Dear Matthew Martin,

As part of our efforts to ensure high scientific quality, the initial drafts prepared for the IARC Monographs are peer-reviewed. With this in mind, you have been assigned to review one or more sections of the above-referenced volume.

To see your assignments and their due dates, log into IOPS (<http://iops.iarc.fr/>), go to the Projects page and click View Assignments for the relevant project.

To perform a review, click the title of the assigned section on the Assignments page. The documents (text, tables, and figures) to be reviewed are available at the top of the next page, followed by a review form with questions and text boxes for you to fill in.

It is recommended that you review the questions on this page before performing your review. Try to address the questions as completely as possible, but if you feel a question isn't relevant to the section you are reviewing, you can skip it. The box for Specific Comments is especially important. Use this space to comment on details of the draft and to bring forward any other issues you think the author should address in revision.

When you have finished, tick the box for "Review is complete" and click Save to submit your comments. In Your assignment page, this review will appear as "completed". If you want to save an incomplete review and return to it later, just click Save..

It is important that you submit your review by the posted deadline in order to allow sufficient time for the author to address your comments.

Please do not hesitate to contact us if you require clarification or any assistance.

Best regards,

Kate Guyton
