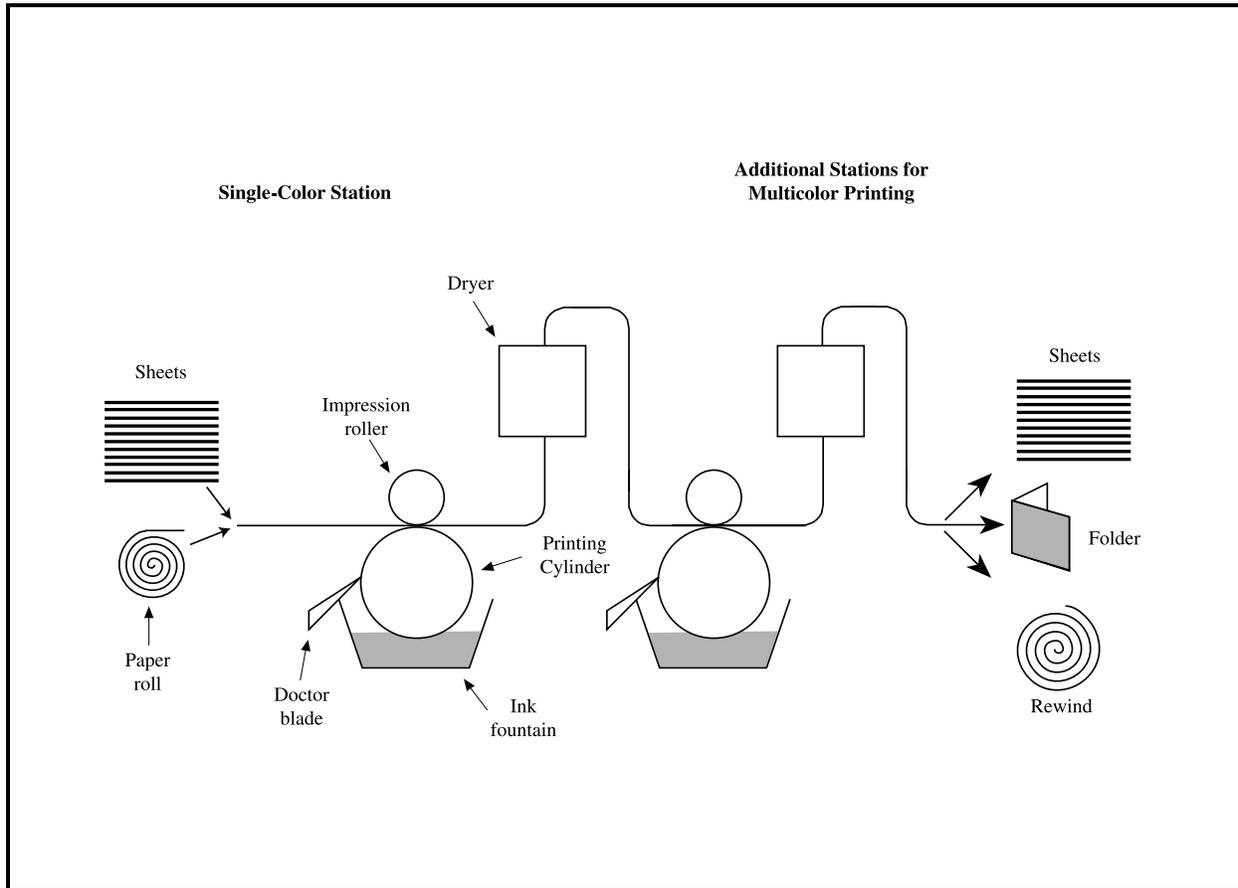

*Gravure*

Gravure printing uses almost exclusively electro-mechanically engraved copper image carriers to separate the image area from the non-image area. Typically, the gravure image carrier is a cylinder. It consists of a steel or plastic base which is plated with copper or a special alloy. The electro-mechanical engraving is accomplished by the electronic impulses driving the diamond stylus which engraves minute cells at the rate of over 3,000 per second. Today, most of the gravure cylinders are engraved directly from digital files. Chemical etching, which is a dominant technology for the gravure cylinder imaging in the past, represents a very small percentage of the total engravings done today. It is used for special applications only. Gravure was the first printing process capable of direct imaging from electronic data.

In gravure printing, ink is applied to the engraved cylinder, then wiped from the surface by the doctor blade, leaving ink only on the engraved image area. The printing substrate is brought into contact with the cylinder with sufficient pressure so that it picks up the ink left in the depressions on the cylinder. (Exhibit 5) Low viscosity inks are required for gravure printing in order to fill the tiny depressions on the plate. To dry the ink and drive off the solvents, drying ovens are placed in the paper path. The solvent-laden air can be passed through carbon beds to trap and condense the solvent. Most of the ink solvents are recaptured using this process, and can either be reused or destroyed by incineration.<sup>20</sup> Also, low VOC inks can be used making carbon beds unnecessary.

The cost of a gravure cylinder is still considered higher compared to other types of printing plates; however, today gravure is the most mature process in “digital data/direct to plate” technology. Also, gravure cylinders have a very long useful life. Several million impressions can be printed before a cylinder needs to be replaced. Gravure printing is capable of producing high-quality, continuous tone images on a variety of substrates. It is most commonly used for large circulation catalogs, magazines, Sunday supplements, and advertising inserts. Also, gravure printing is used for a variety of packaging materials, postage stamps, greeting cards, currency, resilient floor coverings, and wall paper. As in lithography, the two basic types of gravure presses are sheet-fed and web. In the US, almost all commercial gravure printing is done on web fed rotogravure presses.

**Exhibit 5: Rotogravure Press**

Source: EPA 1994

*Flexography*

Flexographic and letterpress plates are made using the same basic technologies. Both technologies employ plates with raised images and only the raised images come in contact with the substrate during printing.

The traditional method of making these plates begins with the exposure of a metal plate through a negative and processing of the exposed plate using an acid bath. The resulting metal engraving may be used directly for letterpress (flatbed), or alternatively used to mold a master using a bakelite board. The board, under pressure and heat, fills the engraving and, when cooled, becomes a master for molding a rubber plate with a raised area that will transfer the graphics. The second method of making plates employs photopolymers in either a solid or liquid state. The photopolymer sheet (consisting of monomers) is exposed to light through a negative and the unexposed areas washed out by means of a solvent or water wash. The result is the relief plate.

Typically, flexographic plates are made of plastic, rubber, or some other flexible material, which is attached to a roller or cylinder for ink application. Ink is applied to the raised image on the plate, which transfers the image to the substrate. There are three basic configurations of flexographic press -- stack, central impression and in-line. (Presses can be configured to print both sides of the web. (Exhibit 6 illustrates a three-roller webfed rotary press.)<sup>b</sup> In the typical flexographic printing sequence, the substrate is fed into the press from a roll. The image is printed as the substrate travels through a series of stations with each station printing a single color. Each station is made up of four rollers where the first roller transfers the ink from an ink pan to the second roller, the meter roller. The meter roller (also known as an Anilox Roll) meters the ink to a uniform thickness onto the third roller, the plate cylinder. The substrate moves between the plate cylinder and fourth roller. The plate is attached to the third roller (the plate cylinder) and the fourth roller (the impression cylinder) applies pressure to the plate cylinder, thereby forming the image on the substrate. The printed web proceeds through an overhead dryer section to dry the ink before the next station. Upon completion of the printing of the last color, the web may then move through an overhead tunnel dryer to remove all residual solvents. The finished product is rewound onto a roll. The width of flexography presses ranges from 4.5 inches up to 115 inches. The ink tray used on larger flexographic presses is very long, allowing for significant evaporation of ink (which may have a high alcohol content). Modern presses are now equipped with enclosed doctor

---

<sup>b</sup> Information on other flexographic printing configurations, such as, the wide web common impression press and the wide web stack type press is available from the Flexographic Technical Association (Section IX).

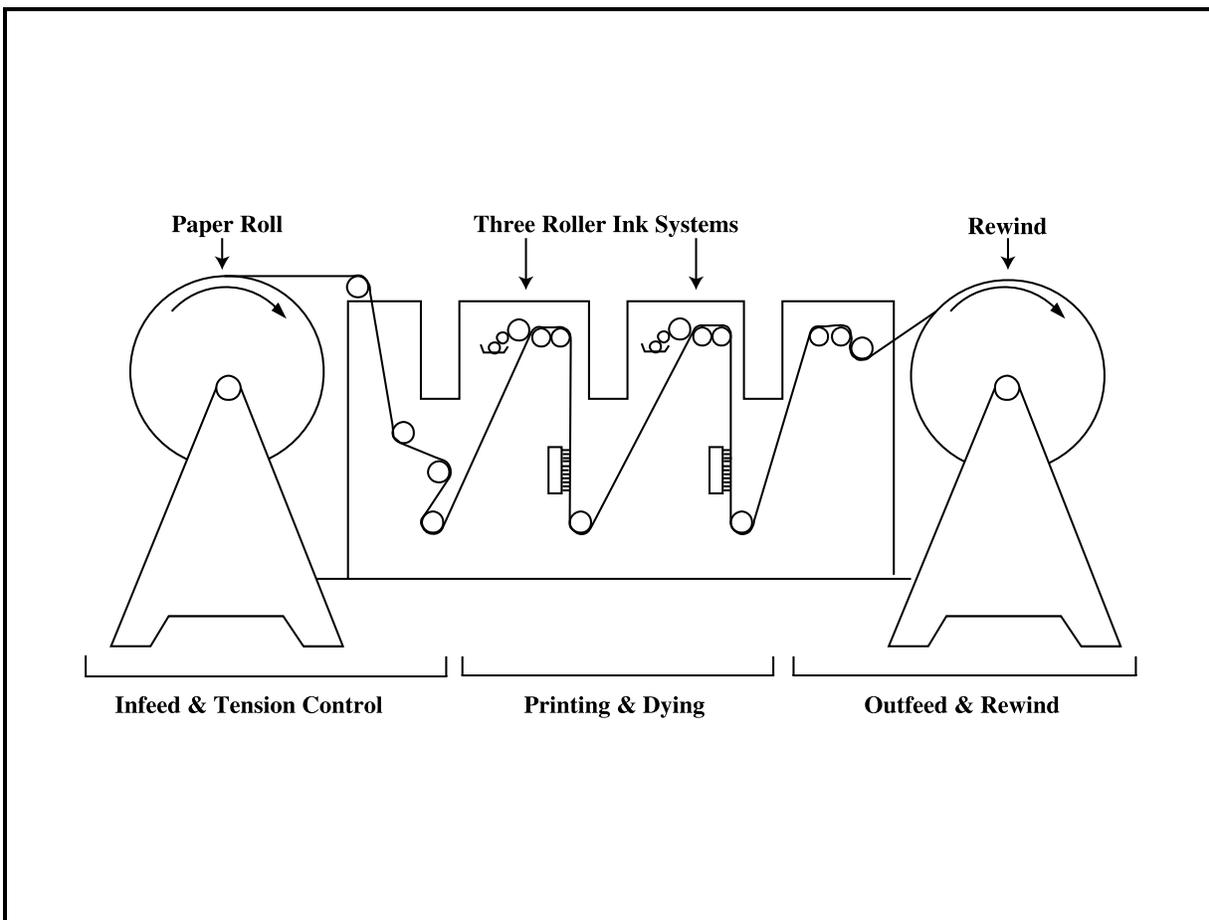

---

blade systems which eliminate the fountain roller and fountain, thereby reducing evaporation losses. Printers with the more narrow presses (for tags, labels and tapes) generally use water based inks and UV coatings. Using UV inks reduces the volatility of the ink.

As in gravure, fast-drying, low-viscosity inks are used. These inks lie on the surface of nonabsorbent substrates and solidify when solvents are removed, making flexography ideal for printing on impervious materials such as polyethylene, cellophane and other plastics and metallized surfaces. The soft plates allow quality printing on compressible surfaces such as cardboard packaging.

With low cost plates and a relatively simple two roller press, flexography is one of the least expensive and fastest growing printing processes. According to the Flexographic Technical Association, 85 percent of packaging is printed with flexography.<sup>21</sup> It is used primarily for packaging, such as plastic wrappers, corrugated boxes, milk cartons, labels, and foil and paper bags.

**Exhibit 6: Webfed Rotary Flexographic Press**

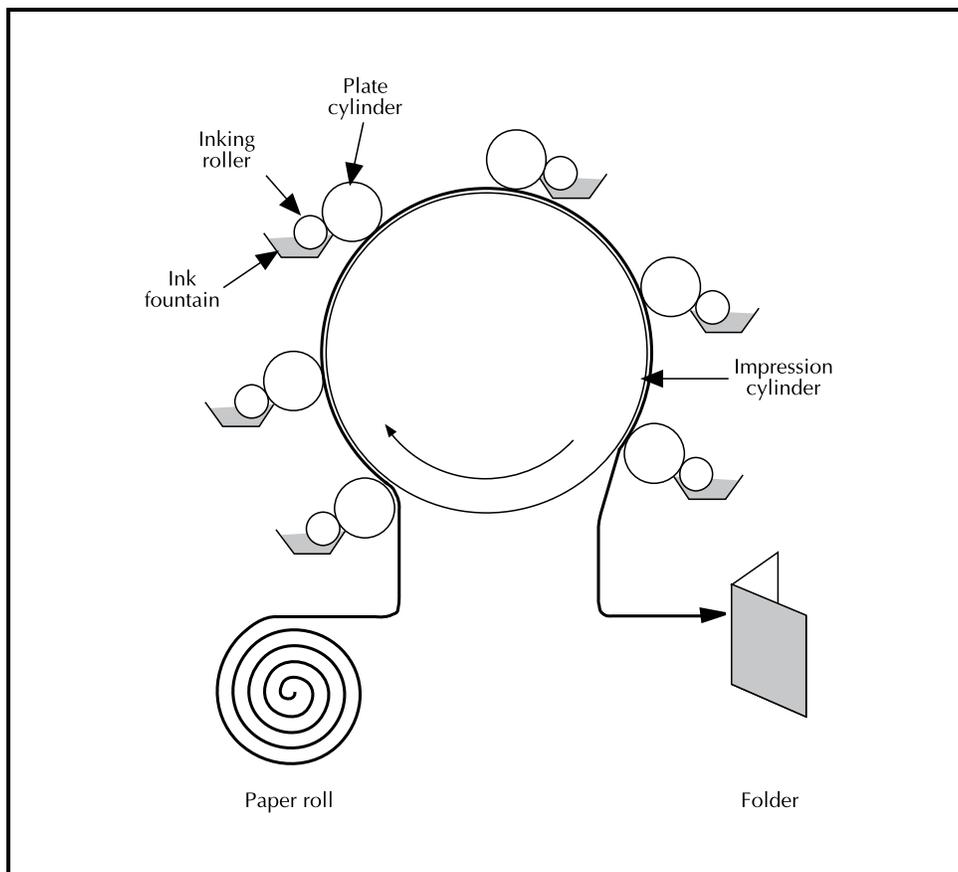

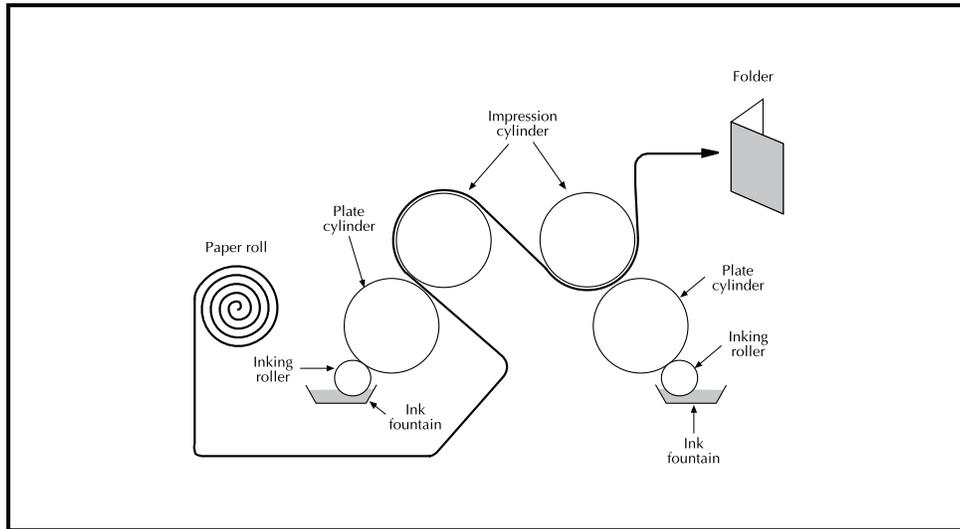

Source: EPA 1994

*Letterpress*

Like flexography, letterpress uses a plate with a raised image on a metal or plastic plate. The three types of letterpresses in use today are the platen, flat-bed, and rotary presses. On the platen press, the raised plate is locked on a flat surface. The substrate is placed on another flat surface and pressed against the inked plate. The flat-bed cylinder press prints as the substrate passes around an impression cylinder on its way from the feed stack to the delivery stack. These presses are often very slow relative to lithographic, flexographic or gravure presses. The most popular letterpress is the web-fed rotary letterpress. Designed to print both sides of the web simultaneously, these presses are used primarily for printing newspapers.

Letterpress was once the predominant printing method, but its prevalence has declined dramatically. It now accounts for an estimated 11 percent of the total value of the U.S. printing industry. Lithographic printing, gravure, and flexography have all begun to replace letterpress. Web letterpress, traditionally used to print newspapers, is being replaced by lithography and flexography. Gravure has largely replaced letterpress for printing long-run magazines and catalogs, while flexography is replacing it for printing paperbacks, labels, and business forms. Today, letterpress is primarily used for printing books, business cards, and advertising brochures.

### Exhibit 7: Rotary Letterpress Press

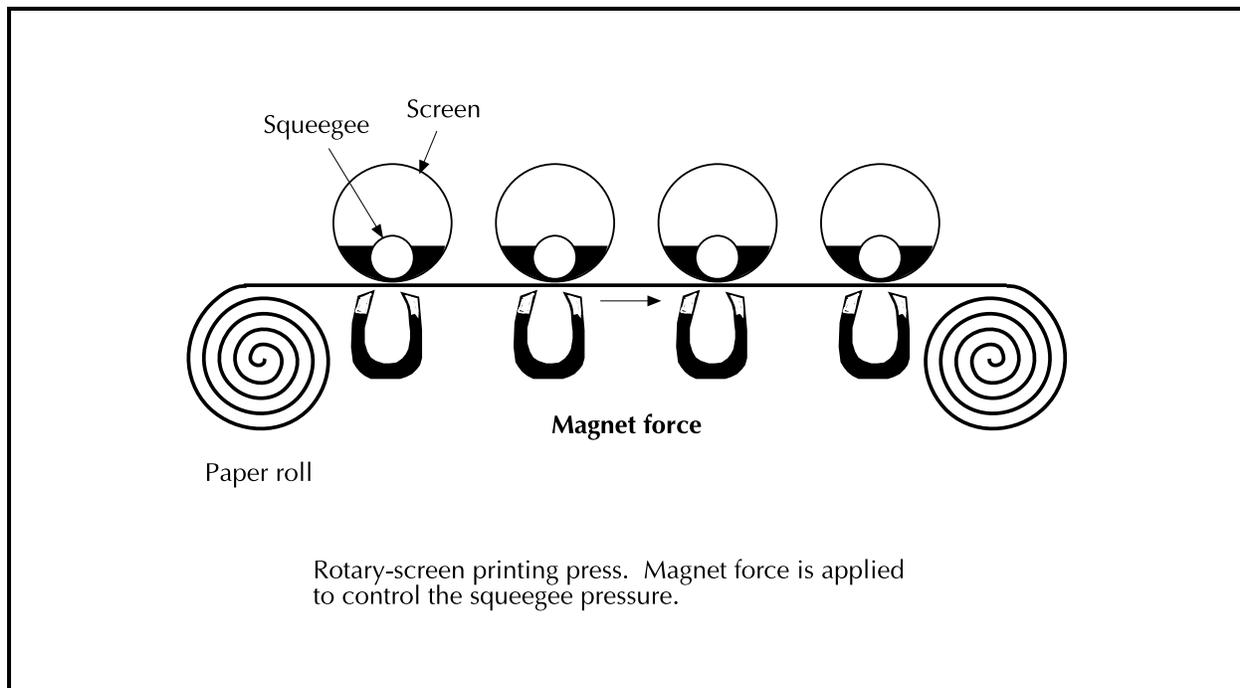

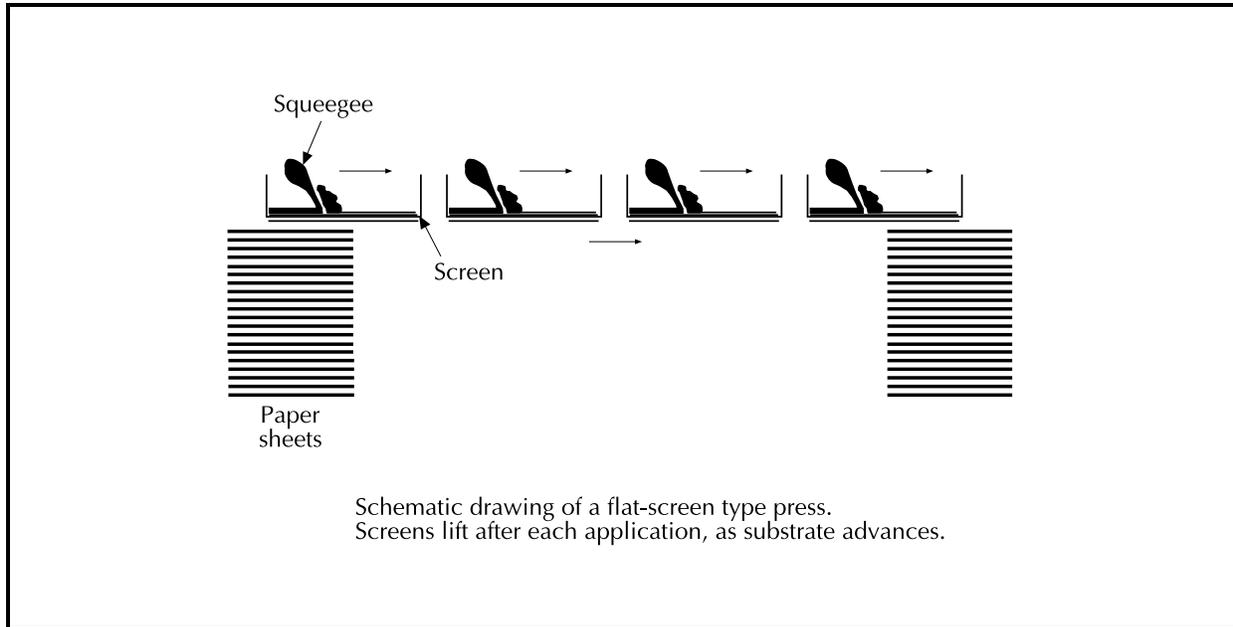

Source: EPA 1994

*Screen Printing*

Unlike the impervious plates used in the other four printing processes, the screen printing process uses a porous polyester mesh. The mesh is stretched tightly over a frame, and a stencil, which defines the image to be printed, is applied to the mesh. The squeegee applies pressure to the ink thereby forcing the ink through the open areas of the screen. The thread count and diameter determine the amount of ink deposited onto the substrate below.

The major chemicals used in screen printing process include organic solvents, adhesives and inks. The chemical composition of the ink used varies depending on the substrate printed and the end product produced. There are five main categories of inks used within the screen printing process: UV-curable, solvent-based, and water-based for graphic applications, plastisols for textile applications, and water-based for textile applications. Screen printing is an extremely versatile printing process, and can be used to print on a wide variety of substrates including paper, plastics, glass, metals, nylon and cotton to produce a wide variety of products including, but not limited to, posters, labels, fleet decals, signage, all types of textile garments and membrane circuits.<sup>22</sup>

### Exhibit 8: Two Methods of Screen Printing

Source: EPA 1994

*Plateless Technologies*

Plateless technologies include electrostatic and laser printing, and other printing methods which do not rely upon the use of a separately developed or prepared plate or screen. Although currently used primarily for low-volume applications, these methods are likely to see increased use as the technologies continue to develop.

**III.A.3. Post-press Operations**

Post-press processes include cutting, folding, collating, binding, perforating, drilling, and many others. From an environmental impact viewpoint, binding is the most significant of the post-press operations. Liquid glue used for binding is typically a water-based latex that becomes impervious to water when it dries.<sup>23</sup>

**III.B. Raw Material Inputs and Pollution Outputs in the Production Line**

Printing operations use materials that may adversely affect air, water, and land: certain chemicals involved in printing volatilize, which contributes to air emissions from the facility and to smog formation; other chemicals may be discharged to drains and impact freshwater or marine ecosystems; and solid wastes contribute to the existing local and regional disposal problems. The five printing processes outlined in the previous section have many common wastes; however, they also each have outputs that are process specific. Thus, it is important to note that wastes do differ from process to process and the solutions identified to reduce waste in one printing process do not necessarily apply to other printing processes. The following charts outline potential outputs for each of the five printing processes.

## Sector Notebook Project

## Printing and Publishing

<b>Exhibit 9: Lithography Process: Inputs, and Outputs</b>		
<b>Process</b>	<b>Inputs</b>	<b>Outputs</b>
Imaging	Film	Used film and out-of-date film.
	Paper	Scrap paper.
	Developer	May be volatile and contribute to air emissions. Spent developer (sent to POTW).
	Fixer	May be volatile and contribute to air emissions. Silver from film is often electrolytically recovered from the fixer prior to discharge of spent fixer to POTW.
	Wash Water	Used rinse water.
	Cleaning Solutions	Rags containing solvents (sent to laundry service or disposed of as hazardous waste).
	Chemical Storage Containers	Empty containers (disposed of or returned to suppliers).
Platemaking	Plates	Used plates.
	Water	Used rinse water (discharged to POTW).
	Developer	Spent developer (may contain alcohol; contributes to air emissions).
Printing	Fountain Solution	May contain VOCs and contribute to air emissions.
	Ink	Waste oil based ink disposed of as hazardous waste. Solvent-based inks contribute to air emissions.
	Paper	Waste paper from bringing press up to required print quality and from rejected prints.
	Cleaning Solutions	Solvents used to clean press and remove excess ink contribute to air emissions.
	Rags	Ink and solvent-laden rags (sent to laundry service, disposed of as hazardous waste, or treated to recover solvents).
Finishing	Paper	Reject prints and edges from trimming.
	Adhesives	Possible losses to the air.
	Shipping boxes	Waste issue.

## Sector Notebook Project

## Printing and Publishing

<b>Exhibit 10: Gravure Process: Inputs, and Outputs</b>		
<b>Process</b>	<b>Inputs</b>	<b>Outputs</b>
Imaging	Digital Data	Film or engraved image carrier (cylinder)
	Film	Used film and out-of-date film.
	Paper	Scrap paper.
	Photographic processing solution	May be volatile and contribute to air emissions. Waste solution.
	Wash Water	Used rinse water.
	Cleaning Solutions	Rags containing solvents (sent to laundry service, disposed of as hazardous waste, or treated to recover solvents).
	Chemical Storage Containers	Empty containers (disposed of or returned to suppliers).
Cylinder Making	Copper-clad Cylinder	Used cylinders.
	Acid etching solution	Waste solution.
Printing	Ink	Solvent-based inks (toluene-based for mass-circulation printing and alcohol-based for packaging) maintain the required low viscosity and contribute to air emissions. Waste ink disposed of as hazardous waste.
	Heat	Ovens are used to drive off the solvents to dry the ink. Ink solvents are recaptured through chillers and other equipment.
	Paper	Waste paper from bringing press up to required print quality and from rejected prints.
	Cleaning Solutions	Solvents used to remove excess ink contribute to air emissions.
Finishing	Paper	Reject prints and edges from trimming.
	Adhesives	Possible losses to the air.
	Shipping boxes	Waste issue.

