Additional text was added to Addendum MP-3 Section 2.3 to describe the timeframe over which CBM wells have been in operation. Also Addendum MP-3 Section 4.8.1 was updated to further capture the context of the Round 1 response.

Comment MuK 77 – Round 3

Response accepted.

Comment MuK 78 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 78. Please consider removing the model sensitivity to storage coefficients and porosity. Steady state groundwater model equations do not include these parameters in any of the model calculations. (MK)

Response MuK 78 – Round 1

As noted in this comment, the final model did not include a transient calibration and a sensitivity analysis on storage coefficient and porosity is not appropriate. The section and discussion regarding model sensitivity to the storage coefficient and porosity has been updated and removed as appropriate.

Comment MuK 78 – Round 2

Response conditionally accepted. Please incorporate the context of the response into the permit application. (MK)

Response MuK 78 – Round 2

Addendum MP-3 Section 4.8.5 (last two sentences) was previously updated during the first round of comment responses to incorporate the context of the Round 1 response.

Comment MuK 78 – Round 3

Response accepted.

Comment MuK 79 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 79. Please clarify if the faults in the model and their parameters were considered in any of the sensitivity analyses. If not, please consider performing a detailed and thorough sensitivity analysis, as the faults appear to influence the drawdowns simulated by the groundwater model. (MK)

Response MuK 79 – Round 1

The faults do influence the drawdowns and flow patterns simulated in the groundwater model. However, as noted in the response to comment MuK 51 the displacement observed in the faults roughly 5 times as thick as the modeled coal seams. Given the fact that the dominant lithology in the area is low permeability claystone/siltstone, it is very likely that where faulting has occurred the displacement has resulted in coals being immediately adjacent to the low permeability strata. Therefore the faults are assumed to be hydrologic barriers to water flow. Based on the best available mapping, these faults have been placed into the model. Because the faults are physical parameters that were developed along with development of the geological model (i.e. elevations and thicknesses of the geological layers), a sensitivity analysis was not performed on the faults.

Part of the reason that the faults influence the groundwater responses in the groundwater model to the degree that they do is because of the CBM impacts. Because the CBM operations have significantly lowered the water levels in the coal seams, the faults create a shadow effect that results in many of the cells immediately downstream of the faults going dry. If there had not been any CBM dewatering operations performed in the coals, the water levels would be significantly higher and the effects of the faults would not be as pronounced.

Comment MuK 79 – Round 2

Response conditionally accepted. Please incorporate the context of the response into the permit application. (MK)

Response MuK 79 – Round 2

The context of the Round 1 response has been added to Addendum MP-3 Section 2.4.1.

Comment MuK 79 – Round 3

Response accepted.

Comment MuK 80 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 80. In addition to the simulated drawdown maps, please consider providing hydrographs at strategically selected locations. This will enable a better presentation of the impacts over time. (MK)

Response MuK 80 – Round 1

As suggested, Appendix A has been added to Addendum MP-3 which depicts the modeled water elevations during the model simulation period at all the water supply wells identified within the model domain (CBM wells excepted) and at selected alluvial target locations within the model domain.

Comment MuK 80 – Round 2

Response not accepted. Appendix A is missing with the electronic files provided to the Cheyenne Office. The hydrographs will be reviewed after the receipt of this Appendix A. (MK)

Response MuK 80 – Round 2

All the appendices for Addendum MP-3 for the first round of comment responses were inadvertently left out of the submittal. Both Appendix A and B are included in this round of comment responses.

Comment MuK 80 – Round 3

Response accepted.

Comment MuK 81 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 81. Please clarify if the three wells listed in Table 4.9-1 are the only wells considered for the analysis. Also, provide a discussion on the methodology to narrow down the analysis from several wells shown in the groundwater rights maps to these three wells. (MK)

Response MuK 81 – Round 1

Additional wells beyond those originally presented in Table 4.9-1 were considered in the analysis. Table 4.9-1 has been updated to include all the wells considered in the analysis. To determine which wells were included in the analysis, completions were compared to modeled surfaces to estimate which formation in which the well was completed. Those thought to be completed in the Carney/Masters sequence were included. Please note that the wells included in Table 4.9-1 error on the side of being over inclusive. Some of the wells are believed to be completed in multiple zones but the analysis assumes that they are only completed in the coal seams of interest. In addition, the well depths were determined based on the State Engineer's database and in many cases well depth data was left blank or was questionable. If there was a question whether a well was actually completed in the coal aquifer of interest the well was assumed to be completed in the coal. Therefore, the well list may include some wells that are not completed in the coals of concern.

Comment MuK 81 – Round 2

Response conditionally accepted. Please incorporate the context of the response into the permit application. (MK)

Response MuK 81 – Round 2

The context of the Round 1 response was added to Addendum MP-3 Section 4.9 during the first round of comment responses. In addition to updating Table 4.9-1, the text was also updated with verbiage from the round 1 comment response to describe how the wells were chosen for inclusion into the model.

Comment MuK 81 – Round 3

Response accepted.

Comment MuK 82 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 82. Please provide (or reference) a discussion about the three wells listed in Table 4.9-1, their depths, screened intervals and other pertinent information. (MK).

Response MuK 82 – Round 1

Table 4.9-1 has been updated to include total depth as well as the screen intervals for all the wells. Additional details on the wells can be found in Adjudication Appendix B.

Comment MuK 82 – Round 2

Response conditionally accepted. Please incorporate the context of the response into the permit application. (MK)

Response MuK 82 – Round 2

Addendum MP-3 Table 4.9-1 was previously updated as noted in the round 1 comment responses. Between the updated text in response to comments and this table, the context of this comment response have been captured in Addendum MP-3.

Comment MuK 82 – Round 3

Response accepted.

Comment MuK 83 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 83. Page Addendum MP-3-60 states, “ To measure the impacts to the Tongue River and Goose Creek, a series of targets were placed along these drainages in Layer 1” Please define the term target. Also, clarify if these targets are located in the alluvial aquifer. (MK)

Response MuK 83 – Round 1

The targets as used in Groundwater Vistas are simply locations where heads are measured and compared with measured heads (if there are any available). Ground Water Vistas generates a hydrograph throughout the transient period of mining and recovery for each target. These targets were placed in Layer 1 to estimate the impacts of mining to surface water bodies. These targets are located where the alluvial aquifer is simulated in Layer 1. Targets representing existing well locations were also put in layers 4 and 6 as well as discussed in Comment MuK 81.

Comment MuK 83 – Round 2

Response conditionally accepted. Please incorporate the context of the response into the permit application. (MK)

Response MuK 83 – Round 2

Additional text was added to Addendum MP-3 Section 4.9 to define what a target is. Also, the inclusion of Appendix A has been included with this round of comment responses, which was inadvertently left out of the first round of comments. The appendix should also help incorporate the context of the Round 1 response.

Comment MuK 83 – Round 3

Response accepted.

Comment MuK 84 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 84. Page Addendum MP-3-60 states, “These targets demonstrate that the estimated maximum impact to Tongue River Alluvium is conservatively estimated to reach 2.5 feet drawdown near the river.” Please expand the discussion on the impacts to surface water flows including translating the drawdown to an estimated decrease in the groundwater baseflows to Tongue River and Goose Creek. (MK)

Response MuK 84 – Round 1

As shown on the hydrographs included in Appendix A, the maximum water level decline of 2.5 feet to the Tongue River alluvium occurred permanently and was caused by dry cells. This 2.5 foot drawdown is not believed to be a real drawdown because it resulted from model instability rather than a real predicted result. If the model did not have dry cells that caused permanent changes in the model, the maximum drawdown due to mining is estimated to be less than 0.5 feet.

As noted in the response to comment MuK 56, the model estimates the coals will contribute a relatively insignificant amount to water to the base flow of the Tongue River. As noted in Comment MuK 73 in the steady state model the River contributed approximately 2,569 cubic feet per day to the model while the river received 410 cubic feet per from the model. The net result is that in the steady state model 2,159 cubic feet per day (11.2 gpm) was contributed from the river to the model. For comparison, at the end of mining, the River contributed 2,714 cubic feet per day to the model and received 363 cubic feet per day from the model. The net result at the end of mining was that 2,351 cubic feet per day (12.2 gpm) was contributed from the River to the model. Over the simulated mining period the model estimates that the increased contribution of flow from the River to the model will be 1 gpm which represents approximately a 9% increase in flow.

Please note that in Groundwater Vistas the river boundary cells go to the bottom of the layer which likely overestimates the impacts to the River. Within the eastern portion of the model domain the coal aquifers can be 200 or more feet below the level of the river while the Tongue River Alluvium is estimated to be between 15 and 30 feet thick based on the thickness of alluvial wells constructed by Big Horn Coal in the area. Therefore, within the eastern portion of the model domain, the coals may be significantly below the alluvium and no River boundary was included in this portion of the model. However, there is an intermediary region where the actual level of the River is some 30-70 feet higher than the coals. At these locations the River boundary cells were left on to conservatively show the impacts to the river. However, the alluvium in these areas is likely thinner than 40-70 feet. As a result, the model allows the River to

directly contribute water to the coals below and the model is expected to overestimate the impacts to the Tongue River in these locations.

Comment MuK 84 – Round 2

Response conditionally accepted. Please incorporate the context of the response into the permit application. The comment will be reviewed after the receipt of Appendix A. (MK)

Response MuK 84 – Round 2

Additional text was added to Addendum MP-3 Sections 2.6.3 and 4.9 to incorporate the context of the Round 1 response. Also, text was added to Section 4.10 in response to Comment MuK 73 which helps capture the context of the Round 1 response.

Comment MuK 84 – Round 3

Response accepted.

Comment MuK 85 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 85. Please provide a statement on any hydrologic impacts predicted by the groundwater model to areas outside the Brook mine permit boundary. (MK)

Response MuK 85 – Round 1

The only impacts outside of the Brook Mine Permit Boundary would be observed at the existing water supply wells. Table 4.9-1 describes the estimated impacts at all the water supply wells in the Model domain that will be impacted both inside and outside of the Brook Mine Permit Boundary. Please note that most of these wells are located outside of the Brook Mine permit boundary. As shown on Table 4.9-1 the largest model predicted impact seen at any existing well outside of the Brook Mine Permit boundary is 20 feet which would be observed at P48251W. As shown in the hydrograph for this well in Addendum MP-3 Appendix A, this impact is estimated to be short lived (approximately 4 years). Model predicted drawdowns at the rest of the wells are less than 5 feet. At many of the wells predicted drawdowns are less than 1 foot over the life of the mine.

Comment MuK 85 – Round 2

Response conditionally accepted. Please incorporate the context of the response into the permit application. The comment will be reviewed after the receipt of Appendix A. (MK)

Response MuK 85 – Round 2

Additional text to capture the context of the Round 1 response has been added to Addendum MP-3 Section 4.11.

Comment MuK 85 – Round 3

Response accepted.

Comment MuK 86 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 86. Please provide a discussion on the simulated impacts caused by mining to surface water – groundwater interaction within the model domain. (MK)

Response MuK 86 – Round 1

Please see the response to comment MuK 84.

Comment MuK 86 – Round 2

Response conditionally accepted. Please incorporate the context of the response into the permit application. The comment will be reviewed after the receipt of Appendix A. (MK)

Response MuK 86 – Round 2

Additional text has been added to Addendum MP-3 to incorporate the context of the Round 1 response (also see response to MuK 84).

Comment MuK 86 – Round 3

Response accepted.

Comment MuK 87 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 87. Please compare the model simulated water balance between pre-mining, during mining and post mining conditions. Consider including a table that presents the water balance during select periods showing the flows from all sources and discharges to all the sinks within the model domain. Provide a detailed discussion addressing any changes in the model simulated water balance between pre-mining, during mining and post mining conditions. (MK)

Response MuK 87 – Round 1

Please see responses to comments MuK 73 and MuK 74. A detailed discussion is included in the responses to these comments.

Comment MuK 87 – Round 2

Response accepted. (MK)

Response MuK 87 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MuK 88 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 88. In addition to the maps presented on the recovery estimates, please provide hydrographs at strategically selected locations. This will enable a better presentation of recovery over time. (MK)

Response MuK 88 – Round 1

As described in response to Comment MuK 80, an appendix (Appendix A) has been added to Addendum MP-3 which depicts the modeled water elevations at a number of well and target locations within the model domain.

Comment MuK 88 – Round 2

Response not accepted. Appendix A is missing with the electronic files provided to the Cheyenne Office. The hydrographs will be reviewed after the receipt of this Appendix A. (MK)

Response MuK 88 – Round 2

Appendix A will be included with this second round of comment responses.

Comment MuK 88 – Round 3

Response accepted.

Comment MuK 89 – Round 1

Mine Plan, Addendum MP-3 Groundwater Model, 89. The modeling documentation lacks discussion on the backfill aquifer. In the recovery model, please clarify how the model treats the backfill aquifer (spoils aquifer) and its resaturation. Please provide a discussion (or reference) to the hydraulic properties of the backfill materials used to create the backfill aquifer and the aerial extent of the backfill aquifer. (MK)

Response MuK 89 – Round 1

Mine Plan Section 4.10 discusses the backfill aquifer. Within the areas where the highwall miner is used for mining, an open cavern will be left behind. Unless the mined out areas collapse, the backfill aquifer is essentially an open cavern with 100% porosity. The modeling software used for this effort does not have the ability to transiently change aquifer properties, and during resaturation of the mined areas the assigned storage coefficients remained the same as the original aquifer properties. As a result, the model may underestimate the time that it takes for the aquifer to resaturate where the mining methods have increased the porosity and thereby resaturation volume. Inversely, in the slots mined with traditional open cut mining

techniques, coal will be removed and replaced with overburden material. In these locations the backfilled material is expected to have poor aquifer characteristics because it will primarily be a mix of fine grained clay and silt with some sand. In these areas the aquifer will essentially be removed. Again, the modeling software does not have the ability to transiently change aquifer properties and this effect was ignored during the modeling.

Figure MP-3-4.9-1 shows the areal extent of mining and Addendum MP-3 Figures 4.7-2, 4.7-3, and 4.7-4 depict the areas that were modeled as dry within the Brook Mine permit area. It is important to note that a large percentage of the area that will be mined is dry prior to the initiation of mining. In addition, figures in MP-3 Section 4 show that after mining, some of the areas go dry and do not rewet. In the areas where slots are excavated this prediction is reasonable because the backfill will act as an aquitard with poor aquifer characteristics. A layer by layer review of the mined area at the end of mining was conducted to determine conceptually how ignoring the changes in the coal porosity and changes in backfill material may have impacted the model predictions.

Upper Carney-With exception of a very small portion of mine block 9 (Figure MP-3-4.9-1). The entire Upper Carney coal is unsaturated. Therefore, there is no resaturation and no recovery. The model estimates are appropriate for the Upper Carney coal.

Lower Carney - Most of the mine blocks as well as the open slots are dry in the Lower Carney at the end of mining. Only mine blocks 1, 2, 5, 9, and 10 had substantial portions that were saturated. As a result, the potential error created by transient aquifer properties in model predicted resaturation rates to the underground mined coal blocks in the Lower Carney coal, if any, is expected to be very low. With the exception of the slots cut to mine blocks 5, 9, and 10, all of the slots cut to mine the Carney Coal will also be dry; therefore, resaturation at those locations will not substantially impact model predictions. The slots cut for blocks 9 and 10 generally run parallel to the direction of water flow. If the coal in these locations is completely removed and replaced with an aquitard, the impact to the aquifer will be minimal because water will simply flow around the portion of the backfilled aquifer. The open pit slot cut adjacent to mine block 5 does run perpendicular to the direction that water is flowing and may change the groundwater flow patterns in this area. However, the location of the slot is near the groundwater divide caused by the fault just to the south. Therefore, this slot is not expected to substantially impact groundwater flows either

Masters - Most of the Masters Coal mine blocks are saturated. Only blocks, 4, 5, 6, and 7 have substantial areas that are not saturated. In the mine blocks where underground mining techniques are employed the model may underestimate the time it takes for resaturation to occur because the storage coefficient is not updated to account for the increased porosity of the mined out block. However this resaturation time will be balanced out by the fact that there will be no aquifer replaced in the open cuts to resaturate, and thus these areas would not resaturate as the model predicts.

With the exception of the open cut for mine block 5, all of the open cuts are oriented so that they will have minimal impacts on the natural flow gradients in the wellfield or are located within or adjacent to dry areas. As previously noted, the open cut near mine block 5 is located adjacent the drainage divide so it will not significantly change the water flow within the aquifer.

Due to the fact that much of the mined area is dry, the actual area mined that is below the water table is relatively small, and that the open cuts are oriented such that they have minimal impacts to groundwater flow, the recovery analysis performed by the model is reasonable. Also, as noted, the areas where underground mining is employed and the model overestimates the rate at which the aquifer is resaturated are counterbalanced by the areas of open cuts where the aquifer will not be replaced and the model underestimates the time it takes for the strata to resaturate.

Comment MuK 89 – Round 2

Response conditionally accepted. Please incorporate the context of the response into the permit application. (MK)

Response MuK 89 – Round 2

Text from this comment response was added to Addendum MP-3 Section 4.10 to capture the context of the Round 1 response.

Comment MuK 89 – Round 3

Response accepted.

Comment MuK 90 – Round 1

Mine Plan, Addendum MP-6 Subsidence Control Plan, 90. Figure MP6.1-1 shows “Monarch Seam Surface Only Mining”. Please clarify if the Monarch seam is targeted for mining in the appropriate sections of Appendix D5, Appendix D6 and mine plan. (MK)

Response MuK 90 – Round 1

The appropriate sections of Appendix D5 and D6 have been updated.

Comment MuK 90 – Round 2

No comment received.

Response MuK 90 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MuK 98 – Round 3 verbal comment via phone call with WWC 12-2-15

Please provide additional clarification describing why the model predicted discharge from the Tongue River to the underlying layers using the River Cells is conservatively over estimated.

Response MuK 98 – Round 3 verbal comment via phone call with WWC 12-2-15

The text in Addendum MP-3 Section 4.7.2 (Page 50) has been updated to further clarify that the model predicted discharge from the Tongue River to the underlying layers is conservatively high. Please also see Addendum MP-3 Section 2.6.3 (pg 29) for additional discussion on the contribution of water from the Tongue River to the groundwater system.

Reclamation Plan

Comment BJ 57 – Round 1

Volume 12, Reclamation Plan, Section RP.8.3, Pg. RP-37, The narrative describes the sources of recharge to the coal seams. One lithology mentioned as a positive recharge contributor is the overlying burn, scoria, or clinker material, generated by coal fires. It is a common misunderstanding that the scoriaceous material recharges coal or overburden. It would appear, at first glance, that the broken, vuggy material would be capable of conveying large amounts of water from the surface to materials beneath. That is not the case, however, as the coal/scoria interface has a zone of partially metamorphosed coal ash that lies between the burned material and the remnant coal. I have seen this zone many times during my 25 year career in the coal mines when supervising coal and overburden removal. This zone is characterized by a white to light gray, clay band that ranges in thickness from 6 inches to a foot or more. It is the same high silica ash found in the bottom ash of the local power plants that burn PRB coal. This ash band acts as an aquaclude, preventing water from entering or escaping the coal. Because of this, any recharge models that were run using the scoria as a recharge source must be reevaluated using new layers that do not include the scoria. Rerun recharge models if needed.

Response BJ 57 – Round 1

It is true that the partially metamorphosed coal ash layer between the coal and the scoria has the potential to limit recharge from the scoria to the coal. However, even though the permeability of this layer is low, there will be areas where the coal has collapsed or other geologic variances such as a thinning section which will allow for water from the scoria to come into contact with the coal. Therefore, even though the scoria may not be directly in contact with the coal, there is still a recharge component to the scoria, albeit; significantly lower than if the scoria and coal were in direct contact. This low recharge rate is reflected in the groundwater model. The calibrated recharge rate used in the groundwater model for the areas covered by scoria was 0.35

inches per year. For comparison purposes, the recharge rates assigned to the Carney and Masters outcrops, where no scoria was present, varied from 0.2 to 0.88 inches per year. Considering that in the scoria areas a very large percentage of direct precipitation is expected to infiltrate into the scoria, the 0.35 inch per year recharge rate represents a significant reduction in the amount of water available (which could be upwards of 10 inches per year) to infiltrate into the coal seams. Therefore, the calibrated recharge rate included in the groundwater model does take into account the low permeability layer between the coal and the scoria.

Comment BJ 57 – Round 2

No comment received.

Response BJ 57 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment BJ 58 – Round 1

Volume 12, Reclamation Plan, Section RP.8.3, Pg. RP-39, The second sentence in the first paragraph has an odd, difficult to understand syntax. Please rewrite the sentence for clarity.

Response BJ 58 – Round 1

Revised page RP-39 text as requested. The sentence will now read “The mine will consult with WDEQ/LQD to determine the number of spoil wells that will be tested”.

Comment BJ 58 – Round 2

No comment received.

Response BJ 58 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment BJ 65 – Round 1

EXHIBITS, Reclamation Plan, Exhibit RP.6-1, The permit boundary on this map is inaccurate. Please recreate the permit boundary layer.

Response BJ 65 – Round 1

Revised Exhibit RP. 6-1 as requested.

Comment BJ 65 – Round 2

No comment received.

Response BJ 65 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment BJ 66 – Round 1

EXHIBITS, Reclamation Plan, Exhibit RP.8-3 and Exhibit RP.8-4, The post mining potentiometric surfaces for the Carney and Masters beds are suspended in mid-air over Slater Creek. Please terminate the contour lines at the outcrop or use a dotted line to indicate the calculated potentiometric surface.

Response BJ 66 – Round 1

Revised Exhibit RP.8-3 and RP.8-4 as requested.

Comment BJ 66 – Round 2

No comment received.

Response BJ 66 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment DS 24 – Round 1

Reclamation Plan, Section RP.4. This brief section discusses what is considered spoil material to be removed during mining. The section states that spoil does not include coal, but there are some very narrow coal seams with numerous stringers of clay or of such low quality that will probably not be mined and will be placed in backfill. Also, the top layers of most coal seams are quite “dirty” and would also be removed and backfilled. In order to provide the readers with a more accurate description of the mining and reclamation processes, please revise the text to show that some coal-laden materials will also be considered spoils and will be backfilled during reclamation.

Response DS 24 – Round 1

Revised text as requested.

Comment DS 24 – Round 2

No comment received.

Response DS 24 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment DS 25 – Round 1

Reclamation Plan, Section RP.5.2. Please provide a description of the methods used to control topsoil depth during replacement. Most mining operations use stakes with surveyed marks as guides for controlling soil application depths.

Response DS 25 – Round 1

See Section RP.5.4 for a description of the methods used to control topsoil depth during replacement.

Comment DS 25 – Round 2

No comment received.

Response DS 25 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment DS 26 – Round 1

Reclamation Plan, Section RP.5.4. Variability in topsoil depth cannot be avoided due to limitations imposed by the equipment used and the pre-application preparations which may include ripping of the compacted overburden surface. Typically, the depth of topsoil application may vary 25%, but the average depth should be closely monitored and should not exceed the average availability. Also, because some soils exhibit unsuitable characteristics and will not be used for reclamation, discussion of the use of substitute topsoil materials is warranted in this section.

Response DS 26 – Round 1

Revised text as requested. Added discussion about substitute topsoil being an option if not enough suitable topsoil is salvaged.

Comment DS 26 – Round 2

No comment received.

Response DS 26 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment DS 27 – Round 1

Reclamation Plan, Section RP.5.6. Sediment control measures will be required to prevent untreated runoff from exiting reclaimed lands onto adjacent native lands. Please provide a discussion of the sediment control measures to be used.

Response DS 27 – Round 1

Revised text as requested.

Comment DS 27 – Round 2

Response is not adequate. Use of ASCMs during mining and following reclamation as sediment control must follow the requirements of Guideline 15. Brook Mine must provide some detail about how the ASCMs will be sized, certified, permitted and terminated. ASCMs may not be used within ½ mile of the Tongue River. Please provide requested information in the Mine Plan.

Response DS 27 – Round 2

In response to Comment MK 116 (Round 2), ASCMs have been removed as the primary form of sediment control within half of a mile of the Tongue River and Goose Creek. In the place of ASCMs within the half-mile buffer, sediment impoundments have been designed. These designs are now provided in Addendum MP-2. Design standards for ASCMs, inspection and maintenance standards for ASCMs, and ASCM removal and site reclamation standards are provided in Addendum MP-1.

Comment DS 27 – Round 3

Response is not adequate. The text in Section 5.6 is not adequate. ASCMs or sediment reservoirs/sumps must be used to control sedimentation from disturbed/reclaimed lands onto adjacent native lands until Phase 2 Bond Release Verification has been approved. The text must be changed to clearly show the types of sediment control that will be used until Phase 2 Bond Release Verification has been approved.

Response DS 27 – Round 3

The text has been revised in Section RP.5.6 to state that sediment measures will be in place until sediment control release has been obtained.

Comment DS 28 – Round 1

Reclamation Plan, Section RP.8.2. This section states only that impoundments will require Landowner, LQD and SEO approval. Prior to construction of post mining impoundments, SEO approved plans for the impoundments must be submitted for inclusion in the permit Reclamation Plan. Please include a statement that a Reclamation Plan revision will be approved by the LQD prior to construction of impoundments.

Response DS 28 – Round 1

Revised Section RP.8.2 to include a statement regarding LQD approval before the construction of postmine impoundments.

Comment DS 28 – Round 2

No comment received.

Response DS 28 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment DS 29 – Round 1

Reclamation Plan, Section RP.11.1. The primary final land use for the permitted acreage will be grazing and wildlife. Only areas where the current use is industrial will remain industrial land uses after mining is completed. Therefore, in order for any constructed buildings or railroad access to remain following mining, and a permit revision to change the land use will be required. It is not just a matter of demonstrating usefulness to the LQD and receiving landowner consent. This will be a major revision to the permit that will require public notice. Clarification should be provided concerning the steps involved to allow building to remain.

Response DS 29 – Round 1

Revised text as requested. Eliminated discussion in Section RP.11 regarding leaving any buildings, facilities, and equipment following completion of mining.

Comment DS 29 – Round 2

No comment received.

Response DS 29 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment DS 30 – Round 1

Reclamation Plan, All Mine Plan Maps with progressions must show the actual years of the initial disturbance or mining activity, or the progression must be linked to a specific year in Reclamation Plan text. The maps must also include the contour interval.

Response DS 30 – Round 1

See Mine Plan MP.1.6 for a description of permit terms and initial year. Revised text in Reclamation Plan Section RP.13 to reference Mine Plane MP.1.6. Revised Exhibit RP.5-1 adding “Note: Year 3 corresponds to the year 2019” in Legend.

Comment DS 30 – Round 2

No comment received.

Response DS 30 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment DS 33 – Round 2 (New Comment)

New Comment: Reevaluate the average topsoil replacement depth based on salvage depth estimates shown in Appendix D7 and expected disturbance of each soil series during mining. 18 inches may not be adequate.

Response DS 33 – Round 2 (New Comment)

The topsoil depth has been revised in the first paragraph of Section RP.5.4.

Comment DS 33 – Round 3

No comment received.

Response DS 33 – Round 3

Round 2 response assumed to be adequate. No response is necessary.

Comment DE 19 – Round 1

Reclamation Plan, Section RP.5.1, page RP-6 – RAMACO states that the contoured surface will be scarified or ripped, if necessary. The mine should commit to scarifying or ripping all surfaces prior to topsoil replacement.

Response DE 19 – Round 1

Revised text as requested. Remove “if necessary” from sentence.

Comment DE 19 – Round 2

No comment received.

Response DE 19 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment DE 20 – Round 1

Reclamation Plan, Section RP.5.6, page RP-8 - The 1st sentence of the 2nd paragraph doesn't make sense. Please correct.

Response DE 20 – Round 1

Revised text as requested. The sentence now reads “Rills and gullies occurring in redistributed soil precluding the achievement of the approved postmining land use or the reestablishment of vegetative cover will be rectified”.

Comment DE 20 – Round 2

No comment received.

Response DE 20 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment DE 21 – Round 2 (New Comment)

There still has been no Reclamation Bond Estimate submitted at this time so there is nothing to review.

Response DE 20 – Round 2 (New Comment)

Reclamation Bond calculations are pending.

Comment DE 21 – Round 3

The applicant still has not submitted any reclamation bond but Western Water has scheduled a meeting to discuss the bond for November 5, 2015. I cannot recommend approval of this permit application until an adequate reclamation bond has been submitted.

Response DE 20 – Round 3

A reclamation bond estimate has been provided as part of the Round 3 response package.

Comment JJ 5 – Round 1

Reclamation Plan, 5. Exhibit RP 6-1 also displays permit boundary discrepancies in regards to the section lines on it and those located on the Adjudication Exhibit 1. Please update accordingly.

Response JJ 5 – Round 1

See response to comment BJ 65. Revised Exhibit RP.6-1 as requested.

Comment JJ 5 – Round 2

No comment received.

Response JJ 5 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment JJ 6 – Round 1

Reclamation Plan, 6. Table RP 6-1 states that there are 11.6 acres of wetlands and other aquatic resources. Please discuss where these acres are to be reclaimed and show them on the Exhibit RP. 6-1 which displays the reclaimed vegetation communities and their locations.

Response JJ 6 – Round 1

Revised Section RP.9 to include reference to Exhibit RP.6-1 for location of reclaimed wetlands and OAR. Revised Exhibit RP.6-1 to include reclaimed wetlands and OAR locations.

Comment JJ 6 – Round 2

No comment received.

Response JJ 6 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 24 – Round 1

Reclamation Plan, Section RP.10 Reestablishment of Essential Hydrologic Functions and Agricultural Utility on Alluvial Valley Floors, Assuming the Tongue River is an AVF, this section should discuss how the essential hydrologic functions will be maintained and/or reestablished, as required by LQD Coal Rules and Regulations, Chapter 5, Section 3(c)(ii). As noted in Comment No. 21, the essential hydrologic functions of the Tongue River AVF need to be identified and a monitoring system needs to be installed. (MDK)

Response MK 24 – Round 1

Revised text as requested in Section RP.10.

Comment MK 24 – Round 2

Response not accepted. Please provide a more thorough discussion for each identified essential hydrologic function to demonstrate that the functions will be maintained throughout the mining operation. In particular, since mining is predicted to cause some amount drawdown in the Tongue River alluvium (Mine Plan Addendum MP-3), this needs specific discussion to demonstrate that the essential hydrologic functions will be maintained and/or reestablished.

Please also provide more detail on the plan and frequency of analyzing the aerial imagery. In addition, please note that given that Mine Plan Addendum MP-3 predicts some amount of drawdown in the alluvium of the Tongue River, installation of alluvial monitoring wells would be required to monitor the AVF. Otherwise there will be no way to assess the validity of the predicted drawdowns. Please provide a more detailed plan for installing the alluvial monitoring well(s). (MDK)

Response MK 24 – Round 2

The text at the end of Section RP.10 has been revised to include the pertinent details on the essential hydrologic function monitoring plan. The plan includes obtaining infrared photography every 5 years and photo documentation annually, as well as installing and monitoring alluvial wells on the Tongue River and Goose Creek during mining and reclamation periods. Exhibit RP.8-5 has been revised to include the proposed locations of the alluvial wells. Also, Guideline 9 Alluvial Valley Floors has been added to the Reference Section RP.17.

Comment MK 24 – Round 3

Response not accepted. Please see review of the response to Comment MK 21 and state in the text in Section RP.10 that the three proposed wells will be installed prior to commencing any mining-related disturbance. (MDK)

Response MK 24 – Round 3

A sentence stating alluvial monitoring wells will be installed prior to commencing mining related disturbance was added to Section RP.10.

Comment MK 25 – Round 1

Reclamation Plan, Section RP.10 Reestablishment of Essential Hydrologic Functions and Agricultural Utility on Alluvial Valley Floors, 25. As noted in Comment No. 21, the adjacent Goose Creek AVF also needs a monitoring system to demonstrate essential hydrologic functions are maintained and/or reestablished as required by LQD Coal Rules and Regulations, Chapter 5, Section 3(c)(i) and (ii). (MDK)

Response MK 25 – Round 1

Revised text as requested in Section RP.10.

Comment MK 25 – Round 2

Response not accepted. Please revise the discussion on the Goose Creek AVF monitoring system as per the response to Comment MK 24. (MDK)

Response MK 25 – Round 2

See response MK 24 for discussion on the Goose Creek AVF monitoring system.

Comment MK 25 – Round 3

Response accepted.

Comment MK 26 – Round 1

Reclamation Plan, Section RP.10 Reestablishment of Essential Hydrologic Functions and Agricultural Utility on Alluvial Valley Floors, 26. This section may also need to be addressed if the LQD finds that other AVFs exist on or near the permit area. If AVFs are determined to be present, the essential hydrologic functions must be maintained and/or reestablished as required by LQD Coal Rules and Regulations, Chapter 5, Section 3(c)(i) and (ii). (MDK)

Response MK 26 – Round 1

Revised text as requested in Section RP.10.

Comment MK 26 – Round 2

No comment received.

Response MK 26 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 75 – Round 1

Reclamation Plan, Section RP.3.3 Postmine Slope Analysis, 49. Please provide a discussion that compares the pre-mine vs. post-mine slope characteristics. A table would be helpful that compared the minimum, maximum, and average slopes under pre-mine and post-mine conditions. (MDK)

Response MK 75 – Round 1

Added Table RP.3-1 comparing premining and postmining slopes. Updated Section RP.3.3 of text to include reference to the new table.

Comment MK 75 – Round 2

No comment received.

Response MK 75 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 76 – Round 1

Reclamation Plan, Section RP.3.5 Drainage Reestablishment, 50. It is stated that mining will disturb portions of the Slater Creek channel and the reclamation will entail reconstruction. However, the Mine Plan PHC (Section MP.6.1) stated that Slater Creek

“will still flow naturally around the trench”, and “Because Slater Creek’s flow will not come into contact with mining activities, no impact will be made to water quality”. Please provide a clear and explicit description of the extent of direct disturbance to the Slater Creek channel. This description should be consistent between the Mine Plan and Reclamation Plan. (MDK)

Response MK 76 – Round 1

As stated in the revised Section MP.6.1 of the Mine Plan, the only anticipated surface disturbance to Slater Creek during mining will be the redirection of the channel through a culvert under a proposed haul road. No text was edited in response to this comment.

Comment MK 76 – Round 2

No comment received.

Response MK 76 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 77 – Round 1

Reclamation Plan, Section RP.4.2 Mitigation of Unsuitable Material , 51. Minor channels are defined as ephemeral streams but there is no definition provided for “major channels”. Please provide a definition and also illustrate an example of a major channel within the proposed permit boundary that would fit into this category. (MDK)

Response MK 77 – Round 1

Revised text in Section RP.4.2 to provide the definition of major channels.

Comment MK 77 – Round 2

No comment received.

Response MK 77 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 78 – Round 1

Reclamation Plan, Section RP.5.6 Erosion Control and Conservation Practices, 52. The first sentence of the second paragraph...”Rills and gullies...” needs revised, as it appears to be missing one or more words. (MDK)

Response MK 78 – Round 1

See response to Comment DE 20. Text revised as requested.

Comment MK 78 – Round 2

No comment received.

Response MK 78 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 79 – Round 1

Reclamation Plan, Section RP.7.4 Aquatic Habitat, 53. The second sentence discusses stockponds possibly being disturbed by mining activities. The Mine Plan PHC did not mention that any existing stockponds would be disturbed by mining activities. If stockponds are to be disturbed by the mining operation, this should be discussed in the Mine Plan PHC. (MDK)

Response MK 79 – Round 1

The text in the Mine Plan PHC has been revised to clarify the disturbance to stockponds within the permit area. Section RP.7.4 has been revised to clarify the anticipated aquatic habitat locations.

Comment MK 79 – Round 2

No comment received.

Response MK 79 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 80 – Round 1

Reclamation Plan, Section RP.7.4 Aquatic Habitat, 54. The text states that two additional postmine impoundments will be constructed and their location is shown in Exhibit RP.3-1. This Exhibit shows ten permanent impoundments, both on and adjacent to the proposed permit area. Please revise this discrepancy in the text or change the symbology in the Exhibit to clearly show the two permanent post-mine impoundments. (MDK)

Response MK 80 – Round 1

Revised text in Section RP.7.4. to clarify the postmine impoundment locations.

Comment MK 80 – Round 2

No comment received.

Response MK 80 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 81 – Round 1

Reclamation Plan, Section RP.8.1 Drainage Basin Reconstruction, 55. Please add the major stream name labels (Tongue River, Goose Creek, East Fork Earley Creek, Slater Creek, Hidden Water Creek) to Exhibit RP.8-1. (MDK)

Response MK 81 – Round 1

Revised Exhibit RP.8-1 as requested.

Comment MK 81 – Round 2

No comment received.

Comment MK 81 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 82 – Round 1

Reclamation Plan, Section RP.8.1 Drainage Basin Reconstruction, 56. Please explain in the text how the postmine drainage basin parameters in Table RP.8-1 were determined. (MDK)

Response MK 82 – Round 1

Revised text in Section RP.8.1 as requested.

Comment MK 82 – Round 2

No comment received.

Response MK 82 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 83 – Round 1

Reclamation Plan, Section RP.8.1 Drainage Basin Reconstruction, 57. The text states that a comparison of drainage basin parameters in Table RP.8-1 and Exhibit RP.8-1 show that the overall hydrologic balance will remain largely unchanged. This conclusion is not obvious from the Table and Exhibit. How similar are the postmine drainage basin parameters to the pre-mine parameters? Which sub-drainages show the largest change from pre-mine conditions? The text needs to include a more thorough discussion to demonstrate to the reader why exactly the postmine hydrologic balance will be unchanged. (MDK)

Response MK 83 – Round 1

Revised text to include reference to Appendix D6 tables and exhibits regarding drainage basin parameters. Minor disturbance and mining methods contribute to the largely unchanged postmine drainage basin parameters.

Comment MK 83 – Round 2

No comment received.

Response MK 83 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 84 – Round 1

Reclamation Plan, Section RP.8.1.1 Discharge Estimates, 58. The text provides no discussion of the comparison between the pre-mine and postmine modelled discharge values. Please provide this discussion so the reader can determine if the differences are minor or major. (MDK)

Response MK 84 – Round 1

Revised text in Section RP.8.1.1 as requested.

Comment MK 84 – Round 2

No comment received.

Response MK 84 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 85 – Round 1

Reclamation Plan, Section RP.8.1.1 Discharge Estimates, 59. Please add the year to the Miller reference within the text (2003) and add this citation to the references list in Section RP.17. (MDK)

Response MK 85 – Round 1

Revised text as requested.

Comment MK 85 – Round 2

No comment received.

Response MK 85 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 86 – Round 1

Reclamation Plan, Section RP.8.1.1 Discharge Estimates, 60. Similar to Comment No. 8 made for Appendix D6, the HEC-HMS runoff estimates in Table RP.8.4 are much higher than the Miller (2003) equations. Please provide a discussion in the text as to the reasonableness of the HEC-HMS estimates and why the HEC-HMS estimates are so much higher than the Miller (2003) regression equations.

Response MK 86 – Round 1

See response to Comment MK 34. No revisions to the text were made.

Comment MK 86 – Round 2

No comment received.

Response MK 86 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 87 – Round 1

Reclamation Plan, Section RP.8.1.2 Channel/Floodplain Design, The last sentence in the first paragraph states that stream reaches for which designed cross sections are provided are identified in plan on Exhibit RP.8-1. There is nothing on this Exhibit that shows which stream reaches have designed cross sections, nor which stream channels are being reconstructed. Please clearly identify this information on this Exhibit. (MDK)

Response MK 87 – Round 1

Exhibit RP.8-1 has been revised as requested.

Comment MK 87 – Round 2

No comment received.

Response MK 87 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 88 – Round 1

Reclamation Plan, Section RP.8.1.2 Channel/Floodplain Design, 62. Exhibit RP.8-2 shows that the main Slater Creek channel will not be disturbed. Please consider this in light of Comment No. 50 that requested clarification on the extent of disturbance to the Slater Creek channel. (MDK)

Response MK 88 – Round 1

See response to Comment MK 76(referred to as Comment No. 50). Revised Exhibits RP.8-1 RP.8-2 as requested. A reconstructed Slater Creek (Figure RP.8-9) cross section has been added to reflect the correct disturbance boundary.

Comment MK 88 – Round 2

No comment received.

Response MK 88 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 89 – Round 1

Reclamation Plan, Section RP.8.1.2 Channel/Floodplain Design, 63. On Page RP-35, second paragraph, it references “reclaimed Slater Creek channel” and channel hydraulics are presented in Table RP.8-5. It is not clear why channel hydraulics are presented for Slater Creek when it will not be disturbed. Is this because reclaimed tributaries to Slater Creek are changing such that the main channel of Slater Creek is expected to be change? Please clarify this in the text. (MDK)

Response MK 89 – Round 1

Slater Creek is included Table RP.8-5 to show that the postmine Slater Creek Channel will be hydraulically similar to premine conditions after mining and reclamation operations have been completed as reclamation of a portion of Slater Creek is expected.

Comment MK 89 – Round 2

No comment received.

Response MK 89 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 90 – Round 1

Reclamation Plan, Section RP.8.2 Permanent Impoundments, 64. It is unclear exactly how many new postmine impoundments will be constructed. Table RP.8-6 identifies two impoundments (Enhancement Stock Pond 1 and Replacement Stock Pond 1), and these are shown in Exhibit RP.3-1. Exhibit RP.3-1 shows eight other permanent impoundments. Please identify if these are new features to be constructed or if they are existing stockponds that may be affected by the mining operation. (MDK)

Response MK 90 – Round 1

The text in Section RP.8.2 has been revised to clarify that only the new features to be constructed are displayed in Table RP.8-6. Affected existing stockponds will be constructed approximately to premine conditions.

Comment MK 90 – Round 2

No comment received.

Response MK 90 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 91 – Round 1

Reclamation Plan, Section RP.8.2 Permanent Impoundments, 65. Please identify in this section if there will be a net increase or decrease in post-mine water storage capacity relative to pre-mine capacity. (MDK)

Response MK 91 – Round 1

Revised text in Section RP.8.2 to clarify a net increase in water storage capacity is expected due to the addition of two postmine impoundments.

Comment MK 91 – Round 2

No comment received.

Response MK 91 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 92 – Round 1

Reclamation Plan, Section RP.8.2 Permanent Impoundments, 66. As mentioned Comment No. 47, it is advised that the applicant discuss with the SEO-Interstate Streams Division any implications for the Yellowstone Compact if new water storage features are proposed that potentially decrease water quantity to the Tongue River. (MDK)

Response MK 92 – Round 1

See response to Comment DS 28(Comment No. 47 mentioned above). Revised text as requested.

Comment MK 92 – Round 2

Response not accepted. The response referenced Comment DS 28, which did not mention consulting with the SEO about the Yellowstone Compact. As indicated in the

response to Comment MK 73, RAMACO is aware of the Yellowstone Compact and will act in accordance with the guidelines outlined. Please add a similar statement to Section RP.8.2. (MDK)

Response MK 92 – Round 2

The text in Section RP.8.2 Permanent Impoundments has been revised in the second paragraph to acknowledge that RAMACO will obtain a permit from the SEO, therefore any implications to the Yellowstone Compact will be analyzed by the SEO.

Comment MK 92 – Round 3

Response accepted.

Comment MK 93 – Round 1

Reclamation Plan, Section RP.8.4.2 Surface Water Monitoring, 67. The text on Page RP-40 states that the surface water monitoring stations are shown on Exhibit RP.8-4. However, the stations are not shown on this Exhibit. It may be make the most sense to add these to Exhibit RP.8-5 and rename the Exhibit “Postmine Hydrologic Monitoring Locations” so the surface water stations and monitoring wells are on one Exhibit. (MDK)

Response MK 93 – Round 1

Revised the reference in text to state “locations of these sites are shown on Exhibit RP.8-5”. Exhibit RP.8-5 was revised to include surface water monitoring stations and renamed as requested. Table RP.8-9 was edited to include all planned surface water stations including postmine impoundment monitoring sites.

Comment MK 93 – Round 2

No comment received.

Response MK 93 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 94 – Round 1

Reclamation Plan, Section RP.8.4.3 Postmine Impoundments, 68. The text on Page RP-41 states that water quality samples will be collected at each of the postmine impoundments listed in Table RP.8-6 and presented on Exhibit RP.3-1. Please clarify in the text that this sampling list includes all ten impoundments shown. (MDK)

Response MK 94 – Round 1

Revised text in Section RP.8.4.3 to reference Table RP.8-9 and Exhibit RP.8-5 for postmine surface water monitoring sites including postmine impoundments.

Comment MK 94 – Round 2

No comment received.

Response MK 94 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 95 – Round 1

Reclamation Plan, Section RP.8.4.3 Postmine Impoundments, 69. Please add the list of impoundments to be sampled to Table RP.8-9 “Surface Water Monitoring Sites”.
(MDK)

Response MK 95 – Round 1

Revised Table RP.8-9 as requested.

Comment MK 95 – Round 2

No comment received.

Response MK 95 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 96 – Round 1

Reclamation Plan, Section RP.8.4.3 Postmine Impoundments, 70. The postmine impoundments to be sampled appears to be slightly different from the impoundments listed in Mine Plan Table MP.7-1 “Operational Surface Water Monitoring Locations”. Table MP.7-1 lists three impoundments (Hall Reservoir, Black Mountain No. 1 Stock Reservoir, and Legerski Bros #1 Stock Reservoir) that are not listed as postmine impoundments to be sampled. Please explain why there is a difference in the operational monitoring and postmine monitoring of some impoundments. (MDK)

Response MK 96 – Round 1

Black Mountain No.1 Stock Reservoir has been added as a postmine impoundment that will be monitored. Legerski No. 1 Stock Reservoir and Hall Reservoir are outside of the areas planned for mining disturbance, however in an effort to further monitor the surface water of the Brook Mine permit area, the reservoirs were added to be sampled quarterly during mining. Table RP.8-9 and Exhibit RP.8-5 have been updated to include Black Mountain Reservoir No. 1 Stock Reservoir.

Comment MK 96 – Round 2

No comment received.

Response MK 96 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 97 – Round 1

Reclamation Plan, Section RP.8.4.3 Postmine Impoundments, 71. In the second full paragraph on Page RP-41, “The water quality samples..” please also state that the water quality samples will be compared against WDEQ/WQD Class III groundwater standards, as suggested by LQD Guideline No. 17 for replacement and enhancement stockponds. (MDK)

Response MK 97 – Round 1

Revised text as requested in Section RP.8.4.3.

Comment MK 97 – Round 2

No comment received.

Response MK 97 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 98 – Round 1

Reclamation Plan, Section RP.8.5.2 Surface Water, 72. At the end of the first paragraph on Page RP-44, it predicts a “slight change” in event peaks and volumes. Please further discuss what is meant by a “slight change”, i.e., what is the magnitude of the increase or decrease? (MDK)

Response MK 98 – Round 1

Section RP.8.5.2 has been updated to reflect the change in event peaks and volumes will be less than one percent when compared to premining conditions.

Comment MK 98 – Round 2

No comment received.

Response MK 98 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 99 – Round 1

Reclamation Plan, Section RP.8.5.2 Surface Water, 73. In the second paragraph on Page RP-44, please clarify the extent of direct mining disturbance to Slater Creek versus tributaries of Slater Creek. This comment relates to previous Comments No. 50 and 62. (MDK)

Response MK 99 – Round 1

See response to Comments MK 76 (comment No. 50) and Mk 88 (Comment No. 62).

Comment MK 99 – Round 2

No comment received.

Response MK 99 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 100 – Round 1

Reclamation Plan, Section RP.8.5.2 Surface Water, 74. Please provide a discussion as to whether the planned postmine impoundments will affect surface water quantity on or downstream of the proposed permit area. (MDK)

Response MK 100 – Round 1

Section RP.8.5.2 has been revised to include discussion of the effect of postmine impoundments to the surface water quantity on and downstream of the proposed permit area.

Comment MK 100 – Round 2

No comment received.

Response MK 100 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 101 – Round 1

Reclamation Plan, Section RP.9.1 Introduction, 75. The second paragraph references Appendix D8. Should this be Appendix D10 (Wetlands)? Please revise this if necessary. (MDK)

Response MK 101 – Round 1

The reference has been revised to D10 as requested.

Comment MK 101 – Round 2

No comment received.

Response MK 101 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 102 – Round 1

Reclamation Plan, Section RP.9.1 Introduction, 76. Please add a statement up front in the Wetland Mitigation section that the USACE has not yet issued a jurisdictional determination for the proposed Brook Mine. Please also provide a statement in the text that the information in Section RP.9 may be subject to change pending the USACE determination. The USACE jurisdictional determination should also be incorporated somewhere into the Mine Permit once that is received by the Brook Mine. (MDK)

Response MK 102 – Round 1

Sections RP.9.1 has been revised as requested.

Comment MK 102 – Round 2

No comment received.

Response MK 102 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MK 103 – Round 1

Reclamation Plan, Section RP.14 Bond Release, 77. The LQD no longer requires a bond release verification for “sediment control release”. This is now termed “surficial stability verification”. More information is available in LQD Guideline No. 23. Please revise the text for this change. (MDK)

Response MK 103 – Round 1

The text in Section RP.14 has been revised by removing the reference to sediment control release.

Comment MK 103 – Round 2

Response accepted. However please note that RAMACO may wish to also cite LQD Guidelines No. 20, 21, 22, 23, and 25, as these are key documents for assisting operators with bond release procedures. (MDK)

Response MK 103 – Round 2

The text in Section RP.14 Bond Release has been revised to include discussion of WDEQ/LQD Guidelines No. 20, 21, 22, 23 and 25 for bond release. In addition, the Guidelines mentioned above have been added to Section RP.17 References.

Comment MK 103 – Round 3

No comment received.

Response MK 103 – Round 3

Round 2 response assumed to be adequate. No response is necessary.

Comment MK 118 – Round 2 (New Comment)

In Section RP.3.4 Erosion and Sedimentation Control Practices, the first sentence on Page RP-4 references sedimentation impoundments. As noted in the response to Comment MK 49, sedimentation impoundments are not currently planned as part of the mining operation. The text in this section should also clarify that sedimentation impoundments are not planned. (MDK)

Response MK 118 – Round 2 (New Comment)

The Mine Plan has been revised to state that sedimentation impoundments will be required. Designs for sedimentation impoundments required in the first five years of operations are now provided in Addendum MP-2. Therefore, the reference to sedimentation impoundments in the Reclamation Plan has been left in place.

Comment MK 118 – Round 3

Response accepted.

Comment MK 119 – Round 2 (New Comment)

In Section RP.8.5.2 Surface Water, the third sentence of the last paragraph on Page RP-46 references sedimentation reservoirs. As noted in the response to Comment MK 49, sedimentation reservoirs are not currently planned as part of the mining operation. The text in this section should also clarify that sedimentation reservoirs are not planned. (MDK)

Response MK 119 – Round 2 (New Comment)

The Mine Plan has been revised to state that sedimentation impoundments will be required. Designs for sedimentation impoundments required in the first five years of operations are now provided in Addendum MP-2. Therefore, the reference to sedimentation impoundments in the Reclamation Plan has been left in place.

Comment MK 119 – Round 3

Response accepted.

Comment MK 127– Round 3 (New Comment)

RP.10 Reestablishment of Essential Hydrologic Functions and Agricultural Utility on Alluvial Valley Floors. Although no mining is planned on the AVFs on the Tongue River and Goose Creek, the disturbance boundary is within a small part of the Big Horn Mine AVF extent (Exhibit D11.6-1). It appears that this area includes the SP-1, OB-1, and OB-2 features in Section 21 on Exhibit MP.5-1, which was updated for this

round. Please include a statement in the text of Section RP.10 that there is some minor disturbance proposed within the AVF extent. Please also discuss in the text of Section RP.10 whether this disturbance would affect the essential hydrological functions of the AVF. (MDK)

Response MK 127 – Round 3 (New Comment)

Minor disturbance is planned within the Big Horn Mine AVF extent in Section 21 of Township 57 North, Range 84 West. The disturbance should not affect the essential hydrologic functions of the AVF on the Tongue River as the disturbed area is minimal in size and should not preclude the conveyance of flow. AVF areas disturbed will be replaced to mimic premine conditions. Discussion of the reclamation of the disturbed AVF areas has been added to the second paragraph of Section RP.10.

Comment MuK 91 – Round 1

Reclamation Plan, RP 8.5.3 Groundwater, 91. Section 8.3, page RP-38 states, “The estimated Postmine Potentiometric surfaces for the reclaimed aquifer for the Masters and Carney Seams are presented respectively in Exhibit RP.8.3 and Exhibit RP.8-4. Please provide a summary comparing and contrasting the premine potentiometric surfaces vs. post mine potentiometric surfaces. This comparison should also consider any changes in the hydraulic properties (hydraulic conductivity, storativity, recharge capacity) of the premine aquifers vs. post mine aquifers. (MK)

Response MuK 91 – Round 1

Section RP.8.5.3 has been revised to include discussion regarding the comparison of premine and postmine potentiometric surfaces.

Comment MuK 91 – Round 2

No comment received.

Response MuK 91 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MuK 92 – Round 1

Reclamation Plan, RP 8.5.3 Groundwater, 92. Please discuss any changes in the interaction between the surface water and groundwater systems from the premining through the postmining phases of the operation. (MK)

Response MuK 92 – Round 1

The response to Comment MuK 84 describes interaction between the surface water and groundwater systems from the premining through the postmining phases of operation. In general the changes between the surface water systems and the groundwater systems are expected to be minimal. For a short time during mining it is

anticipated that there will be a small (less than 6%) increase in the amount of water that recharges the coal seams from the Tongue River. Once the water levels in the coals recover, no further impacts are expected.

Comment MuK 92 – Round 2

No comment received.

Response MuK 92 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MuK 93 – Round 1

Reclamation Plan, RP 8.5.3 Groundwater, 93. Please discuss the intersection of the postmining topographic and potentiometric surfaces and their effects on the location and size of groundwater-fed water bodies. (MK)

Response MuK 93 – Round 1

Revised Section RP.8.5.3 as requested.

Comment MuK 93 – Round 2

No comment received.

Response MuK 93 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MuK 94 – Round 1

Reclamation Plan, RP 8.5.3 Groundwater, 94. Section 8.5.3, page RP-46 states, “These water quality changes can be qualitatively predicted from the overburden mineralogy and projected post mine hydrology.” Please expand this discussion on projected groundwater quality. Provide a discussion on the estimated/ projected post mining groundwater quality. A detailed description of potential changes in water quality from flow through backfill/mined out areas should be included. Any potential changes to water quality in adjacent aquifers should be discussed with respect to the potential for offsite material damage. (MK)

Response MuK 94 – Round 1

Revised Section RP.8.5.3 text as requested.

Comment MuK 94 – Round 2

No comment received.

Response MuK 94 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MuK 95 – Round 1

Reclamation Plan, RP 8.5.3 Groundwater, 95. Please provide a discussion on any anticipated water use during the reclamation period. (MK)

Response MuK 95 – Round 1

As discussed in Addendum MP-3, the only anticipated groundwater uses during the reclamation period are at existing water supply wells. Section RP.8.5.3 has been revised to include additional discussion.

Comment MuK 95 – Round 2

No comment received.

Response MuK 95 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment MuK 96 – Round 1

Reclamation Plan, RP 8.5.3 Groundwater, 96. Please address (or reference) any expected post-reclamation subsidence effects on the hydrologic system (both quantity and quality) and the plan to minimize these effects. (MK)

Response MuK 96 – Round 1

Section RP.8.5.3 has been revised to include discussion of expected postmine subsidence effects on the hydrologic system.

Comment MuK 96 – Round 2

No comment received.

Response MuK 96 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 7 – Round 1

Reclamation Plan, Page RP-13. Section RP.6.2.6. In the last sentence please add that substitutions to the seed mix will be made only with WDEQ approval.

Response SP 7 – Round 1

Revised text in Section RP.6.2.6 as requested, the statement will now read “In the event that seed for primary species is not available, alternatives will be considered

which match the life form and morphology of the primary choice only with WDEQ approval.”

Comment SP 7 – Round 2

No comment received.

Response SP 7 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 7 – Round 3

The response is satisfactory. A commitment to notify the DWEQ for seed mix substitutions has been added.

Comment SP 8 – Round 1

Reclamation Plan, Page RP-16. Section RP.6.4.1. To demonstrate that all of the unaffected acres of each vegetation community are sufficient for an extended reference area please create a table with total acres and affected acres and reference this table in this section.

Response SP 8 – Round 1

Table RP.6-6 has been created to display the number of extended reference acres for the respective vegetation communities. The text in Section RP.6.4.1 has been revised to include a reference to the newly created table.

Comment SP 8 – Round 2

No comment received.

Response SP 8 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 8 – Round 3

Table RP6-6. This table should use the acreage within the permit boundary since the mine has control over management of the land in the permit. Please revise the first column of this table from Brook Mine Study Area to Brook Mine Permit Area and use the acreages from Table D8.2-1. For the second column please title it Disturbed Acreage. When the subtraction for the final column occurs there will be very little acreage for the Agricultural Land but historic or county production numbers can be used.

Response SP 8 – Round 3

Table RP.6-6 has been revised with the permit area acreages from Table D8.2-1 in the first column and the second column has been renamed from Postmining Disturbed Areas to Disturbed Acreage.

Comment SP 9 – Round 1

Reclamation Plan, Page RP-17. Section RP.6.4.1. Please add to the Ch. 4 reference in the first sentence on this page that the Handbook of Approved Sampling and Statistical Methods for Evaluation of Revegetation Success on Wyoming Coal Mines.

Response SP 9 – Round 1

Revised Section RP.6.4.1 as requested.

Comment SP 9 – Round 2

No comment received.

Response SP 9 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 9 – Round 3

The response is satisfactory. A reference to the Handbook of Approved Sampling and Statistical Methods for Evaluation of Revegetation Success on Wyoming Coal Mines has been added.

Comment SP 10 – Round 1

Reclamation Plan, Page RP-17. Section RP.6.4.1. Please remove the first sentence in the third paragraph. It appears in conflict with the next sentence which cites Ch. 4.Sec. 2(d)(ii)(B).

Response SP 10 – Round 1

Removed sentence as requested in Section RP.6.4.1.

Comment SP 10 – Round 2

No comment received.

Response SP 10 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 10 – Round 3

The response is satisfactory. The conflicting citation has been removed.

Comment SP 11 – Round 1

Reclamation Plan, Page RP-19. Section RP.6.4.5.1. Please add a third sentence to the first paragraph to Pastureland land use with a full shrub density greater than 1 shrub/m² is also eligible.

Response SP 11 – Round 1

Sentence including pastureland land use as eligible added to Section RP.6.4.5.1 as requested.

Comment SP 11 – Round 2

No comment received.

Response SP 11 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 11 – Round 3

The response is satisfactory. Pastureland with greater than 1 shrub/m² has been corrected to be eligible.

Comment SP 12 – Round 1

Reclamation Plan, Page RP-24. Please revise the sentence after the • Shrub density bullet to “Additionally, a species list will be prepared” and delete the remainder of the sentence.

Response SP 12 – Round 1

Revised text as requested.

Comment SP 12 – Round 2

No comment received.

Response SP 12 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 12 – Round 3

The response is satisfactory. The sentence has been revised.

Comment SP 13 – Round 1

Reclamation Plan, Page RP-25. Section RP.6.7.3. Under Sampling Frequency in Guideline 14 the third sample may be included as part of your revegetation success (bond release) sampling which can begin in year seven. You may add more flexibility

to your sampling interval such as beginning year 3 or 4, with the second sampling in year 5, 6 or 7 and then the third may be year 7 – 13 and may be used for revegetation success.

Response SP 13 – Round 1

Revised text per recommendations.

Comment SP 13 – Round 2

No comment received.

Response SP 13 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 13 – Round 3

This is confusing. Please use the following language for the section. Sampling will begin in year 3 or 4 after seeding. The second sampling will occur in year 6 or 7 after seeding and the third sampling which may be used for final revegetation success will occur by year 13 or 14 after seeding. In the event the bond period for specific monitoring areas exceeds ten years, additional sampling will occur every five years after the third sample until final bond release.

Response SP 13 – Round 3

RAMACO acknowledges that the text may be confusing. Reclamation Plan text will remain as is.

Comment SP 14 – Round 1

Reclamation Plan, Page RP-29. Section RP.7.2. There is a reference to RP.8 in this section. Please correct the reference if it is not correct.

Response SP 14 – Round 1

Revised text to reference Section RP.6 for seed mixtures and revegetation operations.

Comment SP 14 – Round 2

No comment received.

Response SP 14 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 14 – Round 3

The response is satisfactory. The reference has been corrected.

Comment SP 15 – Round 1

Reclamation Plan, Table RP6.1. Could you please add a footnote listing the disturbances that are included in the 87.3 acres of Disturbance and what the disturbances will be postmining in the 56.1 acres.

Response SP 15 – Round 1

Added footnote describing disturbance for premining and postmining to Table RP.6-1 as requested.

Comment SP 15 – Round 2

No comment received.

Response SP 15 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 15 – Round 3

The response is satisfactory. The types of disturbance have been listed.

Comment SP 16 – Round 1

Reclamation Plan, Exhibit RP.2-1. Postmining the landuse will be Grazingland and Fish and Wildlife Habitat (937.7 acres) and Cropland (3.7 acres) with 56.1 acres of disturbance, 4.9 acres of water and 11.6 acres of wetland. These landuses will match the landuses on Exhibit D1.1-1. With just minor acreage changes shown in Table RP.6-1. Since the railroad and major roads are identified and Taylor Quarry is going to be reclaimed to Grazingland and Fish and Wildlife Habitat, the Industrial commercial stippling is not needed on these areas.

Response SP 16 – Round 1

Revised exhibit as requested.

Comment SP 16 – Round 2

No comment received.

Response SP 16 – Round 2

Round 1 response assumed to be adequate. No response is necessary.

Comment SP 16 – Round 3

The response is satisfactory. Exhibit RP.2-1 has been revised to Grazingland for the reclamation of the Taylor Quarry.

Comment SP 17– Round 3 (New Comment)

Please correct tables or text that list the new affected area. This acreage should match the acreage listed on your Form 1.

Response SP 17 – Round 3 (New Comment)

Tables RP.6-3 has been revised to include a note stating the affected area acreage outside the disturbance boundary has been excluded from shrub density calculations because this acreage will be undisturbed during mining operations except for potential subsidence. No other tables have been revised in response to this comment. Form 1 has been updated with the revised affected area acreage in Adjudication.

Comment SP 18– Round 3 (New Comment)

The shrub density standard is based on the affected acreage which is listed on your Form 1. Please make any needed changes to your shrub density tables and maps.

Response SP 18 – Round 3 (New Comment)

Tables RP.6-3 has been revised to include a note stating the affected area acreage outside the disturbance boundary has been excluded from the shrub density calculations because this acreage will be undisturbed during mining operations except for potential subsidence. Form 1 has been updated with the revised affected area acreage in Adjudication.

Other Comments

Comment MK 27 – Round 1

Items Requested in Electronic Format for Preparation of CHIA, 1. Please provide a CAD or ArcGIS shapefile that contains the proposed permit boundary for the Brook Mine. This file will be used to prepare maps in the CHIA. This file can be emailed to: matthew.kunze@wyo.gov. (MDK)

Response MK 27 – Round 1

See response to comment MK 28.

Comment MK 27 – Round 2

Response to the comment is pending. Review of the response to this comment will be completed when the information is received. (MDK)

Response MK 27 – Round 2

The permit boundary in CAD format was provided as an attachment in an e-mail dated September 1, 2015.

Comment MK 27 – Round 3

Response accepted.

Comment MK 28 – Round 1

Items Requested in Electronic Format for Preparation of CHIA, 2. Please provide the baseline surface and groundwater data collected to support baseline characterization for the permit application. All data can be submitted on Excel templates (Attachments) found on the LQD website for the Coal Annual Report Format (CARF): <http://deq.wyoming.gov/lqd/coal/resources/annual-report-3/>.

- Please provide all surface water flow and water quality data for the following surface water stations: SM578415-SW-1, SM578409-SW-1, SM578418-SW-1, and SM578512-SW-1.
- Please provide all groundwater level and water quality data for all Brook Mine monitoring wells shown in Table D6.2-1.

Response MK 28 – Round 1

The electronic data requested is being compiled in the requested format and will be provided when it is completed.

Comment MK 28 – Round 2

Response to the comment is pending. Review of the response to this comment will be completed when the information is received. (MDK)

Response MK 28 – Round 2

The electronic data in CARF format was provided as an attachment in an e-mail dated September 1, 2015.

Comment MK 28 – Round 3

Response accepted.

Comment MuK 97 – Round 2 (New Comment)

In the next submittal, please consider providing a text tracking mechanism that will highlight the changes that are made in response to the comments. Typically, it can be a bolded font for all the text that is revised. This will help the reviewer to review the appropriate revised text. Without this bold font or some distinct highlight for the revised text, the reviewer has to compare against the initial submittal to get a handle on the changes that were made in response to the LQD comments.

Response MuK 97 – Round 2 (New Comment)

RAMACO will coordinate with WDEQ to facilitate review in anyway once WDEQ has determined the method that is most suitable (as per the meeting on September 1, 2015). In the meantime, RAMACO has attempted to make it as clear as possible in comment responses what the location of textual changes has been. Additionally, please refer to the Change Index for locations of replaced or added text, tables, and figures. Also, any page with new changes will be updated with the submittal month and year in the footer. Pages in the permit without changes will maintain previous dates.

Comment MuK 97 – Round 3

Response accepted.

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	
TFN 6 2-025)	DOCKET 17-4802
)	

OBJECTOR FISHERS' PRE-HEARING MEMORANDUM

Jay A. Gilbertz, of the firm Yonkee & Toner, LLP, by and on behalf of Objectors Mary Brezik-Fisher and David Fisher ("Fishers"), and pursuant to the Order Of Consolidation And Schedule dated March 13, 2017, submits Objector Fishers' Pre-Hearing Memorandum as follows:

ISSUES TO BE DECIDED:

1. Can Brook Mine prove that its mining application and plan are substantively complete and in substantive compliance with the Wyoming Environmental Quality Act and all applicable laws, rules, regulations and standards, including without limitation, Wyo. Stat. §35-11-406?
2. Can Brook Mine prove that its mining application and plan are substantively in compliance with the policy and purpose of the Wyoming Environmental Quality Act and any applicable laws, rules, regulations or standards?

3. Can Brook Mine prove that all conditions precedent to the issuance of a coal mining permit have been met?
4. Are special conditions or contingency requirements appropriate under the unique circumstances of this permit application?

Brief Factual Background:

Brook Mine, LLC has applied for a surface coal mining permit. The permit seeks the right to mine for coal in a high-wall mining fashion which includes auguring coal from underneath overburden similar to underground mining. The proposed mine is in close proximity to the important alluvial valley floors of the Tongue River, Goose Creek and Slater Creek drainages. This area and surrounding lands are important farming and agricultural areas and risks to the quality and quantity of both surface and subsurface waters are at issue. The area has also experienced underground mining activities (such mines well predating environmental protection laws) and has a long and well-documented history of subsidence problems associated with those mines. Environmental subsidence damage from underground mining is a matter of historical fact in the area.

During the permit application process, neither Brook Mine, LLC nor the Wyoming DEQ sought the involvement of nor did they allow members of the public or affected landowners an opportunity to be involved or heard. Rather, the permit was declared technically complete without even cursory public involvement and prior to the Administrator making required statutory findings. Only then were the public and affected landowners invited to file formal "objections" and it was suggested any concerns would be addressed in an informal proceeding.

Rather than providing an informal conference, the DEQ shirked the informal process in favor of referring the matter to this Council. This decision forced any interested member of the public into expensive and burdensome contested case litigation just to have their concerns heard. Faced with this impediment, many Objectors simply chose to give up. Even then, Brook Mine engaged in legal efforts to have the Objector's cases dismissed and preclude any public input at all.

The Objectors who remained were then subjected to what appears to be punitive depositions and intrusive discovery at the hands of Brook Mine. The Fishers contend that a hallmark of environmental protection laws is to encourage public participation with the goal of a better permitting process based on the collective wisdom of the regulators and the public. Unfortunately, the Brook Mine permit has proceeded in a fashion of roadblocks, practical punishments and exclusion, rather than on one of simple inclusion.

Fishers contend that the Brook Mine application and plan do not adequately or substantively assess the potential environmental, hydrologic and reclamation hazards presented by this coal mine. For this reason, the scientific basis for the potential environmental impacts is deficient and thus cannot predict the likely ramifications of allowing the mine to proceed. As such, the application must be denied at this time and more scientific and thorough investigations, conclusions and planning are warranted and necessary before further consideration can be accomplished. The Fishers further contend that Brook Mine's current application is technically deficient and substantively lacking in a number of other ways. Fisher also contend that in any event, any permit should have special conditions

or contingencies which address the unique conditions and necessary landowner protections for this particular and unique mine site.

WITNESSES AND EXHIBITS:

The Fishers are separately and concurrently filing a designation of witnesses and exhibits.

OBJECTOR FISHERS' LIST OF WITNESSES AND EXHIBITS

Jay A. Gilbertz, of the firm Yonkee & Toner, LLP, by and on behalf of Objectors Mary Brezik-Fisher and David Fisher ("Fishers"), and pursuant to the Order Of Consolidation And Schedule dated March 13, 2017, submits Objector Fishers' List Of Witnesses and Exhibits as follows:

I. WITNESSES

A. "Will Call" Witnesses

Fishers will call the following witnesses to testify at the contested case hearing in this matter:

- 1. Mary Brezik-Fisher c/o Jay A. Gilbertz.**

Mrs. Fisher will testify about the Fishers' backgrounds, education and experience, as well as factual information concerning the Fisher property and adjacent lands including its history and how it is subject to the impacts of the proposed mining activities. In addition, she will testify as to their knowledge of all matters relating to the Brook Mine Permit, including their efforts at requesting and obtaining an informal meeting with DEQ, their discovery responses, and all matters concerning potential impacts to their property and adjoining landowners' property, livelihood, property values, and health and safety. Mrs. Fisher will also explain the concerns she has about the proposed mining activities and basis for those concerns. It is further expected that Mrs. Fisher will testify consistent with the deposition testimony she provided.

B. "May Call" Witnesses

Fishers may call the following individuals to testify at the contested case hearing in this matter:

2. **David Fisher** c/o Jay A. Gilbertz. Mr. Fisher is a party to this action and would testify to all the subject matters identified in the potential testimony of Mrs. Fisher set forth above.

3. **John Buyok, P.E.**
86 Monarch Rd.
Ranchester, WY 82839
(307) 673-0068

Mr. Buyok is a retired licensed engineer and he lives within ½ mile of the proposed mining operations. He has experience in reviewing mine and reclamation plans and currently provides services as a private engineering consultant. Mr. Buyok testified previously

regarding the Brook Mine Plan Application in Civil Action No. 16-1601 before the Environmental Quality Council and is expected to testify consistent with his previous testimony. He has reviewed the brook mine plan, reclamation plan, and other materials associated with the pending permit which is the subject of this litigation, and it is expected that he will testify concerning his knowledge and experience in reviewing mine plans, his opinions concerning deficiencies and incompleteness in the mine plan as it is currently proposed, inadequate bonding, and various other concerns as a potentially affected landowner. Mr. Buyok is further expected to testify consistent with his recent deposition which was demanded and taken by Brook Mine in the current pending action. The Fishers reserve the right to call/present Mr. Buyok through his transcribed deposition testimony.

4. Representatives of Wyoming Department Of Environmental Quality

Fishers may call one or more representatives/employees of WDEQ offices in the Sheridan, Cheyenne, and Lander offices concerning their evaluation of the mine plan at issue, including but not limited to, B.J. Kristiansen, Doug Emme, Matt Kunze, and Muthu Kuchanur, Ph.D.

5. Randall Atkins and other representatives, agents, consultants, landmen, engineers, or liasons of Brook Mining Co., LLC and/or Ramaco.

Fishers may call Mr. Atkins, Niles Veal and/or other representatives, agents, consultants, landmen, engineers or liasons of Brook Mining Co., LLC and/or Ramaco to testify concerning all aspects of the proposed Brook Mine, mine plan and reclamation plan, and including but not limited to, deficiencies and incompleteness, communications with landowners, media reports and articles, communications with government officials,

communications with WDEQ, conduct and action toward landowners and all other matters at issue to which they may have knowledge.

6. Brooke Collins: Ms. Collins is the owner/occupant and the restorer of a historic church constructed or faced with native stone and located near the proposed mine site. Ms. Collins is believed to be well-versed in the local history of activities and man-made structures in the vicinity of the proposed mine and may be called to provide her historical knowledge of the area, mine subsidence problems and knowledge of certain structures near the mine site, including the church which she restored and lives in.

7. Joan Tellez: Ms. Tellez is believed to be well-versed in the local history of activities and man-made structures in the vicinity of the proposed mine and may be called to provide her historical knowledge of the area, mine subsidence problems and knowledge of certain structures near the proposed mine site.

Fishers reserve the right to call any and all “will call” and “may call” witnesses listed by any other party, as well as any witness necessary for impeachment and/or rebuttal purposes and any witness necessary to lay foundation for exhibits. Fishers further reserve the right to supplement this list of witnesses prior to the contested case hearing in this matter.

II. EXHIBITS

Fishers may offer the documents and materials listed on *Exhibit A* attached hereto. In addition to the exhibits identified in *Exhibit A*, Fishers reserve the right to use, rely upon

and offer into evidence or the record any and all exhibits listed by any other party, and they reserve the right to make sub-exhibits (i.e. A-1, A-2) of particular or individual documents contained in multi-page exhibits. The Fishers also reserve the right to list all documents associated with any exhibit if such listing is necessary to establish the admissibility of any of the offered exhibits. In addition, the Fishers reserve the right to enlarge all or portions of certain exhibits for demonstrative purposes, or to present them by use of an electronic media system for ease of viewing by the Council. Fishers reserve the right to list or use rebuttal and impeachment exhibits and additional or supplemental exhibits as may be appropriate.

Fishers also reserve the right to list, use and offer any portion of the Brook Mine Plan which has already been made a part of the record in this matter. By "listing" or identifying any exhibit as a potential exhibit in the case, Fishers in no way waive any objections to these exhibits and reserve all potential objections.

DATED this 17th day of May, 2017.

FISHERS' CONTESTED CASE HEARING EXHIBITS

EXHIBIT A

- FISHER 1: Aerial Photo of portion of Tongue River Valley
- FISHER 2: Photos of Fishers' house and property
- 2-A: Old Photo of House
 - 2-B: Old Rock Barn Structure
 - 2-C: Initials carved on rock barn: L.S. July 26, '13
 - 2-D: Old Rock Building/Dwelling on Property
 - 2-E: Fisher house at time of purchase in 1996
 - 2-F: Phase 1 depiction of house remodel
 - 2-G: Current depiction of Fisher house
 - 2-H: Mature fruit trees and pine trees with new fence
 - 2-I: Landscape photo of Fisher property from frontage road
 - 2-J: Landscape photo of Fisher property from I-90
- FISHER 3: Photos of Boceks' property adjacent to Fishers
- 3-A: Bocek property view along frontage road
 - 3-B: Bocek property view along frontage road
- FISHER 4: Photo of Mine Subsidence in Sheridan County
- FISHER 5: Letter from Todd Parfitt dated 01/30/17 denying informal conference
- FISHER 6: Letter from Fishers to BKS Environmental Associates, Inc. dated 07/03/13
- FISHER 7: Email chain between BKS and Niles Veal (July, 2013) regarding trespass on Fisher property (*Brook 041660-041662*)
- FISHER 8: Article dated 12/15/14 entitled "Feds To Boost Mine Blasting Emissions Rules" (Cheyenne (AP))
- FISHER 9: Internet Blog posted on 02/04/14 entitled: "Photos: Hazardous Gas Clouds From Coal Mine Blasting In Southeastern Montana"
- FISHER 10: WyoFile Article by Bleizeffer dated 02/22/13: "There's \$428M in Unfunded Abandoned Mine Reclamation Work in Wyoming"

- FISHER 11: Sheridan Media Web Content Article dated 02/09/17 (*produced by Fishers in discovery*)
- FISHER 12: Gerlach-Map (C-1 Objection Exhibit C) from Expert Report
- FISHER 13: *Brannaman vs. Paxton Resources, LLC*.Judgment
- FISHER 14: *Sorenson vs. High Plains Gas, Inc., et al.*Judgment
- FISHER 15: Email from Deanna Hill to BJ Kristiansen dated 11/21/14 (*part of DEQ document production*)
- FISHER 16: Email from Kim Pandullo to Kyle Wendtland dated 08/12/15 (DEQ Emails pg. 6298)
- FISHER 17: Emails from/to Morrison and DEQ re meeting with landowners dated April, 2016 (DEQ Emails pg. 7756)
- FISHER 18: Emails between Page and Rogaczewski dated May 23-24, 2016 (DEQ Emails pgs. 8007-8008)
- FISHER 19: Email from Barron to Rogaczewski and Kristiansen dated 06/21/16 (DEQ Emails pg. 8123)
- FISHER 20: Email from Kristiansen to Barron dated 02/13/17 with attached Memorandum: Brook Mine AVF Determination, Slater Creek dated 01/07/16
- FISHER 21: DEQ Emails regarding mine subsidence plan dated 01/03/14
- FISHER 22: Email from B.J. Kristiansen to Tanya King re underground mine plan dated 01/02/14
- FISHER 23: Email from B.J. Kristiansen to Robin Jones re underground mine permits dated 01/02/14
- FISHER 24: Email from Matt Kunze to Shannon Anderson re CHIA for Brook Mine dated 03/20/15
- FISHER 25: Letter dated 02/24/16 from B.J. Kristiansen to Randall Atkins re AVF
- FISHER 26: Fishers' Objection Lt. dated 01/22/17 (already filed and part of record)

)
 TFN 6 2-025) **DOCKET 17-4802**

POWDER RIVER BASIN RESOURCE COUNCIL'S PRE-HEARING MEMORANDUM
EXHIBIT A: WITNESS DESIGNATION LIST

The Powder River Basin Resource Council (“Resource Council”) hereby designates the following witnesses for the hearing to be held May 22-26, 2017 in the above-captioned proceedings.

WILL CALL WITNESSES

The following witnesses will be called by the Resource Council at the hearing:

- 1) **Anton Bocek**: Mr. Bocek is a nearby landowner. He will provide testimony about his interests and concerns related to the mine permit application and the proposed coal mining operations. Mr. Bocek is a member of the Resource Council.
- 2) **John Buyok**: Mr. Buyok is a nearby landowner. He will provide testimony about his interests and concerns related to the mine permit application and the proposed coal mining operations. Mr. Buyok is a member of the Resource Council.
- 3) **Gillian Malone**: Ms. Malone is a member of the public that engages in recreational activities in the areas nearby to the proposed mining operations. She will provide testimony about her interests and concerns related to the mine permit application and the proposed coal mining

operations. Ms. Malone may also provide brief testimony on the Resource Council's organizational interests and concerns related to the permit application and proposed mining operations. Ms. Malone is a founding member of the Resource Council and currently serves on its Board of Directors.

4) **Gennaro Marino Ph.D., P.E., D.GE**: Dr. Marino will present expert testimony on the subsidence risk presented by the mine and reclamation plan and will identify deficiencies in the permit application related to subsidence evaluation and prevention. Dr. Marino will present the opinions discussed in his expert report and other opinions related to subsidence he has drawn from reviewing the permit application and associated materials.

5) **Mickel Wireman M.S., P.G.**: Mr. Wireman will provide expert opinions related to the hydrology aspects of the permit application, including the sufficiency of the water monitoring plan, impacts to the hydrologic balance within and outside the permit area, and impacts to alluvium and alluvial valley floors. A copy of the report he has prepared is provided in the Resource Council's exhibits and it was also previously filed in this docket as a part of the Resource Council's expert witness disclosures. Mr. Wireman has let his Wyoming geologist registration lapse, but he has associated with Wyoming professional geologist Sue Ann Spencer for the purposes of his testimony and report. Ms. Spencer has provided a certification that she has reviewed Mr. Wireman's findings in his report and that she finds them compliant with the standards of a professional geologist in Wyoming. Ms. Spencer will also be present at the hearing and will be called jointly with Mr. Wireman to provide limited testimony to this effect as well.