## Sector Notebook Project

## Printing and Publishing

<b>Exhibit 11: Flexography Process: Inputs, and Outputs</b>		
<b>Process</b>	<b>Inputs</b>	<b>Outputs</b>
Imaging	Film	Used film and out-of-date film.
	Paper	Scrap paper.
	Developer	May be volatile and contribute to air emissions. Spent developer (to POTW).
	Fixer	May be volatile and contribute to air emissions. Silver from film is often electrolytically recovered from the fixer prior to disposal of spent fixer to POTW).
	Wash Water	Used rinse water.
	Cleaning Solutions	Rags containing solvents (sent to laundry service, disposed of as hazardous waste, or treated to recover solvents).
	Chemical Storage Containers	Empty containers (disposed of or returned to suppliers).
Platemaking	Plate mold	Used molds, engravings and washes.
	Rubber plate	Used plates, defective plates and photopolymer.
	Etching and wash-out solutions	Waste solution and spent solvents.
Printing	Ink	Waste ink disposed of as hazardous waste. Solvent-based inks contribute to air emissions.
	Paper/film	Waste paper and film from bringing press up to required print quality and from rejected prints.
	Heat	Exhaust heat and odor. High alcohol content of some inks contribute to air emissions as ink dries. Water-based inks are used for paper and some films.
	Cleaning Solutions	Solvents used to remove excess ink contribute to air emissions and hazardous wastes.
Finishing	Paper/film	Reject prints, edges from trimming, box and bag-making wastes.
	Adhesives	Possible losses to the air.
	Shipping boxes	Waste issue.

<b>Exhibit 13: Screen Printing Process: Inputs, and Outputs</b>		
<b>Process</b>	<b>Inputs</b>	<b>Outputs</b>
Imaging and Screen Making	Emulsion	Waste emulsion and out-of-date product.
	Photosensitization solution (needed for unsensitized films only)	Waste solution.
	Screen (polyester, nylon or wire mesh)	Excess screen trimmings; used screens.
	Frame	Reused.
	Developer	Spent developer (sent to POTW).
	Fixer	Spent fixer.
	Chemical Storage Containers	Empty containers.
Printing	Ink	Waste ink usually disposed of as hazardous waste. Solvent-based inks contribute to air emissions.
	Paper or other printing substrate	Waste paper from bringing press up to required print quality and from rejected prints.
	Blockout	Removed during screen reclamation and disposed with screen reclaim chemicals.
	Screen Reclamation Chemicals	Screen reclamation chemicals and ink are disposed of in rags and in clean-up wastewater.
	Water	Water used for screen reclamation is discharged to POTW; sometimes it is filtered prior to discharge.
Finishing	Paper or other printing substrate	Reject prints and edges from trimming.
	Adhesives	Possible losses to the air.
	Shipping boxes	Waste issue.

**IV. CHEMICAL RELEASE AND TRANSFER PROFILE**

This section is designed to provide background information on the pollutant releases that are reported by this industry. The best source of comparative pollutant release information is the Toxic Release Inventory System (TRI). Pursuant to the Emergency Planning and Community Right-to-Know Act (EPCRA), TRI includes self-reported facility release and transfer data for over 600 toxic chemicals. Facilities within SIC Codes 20 through 39 (manufacturing industries) that have more than 10 employees, and that are above weight-based reporting thresholds are required to report TRI on-site releases and off-site transfers. The information presented within the sector notebooks is derived from the most recently available (1993) TRI reporting year (which then included 316 chemicals), and focuses primarily on the on-site releases reported by each sector. Because TRI requires consistent reporting regardless of sector, it is an excellent tool for drawing comparisons across industries.

Although this sector notebook does not present historical information regarding TRI chemical releases, please note that in general, toxic chemical releases have been declining. In fact, according to the 1993 Toxic Release Inventory Data Book, reported releases dropped by 43 percent between 1988 and 1993. Although on-site releases have decreased, the total amount of reported toxic waste has not declined because the amount of toxic chemicals transferred off-site has increased. Transfers have increased from 3.7 billion pounds in 1991 to 4.7 billion pounds in 1993. Better management practices have led to increases in off-site transfers of toxic chemicals for recycling. More detailed information can be obtained from EPA's annual Toxics Release Inventory Public Data Release book (which is available through the EPCRA Hotline at 800-535-0202), or directly from the Toxic Release Inventory System database (for user support call 202-260-1531).

Wherever possible, the sector notebooks present TRI data as the primary indicator of chemical release within each industrial category. TRI data provide the type, amount and media receptor of each chemical released or transferred. When other sources of pollutant release data have been obtained, these data have been included to augment the TRI information.

**TRI Data Limitations**

The reader should keep in mind the following limitations regarding TRI data. Within some sectors, the majority of facilities are not subject to TRI reporting because they are not considered manufacturing industries, or because they are below TRI reporting thresholds. Examples are the mining, dry cleaning,

printing, and transportation equipment cleaning sectors. For these sectors, release information from other sources has been included.

The TRI data presented here does not accurately portray the printing industry's toxic chemical outputs due to the small number of printing facilities that report under EPCRA §313. The 1992 TRI printing industry data is based on information from 374 facilities, yet the printing industry universe has been put at approximately 70,000 facilities by industry sources; the TRI data covers less than one percent of U.S. printers. Small facilities that do not report to TRI because they are below the reporting thresholds of chemical use and/or employment are also somewhat less likely to be subject to the same regulatory requirements as larger facilities. A comprehensive picture of the chemical releases and transfers for the printing industry will be difficult without a separate release and transfer profile of the non-TRI-reporting printing facilities.

The reader should also be aware that TRI "pounds released" data presented within the notebooks is not equivalent to a "risk" ranking for each industry. Weighting each pound of release equally does not factor in the relative toxicity of each chemical that is released. The Agency is in the process of developing an approach to assign toxicological weightings to each chemical released so that one can differentiate between pollutants with significant differences in toxicity. As a preliminary indicator of the environmental impact of the industry's most commonly released chemicals, the notebook briefly summarizes the toxicological properties of the top five chemicals (by weight) reported by each industry.

## **Definitions Associated with Section IV Data Tables**

### **General Definitions**

**SIC Code** -- is the Standard Industrial Classification (SIC) is a statistical classification standard used for all establishment-based Federal economic statistics. The SIC codes facilitate comparisons between facility and industry data.

**TRI Facilities** -- are manufacturing facilities that have 10 or more full-time employees and are above established chemical throughput thresholds. Manufacturing facilities are defined as facilities in Standard Industrial Classification primary codes 20 through 39. Facilities must submit estimates for all chemicals that are on the EPA's defined list and are above throughput thresholds.

**Data Table Column Heading Definitions**

The following definitions are based upon standard definitions developed by EPA's Toxic Release Inventory Program. The categories below represent the possible pollutant destinations that can be reported.

**RELEASES** -- are an on-site discharge of a toxic chemical to the environment. This includes emissions to the air, discharges to bodies of water, releases at the facility to land, as well as contained disposal into underground injection wells.

**Releases to Air (Point and Fugitive Air Emissions)** -- Include all air emissions from industry activity. Point emission occur through confined air streams as found in stacks, ducts, or pipes. Fugitive emissions include losses from equipment leaks, or evaporative losses from impoundments, spills, or leaks.

**Releases to Water (Surface Water Discharges)** -- encompass any releases going directly to streams, rivers, lakes, oceans, or other bodies of water. Any estimates for stormwater runoff and non-point losses must also be included.

**Releases to Land** -- includes disposal of toxic chemicals in waste to on-site landfills, land treated or incorporation into soil, surface impoundments, spills, leaks, or waste piles. These activities must occur within the facility's boundaries for inclusion in this category.

**Underground Injection** -- is a contained release of a fluid into a subsurface well for the purpose of waste disposal.

**TRANSFERS** -- is a transfer of toxic chemicals in wastes to a facility that is geographically or physically separate from the facility reporting under TRI. The quantities reported represent a movement of the chemical away from the reporting facility. Except for off-site transfers for disposal, these quantities do not necessarily represent entry of the chemical into the environment.

**Transfers to POTWs** -- are wastewaters transferred through pipes or sewers to a publicly owned treatments works (POTW). Treatment and chemical removal depend on the chemical's nature and treatment methods used. Chemicals not treated or destroyed by the POTW are generally released to surface waters or landfilled within the sludge.

**Transfers to Recycling** -- are sent off-site for the purposes of regenerating or recovering still valuable materials. Once these chemicals have been recycled, they may be returned to the originating facility or sold commercially.

**Transfers to Energy Recovery** -- are wastes combusted off-site in industrial furnaces for energy recovery. Treatment of a chemical by incineration is not considered to be energy recovery.

**Transfers to Treatment** -- are wastes moved off-site for either neutralization, incineration, biological destruction, or physical separation. In some cases, the chemicals are not destroyed but prepared for further waste management.

**Transfers to Disposal** -- are wastes taken to another facility for disposal generally as a release to land or as an injection underground.

#### **IV.A. EPA Toxic Release Inventory for the Printing and Publishing Industry**

The total amount of TRI toxic chemicals generated by the printing industry is a gross profile of the types and relative amounts of chemical outputs from printing processes. Additional information which can be related back to possible compliance requirements is available from the distribution of chemical releases across specific media within the environment. The TRI data requires filers to separate the total releases for the printing industry for air, water, and land releases. This distribution across media can also be compared to the profile of other industry sectors.

The printing industry releases 99 percent of its total TRI poundage to the air, while the remaining one percent of releases are split between water and land disposal. This release profile differs significantly from other TRI industries which average approximately 60 percent to air, 30 percent to land, and 10 percent to water release respectively. Examining the printing industry's TRI reported toxic chemicals by chemical highlights the likely origins of the large air releases for the industry (see following table).

Of the top ten toxic chemicals in the list, the prevalence of volatile chemicals explains the air intensive toxic chemical loading of the printing industry. Of these ten toxic chemicals, seven are highly volatile. The four top toxic chemicals released, toluene, methyl ethyl ketone, xylene, and 1,1,1-trichloroethane, are all solvents of high volatility. By far the single largest toxic chemical used (released/transferred) by the printing industry is the solvent toluene; toluene comprises roughly 70 percent of the total chemicals released and transferred by the industry. Toluene is used heavily in the gravure printing process as an ink solvent, but is also used throughout printing

**Sector Notebook Project**

**Printing and Publishing**

for cleaning purposes. Metals on the other hand are typically transferred off-site, as a component of hazardous wastes or discharged to the sewer.

**IV.B. Summary of Selected Chemicals Released**

The brief descriptions provided below were taken from the *1993 Toxics Release Inventory Public Data Release* (EPA, 1994), and the Hazardous Substances Data Bank (HSDB), accessed via TOXNET. TOXNET is a computer system run by the National Library of Medicine. It includes a number of toxicological databases managed by EPA, National Cancer Institute, and the National Institute for Occupational Safety and Health.<sup>d</sup> HSDB contains chemical-specific information on manufacturing and use, chemical and physical properties, safety and handling, toxicity and biomedical

<sup>c</sup> Being included on this list does not mean that the release is associated with non-compliance with environmental laws.

<sup>d</sup> Databases included in TOXNET are: CCRIS (Chemical Carcinogenesis Research Information System), DART (Developmental and Reproductive Toxicity Database), DBIR (Directory of Biotechnology Information Resources), EMICBACK (Environmental Mutagen Information Center Backfile), GENE-TOX (Genetic Toxicology), HSDB (Hazardous Substances Data Bank), IRIS (Integrated Risk Information System), RTECS (Registry of Toxic Effects of Chemical Substances), and TRI (Toxic Release Inventory).

effects, pharmacology, environmental fate and exposure potential, exposure standards and regulations, monitoring and analysis methods, and additional references. The information contained below is based upon exposure assumptions that have been conducted using standard scientific procedures. The effects listed below must be taken in context of these exposure assumptions that are more fully explained within the full chemical profiles in HSDB. For more information on TOXNET, contact the TOXNET help line at 800-231-3766.

Toluene (CAS: 108-88-3)

**Toxicity.** Inhalation or ingestion of toluene can cause headaches, confusion, weakness, and memory loss. Toluene may also affect the way the kidneys and liver function.

Reactions of toluene (see environmental fate) in the atmosphere contribute to the formation of ozone in the lower atmosphere. Ozone can affect the respiratory system, especially in sensitive individuals such as asthma or allergy sufferers.

Some studies have shown that unborn animals were harmed when high levels of toluene were inhaled by their mothers, although the same effects were not seen when the mothers were fed large quantities of toluene. Note that these results may reflect similar difficulties in humans.

**Carcinogenicity.** There is currently no evidence to suggest that this chemical is carcinogenic.

**Environmental Fate.** The majority of releases of toluene to land and water will evaporate. Toluene may also be degraded by microorganisms. Once volatilized, toluene in the lower atmosphere will react with other atmospheric components contributing to the formation of ground-level ozone and other air pollutants.

**Physical Properties.** Toluene is a volatile organic chemical.

Glycol Ethers

Data on ethylene glycol mono-n-butyl ether (2-butoxyethanol) are used to represent all glycol ethers because it is the most commonly used glycol ether in printing.

Ethylene Glycol Mono-n-Butyl Ether (2-Butoxyethanol)

**Toxicity.** Exposure to moderate concentrations of 2-butoxyethanol may cause central nervous system depression, including headaches, drowsiness, weakness, slurred speech, stuttering, staggering, tremors, blurred vision, and personality changes. These symptoms are such that a patient, in the absence of an accurate occupational history, may be treated for schizophrenia or narcolepsy. Other symptoms of moderate poisoning include nausea; vomiting; diarrhea; blood toxicity; abdominal and lumbar pain; and lesions in the brain, lung, liver, meninges and heart. Exposure to higher concentrations may lead to skin, respiratory, and eye irritation; kidney and liver damage; and coma.

It appears that 2-butoxyethanol is one of the few materials to which humans are more resistant than experimental animals. This appears to be at least partly due to the fact that humans are more resistant to the chemical's red blood cell-destroying properties than are most lab animals.

**Environmental fate.** The chemical 2-butoxyethanol is highly mobile in soils and should not accumulate in organic matter contained in sediments and suspended solids. Limited monitoring data has shown that it can leach to ground water. Hydrolysis, direct photolysis, volatilization, adsorption, and bioconcentration are not important fate processes for 2-butoxyethanol. Biodegradation is likely to be the most important removal mechanism of 2-butoxyethanol from aerobic soil and water. In the atmosphere, it reacts with photochemically produced hydroxyl radicals with an estimated half-life of 17 hours.

Methyl Ethyl Ketone (CAS: 78-93-3)

**Toxicity.** Breathing moderate amounts of methyl ethyl ketone (MEK) for short periods of time can cause adverse effects on the nervous system ranging from headaches, dizziness, nausea, and numbness in the fingers and toes to unconsciousness. Its vapors are irritating to the skin, eyes, nose, and throat and can damage the eyes. Repeated exposure to moderate to high amounts may cause liver and kidney effects.

**Environmental Fate.** MEK is a flammable liquid. Most of the MEK released to the environment will end up in the atmosphere. MEK can contribute to the formation of air pollutants in the lower atmosphere. It can be degraded by microorganisms living in water and soil.

1,1,1-Trichloroethane (CAS: 71-55-6)

**Toxicity.** Repeated contact of 1,1,1-trichloroethane (TCE) with skin may cause serious skin cracking and infection. Vapors cause a slight smarting of the eyes or respiratory system if present in high concentrations.

Exposure to high concentrations of TCE causes reversible mild liver and kidney dysfunction, central nervous system depression, gait disturbances, stupor, coma, respiratory depression, and even death. Exposure to lower concentrations of TCE leads to light-headedness, throat irritation, headache, disequilibrium, impaired coordination, drowsiness, convulsions and mild changes in perception.

**Carcinogenicity.** There is currently no evidence to suggest that this chemical is carcinogenic.

**Environmental Fate.** Releases of TCE to surface water or land will almost entirely volatilize. Releases to air may be transported long distances and may partially return to earth in rain. In the lower atmosphere, TCE degrades very slowly by photooxidation and slowly diffuses to the upper atmosphere where photodegradation is rapid.

Any TCE that does not evaporate from soils leaches to groundwater. Degradation in soils and water is slow. TCE does not hydrolyze in water, nor does it significantly bioconcentrate in aquatic organisms.

Xylene (Mixed Isomers) (CAS: 1330-20-7)

**Toxicity.** Xylenes are rapidly absorbed into the body after inhalation, ingestion, or skin contact. Short-term exposure of humans to high levels of xylenes can cause irritation of the skin, eyes, nose, and throat, difficulty in breathing, impaired lung function, impaired memory, and possible changes in the liver and kidneys. Both short- and long-term exposure to high concentrations can cause effects such as headaches, dizziness, confusion, and lack of muscle coordination. Reactions of xylenes (see environmental fate) in the atmosphere contribute to the formation of ozone in the lower atmosphere. Ozone can affect the respiratory system, especially in sensitive individuals such as asthma or allergy sufferers.

**Carcinogenicity.** There is currently no evidence to suggest that this chemical is carcinogenic.

**Environmental Fate.** The majority of releases to land and water will quickly evaporate, although some degradation by microorganisms will occur.

Xylenes are moderately mobile in soils and may leach into groundwater, where they may persist for several years.

Xylenes are volatile organic chemicals. As such, xylenes in the lower atmosphere will react with other atmospheric components, contributing to the formation of ground-level ozone and other air pollutants.

#### **IV.C. Other Data Sources**

The toxic chemical release data obtained from TRI allows for a comparison across years and industry sectors. Reported chemicals are limited however to the 316 reported chemicals. The EPA Office of Air Quality Planning and Standards has compiled air pollutant emission factors for determining the total air emissions of priority pollutants (e.g., total hydrocarbons, SO<sub>x</sub>, NO<sub>x</sub>, CO, particulates, etc.) from various industry sectors including printing facilities.

The Aerometric Information Retrieval System (AIRS) contains a wide range of information related to stationary sources of air pollution, including the emissions of a number of air pollutants which may be of concern within a particular industry. With the exception of volatile organic compounds (VOCs), there is little overlap with the TRI chemicals reported above. Exhibit 17 summarizes annual releases of carbon monoxide (CO), nitrogen dioxide (NO<sub>2</sub>), particulate matter of 10 microns or less (PM10), total particulates (PT), sulfur dioxide (SO<sub>2</sub>), and volatile organic compounds (VOCs).

**IV.D. Comparison of Toxic Release Inventory Between Selected Industries**

The following information is presented as a comparison of pollutant release and transfer data cross industrial categories. It is provided to give a general sense as to the relative scale of releases and transfers within each sector profiled under this project. Please note that the following figure and table do not contain releases and transfers for industrial categories that are not included in this project, and thus cannot be used to draw conclusions regarding the total release and transfer amounts that are reported to TRI. Similar information is available within the annual TRI Public Data Release Book.

Exhibit 18 is a graphical representation of a summary of the 1993 TRI data for the Printing and Publishing and the other sectors profiled in separate notebooks. The bar graph presents the total TRI releases and total transfers on the left axis and the triangle points show the average releases per facility on the right axis. Industry sectors are presented in the order of increasing total TRI releases. The graph is based on the data shown in Exhibit 19 and is meant to facilitate comparisons between the relative amounts of releases, transfers, and releases per facility both within and between these sectors. The reader should note, however, that differences in the proportion of facilities captured by TRI exist between industry sectors. This can be a factor of poor SIC matching and relative differences in the number of facilities reporting to TRI from the various sectors. In the case of Printing and Publishing, the 1993 TRI data presented here covers 318 facilities. These facilities listed SIC 2711-2789 (Printing and Publishing) as a primary SIC code.

**Exhibit 18: Summary of 1993 TRI Data:  
Releases and Transfers by Industry**

SIC Range	Industry Sector	SIC Range	Industry Sector	SIC Range	Industry Sector
36	Electronic Equipment and Components	2911	Petroleum Refining	286	Organic Chemical Mfg.
24	Lumber and Wood Products	34	Fabricated Metals	26	Pulp and Paper

**V. POLLUTION PREVENTION OPPORTUNITIES**

The best way to reduce pollution is to prevent it in the first place. Industries have creatively implemented pollution prevention techniques that improve efficiency and increase profits while at the same time minimizing environmental impacts. This can be done in many ways such as reducing material inputs, re-engineering processes to reuse by-products, improving management practices, and employing substitution of toxic chemicals. Some smaller facilities are able to actually get below regulatory thresholds just by reducing pollutant releases through aggressive pollution prevention policies.

In order to encourage these approaches, this section provides both general and company-specific descriptions of some pollution prevention advances that have been implemented within the printing and publishing industry. While the list is not exhaustive, it does provide core information that can be used as the starting point for facilities interested in beginning their own pollution prevention projects. When possible, this section provides information from real activities that can, or are being implemented by this sector -- including a discussion of associated costs, time frames, and expected rates of return. This section also provides the context (in terms of type of industry and/or type of process affected) in which the pollution prevention technique can effectively be used.

**V.A. Pollution Prevention Opportunities for the Printing and Publishing Industry**

Printers use various chemicals throughout their facilities. The payoff from many of the possible changes in the printing process or product choice is unlikely to have a significant effect on a facility's overall emissions profile because these chemicals and chemical formulations are often used in relatively small quantities. Instead, pollution prevention for printers involves a longer-term reorientation of production staff and management priorities so that opportunities are recognized and acted upon as they arise. For example, a one-time pollution prevention audit may not identify novel press technologies capable of reducing VOC emissions if the purchase is not likely to occur for several years, but the practice of on-going pollution prevention auditing, once established, will identify when the time and conditions are right.

This section is structured according to the steps within pre-press, press and post-press operations. Pollution prevention opportunities for specific printing processes (e.g., lithography) are presented separately wherever warranted.

**V.A.1. Pre-press - Image Making Operations**

**Sector Notebook Project****Printing and Publishing**

Image making most frequently involves typesetting and photodeveloping. Typical wastestreams include: photographic chemicals, paper and films, silver, and solid wastes. Pollution prevention opportunities include:

- Implementing operational and work practice changes that can extend the life of chemical baths, reduce the amount of chemicals used and reduce wastewater generation;
- Using chemical substitutes, such as non-silver photographic films (under development);
- Replacing the sometimes repetitive steps of photographing, editing, re-shooting, and the photodeveloping process with electronic imaging (including the capability to edit images on a computer)
- Developing inventory control programs that offer the advantage of reducing spoilage of photodeveloping chemicals and supplies such as paper and film.

**V.A.2. Pre-press - Plate Making/Screen Making Operations**

Typical wastestreams include: outdated material and chemicals, damaged or used plates and screens, wastewaters containing acids, alkalis, solvents, plate coatings, developers, screen emulsions, and rinse water. Pollution prevention opportunities include:

- Changing operational and work practices to reduce chemical use including recovery and recycling of spent chemicals and heavy metals, which require steps to reduce contamination of chemical baths; counter-current washing; and filtration of screen making wastewaters to remove particulates;
- Recycling plates and plate materials to the manufacturer or a metal recoverer;
- Researching and commercializing of other major changes in printing plate development, primarily related to alternative chemistries. For example, using water-developed lithographic plates and film instead of solvent processing may eliminate the need for pretreatment of wastewaters if they are being discharged to the sewer;
- Replacing ferrocyanide bleaches with iron-EDTA bleaches which eliminate certain treatment and disposal requirements;
- Reducing environmental releases related to plate-making and screen-making through new techniques. For example, laser plate making using non-silver plates is under commercial development and could replace chemical development of plates;

- Reducing wastewater through new technologies such as "washless" processing systems. While still expensive to install, these systems can reduce wastewater by as much as 97 percent.

### **V.A.3. Press Operations**

During printing, the image is transferred to a substrate of paper or some other material. Typical wastestreams include: inks, substrate, cleaning solutions, and in the case of lithography, fountain solutions. Pollution prevention opportunities include:

- Improving housekeeping and better operating practices, such as covering reservoirs and containers, scheduling jobs according to increasing darkness of ink color, using wipes as long as possible, and controlling inventory, can all minimize solvent losses from inks and cleaning solutions.
- Reducing ink vaporization by using diaphragm pumps which do not heat ink as much as mechanical vane pumps.
- Recycling waste solvents on-site or off-site. Segregating of solvents may allow a second use (e.g., for equipment cleaning or ink thinning).
- Recycling of certain waste inks where possible.
- Recycling of product rejects where possible.
- Using alternative ink and cleaning products with reduced VOC emissions. Lowering the VOC emissions from printing and press cleanup may be accomplished using vegetable oil-based inks or water-based inks (rather than solvent-based inks) where possible and using low-VOC or VOC-free cleaning solutions. A new printing system that features an oil-based lithographic ink that can be converted to a water-soluble state is currently available, allowing a water-based blanket wash to be used.
- Eliminating the use of chromium-containing fountain solutions to reduce the toxicity of spent fountain solutions.
- Installing automatic ink levelers help to keep ink conditions optimal.
- Using automatic cleaning equipment which can often be retrofitted to existing presses and operations. Typically, lower volumes of cleaning formulations are applied with such cleaning equipment, air contact, and thus volatilization, is reduced, and most are designed to include recycling and reuse of cleaning solutions.
- Minimizing finished product rejects by automating (noncontact) monitoring technologies which detect tears in web and press performance.
- Using fountain coolers to reduce evaporation from the dampening fountain.

**V.A.4. Post-Press Operations**

The final steps in making a printed product may involve folding, trimming, binding, laminating and embossing. Typical wastestreams include: scrap substrate from trimming, rejects from finishing operations, and VOCs released from adhesives. Pollution prevention opportunities include:

- Collecting and reclaiming recyclable materials is often done.
- Replacing VOC-based adhesives with water-soluble adhesives (binding adhesives that are not water-soluble may interfere with later recycling), hot-melt adhesives, or mechanical methods in binding operations.

**VI. SUMMARY OF APPLICABLE FEDERAL STATUTES AND REGULATIONS**

This section discusses the Federal statutes and regulations that may apply to this sector. The purpose of this section is to highlight, and briefly describe the applicable Federal requirements, and to provide citations for more detailed information. The three following sections are included.

- Section VI.A. contains a general overview of major statutes
- Section VI.B. contains a list of regulations specific to this industry
- Section VI.C. contains a list of pending and proposed regulations

The descriptions within Section VI are intended solely for general information. Depending upon the nature or scope of the activities at a particular facility, these summaries may or may not necessarily describe all applicable environmental requirements. Moreover, they do not constitute formal interpretations or clarifications of the statutes and regulations. For further information, readers should consult the Code of Federal Regulations and other state or local regulatory agencies. EPA Hotline contacts are also provided for each major statute.

**VI.A. General Description of Major Statutes***Resource Conservation And Recovery Act*

The Resource Conservation And Recovery Act (RCRA) of 1976 which amended the Solid Waste Disposal Act, addresses solid (Subtitle D) and hazardous (Subtitle C) waste management activities. The Hazardous and Solid Waste Amendments (HSWA) of 1984 strengthened RCRA's waste management provisions and added Subtitle I, which governs underground storage tanks (USTs).

Regulations promulgated pursuant to Subtitle C of RCRA (40 CFR Parts 260-299) establish a "cradle-to-grave" system governing hazardous waste from the point of generation to disposal. RCRA hazardous wastes include the specific materials listed in the regulations (commercial chemical products, designated with the code "P" or "U"; hazardous wastes from specific industries/sources, designated with the code "K"; or hazardous wastes from non-specific sources, designated with the code "F") or materials which exhibit a hazardous waste characteristic (ignitibility, corrosivity, reactivity, or toxicity and designated with the code "D").

Regulated entities that generate hazardous waste are subject to waste accumulation, manifesting, and record keeping standards. Facilities that treat, store, or dispose of hazardous waste must obtain a permit, either from EPA

or from a State agency which EPA has authorized to implement the permitting program. Subtitle C permits contain general facility standards such as contingency plans, emergency procedures, record keeping and reporting requirements, financial assurance mechanisms, and unit-specific standards. RCRA also contains provisions (40 CFR Part 264 Subpart S and §264.10) for conducting corrective actions which govern the cleanup of releases of hazardous waste or constituents from solid waste management units at RCRA-regulated facilities.

Although RCRA is a Federal statute, many States implement the RCRA program. Currently, EPA has delegated its authority to implement various provisions of RCRA to 46 of the 50 States.

Most RCRA requirements are not industry specific but apply to any company that generates, transports, treats, stores, or disposes of hazardous waste. Here are some important RCRA regulatory requirements:

- **Identification of Solid and Hazardous Wastes** (40 CFR Part 261) lays out the procedure every generator should follow to determine whether the material created is considered a hazardous waste, solid waste, or is exempted from regulation.
- **Standards for Generators of Hazardous Waste** (40 CFR Part 262) establishes the responsibilities of hazardous waste generators including obtaining an ID number, preparing a manifest, ensuring proper packaging and labeling, meeting standards for waste accumulation units, and record keeping and reporting requirements. Generators can accumulate hazardous waste for up to 90 days (or 180 days depending on the amount of waste generated) without obtaining a permit.
- **Land Disposal Restrictions** (LDRs) are regulations prohibiting the disposal of hazardous waste on land without prior treatment. Under the LDRs (40 CFR 268), materials must meet land disposal restriction (LDR) treatment standards prior to placement in a RCRA land disposal unit (landfill, land treatment unit, waste pile, or surface impoundment). Wastes subject to the LDRs include solvents, electroplating wastes, heavy metals, and acids. Generators of waste subject to the LDRs must provide notification of such to the designated TSD facility to ensure proper treatment prior to disposal.
- **Used Oil Management Standards** (40 CFR Part 279) impose management requirements affecting the storage, transportation, burning, processing, and re-refining of the used oil. For parties that merely generate used oil, regulations establish storage standards. For

a party considered a used oil marketer (one who generates and sells off-specification used oil directly to a used oil burner), additional tracking and paperwork requirements must be satisfied.

- **Tanks and Containers** used to store hazardous waste with a high volatile organic concentration must meet emission standards under RCRA. Regulations (40 CFR Part 264-265, Subpart CC) require generators to test the waste to determine the concentration of the waste, to satisfy tank and container emissions standards, and to inspect and monitor regulated units. These regulations apply to all facilities who store such waste, including generators operating under the 90-day accumulation rule.
- **Underground Storage Tanks (USTs)** containing petroleum and hazardous substance are regulated under Subtitle I of RCRA. Subtitle I regulations (40 CFR Part 280) contain tank design and release detection requirements, as well as financial responsibility and corrective action standards for USTs. The UST program also establishes increasingly stringent standards, including upgrade requirements for existing tanks, that must be met by 1998.
- **Boilers and Industrial Furnaces (BIFs)** that use or burn fuel containing hazardous waste must comply with strict design and operating standards. BIF regulations (40 CFR Part 266, Subpart H) address unit design, provide performance standards, require emissions monitoring, and restrict the type of waste that may be burned.

*EPA's RCRA/Superfund/UST Hotline, at (800) 424-9346, responds to questions and distributes guidance regarding all RCRA regulations. The RCRA Hotline operates weekdays from 8:30 a.m. to 7:30 p.m., ET, excluding Federal holidays.*

### *Comprehensive Environmental Response, Compensation, And Liability Act*

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), a 1980 law commonly known as Superfund, authorizes EPA to respond to releases, or threatened releases, of hazardous substances that may endanger public health, welfare, or the environment. CERCLA also enables EPA to force parties responsible for environmental contamination to clean it up or to reimburse the Superfund for response costs incurred by EPA. The Superfund Amendments and Reauthorization Act (SARA) of 1986 revised various sections of CERCLA, extended the taxing authority for the Superfund, and created a free-standing law, SARA Title III, also known as the Emergency Planning and Community Right-to-Know Act (EPCRA).

The CERCLA **hazardous substance release reporting regulations** (40 CFR Part 302) direct the person in charge of a facility to report to the National Response Center (NRC) any environmental release of a hazardous substance which exceeds a reportable quantity. Reportable quantities are defined and listed in 40 CFR §302.4. A release report may trigger a response by EPA, or by one or more Federal or State emergency response authorities.

EPA implements **hazardous substance responses** according to procedures outlined in the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) (40 CFR Part 300). The NCP includes provisions for permanent cleanups, known as remedial actions, and other cleanups referred to as "removals." EPA generally takes remedial actions only at sites on the National Priorities List (NPL), which currently includes approximately 1300 sites. Both EPA and states can act at other sites; however, EPA provides responsible parties the opportunity to conduct removal and remedial actions and encourages community involvement throughout the Superfund response process.

*EPA's RCRA/Superfund/UST Hotline, at (800) 424-9346, answers questions and references guidance pertaining to the Superfund program. The CERCLA Hotline operates weekdays from 8:30 a.m. to 7:30 p.m., ET, excluding Federal holidays.*

### *Emergency Planning And Community Right-To-Know Act*

The Superfund Amendments and Reauthorization Act (SARA) of 1986 created the Emergency Planning and Community Right-to-Know Act (EPCRA, also known as SARA Title III), a statute designed to improve community access to information about chemical hazards and to facilitate the development of chemical emergency response plans by State and local governments. EPCRA required the establishment of State emergency response commissions (SERCs), responsible for coordinating certain emergency response activities and for appointing local emergency planning committees (LEPCs).

EPCRA and the EPCRA regulations (40 CFR Parts 350-372) establish four types of reporting obligations for facilities which store or manage specified chemicals:

- **EPCRA §302** requires facilities to notify the SERC and LEPC of the presence of any "extremely hazardous substance" (the list of such substances is in 40 CFR Part 355, Appendices A and B) if it has such substance in excess of the substance's threshold planning quantity, and directs the facility to appoint an emergency response coordinator.

- **EPCRA §304** requires the facility to notify the SERC and the LEPC in the event of a release exceeding the reportable quantity of a CERCLA hazardous substance or an EPCRA extremely hazardous substance.
- **EPCRA §311 and §312** require a facility at which a hazardous chemical, as defined by the Occupational Safety and Health Act, is present in an amount exceeding a specified threshold to submit to the SERC, LEPC and local fire department material safety data sheets (MSDSs) or lists of MSDS's and hazardous chemical inventory forms (also known as Tier I and II forms). This information helps the local government respond in the event of a spill or release of the chemical.
- **EPCRA §313** requires manufacturing facilities included in SIC codes 20 through 39, which have ten or more employees, and which manufacture, process, or use specified chemicals in amounts greater than threshold quantities, to submit an annual toxic chemical release report. This report, commonly known as the Form R, covers releases and transfers of toxic chemicals to various facilities and environmental media, and allows EPA to compile the national Toxic Release Inventory (TRI) database.

All information submitted pursuant to EPCRA regulations is publicly accessible, unless protected by a trade secret claim.

*EPA's EPCRA Hotline, at (800) 535-0202, answers questions and distributes guidance regarding the emergency planning and community right-to-know regulations. The EPCRA Hotline operates weekdays from 8:30 a.m. to 7:30 p.m., ET, excluding Federal holidays.*

### *Clean Water Act*

The primary objective of the Federal Water Pollution Control Act, commonly referred to as the Clean Water Act (CWA), is to restore and maintain the chemical, physical, and biological integrity of the nation's surface waters. Pollutants regulated under the CWA include "priority" pollutants, including various toxic pollutants; "conventional" pollutants, such as biochemical oxygen demand (BOD), total suspended solids (TSS), fecal coliform, oil and grease, and pH; and "non-conventional" pollutants, including any pollutant not identified as either conventional or priority.

The CWA regulates both direct and indirect discharges. The **National Pollutant Discharge Elimination System (NPDES)** program (CWA §402)

controls direct discharges into navigable waters. Direct discharges or "point source" discharges are from sources such as pipes and sewers. NPDES permits, issued by either EPA or an authorized State (EPA has authorized approximately forty States to administer the NPDES program), contain industry-specific, technology-based and/or water quality-based limits, and establish pollutant monitoring requirements. A facility that intends to discharge into the nation's waters must obtain a permit prior to initiating its discharge. A permit applicant must provide quantitative analytical data identifying the types of pollutants present in the facility's effluent. The permit will then set forth the conditions and effluent limitations under which a facility may make a discharge.

A NPDES permit may also include discharge limits based on Federal or State water quality criteria or standards, that were designed to protect designated uses of surface waters, such as supporting aquatic life or recreation. These standards, unlike the technological standards, generally do not take into account technological feasibility or costs. Water quality criteria and standards vary from State to State, and site to site, depending on the use classification of the receiving body of water. Most States follow EPA guidelines which propose aquatic life and human health criteria for many of the 126 priority pollutants.

#### Storm Water Discharges

In 1987 the CWA was amended to require EPA to establish a program to address **storm water discharges**. In response, EPA promulgated the NPDES storm water permit application regulations. Stormwater discharge associated with industrial activity means the discharge from any conveyance which is used for collecting and conveying stormwater and which is directly related to manufacturing, processing or raw material storage areas at an industrial plant (40 CFR 122.26(b)(14)). These regulations require that facilities with the following storm water discharges apply for an NPDES permit: (1) a discharge associated with industrial activity; (2) a discharge from a large or medium municipal storm sewer system; or (3) a discharge which EPA or the State determines to contribute to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

The term "storm water discharge associated with industrial activity" means a storm water discharge from one of 11 categories of industrial activity defined at 40 CFR 122.26. Six of the categories are defined by SIC codes while the other five are identified through narrative descriptions of the regulated industrial activity. If the primary SIC code of the facility is one of those identified in the regulations, the facility is subject to the storm water permit application requirements. If any activity at a facility is covered by one of the

**Sector Notebook Project****Printing and Publishing**

five narrative categories, storm water discharges from those areas where the activities occur are subject to storm water discharge permit application requirements.

Those facilities/activities that are subject to storm water discharge permit application requirements are identified below. To determine whether a particular facility falls within one of these categories, the regulation should be consulted.

**Category i:** Facilities subject to storm water effluent guidelines, new source performance standards, or toxic pollutant effluent standards.

**Category ii:** Facilities classified as SIC 24-lumber and wood products (except wood kitchen cabinets); SIC 26-paper and allied products (except paperboard containers and products); SIC 28-chemicals and allied products (except drugs and paints); SIC 229-petroleum refining; and SIC 311-leather tanning and finishing.

**Category iii:** Facilities classified as SIC 10-metal mining; SIC 12-coal mining; SIC 13-oil and gas extraction; and SIC 14-nonmetallic mineral mining.

**Category iv:** Hazardous waste treatment, storage, or disposal facilities.

**Category v:** Landfills, land application sites, and open dumps that receive or have received industrial wastes.

**Category vi:** Facilities classified as SIC 5015-used motor vehicle parts; and SIC 5093-automotive scrap and waste material recycling facilities.

**Category vii:** Steam electric power generating facilities.

**Category viii:** Facilities classified as SIC 40-railroad transportation; SIC 41-local passenger transportation; SIC 42-trucking and warehousing (except public warehousing and storage); SIC 43-U.S. Postal Service; SIC 44-water transportation; SIC 45-transportation by air; and SIC 5171-petroleum bulk storage stations and terminals.

**Category ix:** Sewage treatment works.

**Category x:** Construction activities except operations that result in the disturbance of less than five acres of total land area.

**Category xi:** Facilities classified as SIC 20-food and kindred products; SIC 21-tobacco products; SIC 22-textile mill products; SIC 23-apparel related

products; SIC 2434-wood kitchen cabinets manufacturing; SIC 25-furniture and fixtures; SIC 265-paperboard containers and boxes; SIC 267-converted paper and paperboard products; SIC 27-printing, publishing, and allied industries; SIC 283-drugs; SIC 285-paints, varnishes, lacquer, enamels, and allied products; SIC 30-rubber and plastics; SIC 31-leather and leather products (except leather and tanning and finishing); SIC 323-glass products; SIC 34-fabricated metal products (except fabricated structural metal); SIC 35-industrial and commercial machinery and computer equipment; SIC 36-electronic and other electrical equipment and components; SIC 37-transportation equipment (except ship and boat building and repairing); SIC 38-measuring, analyzing, and controlling instruments; SIC 39-miscellaneous manufacturing industries; and SIC 4221-4225-public warehousing and storage.

#### Pretreatment Program

Another type of discharge that is regulated by the CWA is one that goes to a publicly-owned treatment works (POTWs). The national **pretreatment program** (CWA §307(b)) controls the indirect discharge of pollutants to POTWs by "industrial users." Facilities regulated under §307(b) must meet certain pretreatment standards. The goal of the pretreatment program is to protect municipal wastewater treatment plants from damage that may occur when hazardous, toxic, or other wastes are discharged into a sewer system and to protect the quality of sludge generated by these plants. Discharges to a POTW are regulated primarily by the POTW itself, rather than the State or EPA.

EPA has developed technology-based standards for industrial users of POTWs. Different standards apply to existing and new sources within each category. "Categorical" pretreatment standards applicable to an industry on a nationwide basis are developed by EPA. In addition, another kind of pretreatment standard, "local limits," are developed by the POTW in order to assist the POTW in achieving the effluent limitations in its NPDES permit.

Regardless of whether a State is authorized to implement either the NPDES or the pretreatment program, if it develops its own program, it may enforce requirements more stringent than Federal standards.

*EPA's Office of Water, at (202) 260-5700, will direct callers with questions about the CWA to the appropriate EPA office. EPA also maintains a bibliographic database of Office of Water publications which can be accessed through the Ground Water and Drinking Water resource center, at (202) 260-7786.*

**Sector Notebook Project****Printing and Publishing***Safe Drinking Water Act*

The Safe Drinking Water Act (SDWA) mandates that EPA establish regulations to protect human health from contaminants in drinking water. The law authorizes EPA to develop national drinking water standards and to create a joint Federal-State system to ensure compliance with these standards. The SDWA also directs EPA to protect underground sources of drinking water through the control of underground injection of liquid wastes.

EPA has developed primary and secondary drinking water standards under its SDWA authority. EPA and authorized States enforce the primary drinking water standards, which are, contaminant-specific concentration limits that apply to certain public drinking water supplies. Primary drinking water standards consist of maximum contaminant level goals (MCLGs), which are non-enforceable health-based goals, and maximum contaminant levels (MCLs), which are enforceable limits set as close to MCLGs as possible, considering cost and feasibility of attainment.

The SDWA **Underground Injection Control** (UIC) program (40 CFR Parts 144-148) is a permit program which protects underground sources of drinking water by regulating five classes of injection wells. UIC permits include design, operating, inspection, and monitoring requirements. Wells used to inject hazardous wastes must also comply with RCRA corrective action standards in order to be granted a RCRA permit, and must meet applicable RCRA land disposal restrictions standards. The UIC permit program is primarily State-enforced, since EPA has authorized all but a few States to administer the program.

The SDWA also provides for a Federally-implemented Sole Source Aquifer program, which prohibits Federal funds from being expended on projects that may contaminate the sole or principal source of drinking water for a given area, and for a State-implemented Wellhead Protection program, designed to protect drinking water wells and drinking water recharge areas.

*EPA's Safe Drinking Water Hotline, at (800) 426-4791, answers questions and distributes guidance pertaining to SDWA standards. The Hotline operates from 9:00 a.m. through 5:30 p.m., ET, excluding Federal holidays.*

*Toxic Substances Control Act*

The Toxic Substances Control Act (TSCA) granted EPA authority to create a regulatory framework to collect data on chemicals in order to evaluate, assess, mitigate, and control risks which may be posed by their manufacture,

processing, and use. TSCA provides a variety of control methods to prevent chemicals from posing unreasonable risk.

TSCA standards may apply at any point during a chemical's life cycle. Under TSCA §5, EPA has established an inventory of chemical substances. If a chemical is not already on the inventory, and has not been excluded by TSCA, a premanufacture notice (PMN) must be submitted to EPA prior to manufacture or import. The PMN must identify the chemical and provide available information on health and environmental effects. If available data are not sufficient to evaluate the chemicals effects, EPA can impose restrictions pending the development of information on its health and environmental effects. EPA can also restrict significant new uses of chemicals based upon factors such as the projected volume and use of the chemical.

Under TSCA §6, EPA can ban the manufacture or distribution in commerce, limit the use, require labeling, or place other restrictions on chemicals that pose unreasonable risks. Among the chemicals EPA regulates under §6 authority are asbestos, chlorofluorocarbons (CFCs), and polychlorinated biphenyls (PCBs).

*EPA's TSCA Assistance Information Service, at (202) 554-1404, answers questions and distributes guidance pertaining to Toxic Substances Control Act standards. The Service operates from 8:30 a.m. through 4:30 p.m., ET, excluding Federal holidays.*

### *Clean Air Act*

The Clean Air Act (CAA) and its amendments, including the Clean Air Act Amendments (CAAA) of 1990, are designed to "protect and enhance the nation's air resources so as to promote the public health and welfare and the productive capacity of the population." The CAA consists of six sections, known as Titles, which direct EPA to establish national standards for ambient air quality and for EPA and the States to implement, maintain, and enforce these standards through a variety of mechanisms. Under the CAAA, many facilities will be required to obtain permits for the first time. State and local governments oversee, manage, and enforce many of the requirements of the CAAA. CAA regulations appear at 40 CFR Parts 50-99.

Pursuant to Title I of the CAA, EPA has established national ambient air quality standards (NAAQSs) to limit levels of "criteria pollutants," including carbon monoxide, lead, nitrogen dioxide, particulate matter, ozone, and sulfur dioxide. Geographic areas that meet NAAQSs for a given pollutant are classified as attainment areas; those that do not meet NAAQSs are classified as non-attainment areas. Under §110 of the CAA, each State must develop

**Sector Notebook Project****Printing and Publishing**

a State Implementation Plan (SIP) to identify sources of air pollution and to determine what reductions are required to meet Federal air quality standards.

Title I also authorizes EPA to establish New Source Performance Standards (NSPSs), which are nationally uniform emission standards for new stationary sources falling within particular industrial categories. NSPSs are based on the pollution control technology available to that category of industrial source but allow the affected industries the flexibility to devise a cost-effective means of reducing emissions.

Under Title I, EPA establishes and enforces National Emission Standards for Hazardous Air Pollutants (NESHAPs), nationally uniform standards oriented towards controlling particular hazardous air pollutants (HAPs). Title III of the CAAA further directed EPA to develop a list of sources that emit any of 189 HAPs, and to develop regulations for these categories of sources. To date EPA has listed 174 categories and developed a schedule for the establishment of emission standards. The emission standards will be developed for both new and existing sources based on "maximum achievable control technology" (MACT). The MACT is defined as the control technology achieving the maximum degree of reduction in the emission of the HAPs, taking into account cost and other factors.

Title II of the CAA pertains to mobile sources, such as cars, trucks, buses, and planes. Reformulated gasoline, automobile pollution control devices, and vapor recovery nozzles on gas pumps are a few of the mechanisms EPA uses to regulate mobile air emission sources.

Title IV establishes a sulfur dioxide emissions program designed to reduce the formation of acid rain. Reduction of sulfur dioxide releases will be obtained by granting to certain sources limited emissions allowances, which, beginning in 1995, will be set below previous levels of sulfur dioxide releases.

Title V of the CAAA of 1990 created a permit program for all "major sources" (and certain other sources) regulated under the CAA. One purpose of the operating permit is to include in a single document all air emissions requirements that apply to a given facility. States are developing the permit programs in accordance with guidance and regulations from EPA. Once a State program is approved by EPA, permits will be issued and monitored by that State.

Title VI is intended to protect stratospheric ozone by phasing out the manufacture of ozone-depleting chemicals and restrict their use and distribution. Production of Class I substances, including 15 kinds of

**Sector Notebook Project****Printing and Publishing**

chlorofluorocarbons (CFCs), will be phased out entirely by the year 2000, while certain hydrochlorofluorocarbons (HCFCs) will be phased out by 2030.

*EPA's Control Technology Center, at (919) 541-0800, provides general assistance and information on CAA standards. The Stratospheric Ozone Information Hotline, at (800) 296-1996, provides general information about regulations promulgated under Title VI of the CAA, and EPA's EPCRA Hotline, at (800) 535-0202, answers questions about accidental release prevention under CAA §112(r). In addition, the Technology Transfer Network Bulletin Board System (modem access (919) 541-5742)) includes recent CAA rules, EPA guidance documents, and updates of EPA activities.*

## VI.B. Industry Specific Regulatory Requirements

While the list of environmental statutes *potentially* affecting printers includes all of the major media-oriented statutes, the actual number is much smaller. In general, printers' relatively small size and lower chemical usage place them below many of the thresholds which would trigger regulatory requirements. For example, the 70 percent of printers with fewer than ten employees typically face only RCRA manifesting and discharge limits established by the local publicly owned wastewater treatment works (POTW). Larger facilities, however, may have to meet Clean Air Act requirements in ozone nonattainment areas, Emergency Planning and Community Right-to Know Act requirements, as well as state requirements established by the State Implementation Plan (SIP) process. These statutes are most frequently triggered because of solvent releases from image developing, inks and cleaning operations.

A fairly complete list of environmental regulations affecting the printing industry is available from the Agency's Design for the Environment Program or, more specifically, the document entitled *Federal Environmental Regulations Potentially Affecting the Commercial Printing Industry* (Contact: Stephanie Bergman 202-260-1821). Most importantly, it includes examples connecting chemicals used in the printing industry to applicable regulations. More accurate profiles of the regulatory requirements for printing facilities may become available in the near future as projects in support of consolidated reporting are completed.

### *Clean Air Act (CAA)*

Title I - Provisions for Attainment and Maintenance of the National Ambient Air Quality Standards (NAAQS):

- Reasonably Available Control Technologies (RACTs) as defined in State Implementation Plans (SIPs) are required at major sources in "nonattainment" areas, defined by severity of air quality problems. NAAQS have been established for six pollutants: ozone, carbon monoxide particulate matter, sulfur dioxide, nitrogen dioxide and lead. Regulations relating to ozone (VOCs react to form O<sub>3</sub>), NO<sub>x</sub> and particulates are likely to have a significant impact on the printing industry. Control Technology Guidelines (CTGs) exist for gravure and flexographic printing, and fabric and paper coating. These CTGs apply primarily in ozone nonattainment areas to sources with potential uncontrolled VOC emissions (ozone precursors) of 25 tons or more per year depending on the severity of the

non-attainment classification. (Contact: David Salman 919-541-0859)

- There are also New Source Performance Standards for the construction, operation or modification of presses, coaters, control devices, boilers, cyclones, evaporators, distillation units, and some bindery equipment.

#### Title V - Permits:

- A new permit system will require all major sources to obtain operating permits to cover all applicable control requirements. States were required to develop and implement the program in 1993 and the first permits are likely to be issued in late 1995. Although revisions to the definition of what constitutes a major source were being negotiated at the time that this document went to press, it is important to note that major source determination will likely be based on a facility's potential emissions and not its actual emissions; require emissions monitoring, and record keeping and reporting.

#### *Resource Conservation and Recovery Act (RCRA)*

Hazardous waste generators are divided in three categories: large quantity generators (1,000 kg or more/month or more than one kg/month of extremely hazardous waste); small quantity generators (100 to 1,000 kg/month and less than one kg/month of extremely hazardous waste); and conditionally exempt small generators (less than 100 kg/month and less than one kg/month of extremely hazardous waste). Each generator bears the responsibility for determining whether or not a waste is hazardous and the appropriate waste code.

- Facility Status (40 CFR Part 262) - Facilities may possibly be classified as Treatment Storage or Disposal Facilities (TSDFs) if they do not send their waste off-site before the applicable time limit (90 to 180 days depending upon the volume).
- Waste Containers (40 CFR §§262.32, 262.34, 265.171, 265.172 and 265.173) - Wastes must be properly stored to meet basic safety requirements and prevent leaks, and must be labeled as hazardous waste and dated at the time that accumulation begins.
- Hazardous Waste Shipments (40 CFR §262.20) - A Uniform Hazardous Waste Manifest must be completed and accompany the shipment. Wastes must be sent to a RCRA C permitted facility. An exception report must be filed with the relevant regulatory agency if the manifest copy is not received within 45 days of shipment. Also, an exemption is allowed for small quantity generators from the

manifest requirement if their waste is shipped under contract, records are maintained for three years, and the vehicle used to haul the waste is owned by the reclaimer.

- Land Disposal Restrictions (40 CFR §268.7) - Additional notification must be sent along with each manifest to the destination facility.
- Biennial Reporting (40 CFR §262.41) - Large quantity generators must submit a report of hazardous waste generation and management activities by March 1 of every even-numbered year.
- Record Keeping (40 CFR §268.7) - Copies of each manifest, biennial report (if a large quantity generator), exception report, test analysis, and inspection log must be kept for three years.
- Training (40 CFR §262.34 (a)(4),(d)(5)(iii)) - Facilities storing waste for longer than the 90-180 day threshold must ensure that employees are familiar with hazardous waste handling procedures or provide training.
- Release or Threat of Release Reporting (40 CFR §262.34) - In case of a release to the environment, the generator must contact the National Response Center.

*Emergency Planning and Community Right-to-Know Act (EPCRA)*

- Emergency Planning (§302(A)) - Businesses that produce, use, or store "hazardous chemicals" at or above "threshold planning quantities" must submit: 1) material safety data sheets or the equivalent and 2) Tier I/Tier II annual inventory report forms to the appropriate local emergency planning commission. Those handling "extremely hazardous substances" are also required to submit a one-time notice to the state emergency response commission.
- Emergency Notification of Extremely Hazardous Substance Release (§304) - A business that unintentionally releases a reportable quantity of an extremely hazardous substance must report that release to the state emergency planning commission and the local emergency planning commission.
- Release Reporting (§313) - Manufacturing businesses with ten or more employees that manufactured, processed, or otherwise used a listed toxic chemical in excess of the "established threshold" must file annually a Toxic Chemical Release form with EPA and the state. Approximately 318 printers nationwide submitted forms summarizing their chemical releases in 1993. Documentation supporting release estimates must be kept for three years.

*Clean Water Act (CWA)*

- Discharges to a POTW (40 Part 403) - Facilities discharging wastewater to a sewer are often subject to restrictions required under the Clean Water Act and established by the local sewerage authority to prevent significant interference with the treatment facility or pass-through of pollutants not removed by treatment. The specific requirements include: notifying the POTW of discharges that could cause problems at the POTW, monitoring and recordkeeping as established by the POTW, and a one-time notice of the discharge of hazardous waste, specifically, if more than 33 pounds/month.
- Direct discharges (40 CFR Parts 116 and 117) - Facilities discharging hazardous substances are required to notify the federal government (33 §153.203) when discharges meet or exceed the reportable quantity.
- The Storm Water Rule (40 §122.26(b)(14) subpart (xi)) requires that printing facilities falling within any of 11 categories defined in 40 CFR 122.26 is subject to storm water permit application regulations.

*Occupational Health and Safety Administration (OSHA)*

A more up-to-date summary of OSHA regulations may be available from OSHA. The following is a summary taken from industry literature.

**Exposure Monitoring** (29 CFR §1910.1045) standard requires initial and periodic monitoring when an employer suspects exposure levels could exceed Permissible Exposure Limits (PELs). Also requires employee notification and recordkeeping.

**Permissible Exposure Limits (PELs)** (29 CFR §1910.1000) for chemicals released during printing operations, such as glycol ethers, toluene and methylene chloride.

**Respiratory Protective Equipment** (29 CFR §1910.134) established new standards for protective equipment.

**Methods of Compliance** (29 CFR §1910.1000 and §1910.134) allows the use of a respirator in lieu of administrative or engineering controls during installation of engineering controls or upset conditions.

**State Statutes**

A 1992 Source Reduction Review Project (SRRP) review of state air regulations found that **thirty states** (AL, CO, CT, DE, DC, FL, GA, AL, KS,

KY, LA, MD, MA, MI, MO, NH, NJ, NY, NC, OH, OK, OR, PA, RI, SC, TN, UT, VA, WA and WI) regulate volatile organic compounds emitted from printing and publishing operations. In general, all employ the same type of standards with potential release triggers of 50,000 pounds/year to 500 pounds/day. Typical standards include: 1) specifying a maximum volatile fraction (e.g., 25 percent by volume) of ink; 2) a minimum water volume (e.g., 75 percent or a "waterborne ink"); or 3) a minimum nonvolatile fraction (e.g., "high solids inks"). In addition, control technologies (i.e., carbon adsorption, incineration, or comparable alternative) are required to reduce or destroy VOCs. Specific efficiencies are established for gravure and flexographic printing.

**Illinois**, although not included in the 1992 SRRP, is known to have air regulations similar to those described above.

**California** has emergency planning requirements similar to those established by EPCRA but the state's lower thresholds result in smaller operations being subject to the planning requirements.