MAY CALL WITNESSES

The Resource Council may call the following witnesses at the hearing:

1) **Brooke Collins**: Ms. Collins lives nearby to the proposed mining operations. She has not yet decided whether she wants to provide testimony at the hearing, but she is likely to be called as a witness. If she does testify, she will provide testimony about her interests and concerns related to the mine permit application and the proposed coal mining operations.

2) **Carol Bilbrough**: Ms. Bilbrough is the LQD Program Manager for DEQ. If not called by DEQ, the Resource Council may call her as a witness to testify as to the oversight and management of the permitting process and regarding DEQ practices and procedures.

3) **Niles Veal**: Mr. Veal is a contractor to Brook. If not called by Brook, the Resource Council may call him as a witness to testify to his personal knowledge about permit preparation work, work to address DEQ identified deficiencies, and regarding his interactions with nearby landowners and residents.

The Resource Council reserves the right to call additional witnesses necessary for impeachment or foundation purposes.

POWDER RIVER BASIN RESOURCE COUNCIL'S PRE-HEARING MEMORANDUM

The Powder River Basin Resource Council (“Resource Council”) hereby files its Pre-hearing Memorandum in the above captioned proceedings. This memorandum summarizes the legal and technical issues before the Environmental Quality Council (“EQC” or “Council”) and presents the Resource Council’s issues of law and fact to be considered at the hearing.

BACKGROUND

In response to the required public notice, the Resource Council timely filed objections to Brook Mining Company, LLC’s (“Brook” or “applicant” or “company”) coal mine permit application. The objections included a variety of issues ranging from incomplete and inaccurate information in the permit application to more technical issues such as hydrology and subsidence concerns, blasting mitigation, and reclamation bond requirements.

Members of the Resource Council also timely filed objections to Brook's coal mine permit application. John and Vanessa Buyok, Gillian Malone, Sadie Clarendon, Jane Buyok, Anton Bocek, Joan Tellez, Wendy Condrat, and William Bensel filed objections. Resource Council member Phil Klebba and his family will also be impacted by mining operations as

discussed below.¹ Their objections and concerns demonstrate that the Resource Council, through representation of its members, is an “interested person” within the meaning of the Wyoming Environmental Quality Act’s Section 406(k) and a “person with an interest which is or may be adversely affected” within the meaning of Ch.1 § 17(b) of DEQ’s Rules of Practice and Procedure. Members Anton Bocek, John Buyok, and Gillian Malone will also provide testimony at the hearing to reinforce the Resource Council’s “interest.”

ISSUES OF FACT AND LAW

In this case, the evidence presented at the hearing will demonstrate:

1. According to the Wyoming Environmental Quality Act (“WEQA” or “Act”), “No mining operation may be commenced or conducted on land for which there is not in effect a valid mining permit to which the operator possesses the rights.” W.S. § 35-11-405(a).
2. Requirements for coal mine permit applications as well as grounds for approval and denial are governed by Section 406 of the Wyoming Environmental Quality Act, along with the Land Quality Division’s Rule and Regulations implementing the Environmental Quality Act.
3. Specifically, “The applicant for a surface coal mining permit has the burden of establishing that his application is in compliance with this act and all applicable state laws.” *Id.* at § 406(n).
4. DEQ regulations require information in a permit application to be “current” . . . “accurate and complete.” DEQ Land Quality Division Rules and Regulations, Ch. 2 § 1. The mine plan must include “[a] complete operations plan proposed to be conducted during the life of the mine” with an accurate estimate of “the number of acres that will be affected annually” and

¹ The Klebbas did not file objections as they were not aware of the opportunity to do so at the time given they live outside of ½ mile from the permit boundary and were thus not provided notice. They subsequently became aware of the proposed project from reading an article in the Casper Star Tribune.

the “anticipated annual and total production by tonnage.” *Id.* at § 5(a)(i). As discussed in Sections 1 and 2 of the Resource Council’s objections, the mine plan and permit application at issue here does not contain current, accurate, or complete information and does not meet the requirements of DEQ’s regulations.

5. For instance, the permit application fails to:

(a) Identify and include all incidental facilities: For the purposes of delineating a permit boundary, the WEQA defines “Surface coal mining operation” to mean surface lands where surface coal mining activities take place and/or surface lands “incident” to underground coal mining activities. The operation shall also “include any adjacent land the use of which is incidental to any of these activities, all lands affected by the construction of new roads or the improvement or use of existing roads to gain access to the site of these activities and for haulage . . . processing areas, shipping areas and other areas upon which are sited structures, facilities or other property or materials on the surface, resulting from or incident to these activities.” W.S. § 35-11-103(e)(xx). The permit application fails to include associated facilities necessary to get coal to a point of sale, including necessary roads and facilities, and does not include the coal “processing areas” associated with the proposed industrial park and manufacturing facilities, which are incidental to the mine.²

(b) Include accurate and complete information about coal storage and hauling: Similarly, the mine plan lacks the necessary specificity about the locations of coal storage in the

² The Resource Council became aware of the industrial park processing facilities only after our petition was filed with the EQC. However, exhibits filed by the Resource Council, produced by DEQ and the company during discovery, demonstrate DEQ was fully aware of these facilities *before* the permit went to public notice and therefore they should have been considered by the agency in its review.

pit, in the permit area, or off- site and does not identify any associated facilities (e.g. silos, stockpiles, etc.) that will be necessary for storage.

(c) Accurately estimate the amount of coal that will be mined: Accurately estimating the amount of coal to be mined is a critical component of any mine plan as it establishes the time period of the permit and the level of anticipated impacts, provides transparency to the public, and allows for enforcement by DEQ once a permit is issued. In the case of this mine, the company is asking DEQ to let them figure it out as they go along. At times, company representatives have stated publicly that they anticipate mining 6-8 million tons per year, and at other times they anticipate mining a small amount of coal. The project keeps shifting, but meanwhile the estimated annual production in the mine plan has not been updated since 2013. The only thing that is clear is the mine plan is not really a plan at all and is too vague or unrealistic to be considered a basis to anticipate impacts or to allow DEQ to adequately enforce the facility should a permit be granted.

Moreover, for years four and five, estimated annual production exceeds the two million ton per year limit established in the company's air quality permit.³ Additionally, should production ramp up to 6-8 million tons per year as has been stated publicly by company representatives, this would surely exceed the two million ton per year limit.

(d) Include accurate and complete information about traffic and road impacts: The mine plan does not estimate truck traffic, disclose any impacts to public or private roads used by the public, and does not include a traffic plan, even though according to the mine plan those "plans" have been "previously formulated." Additionally, the mine will directly impact

³ The air quality permit is mentioned in the mine plan but says the permit will be submitted. It does not disclose that there is a final air quality permit that was received *prior* the coal mining permit going to public notice nor does it explain any limits of on coal production that result from the air quality permit.

Slater Creek Road, a county road that is the only access point for the property of Resource Council member Phil Klebba and his family at the Klebba Ranch. The mine plan does not provide the required buffer around Slater Creek Road or alternatively it does not provide a plan, approved by the Sheridan County Board of County Commissioners, to move the road.

(e) Include accurate and complete information about impacts to conservation easements and recreation access: The mine plan does not discuss or disclose any impacts to conservation easements and recreation access or recreation facilities within or adjacent to the permit area. The Wyoming Game & Fish Department has agreements with landowners for “walk-in” areas for hunting and recreation, areas which are likely to be impacted by mining operations. Additionally, the associated “industrial park” is located within eyesight of the Kleenburn Recreation Area, an area frequently used for recreation activities, including fishing, picnicking, and hiking.

(f) Include accurate and complete information about blasting activities and projected impacts: The mine plan does not describe how frequently blasting will occur and in what amounts, and it does not provide sufficient restrictions to ensure that the requirements of Chapter 6 of the Land Quality Regulations will be met during mining and that offsite impacts resulting from pollution and seismicity will be prevented. Blasting is of particular concern to members of the public who recreate in the area given pollution and other impacts and to nearby homeowners and landowners whose structures could be impacted from blasting activities.

(g) Include information on MSHA requirements and permits: The subsidence control plan references a “ground control plan” that is approved by MSHA and is commonly included for DEQ review in a subsidence control plan. However, no such plan exists. DEQ regulations require “[a] list identifying the Mine Safety and Health Administration identification

number for all mine facilities that require MSHA approval and licenses, permits or approvals needed by the application to conduct the proposed operation, whether and when they have been issued, the issuing authority, and the steps to be taken to comply with the requirements” as part of the permit application. Ch. 2 § 2(a)(v). This information is not included in the permit application and responses to discovery questions raised by the Resource Council confirm that the company has yet to apply for any MSHA permits.

(h) Include accurate and complete information about measures to prevent and remediate coal fires: The mine plan does not include an appropriate plan to prevent and/or put out coal fires or properly treat or dispose of other “materials constituting a fire, health, or safety hazard.” W.S. § 35-11-406(b)(ix). Coal fires are of particular concern to nearby landowners given the history of coal fires in the area and the presence of active coal fires *within* the permit boundary, a fact confirmed by the company’s answers to Resource Council discovery questions.

6. As our hydrogeology expert will explain at the hearing, the mining and reclamation plan does not include “a plan to minimize the disturbances to the prevailing hydrologic balance at the minesite and in associated offsite areas and to the quality and quantity of water in surface and ground water systems both during and after mining operations and during reclamation” as required by the WEQA and corresponding DEQ regulations. W.S. § 35-11-406(b)(xvii). DEQ must deny the permit application *unless* it is sufficiently demonstrated that the proposed operations will not materially damage the hydrologic balance outside the permit area and will minimize disturbances to the prevailing hydrologic balance at the minesite. Again, the applicant has the burden of proof to demonstrate these requirements have been met.

7. Our hydrology expert will also explain that the mine plan does not sufficiently include “[t]he methods of diverting surface water around the affected lands where necessary to

effectively control pollution or unnecessary erosion” as required by the Environmental Quality Act and associated DEQ regulations. W.S. 35-11-406(b)(xv).

8. As discussed in the expert report submitted with the Resource Council’s objections, and as will be explained by our expert at the hearing, the subsidence control plan does not achieve its required objective: to control and prevent subsidence at the mine site. The expert report concludes that “There is a serious risk of surface subsidence from roof collapse in the proposed mining area.”

9. Nearby landowners are particularly concerned about subsidence because it can “constitute[] a public nuisance or endanger[] the public and safety” of local landowners. W.S. § 35-11-406(m)(vii). As discussed above, the company is proposing to mine under at least one county road and will be mining in close proximity to numerous home and business structures, agricultural lands and associated structures, water wells, and public rights of way. Subsidence also has implications for whether the “reclamation plan can accomplish reclamation as required.” *Id.* at § 406(n)(ii). And it has implications for creating damage to the hydrologic balance both within the permit area and in outside areas. *Id.* at §§ 406(b)(xvii), 406(n)(iii).

10. The company has an obligation to prevent subsidence. DEQ Land Quality Regulations require a coal mining permit application with underground components, such as this permit application, to include “[e]xcept for areas where planned subsidence is projected to be used, measures to be taken in the mine to prevent or minimize subsidence, including backfilling of voids and leaving areas in which no coal is removed.” Ch. 7 § 1(a)(v)(C). Additionally, “[u]nderground mining activities shall be planned and conducted so as to prevent subsidence from causing material damage to structure, the land surface, and groundwater resources.” Ch. 2 § 2(b)(iii).

11. Further, “Auger mining may be limited or prohibited to minimize disturbance of the prevailing hydrologic balance, unwarranted subsidence, or if the prohibition is necessary to maximize the utilization, recoverability or conservation of the solid fuel resources.” Ch. 5 § 6(b). This regulation is critical because at various times in the mine plan, the company refers to highwall mining as auger mining or “a similar method to auger mining.” The law treats auger mining distinctly given the particular impacts that can result from this type of mining.

12. The permit application includes a commitment to replace only adjudicated water wells that will be impacted by mining activities. This is not sufficient to meet the requirements of the law and the application must be amended to include all permitted wells. In answers to discovery questions, DEQ has admitted that this amendment needs to be made, however there is no process for that to happen until *after* the hearing.

13. Additionally, before a coal mining permit can be approved, DEQ must make certain findings related to the application’s compliance with the WEQA and DEQ regulations. *Id.* at §§ 406(n)(i)-(vii).

14. These findings have not yet been made, and DEQ has stated, in answers to the Resource Council and other parties through discovery questions, that these findings will only be made *after* the hearing.

15. Specifically, as our hydrogeologist expert will explain at the hearing, the proposed mine has not “been designed to prevent material damage to the hydrologic balance outside the permit area” as required by the WEQA and corresponding DEQ regulations. *Id.* at § 406(n)(iii). Regardless, DEQ is unable to make this finding until its Cumulative Hydrologic

Impacts Assessment (“CHIA”) is completed, and DEQ has stated in answers to discovery questions that its CHIA will only be completed *after* the hearing.⁴

16. Likewise, DEQ is unable to make a finding that “the proposed operation would . . . [n]ot interrupt, discontinue, or preclude farming on alluvial valley floors” as required by Section 406(n)(v). Land Quality Rules and Regulations, Ch. 12 § 1(a)(i). This finding cannot be made because, as the Resource Council’s hearing exhibits will show, DEQ has not finished mapping potentially affected alluvial valley floors, and because, as our hydrogeologist expert will explain, the alluvial valley floors that have been mapped will in fact be impacted by proposed mining activities.

17. Requirements for mine reclamation bonds are governed by Section 417 of the WEQA and corresponding DEQ regulations. The proposed reclamation bond does not cover the *entire* cost of surface and water reclamation, as required to be posted *prior* to any mining on the site. *See* W.S. § 35-11-417(c)(i) (the bond should equal the “cost of reclaiming the affected land disturbed” . . . “plus the administrator’s estimate of the additional cost to the state of bringing in personnel and equipment should the operator fail or the site be abandoned.”). In particular, the proposed bond amount does not include the costs of certain contingency factors, costs that are necessary *regardless* of the scope or extent of mining activities.

18. Like the necessary findings of Section 406(n), DEQ has stated that it has yet to calculate the bond amount and will only do *after* the hearing. This prevents adequate public review and comment on the proposed bond amount, which is a critical requirement of the law.

⁴ The CHIA is not separately subject to public notice and comment provisions under the WEQA or SMCRA. However, it is normal practice for the CHIA to be finalized at the time of public notice to afford the public an opportunity to review and comment as part of any public process on the permit application, such as this hearing.

19. DEQ cannot lawfully issue a permit for the Brook Mine unless the application demonstrates that it meets the requirements of applicable laws and regulations *and* unless DEQ makes the required findings of Section 406(n) and ensures receipt of a sufficient reclamation bond posted in the amount calculated *by DEQ* pursuant to Section 417.

REQUEST FOR RELIEF

20. Given the deficiencies in the permit application described above, and the absence of specific regulatory findings necessary to issue a permit, the permit applicant has not met its burden to demonstrate that the application “is in compliance with this act and all applicable state laws” pursuant to Section 406(n).

21. As a result, the EQC must find that the permit application should be denied. The EQC should issue findings of fact and law and “a decision on the application” to correspond with a recommendation to the DEQ to deny the permit application within fifteen days of receipt of the EQC’s decision pursuant to Section 406(p).

22. At the very least, the EQC should (1) make a finding that DEQ cannot issue the permit until all required findings under Section 406(n) are made, until the reclamation bond amount is calculated pursuant to Section 417, and until deficiencies in the permit application raised by the parties are addressed; (2) stay proceedings until DEQ makes its required findings; and (3) allow the parties’ time to respond and present additional evidence and testimony, as needed. Staying proceedings will afford DEQ time beyond the statutorily provided 15 days to finalize the CHIA and other needed documents and reviews and to respond to public comments and make any needed changes to the permit.

WITNESSES

The Resource Council has named witnesses in the attached Witness Designation List (Exhibit A). The Resource Council reserves the right to call any of the witnesses identified by any other parties, or other witnesses necessary for foundation and impeachment purposes.

EXHIBITS

The Resource Council has identified exhibits in the attached Exhibit List (Exhibit B). The Resource Council reserves the right to use any of these exhibits, or exhibits designated by another party, as demonstrative exhibits at the hearing. The Resource Council also reserves the right to designate additional exhibits necessary for foundation or impeachment purposes.

Dated this 17th day of May, 2017.

POWDER RIVER BASIN RESOURCE COUNCIL'S PRE-HEARING MEMORANDUM
EXHIBIT B: EXHIBIT DESIGNATION LIST

The Powder River Basin Resource Council (“Resource Council”) hereby designates the following exhibits for the hearing to be held May 22-26, 2017 in the above-captioned proceedings.

EXHIBITS

- | | |
|-------------|--|
| Exhibit 1: | Objections to the coal mining permit application filed by the Resource Council |
| Exhibit 2: | Objections to the coal mining permit application filed by Anton Bocek |
| Exhibit 3: | Objections to the coal mining permit application filed by Jane Buyok |
| Exhibit 4: | Objections to the coal mining permit application filed by Joan Tellez |
| Exhibit 5: | Objections to the coal mining permit application filed by John & Vanessa Buyok |
| Exhibit 6: | Objections to the coal mining permit application filed by Bill Bense |
| Exhibit 7: | Objections to the coal mining permit application filed by Wendy Condrat |
| Exhibit 8: | Objections to the coal mining permit application filed by Sadie Clarendon |
| Exhibit 9: | Objections to the coal mining permit application filed by Gillian Malone |
| Exhibit 10: | Objections to the coal mining permit application filed by Brooke Collins |

Exhibit 11: Power Point presentation prepared by Dr. Marino to use as a demonstrative exhibit at the hearing. This exhibit was finalized May 16, 2017 and may be slightly adjusted prior to the hearing.

Exhibits 12-14: Dr. Marino's expert report separated into three files given size. This report was attached to the Resource Council's objections to the coal mining permit application filed with DEQ on January 27, 2017 and was also provided as a part of the expert disclosures filed in the docket to these proceedings.

Exhibit 15: A copy of the Academy of Geo-Professionals website providing information on board certified experts. The website copied is <http://www.geopprofessionals.org/board-certified-experts/diplomate-categories>

Exhibit 16: A copy of the website listing board certified experts certified by the Academy of Geo-Professionals, including Dr. Marino. The website copied is <http://www.geopprofessionals.org/board-certified-experts/diplomate-directory>

Exhibit 17: Mr. Wireman's expert report provided as a part of the expert disclosures filed in the docket to these proceedings.

Exhibit 18: CVs of experts Mr. Wireman and Dr. Marino

Exhibit 19: Biography of Sue Ann Spencer from her company's website

Exhibit 20: Attachments included with the Resource Council's objections to the coal mining permit application filed with DEQ on January 27, 2017.

Exhibit 21: Brook's answers to the Fishers to discovery questions

Exhibit 22: Brook's answers to the Resource Council to discovery questions

Exhibit 23: DEQ's answers to the Fishers to discovery questions

Exhibit 24: DEQ's answers to the Resource Council to discovery questions

Exhibit 25: Brook Mine Overview from Ramaco, downloaded from their website, dated May 2014

Exhibit 26: February 27, 2017 Sheridan Press article entitled "Ramaco Carbon plans research, manufacturing facility for coal products"

Exhibit 27: April 4, 2017 NPR radio story from the program *Here and Now* entitled "Coal CEO Looks For New Ways To Revive the Industry"

Exhibit 28: October 16, 2015 electronic mail correspondence¹ between Thomas Sansonetti and Jeffrey Pope (Brook attorneys) and Andrew Kuhlmann (DEQ attorney) regarding the proposed “Sheridan Industrial Park” associated with the proposed coal mine permit

Exhibit 29: Air Quality Permit No. P0019732 issued to Wyoming Ramaco Coal Company, LLC on January 25, 2016

Exhibit 30: June 04, 2015 electronic mail correspondence between BJ Kristiansen and Deanna Hill

Exhibit 31: January 31, 2017 electronic mail correspondence between Mark Rogaczewski and Jim Ruby discussing “proposed mining operations within 100 feet of a public road”

Exhibit 32: May 19, 2014 electronic mail correspondence between Justin Douthat and Jeff Barron regarding “surface mining beneath the county road”

Exhibit 33: May 15, 2014 electronic mail correspondence between Jeff Barron and Justin Douthat regarding an “affected county road”

Exhibit 34: July 25, 2014 Google Earth picture identifying a county road to relocate

Exhibit 35: February 24, 2016 DEQ alluvial valley floor determinations for the Brook Mine

Exhibit 36: February 08, 2016 electronic mail correspondence between BJ Kristiansen and Jeff Barron regarding alluvial valley floor determinations

Exhibit 37: December 14, 2016 electronic mail correspondence between BJ Kristiansen and Shannon Anderson regarding alluvial valley floor determinations

Exhibit 38-40: April 3, 2009 Contract Documents and Specifications for AML Project 17J, Carney Mine Subsidence Mitigation, submitted by PHC Reclamation, Inc. (This exhibit was split into thirds given its size)²

Exhibit 41: May 12, 2010 AML Contract Processing Slip, submitted by Earth Work Solutions, for the AML Project 17J, Carney Mine project

Exhibit 42: May 12, 2009 information associated with AML Project 17J, Carney Mine Rd. Subsidence Abatement

¹ The electronic mail correspondence included on this list was produced by DEQ or Brook through discovery in these proceedings.

² All of the AML files included on this list were either produced by DEQ through discovery in these proceedings or found on the DEQ AML database.

- Exhibit 43: April 22, 2008 information associated with AML Project 17J, Acme No. 1 fire subsidence
- Exhibit 44: June 29, 2015 information associated with AML Project 17J, Old Monarch Mine subsidence
- Exhibit 45: December 12, 2016 electronic mail correspondence between Melissa Bautz and BJ Kristiansen regarding AML's study of subsidence risk in the permit area
- Exhibit 46: Figure 5 from the Sheridan County Land Use Plan documenting "hazardous areas" including "Known Subsidence Area[s]"
- Exhibit 47: USGS Paper 1164, "Effects of Coal Mine Subsidence in the Sheridan, Wyoming Area," 1980
- Exhibit 48: October 07, 2015 electronic mail correspondence between BJ Kristiansen and Jeff Barron regarding removal of a rail loadout facility from the permit application
- Exhibit 49: July 9, 2014 electronic mail correspondence between Ron Destefano and Jeff Barron regarding coal handling facilities and an associated spur track for review by WYDOT
- Exhibit 50: Handwritten notes from Mark Rogaczewski produced by DEQ during discovery discussing a conversation with Jeff Barron regarding rail facilities inside the permit boundary
- Exhibit 51: June 07, 2015³ electronic mail correspondence between Brian Wood and Doug Emme regarding subsidence control plans/highwall mining requirements (and snow)
- Exhibit 52: October 21, 2015 electronic mail correspondence between Mark Rogaczewski and David Schellinger regarding overburden sampling analyses
- Exhibit 53: July 05, 2016 electronic mail correspondence between Matthew Kunze and BJ Kristiansen regarding CHIA requirements
- Exhibit 54: June 03, 2014 electronic mail correspondence between Matthew Kunze and BJ Kristiansen the permit and the CHIA
- Exhibit 55: December 10, 2015 electronic mail correspondence between BJ Kristiansen and LQD staff regarding the permit application review
- Exhibit 56: February 23, 2015 electronic mail correspondence between BJ Kristiansen and Andrew Kuhlmann regarding permit application review

³ Although this is the final date for the email, as produced by DEQ, given the conversation about the snow in response to the previous email dated Nov. 10, 2014, it is possible that the correct date would be in the Nov. 2014 date range.

- Exhibit 57: March 16, 2015 electronic mail correspondence between BJ Kristiansen and Andrew Kuhlmann regarding permit application review
- Exhibit 58: January 12, 2016 electronic mail correspondence between BJ Kristiansen and Andrew Kuhlmann regarding permit application review
- Exhibit 59: January 14, 2016 electronic mail correspondence between BJ Kristiansen and Andrew Kuhlmann regarding permit application review
- Exhibit 60: November 17, 2015 electronic mail correspondence between BJ Kristiansen and Kyle Wendtland regarding permit application review
- Exhibit 61: March 24, 2016 electronic mail correspondence between BJ Kristiansen, Kyle Wendtland, and Alan Edwards regarding permit application review
- Exhibit 62: April 12, 2016 electronic mail correspondence between Alan Edwards and Mark Rogaczewski (copying Kyle Wendtland) regarding permit application review
- Exhibit 63: March 15, 2017 letter from Tony Wendtland to Joan Tellez
- Exhibit 64: April 5, 2000 OSMRE Directive 882, Handbook for Calculation of Reclamation Bond Amounts
- Exhibit 65: Brook draft reclamation bond calculation, provided through discovery
- Exhibit 66: Another draft of a reclamation bond calculation
- Exhibit 67: Brook Mine 2015 Bond
- Exhibit 68: OSMRE 2013 Annual Evaluation Report for the Wyoming Regulatory Program, October 2013, excerpts related to evaluation of blasting
- Exhibit 69: Supplemental OSMRE Special Study Topic Oversight Report on Blasting in Wyoming for the 2013 Annual Evaluation Report for the Wyoming Regulatory Program
- Exhibit 70: April 12, 2016 electronic mail correspondence between Mark Rogaczewski and Kyle Wendtland regarding a meeting request from the Resource Council
- Exhibit 71: April 27, 2016 electronic mail correspondence between Kyle Wendtland and Alan Edwards regarding a meeting request from the Resource Council
- Exhibit 72: April 7, 2017 presentation from Atlas Carbon on Advanced Carbon Products given in Gillette, Wyoming
- Exhibit 73: Photo of Resource Council member home in the area, provided by John Buyok

Exhibit 74: Photo of recreation use on the Tongue River near the mine site provided by the Sheridan Community Land Trust

Exhibit 75-78: Photos of the Bocek property, provided by Joan Tellez and Anton Bocek

Exhibit 79: Aerial photo of the area of Resource Council member properties, provided by the Sheridan Community Land Trust

Exhibit 80-82: Photos of subsidence on the Buyok property, provided by John Buyok

Exhibit 83: Game & Fish Department Map of Sheridan County Walk-in Areas 1, 6, and 7

Exhibit 84: OSMRE subsidence course training materials provided by OSMRE to DEQ

Exhibit 85: March 6, 2017 electronic mail correspondence between Jeff Barron and BJ Kristiansen regarding a Sheridan County Board of County Commissioners meeting

Exhibit 86: July 22, 2014 information on AML project 17.32 relating to the Buyok-Monarch mine fire

Exhibit 87: July 31, 2014 information on AML project 17.32 for mine subsidence abatement at the Carney Mine

Exhibit 88: September 2, 2016 information on AML project 17.32 for portal closures at the Acme, Kooi, and Old Monarch Mines

Exhibit 89: Jan 30, 2017 electronic mail correspondence between LQD staff, Todd Parfitt, and Alan Edwards

Exhibit 90: Letter from the Tongue River Water Users regarding concerns with the proposed mine

This case will require the Council to exercise the latter authority. The Council will decide whether Brook's permit application submitted to DEQ meets the statutes and regulations governing surface coal mining permit applications in Wyoming. The Council, however, will not, and cannot, decide every facet of how Brook will operate its mine. The permitting process is merely the first step for a company that wants to operate in Wyoming because the applicable

statutes and regulations are performance based standards. *See* Wyo. Stat. Ann. § 35-11-402(a)(xii) (citing performance based standards); Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 4, § 1 (setting forth “performance standards applicable to all coal mining operations.”) Even after DEQ grants a permit, many steps remain before Brook can extract coal from the ground. As a result, the Act limits what a company must do to receive a permit to mine coal.

The Act requires that a permit applicant prove it has complied with the Act and all applicable state laws. Wyo. Stat. Ann. § 35-11-406(n). The applicant must show that the application is “accurate and complete, “the reclamation plan can accomplish reclamation as required by this act,” “the proposed operation has been designed to prevent material damage to the hydrologic balance outside the permit area,” and that the area proposed to be mined is not designated as unsuitable for surface coal mining. *Id.* at (n)(i)-(iv). The permit applicant must also show that its operations would:

(A) Not interrupt, discontinue, or preclude farming on alluvial valley floors that are irrigated or naturally subirrigated, but, excluding undeveloped range lands which are not significant to farming on said alluvial valley floors and those lands as to which the administrator finds that if the farming that will be interrupted, discontinued or precluded is of such small acreage as to be of negligible impact on the farm's agricultural production; or

(B) Not materially damage the quantity or quality of water in surface or underground water systems that supply these alluvial valley floors. Paragraph (n)(v) of this section shall not affect those surface coal mining operations which in the year preceding August 3, 1977, produced coal in commercial quantities, and were located within or adjacent to alluvial valley floors or had obtained specific permit approval by the administrator to conduct surface coal mining operations within said alluvial valley floors. If coal deposits are precluded from being mined by this paragraph, the administrator shall certify to the secretary of the interior that the coal owner or lessee may be eligible for participation in a coal

exchange program pursuant to section 510(b)(5) of P.L. 95-87 [30 U.S.C. § 1260(b)(5)].

Id. at (n)(v). If the applicant intends to mine in an area around “prime farmland,” it must show that it can restore that area “to equivalent or higher levels of yield as nonmined prime farmland in the surrounding area under equivalent levels of management and can meet the soil reconstruction standards of this act and the regulations promulgated pursuant thereto.” *Id.* at (n)(vi). Finally, the applicant must show that it has not violated any laws for any other surface coal mines it operates. *Id.* at (n)(vii).

Here, Brook has proven to DEQ that its permit application meets all of these requirements as demonstrated by DEQ deeming the application technically adequate and suitable for publication. As a result, the Council should evaluate only whether any objector has shown that Brook has failed to carry its burden of proof on specific issues in their objections. It is neither appropriate nor within the Council’s authority to re-evaluate every item in Brook’s permit application. The Council should also weigh against any objections that DEQ spent three years evaluating the technical adequacy of Brook’s permit application.

II. The Relevant Analysis

The case requires the Council to compare two sets of documents: 1) Brook’s Application for Permit to Mine Coal; and 2) Wyoming statutes and regulations. DEQ has already conducted this comparison for over three years and concluded that Brook met all requirements set forth in the applicable statutes and regulations. To assist the Council in its findings, the table below summarizes the applicable statutes and regulations and how Brook’s permit application met them.

Statute/Regulation	Permit
<p>Wyo. Stat. § 35-11-406(a)(i), (ii), (iii), (vi)(B), (vi)(C), (vi)(D), (x)(xi): permit is in writing and submitted to the administrator stating name and address for all responsible for operations; applicant has the right and power to mine from the land; sworn statement that reclamation bond has not been forfeited and statements made in the application are true and correct; name of the lands; approximate acreage; nearest town/city; minerals to be mined; and estimated dates of commencement/termination of proposed permit</p>	<p>Adjudication File – Brook submitted its permit application pursuant to Wyoming statutes. The rights of Ramaco to access the surface and extract its minerals are guaranteed by the deeds provided in the Adjudication File. See pages Adjudication S.W.C.-1 thru 7, Adjudication Ram-1 thru 8 and Adjudication B.H.C.-1 thru 3. The deeds give Ramaco the right to access surface for the purpose of its coal operations. Specific list of lands covered under these surface rights can be found at Adjudication B.H.C.-1 thru 2. Adjudication Exhibit 1 shows surface ownership and rights, the Permit Area, the half-mile buffer to the Permit Area and structures within the half-mile buffer</p>
<p>Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 4(a)(xv); Ch. 3 § 2(b); and Ch. 12 § 1(a)(i): presence/absence of an alluvial valley floor within permit area; demonstrate presence of alluvial valley floors within permit area and affected areas affected by proposed mining operation; and Administrator shall make a determination in writing as to the existence and extent of an alluvial valley floor within permit area. Said determination shall be included in the permit application and available for public notice</p>	<p>Appendix D11 – Alluvial Valley Floors. Alluvial monitor wells have been placed and determinations of prior AVF’s were used by Brook. Adjudication Exhibit 1 shows surface ownership and rights in the Permit Area, the half-mile buffer to the Permit Area and structures within the half-mile buffer. Section D11.1 describes the streams that were evaluated and their subsequent AVF declarations by WDEQ. Memo dated January 7, 2016 for the AVF determination of any AVF along Slater Creek within the permit and half-mile buffer. WDEQ, LQD made previous determinations of AVF’s along the Tongue River, Goose Creek and Hidden water creek in association with the Big Horn Coal permit to mine application, these determinations were included in the Brook Mine permit to mine application</p>
<p>Wyo. Stat. § 35-11-406(b)(xvii) and 35-11-415(b)(xi): blasting plan shall outline procedures and standards that surface coal mine operator will meet; explosives are used only in accordance with state and federal law</p> <p>Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal,</p>	<p>MP.14 – Blasting Plan and Schedule –Specific blasting schedule will be republished and redistributed at least every 12 months. This schedule will be published in the local newspaper between 30 and 60 days prior to any blasting operation in which more than 5 pounds of explosives is to be detonated. A copy will also be sent to each residence within one-half mile of the</p>

Statute/Regulation	Permit
Ch. 6, § 3(a): at least 30 days but not more than 60 days before beginning blasting program, blasting schedule shall be published in a newspaper of general circulation and by mail to each residence or owner within one-half mile of the blasting sites. Residents/owners within one-half mile shall be notified of the manner for requesting a preblasting survey	blasting area. Additionally, on the request of a resident or owner of a man-made dwelling or structure that is located within one-half mile of any part of the area covered under the term of the permit, the applicant or permittee shall conduct a preblasting survey. See also Addendum MP-7 for blasting plan and supplemental materials
Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 15, § 5 and Ch. 4, § 2(d)(x): The Administrator may recommend release 60% of the bond when the operator completes backfilling, regrading, topsoil replacement, recontouring and drainage control; after vegetation whose species composition is commensurate with that of the seed mix; and revegetation performance standards	Bond Release – Exhibit RP.5-2 depicts the schedule of topsoil replacement and RP.14 contains an excerpt from the Reclamation Plan
Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 6 (b)(ii)(C): where permanent water impoundments are proposed, contour maps and cross-sections showing slope conditions around the impoundment and anticipated high/low postmining water level	Final Hydrologic Restoration – Brook will construct post-mine impoundments with landowner's consent as well as compliance with WDEQ/LQD bond release criteria and Wyoming State Engineer's approval
Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 4 (a)(x): operator shall submit a description of the presence of substances or any other factor that will influence mining/reclamation activities; topsoil/subsoil information, including soil survey of affected lands	Table D5.3-2 – Geology and Overburden Assessment describes the moisture content of the coal and is an intrinsic property of the coal. This should not be confused with the saturation of the coal aquifer which would depict water occupying the fractures with the coal as depicted. See Addendum D5-5 for description of overburden, roof and floor samples
Wyo. Stat. § 35-11-406(a)(vii): description of land shall include vegetative cover, annual rainfall, winds, wildlife, surface waters, adjudicated water rights Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal,	Appendix D2 and D3 – History. Addendum D3-1 of the mine permit application contains the Cultural Resources Memorandum for Cultural Resources Policy dated October 2, 2012, stating that WDEQ, LQD will no longer require cultural or paleontological surveys to be conducted or included in mine

Statute/Regulation	Permit
<p>Ch. 2, § 4(a)(i), (ii): description of affected lands within permit area, major past and present uses of permit area and adjacent lands; capability of land prior to mining to support uses, giving consideration to soil and foundation characteristics, topography, vegetative history and land's history of previous mining</p>	<p>permit applications for lands where the surface and mineral ownership are held privately</p>
<p>Wyo. Stat. § 35-11-406(a)(vii): description of land shall include vegetative cover, annual rainfall, winds, wildlife, surface waters, adjudicated water rights</p> <p>Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 4(a)(i), (ii): description of affected lands within permit area, major past and present uses of permit area and adjacent lands; capability of land prior to mining to support uses, giving consideration to soil and foundation characteristics, topography, vegetative history and land's history of previous mining</p>	<p>Appendix D1 – Land Use. To prevent adverse impacts to water, air, fish and wildlife. MP.6 discusses surface water and groundwater. MP.6.3 provides the plan to mitigate impacts to surface water and groundwater. Surface water will be monitored according to MP.7.1. Brook will mitigate impacts to groundwater according to MP.6.3.2. Brook will monitor groundwater according to MP.7.2. Brook has committed to the air quality protection plan at MP.16.3 and the air quality permit previously submitted. MP.18 outlines Brook's plan to minimize adverse impacts on fish and wildlife, see Wildlife Monitoring Plan at Addendum MP-8. A raptor and migratory birds of high federal interest mitigation plan is in place at Addendum MP-9</p>
<p>Wyo. Stat. § 35-11-406(b)(xvi), (xvii): source, quantity, quality of water to be used in mining operations; plan to minimize disturbances to prevailing hydrologic balance and quality and quantity of water in surface and ground water systems, both during and after mining operations and during reclamation activities</p> <p>Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 5(a)(ix), (x), (xi): plan and timetable for control and treatment of surface water and groundwater; probable hydrologic consequences (PHC); and an evaluation of impact of proposed mining activities that may result in contamination, diminution or interruption of quality/quantity of groundwater or surface water</p>	<p>MP.5.8 – Mine pit dewatering. Any water rights affected by Brook Mine's dewatering process, will be replaced with a water source of similar quantity and quality. MP.5 discusses multiple ways that surface water and groundwater will be controlled to prevent pollution and negative impacts to surface waters. Exhibit MP.5-1 shows the hydrologic control plan, MP.7-1 discusses the operational surface water monitoring program</p>

Statute/Regulation	Permit
<p>Wyo. Stat. § 35-11-406(b)(v), (xvii): 1 or more maps of reclamation and mining on appropriate scale showing location/extent of proposed affected lands, public highways, dwelling, surface draining area and all utility and other easements; a blasting plan outlining procedures and standards</p> <p>Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 5(a)(i), § 6(a): complete operations plan proposed to be conducted during life of mine; reclamation plan shall include schedule for each major step which coordinates with operator’s reclamation plan with the mining plan</p>	<p>MP.4.6 – Mining Methods Schedules and Assessments. Sampling procedures will be performed at the Brook Mine to ensure plant growth media does not come in contact with overburden materials that exhibit toxic-forming or acid potential characteristics. Sampling data will include at least one drill hole every 40 acres and the data will be included in Brook Mine’s annual reports. Before Brook stockpiles topsoil, it will ensure at least a 4-foot separation from unsuitable materials.</p> <p>Table 4.9-2 of Mine Plan Addendum MP-3 reports pit inflows by year. The year of pit inflow can be attributed to specific pits. As stated in MP.8, water use at the Brook Mine is anticipated to be less than a typical mine in the Powder River Basin.</p> <p>Table MP.8-1 provides the estimated quantity of water to be used by specific use. Table MP.8-1 also provides a summary of the quantity of water to be obtained from each water source</p>
<p>Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 5(a)(i): complete operations plan proposed to be conducted during life of mine</p>	<p>MP.1.2.1 – Mining Operations. The Permit to Mine provides typical and safe operation procedures of a highwall mine. The coal will be temporarily stored in the pit or directly hauled off site. The coal will be loaded into trucks. Mine Plan Section MP.22 discusses dual permitted areas. Table MP.1-2 shows annual coal production. Tables MP.1-3 and MP.1-4 list equipment utilized on the mine site</p>
<p>Wyo. Statute/Regulation	Permit
Environmental Quality Land Quality – Coal, Ch. 12, § 1(a)(ix)(c): Division shall update information upon verification of additional information submitted or discovered during permit review	Archaeological Resources. Brook is committed to protecting historic and archaeological resources within the permit boundary. LQD no longer requires cultural or paleontological surveys to be conducted or included in mine permit applications for lands where the surface and mineral ownership are held privately
Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 5(a)(ii): narrative and map of permit area identifying location of existing structures, use and maintenance and plan for removal, if required	MP.6 – Protection of Other Resources, Structures and Surfaces. Surface water will be monitored according to MP.7.1 to determine the effects the mine has on surface water. Brook will utilize sediment impoundments and alternative sediment control measures. Brook will monitor groundwater. Dust will be controlled with watering and/or dust suppressants. Baghouses will be employed in the facility area where coal is transferred or crushed. Brook’s air quality permit application demonstrates the use of best available control technology on all emission sources and National Ambient Air Quality Standards will be maintained during operation. Public access to Brook Mine will be limited to the main access route to ensure public safety
Wyo. Stat. §§ 35-11-410(c), 35-11-417(c)(ii): upon receipt of annual report, administrator shall conduct an inspection of the site operation, inspection shall be part of permittee’s annual report WDEQ/LQD Guideline Number 12	RP.16 – Reclamation Costs. Reclamation cost estimates will be included in the Annual Report and will be adjusted manually. The current bond is made for only the first year of disturbance. The reclamation bond will be revised annually as disturbance changes. As mining disturbance increases, so will the bond amount.
Wyo. Stat. § 35-11-406(b)(v): 1 or more maps of reclamation and mining on appropriate scale showing location/extent of proposed affected lands, public highways, dwelling, surface draining area and all utility and other easements Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 4(a)(xvi), Ch. 4, § 2(i), (iii), (iv): description of lands affected within permit area, how lands will be affected during the	MP.3.1.1 – Road, Railroads and Other Transport Systems. Public roads are maintained with public funds and substantially used by the public. Interstate 90 will be protected from blasting pursuant to the Blasting Plan. Interstate 90 will be protected from fugitive dust pursuant to the Air Quality Protection Plan. There are currently no planned railways associated with Brook Mine

Statute/Regulation	Permit
course of mining operation with location of manmade features including roads, railroads, public/private rights-of-way/easements	
<p>Wyo. Stat. § 35-11-406(a)(vii): description of land shall include vegetative cover, annual rainfall, winds, wildlife, surface waters, adjudicated water rights</p> <p>Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 4(a)(xi)(A): list and describe name/location for present surface water in and adjacent to proposed permit area</p>	<p>Appendix D6 – Surface Water Hydrology. Monitoring stations were set on Slater Creek and Hidden Water Creek when said creeks enter and leave the proposed permit boundary, for upstream and downstream locations. No water quality data for Hidden Water Creek because the stream was dry during baseline monitoring activities. Baseline water quality data for Tongue River and Goose Creek were obtained from USGS gaging stations</p>
Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 6(b): reclamation plan shall include time schedule for each major step, coordinate reclamation plan with mining plan to facilitate reclamation at earliest possible time	RP.5-1 – Topsoil Replacement. The final year of topsoil replacement will be year 16 of the Brook Mine life-of-mine
Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 5(a)(ix), (x), (xi): plan to ensure protection of quantity/quality of and rights to surface water and ground water within and adjacent to permit area; probable hydrologic consequences determination (PHC), PHC determination based on baseline hydrologic, geologic information; and evaluation of impact of proposed mining activities that may result in contamination, diminution or interruption of quality/quantity of groundwater or surface water within and adjacent to permit area	Table MP.8-1 – Water Use. This table estimates the quantity of water to be used by specific use and also provides a summary of the quantity of water to be obtained from each water source
Wyoming Administrative Rules Department of Environmental Quality Land Quality – Coal, Ch. 2, § 5(a)(viii), Ch. 4, § 2(r)(i): plan to minimize impacts to fish, wildlife and related environmental values within and adjacent to permit area; use best technology to minimize disturbance and adverse impacts on fish, wildlife and related environmental values	Exhibit MP.16-1 – Wildlife Monitoring. No sage grouse leks were located within the Permit Area or within one mile of the Permit Area. If leks become established within one mile of the Permit Area, they will be checked three times from April through early May. In subsequent years, they will be monitored annually on three mornings

III. The Council should not consider irrelevant issues.

The Council has the duty to review the permit application, DEQ's review of the permit application, and the relevant law to decide if Brook met the legal requirements for a permit to mine coal. The Council need do nothing more, despite the objecting parties request to do so.

The Objectors plan to attack Brook's permit application on grounds irrelevant under the Act. For example, Objectors have designated experts to attack Brook's permit application as it pertains to potential issues relating to hydrology, geology, subsidence and safety that could occur years into mining. But the permit application process does not ask Brook to predict every possibility that may occur during mining. Instead, the application process requires Brook to meet minimum standards to begin mining, which includes planning for certain issues that may arise during mining. If Brook met those standards, the Council must find that the DEQ Director should grant Brook a permit subject to DEQ oversight. That oversight means that should Brook cause environmental problems at any time in the future, Brook, DEQ, and the public can confront the problem then. The Council, however, does not need to tackle these issues or worry about a process for dealing with these issues at this time.

The Council should also beware of attempts to alter the burden of proof standard in this case. The Objectors have stated that Brook bears the burden of proof under the Act and must meet all of the requirements of the Act. The Council should hold the Objectors to the same standard, meaning that the Objectors must demonstrate an issue with Brook's permit application that the Act requires. The Council should not entertain objections unrelated to the requirements of the Act.

IV. Witness List

A. Will Call

Jeff Barron, P.E., WWC Engineering, 1849 Terra Avenue, Sheridan, Wyoming. Mr. Barron will testify regarding the entire permit application, including Brook's Mine and Reclamation plans, the development of Brook's Mine and Reclamation plans, and the communications with landowners about Brook's plan to mitigate any damage. Mr. Barron will testify about the history of mining in the Sheridan Coal Fields, the history of Brook's coal ownership. Mr. Barron will also testify about the authenticity of key documents in this case. Mr. Barron will also testify about the opinions contained in his expert report and Brook's expert disclosures. Finally, Mr. Barron may rebut claims made by any of the Objectors.

B. May Call

Kenneth Woodring, Ramaco Senior Operations Advisor of Ramaco Wyoming Coal Company, LLC, Georgia. Mr. Woodring may testify regarding the Mine Plan as well as the coal quantity and quality. Mr. Woodring may testify about Ramaco's commitment to working with landowners in the area to minimize the overall impact of the Brook Mine. Mr. Woodring may also testify regarding Brook's operations following permit approval. Mr. Woodring may rebut claims about the details of the Brook Mine and Reclamation Plans.

Niles Veal may testify regarding the Adjudication File; work performed on behalf of Brook and interactions he's had with the Objectors to this proceeding. Mr. Veal may also provide rebuttal testimony.

V. Exhibit List

The exhibits Brook intends to introduce at the hearing in the above-referenced matter are identified as follows:

Exhibit No.	Exhibit Description
Brook 1	2014/01/06 BJ Kristiansen email re. underground mine subsidence control plan
Brook 2	2017/04/11 BJ Kristiansen email re. TIPS class from 2015 (w/attachments)
Brook 3	Environmental Quality Act
Brook 4	DEQ/LQD Guideline 12 – Standardized Reclamation Performance Bond Format and Cost Calculation Methods
Brook 5 (a-i)	DEQ/LQD Current Rules and Regulations relating to Coal
Brook 6 (a-b)	DEQ Correspondence File (produced by DEQ, 1st and 2nd Supplement)
Brook 7	Round 1 Comment/Response
Brook 8	Round 2 Comment/Response
Brook 9	Round 3 Comment/Response
Brook 10 (a-d)	MSHA checklists for highwall miner ground control plan
Brook 11	Excerpt from Jill Morrison Deposition
Brook 12	2016-11-22 BJ Kristensen email to Shannon Anderson and Jill Morrison re. info still missing from Brook Mine permit (Morrison Dep. Ex. 9)
Brook 13	DEQ 12/14 and 12/2/16 AVS checks
	Rebuttal Exhibits
	Demonstrative Exhibits
	Impeachment Exhibits

Brook reserves the right to designate additional exhibits, necessary for impeachment or rebuttal. Brook also reserves the right to use any exhibits offered by any other party.

All,

Please find attached Big Horn's exhibits, BHC 1 through BHC 19, from its Exhibit List disclosed in my prior email and filed with the EQC today. I tried to send these via normal attachment but the delivery failed based on the size.

This production will also constitute any necessary supplemental production of Big Horn's discovery responses as to documents and information that Big Horn believes support its objections in this matter as well as documents that Big Horn may use to support its position.

Again, please let me know if you have any issues accessing the documents or questions/concerns.

May 17, 2017

In Re Brook LLC. 17-4802

Dear Counsel:

Following the motion hearing held on March 22, 2017, it was discovered that Council member Deb Baumer mistakenly participated in the hearing. Under Wyo. Stat. Ann. § 35-11-111(a), no State employee, other than employees of institutions of higher education, shall be a member of the Council. Although Ms. Baumer was no longer the director of the Office of Administrative Hearings, she did not officially retire until May 1, 2017. As a result, she was still a State employee.

Notwithstanding Ms. Baumer's participation at the March 22, 2017 hearing, the Council, after consultation with the Attorney General's office, has concluded that the decisions made on March 22 are valid. Those decisions will be approved in writing either at the upcoming contested case hearing or as part of the final order in this matter.

Because Ms. Baumer is no longer a State employee, she is a current member of the Council and will participate in this matter.

I look forward to seeing you May 22, 2017 in Sheridan for the final hearing in this case.

Sincerely,

David M. Bagley, Ph.D., P.E.
Chair, Environmental Quality Council

ATTORNEY FOR OBJECTORS
BIG HORN COAL COMPANY

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)
) Docket Nos. 17-4802, 17-
) 4803, and 17-4804
TFN 6 2-025) (Consolidated)

BIG HORN COAL COMPANY'S PREHEARING MEMORANDUM

Big Horn Coal Company ("Big Horn"), by and through its undersigned counsel of record, hereby submits this Prehearing Memorandum. This contested case hearing, set for May 22, 2017, arises from the surface coal mining permit application of Brook Mining Company, LLC ("Brook") and the numerous objections thereto.

Brook has prepared and submitted a mine permit application pursuant to Wyo. Stat. Ann. § 35-11-406. After published notice of the application, numerous parties filed objections raising concerns with the proposed mine and the significant

deficiencies in the permit's mine and reclamation plans. Many of these objections pertain to the lack of critical detail and analysis in the permit application, which in turn raises various questions and concerns regarding possible irreparable harm to surface and ground water, land and human health and safety. This hearing followed.

This Prehearing Memorandum provides a summary of the single issue before the Environmental Quality Council ("Council") and Big Horn's position on that issue.

ISSUE BEFORE THE COUNCIL

Pursuant to Wyo. Stat. Ann. § 35-11-406, the sole issue before the Council is **whether Brook can affirmatively establish**: that its permit application (1) is in compliance with the Wyoming Environmental Quality Act, Wyo. Stat. Ann. §§ 35-11-101, *et seq.* (the "Act") and all applicable state laws; and (2) satisfies, among others, the following requirements:

- (i) The application is accurate and complete;
- (ii) The reclamation plan can accomplish reclamation as required by this act;
- (iii) The proposed operation has been designed to prevent material damage to the hydrologic balance outside the permit area.

Wyo. Stat. Ann. § 35-11-406(n)(i)-(iii).

A copy of Wyo. Stat. Ann. § 35-11-406 and several relevant provisions of the Wyoming Department of Environmental Quality ("DEQ"), Land Quality

Division (“LQD”) rules and regulations are attached hereto as **Exhibit A** and **Exhibit B**, respectively. Big Horn respectfully requests that the Council take official (judicial) notice of the statutes and rules attached hereto as **Exhibit A** and **Exhibit B** in order to avoid the need to offer proof of each statutory or regulatory provision and thereby expedite the hearing proceedings.

FACTS

Brook proposes to highwall mine through a previously mined area consisting of unconsolidated, saturated and reclaimed backfill material immediately next to the Tongue River, the largest perennial stream in northeast Wyoming, and in the vicinity of the confluence of the Tongue River and Goose Creek (the TR-1 area). The maps provided in Brook’s permit application indicate that mining and surface disturbance will occur less than 100 feet from the bank of the Tongue River; however, the maps are inconsistent as to just how close to the river mining will occur. Typically, the area in a mine plan shown to be affected by operations extends well beyond the actual mining panel and surface disturbance boundaries. Brook’s permit application, however, inexplicably indicates that the affected area near the Tongue River corresponds exactly to the boundary of the mine panel and the surface disturbance boundary.

The strata overlying the coal Brook intends to mine in the TR-1 area is known to include a thick layer of unconsolidated, saturated backfill that exhibits shallow groundwater elevations of 20 feet or less, and is hydrologically connected to and

directly recharged by, both the Tongue River and Goose Creek. The permit application further proposes to highwall mine through areas containing known and documented underground coal seam fires that have been burning for over 100 years. Contrary to Brook's assumptions in its mine and reclamation plan, the proposed mine area does not exhibit the characteristics of native overburden strata. Absent an analysis of the proposed highwall mining operations using sufficient site-specific data, these factors alone present significant risk of irreparable harm to surface and ground water, land, and human health and safety.

SUMMARY

Big Horn's concerns with Brook's permit application involve the clear lack of sampling, data analysis, and even acknowledgement of critical site specific conditions at the proposed mine site. Brook's mine and reclamation plans fail to adequately study highwall mining through previously mined materials and the associated, foreseeable hydrologic risks, particularly given the historical coal seam fires and subsidence events in this area, all of which will undoubtedly impact mining operations, land and water conditions, reclamation efforts, and Big Horn's current and future operations. Big Horn is primarily concerned with Brook's proposal to conduct its mining operations through previously mined and saturated backfill material on lands within Big Horn's own mine permit boundary, absent adequate site specific data or meaningful study or analysis.

Big Horn does not seek to deny Brook the opportunity to mine coal in Sheridan County. As a mining entity itself, Big Horn supports this industry and the ability to mine within the bounds of Wyoming law. However, the lack of site-specific data and analysis in Brook's permit application is unprecedented and falls far short of satisfying industry standards, DEQ's typical expectations, and the requirements under the Act and DEQ/LQD Rules and Regulations. As a landowner and a party owning infrastructure, coal rights and reclamation responsibilities within and directly adjacent to the Brook permit boundary, and as a party who may mine coal adjacent to Brook's proposed operations; Big Horn is entitled to expect that Brook's permit application will comply with the applicable laws and that it will not be approved unless Brook demonstrates required studies have been completed and appropriate, site-specific precautions have been taken to protect Big Horn's property and the environment from irreparable environmental harm.

In response to the numerous objections, Brook has stubbornly advocated a "Shoot First, Ask Questions Later" approach. According to Brook, obtaining a permit application and the right to begin mining requires very little detail, and Brook can rely on subsequent, more detailed operation plans, permit amendments and DEQ oversight to address any problems or issues when they are encountered. This is not the Wild West. The Wyoming legislature enacted the original version of the Wyoming Environmental Quality Act over forty years ago, in 1973. The land quality provisions in the Act established new permit and licensing requirements, and

mining and reclamation standards. Wyoming's efforts in this area even proceeded Congress' enactment of SMCRA. *See Belle Fourche Pipeline Co. v. State*, 766 P.2d 537, 544-48 (Wyo. 1988). Brook's approach undermines the very intent of these long-standing laws and the purpose of the permitting process. While DEQ oversight and future permit amendments provide flexibility to address *unforeseen* issues and risks during operations, this operational flexibility does not exonerate the requirements in state law to gather sufficient site-specific data to assess the probable environmental risks of the proposed operations *prior to DEQ approving a permit*.

The law is clear. Brook must submit a mine and reclamation plan, with supporting site-specific data and studies addressing the probable cumulative hydrologic impacts to both surface and groundwater, within and outside of the permit area, as well as the ability to reclaim the affected lands after mining operations are concluded. Without sufficient site-specific data and analysis, neither Brook, DEQ, nor any interested party can assess the potential impacts from the mining operations or the ability to reclaim or otherwise mitigate these impacts.

As a result, Brook has failed to gather and analyze sufficient data to assess pre-mine site conditions and foreseeable risks of environmental harm, and cannot meet its burden under Wyo. Stat. Ann. § 35-11-406(n).

LEGAL DISCUSSION

For the reasons stated herein, and reserving the right to raise additional arguments supported by relevant evidence at hearing, the evidence at hearing will establish that:

1. Brook cannot affirmatively establish that its permit application is in *compliance with all applicable state laws*, and *is accurate and complete* pursuant to Wyo. Stat. Ann. § 35-11-406(n)(i) because the mine and reclamation plans do not contain:

- a. A plan “consistent with the objectives and purposes of this act and of the rules and regulations promulgated” that addresses “the extent to which the mining operation will disturb or change the lands to be affected, the proposed future use or uses and the plan whereby the operator will reclaim the affected lands to the proposed future use or uses,” Wyo. Stat. Ann. § 35-11-406(b);¹
- b. A plan “to minimize the disturbances to the prevailing hydrologic balance at the minesite and in associated offsite areas and to the quality and quantity of water in surface and ground water systems both during and after mining operations and during reclamation,” Wyo. Stat. Ann. § 35-11-406(b)(xviii);²
- c. Adequate “procedures proposed to avoid constituting a public nuisance, endangering the public safety, human or animal life, property, wildlife and plant life in or adjacent to the permit area,” Wyo. Stat. Ann. § 35-11-406(b)(xiii);³

¹ See Exhibit A.

² See Exhibit A.

³ See Exhibit A.

- d. Adequate “methods of reclamation for effective control of erosion, siltation, and pollution of affected stream channels and stream banks by the mining operations,” Wyo. Stat. Ann. § 35-11-406(b)(xv);⁴
- e. Studies determining the projected result of the proposed mining and reclamation operations, both on and off of the mine site, as to the expected change to “the quantity or quality of the surface and groundwater; the surface and groundwater flow, timing and availability, the surface and groundwater quality under seasonal flow conditions, including dissolved and suspended solids; the effect of acid-forming and toxic material on surface and groundwaters; the stream channel conditions; and the aquatic habitat in the permit area and other affected areas” all in “*sufficient detail to enable the Administrator to determine the probable cumulative hydrologic impacts on surface and groundwater systems* including the impacts resulting from the proposed operation and their interaction with the impacts of all anticipated mining upon all affected hydrologic systems,” WY Rules and Regulations ENV LQC Ch. 19 § 2;⁵
- f. A showing that “[b]ackfilled materials [will] be replaced in a manner which minimizes water pollution on and off the site,” WY Rules and Regulations ENV LQC Ch. 4 § 2(b)(ii);⁶
- g. A showing that “the operator [will] conduct all operations in such a manner as to minimize disturbance of the hydrologic balance outside the permit area,” WY Rules and Regulations ENV LQC Ch. 4 § 2(w);⁷
- h. “Complete information on groundwater which may be affected in the permit area and adjacent areas,” which must include “an estimate of the depth and quantity of any groundwater existing in the proposed permit area down to an including the strata immediately below the lowest

⁴ See Exhibit A.

⁵ See Exhibit B.

⁶ See Exhibit B.

⁷ See Exhibit B.

mineral seem to be mined,” WY Rules and Regulations ENV LQC Ch. 2 § 4(a)(xii)(A);⁸

- i. A description of the geologic strata, the lower of the stratum or any aquifer below the lowest coal seam to be mined and which may be adversely impacted by mining, which must include “***a statement of the results of test borings or core samples***” that show the location of any groundwater, ENV LQC Ch. 2 § 4(a)(viii)(A);⁹ or
- j. Plans and studies to “ensure the protection of the quality and quantity, and rights to, surface and groundwater,” including adequate surface and groundwater monitoring plans to address the potential adverse hydrologic consequences, and “[a]n evaluation of the impact of the proposed mining activities that may result in contamination, diminution, or interruption of the quality and quantity of groundwater or surface water” all within the proposed mine permit area and adjacent areas, WY Rules and Regulations ENV LQC Ch. 2 § 5(a)(ix)-(xi).¹⁰

2. Brook’s permit application does not affirmatively establish that Brook can ***accomplish reclamation as required by the Act*** pursuant to Wyo. Stat. Ann. § 35-11-406(n)(ii),¹¹ which based on WY Rules and Regulations ENV LQC Ch. 4 § 2(a),¹² requires the permittee to “restore the land to a condition equal to or greater than the “highest previous use.””

⁸ See **Exhibit B.**

⁹ See **Exhibit B.**

¹⁰ See **Exhibit B.**

¹¹ See **Exhibit A.**

¹² See **Exhibit B.**

3. Brook cannot affirmatively establish that its proposed operations have been *“designed to prevent material damage to the hydrologic balance outside the permit area”* pursuant to Wyo. Stat. Ann. § 35-11-406(n)(iii).¹³

Accordingly, at the conclusion of the hearing Big Horn will request that the EQC require Brook to gather, analyze and submit to DEQ for review all required site-specific data and studies prior to DEQ preparing the written findings required by Wyo. Stat. Ann. § 35-11-406(n) and issuing a state decision document approving Brook’s mine permit application. Big Horn will further request that DEQ approve Brook’s mine permit application only with inclusion of certain permit conditions designed to mitigate foreseeable risks of irreparable harm.

WITNESSES

Big Horn intends to call the following witnesses, each of whom were previously disclosed and deposed by Brook:

1. Jordan Sweeney
2. Paul (Joe) Gerlach

Big Horn reserves the right to call any witness listed by any other party to this matter, as well as additional witnesses as necessary for impeachment, rebuttal, or foundation for exhibits.

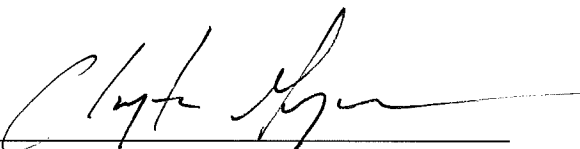

¹³ See **Exhibit A.**

EXHIBITS

Big Horn's list of exhibits are identified in **Exhibit C** attached to this Prehearing Memorandum. Copies of the exhibits listed on **Exhibit C** will be provided to counsel for each party simultaneously with the provision of this Prehearing Memorandum and have been filed online with the Council. Big Horn will bring a paper copy of these exhibits to the final hearing to be included in the record by the court reporter.

Big Horn reserves the right to use any exhibit designated by any other party to this matter, as well as the right to designate additional exhibits as necessary for impeachment or rebuttal. Big Horn reserves the right to enlarge any exhibit or portion thereof at the final hearing and further reserves the right to use or present any exhibit in electronic format.

Dear Counsel:

If possible, just prior to the hearing on Monday, could you have a joint list, for the hearing officer to use, of exhibits that you are willing to allow into the record without objection and those exhibits where there is an objection. That will allow for a much easier and quicker process for the council to have access to exhibits without waiting for the computers to refresh after the introduction of an exhibit.

Thank you.

Sincerely,

Jim Ruby

Subject: Re: Councilmember attendance
Date: Monday, May 08, 2017 8:10:26 AM

Dear Shannon:

The other business that the Council has is very short in duration there isn't any necessity for a time limit. If time runs short than those other issues will probably be held over to the next meeting. The Council is very aware of the time necessary that week for the hearings on the rule making and the final hearing in Brook it is their desire to handle both of those hearings efficiently and effectively. None of the members want to delay either matter unless absolutely necessary.

The reason you might have heard from Jeff Pope is because when he called and asked me the question about who might be in attendance he indicated that all of you but Lynn were involved in depositions in Denver. So I asked him to pass the information I provided him along to those of you at the depositions, if he had the opportunity. As you are aware I also sent you an email concerning that conversation. It is the first email in this string of communications. You always get your communications from either I or the hearing officer I can't think of one instance where that hasn't been the case. It happened in this case as well.

The opening statements will be limited to 10 minutes per side. As to your request for absent council members to send in questions, that has always been available to council members either by them asking directly or by the hearing officer asking on their behalf. The council members will be able to participate either in person, by video or by telephone.

To the degree that there are substantive issues that arise in this case you will always have those issues addressed by either the Council as a whole or the hearing officer. This is the standard operating procedure of the Council. To the degree there are questions of how the hearing process will occur, such as those you have posed or that were posed last week than those questions will more often than not be answered by me. The hearing office does not generally have the information nor the time to handle those types of questions directly. I always visit with the hearing officer to get a decision if it falls within his responsibilities and then pass that information along to the parties. If it is your request that all communications in this matter be directly with the hearing officer I will pass that along to the hearing officer and he can decide whether he wants to follow that procedure for this case. Please let me know if that is what you want to happen and I will forward your request to Dr. Bagley.

Sincerely,

Jim

On Sun, May 7, 2017 at 4:24 PM, Shannon Anderson <sanderson@powderriverbasin.org> wrote:

Jim,

In thinking more about this, we would like to raise some concerns about the other Council business on Wednesday morning. We know the rulemaking hearing has already been scheduled, but as an organization that is involved in both proceedings, we want to make sure neither gets shortchanged with time. We are hoping the Council will be amendable to putting a time limit on the other business - perhaps until 11 a.m. that morning - and then if necessary, to continue the rulemaking hearing on a later date to ensure that the Brook Mine

hearing gets as much time as possible to complete the hearing.

In addition to the video conference question I raised last week, I am also wondering if absent Council members could send in questions for the witnesses to be read through Dr. Bagley and answered by the witnesses at the hearing? It is not ideal, but may at least help to make sure Council members who are making the ultimate decisions in the hearing are able to participate as much as possible.

Also, while I have you, could you confirm the time limit for opening statements?

And finally, I have not received an email/phone call from Jeff Pope about this, and honestly, Jim, I'm not sure why I would. We respectfully request that all communications regarding the hearing come through you (or preferably Dr. Bagley as the Hearing Examiner) and that they are shared with all parties equally.

Thank you,
Shannon

On Thu, May 4, 2017 at 10:48 AM, Jim Ruby <jim.ruby@wyo.gov> wrote:

Dear Counsel:

A question was posed regarding what the attendance may be of the councilmembers. The best answer is this.

Rich Fairservis has recused himself from the proceedings.

Dr. Bagley and Meghan Lally will be present in person for the entire hearing (absent an emergency occurring).

I do not know whether Nick Agopian and Deb Baumer will be present in person for the entire proceeding and if not whether they will be able to attend via phone/internet.

Megan Degenfelder will be present in person until Thursday afternoon.

Tim Flitner will be present in person for some of the hearing and will attend by phone as much as possible for the rest of the hearing.

We are going to audio record the entire hearing and each day we will try and make that recording available to any absent members. We are also going to try and video record the witness testimony and have that available at the end of each day as well for any absent members to watch.

The Council will be taking a break on Wednesday morning from the hearing to handle a few matters. They will hold a rule making hearing at 9:00 a.m. on Wednesday and will handle a few administrative matters. That should not take more than a couple of hours and they will then resume the hearing in Brook.

Hopefully this information will assist you in preparing for this hearing.

You will be receiving an email/phone call from Jeff Pope with much of this same information.

Sincerely,

Jim Ruby

Hi Isaac, just checking in on this and also to ask if there is a way to make any of the folders smaller as I have been trying to download two of them for most of the day now. If you could break up files a bit more in the folders that are quite large (data size not necessarily documents) that would be helpful. Thanks, Shannon

Isaac,

In attempting to access the link and documents provided by you, we running into a few problems. We are unable to open many of the documents produced, particularly any document that is not in either a .pdf or excel file. We have also noticed that several of the folders provided contain numerous sub-folders but no actual documents. I have reached out to both Shannon Anderson and Jay Gilbertz and they are experiencing the same problems. In order to access the files provided and any omitted files, could you provide the parties with your production documents in all .pdf files? Provision of a droxbox or jump drive containing the files in .pdf form should resolve the issue.

Due to the production deadline of last Friday, the vast number of documents and the imminence of the hearing date, we would appreciate your immediate attention to this matter and provision of these files no later than end of business tomorrow.

Thank you and please contact Lynne or myself if you have any questions.

Clayton Gregersen

Subject: Brook Mine Discovery Responses

All,

We will be circulating electronic copies of our written discovery responses momentarily. Due to the time crunch I have not obtained a verification page from Mr. Woodring, but I will circulate the respective verifications early next week.

My staff will also be sending links to download the documents Brook is producing in response to each request for production. Due to the volume of materials, the uploading process is taking longer than anticipated. As soon as the upload is complete, you will receive the link and can begin downloading the information at your convenience. If you have any issues accessing the documents, please do not hesitate to contact me. Likewise, please let me know if you have any questions or concerns.

Thanks,

ATTORNEY FOR OBJECTORS
BIG HORN COAL COMPANY

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	Docket No. 17-4802
)	
TFN 6 2-025)	

**OBJECTOR BIG HORN COAL COMPANY'S DISCOVERY REQUESTS TO
BROOK MINING CO., LLC**

TO: Brook Mining Co., LLC, by and through Thomas Sansonetti, Isaac Sutphin and Jeffrey Pope, Holland and Hart, LLP, 2515 Warren Ave., Suite 450, Cheyenne, WY 82001, their attorneys:

Pursuant to Wyo. Stat. Ann. § 16-3-107(g) and Rules 33 and 34 of the Wyoming Rules of Civil Procedure, Big Horn Coal Company ("Big Horn"), by and through its counsel of record, submits the following interrogatories and requests for production (collectively, the "Discovery Requests") to Brook Mining Co., LLC (sometimes referred to herein as "Brook Mine"). Pursuant to the Order of Consolidation and Schedule of the

Environmental Quality Council ("EQC"), dated March 13, 2017, responses from Brook Mining Co., LLC are due by April 21, 2017.

These Discovery Requests are not intended to duplicate any disclosures required by the EQC's Order of March 13, 2017. Instead, these Discovery Requests are an attempt to supplement the required disclosures with other relevant and discoverable information as defined by the Wyoming Rules of Civil Procedure and appropriate case law interpreting the same. To the extent that the information requested in these Discovery Requests is duplicative of any already required disclosure, please indicate where that information was/will be provided and provide all other responsive information.

INSTRUCTIONS AND DEFINITIONS

The following instructions and definitions apply to these Discovery Requests and are incorporated therein:

1. The terms "Brook Mine", "You", "Your", any plural, or any synonym thereof, are intended to and shall embrace and include Brook Mining Co., LLC, counsel for said party, and all agents, servants, employees, representatives, or anyone on behalf of Brook Mining Co., LLC, or who has acted for or on behalf of the Brook Mining Co., LLC, who are in possession of, or may have obtained information for or on behalf of Brook Mining Co., LLC.
2. The responses to these interrogatories and document requests ("Discovery Requests") shall include all non-privileged information and documents that are within your possession, custody, or control, to the fullest extent allowed under the Wyoming Rules of Civil Procedure.

3. Each Discovery Request should be construed as broadly as permissible under the Wyoming Rules of Civil Procedure, and no Discovery Request should be construed as a limitation on any other Discovery Request. If, in answering these Discovery Requests, you claim an ambiguity in interpreting a particular request, definition, or instruction, such claim shall not be used as a basis for refusing to respond. Instead, you should identify the language deemed ambiguous and the interpretation chosen or used in responding to the Discovery Request.

4. If there exists no information, documents, or things that are responsive to a particular request, that fact should be stated in response to the request.

5. These Discovery Requests are deemed to be continuing to the fullest extent permitted by the Wyoming Rules of Civil Procedure, until and up to the date and time of the final hearing currently set for May 22, 2017.

6. Regardless of the tense employed, all verbs shall be read as applying to the past, present, and future as necessary to make any Discovery Request more, rather than less, inclusive.

7. None of these Discovery Requests are intended to request information or documents protected by attorney-client privilege, protected as work-product or otherwise privileged or protected. To the extent that the following Discovery Requests seek such privileged or protected information, please provide all information not so protected and indicate the existence of the protected information.

8. “And,” “or,” or “and/or” shall be construed in either the disjunctive or conjunctive in order to elicit the broadest possible response.

9. IDENTIFY and/or IDENTIFYING: The terms “identify” and/or “identifying,” with respect to a natural person, means to provide that person’s name, home address and telephone number, current employer and job title, and work address and telephone number. The terms “identify” and/or “identifying,” with respect to an entity, means to provide the name, address and telephone number for that entity. The terms “identify” and/or “identifying,” with respect to a document, means to provide the date, subject matter, author(s), addressee(s), recipient(s), length and current location of the document. The terms “identify” and/or “identifying,” when used with respect to oral statements or communications, means to state the maker of the communication or statement, recipient of the communication or statement, when the communication or statement was made, where the communication or statement was made, the person(s) present when the communication or statement was made, the mode of communication, and the subject matter of the communication or statement.

10. PERSON: The term “person” includes natural persons and business entities.

11. DOCUMENT: The term “document” means all materials, things, and tangible evidence within the scope of the Wyoming Rules of Civil Procedure, including, but not limited to, writings, memoranda, correspondence, files, cards, reports, forms, contracts, agreements, notes, inventories, diaries, calendars, communications or summaries of any kind, billing records, drawings, graphs, charts, studies, photographs, films, recordings, videotapes, computer tapes, computer disks, electronically or digitally recorded data or information, electronic mail, and any other data or information compilations in any form, which are in the possession, custody or control of the you, your agents, counsel, or any

other person(s) acting on your behalf. Each draft and non-identical copy of a Document is to be considered a separate Document.

12. INCLUDING: The term “Including” means including but not limited to.

13. COMMUNICATION: The term “communication” means the imparting or interchange of thoughts, opinions, or information by speech, writing, or signs, including but not limited to all inquiries, discussions, conversations, negotiations, agreements, meetings, telephone conversations, letters, correspondence, notes, facsimile transmissions, answering machine or voice mail information, electronic mail transmissions, or recordings, whether communicated by writing, electronically, orally, or otherwise.

14. The terms “permit”, “permit application”, “mine plan”, “reclamation plan”, “proposed mining operations” or any form or synonym thereof shall refer to the surface coal mining permit application, DEQ No. TFN 6 2-025, including all proposed mining operations involved with the permit application and all subparts and related documents such as the mine plan and reclamation plan, submitted by Brook Mine and that is at issue in the contested case hearing set to begin on May 22, 2017.

INTERROGATORIES

INTERROGATORY NO. 1: Please identify all persons who aided in the preparation of these answers and responses to these Discovery Requests.

ANSWER:

INTERROGATORY NO. 2: Please identify all persons known to you to have any knowledge of any fact concerning the surface coal mining permit application submitted by you in this matter, and for such person, please state the subject matter to which they are believed to have knowledge.

ANSWER:

INTERROGATORY NO. 3: Please identify all persons who aided in the preparation of the mine permit application in this matter. For each person so identified, please indicate their role in the preparation of the permit application.

ANSWER:

INTERROGATORY NO. 4: Please identify and describe any communications you have had with any party related to the permit application, including Wyoming DEQ.

ANSWER:

INTERROGATORY NO. 5: Please identify each and every person you may or intend to call as a witness at the hearing for this matter.¹

¹ Big Horn recognizes that parties have until May 17, 2017 to designate and identify witnesses and exhibits to be used or called at the hearing for this matter. Big Horn respects the right of Brook Mine to reserve its identification of exhibits and witnesses until that point in time, but would request, to the extent that Brook Mine knows of the witnesses and exhibits it intends to call/use (as well as the additional information requested in these Discovery Requests), that Brook Mine provide this information in response to these requests. In the event that Brook Mine elects to wait to disclose the identity of its witnesses and exhibits until a later date, Big Horn also notes the continuing nature of these Discovery Requests and the duty to supplement under W.R.C.P. Rule 26, and requests that Brook Mine provide the requested information, at the latest, simultaneously with its identification of witnesses and exhibits.

ANSWER:

INTERROGATORY NO. 6: For each person identified in Interrogatory No. 5, please provide a description of the substance of their proposed testimony, an identification of all exhibits, documents or communications that will be referred to in each person's testimony or that was relied on forming any knowledge, beliefs or opinions that will be expressed in each witness's testimony. If any witnesses identified in response to this request have provided an expert report in this matter, Big Horn will rely on the required disclosures of W.R.C.P. 26(a)(2) and EQC's Order of March 13, 2017 for this information, and this interrogatory is not applicable to that witness.²

ANSWER:

INTERROGATORY NO. 7: Please identify each and every person you may or intend to call as a witness at the hearing for this matter that may present testimony or evidence in the form of opinion testimony.³

ANSWER:

INTERROGATORY NO. 8: For all persons identified in Interrogatory No. 7, please provide a list of the topics on which that witness may present opinion testimony and a summary of the substance of those opinions. If any witnesses identified in response to this request have provided an expert report in this matter, Big Horn will rely on the required

² See *supra*, n. 1.

³ See *supra*, n. 1.

disclosures of W.R.C.P. 26(a)(2) and EQC's Order of March 13, 2017 for this information, and this interrogatory is not applicable to that witness.^{4,5}

ANSWER:

INTERROGATORY NO. 9: Please identify any person with whom you, your attorney's, or any potential expert witness previously identified by you have consulted with in the preparation of your case in this matter or in the completion and/or submission of your surface coal mining permit application at issue in this matter, DEQ File No. TFN 6 2-025. For each person state:

- a) The name address and any field of expertise;
- b) The subject matter for which the person was consulted;
- c) An identification of all communications with that person regarding this case or any aspect of the above referenced permit application;
- d) A summary of the input provided by that person, specifically including but not limited to any reservations or criticisms of the permit application, mine plan or reclamation plan; and
- e) All documents and information provided to and/or relied upon by such person.

ANSWER:

⁴ See *supra*, n. 1.

⁵ Please note that a merely listing a witness' occupation, type of experience and connection with the case does not qualify as a summary of the witness' opinions or expected testimony. *Anderson v. Bristol, Inc.*, 936 F.Supp.2d 1039, 1059-1060 (S.D. Iowa 2013).

INTERROGATORY NO. 10: Please provide a summary of the evidence you believe demonstrates that the requirements for a surface coal mining permit found in Wyo. Stat. Ann. § 35-11-406(n)(i)-(vii). Included in this summary, please identify what witnesses, documents, exhibits or any other evidence that you may use to demonstrate that each of these requirements has been satisfied at the EQC hearing for this matter set to begin on May 22, 2017.

ANSWER:

INTERROGATORY NO. 11: Please identify and describe any information responsive to any required disclosure found in Rule 26 of the Wyoming Rules of Civil Procedure, replacing as necessary the use of “trial” with “hearing” referring to the hearing in the matter currently set to begin on May 22, 2017, including but not limited to any disclosure required by Rule 26(a)(1) and (a)(3).

ANSWER:

INTERROGATORY NO. 12: Please identify and describe any documents, research, communications or correspondence concerning the permit application which discuss, address or reference the requirements, policies or guidelines of the Wyoming Department of Environmental Quality, Land Quality Division’s Coal Standard Operating Procedure 2.1, Coal Permit Content and Review Procedures Relating to Abutting and Overlapping Coal Permit Area Boundaries.

ANSWER:

INTERROGATORY NO. 13: Please identify and describe the current annual volume of coal you expect to be produced from the proposed mining operations.

ANSWER:

INTERROGATORY NO. 14: Please identify and describe the current intended use, location of use, and transportation inside and outside of the permit area for the coal production identified in response to Interrogatory No. 13.

ANSWER:

INTERROGATORY NO. 15: Please identify and describe the current intended mining sequence and duration of each sequence for the coal production identified in response to Interrogatory No. 13.

ANSWER:

INTERROGATORY NO. 16: Please identify and describe any and all current plans regarding facilities intended to be used in connection with the coal mined and produced from the proposed mining operations.

ANSWER:

INTERROGATORY NO. 17: Please identify and describe all citations or violations of Brook Mine or its affiliates and/or related entities related to any mining or reclamation activity in the past 20 years. For each citation or violation, please describe the resolution thereof, including whether resolution involved an appeal of the citation or violation and whether litigation was involved.

ANSWER:

INTERROGATORY NO. 18: Please identify and describe the current assets of Brook Mine and/or any related or affiliated entities that may be pledged or otherwise used for reclamation related to the proposed mining operations.

ANSWER:

INTERROGATORY NO. 19: Please identify and describe any potential negative geologic or hydrologic impacts inside or outside of the permit area, or any other potential environmental, health, safety or other impacts of the proposed mining operations that you have considered and analyzed in preparing the permit application, and the measures, steps and protections within the mine and reclamation plans that will minimize or negate these impacts.

ANSWER:

INTERROGATORY NO. 20: Please identify and describe how the permit application addresses the potential risks associated with historical and existing underground coal fires and subsidence, and the extent to which the submitted fire control plan, subsidence control plan, and proposed reclamation bond is sufficient to address those risks.