California's **South Coastal Air Quality Management District** and the Air Pollution Control District for the County of San Diego have issued regulations affecting graphic arts operations. These regulations establish standards for the VOC content of inks, cleaning solvents, fountain solutions, as well as work practices and record-keeping.

### **VI.C. Pending and Proposed Regulatory Requirements**

Several regulatory requirements are currently pending that will potentially affect printers. The Clean Air Act Amendments of 1990 and RCRA are both potential sources of new regulatory requirements.

#### *Clean Air Act Amendments of 1990 (CAAA)*

The Clean Air Act Amendments of 1990 included a number of provisions for which the Agency will develop regulations likely to affect printers directly. A draft lithography Control Technology Guidance (CTG) was announced in the Federal Register in November of 1993 to be used by state and Regional air programs as the basis for controls of VOCs released from lithographic printing operations in ozone nonattainment areas. In June of 1994, a lithography Alternative Control Technology (ACT) was issued in response to the comments received regarding the CTG.

Title I - Provisions for Attainment and Maintenance of the National Ambient Air Quality Standards (NAAQS):

**Sector Notebook Project****Printing and Publishing**

- Ozone nonattainment areas are classified as: marginal, moderate, serious, severe, or extreme. "Major" stationary sources are defined as having potential emissions of 50 tons of VOCs per year in serious areas; 25 tons per year in severe areas; and 10 tons or more in extreme areas. For all other areas, a major source is one that releases 100 tons of VOCs per year.
- An Alternative Control Techniques Guideline (ACT) was developed for offset lithographic printing which will affect formulations of fountain solutions and cleaning solvents. (Contact: Dave Salman 919-541-0859)
- Printers not subject to a CTG but designated a major source are subject to Reasonably Available Control Technology (RACT) requirements. The state must develop and adopt non-CTG RACT rules for such sources.

Title III - National Emissions Standards for Hazardous Air Pollutants (NESHAP):

- Maximum Achievable Control Technology (MACT) standards are scheduled for a list of 189 Hazardous Air Pollutants (HAPs) listed in §112. MACT standards for the commercial printing industry are scheduled for 1994. The Agency is studying the feasibility and benefits of MACT standards for publication and packaging gravure and wide web flexographic sources. (Contact: Bob Blaszcak 919-541-5432)

*Resource Conservation and Recovery Act (RCRA)*

- While developed for wastes such as batteries, simplified recordkeeping and manifesting for a number of waste streams with hazardous constituents, such as rags and wipes containing inks and solvents may apply to printers. (Contact: Ronald Josephson 202-260-6715)
- Additional RCRA listings of solvents and chemicals used by printers are also under investigation.

**VII. COMPLIANCE AND ENFORCEMENT HISTORY****Background**

To date, EPA has focused much of its attention on measuring compliance with specific environmental statutes. This approach allows the Agency to track compliance with the Clean Air Act, the Resource Conservation and Recovery Act, the Clean Water Act, and other environmental statutes. Within the last several years, the Agency has begun to supplement single-media compliance indicators with facility-specific, multimedia indicators of compliance. In doing so, EPA is in a better position to track compliance with all statutes at the facility level, and within specific industrial sectors.

A major step in building the capacity to compile multimedia data for industrial sectors was the creation of EPA's Integrated Data for Enforcement Analysis (IDEA) system. IDEA has the capacity to "read into" the Agency's single-media databases, extract compliance records, and match the records to individual facilities. The IDEA system can match Air, Water, Waste, Toxics/Pesticides/EPCRA, TRI, and Enforcement Docket records for a given facility, and generate a list of historical permit, inspection, and enforcement activity. IDEA also has the capability to analyze data by geographic area and corporate holder.

**Compliance and Enforcement Profile Description**

Using inspection, violation and enforcement data from the IDEA system, this section provides information regarding the historical compliance and enforcement activity of this sector. In order to mirror the facility universe reported in the Toxic Chemical Profile, the data reported within this section consists of records only from the TRI reporting universe. With this decision, the selection criteria are consistent across sectors with certain exceptions. For the sectors that do not normally report to the TRI program, data have been provided from EPA's Facility Indexing System (FINDS) which tracks facilities in all media databases. Please note, in this section, EPA does not attempt to define the actual number of facilities that fall within each sector. Instead, the section portrays the records of a subset of facilities within the sector that are well defined within EPA databases.

As a check on the relative size of the full sector universe, most notebooks contain an estimated number of facilities within the sector according to the Bureau of Census (See Section II). With sectors dominated by small businesses, such as metal finishers and printers, the reporting universe within the EPA databases may be small in comparison to Census data. However, the

group selected for inclusion in this data analysis section should be consistent with this sector's general make-up.

Following this introduction is a list defining each data column presented within this section. These values represent a retrospective summary of inspections or enforcement actions, and solely reflect EPA, state and local compliance assurance activity that have been entered into EPA databases. To identify any changes in trends, the EPA ran two data queries, one for the past five calendar years (August 10, 1990 to August 9, 1995) and the other for the most recent twelve-month period (August 10, 1994 to August 9, 1995). The five-year analysis gives an average level of activity for that period for comparison to the more recent activity.

Because most inspections focus on single-media requirements, the data queries presented in this section are taken from single media databases. These databases do not provide data on whether inspections are state/local or EPA-led. However, the table breaking down the universe of violations does give the reader a crude measurement of the EPA's and states' efforts within each media program. The presented data illustrate the variations across regions for certain sectors.<sup>e</sup> This variation may be attributable to state/local data entry variations, specific geographic concentrations, proximity to population centers, sensitive ecosystems, highly toxic chemicals used in production, or historical noncompliance. Hence, the exhibited data do not rank regional performance or necessarily reflect which regions may have the most compliance problems.

## **Compliance and Enforcement Data Definitions**

### **General Definitions**

**Facility Indexing System (FINDS)** -- this system assigns a common facility number to EPA single-media permit records. The FINDS identification number allows EPA to compile and review all permit, compliance, enforcement and pollutant release data for any given regulated facility.

**Integrated Data for Enforcement Analysis (IDEA)** -- is a data integration system that can retrieve information from the major EPA program office databases. IDEA uses the FINDS identification number to “glue together”

---

<sup>d</sup> Reg EPA ions include the following states: I (CT, MA, ME, RI, NH, VT); II (NJ, NY, PR, VI); III (DC, DE, MD, PA, VA, WV); IV (AL, FL, GA, KY, MS, NC, SC, TN); V (IL, IN, MI, MN, OH, WI); VI (AR, LA, NM, OK, TX); VII (IA, KS, MO, NE); VIII (CO, MT, ND, SD, UT, WY); IX (AZ, CA, HI, NV, Pacific Trust Territories); X (AK, ID, OR, WA).

separate data records from EPA's databases. This is done to create a "master list" of data records for any given facility. Some of the data systems accessible through IDEA are: AIRS (Air Facility Indexing and Retrieval System, Office of Air and Radiation), PCS (Permit Compliance System, Office of Water), RCRIS (Resource Conservation and Recovery Information System, Office of Solid Waste), NCDB (National Compliance Data Base, Office of Prevention, Pesticides, and Toxic Substances), CERCLIS (Comprehensive Environmental and Liability Information System, Superfund), and TRIS (Toxic Release Inventory System). IDEA also contains information from outside sources such as Dun and Bradstreet and the Occupational Safety and Health Administration (OSHA). Most data queries displayed in notebook sections IV and VII were conducted using IDEA.

### **Data Table Column Heading Definitions**

**Facilities in Search** -- are based on the universe of TRI reporters within the listed SIC code range. For industries not covered under TRI reporting requirements, the notebook uses the FINDS universe for executing data queries. The SIC code range selected for each search is defined by each notebook's selected SIC code coverage described in Section II.

**Facilities Inspected** --- indicates the level of EPA and state agency inspections for the facilities in this data search. These values show what percentage of the facility universe is inspected in a 12 or 60 month period. This column does not count non-inspectional compliance activities such as the review of facility-reported discharge reports.

**Number of Inspections** -- measures the total number of inspections conducted in this sector. An inspection event is counted each time it is entered into a single media database.

**Average Time Between Inspections** -- provides an average length of time, expressed in months, that a compliance inspection occurs at a facility within the defined universe.

**Facilities with One or More Enforcement Actions** -- expresses the number of facilities that were party to at least one enforcement action within the defined time period. This category is broken down further into federal and state actions. Data are obtained for administrative, civil/judicial, and criminal enforcement actions. Administrative actions include Notices of Violation (NOVs). A facility with multiple enforcement actions is only counted once in this column (facility with three enforcement actions counts as one). All percentages that appear are referenced to the number of facilities inspected.

**Total Enforcement Actions** -- describes the total number of enforcement actions identified for an industrial sector across all environmental statutes. A facility with multiple enforcement actions is counted multiple times (a facility with three enforcement actions counts as three).

**State Lead Actions** -- shows what percentage of the total enforcement actions are taken by state and local environmental agencies. Varying levels of use by states of EPA data systems may limit the volume of actions accorded state enforcement activity. Some states extensively report enforcement activities into EPA data systems, while other states may use their own data systems.

**Federal Lead Actions** -- shows what percentage of the total enforcement actions are taken by the United States Environmental Protection Agency. This value includes referrals from state agencies. Many of these actions result from coordinated or joint state/federal efforts.

**Enforcement to Inspection Rate** -- expresses how often enforcement actions result from inspections. This value is a ratio of enforcement actions to inspections, and is presented for comparative purposes only. This measure is a rough indicator of the relationship between inspections and enforcement. Reported inspections and enforcement actions under the Clean Water Act (CWA), the Clean Air Act (CAA) and the Resource Conservation and Recovery Act (RCRA) are included in this ratio. Inspections and actions from the TSCA/FIFRA/EPCRA database are not factored into this ratio because most of the actions taken under these programs are not the result of facility inspections. This ratio does not account for enforcement actions arising from non-inspection compliance monitoring activities (e.g., self-reported water discharges) that can result in enforcement action within the CAA, CWA and RCRA.

**Facilities with One or More Violations Identified** -- indicates the percentage of inspected facilities having a violation identified in one of the following data categories: In Violation or Significant Violation Status (CAA); Reportable Noncompliance, Current Year Noncompliance, Significant Noncompliance (CWA); Noncompliance and Significant Noncompliance (FIFRA, TSCA, and EPCRA); Unresolved Violation and Unresolved High Priority Violation (RCRA). The values presented for this column reflect the extent of noncompliance within the measured time frame, but do not distinguish between the severity of the noncompliance. Percentages within this column may exceed 100 percent because facilities can be in violation status without being inspected. Violation status may be a precursor to an enforcement action, but does not necessarily indicate that an enforcement action will occur.

**Media Breakdown of Enforcement Actions and Inspections** -- four columns identify the proportion of total inspections and enforcement actions within EPA Air, Water, Waste, and TSCA/FIFRA/EPCRA databases. Each column is a percentage of either the "Total Inspections," or the "Total Actions" column.

### **VII.A. Printing and Publishing Industry Compliance History**

Exhibit 20 provides an overview of the reported compliance and enforcement data for the printing industry over the past five years (August 1990 to August 1995). These data are also broken out by EPA Region thereby permitting geographical comparisons. A few points evident from the data are listed below.

- The number of different printing facilities inspected was only slightly more than one quarter of those identified in the IDEA search. Also, these facilities were inspected on average only every four years.
- A significantly smaller proportion of facilities had enforcement actions brought against them than were inspected. On average 17 percent of those facilities inspected faced enforcement actions.
- Those facilities with one or more enforcement actions had, on average, over the five year period, almost three enforcement actions brought against them.

**VII.B. Comparison of Enforcement Activity Between Selected Industries**

Exhibits 21 and 22 allow the compliance history of the printing sector to be compared to the other industries covered by the industry sector notebooks. Comparisons between Exhibits 21 and 22 permit the identification of trends in compliance and enforcement records of the industry by comparing data covering the last five years to that of the past year. Some points evident from the data are listed below.

- Of those sectors listed, the printing industry has been one of the least frequently inspected industries over the past five years based upon its high number of months between inspections.
- State lead actions have dominated the total number of enforcement actions taken against the printing industry.
- Over the past five years, the printing industry has had one of the lowest rates of enforcement actions per inspection of the sectors listed, and the rate has remained constant over the past year.

Exhibits 23 and 24 provide a more in-depth comparison between the printing industry and other sectors by breaking out the compliance and enforcement data by environmental statute. As in the previous Exhibits (Exhibits 21 and 22), the data cover the last five years (Exhibit 23) and the last one year (Exhibit 24) to facilitate the identification of recent trends. A few points evident from the data are listed below.

- The number of inspections carried out under the Clean Air Act and RCRA over the past five years account for over ninety percent of inspections and of total enforcement actions within the sample. This figure has remained constant over the past year.
- Proportional to the number of inspections conducted under each statute, significantly more enforcement actions are taken under RCRA (with an enforcement to inspection rate of 0.15) than under CAA (with an enforcement to inspection rate 0.05)

## VII.C. Review of Major Legal Actions

This section provides summary information about major cases that have affected this sector, and a list of Supplementary Environmental Projects (SEPs). SEPs are compliance agreements that reduce a facility's stipulated penalty in return for an environmental project that exceeds the value of the reduction. Often, these projects fund pollution prevention activities that can significantly reduce the future pollutant loadings of a facility.

### VII.C.1. Review of Major Cases

The Office of Regulatory Enforcement does not regularly compile information related to major cases and pending litigation within an industry sector. The staff are willing to pass along such information to Agency staff as requests are made. (Contact: Office of Enforcement Capacity and Outreach, 202-260-4140) In addition, summaries of completed enforcement actions are published each fiscal year in the *Enforcement Accomplishments Report*; the summaries are not organized by industry sector. (Contact: Office of Enforcement Capacity and Outreach, 202-260-4140)

### VII.C.2. Supplementary Environmental Projects (SEPs)

Supplemental environmental projects (SEPs) are enforcement options that require the non-compliant facility to complete specific projects. Regional summaries of SEPs undertaken in federal fiscal year 1993 and 1994 were reviewed. Two SEPs were undertaken that involved printing facilities, as shown in the following table.

EPCRA violations engendered one SEP and RCRA violations engendered the other SEP. Due to differences in regional descriptions, the specifics of the original violations are not known. Both of the projects resulted in a reduction in the use or release of volatile organic chemicals (VOCs). Implementation costs were over \$1.7 million for one of the projects involving major process changes or capital investments in equipment. The second project cost \$26,150 and consisted of a process chemical change.

Both of the SEPs were done in Region VII. However, Region VII has only six percent of U.S. printing facilities (third lowest of all Regions) and only eight percent of all inspections (fifth in rank of all Regions). The small number of facilities and inspections suggests a possible regional priority on

**Exhibit 25: FY-1993-1994 Supplemental Environmental Projects Overview: Printing**

General SEP Information		Violation Information						Pollutant Reduction		Supplemental Environmental Project Description
FY	Company Name	State/Region	Type	Initial Penalty	Final Penalty	SEP Credit	SEP Cost to Company	Pollutant of Concern	Pollutant Reduction	Supplemental Environmental Project Description
93	Z-International	MO	EPCRA	N/A	\$7,700	N/A	\$26,150	Solvents	N/A	Solvent-based ink reduction by 50% and substitute OPTI-SOL for tetrachloroethylene in platewashing operations, also new plate de-tacking installed
93	Hallmark Cards	MO	RCRA	N/A	\$30,000	N/A	\$1,740,000	Solvents	80% reduction in VOCs and RCRA Wastes	Solvent-based inks converted to water-based inks at gravure printing facility

**Violation Information Terms**  
 Initial penalty: Initial proposed cash penalty for violation  
 Final penalty: Total penalty after SEP negotiation  
 SEP credit: Cash credit given for SEP so that, Final penalty - SEP credit = Final cash penalty  
 SEP cost to company: Actual cost to company of SEP implementation

NOTE: Due to differences in terminology and level of detail between regional SEP information, in some cases the figure listed as Final penalty may be the Final cash penalty after deduction for SEP credit

N/A: Information not available at time of printing.

**VIII. COMPLIANCE ACTIVITIES AND INITIATIVES**

This section highlights the activities undertaken by this industry sector and public agencies to voluntarily improve the sector's environmental performance. These activities include those independently initiated by industrial trade associations. In this section, the notebook also contains a listing and description of national and regional trade associations.

**VIII.A. Sector-related Environmental Programs and Activities****Design for the Environment (DfE) Printing Industry Project**

The Design for the Environment (DfE) Printing Industry Project (Contact: Stephanie Bergman 202-260-1821) is a joint and cooperative project between the EPA and participating printing industry sectors (screen, lithographic, and flexographic printing). Its purpose is to provide printers cost, risk, and performance information of various chemical, technology, and work practice substitutes to enable them to make informed decisions about incorporating lower risk chemicals into their production processes.

The draft Cleaner Technologies Substitutes Assessment (CTSA) for screen reclamation products and technologies (used in screen printing) was published in September 1994 and was circulated for comment through January 1995. It summarizes the comparative risk, performance, and costs of eleven substitute product systems used to reclaim screens as well as substitute work practices and technologies. A draft CTSA for lithographic blanket washes will be available in 1995.

Pollution prevention case studies and other outreach materials (e.g., videos, software packages, training workshops, and other information products) will be disseminated to printers by various means including a network of volunteer printers. The state of Washington is working with U.S. EPA Region X to disseminate DfE materials and integrate DfE efforts with the state's own "snapshots" initiative (Contact: U.S. EPA Region X - Jayne Carlin 206-553-4762).

*The DfE Program has also developed a number of background documents, including the following: Printing Industry and Use Cluster Profile; Federal Environmental Regulations Potentially Affecting the Commercial Printing Industry; and Summary of Focus Group Discussions with Screen Printers and Lithographers for the Design for the Environment Printing Project. For more information about these documents or to request copies of these documents, please contact the Pollution Prevention Information Clearinghouse at 202-260-1023.*

*Common Sense Initiative*

The EPA's Common Sense Initiative was formally announced by Administrator Browner in July of 1994 to encourage sector-based regulatory policy in six pilot industrial sectors including: iron and steel, electronics, metal plating and finishing, automobiles, printing, and oil refining. The program shifts regulatory focus from concentrating on individual pollutants and media, to industry-wide approaches to environmental problems. An EPA team is involved with other stakeholders from industry, environmental groups, environmental justice groups, labor, and state and local government agencies to identify opportunities to coordinate rulemaking and to streamline record-keeping and permitting requirements. The teams will also work with industry to identify innovative approaches in pollution prevention and environmental technology, and compliance and enforcement.

EPA CSI contacts for printing are as follows:

Ginger Gotliffe, Agency Lead (OECA) 202-564-7072  
 Brian Holtrop (OW) 202-260-6814  
 Dave Salman (OAR) 919-541-0859  
 Stephanie Bergman (OPPTS) 202-260-1821  
 Jim O'Leary (OSWER) 202-260-0724  
 Adam Saslow (OPPE) 202-260-2857  
 Paul Shapiro (ORD) 202-260-4969  
 Jim Curtin (OGC) 703-235-5304

*The Great Printers Project*

The Great Printers Project, co-sponsored by the Environmental Defense Fund (EDF), Printing Industries of America (PIA), and Council of Great Lakes Governors (CGLC), is investigating potential improvements in regulatory implementation and environmental protection. CGLC, PIA, U.S. EPA, Great Lakes state regulatory agencies, and EDF have examined the possibility of re-orienting both regulatory activities and technical support for lithographic printers toward a whole-facility approach. One of the first efforts was an investigation of the regulatory requirements currently facing printing facilities so that proposals for consolidated permitting can be developed. Great Printers Project participants published their first report in July 1994, "The Great Printers Project: Recommendations to Make Pollution Prevention a Standard Practice in the Printing Industry," which covers issues from regulatory design to technical outreach. (Contact: Kevin Mills 202-387-3500)

*Environmental Leadership Program*

In FY94, the Agency's Environmental Leadership Program (ELP) solicited proposals for innovative approaches to environmental management and compliance at the facility level. Forty proposals were received from companies, trade associations, and federal facilities representing many manufacturing and service sector facilities. In ELP, the EPA will work with individual facilities to study and evaluate the implementation of a variety of proposed pilot programs. The information collected from the pilot ELP programs will be used to develop a full-scale ELP program. The John Roberts Company was one of 12 proposals selected to participate in the pilot program. The John Roberts Company is a medium sized commercial lithographic printer located in Minneapolis Minnesota, who will work on developing the concept of mentoring as an environmental auditing tool to proactively and voluntarily verify compliance effectiveness. Other proposals are available for review from the Environmental Leadership Program. (Contact: Tai-ming Chang, ELP Director, 202-564-5081)

*Project XL*

Project XL was initiated in March 1995 as a part of President Clinton's *Reinventing Environmental Regulation* initiative. The projects seek to achieve cost effective environmental benefits by allowing participants to replace or modify existing regulatory requirements on the condition that they produce greater environmental benefits. EPA and program participants will negotiate and sign a Final Project Agreement, detailing specific objectives that the regulated entity shall satisfy. In exchange, EPA will allow the participant a certain degree of regulatory flexibility and may seek changes in underlying regulations or statutes. Participants are encouraged to seek stakeholder support from local governments, businesses, and environmental groups. EPA hopes to implement fifty pilot projects in four categories including facilities, sectors, communities, and government agencies regulated by EPA. Applications will be accepted on a rolling basis and projects will move to implementation within six months of their selection. For additional information regarding XL Projects, including application procedures and criteria, see the May 23, 1995 Federal Register Notice, or contact Jon Kessler at EPA's Office of Policy Analysis (202) 260-4034.

*Waste Reduction Innovation Technology Evaluation*

EPA's Office of Research and Development has supported a variety of Waste Reduction Innovative Technology Evaluation (WRITE) projects related to printing operations including evaluations of water-based inks for wide-web

**Sector Notebook Project****Printing and Publishing**

flexographic printing (Erie County, NY) and soy-based inks for lithographic printers (IL) (Contact: Paul Randall 513-569-7673)

*Region I*

Region I's Waste Management Division is giving a grant to Vermont to establish model facilities illustrating compliance and pollution prevention, which may include a printing facility. A grant to the Printing Industries of New England (PINE), also a DfE participant, provides for on-site compliance outreach, pollution prevention assistance and hazardous waste management assistance to roughly 75 facilities in the Commonwealth of Massachusetts. (Contacts: Abby Swaine - Region I, 617-565-4523 or Mark Mahoney - Region I, 617-565-1155)

*Connecticut*

The Connecticut Department of Environmental Protection has developed a site assessment tool for printers.

*Region IV*

Region IV's VOC Initiative is in the planning stages. Once developed, it may impact printers. (Contact: Bill Klutz, Air Enforcement Branch 404-347-2904)

*Region VIII*

Pollution prevention training for printing and metal finishing industries will be open to municipalities with approved pretreatment programs.

*Region IX*

Geographic Initiative focused in Southern California will target many industries.

**Sector Notebook Project****Printing and Publishing***Printing, Lithographic and Photo Processing Initiative (Washington State)*

The Washington Department of Ecology's Hazardous Waste and Toxics Reduction Program is targeting the printing and photo processing industry as one of a series of single industry initiatives. The assistance is being funded with an EPA pollution prevention grant. The assistance includes: outreach training, seminars and publications, responses to inquiries, hotline and/or on-site assistance to individual facilities. Local governments and industry trade associations in King County-Metro are participants. (Contacts: U.S. EPA Region X - Nancy Helm 206-553-8659 or Jayne Carlin 206-553-4762; WADEC - Darrin Rice 206-407-6743)

*Oregon Printing Industry Initiative*

The Oregon Department of Environmental Quality (DEQ) is providing compliance assistance to printing, lithographic, and photo processing facilities in the state. Assistance will be provided through training, seminars and publications. (Contacts: Region X - Jayne Carlin 206-553-4762 or Kris Colt 206-553-8577; Oregon DEQ - Marianne Fitzgerald 503-229-5946)

*State Pollution Prevention Roundtable*

The State Pollution Prevention Roundtable will soon be publishing a member survey which will summarize state-level expertise and initiatives according to industry.

**VIII.B. EPA Voluntary Programs***33/50 Program*

The "33/50 Program" is EPA's voluntary program to reduce toxic chemical releases and transfers of seventeen chemicals from manufacturing facilities. Participating companies pledge to reduce their toxic chemical releases and transfers by 33 percent as of 1992 and by 50 percent as of 1995 from the 1988 baseline year. Certificates of Appreciation have been given out to participants meeting their 1992 goals. The list of chemicals includes seventeen high-use chemicals reported in the Toxics Release Inventory.

Of the target chemicals, toluene, methyl ethyl ketone, xylenes, and 1,1,1-trichloroethane are released and transferred most frequently by the printing and publishing industry. These four toxic chemicals account for roughly 86 percent of TRI releases and transfers for printing facilities. Twenty-five companies listed under SIC 27 (printing and publishing) are currently participating in the 33/50 program. They account for 12 percent of the 206 TRI reporting companies under SIC 27, which is approximately the average level of participation for all industries (14 percent). (For more information, contact: Mike Burns, U.S. EPA, 202-260-6394 or 33/50 Program 202-260-6907.)

*WasteWi\$e Program*

The WasteWi\$e Program was started in 1994 by EPA's Office of Solid Waste and Emergency Response. The program is aimed at reducing municipal solid wastes by promoting waste minimization, recycling collection, and the manufacturing and purchase of recycled products. As of 1994, the program had about 300 companies as members, including a number of major corporations. Members agree to identify and implement actions to reduce their solid wastes and must provide EPA with their waste reduction goals along with yearly progress reports. EPA, in turn, provides technical assistance to member companies and allows the use of the WasteWi\$e logo for promotional purposes. (Contact: Lynda Wynn 202-260-0700 or the WasteWi\$e Hotline at 800-372-9473)

*Climate Wise Recognition Program*

The Climate Change Action Plan was initiated in response to the U.S. commitment to reduce greenhouse gas emissions in accordance with the Climate Change Convention of the 1990 Earth Summit. As part of the Climate Change Action Plan, the Climate Wise Recognition Program is a partnership initiative run jointly by EPA and the Department of Energy. The

**Sector Notebook Project****Printing and Publishing**

voluntary program is designed to reduce greenhouse gas emissions by encouraging reductions across all sectors of the economy, encouraging participation in the full range of Climate Change Action Plan initiatives, and fostering innovation. Participants in the program are required to identify and commit to actions that reduce greenhouse gas emissions. The program, in turn, gives organizations early recognition for their reduction commitments; provides technical assistance through consulting services, workshops, and guides; and provides access to the program's centralized information system. At EPA, the program is operated by the Air and Energy Policy Division within the Office of Policy Planning and Evaluation. (Contact: Pamela Herman 202-260-4407)

*NICE*<sup>3</sup>

The U.S. Department of Energy and EPA's Office of Pollution Prevention are jointly administering a grant program called The National Industrial Competitiveness through Energy, Environment, and Economics (NICE). By providing grants of up to 50 percent of the total project cost, the program encourages industry to reduce industrial waste at its source and become more energy-efficient and cost-competitive through waste minimization efforts. Grants are used by industry to design, test, demonstrate, and assess the feasibility of new processes and/or equipment with the potential to reduce pollution and increase energy efficiency. The program is open to all industries; however, priority is given to proposals from participants in the pulp and paper, chemicals, primary metals, and petroleum and coal products sectors. (Contact: DOE's Golden Field Office, 303-275-4729)

**VIII.C. Summary of Trade Associations**

The trade and professional organizations serving the printing industry are divided along printing processes as well as type of product produced. For example, there are several trade groups for lithographers as well as the American Newspaper Publishers Association, which typically print using lithographic presses. The large number of small facilities in this industry results in two important characteristics of the trade associations. First, a large number of facilities are not affiliated with any trade associations. Second, a significant portion of the industry research is conducted through trade associations and/or technical foundations which serve the needs of the many smaller members who would otherwise have limited or indirect access to research.

Printing industry membership in trade organizations is approximately 50 percent. The majority of printers not associated with trade groups are small printers with fewer than ten employees. Outreach efforts to unaffiliated small

**Sector Notebook Project****Printing and Publishing**

---

printing shops have been problematic for the printing industry trade associations. The In-Plant Management Association's membership, however, includes in-house operations that would otherwise be difficult to identify or contact as the main business is not printing. Industry officials reported that the trade press, which may be read by nonmembers, and suppliers of equipment and chemicals, offer two vehicles for reaching unaffiliated small printers.

**Printing Industries of America**

100 Daingerfield Rd.

Alexandria, VA 22314

Phone: (703) 519-8100

Fax: (703) 548-3227

Members: 13,200

Staff: 70

Budget: \$12,000,000

Contact: Tom Purcell

Since its inception in 1887, Printing Industries of America (PIA) has grown to be the largest trade group for the printing sector, with the largest membership and budget. PIA focuses on lithographic printing, although their membership includes other printing processes and suppliers. Technical service and support to members occurs through more than 30 strong regional organizations. PIA publishes a variety of periodicals including *The Capital Letter*, a monthly dedicated to government regulatory issues. They are involved in the DfE Printing Industry Project, the Common Sense Initiative, and the Great Printers Project and have developed a voluntary environmental management program for printers. Affiliated trade associations are located throughout the United States.

**Graphic Arts Technical Foundation**

4615 Forbes Ave.

Pittsburgh, PA 15213

Phone: (412) 621-6941

Fax: (412) 621-3049

Members: 7,000

Graphic Arts Technical Foundation (GATF), established in 1924, is a scientific, technical and educational organization serving the graphic communications industries. Members represent printers, packagers, binders, publishers, design houses, and suppliers. They provide in-facility technical support and training to members as well as evaluations of and educational outreach for advancing technologies. GATF performed laboratory testing of alternative lithographic blanket washes for the DfE Printing Industry Project.

The National Association of Printers and Lithographers (NAPL), founded in 1933, is actively engaged in presenting conferences, seminars, and workshops on management topics for lithographic printers. It holds over 50 such functions each year. NAPL focuses on business and management planning rather than technical support for the shop-level employee. They publish the *Environmental Advisor* newsletter and *Printing Manager* magazine. NAPL officials also participate in the DfE Printing Industry Project.

Members: 250  
Staff: 20

The Gravure Association of America (GAA), founded in 1987, promotes the use of gravure printing in publications and the general advancement of gravure printing techniques. The GAA compiles statistics about the gravure industry, collects/analyzes/disseminates current and historical information on environmental issues, government regulations, marketing, and gravure technology, and runs a seminar/lecture series. The Rochester Institute of Technology provides GAA and its members with academic research, testing facilities and personnel training. It is unique in that all types of suppliers (e.g., waste management vendors, chemical and equipment suppliers) are members and are active participants in many GAA activities. The GAA publishes *GAA Today*, which covers environmental regulations, ink and solvent testing, as well as other topics.

**FLEXOGRAPHY**

Staff: 20

Founded in 1958, the Flexographic Technical Association (FTA) is the major industry trade group for the flexographic process. FTA's stated purpose is to "advance the art and science of flexographic printing and assist and recommend developments in flexography." Membership includes suppliers as well as printers. The FTA leads regional workshops for production, supervisory, and management personnel and publishes a monthly magazine entitled *Flexo*, which has a circulation of 9,200.

**SCREEN PRINTING**

**Screenprinting and Graphic Imaging**

Association International (SGIA)

10015 Main Street

Fairfax, VA 22031

Phone: (703) 385-1335

Fax: (703) 273-0456

Members: 3,000

Staff: 29

Budget: \$2,900,000

Contact: Marcia Kinter

Founded in 1948, the Screenprinting and Graphic Imaging Association International (SGIA) represents the interests of the screen printing industry throughout the world. SGIA offers technical assistance on all matters concerning the screen printing and graphic imaging industry; conducts educational programming for the industry; compiles industry statistics; and offers a wide variety of management and government related services.

SGIA was the industry partner in the DfE assessment of screen reclamation products. The Association is closely associated with the Screen Printing Technical Foundation (SPTF). SPTF conducts research into the screen printing process. The foundation also participated in the DfE screen printing project by providing the laboratory evaluation of alternative screen reclamation products submitted to the project.

**OTHER ASSOCIATIONS**

---

**In-Plant Management Association**

1205 W. College Ave.

Liberty, MO 64068

Phone: (816) 781-1111

Members: 2,700

Staff: 5

Founded in 1964, the In-Plant Management Association represents managers of in-plant printing and graphics operations. Members are most frequently located within academic institutions (20 percent) and insurance companies (12 percent). They offer training, educational, and certification programs. IPMA conducts research, surveys and studies on industrial and technological trends.

**National Association of Quick Printers**

401 N. Michigan Ave.

Chicago, IL 60611

Phone: (312) 644-6610

Members: 3,400

Staff: 4

Founded in 1975, the National Association of Quick Printers (NAQP) serves printers that offer "printing-while-you-wait" as well as suppliers. Many of their members are franchise operators. The technology is typically turnkey, xerographic printing, but there is increased use of small lithographic presses in the industry.

**Environmental Conservation Board  
of the Graphic Communications Industries**

1899 Preston White Drive

Reston, VA 22091-4367

Phone: (703) 648-3218

Contact: Mark Nuzzaco

The Environmental Conservation Board (ECB) was founded in 1972 to provide a unified and coordinated approach to environmental issues affecting the graphic communications industry. ECB is an intra-industry organization for environmental affairs for the printing, publishing, newspaper, packaging, and metal decorating industries and their suppliers. Members are predominantly other trade associations, not individual companies. Work is conducted by subcommittees convened to address specific issues. Current projects include: review of draft CTG for lithography, participation in DfE Core Group and in the Common Sense Initiative, information dissemination at trade shows, ECB Environmental Conference, and a newsletter and information database.

Subject: Power plant NSPS complaint

Dear all,

I would like to schedule a time tomorrow, Thursday, for a discussion of the complaint. Could folks do sometime after 3:30pm EST tomorrow for this call?

Additionally, I would like to schedule another quick call on Friday to discuss coordination for filing and/or response to potential communication with White House. Could folks do 1:30 or 2:00pm EST?

Please let me know what works best!

Thanks,

Kelly

Subject: Power plant NSPS complaint

Dear all,

I would like to schedule a time tomorrow, Thursday, for a discussion of the complaint. Could folks do sometime after 3:30pm EST tomorrow for this call?

Additionally, I would like to schedule another quick call on Friday to discuss coordination for filing and/or response to potential communication with White House. Could folks do 1:30 or 2:00pm EST?

Please let me know what works best!

Thanks,

Kelly

is 518-937-3148. I'll be in the office til about 5/530 today and reachable on the bberry after that.

Kim, if you wanted to reach out to the NGOs directly, I'd suggest calling Ben Longstreth at NRDC, Vickie Patton at EDF, and Joanne Spalding at Sierra Club. If you need any of their #s, just let me know. Thanks.--Mike

Based on the doodle poll there was no time that worked for everyone to discuss issues related to the RWH effort. Can folks let me know their availability for a call next Monday or Tuesday? Thanks!

Hi Mike--

I hope you are having a wonderful weekend. I hesitate to intrude upon it, but if you have a few minutes to talk my cell is 202-650-2277.

Best,  
Megan

**RESPONSE BY NRDC AND STATE INTERVENTOR-PETITIONERS TO  
EPA’S MOTION FOR VOLUNTARY REMAND AND PARTIAL  
VACATUR**

For the following reasons, Petitioner Natural Resources Defense Council (“NRDC”) and Intervenor-Petitioners New York and Connecticut (collectively, “Petitioners”) support EPA’s motion for vacatur of the CAIR-RACT presumption, but oppose EPA’s motion for voluntary remand of the CAIR-RACT determination unless a deadline is ordered for completion of that remand.

**Background**

Ozone, the main component of urban smog, is a corrosive air pollutant that can inflame the lungs and leave people gasping for breath. *See Am. Trucking*

*Ass'ns, Inc. v. EPA*, 283 F.3d 355, 359 (D.C. Cir. 2002). It is linked to aggravation of asthma, emergency department visits, hospitalizations for serious bronchial conditions, premature deaths, and other serious health harms. *See* 73 Fed. Reg. 16436, 16449 (Mar. 27, 2008). Ozone is formed in the air by the mixing of air pollutants – principally nitrogen oxides (“NO<sub>x</sub>”) and volatile organic compounds (“VOCs”) – in the presence of sunlight. 62 Fed. Reg. 38856, 38858 (July 18, 1997). Power plants, factories, and motor vehicles are major sources of NO<sub>x</sub> and VOCs.

The Clean Air Act (“CAA” or “the Act”) requires EPA to designate communities that violate ozone health standards as “nonattainment areas,” and requires states to adopt implementation plans to remedy the nonattainment. 42 U.S.C. §§ 7407(d), 7502, 7511-7511d. Among other things, the plans must “provide for . . . such reductions in [air pollutant] emissions from existing sources in the area as may be obtained through the adoption, at a minimum, of reasonably available control technology.” 42 U.S.C. §7502(c)(1). *See also id.* §7511a(b)(2)(C) (requiring plans for certain ozone nonattainment areas to “require the implementation of reasonably available control technology” for “all” major stationary sources of “that are located in the area”). EPA has long defined “reasonably available control technology” (“RACT”) as “the lowest emission limitation that a particular source is capable of meeting by the application of

control technology that is reasonably available considering technological and economic feasibility.” 70 Fed. Reg. 71612, 71652 n.57 (Nov. 29, 2005) (quoting 44 Fed. Reg. 53761, 53762 (Sept. 17, 1979)).

In this suit, Petitioners challenge an EPA rule allowing participation in an interstate pollution trading program (the Clean Air Interstate Rule or “CAIR”) to substitute for installation of RACT controls at individual power plants in ozone nonattainment areas (“CAIR-RACT provision”). CAIR was adopted to address the problem of interstate transport of ozone-forming pollution. It sets statewide budgets for NO<sub>x</sub> emissions from major power plants in 25 states and the District of Columbia. States can meet their budgets by issuing limited emissions allowances to power plants, but a plant can choose to buy additional allowances from other better-controlled plants rather than limit its emissions. The plants selling these emission allowances can be located in distant states many hundreds of miles away, and the emission reductions generating the allowances need not provide any ozone control benefit in the nonattainment area of the purchasing source. 63 Fed. Reg. 57356, 57460 (Oct. 27, 1998); 72 Fed. Reg. 31727, 31732 (June 8, 2007). Although this Court held in *North Carolina v. EPA*, 531 F.3d 896 (D.C. Cir. 2008), that CAIR was legally flawed, it subsequently decided to allow the rule to remain

in place while EPA develops a replacement to address the interstate transport of pollution. *See North Carolina v. EPA*, 550 F.3d 1176 (D.C. Cir. 2008).<sup>1</sup>

As EPA notes, the CAIR-RACT provision allows CAIR to substitute for RACT in two ways. First, for a number of specific nonattainment areas and states, EPA conducted an analysis purporting to predict that CAIR would lead to greater emission reductions in the area than source-by-source RACT (“CAIR-RACT determination”). Second, for all other ozone nonattainment areas covered by CAIR, EPA adopted a general presumption that RACT requirements are satisfied by implementation of CAIR (“CAIR-RACT presumption”). Petitioners contend that both the CAIR-RACT determination and CAIR-RACT presumption illegally and arbitrarily abrogate the Act’s mandate for RACT controls at pollution sources within each nonattainment area.

**1. Vacatur of the CAIR-RACT presumption is required by this Court’s decision in *NRDC v. EPA*.**

As EPA’s motion correctly explains, this Court’s ruling in *NRDC v. EPA*, 571 F.3d 1245 (D.C. Cir. 2009), requires invalidation of EPA’s presumption that the CAIR satisfies the Act’s RACT requirement for power plants covered by CAIR. *NRDC* held that a regional emissions trading program (the NO<sub>x</sub> SIP call)

---

<sup>1</sup> EPA’s replacement for CAIR, the Cross-State Air Pollution Rule, 76 Fed. Reg. 48208 (Aug. 8, 2011), was also found to be legally invalid. *EME Homer City Generation, L.P. v. EPA*, 696 F.3d 7 (D.C. Cir. 2012). Petitions for writ of certiorari of that decision are currently pending with the Supreme Court.

could not be deemed to satisfy the Act's mandate for RACT-level emissions reductions from sources "within each nonattainment area." Id. 1256. That is because the trading program allowed sources within any given nonattainment area to avoid reducing their emissions at all (much less by the level achievable with RACT controls) by purchasing emissions allowances from sources located outside that area. CAIR is the same type of trading program, and the broad presumption that CAIR satisfies RACT is therefore flatly prohibited under the rationale of *NRDC*.

**2. A voluntary remand of EPA's CAIR-RACT determination for specific nonattainment areas should be granted only if accompanied by a deadline for completing remand proceedings.**

EPA moves for voluntary remand of its CAIR-RACT determination without including any deadline for completing remand proceedings. The effect of such an open-ended remand would be to leave the CAIR-RACT determination in place indefinitely, allowing power plants in numerous nonattainment areas to avoid installing and operating the RACT-level controls mandated by the Act for protection of public health. Although Petitioners contend that EPA's CAIR-RACT determination is unlawful and arbitrary, Petitioners would not object to a remand of the CAIR-RACT determination if accompanied by a court-ordered deadline requiring expeditious completion of remand proceedings. But without such a deadline, the Act's health protection mandates and timelines would be thwarted,

and Petitioners would be denied a timely opportunity to pursue their legitimate objections to the CAIR-RACT determination, further outlined below.

EPA's CAIR-RACT determination is unlawful and arbitrary on multiple grounds.<sup>2</sup> For one, the determination merely reflects a prediction by EPA that power plants in the affected nonattainment areas will choose to comply with CAIR by installing and operating pollution controls in those areas sufficient to achieve RACT-level reductions. As noted above, however, neither CAIR nor the CAIR-RACT determination *requires* those plants to install RACT-level controls inside any nonattainment area: Instead, they can choose to avoid controlling their emissions by purchasing allowances from other sources located a thousand miles away in another state. Thus, the rule unlawfully waives the Act's express mandates for RACT controls "at a minimum" for all existing sources "in" each nonattainment area. 42 U.S.C. §§7502(c)(1); 7511a(b)(2).

Even assuming that power plants covered by CAIR will choose to install RACT controls, the determination wrongly assumes that those plants will actually operate their pollution controls continuously on the hot summer days when ozone pollution levels are at their worst. In reality, CAIR (in contrast to RACT) does not require them to do so, and New York is aware of instances in which power plants

---

<sup>2</sup> For the sake of brevity, Petitioners will not present here all of their arguments challenging the CAIR-RACT determination. Additional arguments appear in Petitioners' briefs filed in this Court in *NRDC v. EPA*, No. 06-1045.

covered by CAIR periodically shut down their NO<sub>x</sub> emission controls, including on some days when the threat of ozone violations is high. EPA also irrationally based its determination that CAIR performs better than RACT on a comparison of total annual and seasonal emissions predicted under CAIR versus RACT, when the relevant comparison is of daily and hourly emissions that impact whether an area will violate the 8-hour ozone standard. CAIR sets an emission budget for the total amount of pollution that power plants can collectively emit in the entire CAIR region over an entire year and an entire summer. In contrast, RACT limits the amount a plant can emit on any one day. Since allowance banking is permitted under CAIR, leftover allowances from previous years can be used to offset current year requirements. EPA, therefore, cannot assure that CAIR in any year will perform better than RACT. As a result, CAIR fails the RACT equivalency test on a spatial (in the area) and temporal basis. The CAIR-RACT determination also wrongly assumed that RACT would consist of weak pollution controls that would be the same at every power plant; an assumption at odds with the definition of RACT as the lowest emission limitation that a “particular source” is capable of achieving.

EPA’s proposed remand without a deadline would allow all of the above flaws in the CAIR-RACT determination to remain unaddressed indefinitely. And the absence of a deadline for completing remand proceedings would present a

significant threat to public health by allowing power plants inside numerous nonattainment areas to continue avoiding RACT-level pollution controls, thereby allowing substantially greater ozone-forming emissions than would RACT during periods when ozone violations are most likely. Moreover, the statutory deadlines for implementation of RACT controls and for attainment of the 1997 ozone standard in many areas have long since passed. *See* 70 Fed. Reg. 71617, 71658-59 (Nov. 29, 2005) (indicating that RACT must be implemented within 57 months of nonattainment designations); 69 Fed. Reg. 23858 (Apr. 30, 2004) (promulgating nonattainment designations for 1997 ozone standard effective June 15, 2004). Thus, any delay by EPA in completing remand proceedings on the CAIR-RACT determination will thwart the Act's timetables and threaten to delay timely attainment of ozone health standards both within the affected nonattainment areas and in downwind states.

In addition, the Court cannot rely on EPA to expeditiously complete remand proceedings on this issue absent a court-ordered deadline. The agency *still* has not, for example, completed a remand rulemaking to comply with this Court's decision of nearly four years ago in *NRDC*, 571 F.3d at 1258 (remanding EPA's rule treating the NO<sub>x</sub> SIP call as RACT). Given the agency's track record of delay, the passage of the Act's RACT and attainment deadlines, and the danger to public health from continued ozone violations, a court-ordered remand schedule is fully

warranted. *See Env'tl. Def. Fund v. EPA*, 852 F.2d 1316, 1331 (D.C. Cir. 1988) (setting deadline for action on remand because of “EPA’s history of delay and missed deadlines”).

Petitioners further submit that a schedule of no longer than six months would be appropriate for completion of the remand rulemaking. Such a schedule is justified not only by the urgency of the health issues at stake, but also by the fact that EPA has *already* developed a proposed rule to rescind the CAIR-RACT determination.

<http://www.reginfo.gov/public/do/eAgendaViewRule?pubId=201110&RIN=2060-AQ07> (last visited June 20, 2013) (copy attached hereto) (“This rule will propose to withdraw any prior determination or presumption that compliance with the Clean Air Interstate Rule (CAIR) or the NO<sub>x</sub> SIP Call constitutes reasonably available control technology (RACT)....”). EPA sent the proposed rule to the Office of Management and Budget (“OMB”) on November 14, 2011.

<http://www.reginfo.gov/public/do/eoReviewSearch;jsessionid=7DDE5EB4E7E8FBAE9942A863CE66B8FA> (last visited June 20, 2013) (RIN: 2060-AQ07) (excerpt attached). As there is no statutory requirement for OMB to review the proposed rule, the only remaining steps that EPA has to take are to publish the proposal in the Federal Register, allow time for public comment, review and respond to the comments, and prepare and publish a final rule. *See* 42 U.S.C.

§7607(d)(3)-(7). That entire process can readily be completed within six months. *See, e.g.*, 78 Fed. Reg. 3086, 3094-95, 3276 (Jan. 15, 2013) (showing EPA promulgation of final revised standards for particulates within six months of proposal).

### CONCLUSION

For all the foregoing reasons, the Court should grant EPA's motion for vacatur of the CAIR-RACT presumption, and remand the CAIR-RACT determination to EPA with instructions to complete a remand rulemaking within six months of the Court's order. If the Court does not order vacatur and/or remand of all EPA actions at issue in this case, then Petitioners ask that the Court direct the parties to submit statements (jointly, if possible) within 30 days indicating: a) whether they believe supplemental briefing is warranted on the EPA actions still before the Court, and if so, a proposed schedule and format for such briefing; and/or b) whether the case should be set for oral argument.

Dated: June 20, 2013

Respectfully submitted,

/s/ David S. Baron

**EPA/AR**

**RIN:** 2060-AQ07

**Publication ID:** Fall 2011

**Title:** Withdr.of the Prior Deter. or Presump. That Compl. w/CAIR or the NOx SIP Call Const. RACT or RACM for the 97 8-Hr Ozone & 97Fine Part. NAAQS; & Rev. to RACT Guid. & RFP Req. for the 97Fine Part. NAAQS

**Abstract:** This rule will propose to withdraw any prior determination or presumption that compliance with the Clean Air Interstate Rule (CAIR) or the NOx SIP Call constitutes reasonably available control technology (RACT) or reasonably available control measures (RACM) for oxides of nitrogen (NOx) or sulfur dioxide (SO2) emissions from electric generating unit (EGU) sources participating in these regional cap-and-trade programs. This rule will propose revisions to preamble guidance in the final Implementation Rule for the 1997 PM2.5 national ambient air quality standard (NAAQS) concerning the economic feasibility criteria for determining RACT for sources located within nonattainment areas. The rule will also propose to clarify the situations under which emission reductions from outside of a nonattainment area can be credited toward meeting the Reasonable Further Progress (RFP) requirements for the 1997 PM2.5 NAAQS.

For Immediate Release

June 25, 2013

June 25, 2013

MEMORANDUM FOR THE ADMINISTRATOR OF THE  
ENVIRONMENTAL PROTECTION AGENCY

SUBJECT: Power Sector Carbon Pollution Standards

With every passing day, the urgency of addressing climate change intensifies. I made clear in my State of the Union address that my Administration is committed to reducing carbon pollution that causes climate change, preparing our communities for the consequences of climate change, and speeding the transition to more sustainable sources of energy.

The Environmental Protection Agency (EPA) has already undertaken such action with regard to carbon pollution from the transportation sector, issuing Clean Air Act standards limiting the greenhouse gas emissions of new cars and light trucks through 2025 and heavy duty trucks through 2018. The EPA standards were promulgated in conjunction with the Department of Transportation, which, at the same time, established fuel efficiency standards for cars and trucks as part of a harmonized national program. Both agencies engaged constructively with auto manufacturers, labor unions, States, and other stakeholders, and the resulting standards have received broad support. These standards will reduce the Nation's carbon pollution and dependence on oil, and also lead to greater innovation, economic growth, and cost savings for American families.

The United States now has the opportunity to address carbon pollution from the power sector, which produces nearly 40 percent of such pollution. As a country, we can continue our progress in reducing power plant pollution, thereby improving public health and protecting the environment, while supplying the reliable, affordable power needed for economic growth and advancing cleaner energy technologies, such as efficient natural gas, nuclear power, renewables such as wind and solar energy, and clean coal technology.

Investments in these technologies will also strengthen our economy, as the clean and efficient production and use of electricity will ensure that it remains reliable and affordable for American businesses and families.

By the authority vested in me as President by the Constitution and the laws of the United States of America, and in order to reduce power plant carbon pollution, building on actions already underway in States and the power sector, I hereby direct the following:

Section 1. Flexible Carbon Pollution Standards for Power Plants. (a) Carbon Pollution Standards for Future Power Plants. On April 13, 2012, the EPA published a Notice of Proposed Rulemaking entitled "Standards of Performance for Greenhouse Gas Emissions for New Stationary Sources: Electric Utility Generating Units," 77 Fed. Reg. 22392. In light of the information conveyed in more than two million comments on that proposal and ongoing developments in the industry, you have indicated EPA's intention to issue a new proposal. I therefore direct you to issue a new proposal by no later than September 20, 2013. I further direct you to issue a final rule in a timely fashion after considering all public comments, as appropriate.

(b) Carbon Pollution Regulation for Modified, Reconstructed, and Existing Power Plants. To ensure continued progress in reducing harmful carbon pollution, I direct you to use your authority under sections 111(b) and 111(d) of the Clean Air Act to issue standards, regulations, or guidelines, as appropriate, that address carbon pollution from modified, reconstructed, and existing power plants and build on State efforts to move toward a cleaner power sector. In addition, I request that you:

(i) issue proposed carbon pollution standards, regulations, or guidelines, as appropriate, for modified, reconstructed, and existing power plants by no later than June 1, 2014;

(ii) issue final standards, regulations, or guidelines, as appropriate, for modified, reconstructed, and existing power plants by no later than June 1, 2015; and

(iii) include in the guidelines addressing existing power plants a requirement that States submit to EPA the implementation plans required under section 111(d) of the Clean Air Act and its implementing regulations by no later than June 30, 2016.

(c) Development of Standards, Regulations, or Guidelines for Power Plants. In developing standards, regulations, or guidelines pursuant to subsection (b) of this section, and consistent with Executive Orders 12866 of September 30, 1993, as amended, and 13563 of January 18, 2011, you shall ensure, to the greatest extent possible, that you:

(i) launch this effort through direct engagement with States, as they will play a central role in establishing and implementing standards for existing power plants, and, at the same time, with leaders in the power sector, labor leaders, non-governmental organizations, other experts, tribal officials, other stakeholders, and members of the public, on issues informing the design of the program;

(ii) consistent with achieving regulatory objectives and taking into account other relevant environmental regulations and policies that affect the power sector, tailor regulations and guidelines to reduce costs;

(iii) develop approaches that allow the use of market-based instruments, performance standards, and other regulatory flexibilities;

(iv) ensure that the standards enable continued reliance on a range of energy sources and technologies;

(v) ensure that the standards are developed and implemented in a manner consistent with the continued provision of reliable and affordable electric power for consumers and businesses; and

(vi) work with the Department of Energy and other Federal and State agencies to promote the reliable and affordable provision of electric power through the continued development and deployment of cleaner technologies and by increasing energy efficiency, including through stronger appliance efficiency standards and other measures.

Sec. 2. General Provisions. (a) This memorandum shall be implemented consistent with applicable law, including international trade obligations, and subject to the availability of appropriations.

(b) Nothing in this memorandum shall be construed to impair or otherwise affect:

(i) the authority granted by law to a department, agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(c) This memorandum is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

(d) You are hereby authorized and directed to publish this memorandum in the *Federal Register*.

## EPA Regulation of Greenhouse Gas Emissions from Existing Power Plants: Issues and Options

*Kyle Danish, Stephen Fotis, Doug Smith, and Ilan Gutherz*

In his June 25<sup>th</sup> speech on climate policy, President Obama announced that he will direct the Environmental Protection Agency (EPA) to use its existing authorities under the Clean Air Act to develop greenhouse gas (GHG) emission standards for power plants.

The President described this regulation as one plank in an overall plan to meet a commitment made by his administration in international climate negotiations: a reduction in U.S. GHG emissions of 17 percent from 2005 levels by 2020.

Given that existing power plants account for approximately a third of U.S. GHG emissions, it would be difficult to meet the Obama Administration's objective without addressing power sector emissions in some way. However, setting GHG emission standards for existing power plants under the Clean Air Act is far from straightforward. What follows is a review of some of the key issues and options for setting these regulations.

### REGULATION OF POWER PLANTS UNDER SECTION 111 OF THE CLEAN AIR ACT

The EPA is expected to regulate power plant GHG emissions under section 111 of the Clean Air Act, which authorizes EPA and the States to set "standards of performance" for emissions from major emitting facilities. Indeed, EPA has already proposed GHG performance standards for *new* power plants under section 111(b). (See our March 2012 issue alert: <http://www.vnf.com/news-alerts-696.html>.) A Presidential Memorandum issued concurrently with the President's speech (see <http://www.whitehouse.gov/the-press-office/2013/06/25/presidential-memorandum-power-sector-carbon-pollution-standards>) directs EPA to *revise* its proposed rule for new power plants in light of the comments received and to issue a new proposal by September 20, 2013.

The Presidential Memorandum further directs EPA to develop GHG emission standards for *existing* power plants, and for modified and reconstructed power plants, on a more extended schedule, with EPA issuance of proposed rules by June 1, 2014, and issuance of final rules by June 1, 2015.

Section 111(d) authorizes EPA to regulate existing sources of certain air pollutants that are not regulated under other sections of the Clean Air Act. Section 111(d) directs EPA to require States to develop plans that establish performance standards for such sources. The State plans are subject to approval by EPA.

Previously, EPA established a generic procedure to carry out this Federal-State regulatory process. Under this procedure, EPA develops an "emission guideline," which sets a benchmark for State performance standards. State plans generally must be "no less stringent" than the EPA-set emission guideline, but States have some

leeway to tailor their plans to in-State conditions.

The EPA procedure establishes a multi-year process under which the agency develops the emission guidelines, States develop and submit plans, EPA reviews and approves the plans, and regulated sources comply with approved State plans by certain deadlines. The President’s June 25<sup>th</sup> Memorandum calls for EPA to finalize the guidelines by June 1, 2015 and to require States to submit plans for implementing the federal guidelines by June 30, 2016. The Memorandum does not specify a deadline by which regulated power plants must comply with the standards.