ANSWER:

INTERROGATORY NO. 21: Please identify and describe how the permit application specifically addresses the use of highwall mining techniques through and/or near previously mined backfill material.

ANSWER:

INTERROGATORY NO. 22: Please identify and describe the groundwater model you used to prepare the permit application and how that model incorporates site specific attributes, including the historical mining and reclamation activity in the area.

ANSWER:

INTERROGATORY NO. 23: Please identify and describe the site specific analysis (sampling and testing) of stability factors and coal strengths you used to prepare your permit application, including but not limited to all analysis or geotechnical design relied on to support the use of highwall mining techniques.

ANSWER:

INTERROGATORY NO. 24: Please identify and describe the materials and documents reviewed regarding subsurface coal fires in and around the permit area, and how the permit application addresses the control of new or existing subsurface coal fires that may be rekindled or aggravated by the proposed mining operations.

ANSWER:

INTERROGATORY NO. 25: Please identify who will testify as the designated corporate representative of Brook Mine regarding the matters of inquiry in these Discovery Requests and the information and production provided in response to these Discovery Requests.

ANSWER:

REQUESTS FOR PRODUCTION

REQUEST FOR PRODUCTION NO. 1: Please produce a true and correct copy of any and all documents, exhibits, communications, drawings, photographs, videotapes, motion pictures or other items of evidence that you believe is relevant to your demonstration that the permit application satisfies the requirements for a surface coal mining permit found in Wyo. Stat. Ann. § 35-11-406(n)(i)-(vii), regardless of whether you may use these materials as an exhibit.⁶

RESPONSE:

REQUEST FOR PRODUCTION NO. 2: Please produce copies of all documents identified or referred to in your answers to these Discovery Requests, or utilized or relied on in answering these Discovery Requests.

RESPONSE:

REQUEST FOR PRODUCTION NO. 3: Please provide all documents responsive to any required disclosure found in Rule 26 of the Wyoming Rules of Civil Procedure, replacing as necessary the use of “trial” with “hearing” referring to the EQC hearing in the matter currently set to begin on May 22, 2017, including but not limited to any disclosure required by Rule 26(a)(1) and 26(a)(3).

RESPONSE:

REQUEST FOR PRODUCTION NO. 4: Please produce any documents, research, communications or correspondence with any person or entity discussing or referencing any potential hydrologic, geologic, environmental, health or safety impacts of

⁶ See *supra*, n. 1.

the proposed mining operations, and/or the extent to which the proposed reclamation bond is sufficient to address such impacts.

RESPONSE:

REQUEST FOR PRODUCTION NO. 5: Please produce any studies, data, mapping, documents or research concerning, or any communications or correspondence with any person or entity, discussing or referencing any of the following:

- a. Geotechnical designs or highwall mining design of the proposed mining operations;
- b. Coal strength or stability factors of the proposed mining operations;
- c. Materials reports or studies regarding the proposed mining operations;
- d. Subsidence issues related to the proposed mining operations;
- e. Water use rates and/or groundwater aquifer testing, inside or outside of the permit area;
- f. Impacts on surface or groundwater from the proposed mining operations;
- g. Historical underground workings in or around the mining area of the proposed mining operations;
- h. Mining operations occurring on or near backfill materials from prior mining operations;
- i. Subsurface fires in or around the mining area of the proposed mining operations;
- j. Acid forming, or toxic materials, or materials constituting a fire, health or safety hazard uncovered during or created by the mining process;

- k. The proposed future uses of the lands affected by the mine plan and how you will reclaim the land for these proposed future uses; or
- l. Reclamation and/or the sufficiency of the reclamation bonding to address any impacts resulting from the proposed mining operations.

For each of the documents provided in response to this request, please indicate whether it was provided to Wyoming DEQ by you in connection with the permit application.

RESPONSE:

REQUEST FOR PRODUCTION NO. 6: Please produce all state and federal permits received by Brook Mine related to the proposed mining operations.

RESPONSE:

These Discovery Requests are not intended to duplicate any disclosures required by the EQC's Order of March 13, 2017. Instead, these Discovery Requests are an attempt to supplement the required disclosures with other relevant and discoverable information as defined by the Wyoming Rules of Civil Procedure and appropriate case law interpreting the same. To the extent that the information requested in these Discovery Requests is duplicative of any already required disclosure, please indicate where that information was/will be provided and provide all other responsive information.

INSTRUCTIONS AND DEFINITIONS

The following instructions and definitions apply to these Discovery Requests and are incorporated therein:

1. The term "You", "Your", any plural, or any synonym thereof, are intended to and shall embrace and include Wyoming DEQ, counsel for said party, and all agents, servants, employees, representatives, or anyone on behalf of Wyoming DEQ, or who has acted for or on behalf of the Wyoming DEQ, who are in possession of, or may have obtained information for or on behalf of Wyoming DEQ.
2. The responses to these interrogatories and document requests ("Discovery Requests") shall include all non-privileged information and documents that are within your possession, custody, or control, to the fullest extent allowed under the Wyoming Rules of Civil Procedure.
3. Each Discovery Request should be construed as broadly as permissible under the Wyoming Rules of Civil Procedure, and no Discovery Request should be construed as a limitation on any other Discovery Request. If, in answering these Discovery Requests, you

claim an ambiguity in interpreting a particular request, definition, or instruction, such claim shall not be used as a basis for refusing to respond. Instead, you should identify the language deemed ambiguous and the interpretation chosen or used in responding to the Discovery Request.

4. If there exists no information, documents, or things that are responsive to a particular request, that fact should be stated in response to the request.

5. These Discovery Requests are deemed to be continuing to the fullest extent permitted by the Wyoming Rules of Civil Procedure, until and up to the date and time of the EQC hearing currently set for May 22, 2017.

6. Regardless of the tense employed, all verbs shall be read as applying to the past, present, and future as necessary to make any paragraph more, rather than less, inclusive.

7. None of these Discovery Requests are intended to request information or documents protected by attorney-client privilege, protected as work-product or otherwise privileged or protected. To the extent that the following Discovery Requests seek such privileged or protected information, please provide all information not so protected and indicate the existence of the protected information.

8. "And," "or," or "and/or" shall be construed in either the disjunctive or conjunctive in order to elicit the broadest possible response.

9. IDENTIFY and/or IDENTIFYING: The terms "identify" and/or "identifying," with respect to a natural person, means to provide that person's name, home address and telephone number, current employer and job title, and work address and telephone number. The term "identify" and/or "identifying," with respect to an entity, means to provide the

name, address and telephone number for that entity. The term “identify” and/or “identifying,” with respect to a document, means to provide the date, subject matter, author(s), addressee(s), recipient(s), length and current location of the document. The term “identify” and/or “identifying,” when used with respect to oral statements or communications, means to state the maker of the communication or statement, recipient of the communication or statement, when the communication or statement was made, where the communication or statement was made, the person(s) present when the communication or statement was made, the mode of communication, and the subject matter of the communication or statement.

10. PERSON: The term “person” includes natural persons and business entities.

11. DOCUMENT: The term “document” means all materials, things, and tangible evidence within the scope of the Wyoming Rules of Civil Procedure, including, but not limited to, writings, memoranda, correspondence, files, cards, reports, forms, contracts, agreements, notes, inventories, diaries, calendars, communications or summaries of any kind, billing records, studies, drawings, graphs, charts, photographs, films, recordings, videotapes, computer tapes, computer disks, electronically or digitally recorded data or information, electronic mail, and any other data or information compilations in any form, which are in the possession, custody or control of the you, your agents, counsel, or any other person(s) acting on your behalf. Each draft and non-identical copy of a document is to be considered a separate document.

12. INCLUDING: The term “including” means including but not limited to.

13. COMMUNICATION: The term “communication” means the imparting or interchange of thoughts, opinions, or information by speech, writing, or signs, including but not limited to all inquiries, discussions, conversations, negotiations, agreements, meetings, telephone conversations, letters, correspondence, notes, facsimile transmissions, answering machine or voice mail information, electronic mail transmissions, or recordings, whether communicated by writing, electronically, orally, or otherwise.

14. The terms “permit”, “permit application”, “mine plan”, “reclamation plan”, “proposed mining operations” or any form or synonym thereof shall refer to the surface coal mining permit application, DEQ No. TFN 6 2-025, including all proposed mining operations involved with the permit application and all subparts and related documents such as the mine plan and reclamation plan, submitted by Brook Mining Co. LLC (“Brook Mine”) and that is at issue in the contested case hearing set to begin on May 22, 2017.

INTERROGATORIES

INTERROGATORY NO. 1: Please identify all persons who aided in the preparation of these answers and responses to these Discovery Requests.

ANSWER:

INTERROGATORY NO. 2: Please identify and describe with specificity the process undertaken by Wyoming DEQ in the review of the permit application, including but not limited to Wyoming DEQ's review of any technical data.

ANSWER:

INTERROGATORY NO. 3: Please identify all persons who aided in the review of or otherwise has knowledge of any facts concerning the mine permit application in this matter. For each person so identified, please indicate their role in the review of the permit application and the subject matter to which they are believed to have knowledge.

ANSWER:

INTERROGATORY NO. 4: Please identify each and every person you may, or intend to, call as a witness at the hearing for this matter.¹

ANSWER:

¹ Big Horn recognizes that parties have until May 17, 2017 to designate and identify witnesses and exhibits to be used or called at the hearing for this matter. Big Horn respects the right of Wyoming DEQ to reserve its identification of witnesses and exhibits until this point in time, but would request, to the extent that Wyoming DEQ knows of the witnesses and exhibits it intends to call/use (as well as the additional information requested in these Discovery Requests), that Wyoming DEQ provide this information in response to these requests. In the event that Wyoming DEQ elects to wait to disclose the identity of its witnesses and exhibits until a later date, Big Horn also notes the continuing nature of these Discovery requests and the duty to supplement under W.R.C.P. Rule 26 and requests that Wyoming DEQ provide the requested information, at the latest, simultaneously with its identification of witnesses and exhibits.

INTERROGATORY NO. 5: For each person identified in Interrogatory No. 5, please provide a description of the substance of their proposed testimony, an identification of all exhibits, documents or communications that will be referred to in each person's testimony or that was relied on forming any knowledge, beliefs or opinions that will be expressed in each witness's testimony. If any witnesses identified in response to this request have provided an expert report in this matter, Big Horn will rely on the required disclosures of W.R.C.P. 26(a)(2) and EQC's Order of March 13, 2017 for this information, and this interrogatory is not applicable to that witness.²

ANSWER:

INTERROGATORY NO. 6: Please identify each and every person you may or intend to call as a witness at the hearing for this matter that may present testimony or evidence in the form of opinion testimony.³

ANSWER:

INTERROGATORY NO. 7: For all persons identified in Interrogatory No. 7, please provide a list of the topics on which that witness may present opinion testimony and a summary of the substance of those opinions. If any witnesses identified in response to this request have provided an expert report in this matter, Big Horn will rely on the required

² See *supra*, n. 1.

³ See *supra*, n. 1.

disclosures of W.R.C.P. 26(a)(2) and EQC's Order of March 13, 2017 for this information, and this interrogatory is not applicable to that witness.^{4,5}

ANSWER:

INTERROGATORY NO. 8: Please identify any person with whom you, your attorney's, or any potential expert witness previously identified by you have consulted with in the preparation of your case in this matter or in the review of the permit application, DEQ File No. TFN 6 2-025. For each person state:

- a) The name, address and any field of expertise;
- b) The subject matter for which the person has been consulted or has reviewed the permit application;
- c) A summary of the communications with that person regarding this case or any aspect of the above referenced permit application;
- d) A summary of the input provided by that person, specifically including but not limited to any reservations or criticisms of the permit application, mine plan or reclamation plan; and
- e) All documents and information provided to and/or relied upon by such person.

ANSWER:

⁴ See *supra*, n. 1.

⁵ Please note that a merely listing a witness' occupation, type of experience and connection with the case does not qualify as a summary of the witness' opinions or expected testimony. *Anderson v. Bristol, Inc.*, 936 F.Supp.2d 1039, 1059-1060 (S.D. Iowa 2013).

INTERROGATORY NO. 9: Please indicate whether Wyoming DEQ believes, finds or recommends that the permit application should be approved/issued, and explain why Wyoming DEQ takes this position.

ANSWER:

INTERROGATORY NO. 10: If Wyoming DEQ believes, finds or recommends that the permit application should be approved/issued, please provide a summary of the evidence you believe establishes the requirements for a surface coal mining permit found in Wyo. Stat. Ann. § 35-11-406(n)(i)-(vii). Included in this summary, please identify what witnesses, documents, exhibits or any other evidence that you believe establishes each of these requirements.

ANSWER:

INTERROGATORY NO. 11: Please identify and describe any information responsive to any required disclosure found in Rule 26 of the Wyoming Rules of Civil Procedure, replacing as necessary the use of “trial” with “hearing” referring to the hearing in the matter currently set to begin on May 22, 2017, including but not limited to any disclosure required by Rule 26(a)(1) and (a)(3).

ANSWER:

INTERROGATORY NO. 12: Please identify and describe the potential negative impacts on hydrologic balance inside or outside of the permit area, or any other potential geologic, environmental, health, safety or other impacts of the proposed mining operations that you have considered in reviewing the permit application.

ANSWER:

INTERROGATORY NO. 13: Please explain how you believe the proposed mining operations and/or reclamation plan will address the impacts identified in your response to Interrogatory No. 13.

ANSWER:

INTERROGATORY NO. 14: Please identify and describe the risks you have considered in reviewing the permit application associated with historical and existing underground coal fires and possible subsidence.

ANSWER:

INTERROGATORY NO. 15: Please explain how you believe the proposed mining operations and/or reclamation plan will address the risks identified in your response to Interrogatory No. 15, and the extent to which the submitted fire control plan, subsidence control plan, and proposed reclamation bond is sufficient to address those risks.

ANSWER:

INTERROGATORY NO. 16: Please identify and describe any documents, research, communications or correspondence discussing or referencing the requirements, policies or guidelines of the Wyoming Department of Environmental Quality, Land Quality Division's Coal Standard Operation Procedure 2.1, Coal Permit Content and Review Procedures Relating to Abutting and Overlapping Coal Permit Area Boundaries, as it pertains to the permit application.

ANSWER:

INTERROGATORY NO. 17: Identify and describe the materials and documents reviewed and any conclusions reached by Wyoming DEQ regarding the implications of

and impacts that may result from the mine plan's proposal to utilize highwall mining techniques through and/or near previously mined backfill material.

ANSWER:

INTERROGATORY NO. 18: Explain and describe the groundwater modeling used or reviewed by Wyoming DEQ in considering the permit application, and how this information supports any conclusions reached by Wyoming DEQ. Please specifically address any groundwater modeling that addresses site specific attributes of the permit area, including the historical mining and reclamation activity in the area.

ANSWER:

INTERROGATORY NO. 19: Identify and describe the materials and documents reviewed and any conclusions reached by Wyoming DEQ regarding analytical work (sampling and testing) submitted in support of the proposed highwall mining techniques or the geotechnical designs proposed by Brook Mine.

ANSWER:

INTERROGATORY NO. 20: Identify and describe the materials and documents reviewed and any conclusions reached by Wyoming DEQ regarding stability factors or coal strengths within the permit area. Please specifically include any site specific data, studies, or other analytical materials considered and reviewed by Wyoming DEQ in this regard.

ANSWER:

INTERROGATORY NO. 21: Identify and describe the materials and documents reviewed and any conclusions reached by Wyoming DEQ regarding subsurface coal fires

in and around the permit area and the feasibility of controlling new or existing subsurface coal fires that may be rekindled or aggravated by the proposed mining operations.

ANSWER:

REQUESTS FOR PRODUCTION

REQUEST FOR PRODUCTION NO. 1: Please produce a true and correct copy of any and all documents, exhibits, drawings, photographs, videotapes, motion pictures or other items of evidence that you believe is relevant to the findings required for the approval of Brook Mine's surface coal mining permit found in Wyo. Stat. Ann. § 35-11-406(n)(i)-(vii), regardless of whether you may use these materials as an exhibit.⁶

RESPONSE:

REQUEST FOR PRODUCTION NO. 2: Please produce copies of all documents identified or referred to in your answers to these Discovery Requests, or utilized or relied on in answering these Discovery Requests.

RESPONSE:

REQUEST FOR PRODUCTION NO. 3: Please provide all documents responsive to any required disclosure found in Rule 26 of the Wyoming Rules of Civil Procedure, replacing as necessary the use of "trial" with "hearing" referring to the EQC hearing in the matter currently set to begin on May 22, 2017, including but not limited to any disclosure required by Rule 26(a)(1) and (a)(3).

RESPONSE:

⁶ See *supra*, n. 1.

REQUEST FOR PRODUCTION NO. 4: Please produce copies of any documents containing findings, determinations or recommendations of the Wyoming DEQ or any member thereof, either formal or informal, regarding the permit application.

RESPONSE:

REQUEST FOR PRODUCTION NO. 5: Please produce copies of all documents or communications regarding the permit application.

RESPONSE:

REQUEST FOR PRODUCTION NO. 6: Please produce copies of any draft mine permit, draft state decision document and/or draft of any finding to be made by Wyoming DEQ related to the permit application.

RESPONSE:

REQUEST FOR PRODUCTION NO. 7: Please produce any documents, research, communications or correspondence with any person or entity that discuss or reference any impacts on hydrologic balance inside or outside of the permit area, or any other potential environmental, health, safety or other impacts of the proposed mining operations.

RESPONSE:

REQUEST FOR PRODUCTION NO. 8: Please produce any documents, research, communications or correspondence with any person or entity that discuss or reference any risks associated with existing underground coal fires and possible subsidence, and/or the extent to which the proposed reclamation bond is sufficient to address any such impacts.

RESPONSE:

REQUEST FOR PRODUCTION NO. 9: Please produce any data, mapping, documents or research reviewed by you concerning, or any communications or correspondence between you and any person or entity that discuss or reference any of the following:

- a. Geotechnical designs or highwall mining design of the proposed mining operations;
- b. Coal strength or stability factors of the proposed mining operations;
- c. Materials reports or studies regarding the proposed mining operations;
- d. Subsidence issues related to the proposed mining operations;
- e. Water use rates and/or groundwater aquifer testing inside or outside of the permit area;
- f. Impacts on surface or groundwater from the proposed mining operations;
- g. Historical underground workings in or around the mining area of the proposed mining operations;
- h. Mining operations occurring on or near backfill materials from prior mining operations;
- i. Subsurface fires in or around the mining area of the proposed mining operations;
- j. Acid forming, or toxic materials, or materials constituting a fire, health or safety hazard uncovered during or created by the mining process;

- k. The proposed future uses of the lands affected by the mine plan and how the proposed reclamation plan will reclaim the land for the proposed future uses; or
- l. Reclamation and/or the sufficiency of the reclamation bond to address any impacts resulting from the proposed mining operations.

For all of the information provided in response to this request, please indicate the source of this information and whether it was provided to you by Brook Mine.

ATTORNEYS FOR PERMIT APPLICANT
BROOK MINING COMPANY, LLC

)

)

)

;

Permit Applicant Brook Mining Company, LLC (Brook), by and through counsel Holland & Hart LLP, submits its First Set of Interrogatories and Requests for Production of Documents to Powder River Basin Resource Council, to be answered in accordance with the March 13, 2017 Environmental Quality Council Order of Consolidation and Schedule, and the definitions and instructions set forth below.

INSTRUCTIONS AND DEFINITIONS

1. Each interrogatory and request calls for information known by you and your attorneys, officers and agents; all information from sources under your custody, control, or possession; and all information given to you by others.

2. Pursuant to Wyo. R. Civ. P. 26(e) each of the following interrogatories and requests for documents is continuing in nature, such that supplemental responses are required for any new information which you receive that reveals an original response or answer was incorrect when made, or is no longer true or complete in light of such new information. This duty to supplement shall be continuing throughout the course of litigation and such supplementary responses are hereby requested to be served immediately upon discovery or identification of such information.

3. If there is any question regarding the interpretation of any part of any of the interrogatories or requests for documents, undersigned counsel should be contacted immediately for clarification. The language of these interrogatories and requests for documents should be construed in the broadest possible sense permitted under the Wyoming Rules of Civil Procedure to the end that full and complete discovery may be obtained with regard to the matters requested.

4. Whenever, in the course of answering these interrogatories and request for documents, information is called for which is other than within the personal knowledge of the person executing these answers, you are requested, in addition to providing such information, to provide the name, address, and telephone number of each person providing such information to you, or if the information is obtained from a writing or other document, to identify each such writing or document as described above.

5. In answering or responding to these interrogatories and requests for documents, please state the request immediately preceding your answer.

6. The word "document" is used herein in its broadest sense and includes any reproduction or copy of any kind of writing or any other documentary material, including, without limitations, letters, correspondence, facsimiles, memoranda, notes, diaries, publications, reports, drawings, graphs, charts, photographs, phone-records, emails, computerized information, brochures, calendars or any other form of data compilation.

7. The conjunctive includes the disjunctive and vice versa; "all" includes "any" and vice versa, so that these discovery requests shall be construed to request the broadest scope of information.

8. The term "communication" or "communications" means the transmittal of information in the form of facts, ideas, inquiries, discussions, conversations, negotiations, agreements, undertakings, meetings, telephone conversations, letters, notes, telegrams, telexes,

emails, advertisements or other form of interchange whether oral or written. "You" or "your" refers to Powder River Basin Resource Council, its Members, and its attorneys.

9. "You" or "your" refers to Powder River Basin Resource Council, and its attorneys.

10. "Describe," when used with respect to a communication, act or conduct, means to give, state or identify the following: The date of communication, act or conduct, where it took place, and the person or persons present;

- a. If a communication, the words or substance of the communication, the person making each of the particular statements so listed, the mode of the communication (e.g., in writing, telephone, via computer, in person) and the location of each of the participants;
- b. If an act or conduct, the details of the act or conduct being described and what each participant in such act or conduct did; and
- c. Any document evidencing or reflecting any communication, act or conduct described in response to, or called for by, the interrogatory requesting you to describe that communication, act or conduct.

11. "Shared networking websites" means and refers to internet sites such as Facebook, MySpace, LinkedIn, Twitter, Spoke, Skype, Blogger/BlogSpot, and any other similar websites where personal content is stored/maintained by a third party but is not publicly available via the internet.

12. "Identify," when used with respect to a person, means to give the person's name, present or last known address and telephone number, and the position and business affiliation of the person at the time of his/her actions in connection with the matters alleged in this action.

13. "Identify," when used with respect to a corporation or other form of business organization, means to state the name of such corporation or business organization, the address of its principal place of business and the identity of all individuals who acted on its behalf in connection with the matters alleged in this action.

14. "Identify," when used with regard to a document or writing, means to give the type of document or writing (e.g., letter, memorandum, telegraph, chart, report, etc.), date, file and/or identifying symbol; to identify the author, addressee and each custodian of such document; and to state the substance of such document or produce same.

15. If any interrogatory or request for documents cannot be responded to in full, respond to it to the fullest extent possible, specifying the reasons for your inability to respond fully and identifying the date by which you will make a complete response.

16. If an objection is made with regard to any information sought, state the nature of the objection and the legal authority therefore.

17. Supplementation of responses is also requested for new information which you receive that shows an original response to these interrogatories and requests for documents was incorrect when made, or although correct when made, is no longer true in light of such new information. The duty to supplement shall be continuing as to the above-described types of information, and supplementary responses are hereby requested to be served whenever such information is discovered or determined.

INTERROGATORIES

INTERROGATORY NO. 1: Identify and describe every communication that you had, including meeting minutes (verbal, written, electronic) relating to Powder River Basin Resource Council's (PRBRC) January 27, 2017 Objections to Brook Mining Co., LLC's Coal Mining Permit Application. For each communication, state the people involved in the communication, all individuals who witnessed it, the date and time of the communication, the content of the communication in exquisite detail, and how you learned or became aware of the communication.

ANSWER:

INTERROGATORY NO. 2: Identify all email addresses, webpage addresses, or URLs that have been registered to you during the past five (5) years, including but not limited to, URLs for any shared networking websites, or any other page or account created or maintained by you on any internet-based social networking or communication site.

ANSWER:

INTERROGATORY NO. 3: Please identify the individuals who helped you prepare your objections to Brook Mining Co., LLC's Coal Mining Permit Application.

ANSWER:

INTERROGATORY NO. 4: Please state the names, addresses, telephone numbers and places of occupation of all persons known to you to have any knowledge of any fact concerning the objections submitted by PRBRC, and for such person, please set forth the subject matter to which they are believed to have knowledge.

ANSWER:

INTERROGATORY NO. 5: Please state with specificity all relevant facts supporting your objections to Brook Mining Co., LLC's Coal Mining Permit Application.

ANSWER:

INTERROGATORY NO. 6: Please state with specificity all statutes and/or regulations that you relied upon to form the basis for your objections to Brook Mining Co., LLC's Coal Mining Permit Application. In doing so, identify the objection you claim the statute and/or regulation supports.

ANSWER:

INTERROGATORY NO. 7: Please identify all Member Objectors of PRBRC, including, name, occupation, address, telephone number, and date of membership.

ANSWER:

INTERROGATORY NO. 8: Identify and describe every communication that you had with any other Objector, whether or not said Objector is a Member of Powder River Basin Resource Council, relating in any way to Brook Mining Co., LLC's Coal Mining Permit Application. For each communication, state the people involved in the communication, all individuals who witnessed it, the date and time of the communication, the content of the communication in exquisite detail, and how you learned or became aware of the communication.

ANSWER:

INTERROGATORY NO. 9: Identify each and every fact witness you intend to call at the hearing in this matter, together with a summary of their anticipated testimony and basis of their knowledge.

ANSWER:

INTERROGATORY NO. 10: Describe Shannon Anderson's role in preparing objections to Brook Mining Co., LLC's Coal Mining Permit Application.

ANSWER:

REQUESTS FOR PRODUCTION OF DOCUMENTS

REQUEST FOR PRODUCTION NO. 1: Produce all documents that support your objections to Brook's mine permit and submitted to the Department of Environmental Quality.

RESPONSE:

REQUEST FOR PRODUCTION NO. 2: With respect to each expert you designated, please produce the following:

- A. All materials (whether provided by counsel for PRBRC or generated by the expert) which your designated experts relied on in preparation of their reports;
- B. Correspondence, including to and/or from counsel for PRBRC, or any of the objectors in this case;
- C. Draft reports relating to the experts' involvement in this case;
- D. All invoices and time records for services rendered relating to the experts' involvement in this case;
- E. All notes, including notes from interviews or consultations, data and case materials which underlie or form the basis for any and all opinions, observations, findings, and conclusions made in this case; and
- F. The entire file for each expert, whether electronic or otherwise, relating to this case.

RESPONSE:

REQUEST FOR PRODUCTION NO. 3: Produce all documents that support your answers to interrogatories.

RESPONSE:

REQUEST FOR PRODUCTION NO. 4: Produce copies of all correspondence by or between PRBRC and its Members relating in any way to Brook.

RESPONSE:

REQUEST FOR PRODUCTION NO. 5: Produce copies of all correspondence between PRBRC Members relating in any way to Brook.

RESPONSE:

REQUEST FOR PRODUCTION NO. 6: Produce copies of all draft objections or objection templates.

RESPONSE:

REQUEST FOR PRODUCTION NO. 7: Produce all notes and/or minutes from any PRBRC meeting regarding Brook, including but not limited to community outreach or public meetings.

RESPONSE:

REQUEST FOR PRODUCTION NO. 8: With respect to Sue Ann Spencer, please produce the following:

A. All materials (whether provided by counsel for PRBRC or generated by Ms. Spencer) which she relied on;

B. Correspondence, including to and/or from counsel for PRBRC, other designated experts, or any of the objectors in this case;

C. Draft reports or documents relating to Ms. Spencer's involvement in this case;

D. All invoices and time records for services rendered relating to Ms. Spencer's involvement in this case;

E. All notes, including notes from interviews or consultations, data and case materials which underlie or form the basis for any and all opinions, observations, findings, and conclusions made in this case; and

F. The entire file for Ms. Spencer's, whether electronic or otherwise, relating to this case.

INSTRUCTIONS AND DEFINITIONS

1. Each interrogatory and request calls for information known by you and your attorneys, officers and agents; all information from sources under your custody, control, or possession; and all information given to you by others.
2. Pursuant to Wyo. R. Civ. P. 26(e) each of the following interrogatories and requests for documents is continuing in nature, such that supplemental responses are required for any new information which you receive that reveals an original response or answer was incorrect when made, or is no longer true or complete in light of such new information. This duty to supplement shall be continuing throughout the course of litigation and such supplementary responses are hereby requested to be served immediately upon discovery or identification of such information.
3. If there is any question regarding the interpretation of any part of any of the interrogatories or requests for documents, undersigned counsel should be contacted immediately for clarification. The language of these interrogatories and requests for documents should be construed in the broadest possible sense permitted under the Wyoming Rules of Civil Procedure to the end that full and complete discovery may be obtained with regard to the matters requested.
4. Whenever, in the course of answering these interrogatories and request for documents, information is called for which is other than within the personal knowledge of the person executing these answers, you are requested, in addition to providing such information, to provide the name, address, and telephone number of each person providing such information to you, or if the information is obtained from a writing or other document, to identify each such writing or document as described above.
5. In answering or responding to these interrogatories and requests for documents, please state the request immediately preceding your answer.
6. The word "document" is used herein in its broadest sense and includes any reproduction or copy of any kind of writing or any other documentary material, including, without limitations, letters, correspondence, facsimiles, memoranda, notes, diaries, publications, reports, drawings, graphs, charts, photographs, phone-records, emails, computerized information, brochures, calendars or any other form of data compilation.
7. The conjunctive includes the disjunctive and vice versa; "all" includes "any" and vice versa, so that these discovery requests shall be construed to request the broadest scope of information.
8. The term "communication" or "communications" means the transmittal of information in the form of facts, ideas, inquiries, discussions, conversations, negotiations,

agreements, undertakings, meetings, telephone conversations, letters, notes, telegrams, telexes, emails, advertisements or other form of interchange whether oral or written.

9. “You” or “your” refers to Big Horn Coal Company, and its attorneys.

10. “Describe,” when used with respect to a communication, act or conduct, means to give, state or identify the following: The date of communication, act or conduct, where it took place, and the person or persons present;

- a. If a communication, the words or substance of the communication, the person making each of the particular statements so listed, the mode of the communication (e.g., in writing, telephone, via computer, in person) and the location of each of the participants;
- b. If an act or conduct, the details of the act or conduct being described and what each participant in such act or conduct did; and
- c. Any document evidencing or reflecting any communication, act or conduct described in response to, or called for by, the interrogatory requesting you to describe that communication, act or conduct.

11. “Shared networking websites” means and refers to internet sites such as Facebook, MySpace, LinkedIn, Twitter, Spoke, Skype, Blogger/BlogSpot, and any other similar websites where personal content is stored/maintained by a third party but is not publicly available via the internet.

12. “Identify,” when used with respect to a person, means to give the person’s name, present or last known address and telephone number, and the position and business affiliation of the person at the time of his/her actions in connection with the matters alleged in this action.

13. “Identify,” when used with respect to a corporation or other form of business organization, means to state the name of such corporation or business organization, the address of its principal place of business and the identity of all individuals who acted on its behalf in connection with the matters alleged in this action.

14. “Identify,” when used with regard to a document or writing, means to give the type of document or writing (e.g., letter, memorandum, telegraph, chart, report, etc.), date, file and/or identifying symbol; to identify the author, addressee and each custodian of such document; and to state the substance of such document or produce same.

15. “Brook Proposed Mine Plan” refers to the Mine Plan included in Brook’s permit application on file with the Department of Environmental Quality.

16. "Brook Proposed Reclamation Plan" refers to the Reclamation Plan included in Brook's permit application on file with the Department of Environmental Quality.

17. "Mine Disturbance Area" refers to the disturbance areas outlined in Exhibit 1-1 of Brook's Proposed Mine Plan.

18. "Industrial Shop" refers to the facility by the same name in Big Horn Coal Co.'s Response to Brook Mine Request for Order in Lieu of Consent dated April 15, 2016.

19. "Rail Spur Facility" refers to the facility by the same name in Big Horn Coal Co.'s Response to Brook Mine Request for Order in Lieu of Consent dated April 15, 2016.

20. If any interrogatory or request for documents cannot be responded to in full, respond to it to the fullest extent possible, specifying the reasons for your inability to respond fully and identifying the date by which you will make a complete response.

21. If an objection is made with regard to any information sought, state the nature of the objection and the legal authority therefore.

22. Supplementation of responses is also requested for new information which you receive that shows an original response to these interrogatories and requests for documents was incorrect when made, or although correct when made, is no longer true in light of such new information. The duty to supplement shall be continuing as to the above-described types of information, and supplementary responses are hereby requested to be served whenever such information is discovered or determined.

INTERROGATORIES

INTERROGATORY NO. 1: Please identify the individuals who helped you prepare your objections to Brook's Coal Mining Permit Application.

ANSWER:

INTERROGATORY NO. 2: Please state the names, addresses, telephone numbers and places of occupation of all persons known to you to have any knowledge of any

fact concerning the objections submitted by Big Horn Coal Company, and for such person, please set forth the subject matter to which they are believed to have knowledge.

ANSWER:

INTERROGATORY NO. 3: Please state with specificity all relevant facts supporting your objections to Brook's Coal Mining Permit Application.

ANSWER:

INTERROGATORY NO. 4: Please state with specificity all statutes and/or regulations that you relied upon to form the basis for your objections to Brook's Coal Mining Permit Application. In doing so, identify the objection you claim that the statute and/or regulation supports.

ANSWER:

INTERROGATORY NO. 5: Identify and describe every communication that you had with any other Objector, relating in any way to Brook's Coal Mining Permit Application. For each communication, state the people involved in the communication, all individuals who witnessed it, the date and time of the communication, the content of the communication in exquisite detail, and how you learned or became aware of the communication.

ANSWER:

INTERROGATORY NO. 6: Describe your existing operations within the mine disturbance area.

ANSWER:

INTERROGATORY NO. 7: Describe your proposed future operations within the mine disturbance area, including when those operations are proposed to begin.

ANSWER:

INTERROGATORY NO. 8: Describe your proposed future operations for the industrial shop.

ANSWER:

INTERROGATORY NO. 9: Describe your proposed future operations for the rail spur facility.

ANSWER:

INTERROGATORY NO. 10: Describe your current operations at the industrial shop.

ANSWER:

INTERROGATORY NO. 11: Describe your current operations at the rail spur facility.

ANSWER:

INTERROGATORY NO. 12: Explain the basis on which you claim Brook's mine and reclamation plans lack sampling, testing, geotechnical, and analytical data.

ANSWER:

INTERROGATORY NO. 13: Describe when and how Big Horn Coal plans to reclaim its rail spur, water tank, pump house and shop.

ANSWER:

INTERROGATORY NO. 14: Describe in detail all work performed by Aqua Terra Consultants for you from 2013 to present.

ANSWER:

INTERROGATORY NO. 15: Identify each and every fact witness you intend to call at the hearing in this matter, together with a summary of their anticipated testimony and basis of their knowledge.

ANSWER:

REQUESTS FOR PRODUCTION OF DOCUMENTS

REQUEST FOR PRODUCTION NO. 1: Produce all documents that support your responses to interrogatories.

RESPONSE:

REQUEST FOR PRODUCTION NO. 2: Produce the leases currently in effect for your industrial shop.

RESPONSE:

REQUEST FOR PRODUCTION NO. 3: Produce all documents that show your existing and proposed future operations and development plans within the mine permit boundary.

RESPONSE:

REQUEST FOR PRODUCTION NO. 4: Produce all documents that show your existing rights and obligations under Mine Permit No. 213-T7.

RESPONSE:

REQUEST FOR PRODUCTION NO. 5: Produce all documents showing any current agreements between you and Burlington Northern-Santa Fe Railroad for current or future use of the rail spur facility.

RESPONSE:

REQUEST FOR PRODUCTION NO. 6: Produce all correspondence related to any current agreements between you and Burlington Northern-Santa Fe Railroad for current or future use of the rail spur facility.

RESPONSE:

REQUEST FOR PRODUCTION NO. 7: Produce all documents that support your claims about safety and environmental concerns related to previous mining under Big Horn Coal's surface, including for BHCC Pits 1 and 2.

RESPONSE:

REQUEST FOR PRODUCTION NO. 8: Produce all hydraulic conductivity data available from monitor wells for BHCC Pit 1, Pit 2, and the Placheck Pit.

RESPONSE:

REQUEST FOR PRODUCTION NO. 9: Produce all documents that Big Horn Coal has sent to or received from the Department of Environmental Quality related to its reclamation of the BHCC Pit 1, Pit 2, and the Placheck Pit.

RESPONSE:

REQUEST FOR PRODUCTION NO. 10: Produce all documents that show work Big Horn Coal has done or had done on its rail spur facility in the last year.

RESPONSE:

REQUEST FOR PRODUCTION NO. 11: Produce all documents that show the Placheck Pit reclaimed area is unsuitable material for topsoil.

RESPONSE:

REQUEST FOR PRODUCTION NO. 12: Produce all documents that show why a 65-degree bench slope in the TR-1 is impossible.

RESPONSE:

REQUEST FOR PRODUCTION NO. 13: Produce all documents that show the operating cost for highwall mining is \$8-12/ton.

RESPONSE:

REQUEST FOR PRODUCTION NO. 14: With respect to each expert you designated, please produce the following:

A. All materials (whether provided by counsel for Big Horn Coal or generated by the expert) which your designated experts relied on in preparation of their reports;

B. Correspondence, including to and/or from counsel for Big Horn Coal, or any of the objectors in this case;

C. Draft reports relating to the experts' involvement in this case;

D. All invoices and time records for services rendered relating to the experts' involvement in this case;

E. All notes, including notes from interviews or consultations, data and case materials which underlie or form the basis for any and all opinions, observations, findings, and conclusions made in this case; and

F. The entire file for each expert, whether electronic or otherwise, relating to this case.

RESPONSE:

REQUEST FOR PRODUCTION NO. 15: Produce all documents related to any requests, applications for, or otherwise related to any post-mining land use changes for the Big Horn Coal mine.

RESPONSE:

REQUEST FOR PRODUCTION NO. 16: Produce all documents that support your objections, if any.

RESPONSE:

REQUEST FOR PRODUCTION NO. 17:

Produce all quarterly/annual

inspection reports for the Big Horn Mine, Permit No. 213-T7, from 2012 to the present date.

RESPONSE:

DATED: April 7, 2017.

ATTORNEYS FOR PERMIT APPLICANT
BROOK MINING COMPANY, LLC

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	Docket 17-4802
)	
TFN 6 2-025)	

**BROOK MINING COMPANY, LLC'S FIRST COMBINED SET OF INTERROGATORIES AND
REQUESTS FOR PRODUCTION OF DOCUMENTS TO
MARY BREZIK-FISHER AND DAVID FISHER**

Permit Applicant Brook Mining Company, LLC (Brook), by and through counsel Holland & Hart LLP, submits its First Combined Set of Interrogatories and Requests for Production of Documents to Mary Brezik-Fisher and David Fisher, to be answered in accordance with the March 13, 2017 Environmental Quality Council Order of Consolidation and Schedule, and the definitions and instructions set forth below.

INSTRUCTIONS AND DEFINITIONS

1. Each interrogatory and request calls for information known by you and your attorneys, officers and agents; all information from sources under your custody, control, or possession; and all information given to you by others.

2. Pursuant to Wyo. R. Civ. P. 26(e) each of the following interrogatories and requests for documents is continuing in nature, such that supplemental responses are required for any new information which you receive that reveals an original response or answer was incorrect when made, or is no longer true or complete in light of such new information. This duty to supplement shall be continuing throughout the course of litigation and such supplementary responses are hereby requested to be served immediately upon discovery or identification of such information.

3. If there is any question regarding the interpretation of any part of any of the interrogatories or requests for documents, undersigned counsel should be contacted immediately for clarification. The language of these interrogatories and requests for documents should be construed in the broadest possible sense permitted under the Wyoming Rules of Civil Procedure to the end that full and complete discovery may be obtained with regard to the matters requested.