### ISSUES WITH SECTION 111 REGULATION OF EXISTING POWER PLANTS

**Authority to Regulate.** EPA faces a threshold issue: Can the agency even regulate existing power plants under section 111(d)?

During amendments to the Clean Air Act in 1990, the Senate and the House of Representatives passed different versions of amendments to section 111(d). In the rush to finalize the massive bill, the House-Senate conference did not reconcile the two versions, and – in an unusual outcome – both became part of the bill that was signed into law.

The Senate language alone would allow EPA to regulate GHGs from existing power plants. The House language, on the other hand, prohibits EPA from regulating a category of facilities that EPA already is regulating under section 112 of the statute, which addresses air toxic emissions. Because EPA has issued a final rule regulating toxic emissions from power plants – the Mercury and Air Toxics Standards Rule (*see our December 2011 issue alert: <http://www.vnf.com/news-alerts-661.html>*) – the House language, if read literally, would preclude section 111(d) regulation of power plants.

Lacking clear guidance from Congress, EPA has interpreted the House and Senate amendments to section 111(d) in a manner that allows EPA to regulate GHGs from existing power plants and other existing stationary sources. The extent to which a court would defer to this interpretation is a question the agency will face if it moves forward on regulation under section 111(d).

**Setting the “Emission Guideline.”** Assuming that EPA may regulate under section 111(d), it faces another set of questions in setting the “emission guideline” for State plans. EPA regulations provide for setting a guideline that “reflects the application of the best system of emission reduction (considering the cost of such reduction) that has been adequately demonstrated” for sources within the regulated category.

EPA’s conventional approach to setting emission guidelines and performance standards under section 111 has been to look at systems of emission control technologies that can be implemented *at the facility*. However, that approach is complicated in the context of GHG emissions because direct control technology for GHG emissions (such as carbon capture and sequestration) is not now commercially viable. Some units may be able to reduce emissions with plant efficiency improvements, co-firing with natural gas or biomass, or fuel switching, but others may lack any

feasible at-the-plant options. Given these constraints, emission guidelines developed based solely on consideration of at-the-plant measures may produce limited emission reductions.

Some environmental groups are advocating that the EPA take a different and more ambitious approach to setting the emission guideline for existing plants. Under this alternative approach, the benchmark would be based on a “system of emission reduction” that not only considers measures that can be implemented at an individual plants, but also considers offsite measures that can be implemented *across the entire power sector*. These other measures could include, for instance, additions of renewable or possibly nuclear generation resources, as well as programs that promote more efficient use of energy in homes, buildings, and manufacturing.

By assuming the availability of a much broader range of “beyond the fence” measures, some environmental groups have urged the adoption of stringent GHG emission guidelines that fossil-fueled plants may not be able to achieve through improved efficiency or other on-site measures alone. For example, the Natural Resources Defense Council (NRDC) has published one such proposal (*see <http://www.nrdc.org/air/pollution-standards/files/pollution-standards-report.pdf>*).

**Means of Compliance.** In addition to establishing GHG emission guidelines, EPA will likely need to provide guidance on the range of measures States may allow power plants to use in order to demonstrate compliance. For instance, could a State permit use of “beyond the fence” measures to establish compliance even if such measures were not the basis for the EPA-set emission guideline? Could a State provide for market-based compliance mechanisms such as inter-unit averaging, trading, and banking? Could a State with a pre-existing GHG regulatory program for power plants rely on that program for compliance, provided it is “no less stringent” than the EPA-set guideline?

The June 25<sup>th</sup> Presidential Memorandum does not identify a clear preference for one policy approach or another. The Memorandum does direct EPA to “develop approaches that allow the use of market-based instruments, performance standards, and other regulatory flexibilities” and “ensure that the rules enable continued reliance on a range of energy sources and technologies.” However, the Memorandum does not make clear whether EPA should consider the availability of market-based measures in determining the stringency of the emission guideline (potentially resulting in a much more stringent guideline) or should simply consider allowing States the flexibility to adopt such approaches in meeting a guideline otherwise based on systems of emission reductions that can be implemented directly at the plant (implying a relatively less stringent guideline).

Virtually any program EPA adopts will be subject to legal uncertainty. There is little or no instructive judicial precedent on implementation of section 111(d). The extent to which a court would defer to EPA on its interpretations of the key statutory terms is unclear.

The various regulatory approaches also raise a host of design questions. For example, how can energy efficiency program activities be translated into GHG emission reductions for purposes of supporting a Clean Air Act

compliance determination? Many end-use energy efficiency programs are in operation throughout the country, but adapting these program structures to be part of an enforceable GHG regulatory regime could involve significant work.

***Regulation of Modified and Reconstructed Plants.*** GHG emissions from existing power plants that are modified or reconstructed would be regulated by EPA under section 111(b), not section 111(d). The standards of performance adopted for modified or reconstructed plants may be different from those promulgated for either new or existing units. The schedule of rulemakings for addressing modified sources is the same as that for the rulemakings on existing sources – with a proposed rule by June 2014, and a final rule by June 2015.

The performance standards to be established for modified and reconstructed power plants will become applicable to those existing plants that undertake major construction projects after the date that the EPA issues its proposal to establish those standards (which could be as early as June 2014). It may be necessary for companies undertaking major projects at existing power plants after June 2014 to document that those projects do not result in a GHG emissions increase that would trigger the application of new GHG performance standards for those plants.

## CONCLUSION

Because GHG emissions from power plants represent a major portion of U.S. emissions, pursuing regulation of the electric power sector is likely to be a significant part of the President's new climate policy. However, EPA will have to resolve a number of legal and policy design issues as it moves forward with GHG performance standards for existing power plants. The Presidential Memorandum directs EPA to conduct a rigorous process to engage with States, the power sector, labor and other stakeholders in designing these policies.

## FOR MORE INFORMATION

For more information on the issue of GHG standards for power plants or for assistance in engaging in these forthcoming regulatory processes, please contact [Kyle Danish](#), [Stephen Fotis](#) or any member of the firm's [Environment](#) or [Climate Change](#) practices at (202) 298-1800. Van Ness Feldman is active on the range of Federal and State activities relating to climate change, air quality, and energy policy. Van Ness Feldman has been recognized by *Chambers USA*, *Chambers Global*, *Legal 500*, and *U.S. News / Best Lawyers* for its Energy, Environment, Government Relations, and other related practice areas. The firm's Climate Change practice has received *Chambers USA's* Band One recognition, one of only five firms in the country to receive this honor.

To: Vickie Patton  
Subject: Cleaner Cars for America

Dear Journalist,

As we approach the Fourth of July weekend, our nation is moving forward in advancing energy security through cleaner cars that will double our fleetwide fuel economy by model year 2025 and cut carbon pollution by 6 billion tons, break our dependence on oil, and save families hard-earned money at the gas pump while protecting our children from particulate and smog-forming pollution.

The public comment period closed yesterday on the final pillar of the nation's integrated multipollutant clean car standards that protect human health through a "systems" approach of cleaner vehicles and cleaner fuels: EPA's "tier 3" emission standards for particulates and smog-forming emissions and cleaner low sulfur gasoline.

There is extensive, broad support for EPA's clean air standards.

In yesterday's public comments – pertinent excerpts below –the Alliance of Automobile Manufacturers, the United Auto Workers, leading public health organizations, and a coalition of businesses expressed their strong support for EPA's clean air standards, as did tens of thousands of concerned citizens. Indeed, as noted below, the automakers highlighted the "Day One" clean air benefits of cleaner low sulfur gasoline "immediately reducing emissions from every gasoline-powered vehicle on our roads, no matter how old."

The diverse interests that are working together to achieve cleaner cars for a healthier and stronger America provide much to celebrate this Fourth of July.

Best wishes,

Vickie Patton

General Counsel

Environmental Defense Fund, 720-837-6239

Alliance of Automobile Manufacturers and Association of Global Automakers

"Sulfur inhibits the catalytic converter's ability to reduce vehicle emissions, so lower sulfur at the pump means fewer exhaust emissions in the air. And because lower sulfur reduces emissions from all vehicles, the proposed sulfur reductions would achieve Day One benefits, immediately reducing emissions from every gasoline-powered vehicle on our roads, no matter how old."

<http://www.autoalliance.org/index.cfm?objectid=359B3CB0-E285-11E2-8898000C296BA163>.

United Auto Workers (UAW)

"[Tier 3] standards will create jobs and are estimated to prevent thousands of deaths each year, in turn

providing billions of dollars in public healthcare savings.”

“We call for an immediate finalization of the proposed Tier 3 rules and the use of similar widely-beneficial regulations to ensure our commitment to creating the next generation of clean and efficient vehicles.”

<http://www.regulations.gov/#!documentDetail;D=EPA-HQ-OAR-2011-0135-2184>

The American Academy of Pediatrics, the American Heart Association, the American Lung Association, the American Public Health Association, the American Thoracic Society, the Asthma and Allergy Foundation of America, Trust for America’s Health, Healthcare Without Harm, and the National Association of City and County Health Officials

“These standards are urgently needed and will help protect the health of millions of Americans who continue to breathe unsafe air.”

“Abundant scientific evidence exists on the health effects of ozone, particulate matter and other pollutants from tailpipe exhaust. Tier 3 standards will be effective tools to reduce such pollution and improve air quality.”

American Lung Association (ALA)

“We applaud the Environmental Protection Agency for proposing cleaner gasoline and vehicle standards, also known as Tier 3, that will cut life-threatening tailpipe pollution from cars, light trucks and SUVs..”

<http://www.regulations.gov/#!documentDetail;D=EPA-HQ-OAR-2011-0135-4177>

Business for Innovative Climate and Energy Policy (BICEP)

“As major U.S. businesses, we are writing to voice our strong support for the proposed Tier 3 Motor Vehicle Emission and Fuel Standards. These standards are the most cost effective way to reduce harmful emissions of carbon monoxide, nitrogen oxide, and volatile organic compounds, which contribute to smog and soot, cause respiratory and heart disease, and drive up healthcare costs. Furthermore, Tier 3 will result in net economic gains and job growth, and reduce health care costs.”

All, I've heard back from Joe that they won't be ready to meet with us on the 29th and need until the week of Aug. 5 to be in position to have a productive discussion. I know that means that several of us will be unable to participate, but we should try and push this forward with whomever is available. Meleah said that she could probably do a meeting (at least by phone) on Aug. 8 or 9, so why don't folks let me know their availabilities for those days and we can go from there. Thanks.--Mike

Subject: Oil and Gas NSPS/Meeting Reschedule

All, I've heard back from Joe that they won't be ready to meet with us on the 29th and need until the week of Aug. 5 to be in position to have a productive discussion. I know that means that several of us will be unable to participate, but we should try and push this forward with whomever is available. Meleah said that she could probably do a meeting (at least by phone) on Aug. 8 or 9, so why don't folks let me know their availabilities for those days and we can go from there. Thanks.--Mike

Joe and company have suggested 2-3 pm eastern on the 8th or 9th. Can folks weigh in with which date works better. I'll be out for a couple of days, so will ask Morgan to circle back to Joe's secretary when the votes are in. Thanks.

All, I've heard back from Joe that they won't be ready to meet with us on the 29th and need until the week of Aug. 5 to be in position to have a productive discussion. I know that means that several of us will be unable to participate, but we should try and push this forward with whomever is available. Meleah said that she could probably do a meeting (at least by phone) on Aug. 8 or 9, so why don't folks let me know their availabilities for those days and we can go from there. Thanks.--Mike

So far I've heard availability from some folks at NRDC, Earthjustice, and CATF and it looks like Aug. 9 is the better of the 2 days. Is someone from Sierra Club and EDF available that day from 2-3 pm eastern time?

Subject: UARG v. EPA, S. Ct. No. 12-1146 & related greenhouse gas cases

Dear Counsel:

Here is the environmental organization respondents' brief in opposition.

Best,

Sean

## QUESTIONS PRESENTED

Nine petitions for certiorari challenge some or all of four actions of the Environmental Protection Agency concerning the regulation of greenhouse gases under the Clean Air Act, 42 U.S.C. 7401, *et seq.*: (1) a finding under Section 202(a)(1) of the Act, 42 U.S.C. 7421(a)(1), that greenhouse gas pollution may reasonably be anticipated to endanger public health or welfare (Endangerment Finding); (2) regulations establishing greenhouse gas emissions standards for new light-duty motor vehicles for model years 2012–2016 under Section 202(a)(2), 42 U.S.C. 7421(a)(2) (Tailpipe Rule); (3) an agency interpretation identifying the time at which greenhouse gases would become “subject to regulation” under the Act (Timing Decision), and (4) regulations phasing in the application of the Act’s Title I, Part C, Prevention of Significant Deterioration (PSD) and Title V Operating Permit programs to stationary sources of greenhouse gas emissions (Tailoring Rule). In addition, certain petitioners challenge regulations promulgated by EPA in 1978, 1980, and 2002 interpreting the Act’s PSD permitting requirements, 42 U.S.C. 7475(a), 7479(1).

The questions presented are:

1. Whether the Endangerment Finding complied with Section 202(a)(1), was supported by the record, and satisfied applicable procedural requirements.

2. Whether the Tailpipe Rule is consistent with Section 202(a)(2) and supported by the record.
3. Whether the statutory requirement to obtain a PSD construction permit applies to sources that emit sufficient amounts of any regulated air pollutant, including greenhouse gases.
4. Whether petitioners lacked Article III standing to challenge the Timing Decision and Tailoring Rule.

## **RULE 29.6 STATEMENT**

Respondents Conservation Law Foundation; Environmental Defense Fund; Georgia ForestWatch; Indiana Wildlife Federation; Michigan Environmental Council; National Wildlife Federation; Natural Resources Council of Maine; Natural Resources Defense Council; Ohio Environmental Council; Sierra Club; Wetlands Watch, and Wild Virginia (Environmental Organization Respondents), all respondent-intervenors in the court of appeals, are nonprofit environmental organizations. The Environmental Organization Respondents have no corporate parents and no publicly held corporation owns an interest in any of them.

## INTRODUCTION

In *Massachusetts v. EPA*, 549 U.S. 497 (2007), this Court held that greenhouse gases “unambiguous[ly]” fall within the Clean Air Act’s definition of “air pollutant,” and that the Environmental Protection Agency has a duty under the Act to curb the emissions of these pollutants if it finds that they contribute to pollution that endangers public health or welfare. Responding to this Court’s mandate, EPA has taken a series of carefully considered actions addressing greenhouse gas pollution.

Nine petitions for certiorari raise a variety of challenges to a D.C. Circuit decision upholding EPA’s actions. Legal merit is not measured by “pages of briefing,” see *Whitman v. American Trucking Ass’ns, Inc.*, 531 U.S. 457, 465 (2001), and the many petitions and supporting briefs raise no issue worthy of this Court’s review.

EPA’s endangerment and contribution findings and emissions standards for motor vehicles simply implement *Massachusetts*’ mandate. The D.C. Circuit correctly determined that these agency actions satisfied all requirements of Section 202(a) of the Act as interpreted by this Court in *Massachusetts*, and reflected EPA’s careful, candid, and reasonable assessment of the “ocean” (Pet.App. 46a) of scientific evidence concerning climate change, its causes, and its effects.<sup>1</sup> No petitioner challenges the motor vehicle emissions standards, which EPA

---

<sup>1</sup> We cite to the Petition Appendix in *Utility Air Regulatory Group v. EPA*, No. 12-1146. The appendix to this brief contains a glossary of abbreviations.

established in coordination with the Department of Transportation as this Court contemplated in *Massachusetts*. These standards are delivering significant emissions reductions, and enjoy the automobile industry's support. None of the challenges to the endangerment finding and vehicle standards remotely warrants certiorari.

Nor is review warranted of the D.C. Circuit's ruling that EPA was "unambiguously correct" (Pet.App. 24a), in regulations promulgated in 1978, 1980, and 2002, that the Act's Prevention of Significant Deterioration (PSD) permitting provisions apply to major sources of any air pollutant regulated under the Act. (As the D.C. Circuit found, petitioners forfeited any challenge as to Title V's operating permit requirements.) The D.C. Circuit applied orthodox rules of statutory interpretation and held EPA's construction to be "statutorily compelled." Pet.App. 94a. Petitioners' varied and conflicting arguments persistently ignore plain statutory language—including the "air pollutant" definition this Court in *Massachusetts* held "unambiguous[ly]" (549 U.S. at 529) covers greenhouse gases.

The D.C. Circuit also correctly concluded that petitioners lacked Article III standing to challenge EPA's Timing Decision and Tailoring Rule, because these actions benefited rather than harmed petitioners. The petitions that challenge this ruling only confirm the marked departures from settled Article III principles that would be required to reach any different conclusion.

Although many petitions disregard or slight *Massachusetts'* holdings and reasoning, only that of

Texas, *et al.*, explicitly calls for this Court to reconsider and overrule its holding in *Massachusetts* that greenhouse gases are an “air pollutant” under the Act’s statute-wide definition. The strong version of *stare decisis* that applies in statutory cases requires rejection of that request under any circumstances, and the request should be especially unwelcome given that just two years ago this Court relied squarely upon *Massachusetts* in holding that “the Clean Air Act and the EPA actions it authorizes” displace federal common law abatement actions against carbon dioxide-emitting power plants. *American Electric Power Co. v. Connecticut*, 131 S. Ct. 2527, 2537 (2011). *Massachusetts*, this Court explained, “made plain that emissions of carbon dioxide qualify as air pollution subject to regulation under the Act.” *Id.* (citing 549 U.S. at 528–29).

Finally, any suggestions of dire practical impacts from the PSD permitting requirements are simply unfounded. In contrast with petitioners’ implications that tens of thousands of sources are being affected, fewer than 200 sources, all of them large emitters, applied for PSD permits for greenhouse gas emissions in the first two years of the program. See *infra*, pp. 44 & nn.21–22. In short, there is no practical issue warranting the Court’s intervention.

The petitions should all be denied.

## STATEMENT

**A. Statutory Background.** The Clean Air Act establishes a comprehensive suite of programs “to promote the public health and welfare.” 42 U.S.C. 7401(b)(1). For purposes of the Act, “air pollutant” means any air pollution agent or combination of such agents, including any physical, chemical, biological, radioactive ... substance or matter which is emitted into or otherwise enters the ambient air.” 42 U.S.C. 7602(g).

Section 202(a)(1) of the Act requires the EPA Administrator to determine whether, “in [her] judgment,” “the emission of any air pollutant” from new motor vehicles “cause[s], or contribute[s] to, air pollution” that “may reasonably be anticipated to endanger public health or welfare.” *Id.* 7521(a)(1). If the Administrator answers these questions affirmatively, then she “shall” promulgate vehicle emission standards “in accordance with the provisions of” Section 202. *Id.* Standards for passenger vehicles are governed by Section 202(a)(2), which provides that the standards “shall take effect after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.” 42 U.S.C. 7521(a)(2). See generally *Massachusetts*, 549 U.S. at 506, 532–35.

The Prevention of Significant Deterioration (PSD) program requires new and modified “major emitting facilities” to obtain preconstruction permits. 42 U.S.C. 7475. Covered facilities are those located in “attainment” areas (areas meeting at least one national ambient air quality standard (NAAQS)), 42 U.S.C. 7407(d)(1), 7471, 7475(a),<sup>2</sup> and which emit or have the potential to emit more than 100 or 250 tons per year of “any air pollutant.” 42 U.S.C. 7479(1). The PSD program requires a preconstruction permit that includes, *inter alia*, emission limitations reflecting the best available control technology (BACT) for each pollutant “subject to regulation under the [Act].” 42 U.S.C. 7475(a)(1), (a)(4), 7479(3). For decades, EPA regulations have provided that, once an air pollutant becomes subject to regulation under any provision of the Act, emissions of that pollutant trigger application of PSD and Title V permitting—so that “the PSD program applies automatically to newly regulated ... pollutants.” 67 Fed. Reg. 80,186, 80,240 (Dec. 31, 2002). See also 43 Fed. Reg. 26,380, 26,397 (June 19, 1978); 45 Fed. Reg. 52,676, 52,711 (Aug. 7, 1980); *Alabama Power v. Costle*, 636 F.2d 323, 352 (D.C. Cir. 1979) (observing that, under the statute, PSD permit applicability is not limited to NAAQS pollutants).

---

<sup>2</sup> NAAQSs have been established for six pollutants: lead, ozone, carbon monoxide, two forms of particulate matter, sulfur dioxide, and nitrogen dioxide. 40 C.F.R. 50.4–50.18. Dozens of other air pollutants are regulated under the Act. See *infra*, p. 34 n.17.

The Title V operating permit program does not impose substantive requirements, but requires “major sources” (any source that emits or has the potential to emit one hundred tons per year of any air pollutant) to have operating permits that collect in one place all applicable emissions standards. 42 U.S.C. 7661a(a), 7661(2), 7602(j). 57 Fed. Reg. 32,250, 32,251 (July 21, 1992).

**B. Regulatory Background.** In *Massachusetts*, this Court held that greenhouse gases “without a doubt” and “unambiguous[ly]” fall within “the Act’s sweeping definition of ‘air pollutant,’” 549 U.S. at 528–29 (citing and discussing 42 U.S.C. 7602(g)). The Court also held that Section 202(a)’s “clear ... command” required EPA to make a “scientific judgment” as to “whether greenhouse gas emissions contribute to climate change,” unless it found the science too profoundly uncertain to permit such a judgment. *Id.* at 533–34.

*Endangerment Finding.* On remand from *Massachusetts*, EPA determined that greenhouse gas pollution may reasonably be anticipated to endanger public health and welfare, and that vehicular greenhouse gas emissions contribute to that pollution. 74 Fed. Reg. 66,496, 66,499 (Dec. 15, 2009). See also 74 Fed. Reg. 18,886 (Apr. 24, 2009) (proposed finding). The Endangerment Finding rested on a massive foundation of scientific evidence developed over decades by thousands of scientists in a range of fields, and reflected in tens of thousands of peer-reviewed publications. EPA prepared a detailed technical support document (TSD) relying in part on comprehensive analyses incorporating thousands of peer-reviewed studies of current

climate change research developed by the Intergovernmental Panel on Climate Change, the United States Global Change Research Program (USGCRP), and the National Research Council (NRC)—each of which was in turn subject to further peer review. TSD 6, D.C. Cir. Endangerment Joint Appendix (End.JA) 3354. The agency then put the TSD through “three rounds of technical review by ... 12 federal experts,” “three rounds of internal EPA review,” and “two rounds of public comment,” and prepared an 11-volume response to the thousands of written comments it received. See Response to Comments (RTC) 1–10, End.JA 3566.

EPA found that:

- Atmospheric carbon dioxide (CO<sub>2</sub>) and methane concentrations have increased by approximately 38% and 149%, respectively, since the Industrial Revolution, “almost all” due to anthropogenic emissions, and these concentrations are significantly higher than they have been for at least 650,000 years. 74 Fed. Reg. at 66,517.
- Warming of the climate system “is now evident from observations of increases in global average air and ocean temperatures, widespread melting of snow and ice, and rising global average sea level.” *Id.*
- Average surface temperatures have risen by  $1.3 \pm 0.32^\circ$  F over the past century (1906–2005), with the greatest warming occurring during the past 30 years, and the 20 warmest years on record all occurring since 1981. *Id.*
- Anthropogenic greenhouse gas emissions very

likely caused most of the warming that occurred over the past 50 years. *Id.* at 66,517–18, 66,522–23.

- Climate models project an increase in global average temperatures of 2.0–11.5° F during the twenty-first century. *Id.* at 66,519; see also TSD 69, End.JA 3417 (citing projections for 2030 of between 2°–4° F).
- Reducing greenhouse gas emissions would reduce the pace and magnitude of the temperature rise. TSD 66, End.JA 3414.

Based on copious record evidence that warming temperatures will cause (and in some cases are already causing) increased risks of mortality and illness from reduced air quality, intensified heat waves, and more frequent and more intense storms, see 74 Fed. Reg. 66,497–99, 66,516–36; see also TSD ES4, 89–93, End.JA 3345, 3437–3441, the Administrator found that greenhouse gas pollution is “reasonably anticipated to endanger public health, for both current and future generations.” 74 Fed. Reg. at 66,524.<sup>3</sup> The Administrator also found that climate change poses a variety of risks to public welfare, including increased droughts, sea level rise, harms to agriculture, more severe storms, and increased storm surge damage and flooding in coastal communities, *id.* at 66,497–99, 66,525,

---

<sup>3</sup> The Administrator recognized that climate change will have some positive effects on health and welfare, but explained why adverse effects are likely to be preponderant. See, *e.g.*, 74 Fed. Reg. at 66,525 (increase in heat-related deaths, which already exceed cold-related deaths, likely to overwhelm reductions in cold-related deaths).

66,530–36, and will “fundamentally rearrange U.S. ecosystems,” *id.* at 66,498. In addition to the harmful effects from greenhouse gases’ heat-trapping characteristics and the resulting climate changes, increased atmospheric concentrations of CO<sub>2</sub> have already caused a marked increase in the acidity of ocean water, with potentially serious implications for coral reefs, shellfish and other aquatic life. TSD 38, 134, End.JA 3386, 3482.

*Contribution Finding.* The Administrator also found that emissions from new motor vehicles “cause or contribute” to greenhouse gas pollution. See 74 Fed. Reg. 66,537–41. In making this determination, the Administrator considered, among other things, motor vehicles’ large share of both global and domestic greenhouse gas emissions. *Id.* at 66,539.

*Administrative Reconsideration.* EPA denied ten petitions seeking administrative reconsideration of the Endangerment Finding, and issued a 360-page response addressing the petitions’ claims that the science underlying the finding was flawed. 75 Fed. Reg. 49,556 (Aug. 13, 2010).

*Tailpipe Rule.* Explaining that once an endangerment finding is made, “section 202(a) requires EPA to issue standards,” EPA promulgated greenhouse gas emissions standards for light-duty motor vehicles on May 7, 2010. 75 Fed. Reg. 25,324, 25,398 (Tailpipe Rule). In developing the standards, EPA considered the range of statutory factors set out in Section 202(a)(2), including available technology, cost of compliance, and the time period necessary to implement the standards. *Id.* at 25,403–04. EPA found that the Rule would prevent emissions of nearly one billion metric tons of CO<sub>2</sub> equivalent

(CO<sub>2</sub>e). *Id.* at 25,404, 25,519–20.<sup>4</sup>

*EPA's Actions Regarding Stationary Sources.* Recognizing that regulating greenhouse gas emissions from motor vehicles would by operation of law trigger PSD and Title V permitting, *supra* p. 5, EPA initiated two proceedings to address the application of those programs. First, in the Timing Decision, the agency determined that a pollutant is “subject to regulation” (and thus covered by the PSD and Title V requirements) when compliance with emission limitations for that pollutant is first required—in the case of greenhouse gases, January 2, 2011, the date that the first 2012 model year vehicles would be subject to greenhouse-gas emission standards under the Tailpipe Rule. 75 Fed. Reg. 17,004, 17,004–07 (Apr. 2, 2010). Second, in the Tailoring Rule, EPA phased in the permitting requirements starting with the largest greenhouse gas emitting sources, commencing with sources that have the potential to emit 100,000 tons CO<sub>2</sub>e per year of greenhouse gases. 75 Fed. Reg. 31,514, 31,522–23 (June 3, 2010). EPA determined that these measures were necessary to avoid unworkable administrative burdens that would result from immediately subjecting smaller sources to permitting requirements, and would still cover sources responsible for the vast majority (about 86

---

<sup>4</sup> Carbon dioxide equivalent units (CO<sub>2</sub>e) take account of greenhouse gases’ differing heat-trapping potencies; for example, methane is 25 times more potent than carbon dioxide over a 100-year time-scale, and nitrous oxide is 298 times more potent. See, *e.g.*, 75 Fed. Reg. at 25,421. EPA defined the pollutant “greenhouse gases” to include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. 74 Fed. Reg. at 66,497.

percent) of stationary source greenhouse gas emissions. *Id.* at 31,543–45, 31,556, 31,571.