4. Whenever, in the course of answering these interrogatories and request for documents, information is called for which is other than within the personal knowledge of the person executing these answers, you are requested, in addition to providing such information, to provide the name, address, and telephone number of each person providing such information to you, or if the information is obtained from a writing or other document, to identify each such writing or document as described above.

5. In answering or responding to these interrogatories and requests for documents, please state the request immediately preceding your answer.

6. The word "document" is used herein in its broadest sense and includes any reproduction or copy of any kind of writing or any other documentary material, including, without limitations, letters, correspondence, facsimiles, memoranda, notes, diaries, publications, reports, drawings, graphs, charts, photographs, phone-records, emails, computerized information, brochures, calendars or any other form of data compilation.

7. The conjunctive includes the disjunctive and vice versa; "all" includes "any" and vice versa, so that these discovery requests shall be construed to request the broadest scope of information.

8. The term "communication" or "communications" means the transmittal of information in the form of facts, ideas, inquiries, discussions, conversations, negotiations, agreements, undertakings, meetings, telephone conversations, letters, notes, telegrams, telexes, emails, advertisements or other form of interchange whether oral or written. "You" or "your" refers to Powder River Basin Resource Council, its Members, and its attorneys.

9. "You" or "your" refers Mary Brezik-Fisher and David Fisher, and their attorneys.

10. "Describe," when used with respect to a communication, act or conduct, means to give, state or identify the following: The date of communication, act or conduct, where it took place, and the person or persons present;

- a. If a communication, the words or substance of the communication, the person making each of the particular statements so listed, the mode of the communication (e.g., in writing, telephone, via computer, in person) and the location of each of the participants;
- b. If an act or conduct, the details of the act or conduct being described and what each participant in such act or conduct did; and
- c. Any document evidencing or reflecting any communication, act or conduct described in response to, or called for by, the interrogatory requesting you to describe that communication, act or conduct.

11. "Shared networking websites" means and refers to internet sites such as Facebook, MySpace, LinkedIn, Twitter, Spoke, Skype, Blogger/BlogSpot, and any other similar websites where personal content is stored/maintained by a third party but is not publicly available via the internet.

12. "Identify," when used with respect to a person, means to give the person's name, present or last known address and telephone number, and the position and business affiliation of the person at the time of his/her actions in connection with the matters alleged in this action.

13. "Identify," when used with respect to a corporation or other form of business organization, means to state the name of such corporation or business organization, the address of its principal place of business and the identity of all individuals who acted on its behalf in connection with the matters alleged in this action.

14. "Identify," when used with regard to a document or writing, means to give the type of document or writing (e.g., letter, memorandum, telegraph, chart, report, etc.), date, file and/or identifying symbol; to identify the author, addressee and each custodian of such document; and to state the substance of such document or produce same.

15. If any interrogatory or request for documents cannot be responded to in full, respond to it to the fullest extent possible, specifying the reasons for your inability to respond fully and identifying the date by which you will make a complete response.

16. If an objection is made with regard to any information sought, state the nature of the objection and the legal authority therefore.

17. Supplementation of responses is also requested for new information which you receive that shows an original response to these interrogatories and requests for documents was

incorrect when made, or although correct when made, is no longer true in light of such new information. The duty to supplement shall be continuing as to the above-described types of information, and supplementary responses are hereby requested to be served whenever such information is discovered or determined.

INTERROGATORIES

INTERROGATORY NO. 1: Please identify the individuals who helped you prepare your objections to Brook Mining Co., LLC's Coal Mining Permit Application.

ANSWER:

INTERROGATORY NO. 2: Please state the names, addresses, telephone numbers and places of occupation of all persons known to you to have any knowledge of any fact concerning the objections submitted by you or who helped you prepare your objections, and for such person, please set forth the subject matter to which they are believed to have knowledge.

ANSWER:

INTERROGATORY NO. 3: Please state with specificity all relevant facts supporting your objections to Brook Mining Co., LLC's Coal Mining Permit Application.

ANSWER:

INTERROGATORY NO. 4: Please state with specificity all statutes and/or regulations that you relied upon to form the basis for your objections to Brook Mining Co.,

LLC's Coal Mining Permit Application. In doing so, identify the objection that a statute and/or regulation supports.

ANSWER:

INTERROGATORY NO. 5: Identify and describe every communication that you had with any other Objector, relating in any way to Brook Mining Co., LLC's Coal Mining Permit Application. For each communication, state the people involved in the communication, all individuals who witnessed it, the date and time of the communication, the content of the communication in exquisite detail, and how you learned or became aware of the communication.

ANSWER:

INTERROGATORY NO. 6: Identify in detail the previous mine operations that caused damage to water wells and specify which water wells required repair.

ANSWER:

INTERROGATORY NO. 7: Describe how the Brook mine has a "very real potential" to affect the Tongue River Reservoir and what information you relied to reach that conclusion.

ANSWER:

INTERROGATORY NO. 8: Identify each and every fact witness you intend to call at the hearing in this matter, together with a summary of their anticipated testimony and basis of their knowledge.

ANSWER:

REQUESTS FOR PRODUCTION OF DOCUMENTS

REQUEST FOR PRODUCTION NO. 1: Produce all correspondence received from or sent to Brook.

RESPONSE:

REQUEST FOR PRODUCTION NO. 2: Produce all geological surveys that you reference in paragraph 3 of your objections.

RESPONSE:

REQUEST FOR PRODUCTION NO. 3: Produce all documents that support your claim that blasting could worsen on-going subsidence issues.

RESPONSE:

REQUEST FOR PRODUCTION NO. 4: Produce all documents that support your objections to Brook's mine permit application.

RESPONSE:

REQUEST FOR PRODUCTION NO. 5: Produce all documents that support your answers to interrogatories.

RESPONSE:

REQUEST FOR PRODUCTION NO. 6: Produce all reports, analyses, or data relating to water quality and quantity from wells on your property.

RESPONSE:

REQUEST FOR PRODUCTION NO. 7: Produce copies of any and all correspondence between you and any other individual or entity relating in any way to Brook.

RESPONSE:

REQUEST FOR PRODUCTION NO. 8: Produce all documents, reports, analyses, or data related to any foundations built on your property.

RESPONSE:

DATED: April 7, 2017.

*Attorney for Objectors,
Mary Brezik-Fisher and David Fisher*

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	DOCKET 17-4802
TFN 6 2-025)	
)	

**FIRST SET OF INTERROGATORIES TO BROOK MINING COMPANY, LLC
ISSUED BY OBJECTORS MARY BREZIK-FISHER AND DAVID FISHER**

Objectors Mary Brezik-Fisher and David Fisher, by and through their undersigned counsel, submit the following interrogatories issued to Brook Mining Company, LLC to be answered separately and fully in writing under oath pursuant to the Wyoming Rules of Civil Procedure as follows:

A. DEFINITIONS AND REQUIREMENTS

Each interrogatory requests all information known by you, your agents, employees and attorneys, including information that can be obtained through a diligent review of information or data under your control or available to you. Your answers should include all information given to you by others, unless such information is protected by the attorney-client privilege or the work product doctrine. If you claim requested information is not

subject to disclosure, comply with the Rules of Civil Procedure, including Rule 26(b)(5) by making that claim expressly and describing the nature of the documents, communications, or things not produced or disclosed in a manner that, without revealing information itself privileged or protected, will enable the undersigned to assess the applicability of the privilege or protection.

When the terms “writing”, “documents”, “tangible items”, or “electronically stored information” are used in these requests, these terms should be construed in the broadest sense and are intended to encompass all forms of information as contemplated and described by Wyoming Rule of Civil Procedure 34, including without limitation, all writings, documents, copies, reproductions, drawings, graphs, charts, photographs, sound recordings, visual recordings, images, and any other data or data compilations stored in any medium from which information can be obtained or translated (if necessary) by the respondent into reasonably usable form.

Supplementation of all responses is required in strict compliance with the Rules of Civil Procedure and for any answer that requests information relating to or seeking information on; (a) the identity and location of persons having knowledge of discoverable facts; (b) the identity, location, qualifications and opinions of experts expected to be called at trial; and (c) any answer to an request to which supplemental, new or amended information is obtained that changes, supplements, alters, supports or contradicts any prior response.

Definitions:

1. **“Brook Mine”** as used in this discovery shall mean Brook Mining Company, LLC.
2. **“Mine or Mining Permit”** as used in this discovery shall mean Brook Mine Application TFN 6 2-025 currently pending in Sheridan County, Wyoming.
3. **“DEQ”** as used in this discovery shall mean the Wyoming Department Of Environmental Quality.
4. **“Fishers”** as used in this discovery shall mean Objectors Mary Brezik-Fisher and David Fisher.

INTERROGATORIES

INTERROGATORY NO. 1: List all parent, subsidiary or affiliated companies,

or associated entities of Brook Mining Company, LLC and define their relationship to Brook Mining Company, LLC.

ANSWER:

INTERROGATORY NO. 2: Identify by name, address, and telephone number all current employees of Brook Mining Company, LLC, who will be responsible for management and operation of the proposed Brook Mine. If Brook Mining Company, LLC's operations will be managed by someone other than Brook Mine employees, identify those persons or entities who will be responsible for managing and operating the mine.

ANSWER:

INTERROGATORY NO. 3: Identify whether there have been any citations, notices of violation or similar action by any governmental entity against Brook Mining Company, LLC or any of its parent, subsidiary or affiliated companies, including but not limited to, Ramaco, LLC, Ram Mining, LLC, Ramaco Resources, Inc., and Ramaco Development, LLC. In relation to each matter identified describe the resolution of the matter or if it is still pending.

ANSWER:

INTERROGATORY NO. 4: Identify all tangible assets of Brook Mining Company, LLC in addition to any coal rights it may have in Wyoming and the general nature of and approximate value of any such assets.

ANSWER:

INTERROGATORY NO. 5: Identify the current estimate for the yearly tonnage of coal production anticipated by Brook Mine in each of the first five years of coal production, if those estimates differ from what is listed in the current mine plan.

ANSWER:

INTERROGATORY NO. 6: Identify the current estimate of the number of full-time employees of the Brook Mine in each of the first five years of the mine's operation.

ANSWER:

INTERROGATORY NO. 7: Identify each person whom Brook Mining Company, LLC expects to call or utilize as an expert at the contested case hearing. In relation to each expert, **regardless of whether or not the expert is a "retained" expert**, identify the following:

1. His or her name, current address and area of expertise, and the name of any company, organization or entity with which the expert is employed or affiliated.
2. Specifically identify and give a comprehensive statement of all opinions the expert will offer at trial or any hearing, and give a detailed explanation of the basis and facts upon which the expert relies for his or her proffered opinion.
3. Identify all publications authored or co-authored by the expert within the last 10 years.
4. Identify all cases in which the expert has testified as an expert witness (by deposition or trial testimony) within the last 4 years. As to each case, identify the approximate date of the case, names of the parties and their lawyers and the court which exercised jurisdiction.
5. Identify all documents supplied to the expert by you and all other documents of any sort reviewed by the expert in relation to this case.

If experts have not yet been identified, fully supplement this response when such

experts are identified or concurrently with expert disclosures as may be required by any case management order or scheduling order.

ANSWER:

INTERROGATORY NO. 8: Identify all witnesses that you will call or may call at any contested case hearing in this matter. In relation to each witness, identify the witness by name, provide contact information, any company or organization which employs the witness and a summary of the material information which you believe this witness may have or testify to at any hearing.

ANSWER:

INTERROGATORY NO. 9: Identify the relationship between Mr. Niles Veal of Sheridan, Wyoming and Brook Mining Company, LLC or any other subsidiary or affiliated company of Ramaco Resources, Inc. Include in your answer the length of employment with or agency for Brook Mining or any of Ramaco Resources, Inc.'s subsidiaries or affiliated companies along with his job description. Your answer should identify whether you acknowledge Niles Veal is a person authorized to act on behalf of Brook Mining or any of its parent companies.

ANSWER:

INTERROGATORY NO. 10: Other than Brook Mining Company, LLC, identify any other company (subsidiary, parent or affiliated), or any officer, director, CEO, shareholder, or any other individual who has provided a guarantee to be responsible for the

reclamation or remediation costs exceeding the current bonding requirement set forth in the Mine Plan or for any environmental impacts such as water or air pollution.

ANSWER:

INTERROGATORY NO. 11: Identify with specific reference to provisions in the current mine plan any documentation which provides compensation for damages to affected landowners regarding issues pertaining to domestic and stock water wells, homes and foundations, medical expenses or injury associated with diminished or dangerous air quality levels, and other potential adverse affects of the mine operation on affected landowners and members of the public.

ANSWER:

INTERROGATORY NO. 12: Identify and describe with specificity all direct communications by and between any objecting landowner and Brook Mining Company, LLC or any of its representatives, agents, employees, directors, officers in which you contend the objecting landowner's questions and concerns about the mine plan were "discussed and addressed". Include in your answer the names, addresses, and phone numbers of all individuals involved in any such occurrences, the date of the occurrence, the location of any such occurrence and the substance of the conversation or communication.

ANSWER:

INTERROGATORY NO. 13: If either a non-adjudicated or non-permitted domestic or stock water well is utilized by a landowner within one-half mile of the mine permit boundary and such well is adversely impacted by mining operations, does Brook Mine

commit to repair and/or replace impacted or damaged domestic and stock water wells?

ANSWER:

INTERROGATORY NO. 14: Identify with specificity the design, nature and extent of any Air Quality Monitoring Program (both on and off the permit area) which will be implemented and utilized by Brook Mine during its mining operations which will ensure compliance with applicable state and federal air quality standards and the plan currently in place that defines how any adverse impacts will be controlled, stopped and remediated. Include in your answer the name of the individual or individuals who designed the Program. If no such Air Quality Monitoring Program has been designed, state that fact in your answer. If your answer is a reference to the Mine Plan, provide specific citation to those aspects of the Mine Plan which you claim provide the answer to this question.

ANSWER:

INTERROGATORY NO. 15: Identify with specificity the design, nature and extent of any Water Quality Monitoring Program (both surface and subsurface on and off the mine permit area) which will be implemented and utilized by Brook Mine during its mining operations to ensure that water sources suffer no adverse impacts or degradation and the plan currently in place that defines how any adverse impacts will be controlled, stopped and remediated. Include in your answer the name of the individual or individuals who designed the programs. If no such Water Quality Monitoring Program has been designed, state that fact in your answer. If your answer is a reference to the Mine Plan, provide specific citation to those aspects of the Mine Plan which you claim provide the answer to this question.

ANSWER:

INTERROGATORY NO. 16: Identify the projected or estimated cost, expense or expenditure of the overburden removal to excavate the access trenches or openings for providing the access area necessary to facilitate the highwall mining equipment and activities at the Brook Mine facility proposed in Sheridan County, Wyoming. If projections or estimates exist only for a portion of the project (i.e. one trench) identify that the projection or estimate is so limited and the scope to which the projection or estimate applies. Your response should include the name(s) of all individuals or companies involved in preparing these calculations and any data relied upon in formulating the calculations.

ANSWER:

INTERROGATORY NO. 17: Identify whether data and samples collected on the Fisher property without authorization from the Fishers on July 1, 2013, including soil, vegetation and foliage samples, by representatives from BKS Environmental Associates, Inc. was tested and/or analyzed and whether such data and testing was included in the mine plan.

ANSWER:

DATED this 7th day of April, 2017.

subject to disclosure, comply with the Rules of Civil Procedure, including Rule 26(b)(5) by making that claim expressly and describing the nature of the documents, communications, or things not produced or disclosed in a manner that, without revealing information itself privileged or protected, will enable the undersigned to assess the applicability of the privilege or protection.

When the terms “writing”, “documents”, “tangible items”, or “electronically stored information” are used in these requests, these terms should be construed in the broadest sense and are intended to encompass all forms of information as contemplated and described by Wyoming Rule of Civil Procedure 34, including without limitation, all writings, documents, copies, reproductions, drawings, graphs, charts, photographs, sound recordings, visual recordings, images, and any other data or data compilations stored in any medium from which information can be obtained or translated (if necessary) by the respondent into reasonably usable form.

Supplementation of all responses is required in strict compliance with the Rules of Civil Procedure and for any answer that requests information relating to or seeking information on; (a) the identity and location of persons having knowledge of discoverable facts; (b) the identity, location, qualifications and opinions of experts expected to be called at trial; and (c) any answer to an request to which supplemental, new or amended information is obtained that changes, supplements, alters, supports or contradicts any prior response.

Definitions:

1. **“Brook Mine”** as used in this discovery shall mean Brook Mining Company, LLC.
2. **“Mine or Mining Permit”** as used in this discovery shall mean Brook Mine Application TFN 6 2-025 currently pending in Sheridan County, Wyoming.
3. **“DEQ”** as used in this discovery shall mean the Wyoming Department of Environmental Quality.
4. **“Fishers”** as used in this discovery shall mean Objectors Mary Brezik-Fisher and David Fisher.

INTERROGATORIES

INTERROGATORY NO. 1: Identify the basis for a determination by DEQ that

geotechnical studies demonstrate a scientific basis for the conclusion that the proposed Mine Plan for Brook Mine does not present a risk of subsidence, sloughing or other geotechnical risks and the specific and *mandatory* requirements of the Mine Plan which dictate how the operator is *obligated* to respond in the event geotechnical problems are encountered. Your answer should include the name, address, and telephone number of all individuals or companies which DEQ is aware of that conducted Geotechnical studies for the purpose of investigating the geotechnical conditions in the area where Brook Mine proposes to conduct mining activities, whether the DEQ has conducted its own studies and the DEQ's basis for relying on any studies submitted by Brook Mine.

ANSWER:

INTERROGATORY NO. 2: Identify the basis for a determination by DEQ that hydrologic studies and surface run-off studies demonstrate a scientific basis for the conclusion that the proposed Mine Plan for Brook Mine does not present a risk of degradation to surface and subsurface water quality and quantity or a risk of adverse effects to the cumulative hydrological balance and how the current Mine Plan sets forth specific and *mandatory* requirements which dictate how the operator is *obligated* to respond in the event of hydrological problems or water quality or quantity degradation are encountered. Your answer should include the name, address, and telephone number of all individuals or companies which DEQ is aware of that conducted hydrological or water studies for the purpose of investigating the hydrological and water conditions and risks posed by the mining

activities in the area where Brook Mine proposes to conduct mining activities, whether the DEQ has conducted its own studies and the DEQ's basis for relying on any studies submitted by Brook Mine.

ANSWER:

INTERROGATORY NO. 3: Identify the name of all DEQ personnel (in the Sheridan office, Cheyenne office, Lander office and elsewhere) involved in assessing and evaluating the Brook Mine Permit that is the subject of this contested case hearing. In relation to each person identified, describe which office the person works in, their job title, the particular aspect of evaluation or the tasks undertaken by that individual, and the nature of each individual's input in the permitting process.

ANSWER:

INTERROGATORY NO. 4: Identify the amount of the reclamation/performance bond which DEQ will require for the Brook Mine project, how the amount of the bond was calculated and what information was considered in determining the bond amount. Your answer should also include the identification of any information or sources relied upon in calculating or determining the amount of the reclamation bond.

ANSWER:

INTERROGATORY NO. 5: If reclamation costs exceed the figure you list in your answer to interrogatory no. 4 above, identify with specificity the individuals, companies,

state and local agencies, or any other entities who will be responsible for all additional costs and expenses associated with reclamation exceeding the amount of the established bond and what investigation DEQ has undertaken to confirm that any such entity is capable of satisfying any additional reclamation or remediation expenses pertaining to the mining operations of Brook Mining Company, LLC in Sheridan County.

ANSWER:

INTERROGATORY NO. 6: Identify with particularity the precise documents or information DEQ relied upon in determining that material damage to the hydrologic balance outside the proposed permit area for the Brook Mine would be prevented. If DEQ has not made this determination, please state that fact.

ANSWER:

INTERROGATORY NO. 7: Identify with particularity the precise documents or information DEQ relied upon in determining that both the quantity and quality of water in both the surface and underground water systems that supply the alluvial valley floor of the Tongue River Valley in the area of the Brook Mine would not be materially damaged by the mining and associated activities. If DEQ has not made these determinations, please state that fact.

ANSWER:

INTERROGATORY NO. 8: Identify all witnesses that you will call or may call at any contested case hearing in this matter. In relation to each witness, identify the witness by name, provide contact information, any company or organization which employs the witness and a summary of the material information which you believe this witness may have or testify to at any hearing.

ANSWER:

INTERROGATORY NO. 9: Identify each person whom you expect to call or utilize as an expert at the contested case hearing. In relation to each expert, **regardless of whether or not the expert is a “retained” expert**, identify the following:

1. His or her name, current address and area of expertise, and the name of any company, organization or entity with which the expert is employed or affiliated.
2. Specifically identify and give a comprehensive statement of all opinions the expert will offer at trial or any hearing, and give a detailed explanation of the basis and facts upon which the expert relies for his or her proffered opinion.
3. Identify all publications authored or co-authored by the expert within the last 10 years.
4. Identify all cases in which the expert has testified as an expert witness (by deposition or trial testimony) within the last 4 years. As to each case, identify the approximate date of the case, names of the parties and their lawyers and the court which exercised jurisdiction.
5. Identify all documents supplied to the expert by you and all other documents of any sort reviewed by the expert in relation to this case.

If experts have not yet been identified, fully supplement this response when such experts are identified or concurrently with expert disclosures as may be required by any case

management order or scheduling order.

ANSWER:

INTERROGATORY NO. 10: Identify whether the mine plan requires that domestic and stock wells which are impacted or damaged by mine operations will be repaired and/or replaced if the wells are “registered” with the Wyoming State Engineer’s Office as opposed to being “adjudicated”.

ANSWER:

INTERROGATORY NO. 11: Identify the locations of all monitoring stations on the Tongue River which are included in the mine plan and include in your answer whether monitoring stations are located upstream and downstream of the permit boundary and why DEQ considers the identified stations adequate to monitor for potential adverse impacts on the Tongue River by the Brook mining operation.

ANSWER:

INTERROGATORY NO. 12: What is DEQ’s current understanding of the annual and total coal production estimates presented by Brook Mine and/or Ramaco representatives in the first five years of production, and since those estimates appear to have changed over time, explain how DEQ has been able to accurately evaluate the potential impacts to air quality, water quality and resources, and land resources?

ANSWER:

INTERROGATORY NO. 13: How many surface coal mine applications and permits for new surface coal mines, including highwall mining, in the State of Wyoming have the DEQ offices in Wyoming and the DEQ offices in Sheridan County reviewed and evaluated within the last twenty years?

ANSWER:

INTERROGATORY NO. 14: Identify all seismographic studies, testing and field reports (AML or otherwise) which have been conducted and in which data has been collected in the vicinity of the proposed Brook Mine within the last three years. Include in your answer the identification of the individuals and companies involved in these studies.

ANSWER:

DATED this 7th day of April, 2017.

STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	
TFN 6 2-025)	DOCKET 17-4802
)	

**FIRST REQUESTS FOR PRODUCTION TO BROOK MINING COMPANY, LLC
ISSUED BY OBJECTORS MARY BREZIK-FISHER AND DAVID FISHER**

Pursuant to the Wyoming Rules of Civil Procedure, Objectors Mary Brezik-Fisher and David Fisher, by and through their undersigned counsel, submit the following requests for production issued to Brook Mining Company, LLC to be answered separately and fully in writing under oath as follows:

A. DEFINITIONS AND REQUIREMENTS

Each request seeks all information or materials known to you, your agents, employees and attorneys, including information that can be obtained through a diligent review of records or data under your control or available to you. Your answers should include all materials given to you by others, unless such information is protected by the attorney-client privilege

or the work product doctrine. If you claim requested information is not subject to disclosure, comply with the Wyoming Rules of Civil Procedure, including Rule 26(b)(5), by making such a claim expressly and describing the nature of the documents, communications, or things not produced or disclosed in a manner that, without revealing information itself privileged or protected, will enable the undersigned to assess the applicability of the privilege or protection.

When the terms “writing”, “documents”, “tangible items”, or “electronically stored information” are used in these requests, these terms should be construed in the broadest sense and are intended to encompass all forms of information as contemplated and described by Wyoming Rule of Civil Procedure 34, including without limitation, all writings, documents, copies, reproductions, drawings, graphs, charts, photographs, sound recordings, visual recordings, images, and any other data or data compilations stored in any medium from which information can be obtained or translated (if necessary) by the respondent into reasonably usable form.

Supplementation of all responses is required in strict compliance with the Wyoming Rules of Civil Procedure and for any answer that requests information relating to or seeking information on: (a) the identity and location of persons having knowledge of discoverable facts; (b) the identity, location, qualifications and opinions of experts expected to be called at trial; and (c) any answer to a request to which supplemental, new or amended information is obtained that changes, supplements, alters, supports or contradicts any prior response.

Definitions:

1. **“Brook Mine”** as used in this discovery shall mean Brook Mining Company, LLC.
2. **“Mine or Mining Permit”** as used in this discovery shall mean Brook Mine Application TFN 6 2-025 currently pending in Sheridan County, Wyoming.
3. **“DEQ”** as used in this discovery shall mean the Wyoming Department Of Environmental Quality.
4. **“Fishers”** as used in this discovery shall mean Objectors Mary Brezik-Fisher and David Fisher.

The following documents and things are requested:

REQUEST FOR PRODUCTION NO. 1: Produce a copy of all Geotechnical, water quality and air quality studies and reports which have been completed by Brook Mining Company, LLC in relation to the Brook Mine.

RESPONSE:

REQUEST FOR PRODUCTION NO. 2: Produce a complete copy of all information you supplied to the Wyoming Department of Environmental Quality in relation to your reclamation/performance bond.

RESPONSE:

REQUEST FOR PRODUCTION NO. 3: Produce a complete copy of all information you supplied to the Wyoming Department of Environmental Quality in relation to hydrologic studies, models, predictions and plans for protection of both the surface and subsurface water quantity and quality.

RESPONSE:

REQUEST FOR PRODUCTION NO. 4: Produce a copy of any documents or materials identified in your response to interrogatories issued by the Fishers.

RESPONSE:

REQUEST FOR PRODUCTION NO. 5: In relation to each expert witness you will call at the contested case hearing, (**regardless of whether such expert is a “retained” expert or not**) please produce the following information in relation to each expert:

- a) A copy of all documents supplied to the expert;
- b) Any correspondence, email, or other documents exchanged between you and the expert;
- c) A copy of the expert’s *curriculum vitae* or resume; and
- d) Any report prepared by the expert which relates to this case.

If you do not answer this request at this time, fully supplement your response to this request when your experts are identified, or concurrently with any disclosure required pursuant to the contested case hearing.

RESPONSE:

REQUEST FOR PRODUCTION NO. 6: Produce a copy of the document (which may have been a flow chart) which was provided to the Sheridan County Commissioners during a Public Comment Period on March 7, 2017 by Jeff Barron, P.E. on behalf of Brook Mine and/or Ramaco.

RESPONSE:

REQUEST FOR PRODUCTION NO. 7: Produce any documents that evidence the projected or estimated cost, expense or expenditure of the overburden removal to excavate and create the access trenches or openings for providing the access points to facilitate the highwall mining equipment and activities at the Brook Mine facility proposed in Sheridan County, Wyoming.

RESPONSE:

REQUEST FOR PRODUCTION NO. 8: Produce a copy of the video which was presented at the previous contested case hearing with the EQC involving Brook Mine, Padlock and Big Horn Coal which demonstrated mining operations.

RESPONSE:

REQUEST FOR PRODUCTION NO. 9: Produce a copy of all data, summaries testing or other similar data or materials which were developed from or relate to the soil, vegetation, or other samples or materials taken from the Fishers' property.

RESPONSE:

DATED this 7th day of April, 2017.

3. “Describe” means to specify in detail and to particularize the content of the answer to the question and not just to state the reply in summary or outline fashion, including all pertinent facts about the fact, event, or situation in question, including but not limited to:

- (a) the time, date, and place;
- (b) identification of all persons present or involved;
- (c) identification of all oral or written communications made during the event or situation;
- (d) a detailed description of all actions taken.

4. “Document(s)” is used in the broadest sense contemplated by W.R.C.P. 34. It means all records and other tangible forms of expression, including information in electronic, magnetic, or photographic form, in your possession, custody, or control, including drafts and any copies thereof that contain notes or otherwise differ from the original, however many, by whomever created, however prepared, circulated, sent, received, dated or used, produced or stores (manually, mechanically, electronically, or otherwise), including but not limited to books, papers, files, modeling files and data, notes, correspondence, memoranda, reports, writings, drawings, photographs, telegrams, facsimiles (faxes), telephone logs, contracts, agreements, calendars, datebooks, worksheets, summaries, magnetic tapes, data files, other data compilations from which information can be obtained, electronic mail, disks, diskettes, disk packs, and other electronic media, microfilm, microfiche, and storage devices. It includes all material that relates or refers in whole or in part to the subjects referred to in any Interrogatory and also includes the file jackets, and any labels thereon, in which responsive documents are contained. If any documents contain attachments or appendices, describe the attachments or appendices.

5. “Identify” means:

(a) When applied to an individual person, state the full name, present or last known business address, position with the state or other employer, job description, and telephone number;

(b) When applied to a document, state the title, date(s), author(s), signer(s), intended recipient(s), addressee(s), present location and custodian of the document, and current or last known address of the custodian of the document.

(c) When applied to oral communication, identify the speaker(s) and the person(s) addressed, state the date, place and medium of the communication and describe completely the content of the communication.

6. “Including” means “including, but not limited to.”

7. “Regarding,” “Related to,” and “Concerning” means concerning, referring to, alluding to, responding to, relating to, connected with, commenting upon, in respect of, about, establishing, analyzing, criticizing, touching upon, constituting, supporting, refuting and/or being.

9. “DEQ” refers to the Wyoming Department of Environmental Quality or any agent, officer or employee of DEQ. This includes the Wyoming Division of Land Quality (“Land Division”) and any agent, officer or employee of any of the divisions.

10. “You” or “Your” means DEQ or any agent officer, or employee of DEQ. This includes the Land Division and any agent, officer or employee of any of the divisions.

INSTRUCTIONS

In responding to these Interrogatories and Requests for Production of Documents, please adhere to the following instructions:

1. Furnish all information that is available to you, known to you, or that can be known after reasonable inquiry, including information in the possession, custody, or control of your attorneys, staff, agents, employees, officers, consultants, experts, or other representatives. In answering, you are required to make a reasonable inquiry to ascertain the information or knowledge necessary to respond in detail to such request. Answers must be specific and responsive.

2. If you do not or cannot answer any Interrogatory or Request for Production of Documents after exercising due diligence in attempting to secure the information, please state your answer to the extent possible and indicate your inability to answer the remainder. Include whatever information you may have concerning the unanswered portions and set forth in detail all efforts undertaken to ascertain the requested information.

3. If anything is deleted from a document produced in response to an Interrogatory or Request for Production, state the reason for the deletion, the subject matter of the deletion, and the name of the person or persons who decided to delete the information.

4. If any information in these Interrogatories or Requests for Production is withheld pursuant to an objection or claim of privilege, answer portions of the Interrogatory or Request for Production for which the privilege does not apply, identify the objection or privilege claimed, set forth a specific basis upon which the objection is raised or the privilege is claimed, and provide a privilege log and/or index of documents withheld that includes the following information: a statement identifying the nature of the information withheld, the date and subject matter of any communication containing that information, the names of all persons with knowledge of the information including the author, and the basis for withholding the information.

5. Answer all Interrogatories and Requests for Production under oath, and provide verification from appropriate representatives of DEQ, to support these answers.

6. Provide answers to these Interrogatories and Requests for Production by 5 p.m. on April 21, 2017. If you cannot complete these answers within this time, provide immediate notice to the Resource Council's counsel so that an amicable resolution to the problem can be reached.

7. These Interrogatories and Requests for Production are to be deemed continuing in nature up until the date of the hearing. Supplement all answers as required by W.R.C.P. 26(e).

INTERROGATORIES

1. Identify and describe all persons at DEQ who were involved in any aspect of the permit application review process for Brook's permit and identify and describe their role in the process.

2. Identify and describe any advisors, consultants, or experts, if any, hired or used by DEQ in reviewing Brook's permit application and identify and describe their role in the permit process.

3. Please explain where DEQ is in the process of issuing a Cumulative Hydrologic Impact Assessment (CHIA) for Brook's proposed mine and disclose the anticipated timing of when the CHIA will be finalized. Please identify and describe all DEQ staff, and any advisors, consultants, or experts, if any, from outside the agency involved in the CHIA writing and review process.

4. Please explain how DEQ will incorporate the CHIA's findings into any decisions on Brook's permit application and/or please explain how DEQ will ask the EQC to incorporate the CHIA's findings into any decisions on Brook's permit application.

5. Please explain where DEQ is in the process of determining and designating Alluvial Valley Floors (AVFs) in the area. Please explain what work, if any, DEQ plans to carry out to further determine and designate AVFs in the area and the timing for the proposed actions.
6. Please explain when DEQ plans to issue a State Decision Document and/or a draft permit for Brook's proposed mine.
7. Please disclose how many water wells the groundwater modeling indicates will be impacted by Brook's proposed mine.
8. Please disclose the number and location of surface and ground water monitoring sites and explain how DEQ determined that the monitoring program was sufficient to adequately characterize the hydrologic balance and hydrologic systems of the area.
9. Please explain how DEQ plans to respond to a subsidence occurrence at the mine site.
10. Please describe what evidence, data, and information DEQ relied upon to review Brook's subsidence control plan and determine its effectiveness. Please disclose whether DEQ consulted with any third-parties in reviewing the subsidence control plan.
11. Please explain why DEQ chose not to include information on potential subsidence in the public notice, as described under Chapter 7, Section 3 of DEQ's coal regulations.
12. Please explain and describe any coal fires that DEQ knows to be occurring in the area at the present time or have occurred in the area over the course of the AML and LQD programs.
13. Please provide all information from the AML division regarding efforts to address coal mine fires and subsidence and please list all dates and times the AML division has had to address coal mine fires and subsidence in the area.

14. Please explain how the DEQ reviewed and considered potential impacts to recreation uses in and around the Brook mine permit boundary.

15. Please explain how DEQ evaluated and required buffers around public roads and streams in reviewing Brook's proposed mining operations.

16. Please list all highwall mines that DEQ has previously approved permit(s) for, including mines that are partially highwall and partially surface, room & pillar, or longwall. Identify the DEQ Land Quality Division office that reviewed and approved the permits.

REQUESTS FOR PRODUCTION OF DOCUMENTS

1. Provide a copy of any written findings by DEQ made pursuant to W.S. 35-11-406(n).

2. Provide a copy of any DEQ reports or memorandum used as background to make findings pursuant to W.S. 35-11-406(n), including, but not limited to, the Cumulative Hydrologic Impact Assessment required under Chapter 19 of DEQ's coal mining rules and regulations.

3. Provide a copy of any written findings by DEQ made pursuant to W.S. 35-11-406(m).

4. Provide a copy of any recommendation by the administrator (or other DEQ staff) made pursuant to W.S. 35-11-403(a)(iv) related to the issuance or denial of Brook's permit application.

5. Please provide a copy of "The administrator's estimate of the additional cost to the state of bringing in personnel and equipment should the operator fail or the site be abandoned" that is to be incorporated into the bond amount under W.S. 35-11-417(c)(i).

6. Please provide a copy of any workbooks or spreadsheets used by DEQ in calculating the reclamation bond amount.

7. Please provide a copy of the names and addresses of all surface owners and affected properties who received a copy of the public notice published in December 2016 pursuant to W.S. 35-11-406(j).

8. Please provide a copy of any determinations made by DEQ related to Alluvial Valley Floor designations inside the permit boundary or in the area surrounding the proposed mining operation.

9. Please provide a copy of any draft or final mine permit, state decision document, and/or other written determinations by DEQ related to permit terms and conditions.

10. Please provide a copy of any correspondence that DEQ staff or agents have in their possession, including electronic correspondence or transcripts of voicemails, between the DEQ and EQC related to the referral of the permit application for a contested case hearing.

11. Please provide a copy of any correspondence between the DEQ and any person that submitted an objection letter regarding the objection letter or the referral of objections to the EQC. Letters that are already part of the EQC Docket need not be provided.

12. Please provide a copy of any water quality TMDLs for the Tongue River, Goose Creek, and any other streams or tributaries that are located within the permit boundary.

13. Please provide a copy of any AML reports related to coal mines in the area.

14. Please provide any and all data or other information collected or analyzed as part of the AML division's study of subsidence in Sheridan County. Also provide any draft reports of the Sheridan County subsidence study.

15. Please provide a copy of any searches ran through the Applicant Violator System related to this permit application.

Dated this 7th day of April, 2017.

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)
)
 TFN 6 2-025) DOCKET 17-4802

**POWDER RIVER BASIN RESOURCE COUNCIL'S FIRST SET OF
INTERROGATORIES AND REQUESTS FOR PRODUCTION OF DOCUMENTS
SERVED ON BROOK MINING CO., LLC**

In accordance with the Presiding Officer’s Scheduling Order of March 13, 2017, and pursuant to Wyoming Rules of Civil Procedure 26, 33, 34, and the following definitions and instructions, Powder River Basin Resources Council (“Resource Council” or “PRBRC”) requests that Brook Mining Co., LLC or any agent, officer or employee of Brook who has relevant information answer fully and under oath the following Interrogatories and Requests for Production of Documents.

DEFINITIONS

1. “Brook” means the permit applicant Brook Mining Co., LLC and includes any employee, officer, agent, or expert of Brook.
2. “Communication(s)” means conversations, discussions, meetings, telephone calls, notes, letters, memoranda, reports, telecopies of facsimiles (faxes), electronic mail, voice mail, text messages, data or file transfer, pictures or photographs, and all other forms of oral, written or electronic expression by which information may be conveyed, including any mechanical or electronic sound recording or transcription thereof.

3. “Describe” means to specify in detail and to particularize the content of the answer to the question and not just to state the reply in summary or outline fashion, including all pertinent facts about the fact, event, or situation in question, including but not limited to:

- (a) the time, date, and place;
- (b) identification of all persons present or involved;
- (c) identification of all oral or written communications made during the event or situation;
- (d) a detailed description of all actions taken.

4. “Document(s)” is used in the broadest sense contemplated by W.R.C.P. 34. It means all records and other tangible forms of expression, including information in electronic, magnetic, or photographic form, in your possession, custody, or control, including drafts and any copies thereof that contain notes or otherwise differ from the original, however many, by whomever created, however prepared, circulated, sent, received, dated or used, produced or stores (manually, mechanically, electronically, or otherwise), including but not limited to books, papers, files, modeling files and data, notes, correspondence, memoranda, reports, writings, drawings, photographs, telegrams, facsimiles (faxes), telephone logs, contracts, agreements, calendars, datebooks, worksheets, summaries, magnetic tapes, data files, other data compilations from which information can be obtained, electronic mail, disks, diskettes, disk packs, and other electronic media, microfilm, microfiche, and storage devices. It includes all material that relates or refers in whole or in part to the subjects referred to in any Interrogatory and also includes the file jackets, and any labels thereon, in which responsive documents are contained. If any documents contain attachments or appendices, describe the attachments or appendices.

5. “Identify” means:

- (a) When applied to an individual person, state the full name, present or last known business address, position with the state or other employer, job description, and telephone number;
- (b) When applied to a document, state the title, date(s), author(s), signer(s), intended recipient(s), addressee(s), present location and custodian of the document, and current or last known address of the custodian of the document.
- (c) When applied to oral communication, identify the speaker(s) and the person(s) addressed, state the date, place and medium of the communication and describe completely the content of the communication.

6. “Including” means “including, but not limited to.”

7. “Regarding,” “Related to,” and “Concerning” means concerning, referring to, alluding to, responding to, relating to, connected with, commenting upon, in respect of, about, establishing, analyzing, criticizing, touching upon, constituting, supporting, refuting and/or being.

9. “DEQ” refers to the Wyoming Department of Environmental Quality or any agency, officer or employee of DEQ. This includes the Wyoming Division of Land Quality (“Land Division”) and any agent, officer or employee of any of the divisions.

10. “You” or “Your” means Brook or any agent, officer, or employee of Brook.

INSTRUCTIONS

In responding to these Interrogatories and Requests for Production of Documents, please adhere to the following instructions:

1. Furnish all information that is available to you, known to you, or that can be known after reasonable inquiry, including information in the possession, custody, or control of

your attorneys, staff, agents, employees, officers, consultants, experts, or other representatives.

In answering, you are required to make a reasonable inquiry to ascertain the information or knowledge necessary to respond in detail to such request. Answers must be specific and responsive.

2. If you do not or cannot answer any Interrogatory or Request for Production of Documents after exercising due diligence in attempting to secure the information, please state your answer to the extent possible and indicate your inability to answer the remainder. Include whatever information you may have concerning the unanswered portions and set forth in detail all efforts undertaken to ascertain the requested information.

3. If anything is deleted from a document produced in response to an Interrogatory or Request for Production, state the reason for the deletion, the subject matter of the deletion, and the name of the person or persons who decided to delete the information.

4. If any information in these Interrogatories or Requests for Production is withheld pursuant to an objection or claim of privilege, answer portions of the Interrogatory or Request for Production for which the privilege does not apply, identify the objection or privilege claimed, set forth a specific basis upon which the objection is raised or the privilege is claimed, and provide a privilege log and/or index of documents withheld that includes the following information: a statement identifying the nature of the information withheld, the date and subject matter of any communication containing that information, the names of all persons with knowledge of the information including the author, and the basis for withholding the information.

5. Answer all Interrogatories and Requests for Production under oath, and provide verification from appropriate representatives of Brook, to support these answers.

6. Provide answers to these Interrogatories and Requests for Production by 5 p.m. on April 21, 2017. If you cannot complete these answers within this time, provide immediate notice to the Resource Council's counsel so that an amicable resolution to the problem can be reached.

7. These Interrogatories and Requests for Production are to be deemed continuing in nature. Supplement all answers as required by W.R.C.P. 26(e), up until the date of the hearing.

INTERROGATORIES

1. Identify and describe all persons employed by Brook Mining Co., LLC.

2. Identify and describe any advisors, consultants, or experts, if any, hired or used by Brook in preparing or reviewing your permit application. Please describe the qualifications of these individuals.

3. Identify and describe all subsidiary and/or parent companies/entities related to Brook.

4. Please explain the relationship between Brook and Ramaco Carbon, LLC, if any. Please explain whether Brook considers the proposed "industrial park" and "research center" as part of its mining project and if not, why not.

5. Please explain efforts to market coal from the proposed mining operation and please describe any and all contracts, if any exist, for sale of coal to entities outside the permit boundary.

6. Please describe any plans for blasting in the area, including proposed blasting timing and amounts. Describe and identify any planned restrictions on blasting, including weather conditions, weekends, holidays, etc.

7. Please describe any relationship Brook has with Cloud Peak Energy, including but not limited to agreements for surface use, ingress/egress, rights of way, etc.

8. Please disclose whether Brook has obtained surface owner access or orders in lieu of consent from all surface owners within the permit boundary, including the BNSF.

9. Please disclose whether Brook is aware of coal fires in the area at the present or in the past.

10. Please disclose whether Brook is aware of subsidence in the area at the present or in the past.

REQUESTS FOR PRODUCTION OF DOCUMENTS

1. Provide a copy of all state and federal permits received by Brook for the proposed project.

2. Provide a copy of any permit applications to MSHA.

3. Provide a copy of the traffic control plan referenced in the permit application.

4. Provide a copy of any agreements, if any, with Cloud Peak Energy.

5. Please provide any and all documents, data, or other evidence that demonstrate the amount of water saturation in the targeted coal seams and what the groundwater inflow rates are in relation to the proposed mine excavations.

6. Provide a copy of any other subsidence control plans prepared by Jeff Barron at any time in his career.

7. Provide a copy of Brook's Exhibit 45 provided to the EQC as part of Docket 16-1601.

Dated this 7th day of April, 2017.

EXHIBIT B

EXPERT REPORT IN THE MATTER OF
BIG HORN COAL COMPANY V. BROOK MINE

Prepared for Big Horn Coal Company, Sheridan, Wyoming

Prepared by Paul J. Gerlach, PG, President, Aqua Terra Consultants, Inc., Sheridan, Wyoming

March 28, 2017

INTRODUCTION.

My name is Paul (Joe) Gerlach. I am a registered Professional Geologist in the state of Wyoming (PG 83), and the co-founder and President of Aqua Terra Consultants, Inc., a S-Corporation in Sheridan, Wyoming. I am an expert in the field of hydrogeology, also known as groundwater hydrology. I am a former employee of Peter Kiewit Sons Company, former owner of Big Horn Coal Company, and I have frequently provided professional services to Big Horn Coal Company since leaving that employment. During the past 40 years, I have testified as an expert witness in two states and have never been denied qualification as an expert. I have not testified as an expert witness in the last four years. I have not published any documents in the past 10 years. A true and correct copy of my *curriculum vitae* is shown at Attachment 1 to this report. My fee Schedule and Policies is shown at Attachment 2 to this report.

MY INVOLVEMENT IN THIS MATTER.

I was initially retained in this matter on January 6, 2017 by Mr. Jordan Sweeney of Lighthouse Resources Inc., owner of Big Horn Coal Company. I was retained to review and render opinions about the adequacy of the Brook Mine permit application in identifying and assessing potential hydrologic and other impacts associated with Brook Mine's proposed coal mining operation within and in the vicinity of the Big Horn Coal Mine.

Since the date of my retention, I have reviewed certain materials provided (see next section of this report for details), corresponded via telephone and email with Mr. Sweeney and with Mr. Clayton Gregersen and Ms. Lynne Boomgaarden, attorneys with Crowley Fleck, PLLP, and reviewed technical literature related to underground coal mine fires within and adjacent to the Brook Mine permit area.

MATERIALS PROVIDED AND OBTAINED.

I have been provided with or obtained the materials itemized below:

- Copies of digital files from the Wyoming Department of Environmental Quality, Land Quality Division provided to a representative of Big Horn Coal Company on December 12, 2016, which allowed review of specified relevant portions of Brook Mine's most recent and accurate permit application
- Objections to the Brook Mine permit application from various landowners, the Powder River Basin Resource Council and Big Horn Coal Company posted on-line (<https://eqc.wyo.gov/Public/Dockets.aspx>) by the Wyoming Environmental Quality Council on January 30, 2017 under Docket 17-4801.
- Text and drawings from Big Horn Coal Company's mine permit No. 213 relating to the Reclamation Plan and relating to geologic descriptions contained in Appendix D5.

- The report "Effects of Coal Mine Subsidence in the Sheridan, Wyoming, Area", 1980, US Geological Survey Professional Paper 1164
- Wyoming State Engineer's Office on-line website database of water rights records, groundwater well completion data and geologic logs
- Big Horn Coal Company Reclamation History, Vol. 2, Section 6.2, Permit 213-T5 Change #9, Big Horn Mine Groundwater Restoration Demonstration, Approved August 8, 2002

EXHIBITS CREATED IN SUPPORT OF MY OPINIONS

I created the following exhibits that support and are formative to the opinions that I have developed. In all cases, the exhibits are intact original materials or selected sets of components of original materials available in the public domain as taken from the Brook Mine permit application, the Big Horn Coal Mine permit application, published professional reports, and groundwater rights files of the Wyoming State Engineer's Office.

C1-Objection Exhibit A: *Exhibit MP.4-1 Coal Removal Sequence* (original material from Brook Mine application).

C1-Objection Exhibit B: *Figure MP-6.1-1 Showing Brook Mine Proposed Trenches and Highwall Mining Panels* (original material from Brook Mine application).

C1-Objection Exhibit C: This drawing has no formal title and is a collection of materials copied from the Brook Mine application (location of geologic cross section K-K' and locations of Brook Mine panels), and materials copied from the Big Horn Coal Mine application (location of geologic cross section D-D', area of reclaimed Big Horn Coal Mine backfill, and area of shallow water table conditions within Brook Mine TR-1 mining area).

C1-Objection Exhibit D: *Pit One Truck-Shovel Operation Geologic Cross-Section D-D'* (original material from Big Horn Coal Mine application with line added to denote the shallow groundwater table elevation 3600 feet across the section).

C1-Objection Exhibit E: *Addendum D5-3 Exhibit 2 Geologic Cross Section K-K'* (original material from Brook Mine application with line added to denote the shallow groundwater table elevation 3600 feet across the section).

C1-Objection Exhibit F: *Big Horn Coal Company Big Horn Mine Groundwater Restoration Demonstration* (original material from Big Horn Coal Reclamation History, Vol. 2, Section 6.2).

C2-Objection Exhibit A: *Figure 4.9-11. Domestic Well and Alluvial Target Locations* (original material from Brook Mine application).

C2-Objection Exhibit B: *Maximum Modeled Well Drawdown Relative to Well Completion Aquifers* (original material taken from Table 4.9-1 of Brook Mine application combined with information downloaded from the groundwater rights files of the Wyoming State Engineer's Office).

C3-Objection Exhibit A: This drawing has no formal title and is a collection of materials copied from the Brook Mine application (mine panel locations showing years and months of proposed mining), copied from the Big Horn Coal Mine application (areas of reclaimed backfill, Pit 3 Subsidence Dump area and notes identifying miscellaneous areas of subsidence hole reclamation), and copied from US Geological Survey Professional Paper 1164 (areas of underground coal fires).

OPINIONS.

Based on my review of the materials listed above, my previous experiences studying the hydrogeology of the Big Horn Mine area, and discussions with individuals knowledgeable of the mine's reclamation and hydrologic monitoring data, I have developed the following opinions:

1. Brook Mine Permit Application – Section MP.4; Exhibit MP.4-1; Section MP.5; Section MP.13; Addendum MP-6

Section MP.4 and Exhibit MP.4-1 (see C1-Objection Exhibit A) provide plans for the development of a highwall mining trench through, and the development of highwall mining panels beneath, reclaimed backfill of BHCC Pits 1 and 2 adjacent to Goose Creek and the Tongue River in the southeastern portion of the Brook Mine permit area. The trench would penetrate through the bottom of the backfill to allowing mining of Carney coal found about 70 feet beneath the backfill. The backfill of the proposed trench area averages about 90 feet thick. The northeast corner of the highwall panel area appears on Exhibit MP.4-1 to be equivalent to the Brook Mine permit boundary, and would be less than 100 feet from the bank of the Tongue River. On Figure MP-6.1-1 of Addendum MP-6-11 (see C1-Objection Exhibit B), the highwall mining panels are shown even nearer to the Tongue River channel, and the reason for the disparity between the figure and Exhibit MP.4-1 is unexplained. There are off-site impact risks associated with the permit's disturbance, affected and permit boundaries all being equivalent to the mining panel boundary in this most environmentally sensitive area adjacent to the bank of the Tongue River. The affected area boundary shown on Exhibit MP.4-1 around the other proposed mining panels typically extends well beyond the disturbance boundary for reasons unexplained in the Mine Plan.

Mine Plan Section MP.4, together with all Mine Plan text inclusive of Section MP.13 and Addendum MP-6, are silent on the subject of the special textural and hydrologic characteristics of the proposed southeastern highwall mining area in Sections 15 and 22, T57N, R84W. The area is unique in that the strata overlying the coal to be mined includes a thick layer of unconsolidated, saturated backfill exhibiting shallow groundwater elevations of 20 feet or less below ground surface where existing ground elevations are 3600 feet MSL and lower (see C1-Objection Exhibit C, C1-Objection Exhibit D and C1-Objection Exhibit E). The water surface in BHCC's postmining Reservoir 14 in the SESE Sec. 15 is an expression of the

groundwater table. The groundwater throughout Pits 1 and 2 is directly connected to and recharged by Goose Creek and the Tongue River, as documented in Big Horn Mine's Reclamation History, Groundwater Restoration Demonstration (GRD) approved by the WDEQ/LQD as Change No. 9 to Permit 213-T5 on August 8, 2002 (see C1-Objection Exhibit F, pages 4, 5, 13, 14 and 35, and Exhibit 1 of the GRD). C1-Objection Exhibit E (Brook Mine geologic cross section K-K'-) fails to show the groundwater table elevation in the BHC mine backfill adjacent to and recharged by Goose Creek and Tongue River, and is thereby very misleading in suggesting that groundwater is found only in the Carney and Masters coal seams. The GRD verifies that the Pits 1 and 2 backfill resaturated very rapidly, indicative of unconsolidated, porous material connected to perennial stream recharge sources nearby. Mine Plan Section MP.4 is silent on the subject of managing massive sloughing that may occur in the saturated and nonsaturated backfill of the southeastern highwall mining area as the highwall mining trenches are excavated through the backfill, Monarch-Carney interburden and the Carney coal. These facts considered, the Brook Mine permit application inadequately addresses the requirements of Wyoming Coal Rules and Regulations Chapter 2, Section 2(v)(A)(I)(1.), Chapter 2, Section 4(a)(xii)(A), Chapter 2, Section 5(a)(i)(D)(VII) and Chapter 4, Section 2(s). Section MP-5 of the Brook Mine Plan also fails to present an alternative water management and treatment plan to be followed should groundwater inflow volumes exceed infrastructure design capacities.

The assessment of potential land subsidence and the remediation plan presented for land subsidence in Addendum MP-6 is inadequate relative to protecting the value and function of adjacent lands, particularly for protecting the stability of the Tongue River and the quality of shallow groundwater connected to the river. Addendum MP-6 does not absolutely discount the possibility of land subsidence above the highwall miner holes, nor does it provide a plan for the discontinuation of any southeastern area highwall mining should subsidence occur in the lowlands contiguous to Tongue River or Goose Creek. The environmental implications of subsidence developing adjacent to Tongue River and Goose Creek are so severe as to warrant, at a minimum, a permit commitment to temporarily or permanently cease all mining throughout all of the southeastern highwall mining area should any subsidence develop in any of the area at any time. The permit's plan for "backfilling will commence within 12 months of a subsidence location being identified if self-healing is not providing sufficient remediation" (Section MP-6.4, Addendum MP-6) is environmentally unacceptable for the southeastern highwall (TR-1) mining area because: 1) the stability and alignment of Goose Creek and Tongue River could be jeopardized should subsidence occur, and; 2) any groundwater quality impacts associated with underground coal fires developing in mine openings would have direct and essentially immediate access to Goose Creek and Tongue River via the shallow groundwater table. Section MP-6.4 and Addendum MP-6 of the Brook Mine permit application inadequately address the requirements of Wyoming Coal Rules and Regulations Chapter 2, Section 2(a)(v)(A)(I)(1.) and Chapter 4, Section 2(r)(i)(C). As opposed to the requirements of Coal Rules and Regulations Chapter 7, Section 2(b)(v), the TR-1 area mine plan

does not avoid exchange of groundwater between an aquifer used for domestic and agricultural uses (Tongue River and Goose Creek alluvium) and other strata.

2. Brook Mine Permit Application – Section MP.5.9; Section MP.6.2; Addendum MP-3; Section MP.8

The groundwater model of Addendum MP-3 was improperly constructed and executed because the model does not recognize the unique textural and hydraulic characteristics of saturated backfill in BHCC's Pits 1 and 2, but instead simulates the backfill in the same fashion as native overburden strata (see Section 4.0 of Addendum MP-3). Section 2.5.1 of Addendum MP-3 states "no site-specific hydraulic conductivity information is available for the alluvial areas and over/interburden (model) layers". In fact, hydraulic conductivity data are available for the alluvium in the Big Horn Mine permit document, and hydraulic conductivity data are available for backfill from former monitor wells in the Pit 1 and Pit 2 area and for the Plachek Pit backfill. The backfill data are provided in the GRD referenced under Objection No. 1 above. Hydraulic conductivity values assigned to the spoils together with all other "overburden" strata in the model are very small relative to those shown for nearly all backfill wells in the GRD. The groundwater model ignores determination of the spatial extent of drawdown in the water table of Pit 1 and Pit 2 backfill that is connected to the water table in Tongue River and Goose Creek alluvium, which in turn is supplied by flows in both streams. The text of Section MP.6.2.3 states "Drawdowns of the overburden were not modeled and only isolated sands where encountered are expected to be affected".

Section 4.9 and Figure 4.9-11 of Addendum MP-3 (see C2-Objection Exhibit A) shows where the groundwater model was used to predict water table drawdown in Tongue River valley alluvium at "alluvial target" points distributed over about a three-mile reach of the valley floor. Section 4.9 states that "the actual drawdown in the alluvial targets induced from mining is estimated to be less than 0.5 feet". The same text goes on to explain "maximum impacts are expected to occur in areas where the overburden is thin (near coal seam outcrops) and are of short duration". Clearly, the groundwater model causes drawdown in Tongue River alluvium only as a result of the model simulating drawdown in the upper Carney coal through Masters coal stratigraphic sequence, and not as a result of excavating through BHCC's reclaimed saturated backfill of the Pits 1 and 2 area (Brook Mine TR-1 mining area). The alluvial target points are positioned well upstream of the Brook Mine TR-1 mining area, and thereby avoid showing alluvial water table drawdown in the TR-1 area especially if the model were properly executed to include mining of the saturated backfill in BHCC's Pits 1 and Pits 2. Neither does the groundwater model explore potential permanent groundwater elevation changes associated with the highwall mining panels acting as collector drains to the backfill and alluvial water table via the backfilled highwall trench pits.

Table 4.9-1 of the Brook Mine groundwater model (Addendum MP-3) identifies maximum drawdown values predicted by the model at existing stock and domestic wells. Well locations are shown on Figure 4.9.11 (see C2-Objection Exhibit A).

C2-Objection Exhibit B provides much of the same information as shown on Table 4.9-1 for three of the wells, but also provides the stratigraphic descriptions of the aquifers supplying each well as copied from the water rights files of the Wyoming State Engineer's website. All three wells are positioned near Tongue River, and all three stratigraphic descriptions are typical of alluvium. Table 4.9-1 indicates that the maximum drawdown at these wells will range from 0.5 feet to 1.5 feet, but the drawdown is assigned to layer 4 of the groundwater model, which is lower Carney coal and not model layer 1 overburden inclusive of alluvium. If the maximum drawdown predicted at these wells is truly intended to represent what will happen in these wells, then the predictions conflict with the statement on page MP-3-5 of Addendum MP-3 that "estimated impacts within the Tongue River alluvium will be minor and in most places not measurable". If, on the other hand, the maximum predicted drawdowns are not intended to represent drawdowns that will occur in the wells but in model layer 4 instead, then Table 4.9-1 is very misleading and it would thereby appear that the groundwater model does not attempt to predict drawdown that will occur within existing supply wells.

Table 4.9-2 of Addendum MP-3 tracks model-predicted groundwater inflow rates to Brook Mine, and shows that inflow rates will be greatest, from 65.4 gpm to 74.5 gpm, during the first two years of mining (TR-1 area). Text describing Table 4.9-2 suggests that the inflow rates will be relatively high in the TR-1 area because the coal there is fully saturated. The text is silent, however, on drawing any connection between inflow rates and mining through the saturated backfill of BHCC Pits 1 and 2. Section MP.8 of the Mine Plan states "It is estimated that the total water use will be approximately 120 million gallons per year (approximately 328,200 gallons per day) with an expected variability of plus or minus 20 percent." Mine Plan Table MP.8-1 lists "pit inflows" and "surface water rights" as being the two primary sources of water for the mine, but no specific surface water right is identified and no information is provided as to whether or not the State of Wyoming has approved any transfer of an existing surface water right to industrial uses. Table MP.8-1 and Section MP.8 do not identify the specific mining areas or strata sources that will supply the groundwater, but presumably it would be the TR-1 area which will be reclaimed late in the mine life. As stated earlier, the Brook Mine groundwater model does not simulate groundwater inflow from BHCC's saturated backfill of the TR-1 area; consequently, any consumptive groundwater losses from that aquifer source are not included in the groundwater drawdown predictions.

The Brook Mine Plan is devoid of a hydrologic budget identifying specific groundwater sources targeted for consumptive mine uses, and the determination of what would remain of groundwater and surface water supplies while the mine supplies its industrial water needs. The value of the existing surface estate and future options for developing the surface estate could be marginalized by Brook Mine's consumptive water uses. The Brook Mine permit application fails to identify alternative surface and groundwater supply sources, and thereby does not comply with the requirements of Wyoming Coal Rules and Regulations Chapter 2, Section 5(a)(ix)(E) and Chapter 2, Section 5(a)(xi). The Brook Mine permit application fails

to adequately describe the surface water and groundwater and related geology in the permit area sufficient to assess the probable hydrologic consequences (PHC) as required under Coal Rules and Regulations Chapter 2, Section 4(a)(xiv). The Brook Mine permit application does not provide a complete PHC determination required under Coal Rules and Regulations Chapter 2, Section 5(a)(x) and Chapter 2, Section 5(a)(xi). The Brook Mine permit application does not provide sufficient information on hydrologic changes which may be reasonably expected as a result of its operation as necessary for the Administrator to determine the probable cumulative hydrologic impacts on surface and groundwater systems, as required by Coal Rules and Regulations Chapter 19, Section 2.

3. Brook Mine Permit Application – Section MP.11; Addendum MP-5

The fire control plan referenced in Section MP.11 and presented in Addendum MP-5 describes measures to be taken to prevent and control fires in the mine pits, fires in the mine's processing and shop facilities, equipment fires and rangeland fires. Remarkably, Addendum MP-5 fails to acknowledge the existence of historic underground coal mine fires in some of the proposed panel mining areas. The Mine Plan and Addendum MP-5 do not provide plans to control and extinguish new subsurface coal fires that may develop or existing subsurface coal fires that may become rekindled or enlarged as a result of the highwall mining panels that will be opened outboard of the highwall trench openings.

C3-Objection Exhibit A is a drawing showing the approximate extent of underground coal mine fires in the area of proposed highwall mining in Sections 10 and 15, T57N, R84W, as reported by the U.S. Geological Survey in 1980. The fires in this particular area originated with mining of the Monarch coal. This and other nearby historic underground mines have long been known to exhibit numerous subsidence features and underground coal mine fires, and in the late 1980s BHCC received approval from the WDEQ/LQD to permanently place nearly 10 million bank cubic yards of overburden over the area shown on C3-Objection Exhibit A in an attempt to reclaim the subsidence and control the fire. That unique reclamation feature is known as the Pit 3 Subsidence Dump in Big Horn Mine's reclamation history. The proposed highwall mining will develop mine openings in the Carney and Masters coal seams beneath the Monarch seam in areas that are known to still exhibit evidence of underground coal fires. Plumes of steam and smoke have been observed again over the general area of Sections 10 and 15 this winter of 2016-2017. These observations indicate that, in places, the perimeter of the historic subsurface coal seam fires has expanded notable distances from the referenced 1980 boundary delineation.

The subsidence control plan of Addendum MP-6 does little to guarantee the long-term protection of the surface estate especially where highwall mining panels will be driven beneath underground coal mine fires having a long history of activity. Section MP-6.2 of Addendum MP-6 provides numerical calculations for subsidence chimney heights, but there is no investigation of the potential that the historic mine fires may have compromised the structural integrity of strata

underlying the fires and overlying the coals targeted for highwall panel mining (the interburden), leaving the interburden more prone to subside than normal. Highwall mining beneath or adjacent to pre-existing underground mine fires is particularly problematic because of the potential for oxygen and water to be transmitted from the highwall mining openings to "hotspots" in the seams already burning via highwall trenches or via fractured or subsided interburden above the panel openings. There is no legitimacy with the plan stated in Section MP-6.4 of Addendum MP-6 which states "Backfilling will also be performed if it is determined that the introduction of water and oxygen could contribute to spontaneous ignition of the remaining coal not extracted from the highwall mining operations". It is common knowledge in the mining industry that oxygen and water are key catalysts in causing spontaneous combustion in coal, whether the coal be in mine openings or in stockpiles. The introduction of additional water and air to a coal seam already on fire is especially problematic.

Section MP-6.3 of Addendum MP-6 commits to maintaining highwall mining mapping and subsidence documentation in a subsidence report that will be available for inspection. The Mine Plan does not commit to freely submitting the highwall mining mapping and subsidence documentation report to all owners of surface estate within the Brook Mine permit area. The Subsidence Monitoring and Assessment reporting of Section MP-6.3 does not include mapping, photographing and describing all evidence of surface or underground coal fires occurring within the Brook Mine permit area whenever such evidence becomes available throughout the life of the mining and post-mining periods. Those having surface estate adjacent to Brook Mine operations may experience greater risk of damages caused by the development of underground coal fire conditions whose reporting is not available in the public domain.

The above facts considered, this report contends that the Brook Mine permit application falls far short of addressing requirements of Coal Rules and Regulations Chapter 2, Section 5(a)(iv), Chapter 7, Section 4, Chapter 2, Section 2(a)(v)(A)(I)(c.), Chapter 4, Section 2(h)(ii), and Chapter 4, Section 2(w).

I declare under penalty of perjury that the foregoing is true and correct.

Paul J. Gerlach
President
Aqua Terra Consultants, Inc.

CURRICULUM VITAE**

PAUL J. GERLACH

March 28, 2017

Name: P. Joe Gerlach

Position: Geologist/Hydrogeologist, Firm Principal

Education: B.A., Geology, 1974, Miami University of Ohio
M.S., Geology, 1976, South Dakota School of Mines and Technology

Credentials: Licensed Professional Geologist, Wyoming P.G. No. 83
MSHA-Certified (Surface/Coal Mining)
Member Wyoming Geological Association

Experience:

1991-Present Principal, Aqua Terra Consultants, Inc.
1982-1991 Hydrogeologist/Project Manager, Western Water Consultants, Inc., Sheridan, WY
1980-1982 Hydrogeologist/Office Manager, Hydrometrics, Inc., Sheridan, WY
1976-1980 Hydrogeologist/Director of Hydrologic Studies, PKS Co., Sheridan, WY
1974-1976 Research Assistant, South Dakota School of Mines, Rapid City, SD

Skills and Responsibilities:

- Corporate direction and overall management of the firm.
- Senior consultant and technical advisement for geologic and hydrologic issues, including geologic characterization, mineralogy, surface water characterization and groundwater hydrology.
- Manager and principal investigator for mine planning and permitting of more than 20 coal-strip mines in Wyoming, Montana, Colorado, New Mexico and Alaska.
- Alluvial Valley Floor investigations and the hydrologic components of wetlands inventories and mitigation plans for coal mine permit applications.
- Design and construction supervision of mine-pit groundwater dewatering and pressure grouting systems.
- Complete data collection and analytical expertise for overburden quality investigations in mining.
- Aquifer reclamation designs for groundwater recharge and conveyance in postmining reclamation.
- Expertise in EIS and EA preparation for mining, methane production and oil and gas production.
- Design and construction supervision of water-supply, industrial, domestic, stock and dewatering wells.
- Groundwater modeling of hydrologic systems applied to mining impacts and dewatering systems.
- Expertise in groundwater quality monitoring, data analysis and contaminant transport modeling.
- Location, study and drilling supervision of CBM wells, and evaluation and design of water management plans for landowners and CBM producers.
- Expert witness experience in cases involving groundwater rights, groundwater movement and water well construction.
- Wetland design and preparation of Corps of Engineer permits.

BIG HORN COAL COMPANY

BIG HORN MINE
GROUNDWATER RESTORATION DEMONSTRATION

FOREWORD

The Administrator of the Wyoming Department of Environmental Quality, Land Quality Division, has declared that requests for final incremental bond release at coal mines must be preceded by: 1) a demonstration that the postmining groundwater conditions support the postmining land use as per Coal Rules and Regulations Chapter 4, Section 2.(h)(i) and Chapter 4, Section 2.(i)(i) and; 2) verification of the accuracy of the Probable Hydrologic Consequences (PHC) predictions for groundwater as per Coal Rules and Regulations Chapter 4, Section 2.(i). One of the principal objectives in Big Horn Coal's reclamation has been to restore the quantity of groundwater in the mine backfill and adjacent areas to a level suitable for livestock use and meeting the livestock use water quality standards set forth under the Wyoming Department of Environmental Quality, Water Quality Division's Rules and Regulations, Chapter VIII. Section 5, Table 1. Groundwater quality data are presented in this report demonstrating how these standards have been met at Big Horn Mine. In terms of restoring groundwater quantity characteristics, Big Horn's specific objectives have been to re-establish infiltration and recharge capacities, aquifer storage and groundwater flow, and aquifer saturated thicknesses.

This report is intended to fulfill the requirements for demonstrating postmining groundwater conditions at Big Horn Mine and more specifically to verify that the quantity and quality of groundwater has been restored throughout the majority of all reclaimed mine lands and throughout all adjacent areas to conditions suitable for livestock watering. Data and analyses are provided for reclaimed mine spoil sites not yet fully meeting livestock watering criteria showing trends in groundwater recovery which allow forecasts to be made of meeting the restoration goals. Groundwater conditions now existing within and contiguous to Big Horn Mine are compared to predictions made in the PHC assessments of the mine permit document.

This report is inclusive of all of Big Horn Mine and has been prepared intentionally well in advance of any request for Final Incremental Bond release because, as demonstrated in this report, coal bed methane gathering activities have begun to significantly impact groundwater conditions in areas adjacent to the mine. This submittal does not request any changes in Big Horn Mine's currently approved groundwater monitoring program nor does it request any release from liability for postmining groundwater conditions.

I POSTMINING GROUNDWATER QUANTITY

Groundwater conditions within and adjacent to Big Horn Mine were influenced by nearly 100 years of surface and underground coal mining activities. This chapter begins with an overview of the historic mining developments that are inferred to have or are known to have affected groundwater conditions within and proximate to Big Horn Mine.

1903 to 1963 - According to records compiled by Dunrud and Osterwald (1980), coal mining near Big Horn Mine began at the underground Dietz No. 5 Mine in 1903 immediately south of present-day Big Horn Mine. From 1904 to 1940, underground coal mines including the Dietz No. 8 Mine, the Hotchkiss Nos. 1 and 2 Mines, the Model Mine, the Carney Mine and the Acme and Acme No. 2 Mines were developed over large areas within and contiguous to Big Horn Mine. The Plachek strip coal mine on Goose Creek (the Plachek Pit reservoir of Section 22) operated from 1957 to 1963 and the B and W strip coal mine operated from 1948 to 1953 within a portion of what ultimately became Big Horn's Pit 3. In essence, Big Horn Coal Company, which consolidated Big Horn Mine in 1963, was restricted in its mining to "islands" of coal separating the historic mines.

1965 - Large-scale stripping operations are underway along the east side of Goose Creek east of the former Plachek Pit within Big Horn's Pit 1.

1973 - Tongue River immediately below the mouth of Goose Creek is diverted 500 feet north into the old B and W Mine coal pits to allow mining in Pit 2.

Summer 1978 - Tongue River is routed into its permanent postmining channel after the final backfilling and grading of Pit 2. Mining begins in the Pit 3 area.

Early 1980's - Mining in Pit 3 intercepts alluvium of Tongue River causing local drawdown of the alluvial water table.

1984 - Pit 1 was extensively backfilled, leaving open only the "Southeast Triangle" groundwater sump.

1985 - Pit 3 advancement ceases and most exposed coal faces are covered. This reduces the groundwater inflow rate to Pit 3.

December 1996 – Backfilling of the Pit 1 “Southeast Triangle”, which began in 1994, is completed and the groundwater sump is closed. Pit pumpage of groundwater from the Dietz 2, Dietz 3 and Monarch coal aquifers ceases.

1999 – Coal bed methane gathering activities begin pumping groundwater from the Dietz 3, Monarch and Carney coal seams in areas south and southeast of Big Horn Mine.

2000 – Backfilling and grading of Pit 3 is completed late in the year and Pit 3 Reservoir begins filling.

In Section 6.1.5 of the Reclamation Plan, alluvial groundwater from Tongue River and Goose Creek valleys is predicted to be a significant recharge source to the postmining coal aquifers in areas adjacent to the mine reclamation and to the mine backfill (spoils) as well via, in part, groundwater recharge from resaturated spoils along the downgradient coal/spoils contacts (see Exhibits RP-14, RP-15 and RP-16 of the Reclamation Plan). The mined edges of the Dietz 2 coal, Dietz 3 coal and, particularly, Monarch coal seams contact reclaimed spoils which in turn contact Goose Creek and/or Tongue River channels or the native alluvium underlying the stream valleys over broad lengths along the perimeters of reclaimed Pits 1, 2 and 3. Streamflow infiltration from Goose Creek and from Tongue River together with subsurface flow from the alluvium of these valleys has recharged the mine backfill, which has in turn recharged the native coal aquifers at the coal/spoils contacts. Groundwater in the alluvium of Tongue River valley south of Pit 3 Reservoir and streamflow in Tongue River north of the reservoir were also identified as the principal recharge sources to Pit 3 Reservoir via the South French Drain and North French Drain, respectively (see Sections 7.3.1.1 and 7.3.1.4 of the Reclamation Plan). Very little, if any, groundwater resaturation was predicted at Pits 4 and 5 because the coals mined in these areas naturally existed as remnants isolated from recharge sources of the Tongue River and Goose Creek valley floors. No groundwater aquifers were identified before or during mining in Pits 4 and 5 and none has been projected to develop after mining in either area (see Section 6.1.5, Reclamation Plan).

Chapter 4, Section 2.(h)(i) of the Wyoming Department of Environmental Quality, Land Quality Division Rules and Regulations states that “the recharge capacity of reclaimed

lands shall be restored to a condition which supports the approved postmining land use". Big Horn Coal's objective to restore the mine backfill and adjacent aquifers to a condition suitable for livestock watering would be greatly compromised were the spoils sufficiently impermeable so as to not readily transmit water horizontally as groundwater movement, or vertically as infiltration of surface water, inclusive of rainfall, snowmelt and streamflow. The infiltration rate of a soil or of strata where soil is absent is defined as the rate at which water infiltration takes place, expressed in depth of water per unit of time, usually in inches per hour. The following section of this text explores the approximate, effective infiltration rate of the mine backfill where the effective infiltration rate is broadly defined as the rate at which the backfill resaturated as a result of water infiltration from all sources including stream channel and other surface water infiltration combined with lateral groundwater inflow from unmined aquifers.

I.A Groundwater Recovery In Backfill Aquifer In Pits 1, 2, 3, 4 And 5

I.A.1 Infiltration Rates

No direct measurements have been made of infiltration rates on reclaimed lands at Big Horn Coal beyond those presented in the 1993-1994 Annual Report (Table 16). No attempt has been made to convert the infiltration rates of the 1993-1994 Annual Report into groundwater recharge or spoil resaturation rates. Instead, effective infiltration rates, as defined in the previous section, have been estimated for portions of Pits 1 and 2 corresponding to four topsoil request areas formerly approved by LQD before topsoil was applied on the regraded spoils. These areas, shown on Exhibit 1 accompanying this document, were selected for effective infiltration rate calculations because the timing and sources of groundwater recharge within Pits 1 and 2 can be estimated with some accuracy. The resaturation of spoils within these areas is credited almost exclusively to the infiltration of streamflow in Tongue River and Goose Creek and lateral groundwater flow from the alluvium of these valleys. Lateral groundwater flow to spoils from the Dietz 3 and Monarch coal seams and the infiltration of precipitation and snowmelt over the spoils probably constituted a very small fraction of the total spoil resaturation.

Pits 1 and 2

As of October 2001, groundwater in the backfill at Big Horn Mine had recovered to the potentiometric elevations shown on Exhibit 1. This exhibit also shows potentiometric elevations in Monarch coal adjacent to the mine and in Tongue River alluvium between Pits 2 and 3 near the South French Drain as of October 2001. The first step in estimating effective infiltration rates was to convert the potentiometric elevations shown within the topsoil request areas into volumes of saturated spoils. This was accomplished by first preparing a digital map of structure contours on the top of the Monarch coal from Exhibit D5-12 (Appendix D5) and then subtracting from this surface a unit amount of 22 feet representative of the average thickness of the coal (see Exhibit D5-11, Appendix D5) to derive structural contours on the bottom of Monarch coal. Using surface modeling software, this intermediate product was then subtracted from the potentiometric contour elevations (Exhibit 1) to derive approximate volumes of saturated spoils above the original Monarch floor (assumed pit floors) within each topsoil request area.

Having estimated the volumes of saturated spoils within the topsoil request areas of Pits 1 and 2, the final elements needed for computing approximate effective infiltration rates were an estimate of the effective porosity of the spoils and estimates of the time elapsed between when the spoils began resaturating and ending with the October 2001 groundwater level measurement date. Although the backfill of Pits 1 and 2 was undoubtedly constantly subject to some resaturation in the form of seepage from Goose Creek and Tongue River even as mining continued in the area, the date resaturation began was assumed to be equivalent to the date Tongue River was turned into its final channel, July 1978. Under this assumption, the time elapsed between July 1978 and October 2001 was constant for the four topsoil request blocks of Exhibit 1 at 23.2 years. The effective porosity of the spoils was assumed to be 20 percent in the effective infiltration rate calculations. A porosity of 23 percent was found for the spoils at the Plachek Pit through multiple well testing but all other multiple well tests at Big Horn Mine returned storage coefficients that were much lower (see Table RP-12, Reclamation Plan). The low storage coefficients were thought to be indicative of coarse-grained spoils being overlain by fine-grained materials (see Section

6.1.2, Reclamation Plan). While this hydraulic differentiation can be expected after the spoils are fully or nearly fully saturated, an effective porosity of approximately 20 percent is probably more indicative of the spoils in their dry, loose state.

Effective infiltration rates computed per the above procedure are presented on Table 1. The rates range from 5.9 to 13.9 inches per year, which is very high relative to what would be expected for the vertical infiltration of rainfall and snowmelt alone. As an example, Davis and Zabolotney (1996) found through groundwater flow modeling that the premining infiltration rate from surface water sources (precipitation, snowmelt, overland runoff, etc.) to shallow overburden aquifers at Belle Ayr coal mine was about 0.16 inches per year. Reclaimed lands at the mine were found to have an infiltration rate of about 2 inches per year. The authors concluded that the postmining infiltration rates will likely diminish over time as the spoils settle and as evapotranspiration losses increase with increasing vegetal growth. Big Horn Mine reported infiltration rates ranging from 0.10 inches per hour to 3.00 inches per hour from eight, double ring infiltration tests conducted on backfill in Pits 1, 3 and 4 (see Table 16, 1993-1994 Annual Report). The average infiltration rate from these tests was 0.82 inches per hour.

The reader is again advised that the effective infiltration rates of Table 1 are not true soil infiltration rates but are inclusive instead of groundwater recharge from all sources. The rates may also be biased somewhat high by the assumption that the total recharge period for Pits 1 and 2 was only 23.2 years prior to October 2001 when in fact the backfill of both pits was subject to some constant recharge that was probably not entirely captured by pit pumpage before July 1978, the assumed starting date for recharge. Conversely, resaturation in the Pit 1/Pit 2 area has not been limited to the topsoil application areas alone but has also occurred contiguous to these areas in pre-law portions of the mine. This could tend to bias the estimated effective infiltration rates low. Regardless of the analytical technique's limitations, the resultant infiltration rate values (recharge values) clearly indicate that the backfill of Pits 1 and 2 has resaturated very quickly and there are no apparent properties of the spoils that retard water infiltration or movement in either the vertical or horizontal planes.

Pit 3

As shown more fully in Section I.A.2. below, all indications are that the Pit 3 spoils have resaturated very rapidly, virtually in phase with the filling of Pit Three Reservoir. Effective infiltration rates were not computed for the Pit 3 spoils because the topsoil application dates (hence, the approximate backfilling dates) ranged over 16 years (1985 through 2000), but a large portion of the recharge was probably supplied by Pit 3 Reservoir as it began filling beginning in late 2000. Because of the diversity of recharge sources and the temporal duration of backfilling activities at Pit 3, it would be very difficult to establish a starting date for recharge with any accuracy.

I.A.2 Subsurface Flows

I.A.2.a Water Level Recovery Within Mine Backfill And Adjacent Affected Aquifers

Figures A-1 through A-28 in Addendum A are hydrographs of groundwater elevations versus time for wells monitoring the backfill aquifer and Carney coal, and wells monitoring all aquifers affected by mining, including the alluvium of Tongue River and Goose Creek valleys, and the Dietz 2, Dietz 3 and Monarch coal seams. Although some of the non-backfill wells were removed from the monitoring program in March 2001 (Change No. 6 to Permit 213-T5; partially approved April 20, 2001), groundwater elevations were measured in most wells as recently as October 2001. Groundwater saturation, as portrayed by hydrographs, is considered fundamental to understanding subsurface flow because the groundwater elevation in a well is a product of both horizontal and vertical water movement.