**C. This Litigation.** Numerous parties petitioned the D.C. Circuit to review the Endangerment Finding, Tailpipe Rule, Timing Decision, and Tailoring Rule, and some also filed actions seeking review of EPA’s 1978, 1980, and 2002 regulations confirming that the Act’s PSD permit program applies to sources emitting any regulated air pollutant, not just sources emitting NAAQS pollutants. Petitioners in the latter proceeding argued that the advent of greenhouse gas regulation constituted new grounds authorizing belated judicial review of the old regulations, notwithstanding the Act’s 60-day review period, 42 U.S.C. 7607(b)(1); *American Chemistry Council v. EPA*, D.C. Cir. No. 10-1167. The D.C. Circuit organized the petitions into four sets of consolidated cases, and heard oral argument over two days in February 2012.

A unanimous D.C. Circuit panel (Sentelle, C.J., and Rogers and Tatel, JJ.) denied the petitions challenging the Endangerment Finding, the Tailpipe Rule, and the 1978–2002 PSD regulations. The panel dismissed for lack of Article III standing the petitions challenging the Timing Decision and Tailoring Rule.

The court rejected arguments that EPA was obligated to consider various “policy concerns and regulatory consequences” before making an Endangerment Finding, reasoning that Section 202(a)(1) “requires EPA to answer only two questions: whether particular ‘air pollution’—here, greenhouse gases—‘may reasonably be anticipated to endanger public health or welfare,’ and whether

motor-vehicle emissions ‘cause, or contribute to’ that endangerment.” Pet.App. 32a–33a. The court concluded that the agency had properly confined itself to the statutorily-required “scientific judgment’ about the potential risks greenhouse gas emissions pose to public health or welfare.” *Id.* 33a (quoting *Massachusetts*, 549 U.S. at 534). The court rejected requests to “re-weigh the scientific evidence,” *id.* 44a, and concluded that parties seeking administrative reconsideration had not “provided substantial support for their argument that the Endangerment Finding should be revised,” *id.* 51a.

The D.C. Circuit next upheld the Tailpipe Rule. The court noted that petitioners did “not challenge the substantive standards,” but focused “principally on EPA’s failure to consider the cost of stationary-source permitting requirements triggered by the Rule.” *Id.* 53a. It concluded that “plain text of Section 202(a) and precedent refute Petitioners’ contentions.” *Id.*

Turning to the challenges to the PSD permitting provisions, the court first addressed a jurisdictional question: whether petitioners could challenge EPA’s decades-old interpretation that PSD applies to all regulated pollutants in light of the 60-day review limit in Section 307(b)(1) of the Act, 42 U.S.C. 7607(b)(1). The court noted that EPA’s interpretation actually had been challenged in petitions for review of the 1978 regulations, see Pet.App. 61a (citing industry briefs in *Alabama Power*), and that EPA had “highlighted” (*id.*) its longstanding interpretation in regulations promulgated in 1980 and 2002. The court

determined, however, that two petitioners—the National Association of Homebuilders (NAHB) and the National Oilseed Processors Association (NOPA)—could invoke Section 307(b)’s exemption for “grounds arising after” the 60-day period because, unlike “other Industry petitioners[],” at least some of their members would not have had ripe challenges to EPA’s interpretation earlier. Pet.App. 66a.

On the merits, the D.C. Circuit found EPA’s interpretation of the PSD permitting trigger to be “unambiguously correct” and “statutorily compelled.” *Id.* 24a, 72a. The court explained that “given both the statute’s plain language and the Supreme Court’s decision in *Massachusetts*,” it had “little trouble concluding that the phrase ‘any air pollutant’ includes *all* regulated air pollutants, including greenhouse gases.” *Id.* 73a.

The court considered the “alternative interpretations of the PSD permitting triggers” offered by the challengers, but concluded that none “cast[s] doubt on the unambiguous nature of the statute.” *Id.* 77a. The court rejected, as inconsistent with statutory text, arguments that the PSD program is “focused solely on localized air pollution” (*id.* 81a–83a); that the phrase “any area to which this Part applies” in Section 165(a) imposes a “pollutant-specific situs requirement” limiting PSD permitting triggering solely to NAAQS pollutants (*id.* 83a–94a); and a third proposed interpretation, not pressed in the present petitions, based upon 42 U.S.C. 7476(a) (Pet.App. 94a–95a).

While the challengers advocated at length various theories by which the PSD program might be “construed” to exclude greenhouse gases, they

advanced no arguments as to the Title V operating permit program. Observing that “none of petitioners’ alternative interpretations applies to Title V,” the D.C. Circuit held that they had “forfeited any challenges to EPA’s greenhouse gas-inclusive interpretation of Title V.” Pet.App. 78a.

The court next rejected the challenges to the Timing Decision and Tailoring Rule, holding that petitioners had “fall[en] far short” of demonstrating any of the three elements of standing under Article III. *Id.* 100a. The court explained that “neither the Timing nor Tailoring Rules caused the injury Petitioners allege: having to comply with PSD and Title V for greenhouse gases,” and that both Rules “actually mitigate Petitioners’ purported injuries.” *Id.* 100a–101a.

The full D.C. Circuit denied petitions for rehearing en banc. Judge Brown dissented, expressing her view that *Massachusetts* was wrongly decided. *Id.* 615a–625a. Judge Kavanaugh, also in dissent but focusing on the PSD provisions, argued that “any air pollutant” in Section 169(1) should be read to mean only NAAQS pollutants. *Id.* 638a–661a. The panel members filed a joint concurrence responding to the dissenters’ arguments, concluding that: “Here, Congress spoke clearly, EPA fulfilled its statutory responsibilities, and the panel, playing its limited role, gave effect to the statute’s plain meaning.” *Id.* 612a.

## REASONS FOR DENYING THE PETITIONS

### I. PETITIONERS' CHALLENGES TO THE ENDANGERMENT FINDING AND TAILPIPE RULE LACK MERIT AND ARE UNWORTHY OF FURTHER REVIEW

The D.C. Circuit's unanimous decision sustaining EPA's interpretation of Section 202(a) is unassailably correct, anchored in the plain language of that provision and this Court's *Massachusetts* ruling. So too is the court's disposition of challenges to the scientific record on which EPA based its actions. Petitioners' arguments graft requirements onto Section 202 that are not part of the statute Congress enacted, and their arguments concerning EPA's analysis of the record fail to establish that the agency or the D.C. Circuit committed any error, let alone error warranting this Court's review. No member of the full court, including the two judges who dissented from rehearing en banc, suggested that petitioners' attacks on the Endangerment Finding or Tailpipe Rule warranted further review. (Judge Brown's criticism on those points was based on her view that *Massachusetts* itself was wrongly decided. Pet.App. 615a–625a). Texas's request to overrule *Massachusetts* disregards core *stare decisis* principles.

#### A. Petitioners' Challenges to EPA's Interpretation of Section 202(a)(1) Are Unworthy of Further Review.

The Chamber of Commerce's argument that Section 202(a)(1) requires a "particular type of causal connection between air pollutants and endangerment"—one that "calls to mind" common-

law foreseeability tests, Pet. 21, 23 (citing *Palsgraf v. Long Island R.R.*, 162 N.E. 99 (N.Y. 1928)), was not raised before the agency or the D.C. Circuit and is therefore forfeited. See *U.S. v. Jones*, 132 S. Ct. 945, 954 (2012). Regardless, this insubstantial argument is unworthy of review. Section 202(a) requires promulgation of standards when vehicle emissions “cause, or contribute to” air pollution which, in the Administrator’s “judgment,” “may reasonably be anticipated to endanger public health or welfare.” This language would be a startlingly improbable way to codify common law concepts. To the contrary, Congress adopted the Section 202(a)(1) endangerment formulation to emphasize and reinforce the Administrator’s duty to take precautionary action to prevent harm before it occurs, on the basis of probative but still uncertain scientific evidence. See *Ethyl Corp. v. EPA*, 541 F.2d 1, 24–25 (D.C. Cir. 1976) (en banc); *Massachusetts*, 549 U.S. at 506 n.7.

The Chamber’s related suggestions that the impacts of climate change are too “remote” to constitute “public health” effects (Pet. 23–25) or that only “inhalational” effects can qualify as such (Pet. 17, 24; see also Pet.App. 622a–623a (Brown, J., dissenting)) are likewise meritless. Increased greenhouse gas concentrations result in warming and produce, among other things, intensified heat waves, exacerbated smog, exacerbated disease vectors, and more frequent and intense storms—all of which can cause death or illness. 74 Fed. Reg. at 66,497–99, 66,516–36. Other familiar forms of Clean Air Act-regulated pollution endanger public health by non-“inhalational” routes. For example, chlorofluorocarbons harm public health by depleting

the ozone layer in the stratosphere, allowing cancer- and cataract-causing radiation from the sun to reach the Earth's surface. The most urgent human health effects from mercury emissions occur as a result of consuming fish contaminated by mercury emitted from smokestacks, transported through the air and deposited in water bodies, where it is transformed by microorganisms into methylmercury and concentrated through bioaccumulation in the aquatic food chain. See also *Ethyl Corp.*, 541 F.2d at 9, 45–46 (upholding regulation of fuel additives based in part on evidence of possible harms to health of children who ingest dust containing lead originating from auto emissions). The Chamber's assertion that the serious risks amply documented in the record are "beyond the bounds of what Congress intended for the agency to address" (Pet. 24) is forcefully contradicted by the Act's "broad language." See *Massachusetts*, 539 U.S. at 532. See also *id.* at 529 n.26 (greenhouse gases are "unquestionably" air pollution "agents" notwithstanding their characteristics as atmospheric pollutants).<sup>5</sup>

---

<sup>5</sup> The "indirectness" argument is the opposite of one the Chamber urged—successfully—in previous Clean Air Act litigation: In a challenge to EPA's 1997 ozone NAAQS, the Chamber faulted the agency for failing to account for the (claimed) benefits of ground-level ozone in blocking ultraviolet (UVB) radiation, which causes skin cancer and cataracts. The Chamber characterized these UVB-shielding effects of ozone pollution as "direct health effects of ground-level ozone in the ambient air," Small Business Reply Br., D.C. Cir. No. 97-1441 at 7 (filed Aug. 6, 1998), and dismissed as "desperate" the contention that those effects were "too indirect to be counted." Small Business Opening Br., D.C. Cir. No. 97-1441 at 23 (filed March 23, 1998). The D.C. Circuit unanimously ruled that EPA must consider these UVB effects, *American Trucking*

The Chamber's labored argument (Pet. 26–27) that EPA erred by treating harms flowing from climate change as “health” dangers rather than “welfare” effects is particularly specious.<sup>6</sup> The premise that Section 202(a) contemplates some strict dichotomy is facially implausible, given that it mandates regulation when air pollution endangers “public health *or* welfare.” In any event, it was plainly reasonable for EPA to consider effects such as death and illness from heat waves, increased smog, and new or exacerbated disease vectors as “health” risks. The Chamber's complaint does not warrant this Court's attention.

The Coalition for Responsible Regulation (CRR) insists (Pet. 7, 24–29) that EPA's Endangerment Finding and vehicle standards should be vacated based on the standards' supposed “futility” (or the absence of a rigorous “demonstration” of their “efficacy”). Yet it is not CRR's position that EPA should have promulgated *more* effective tailpipe standards (*no* party actually challenges the substance of EPA's emission standards). Nor is CRR a regulated party: none of the petitioners is regulated by the Tailpipe Rule (and the auto manufacturers support it).

---

*Ass'n. v. EPA*, 175 F.3d 1027, 1051–53 (D.C. Cir. 1999), *rehearing denied in relevant part*, 195 F.3d 4, 10 (D.C. Cir. 1999), *rev'd in part on other grounds*, 531 U.S. 457 (2001).

<sup>6</sup> This contention is forfeited. It appeared below in a single, opaque sentence on page 58 of industry petitioners' lengthy opening brief, and the D.C. Circuit did not address it. See *Mogenhan v. Napolitano*, 613 F.3d 1162, 1165 n.1 (D.C. Cir. 2010) (“skeletal” arguments forfeited).

Contrary to CRR’s suggestion, the emission reductions resulting from the vehicle standards are manifestly substantial: EPA projected the standards will reduce greenhouse gases by 962 million metric tons of over the lifetime of model year 2012–2016 vehicles. 75 Fed. Reg. at 25,490, Table III.F.1-2. Even if the standards had not been strengthened for later model years,<sup>7</sup> by 2050 they would have resulted in an estimated 22.8 percent emission reduction from the U.S. transportation sector and a 6 percent reduction in emissions from *all domestic sources* over that period. *Id.* at 25,489. “Judged by any standard, U.S. motor-vehicle emissions make a meaningful contribution to greenhouse gas concentrations.” *Massachusetts*, 549 U.S. at 525.

CRR advances an “interpretation” of Section 202 whereby endangerment may be found only if the air pollution problem in question is due *solely* to the vehicle emissions and can be *entirely* resolved by vehicle standards. This bears no resemblance to the provision Congress enacted. Section 202(a)(1) states that EPA “shall” promulgate emissions standards (a) if air pollution may reasonably be anticipated to endanger public health or welfare and (b) if new vehicle emissions “contribute” to that pollution. See *Massachusetts*, 549 U.S. at 533–34.<sup>8</sup> The *content* of

---

<sup>7</sup> In 2012, EPA and DOT issued more advanced standards for model years 2017–25, also with the auto industry’s support, that will further reduce greenhouse gas emissions from vehicles sold in those years. See 77 Fed. Reg. 62,624 (Oct. 15, 2012).

<sup>8</sup> CRR’s theories are at odds with the statutory text. Compare Pet. 20 (“Only an interpretation that requires a contribution to ‘endangerment’ is faithful to the Act’s text and structure.”) with Section 202(a)(1) (EPA “shall” prescribe standards when it finds that vehicle emissions “cause, or

the vehicle standards is determined in accordance with Section 202(a)(2), which mandates emission reductions that are achievable considering manufacturers' need for lead time, the availability of technology, and compliance costs. Thus, Section 202(a) does not require that vehicle emissions must be the sole cause of the pollution problem, or that abatement of those emissions must fully cure it. The statutory criteria for endangerment and for the vehicle standards readily dispose of CRR's claims that the D.C. Circuit's construction affords EPA "unconstrained" discretion (Pet. 35) or precludes "meaningful" judicial review (Pet. 34–36).

The Section 202(a) framework—endangerment and contribution findings triggering a duty to regulate, and standards turning on cost and feasibility rather than on achieving a specific risk-reduction or health-based goal—is common in other key provisions of the Act, including the Section 111 new source performance standards. See *American Electric Power*, 131 S. Ct. at 2537–38. Such provisions rest on the perfectly rational *congressional* premise that reducing emissions that “contribute” to dangerous air pollution will reduce the danger.<sup>9</sup>

---

contribute to, *air pollution* which may reasonably be anticipated to endanger public health or welfare.”) (emphasis added).

<sup>9</sup> CRR claims the emissions reductions “would largely occur anyway as a result of the NHTSA fuel economy standards.” Pet. 14; see Pet. 27 & n.5. But Section 202(a) imposes legal obligations “independent” from those under the fuel economy statute, see *Massachusetts*, 549 U.S. at 532, and the fact that EPA and NHTSA coordinated to make compliance easier is

EPA followed these statutory commands in all respects. First, EPA determined that greenhouse gas air pollution endangers the public health and welfare of present and future generations. Second, EPA determined that emissions of greenhouse gases from motor vehicles contribute to greenhouse gas air pollution, a finding that considered factors such as vehicles' "relative importance" as pollution sources. See 74 Fed. Reg. 66,537–41. (No party challenged that contribution finding in the D.C. Circuit.) Third, EPA determined the level of emissions reductions achievable in light of available automotive technology, lead-time, and manufacturers' compliance costs. See 75 Fed. Reg. at 25,403–04, 25,463, 24,519–20.

In an effort to rewrite Section 202(a), CRR (Pet. 17–18) misapplies the administrative law principle of reasoned explanation articulated in *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29 (1983). That principle requires an agency to consider relevant factors, but "the determination of what is relevant" comes from the statute. *Motor & Equip. Mfrs. Ass'n v. EPA*, 627 F.2d 1095, 1116 (D.C. Cir. 1979). Thus, *State Farm* explains that "an agency rule would be arbitrary and capricious if the agency has relied on factors which Congress has not intended it to consider." 463 U.S. at 43. See also *American Trucking Ass'ns*, 531 U.S. at 465–68

---

hardly a mark against them. Furthermore, EPA's vehicle standards are projected to result in 47 percent greater greenhouse gas reductions than projected under the NHTSA fuel economy standards over the lives of model year 2012–2016 vehicles. 75 Fed. Reg. at 25,490, Table III.F.1-2; *id.* at 25,635–36, Table IV.G.1-4.

(holding the Act did not permit EPA to consider costs in setting NAAQS, despite arguments that such consideration was not only “relevant,” but vitally important to the national economy). Indeed, in *Massachusetts* this Court emphasized this very point, rejecting a “laundry list” of “policy” reasons as “divorced from the statutory text.” 549 U.S. at 532–33. Nothing in Section 202(a)(2) permits EPA to withhold motor vehicle emissions standards because they alone will not fully solve the pollution problem, or requires the agency to measure the efficacy of potential standards before deciding whether endangerment exists.

CRR repeatedly invokes the D.C. Circuit’s decision in *Ethyl*, but, as the panel noted, “[n]othing in *Ethyl* implied that EPA’s authority to regulate was conditioned on evidence of a particular level of mitigation; only a showing of significant *contribution* was required.” Pet.App. 57a. Indeed, *Ethyl* rejected arguments very like CRR’s, holding that EPA had properly regulated lead from motor vehicles even though lead comes from “multiple sources” and airborne lead from automobiles “in and of itself, may not be a threat,” and explaining that “no regulation could ever be justified” if the agency were barred from attacking cumulative harms incrementally. 541 F.2d at 30. See also *Massachusetts*, 549 U.S. at 524 (agencies generally approach “massive problems” by “whittl[ing] away at them over time”); 42 U.S.C. 7421(a)(1) (providing for revision of emissions standards “from time to time”). CRR’s challenges are unworthy of further review.

**B. Petitioners' Attacks on EPA's Analysis of the Scientific Record Lack Merit And Are Unworthy of Review.**

Southeastern Legal Foundation asks the Court (Pet. 10–17) to review EPA's analysis of the climate science. Notwithstanding its high rhetorical pitch, SLF's attack is, in substance, tellingly indirect and circumscribed. Citing a few passages in the vast record, SLF asks the Court to brand "irrational" (Pet. 10) EPA's assignment of a 90–99 percent confidence level to the finding that human activities caused most of the warming that occurred in the second half of the twentieth century.<sup>10</sup>

EPA dealt candidly with uncertainties in the massive scientific record addressing the causes and effects of climate change. EPA's finding was based on a consideration of "the totality of scientific evidence, some of which was assessed as being virtually certain ... while other evidence was less

---

<sup>10</sup> SLF (Pet. 12 & n.8) cites post-decisional materials to suggest that subsequent developments have cast doubt upon the scientific basis for EPA's finding. Besides being improper in a record review case, see 42 U.S.C. 7607(d)(7), the claim is patently untrue. See, e.g., NRC, *America's Climate Choices* at 17 (2011) (finding that increased concentrations of greenhouse gases "definitively" cause global warming); *id.* at 19 (confirming that United States is experiencing the impacts of climate change, including sea level rise and increasing frequency and severity of heavy rainfall, drought, and wildfires across multiple regions of the country), *available at* [https://download.nap.edu/catalog.php?record\\_id=12781](https://download.nap.edu/catalog.php?record_id=12781); NRC, *Advancing the Science of Climate Change* (2010) ("[C]limate change is occurring, is caused largely by human activities, and poses significant risks for—and in many cases is already affecting—a broad range of human and natural systems.") (quoted in 75 Fed. Reg. at 49,558).

certain.” RTC 1-35, End.JA 3593; see also 74 Fed. Reg. at 66,497, 66,506. The appeals court carefully reviewed the scientific record, Pet.App. 39a–45a, and examined the few marginal objections petitioners did raise (mostly abandoned in SLF’s petition here). See *id.* 42a (observing that “Industry Petitioners do not find fault with much of the substantial record EPA amassed in support of the Endangerment Finding”).

The issues SLF does raise are unworthy of further review. For example, SLF’s claim (Pet. 13) to have “refut[ed]” EPA’s physical understanding of climate change—based on the absence of a predicted “hot spot’ in the tropical upper troposphere”—was not timely raised in Petitioners’ opening briefs below and was thereby forfeited. See *Catawba County v. EPA*, 571 F.3d 20, 38 (D.C. Cir. 2009). In any event, SLF’s arguments disregard EPA’s explanation that more recent and accurate data demonstrate warming consistent with modeled predictions. RTC 3-7, End.JA 3815–16. Similarly, SLF is wrong in arguing (Pet. 14–15) that short-term and regional climate variability (driven by complex but familiar climate dynamics) casts doubt on science’s understanding of long-term, documented warming trends or on the models that predict them. Both basic principles of physics and climate models project long-term, large-scale responses of average global temperature to rising greenhouse gas concentrations—precisely what has been observed. See RTC 3-6, End.JA 3814–15. Further review is unnecessary.

Virginia’s assertion (Pet. 27) that EPA “impermissibly delegated” its responsibility under Section 202(a)(1) to form its own “judgment” on endangerment is likewise unworthy of further

review. The D.C. Circuit explained, Pet.App. 38a–39a, that the Administrator exercised her independent judgment and appropriately reviewed and referenced both primary scientific sources and syntheses of those sources. See, *e.g.*, 74 Fed. Reg. at 66,497, 66,510–12, 66,517–19. As the court observed: “This is how science works. EPA is not required to re-prove the existence of the atom every time it approaches a scientific question.” Pet.App. 38a–39a.

Nor need this Court review the D.C. Circuit’s unanimous rejection of Virginia’s claim (Pet. 16) that EPA “misapplied” 42 U.S.C. 7607(d)(7)(B), which requires EPA to initiate a reconsideration proceeding if the objection a party raises could not have been raised during the public comment period and the objection is “of central relevance to the outcome of the rule.” The reconsideration petitions principally claimed that the IPCC assessment report contained several items of flawed and unreliable information. EPA examined these claims carefully, see Pet.App. 50a, and the D.C. Circuit observed that the reconsideration petitions demonstrated no “pattern of flawed science,” that only a few of the alleged IPCC shortcomings really were errors, and that EPA had not relied on them. *Id.* 51a–52a. The court also sensibly rejected Virginia’s argument (Pet. 15–17) that EPA’s detailed explanation for denying reconsideration was itself proof that reconsideration was required. *Id.* 52a–53a.

The Pacific Legal Foundation’s contention that EPA was required to make the proposed Endangerment Finding available to the Science Advisory Board (SAB) faces fatal procedural

barriers. This statutory objection was not timely raised during the public comment period, End.JA 4843, see 42 U.S.C. 7607(d)(7)(B), and improperly relies on non-record assertions in a declaration submitted with PLF's en banc petition. See *id.* 7607(d)(7)(A), 7607(e). In any event, the contention is plainly unworthy of this Court's review. The provision on SAB review is, by its terms, limited to instances in which (1) a "proposed criteria document, standard, limitation, or regulation" (2) "is provided to any other Federal agency for formal review and comment." See *id.* 4365(c)(1). The panel found that PLF "failed to respond" to EPA's demonstration, during the rulemaking, that the Endangerment Finding was not subject to interagency "formal review and comment" within the meaning of the SAB statute, see Pet.App. 49a; see also RTP 3-7, End.JA 4842-44. PLF now advances a strained and unsupported argument (Pet. 15) that the public comment process under the Clean Air Act itself constitutes a "formal" interagency review that triggers SAB review.<sup>11</sup> Its allegations of intra-circuit conflicts (*e.g.*, Pet. 23-25) were not persuasive to any member of full D.C. Circuit; PLF's en banc petition was denied without a recorded vote. Pet.App. 663a.

---

<sup>11</sup> The D.C. Circuit's alternative conclusion (Pet.App. 48a-49a) that any error concerning the SAB provision was harmless under the Act's "substantial likelihood" standard for "alleged procedural errors," 42 U.S.C. 7607(d)(8), does not merit review either. Although PLF protests (Pet. 21-23) that that provision applies only to certain Clean Air Act violations, its text contains no such limitation, and the APA's "prejudicial error" standard, 5 U.S.C. 706, would apply in any event.

**C. Pleas to Reconsider *Massachusetts* Ignore Statutory *Stare Decisis* and the *American Electric Power* Decision.**

Texas’s petition explicitly—albeit half-heartedly—asks the Court “to reconsider *Massachusetts*’s holding that carbon dioxide and other greenhouse gases unambiguously qualify as ‘air pollutant[s]’ within the meaning of the Act.” Pet. 31. The Court should reject this plea under “[b]asic principles of *stare decisis*.” See *U.S. v. Home Concrete & Supply, LLC*, 132 S. Ct. 1836, 1841 (2012).

“[A] difference of opinion within the Court ... does not keep the door open for another try at statutory construction,” *Watson v. U.S.*, 552 U.S. 74, 82 (2007), and no intervening fact or legal development undermines this Court’s decision. On the contrary, the body of scientific evidence of anthropogenic climate change and its harms has become even more robust since 2007, see, *e.g., supra*, p. 23 n.10, and all three branches of the federal government, as well as States and regulated parties, have acted in reliance upon *Massachusetts*.

Indeed, while Texas insists (Pet. 31) that the Court did not foresee how *Massachusetts* would resonate beyond the Act’s vehicle standards provision, Texas does not even cite the Court’s unanimous 2011 decision in *American Electric Power* that power plant greenhouse gas emissions are also subject to regulation under Clean Air Act provisions such as Section 111. See 131 S. Ct. at 2537 (“[T]he Clean Air Act and the EPA actions it authorizes displace any federal common law right to seek abatement of carbon-dioxide emissions from

fossil-fuel fired power plants.”). As *American Electric Power* explained, “*Massachusetts* made plain that emissions of carbon dioxide qualify as air pollution subject to regulation under the Act.” *Id.* (citing 549 U.S., at 528–529). The Court accepted arguments by major electric utilities (members of trade associations before the Court here) that power plants’ greenhouse gas emissions are indeed subject to regulation under the Act. See, e.g., AEP Pet’r Br. in No. 10-174, at 46 (“[T]he Clean Air Act delegates regulatory authority over carbon dioxide emissions to EPA, and thus displaces federal common law claims.”); *id.* at 43 (maintaining that Act “speaks directly” to carbon pollution from stationary sources) (internal quotation marks and citations omitted).

Texas’s desultory argument based on two constitutional decisions (Pet. 33) ignores this Court’s longstanding emphasis that “*stare decisis* in respect to statutory interpretation has special force, for Congress remains free to alter what we have done.” *Home Concrete & Supply*, 132 S. Ct. at 1841. Accord *John R. Sand & Gravel Co. v. U.S.*, 552 U.S. 130, 139 (2008); *Hohn v. U.S.*, 524 U.S. 236, 251 (1998); *Patterson v. McLean Credit Union*, 491 U.S. 164, 172–73 (1989). Indeed, since *Massachusetts*, Congress has considered but declined to adopt scores of legislative proposals that would have repealed, deferred, or otherwise curtailed EPA’s authority to regulate greenhouse gas emissions.<sup>12</sup> Texas’s plea to

---

<sup>12</sup> At least sixty-one such bills or resolutions have been introduced in Congress—and none has been enacted into law. See, e.g., S. Amdt. 359 to S. Con. Res. 8, 113th Cong. (2013); H.R. 2081, 113th Cong. (2013); S.2365, 112th Cong. (2012); H.R. 3409, 112th Cong. (2012); S.J. Res. 26, 111th

strip EPA of the statutory authority recognized in *Massachusetts* and recently reaffirmed in *AEP* cannot be reconciled with the values of stability and separation of powers that statutory *stare decisis* serves.

## II. EPA'S CONSTRUCTION OF THE PSD APPLICABILITY PROVISIONS WAS CORRECT AND DOES NOT MERIT FURTHER REVIEW

Many petitioners challenge the D.C. Circuit's ruling upholding EPA's long-standing interpretation that the PSD construction permit program applies to sources emitting threshold quantities of any regulated air pollutant.<sup>13</sup> There are substantial differences among their various theories, some of which have shifted even since the decision below. Some petitioners seek to exclude greenhouse gases entirely from the PSD program (*e.g.*, Texas Pet. 30; Chamber Pet. 28–29), while the ACC petitioners (Pet. 24 n.12) and Judge Kavanaugh's dissent (Pet.App. 646a) acknowledge that sources subject to PSD permitting because they emit other pollutants

---

Cong. (2010); S. 1622, 111th Cong. (2009); H.R. 2846, 111th Cong. (2009); S. 570, 111th Cong. (2009).

<sup>13</sup> Whether EPA's decades-old interpretation is still open to challenge despite the 60-day limitation in 42 U.S.C. 7607(b)(1) turns on (1) whether the D.C. Circuit correctly ruled (Pet.App. 62a–67a) that the two trade associations, NAHB and NOPA, could avoid the statutory bar, and (2) whether that ruling also allows *other* parties to assert distinct challenges to the long-standing interpretation. *Cf.* EIMWG Pet. at ii (Question Presented No. 3). See *NRDC v. EPA*, 571 F.3d 1245, 1265 (D.C. Cir. 2009) (holding that the restriction is jurisdictional); *Motor & Equip. Mfrs. Ass'n v. Nichols*, 142 F.3d 449, 460 (D.C. Cir. 1998) (same).

must control their greenhouse gas emissions using the “best available control technology.” Below, the ACC petitioners argued for a greenhouse gas-excluding interpretation based upon what they called a “pollutant-specific situs requirement” ostensibly flowing from the phrase “in any area to which this part applies” in Section 165(a). See Pet.App. 83a; Petitioners’ Opening Br. in D.C. Cir. No. 10-1166 at 29–31. But now they refer to “the alternative interpretation advanced by this petition and Judge Kavanaugh,” see ACC Pet. 24 n.12, even though Judge Kavanaugh did not even cite the statutory phrase ACC previously highlighted as operative and crucial.

None of petitioners’ protean arguments warrants further review. As the D.C. Circuit held, EPA’s decades-old reading of the Act is “unambiguously correct” and “statutorily compelled” (Pet.App. 24a, 72a) by the plain text of the PSD applicability provisions: Section 165(a) requires any “major emitting facility” being constructed in a PSD area to obtain a permit, 42 U.S.C. 7475(a), and Section 169(1) defines “major emitting facility” as a stationary source emitting 100 or 250 tons or more per year of “*any* air pollutant.” *Id.* 7479(1) (emphasis added). Under Section 302(g), “air pollutant,” “when used in this [Act] ... means *any* air pollution agent or combination of such agents, including any physical, chemical, biological, radioactive ... substance or matter which is emitted into or otherwise enters the ambient air,” *id.* 7602(g) (emphasis added). That language cannot reasonably be limited to the six NAAQS pollutants. Moreover, this Court held in *Massachusetts* that the definition “without a doubt” and “unambiguous[ly]” includes

greenhouse gases. 549 U.S. at 529. “Given all this,” the appeals court had “little trouble concluding that ‘any air pollutant’ in the definition of ‘major emitting facility’ unambiguously means ‘any air pollutant regulated under the [Act],’” including greenhouse gases. Pet.App. 77a.

The D.C. Circuit explained in careful detail why the various “alternative” interpretations of the PSD trigger offered by petitioners and Judge Kavanaugh are inconsistent with the statute. *Id.* 77a–95a. Each involves untenable departures from the text of the statute.<sup>14</sup> ACC and other petitioners now argue, in reliance on Judge Kavanaugh’s dissent, that EPA *must* adopt different regulatory definitions of the statutory term “air pollutant” depending on the program at issue, and that “any air pollutant” in Section 169(1) *must* be read to mean “any NAAQS pollutant.” See, *e.g.*, ACC Pet. 19–25; Pet.App.

---

<sup>14</sup> Petitioners contend that the D.C. Circuit mistakenly assumed that *Massachusetts*, which involved only mobile sources, had resolved PSD’s application to stationary sources of greenhouse gases. See, *e.g.*, UARG Pet. 18–20. That charge is unfounded. The D.C. Circuit recognized that the PSD coverage issue was separate and unaddressed by *Massachusetts*, and it entertained the possibility that the PSD provisions could be read to exclude regulated air pollutants such as greenhouse gases, notwithstanding 35 years of EPA regulations. Ultimately, however, the court found that the statutory text precluded that approach. In construing the PSD program, the D.C. Circuit properly took account of *Massachusetts*’s holding as to the “unambiguous” meaning of the Act’s “air pollutant” definition, just as this Court did in *American Electric Power*, 131 S. Ct. at 2537 (Section 111 applies to greenhouse gases because “*Massachusetts* made plain that emissions of carbon dioxide qualify as air pollution subject to regulation under the Act.” (citing 549 U.S. at 528–29)).

640a–643a, 648a. But this argument violates basic principles of statutory construction. “Air pollutant” is a defined term expressly applicable *throughout the Act*. See 42 U.S.C. 7602 (“When used in this chapter”); *Massachusetts*, 549 U.S. at 532 (referring to “*the Clean Air Act’s* capacious definition of air pollutant”) (emphasis added); *American Electric Power*, 131 S. Ct. at 2537 (“[E]missions of carbon dioxide qualify as air pollution subject to regulation under the Act.”). “Statutory definitions control the meaning of statutory words.” *Burgess v. United States*, 553 U.S. 124, 129–30 (2008) (quoting *Lawson v. Suwannee Fruit & S.S. Co.*, 336 U.S. 198, 201 (1949)). See also *Bilski v. Kappos*, 130 S. Ct. 3218, 3226 (2010) (“When a statute includes an explicit definition, we must follow that definition.”) (citation and internal quotation marks omitted). As the Court concluded in *Massachusetts*, Congress would not have defined “air pollutant” in Section 302(g) “so carefully and so broadly, yet confer[red] on EPA the authority to narrow that definition whenever expedient.” 549 U.S. at 529, n.26.

Contrary to petitioners’ careful efforts to bury it, *e.g.*, UARG Pet. 20–21, Congress’s use of the defined term “air pollutant” in Section 169(1)’s designation of PSD sources was no accident: Congress amended and expanded the definition of “air pollutant” to its current, broad form as part of the same 1977 legislation by which it enacted the PSD program. Pub. L. No. 95-95, § 301, 91 Stat. 685, 770 (1977).<sup>15</sup>

---

<sup>15</sup> Prior to the 1977 amendments, Section 302(g) had defined “air pollutant” to mean “an air pollution agent or combination of such agents.” Pub. L. No. 91-604, § 16(g), 84 Stat. 1676, 1710 (1970).

And in 1990, when Congress established a separate permitting program for hazardous air pollutants (which are non-NAAQS pollutants), Congress enacted a specific provision exempting these pollutants from PSD permitting. 104 Stat. 2399, 2537 (1990), codified at 42 U.S.C. 7412(b)(6) (PSD “shall not apply” to hazardous air pollutants); see also 42 U.S.C. 7412(g)(2). This exemption would have been unnecessary if PSD had been limited to NAAQS pollutants all along.

Although the appeals court did not—and did not need to—go beyond statutory text, the legislative history shows with exceptional clarity that Congress intended PSD permitting to apply to the full range of air pollutants, specifically including those that threatened to cause, to quote the committee that authored the provisions, “[w]orldwide weather modification.” H.R. Rep. No. 95-294, at 138 (1977). The committee “recognized the strong need for a policy of preventing significant deterioration of air quality” for, among other reasons, “avoidance of unnecessary stratospheric and atmospheric modifications due to air pollution,” *id.* at 105, and extensively quoted from a path-breaking National Academy of Sciences study of global warming, *Understanding Climate Change. Id.* at 138.

Judge Kavanaugh relied upon *Environmental Defense v. Duke Energy Corp.*, 549 U.S. 561 (2007), for the proposition that an agency may interpret a recurring statutory term differently depending on the context. Pet.App. 652a–653a; see also UARG Pet. 21. But that modest principle is not a license to ignore an unambiguous definition that expressly applies across a statute based upon generalized

appeals to context. On the contrary, *Duke Energy* explained that any interpretive differentiation must stay “within the limits of what is reasonable, as set by the Act’s common definition.” 549 U.S. at 576.<sup>16</sup> Neither Judge Kavanaugh’s dissent nor any of the petitions even attempts to show how the text of the Section 302(g) definition may “reasonably” be read to exclude numerous non-NAAQS pollutants that have long been regulated under the Act,<sup>17</sup> or how, notwithstanding this Court’s parsing of the very same “unambiguous” definition in *Massachusetts*, the same text may now be read as excluding

---

<sup>16</sup> *Duke Energy* approved EPA’s use of different regulatory definitions of the common, statutorily defined term “modification” employed in two different Clean Air Act programs (NSPS and PSD). The regulations provided different methods of measuring an emissions “increase,” an undefined word within the common statutory term. The argument the Court rejected was that EPA’s use of an hourly test for measuring an NSPS “increase” precluded the agency, in subsequent PSD rulemaking, from using an annual test for a PSD “increase.” See 549 U.S. at 567–59, 574–76. There was no claim in *Duke Energy* that the text of the relevant statutory definition precluded the annual approach, and nothing in the Court’s opinion (or any of petitioners’ other cases) suggests that an agency, in interpreting an iterated statutory term to fit differing contexts, may stray from the boundaries fixed by the text of the term.

<sup>17</sup> A wide variety of regulated, non-NAAQS pollutants have been subject to PSD for decades. See, e.g., 40 C.F.R. 51.166(b)(23)(i) (PSD applicability regulations for fluorides; sulfuric acid mist; hydrogen sulfide; total reduced sulfur; municipal waste combustor organics, metals and acid gases; and solid waste landfill emissions). Judge Kavanaugh’s NAAQS-only gloss on “any air pollutant” would exclude all these pollutants, which fall into the category “any air pollutant” just as clearly as do greenhouse gases.

greenhouse gases. Congress's decision, in Section 169(1), to modify "air pollutant" with the "expansive" term "any," see *U.S. v. Gonzales*, 520 U.S. 1, 5 (1997), further emphasizes the intended breadth of the definition.

Petitioners (ACC Pet. 9, 24) and Judge Kavanaugh (Pet.App. 647a) wrongly conclude that Section 169(1) can be limited to NAAQS pollutants because the PSD program, they contend, is focused singularly on NAAQS attainment. The statute says otherwise. As the panel observed (Pet.App. 90a), Title I, Part C, Subpart 1, of the Act, containing the PSD provisions, is entitled "Clean Air," and opens with an expansive statutory statement of purpose: "to protect public health and welfare from any actual or potential adverse effect which in the Administrator's judgment may reasonably be anticipate[d] to result from air pollution." 42 U.S.C. 7470(1). See also *Massachusetts*, 549 U.S. at 506 (under the Act effects on welfare include "effects on ... weather ... and climate" (quoting 42 U.S.C. 7602(h))).

Furthermore, the PSD permit program's central substantive provision, the requirement in Section 165(a)(4) to install BACT, expressly applies to "each pollutant subject to regulation under this" Act, 42 U.S.C. 7475(a)(4), as ACC (Pet. 8, 24 nn.11 & 12) and Judge Kavanaugh (Pet.App. 646a) both acknowledge. If PSD really had the claimed "NAAQS-only" mission, Congress would hardly have required sources to install controls for all regulated pollutants.

The Section 165(a)(4) BACT provision highlights one of the more emphatic ways in which the

statutory text refutes the NAAQS-only theory: As a matter of logic and ordinary understanding, if a “pollutant” is “subject to regulation under the [Clean Air Act],” it is necessarily included in the broader phrase “any air pollutant” in Section 169(1). See *City of Arlington v. FCC*, 133 S. Ct. 1863, 1874 (2013) (adhering to “the theorem that the whole includes all of its parts”). Judge Kavanaugh’s analysis specifically depends upon the clearly untenable proposition that the category “each pollutant subject to regulation” in Section 165(a)(4) is “broader” (Pet.App. 646a) than “any air pollutant” in Section 169(1)—and that the former, but not the latter, includes greenhouse gases. Both ordinary meaning and the D.C. Circuit’s canonical early decision construing the PSD provisions say the opposite: “that the § 169(1) definition of major emitting facility refers to a broader category of pollutants than does that of § 165.” *Alabama Power*, 636 F.2d at 352 n.60.

But the flaws in the “NAAQS-only” theory do not end there: Section 165(a)(3) requires that PSD permittees demonstrate compliance not only with the NAAQS, but also with “*any other* applicable emission standard or standard of performance under” the Act. 42 U.S.C. 7475(a)(3) (emphasis added). These “other” emissions standards include new source performance standards, 42 U.S.C. 7411, which indisputably apply to non-NAAQS air pollutants, including greenhouse gases, as this Court recognized in *American Electric Power*, 131 S. Ct. at 2537. See also Pet.App. 612a.

The NAAQS-only arguments are marred by other logic errors. Petitioners and Judge Kavanaugh

emphasize that while the Act's visibility provision defines "major stationary sources" by reference to threshold amounts of "any pollutant," 42 U.S.C. 7491(g), EPA's regulatory guidance limits the program to "visibility-impairing" pollutants. See Pet.App. 654a; UARG Pet. 22. But this merely reflects explicit statutory text limiting the scope of the visibility provisions to "any air pollutant which may reasonably be anticipated to cause or contribute to any impairment of visibility in any such area." 42 U.S.C. 7491(b)(2)(A); see also *id.* 7491(c)(1)–(2). No similar limitation on the term "any air pollutant" is found in Section 169(1). *Some* PSD provisions are expressly linked to the NAAQS (*e.g.*, Section 163(b)(4), cited by Judge Kavanaugh, Pet.App. 645a, specifying maximum allowable increases of NAAQS pollutants); however, numerous *other* pivotal PSD provisions (including Sections 160(1), 165(a)(3)(C), and 165(a)(4)) expressly apply to non-NAAQS pollutants.<sup>18</sup>

The three D.C. Circuit panel judges also correctly rejected (Pet.App. 610a–611a) Judge Kavanaugh's argument (Pet.App. 641a–642a) that a "NAAQS-pollutant-only" interpretation was justified by the interest in avoiding "absurd results" in the form of an unexpectedly large number of PSD permits. As the concurring judges explained, that

---

<sup>18</sup> EPA *has* interpreted the Section 169(1) source definition to reach no more broadly than the substantive requirements of the PSD program. See Pet.App. 73a–74a (discussing EPA's longstanding regulatory limitation of the PSD program to regulated air pollutants, *i.e.*, those subject to substantive limitations under PSD provisions such as Section 165(a)(4)'s BACT requirement).

argument depends on the plainly incorrect premise that “NAAQS pollutant” is a “plausible interpretation” of “any air pollutant.” See Pet.App. 611a. Moreover, EPA found only that the administrative demands created by immediate application of PSD to a large number of sources led to absurd results; the agency never concluded that it would be absurd to apply PSD to non-NAAQS pollutants generally, or greenhouse gases in particular. To the contrary, EPA found that Congress clearly intended PSD to apply to all regulated pollutants, including greenhouse gases. See, *e.g.*, 75 Fed. Reg. at 31,517. In the Tailoring Rule, EPA responded to well-documented administrative issues by phasing in PSD and Title V permitting, focusing first on the largest industrial sources and committing to future evaluations of the permitting process before potentially extending permitting to smaller sources. *Id.* at 31,514–17, 31,535–40.

No party that sought to challenge EPA’s authority to adopt the Tailoring Rule had standing to do so, and the D.C. Circuit thus did not reach the question of EPA’s phase-in authority. See Pet.App. 106a. Even if that merits question were somehow before this Court (and if all of the reasons the agency gave for the Tailoring Rule were held invalid), the correct response would not be to read a textually unsupported “NAAQS-only” limitation into Section 169(1), but to enforce the statute as written. See, *e.g.*, *American Trucking Ass’ns*, 531 U.S. at 466, 471 (rejecting an invitation to read ambiguity into the Act to avoid assertedly extreme economic burdens, because the statute “unambiguously” settled the matter); *Union Elec. Co. v. EPA*, 427 U.S. 246, 265–

66 (1976) (similar); *Griffin v. Oceanic Contractors Inc.*, 458 U.S. 564, 575 (1982) (even when an unambiguous statute might produce “mischievous, absurd or otherwise objectionable” consequences, the remedy is with Congress) (quoting *Crooks v. Harrelson*, 282 U.S. 55, 60 (1930)).

In sum, the D.C. Circuit correctly ruled that EPA’s longstanding construction of the PSD applicability provisions was statutorily compelled, and further review is unwarranted.

Several petitioners seek review of EPA’s interpretation that Title V applies to sources of greenhouse gas emissions. See Texas Pet. 28; SLF Pet. 20–21; Chamber Pet. i (Question Presented No. 3). However, as the D.C. Circuit correctly found, petitioners failed to advance any “alternative interpretations” regarding Title V and thus had “forfeited any challenges to EPA’s greenhouse-gas inclusive interpretation” of that program’s scope. Pet.App. 78a. Tellingly, the one petition that attempts to contest this finding is only able to cite arguments belatedly presented in reply briefs. SLF Pet. 21 & n.13. Judge Kavanaugh’s dissenting opinion nowhere even mentions Title V. Review is unwarranted here as well.

### III. THE D.C. CIRCUIT'S RULING THAT NO PETITIONER HAS STANDING TO CHALLENGE THE TAILORING RULE WAS CORRECT AND IS UNWORTHY OF REVIEW

Three petitions urge the Court to review the D.C. Circuit's ruling that no challenger to EPA's Tailoring Rule had Article III standing. Texas Pet. at 20–28; UARG Pet. 28–32; SLF Pet. 27–29.<sup>19</sup> But the D.C. Circuit's unanimous conclusion that these challenges fell “far short” of Article III's requirements rests on a straightforward and entirely correct application of familiar standing principles, and does not warrant review by this Court. Pet.App. 100a (citing *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560 (1992)). The court explained, correctly, that “neither the Timing nor Tailoring Rules caused the injury Petitioners allege: having to comply with PSD and Title V for greenhouse gases.” *Id.* 101a. That obligation, the court had explained already, stems directly from the statute. The Tailoring Rule, by restricting the number of sources subject to PSD and Title V, *eases* burdens on both regulated entities and permitting authorities. As a result, the court recognized that setting aside the Tailoring Rule would, “if anything,” “significantly exacerbate Petitioners' injuries.” *Id.* See *Gonzales v. Gorsuch*, 688 F.2d 1263, 1267 (9th Cir. 1982) (Kennedy, J.) (denying standing where “the requested relief will actually worsen the plaintiff's position”).

---

<sup>19</sup> Texas (Pet. 20) urges the Court to review the merits of the Tailoring Rule, which the D.C. Circuit did not reach. But see *Decker v. Nw. Env'tl. Def. Ctr.*, 133 S. Ct. 1326, 1335 (2013) (“[W]e are a court of review, not of first view.”) (internal quotation marks and citations omitted).

Petitioners suggest that they satisfy Article III requirements “when EPA’s GHG program is considered as a whole.” SLF Pet. 29. See also UARG Pet. 28–32. But such arguments ignore the principle that “[s]tanding is not dispensed in gross. Rather, a plaintiff must demonstrate standing for each claim he seeks to press.” *Davis v. FEC*, 554 U.S. 724, 734 (2008) (citations and internal quotation marks omitted); see also *DaimlerChrysler Corp. v. Cuno*, 547 U.S. 332, 352 (2006); *FW/PBS, Inc. v. City of Dallas*, 493 U.S. 215, 235 (1990). Here, the D.C. Circuit heard and decided each of the claims for which petitioners established their standing to sue (including the claim that the issuance of vehicle standards does not trigger PSD permitting for major sources of greenhouse gas emissions). But no petitioner demonstrated an injury caused by the Tailoring Rule or redressable by its *vacatur*, and the court was therefore right to hold that petitioners lacked standing to challenge it.

Texas’s standing theories (Pet. 22–23, 26) are utterly without merit. Texas appears to have largely abandoned its theory that vacating the Tailoring Rule would prompt congressional repeal. See Pet.App. 101a–103a. Texas now makes an unexplained assertion (Pet. 22) that vacating rules that *relax* regulatory burdens would somehow “redress the injury of onerous regulation.” Alternatively, Texas claims (Pet. 23–26) that, although it *opposes* action to mitigate climate change, Texas has standing to seek *vacatur* of the Tailoring Rule based on the same loss of coastline that the Commonwealth of Massachusetts established in *Massachusetts v. EPA*. The D.C. Circuit held that this argument had not been

properly presented under circuit precedent and court rule, see *Sierra Club v. EPA*, 292 F.3d 895, 901 (D.C. Cir. 2002); D.C. Cir. R. 28(a)(7), Pet.App. 104a–105a, and that Texas had failed to introduce any supporting evidence for it, Pet.App. 105a–106a.

Texas’s plea for standing based on an injury it does not believe it is suffering and does not want to remedy shows scant respect for the “integrity of the judicial process,” *New Hampshire v. Maine*, 532 U.S. 742, 749 (2001) (internal quotation marks and citation omitted), and is not worthy of discretionary jurisdiction. See *id.* (discussing rules prohibiting litigants from playing “fast and loose with the courts” or using “self-contradiction ... as a means of obtaining unfair advantage” (internal quotation marks and citations omitted)).

The D.C. Circuit’s standing ruling represented the straightforward application of settled Article III requirements. No further review is required.

#### **IV. THE CASE DOES NOT PRESENT LEGAL ISSUES WORTHY OF REVIEW, AND PETITIONERS’ ASSERTIONS REGARDING ITS PRACTICAL IMPACT ARE UNFOUNDED**

Attempting to compensate for the absence of legal issues warranting review, petitioners resort to magniloquent assertions (*e.g.*, Chamber Pet. 1) about the importance of the cases and the supposed practical effects of EPA’s actions. But as the members of the D.C. Circuit panel put it, while “[t]he underlying policy questions and the outcome of this case are undoubtedly matters of exceptional importance,” “the legal issues presented ... are straightforward, requiring no more than the

application of clear statutes and binding Supreme Court precedent.” Pet.App. 612a.<sup>20</sup>

Indeed, the relatively few challenges to the Endangerment Finding and Tailpipe Rule—to the extent they raise legal issues at all—are strained efforts that run directly against the plain language of Section 202(a) and this Court’s interpretation of that provision in *Massachusetts*. Petitioners’ few glancing criticisms of EPA’s exercise of its “scientific judgment,” *Massachusetts*, 549 U.S. at 533–34, are paradigms of uncertworthiness. Petitioners, moreover, do not direct any serious attack on the regulations actually before the Court, the motor vehicle emissions standards. No party challenged the substance of those standards, which have enormous environmental and consumer benefits. These issues clearly do not warrant further review.

Petitioners’ various challenges to EPA’s construction of the PSD applicability provisions all depend upon denying effect to the Clean Air Act’s unambiguous text. The D.C. Circuit’s reaffirmation of a longstanding, plain language interpretation of the PSD provisions does not merit this Court’s review. Petitioners failed to present any challenge to EPA’s construction of Title V below. Many of the

---

<sup>20</sup> This distinction is a longstanding one. Discussing certiorari jurisdiction before the House Judiciary Committee in 1922, Chief Justice Taft explained that a case that is “very important ... financially” or otherwise “important to the parties,” may turn on a “principle of law ... which is not important because it is well settled,” and that “[i]n such cases we reject the petition.” *Jurisdiction of Circuit Courts of Appeals and United States Supreme Court: Hearing on H.R. 10479 Before the House Comm. on the Judiciary*, 67th Cong. 2 (1922).

petitions attempt indirectly to attack (gross mischaracterizations of) the Tailoring Rule, without attempting to show that the D.C. Circuit erred in ruling that no one had standing to challenge it.

With respect to stationary sources, no petitioner can credibly contend that the impact of greenhouse gas regulation as actually implemented is unreasonable or oppressive. Permitting is proceeding at a reasonable pace across the country and across industrial sectors. In the first two years of the program, fewer than 200 greenhouse gas-emitting sources, all of them large emitters, applied for PSD permits.<sup>21</sup> The majority of the PSD permits issued have been for industrial sources such as electric generating units and natural gas processing plants.<sup>22</sup> As with any PSD permit, each determination of BACT by state or federal permitting authorities requires consideration of cost, 42 U.S.C. 7479(3), and is subject to judicial review. EPA's actions on greenhouse gas permitting have been fact-based and measured, with careful attention to preserving administrability for permitting agencies. See, *e.g.*, 77 Fed. Reg. at

---

<sup>21</sup> U.S. EPA, Greenhouse Gas Permitting Update, Office of Air Quality Planning and Standards, National Association of Clean Air Agencies Meeting, at 5 (Dec. 12, 2012), available at <http://www.4cleanair.org/Documents/NACAADecember12MeetingGHGPermittingUpdate.pdf> (GHG Permitting Update); *id.* at 6 (28 applications for Title V permits filed between July 1 and December 10, 2012). See also 77 Fed. Reg. 41,051, 41,058 (July 12, 2012) (44 greenhouse gas permits issued during first 15 months of program).

<sup>22</sup> GHG Permitting Update at 5.

41,053-59. No practical issue warrants intervention by this Court.

EPA, in short, is properly moving forward with the work of applying the Act to a dangerous form of air pollution. None of the issues raised in the petitions warrants further review.

### **CONCLUSION**

The nine petitions should be denied.

Respectfully submitted.

So far I've heard availability from some folks at NRDC, Earthjustice, and CATF and it looks like Aug. 9 is the better of the 2 days. Is someone from Sierra Club and EDF available that day from 2-3 pm eastern time?

All, I've heard back from Joe that they won't be ready to meet with us on the 29th and need until the week of Aug. 5 to be in position to have a productive discussion. I know that means that several of us will be unable to participate, but we should try and push this forward with whomever is available. Meleah said that she could probably do a meeting (at least by phone) on Aug. 8 or 9, so why don't folks let me know their availabilities for those days and we can go from there. Thanks.--Mike

Subject: career change

Friends...

Big news on my end, unless Janice Dean has already spilled the beans (which would be ok). I'm leaving EPA to become a partner at McDermott Will & Emery, an American Lawyer 100 firm. I'll be in the NY office, in the Energy Advisory Group. It means switching sides a bit, since they have a lot of clients who need Clean Air Act assistance (mostly merchant power generators, not utilities), but also the opportunity to build a litigation and counseling practice for renewable energy companies (because they also have a lot of renewable energy clients).

It has been great to work at EPA, of course, but after nearly 10 years in the public sector and with EPA

facing pay freezes and unpaid furloughs for the indefinite future, it is time for me to move on. I'll be officially employed at EPA for a few more weeks, and will start at MWE the week of August 19, with a short vacation starting August 5. I'll circulate my new work email and phone number once I have them, but you can always reach me at [Jacob.Hollinger@verizon.net](mailto:Jacob.Hollinger@verizon.net) or (917) 331-6509. And I'll still have this EPA email address for one more week.

I hope to catch up with each of you in person sometime soon!

- Jacob

Friends...

Big news on my end, unless Janice Dean has already spilled the beans (which would be ok). I'm leaving EPA to become a partner at McDermott Will & Emery, an American Lawyer 100 firm. I'll be in the NY office, in the Energy Advisory Group. It means switching sides a bit, since they have a lot of clients who need Clean Air Act assistance (mostly merchant power generators, not utilities), but also the opportunity to build a litigation and counseling practice for renewable energy companies (because they also have a lot of renewable energy clients).

It has been great to work at EPA, of course, but after nearly 10 years in the public sector and with EPA facing pay freezes and unpaid furloughs for the indefinite future, it is time for me to move on. I'll be officially employed at EPA for a few more weeks, and will start at MWE the week of August 19, with a short vacation starting August 5. I'll circulate my new work email and phone number once I have them, but you can always reach me at [Jacob.Hollinger@verizon.net](mailto:Jacob.Hollinger@verizon.net) or (917) 331-6509. And I'll still have this EPA email address for one more week.

I hope to catch up with each of you in person sometime soon!

- Jacob

I suggested in an email I sent to Lisa late last week that we should set up another call for this Wed. 1030 is okay by me.

Subject: RE: OMB has Formally Accepted the NSPS Rule

This is now posted as accepted on OMB's website. Are we talking on Wednesday again? If we are, could we shift to 10:30? We have a call at 9:30 that conflicts.

Thanks,

Janice

All,

I can't make 10:30 this Wednesday, but David Baron is available then. Thanks.

-Tim