The text of the following sections identifies evidence of potentiometric declines in the coal aquifers caused by coal bed methane (CBM) gathering activities that began near Big Horn Mine in 1999. This is particularly true for the Monarch and Carney coals. Gas and groundwater production records of the Wyoming Oil and Gas Commission were interrogated via internet link on April 29, 2002 to obtain information relating to CBM activities for selected areas adjacent to Big Horn Mine. These areas include Sections 13 and 22 through 27 south and southeast of the mine (sections of land shown on Exhibit 1). The

search revealed the existence of 120 CBM wells in various stages of permitting and development (expired, cancelled or abandoned permits not included), although groundwater production data were recorded for only 20 wells; one in section 13 and the other 19 in section 26. All 20 wells are developed in either the Monarch or Carney coal seams. Many of the other wells not having groundwater production records also have no indication of the coal completion interval in the records reviewed for this search. The groundwater production data of the 20 wells are temporally variable, suggesting that the wells have been intermittently operated. What can be stated is that, in the period 1999 through early 2002, the cumulative groundwater production of the 20 wells was 799 acre-feet (AF); 50 AF from the one well in Section 13 and 749 AF from the 19 wells in Section 26. The well in Section 13 is in Carney coal and had an average groundwater production rate of 25 gpm from May 1999 through August 2000. The two wells with the largest cumulative water production in Section 26 (both in Carney coal) had average water production rates of 30 to 31 gpm from May 1999 through August 2000. The two wells with the lowest cumulative water production in Section 26 (both in Carney coal) produced at rates between 4 and 5 gpm. CBM development activities remain brisk around Big Horn Mine and the volumes of groundwater produced will almost certainly increase in the near future.

Hydrographs of alluvial wells

Hydrographs for the alluvial aquifers are presented as Figures A-1, A-2, A-3, A-9 and A-13. Those for wells 206-76 and 397-78 (Figures A-1 and A-2), located near the South French Drain (Exhibit 1), suggest water table recovery of about one to two feet from 1989 to present (fall 2001), probably as the result of the final backfilling of Pits 1 and 2. The water table elevation fluctuations within these two wells over the past several years appear to be within the ranges seen in 1979 and 1980. The hydrographs for the remaining three alluvial wells, Nos. 403-78, 508-79 and 644-80 (Figures A-3, A-9 and A-13, respectively), show no apparent influence of mining upstream of the mine on Goose Creek and Tongue River (wells Nos. 508-79 and 403-78, respectively) and downstream of the mine on Tongue River (No. 644-80; see Exhibit 1). Underflow in the alluvium of the stream valleys, as evidenced by the groundwater elevation trends of the five wells, appears

to have fully or nearly fully re-established, as predicted in the Reclamation Plan (Sections 6.1.5 and 6.2.2).

The Reclamation Plan concludes that the only drawdown observed in alluvium historically monitored by Big Horn Mine occurred in the immediate vicinity of South French Drain (Section 6.2.2), and this drawdown will be permanent as a result of the high water line of the reservoir always remaining below the base of alluvium intercepted by the drain. Permanent, postmining water table elevations predicted for the alluvium contiguous to South French Drain are shown on Exhibit RP-16. Water table elevations in alluvium of the same area as recorded in October 2001 are also shown on Exhibit 1 accompanying this text. The water table elevations of the two drawings are very similar and the inferred flow patterns vary only slightly with Exhibit 1 showing a somewhat smaller area of the valley floor underflow being affected by Pit 3 Reservoir drainage. Based on Exhibit 1 and Exhibit RP-16, it is concluded that the alluvial underflow conditions have been restored and the affects of Pit 3 Reservoir on alluvial water table elevations and flow patterns are as predicted.

Hydrographs of Dietz 2 coal wells

Groundwater elevations in Dietz 2 coal were predicted to return to premining conditions quickly after mining because saturated Dietz 2 coal was mined only in Pit 1 and the alluvial subcrop recharge zones of the aquifer were not disturbed by mining (see Section 6.1.5, Reclamation Plan). Groundwater hydrographs through October 2001 are presented in Addendum A for Dietz 2 coal wells Nos. 469-79, 596-80, 686-81, 687-81 and 828-84 as Figures A-8, A-12, A-18, A-19 and A-26, respectively. The wells are located on Exhibit 1. The hydrographs show that the potentiometric surfaces in wells Nos. 469-79, 686-81 and 687-81, located south and southeast of Pits 1 and 2, have recovered significantly since about 1994 to elevations equivalent or greater to those of the early 1980's. The mechanisms of aquifer recharge and subsurface flow in the Dietz 2 coal are clearly fully re-established south and southeast of Big Horn Mine. Groundwater elevations in wells Nos. 596-80 and 828-84 remain about four feet and two feet, respectively, below peak elevations observed in the early to mid-1980's. Water levels in these wells fluctuate from about one to two feet

between readings, indicating variable recharge and subsurface flow rates that are probably associated with cyclical precipitation changes and seasonal changes in Tongue River flow rates/stages. This is considered evidence of the aquifer flow functioning normally in response to natural changes in recharge volumes and rates. The differences in water elevations in wells 596-80 and 828-84 over what they were 15 to 20 years ago are small relative to the potentiometric heads existing above the top of the coal.

Hydrographs of Dietz 3 coal wells

Like the Dietz 2 coal, groundwater flow and potentiometric elevations in the Dietz 3 coal were projected to recover from drawdown quickly after reclamation at Big Horn Mine because none of the coal's alluvial recharge subcrop zones were disturbed by mining (see Section 6.1.5 Reclamation Plan). Groundwater hydrographs are presented in Addendum A for five Dietz 3 monitor wells: Nos. 462-79, 468-79, 576-80, 660-81 and 827-84 corresponding to Figures A-4, A-7, A-10, A-17 and A-25, respectively. The wells are located on Exhibit 1. In all cases, notes on the hydrographs indicate that the wells have become affected by CBM gas gathering activities beginning at various times from 1999 to October 2001. CBM wells have been withdrawing groundwater and gas from the Dietz 3, Monarch and Carney coal seams in areas immediately south and southeast of Big Horn Mine since approximately 1999. With the exception of well 576-80, all the Dietz 3 wells show water level recovery to potentiometric elevations slightly less than to significantly greater than what was observed in the early 1980's. By 1998, potentiometric elevations at well 576-80 had recovered to within less than four feet of peak elevations observed in 1986, but beginning in late 1999 the well has experienced renewed drawdown presumably as a result of CBM activities. The recovery of mining-related drawdown and reduction of flow in the Dietz 3 aquifer appears to have been substantially complete by 1998 or 1999 but since that time there has been significant renewed drawdown associated with CBM gathering activities. These activities are projected to locally escalate in the future and drawdown in the Dietz 3 will undoubtedly increase in areas within and adjacent to Big Horn Mine.

Hydrographs of Monarch coal wells

Mining at Big Horn Coal removed the Monarch coal's alluvial recharge subcrop zones and replaced them with spoils. The coal's postmining groundwater recharge is primarily via the spoils which in turn are recharged by underflow in the alluvium of Tongue River and Goose Creek, by seepage from Tongue River along its reconstructed length between Pits 2 and 3, and by seepage from Pit 3 Reservoir. Because the spoil recharge sources are areally extensive and supported by perennial water bodies, the recovery of potentiometric elevations and groundwater flow in the Monarch aquifer was projected to be relatively rapid after final reclamation (see Section 6.1.5, Reclamation Plan).

Addendum A contains groundwater hydrographs for three Monarch wells: Nos. 467-79, 584-80 and 825-84 corresponding to Figures A-6, A-11 and A-24, respectively. The hydrographs of all three wells show significant groundwater level recovery beginning in 1996 that was likely a result of substantially closing the Pit 1 final opening, but the recovery periods were relatively short lived until potentiometric declines began again in 1999 or 2000. Beginning in year 2000, the potentiometric trends in wells 467-79 and 584-80 reversed and the water levels rose abruptly to elevations unmatched in the history of the wells. This phenomenon is almost certainly indicative of gas buoyancy reducing the specific weight of the groundwater and causing the water levels in the wells to rise. This has not been observed to date in well 825-84 where the groundwater surface has steadily declined since late 1999. The potentiometric declines that began in the Monarch in late 1999 or 2000 are ascribed to local CBM gathering activities as is the apparent gas buoyancy found in wells 467-79 and 584-80. Although potentiometric elevations and groundwater flow in the coal had significantly recovered as the mine pits were backfilled, the recovery was not entirely complete by the time CBM activity-related drawdown began in 1999 and 2000. Ignoring the effects of gas buoyancy, up to about 10 feet of additional recovery to historic peak groundwater elevations remained at well 584-80, some 8 feet remained at well 825-84 and about 5 feet remained at well 467-79.

The potentiometric surface shown for the Monarch coal on Exhibit 1 adjacent to the reclaimed spoils is very similar in pattern and value to the projected postmining potentiometric surface of the coal shown on Exhibit RP-16 of the Reclamation Plan. The

drawings differ slightly in that the potentiometric contours of Exhibit 1, drawn with October 2001 water level measurements, are shifted slightly upgradient from those of Exhibit RP-16. This is due to the stage in Pit 3 Reservoir still being some six feet below its projected average elevation. As the reservoir fills, groundwater elevations in the spoils and adjacent Monarch coal will rise, causing the potentiometric contours of Exhibit 1 to shift downgradient in better agreement with the same contours of Exhibit RP-16.

Hydrograph of Carney coal well

The Carney coal seam was not physically or hydraulically affected by mining at Big Horn since it lies some 100 feet below the Monarch coal (see Section 6.2.2, Reclamation Plan). A hydrograph is presented for one Carney well in Addendum A - well 465-79 corresponding to Figure A-5. The hydrograph clearly shows no effect from mining, although potentiometric elevations in the well declined over 100 feet from 1999 through year 2000 as a result of local CBM gathering activities. The pattern and timing of the drawdown in well 465-79 is similar to that seen in wells Nos. 462-79, 468-79 and 660-81, developed in Dietz 3 coal, and to Monarch coal well 467-79.

Hydrographs of mine backfill wells

As previously mentioned, saturation of the mine backfill and establishment of groundwater flow through the backfill were also projected to be relatively rapid after mine reclamation because of the large, perennial recharge sources provided by Goose Creek, Tongue River and the Pit 3 Reservoir. Groundwater hydrographs illustrating recharge trends are provided for nine spoil wells in Addendum A. These include wells Nos. 655-81, 656-81, 657-81, 745-82, 816-83, 819-84, 823-84, 906-90 and 907-90 corresponding to Figures A-14 through A-16, A-20 through A-23, A-27 and A-28, respectively. A tenth spoil well, labeled "C-2001" on Exhibit 1, was constructed in late August 2001 near the north shore of Pit 3 Reservoir. No hydrograph has yet been prepared for this well because of the well's short period of record. The reader is also advised that well 816-83 in Pit 4 spoils and wells 906-90 and 907-90 in Pit 5 spoils are recording only minor groundwater saturation in keeping with the prediction set forth in Section 6.1.5 of the Reclamation Plan that there would be very little, if any, resaturation of the spoils in either of these two pits.

As predicted, all of the Pit 1, 2 and 3 spoil wells show relatively rapid and, in most cases, generally consistent groundwater recovery beginning up to 20 years ago in the early 1980's. Well 745-82, located north of Tongue River in Pit 3 spoils, and well 819-84, located east of Goose Creek in Pit 2 spoils, are showing pronounced seasonal water elevation fluctuations that are ascribed to changes in stream stages and alluvial water table elevations of the respective valleys. This phenomenon, also apparent to a lesser degree in wells 657-81 and 823-84, is demonstrative of the spoils' ability to rapidly transmit water from vertical and horizontal recharge sources (ie. high infiltration and horizontal groundwater movement rates). Groundwater recovery rates in Pits 1 through 3 spoils began diminishing between late 1997 to 2000, indicating that the potentiometric surface was approaching hydrostatic equilibrium with recharge and discharge sources. Groundwater elevations in the Pit 3 spoils contiguous to Pit 3 Reservoir will likely continue to ascend slightly, perhaps another two to four feet, as the stage in the reservoir ascends the final six feet above the approximate elevation observed October 2001 to its average operating elevation of 3560.5 feet.

Well 816-83 in Pit 4 spoils is 50 feet deep and with a groundwater elevation of 3634.0 (Oct. 2001) there is only some 5.5 feet of water in the well. This is insufficient for any practical use; therefore and as predicted, the Pit 4 spoils are not identified as an aquifer. Wells 906-90 and 907-90 developed in Pit 5 spoils are 75 and 160 feet deep, respectively. The groundwater elevations shown on Exhibit 1 for October 2001 translate to water column heights of 6.9 feet and 5.2 feet for wells 906-90 and 907-90, respectively. Again, these small water columns are insufficient for any practical well development and the Pit 5 spoils are not identified as an aquifer. The hydrographs for the Pits 4 and 5 wells do not suggest that the water levels may rise significantly. Instead, the groundwater elevations appear to be in dynamic equilibrium with local recharge and discharge sources. Further evidence that the Pit 4 and Pit 5 backfill does not/will not constitute an aquifer was seen in October 2001 when wells 816-83 and 906-90 were sampled for water quality analyses. Each well was bailed dry after yielding less than 10 gallons of groundwater.

I.A.2.b Potentiometric Surface In Backfill Aquifer

Exhibit 1 illustrates the potentiometric surface in backfill and adjacent Monarch coal at Big Horn Mine as of October 2001. The drawing also shows water table elevations in Tongue River alluvium adjacent to the South French Drain, as discussed above under the title *Hydrographs of alluvial wells*. Exhibit 1 shows that the groundwater gradient in Pit 1 is from west to east, from recharge provided by Goose Creek. In Pit 2 and between Pits 2 and 3, the Tongue River has a profound effect on the water table configuration. This is particularly evident with the 3580-foot water table contour traversing nearly parallel to the river between Pits 2 and 3, indicating flow directly from the river into the spoils and thence into Pit 3 Reservoir. The 3580-foot contour in the spoils of Pits 1 and 3 join the same water table contour in Tongue River alluvium south of South French Drain. Overall, the salient feature of Exhibit 1 is that the spoils of Pits 1, 2 and 3 are in direct hydraulic continuity with the alluvium of Goose Creek and Tongue River.

The potentiometric surfaces of the backfill, Monarch coal and Tongue River alluvium near the South French Drain on Exhibit 1 agree in form and value with the potentiometric surfaces projected for the same aquifers on Exhibit RP-16 of the Reclamation Plan. Potentiometric elevations shown on Exhibit 1 for the spoils are up to about 10 feet lower than those projected on Exhibit RP-16, especially through the northwestern portion of Pit 3 adjacent to Pit 3 Reservoir. The difference is due in part to the fact that the stage in the reservoir was still some six feet below its normal projected stage when Exhibit 1 was prepared (October 2001), and due in part to the fact that Exhibit 1 was drawn using additional backfill groundwater control points not available when Exhibit RP-16 was created. Overall, the potentiometric configurations of Exhibit 1 agree remarkably well with those of Exhibit RP-16, allowing the conclusion that the goal of restoring groundwater quantity has been met.

Exhibit 1 illustrates one groundwater feature in the spoils that is not shown on Exhibit RP-16. It is that Reservoir 14 contains a permanent pool supplied by groundwater in Pit 2 spoils. Although the pool depth is only some two to three feet, the reservoir did not go dry in year 2001 despite the occurrence of a severe drought that began in year 2000.

The 3580-foot groundwater contour encircling Reservoir 14 on Exhibit 1 indicates that the reservoir's evaporative losses locally suppress the spoils' potentiometric surface.

I.A.2.c Groundwater Production Rates In Backfill

No conventional aquifer tests have been completed in Big Horn Mine spoils beyond those that are reported in Section 6.1.2 of the Reclamation Plan; however, eight test holes and one monitor well (well C-2001) were drilled in Pits 1 and 3 in August 2001 and from this work additional data are available on approximate groundwater production rates in the spoils. The results of the tests described in the Reclamation Plan show a wide diversity in spoil hydraulics with transmissivities ranging from about 5 gallons per day per foot (gpd/ft) to over 22,000 gpd/ft. Production rates in those tests ranged from less than one gpm to 37 gpm. Overall, the transmissivity (a measure of an aquifer's total yield available to a well) of the spoils was projected to be at least as great as the undisturbed coals.

The eight test holes that were drilled in the spoils, together with monitor well C-2001, are located on Exhibit 1 and geologic logs for the sites are presented in Addendum A. The test holes were drilled in repeated attempts to construct five additional monitoring wells that would be used for assessing postmining groundwater elevations, water quality and aquifer hydraulic characteristics. The test holes could not be completed as monitoring wells because the spoils consistently caved into the boreholes at such large volumes and rates so as to preclude successful insertion of well casing. While sloughing of mine backfill in boreholes is not unique, the problem at Big Horn was obviously exacerbated in some cases by the boreholes producing large groundwater flows that washed out the unconsolidated materials. Groundwater yields estimated by experienced personnel during airlifting of the open boreholes are noted on the logs of three of the sites in Addendum A. Holes A-A and A-A1 produced approximately 20 to 25 gpm while hole B-A2 was noted as producing some 25 to 30 gpm, all from airlifting near the base of the spoils. Well C-2001 was noted as yielding 10 gpm during final airlift development. While the permeability and transmissivity of the spoils will probably diminish as the materials settle and compact, all evidence now indicates that groundwater yields in Pits 1 through 3 are more than sufficient to supply livestock watering wells.

I.A.3 Backfill Storage Characteristics

I.A.3.a Backfill Storage Characteristics Reported In Mine Permit Document

The groundwater storage characteristics of the backfill at Big Horn Mine are quantitatively and qualitatively assessed in the Reclamation Plan. Table RP-12 quantifies storage coefficients in spoils from four multiple-well pumping tests. The results range from a high of 0.23 for spoils of the Plachek Pit to a low of 0.0002 for a test completed in Pit 3 spoils. The high value is indicative of unconsolidated strata under water table conditions while the low value and others found like at the mine are indicative of groundwater under confined to semi-confined conditions. Similar storage coefficient values characterized the native coal and overburden strata of Big Horn Mine, with the largest storage found in the alluvium of Goose Creek and Tongue River valleys and the smallest values found in the deeper coal seams. By reference to studies conducted at strip coal mines in southeastern Montana (Van Voast et al., 1978), the Reclamation Plan cites low spoil storage coefficients indicative of rubble-strewn pit floors and cites further the conclusion that the premining and postmining occurrence and flow of groundwater are not expected to be dissimilar (Section 6.1.2, Reclamation Plan).

I.A.3.b Current Status Of Groundwater Storage In Mine Backfill

There have been no direct measurements of backfill storage coefficients at Big Horn Mine beyond those referenced above in the previous text section. However, indirect evidence of groundwater storage in the spoils exists in the findings and products presented above including the groundwater hydrographs of wells in the backfill (Addendum A), the potentiometric surface map of the spoils (Exhibit 1) and the logs of the test holes drilled in the spoils (Addendum A).

The hydrographs of the spoil wells in Pits 1 through 3 together with the potentiometric surface map of the spoils show groundwater recovery to predicted elevations over nearly all portions of the backfill. Below the phreatic surface of the spoils, groundwater is held in storage, as is true for any aquifer. Both the effective porosity

(unconfined storage) and confined storage properties of the spoils probably vary considerably over the mine as a result of the spoils' textural diversity, but overall, the effective porosity appears to be large as evidenced by the geologic logs of the spoils test holes (Addendum A) describing loose, caving materials with noticeable voids. The large porosity of the spoils described in the test holes is also demonstrative of materials exhibiting large permeabilities, and hence, large groundwater yields, which indeed was the case for the several test holes where yields were estimated. Groundwater also readily moves into and out of storage in the spoils, as evidenced by the seasonal water elevation fluctuations that are very apparent in the hydrographs of several of the spoil wells, most notably wells Nos. 745-82 and 819-84. These seasonal fluctuations are caused by the water table in the spoils rapidly responding to changes in recharge (river stage) and discharge (evapotranspiration losses), which in turn is indicative of an aquifer having large porosity and permeability.

Finally, groundwater storage releases and flow through the spoils have been sufficient to maintain a permanent pool in Reservoir No. 14 within Pit 2 through over a year of drought (2000-2001) when recharge from precipitation and runoff was very small and evaporative losses were high.

I.A.4 Recharge Capacity Of Mine Backfill

The data and findings presented in the previous sections of this text fully demonstrate the recharge capacity of the reclaimed lands within Big Horn Coal Mine.

II POSTMINING GROUNDWATER QUALITY

As defined in Section I, the intended post mining use of groundwater at the Big Horn Mine will be for livestock consumption. The Wyoming Department of Environmental Quality defines groundwater quality standards for this use (Class III) and others in Chapter VIII of Wyoming Water Quality Rules and Regulations (March 1993). Chapter VIII constituent and concentration suitability criteria for domestic (Class I), agricultural (Class II) and livestock uses are presented in Table 4. Based upon the intended use of groundwater from Big Horn Coal's restored and adjacent aquifer systems, the following evaluation is restricted to the assessment of groundwater for Class III laboratory analytical constituents and concentration limits. By mutual agreement with the WDEQ, Big Horn Coal Company also includes the analytical results and assessment for ammonia nitrogen.

Big Horn Coal Company commits to Class III groundwater quality restoration objectives for Big Horn Coal Company's Pits 1, 2, and 3 disturbance areas and adjacent aquifers. Premining assessments in the Pit 4 and Pit 5 areas conclusively demonstrated the lack of groundwater in the mine-affected geologic units of both areas. It was anticipated there would never be usable quantities of groundwater within either of these areas when fully reclaimed. This prediction has been confirmed, as discussed above under Section I.

A relevant water quality assessment which included backfill wells from several northern Powder River Basin (Gillette, Wyoming) coal mines has been compiled by the WDEQ (Ogle, 2002). Wells represented in this assessment were monitored for upwards of 15 years and demonstrated steady but only relatively slow recharge rates. Only one of the referenced wells had recharged to the premining level. Typically dissolution of sodium, calcium, magnesium, and sulfate during initial saturation resulted in an elevated TDS in sampled groundwater from these sources. Elevated sulfate and TDS routinely exceeded Class III limits during initial saturation. In general, elevated TDS and sulfate concentrations in the backfill aquifers declined as the aquifers continued to be recharged and flushed. In summary, with sufficient time, TDS and sulfate concentrations are expected to meet Class III limits.

The WDEQ's assessment also references generalized historic backfill water quality research from southeastern Montana as summarized by Van Voast et al (1976). The research indicated that backfill groundwater tends to contain increased concentrations of minerals and chemically resemble that of the associated inorganic aquifers rather than that of coal aquifers. Additionally, TDS concentrations generally range from 1,500 to 3,500 mg/L but were found to occur as high as 6,000 mg/L. The research also concluded that notable percentages of available salts were dissolved during initial backfill saturation and the concentrations of salts declined with exposure to subsequent pore volumes. Research indicates that, although trace metals might occur in undisturbed groundwater locally, they generally are more common in backfill area groundwater. The distribution and concentrations of dissolved trace metals in backfill groundwater was, however, determined to be of no great significance.

As discussed in Section 6.2.2 of the Reclamation Plan, there has historically been no mine-attributed change of water quality in the affected (Dietz 2, Dietz 3 and Monarch) coal aquifers, or in the two alluvial aquifer systems. The Carney coal aquifer, underlying the Monarch coal, was not physically or hydraulically affected by mining.

Big Horn Coal Company's groundwater monitoring database indicates that several different laboratories provided groundwater analytical services to the mine over the years. Northern Testing Laboratory of Billings, Montana, and Inter-Mountain Laboratories of Sheridan, Wyoming, provided much of the groundwater quality analytical services from 1980 through 1983. Records indicate virtually all of the groundwater analyses from about 1983 through most of 1990 were conducted by the Peter Kiewit & Sons' corporate laboratory, historically located in Sheridan, Wyoming. Inter-Mountain Laboratories resumed contract groundwater analytical services in late 1990 and continues to provide these services. Other than small differences in the reported quantifiable limits for lead, chromium, arsenic and selenium, there does not appear to be significant analytical variability resulting from changes in the laboratories used, or changes in the regulatory and industry-accepted laboratory practices that would have occurred within Big Horn's period of record.

II.A Constituents For Class III Water Quality Assessment

In consultation with the WDEQ/LQD, fourteen analytical water quality constituents of Class III criteria were selected for evaluating postmining groundwater quality characteristics at Big Horn Mine. These include: pH, total dissolved solids (TDS), the combined nitrate and nitrite compounds (reported as nitrogen), chloride, and sulfate along with dissolved concentrations of aluminum, arsenic, cadmium, cadmium, copper, lead, selenium, and zinc. With exception to the analysis of pH, which is a unitless measurement, all analytical results are reported in milligram per liter (mg/L) concentrations. Regulatory-defined maximum concentration limits or allowable ranges of each constituent are presented with the analytical result summary tables in Addendum B.

II.A.1 Monitoring Results For Class III Water Quality Criteria

Laboratory analytical data are compiled from 15 monitoring wells that are sampled annually during the current monitoring regime. The monitoring well sample locations are shown on Exhibit 1. The number of samples obtained from these wells varies, based upon well installation dates and historic monitoring frequencies. Analytical result summaries are presented in tabular format numerically by aquifer and include life of well minimum, maximum and arithmetic mean concentrations for each of the targeted constituents (Addendum B, Tables B-1 through B-15). Figures B-1 through B-6 illustrate graphic constituent concentrations for those wells that have exceeded one or more Wyoming Class III quality criteria. Big Horn Coal Company did not analyze combined nitrogen compounds as nitrate plus nitrite from approximately 1982 to 1996; however there are sufficient data to assess this constituent.

II.A.1.a Groundwater Quality In Mine Spoils

The analytical results of historic groundwater sampling from nine well locations within the reclaimed spoils of Big Horn Coal Company's five pit disturbances are presented in well identification numeric sequence in Tables B-1 through B-8.

Pits 1 and 2 spoils

Analytical results obtained from monitoring wells 656-81, 819-84, and 823-84 are used to assess backfill water quality of Pits 1 and 2. Results of the analytical assessment for these wells are presented respectively as Tables B-1, B-5, and B-6.

The water quality at wells 656-81 and 819-84 reflects the major influence to the backfill materials from the high quality waters of Goose Creek and its alluvium. With exception of a single occurrence of chromium (0.08 mg/L in 1986 at 819-84), targeted Class III constituent concentrations from both wells have not been exceeded. Four individual analytical results from 656-81 are considered anomalous and are not utilized in the assessment. Out of 37 samples from 819-84, two analytical results are considered outliers. Concentrations of dissolved solids at both wells are typically on the order of 1000 mg/L. Concentrations of all of the Class III constituents from these wells are considered stable.

The analyses presented in Table B-6 from reclaimed spoils well 823-84 confirm overall very high quality backfill recharge. Readily dissolved ions were apparently flushed from the newly saturated backfill at this location by approximately 1986. Since 1987, dissolved solids have ranged from 42 to 710 mg/L. Although primary recharge to the aquifer at this location is from the Tongue River, the unusually low concentrations of dissolved solids at this location likely result from the influence of nearby Reservoir 14. Sulfate concentrations continue to fluctuate somewhat, but average less than 150 mg/L. Since 1987, of the eight-trace metals targeted, zinc was detected twice at 0.02 and 0.05 mg/L, and copper was detected once at 0.02 mg/L. Records indicate that, from 1987 through 1991, pH laboratory analyses of samples from this well consistently were above the Class III limit of 8.5, with a maximum pH measurement of 10 occurring in October 1990. Since 1992, three pH measurements have exceeded 8.5 while the life of well average pH from 37 samples is 7.6. These occurrences of elevated pH indicate not only the presence of soluble carbonate in the backfill matrix, but more importantly, these occurrences further confirm the nearly pristine backfill groundwater's initial lack of buffering capacity resulting from low concentrations of dissolved cations. Figure B-2 graphically illustrates the historical pH values of well 823-84.

Pit 3 spoils

Three additional backfill wells are situated in Pit 3 reclaimed spoils on the north side of the Tongue River. These include 745-82, 657-81 and the recently installed C-2001. Analytical results of Class III constituents for these three wells correspond respectively with Tables B-3, B-2, and B-8.

Analytical results from 745-82 have never exceeded any of the Class III constituent limits. Historically, TDS concentrations demonstrate a conclusive downward trend from 3760 mg/L in 1982 to approximately 1100 mg/L in recent years. The peak sulfate concentration has declined from 2230 to less than 600 mg/L since 1999. With exception to copper and zinc occurring near the detection limit on isolated occasions, Class III trace metals are generally no longer detected in well 745-82.

The analytical results presented in Table B-2 for spoils well 657-81 are atypical of those obtained from other wells in Big Horn Coal Company's Pits 1, 2, and 3 backfill. Several factors contribute to the delayed stabilization of groundwater quality at 657-81. These factors include localized low aquifer transmissivity and probable infiltration of low quality groundwater resulting from exposure to numerous active underground coal fires burning in the partially saturated areas of the adjacent Monarch coal seam to the northwest. The underground coal fires are located outside of Big Horn Coal's Pit 3 disturbance in areas of historical underground mine workings and are currently observed approximately 1,000 feet northwest of 657-81. Water temperature measurements during sampling of 657-81 have historically fluctuated and have exceeded 20° Celsius on several occasions. Elevated groundwater TDS concentrations potentially attributable to underground combustion of local coal aquifers is found in the results of baseline monitoring presented in Appendix D6 of the Welch No.1-North Mine's Permit 497-T3 (1999). The Welch Mine is located north and adjacent to Big Horn Mine property. There are documented, active burns in dry or partially saturated zones of the Dietz 2, Dietz 3, and Monarch seams within and adjacent to the Welch Mine that are believed to be associated with the abandoned Acme underground coal mine. One of the historic Welch Mine Dietz 3 monitoring wells (D3-M1), located within one half mile downdip (and hydraulically downgradient) from a documented active burn,

consistently yielded elevated TDS concentrations of approximately 5800 mg/L in the early and mid-1980's, prior to the well's abandonment. Other Dietz 3 monitoring wells closer to the burn were dry, however, down hole temperature measurements at these locations exceeded 70° C. Additionally, several Monarch coal wells located less than one mile downgradient from the burn contained elevated baseline TDS concentrations on the order of 2500 mg/L, over two times the concentration observed in Big Horn Mine's 825-84 Monarch monitoring well.

Since sampling commenced at 657-81, peak TDS concentrations (6440 mg/L in 1984) have declined to less than 6000 mg/L in recent years, but typically remain above target Class III limits. Several times throughout monitoring, concentrations of dissolved solids have shown dramatic fluctuations, apparently from subtle temporary shifts in the principal source of recharge or infiltration paths. In 1991, TDS concentrations abruptly fell to 546 mg/L with another significant temporary reduction in TDS occurring in 1999. Maximum sulfate concentrations of 3280 mg/L have fallen and continued to remain below Class III limits since 1996. Although chromium concentrations intermittently exceeded 0.05 mg/L from 1982 to 1989, since 1990 this element has not been detected at 657-81. Analytical results for pH, TDS, sulfate and chromium are provided in graphical format as Figures B-3 through B-5.

A single water sample (Table B-8) has been collected from the recently installed Pit 3 spoils monitoring well (C-2001) that was completed in the northern area of the backfill. Initial water quality testing confirmed all constituents to be below the targeted livestock criteria limits. Currently, sulfate concentrations are at 2100 mg/L and the TDS results are reported to be 3960 mg/L. With exception to zinc, which was found to be present at 0.02 mg/L, there were no detectable concentrations of the Class III trace metals present. Water quality in the adjacent spoils is expected to continue to improve quickly as a result of further influence from the new Pit 3 Reservoir.

Pit 4 spoils

Although there is insufficient quantity of water to develop for livestock use in the reclaimed Pit 4 backfill, sufficient volume is available to sample. Because of very limited

infiltration, the water quality at the single monitoring well (816-83, Table B-4) has been slow to stabilize. Water quality at the well has, however, shown significant improvement. Historically, the pH has fallen below the targeted range of 6.5 to 8.5 and TDS, sulfate and chromium have exceeded the targeted Class III limits. These constituent concentrations are presented in graphical format as Figures B-6 through B-8. Additionally, at one time or another, all of the other seven Class III trace metals have been detected. As of the most recent three samples collected since 1997, only TDS has exceeded target Class III limits from a single sample.

Pit 5 spoils

Due to the lack of groundwater in the Pit 5 area prior to mining, as anticipated, the backfill contains insufficient quantity of groundwater to develop for livestock use. Sufficient water is available to sample well 906-90 by purging slowly with a hand bailer. The well produced less than 10 gallons during the most recent sampling event. Analytical results for this well are summarized in Table B-7 and with some exceptions mentioned below, are generally within Class III limits. A single sample collected in April 1998 contained TDS concentrations above 5000 mg/L. Also, there have been three radical single sample spikes in nitrate and nitrite concentrations at the well occurring in 1998, 1999, and 2001 that have ranged from 113 to 338 mg/l. Figures B-9 and B-10 graphically show concentrations of TDS and nitrate and nitrite compounds from 1992 through the present. Ammonia concentrations show simultaneous spikes ranging from approximately 62 to 133 mg/L. Very low concentrations of aluminum, copper, selenium and zinc have been present on occasion in samples from well 906-90; however these trace metals are typically not detected. With exception to the occurrences of the three nutrient concentration spikes mentioned earlier, backfill water quality at Pit 5 appears relatively stable and the groundwater has otherwise consistently met livestock use limits.

Livestock grazing probably has not contributed to the intermittently elevated nitrogen compounds observed at 906-90, based upon the limited amount of seasonal unconfined grazing conducted within and above the reclaimed Pit 5 area. Although there is the potential for isolated remnants of nitrogen based blasting agents to occur within surface coal

mine backfill, in this case the source for the elevated concentrations of nitrogen compounds is more likely attributed to backfill recharge water that is exposed to the underground coal fires known to exist in the adjacent, abandoned underground Acme Mine workings. Baseline ammonia concentrations at the Welch No.1 Mine's historic D3-M1 monitoring well (discussed earlier in this section), intermittently exceeded 15 mg/L. During the same period of baseline groundwater monitoring, several other Welch Mine Dietz 3 and Monarch monitoring wells located within one mile downgradient from areas of the Acme Mine underground burn also demonstrated erratic low-level fluctuations in ammonia and combined nitrate and nitrite concentrations.

Tongue River alluvium

Groundwater quality of the Tongue River alluvium aquifer is monitored at a single downgradient well location from the Big Horn Mine (644-80, Table B-9). Groundwater quality of the alluvium at this location has been and continues to be of excellent livestock quality. With exception to a single anomalous occurrence of lead, Class III limits have not been exceeded in over twenty years of routine monitoring. For this assessment, one analytical result for nitrate and nitrite (1.22 mg/L) and one lead result (0.24 mg/L) are considered anomalies and were not included for the statistical assessment.

Dietz 2 coal

The analyses from two recent Dietz 2 coal aquifer water samples obtained downgradient from the Big Horn Mine at well 828-84 (Table B-10) confirm excellent livestock water quality. Sulfate is not a detectable constituent at this location and TDS averages 1250 mg/L. Trace metal concentration averages are below detectable levels.

Dietz 3 coal

Analytical results from wells 468-79 and 827-84 are assessed in Tables B-11 and B-12. These results characterize the water quality downgradient from the Big Horn Mine in the adjacent Dietz 3 coal aquifer. The data from both wells confirm excellent water quality for livestock use and indicate no degradation of water quality in approximately two decades of monitoring.

Monarch coal

Two downgradient Monarch coal aquifer wells (467-79 and 825-84) are located to the east and northeast of the Big Horn Mine. The analytical results obtained from over 15 years of monitoring both wells are presented in Tables B-13 and B-14. As with the water quality from the overlying Dietz 2 and Dietz 3 coal aquifers, groundwater quality from the Monarch coal continues to meet livestock use criteria. Class III constituents have never exceeded target limits to date, and there have been no apparent changes in constituent concentrations resulting from Big Horn Mine's operations.

Carney coal

The analytical results obtained from 35 samples collected since 1979 from monitoring well 465-79 are presented in Table B-15. The data represents historic water quality monitored from the Carney coal aquifer. As stated previously, Big Horn Coal did not physically or hydraulically impact the Carney coal. Water quality of the Carney aquifer has and continues to be suitable for livestock use.

III VERIFICATION OF POSTMINING PROBABLE HYDROLOGIC CONSEQUENCES

III.A Review Of Predicted Probable Hydrologic Consequences

As stated in Section 6.2.2 of the Reclamation Plan, the coal seams mined at Big Horn Coal, in descending order the Dietz 2, Dietz 3 and Monarch coals, together with the alluvium of Goose Creek and Tongue River valleys, were identified as the only strata physically mined that is capable of yielding enough groundwater to be classified as aquifers. The Carney coal seam, another aquifer found about 100 feet beneath the Monarch, was not physically or hydrologically affected by mining. Prior to mining, the Dietz and Monarch coal seams were locally recharged primarily by groundwater where the coals subcropped in saturated alluvium of Goose Creek and Tongue River valleys. Mining within Pits 1, 2 and 3 variously affected groundwater elevations in the coal seams depending upon the positions of the pits relative to the coals' alluvial subcrop zones. Potentiometric declines of 10 feet and more were recorded in the Dietz 2 and Dietz 3 seams up to about one mile downdip (southeast and east) of mining and up to about 1.5 miles downdip of the mine in Monarch coal (Section 6.2.2, Reclamation Plan). The coal seams were dry in Pits 4 and 5 and no aquifers were intercepted in these areas. The southern boundary of Pit 3 intercepted saturated alluvium of Tongue River along a length of about 2,000 feet. This caused the water table in the alluvium to decline over a portion of the valley floor between the river and the mine pit. Mining did not cause water table declines in alluvial wells monitored by the mine other than those proximate to the southern boundary of Pit 3 (Section 6.2.2, Reclamation Plan). No unnatural groundwater quality changes were observed in either the affected coal seam aquifers or in the alluvium of the stream valleys (Section 6.2.2, Reclamation Plan). The channel and alluvial deposits of Goose Creek were also mined in the 1950's and 1960's but hydrologic impacts were not predicted for this mining because it was pre-law.

With the creation of Pit 3 Reservoir, the postmining hydrology of Big Horn Mine will be significantly different than premining. Beyond the existence of the reservoir where none existed prior to mining, the changes will be rather limited with regard to postmining groundwater quantity and quality. The reservoir will be supplied primarily by the North

French Drain, which connects the reservoir to channel flows in Tongue River, and by the South French Drain, which connects the reservoir to saturated alluvium of Tongue River upstream of the North French Drain. Other, projected water supplies to Pit 3 Reservoir include groundwater sources from reclaimed saturated spoils and the Dietz 3 and Monarch coal seams but these sources will be minor relative to what will be provided by the two French drains (Section 7, Reclamation Plan). The average pool elevation of the reservoir will be below the floor of Tongue River alluvium where the alluvium connects to the South French Drain, meaning that the water table in the alluvium proximate to the drain will be permanently lower than premining. Permanent drawdown of the alluvial water table is projected to occur only proximate to the South French Drain where it will extend slightly less than half-way across Tongue River valley south from Pit 3 Reservoir to the river channel (see Exhibit RP-25 and Section 7.3.1.1.1, Reclamation Plan). The mined edges of the Dietz 3 and Monarch coal seams will be below the normal operating level of the reservoir and, although the edges of both seams were covered with backfill, the reservoir should act as a constant head recharge source to the coals similar to the natural subcrops of the coals in saturated alluvium of both Tongue River and Goose Creek (see Exhibits RP-15 and RP-16, Reclamation Plan).

III.A.1 Groundwater Elevations, Recharge And Infiltration Rates, Water Quality And Aquifer Yields

Groundwater elevations

Groundwater elevations in the affected coal seam aquifers and in the reclaimed spoils are projected to recover relatively rapidly to equilibrium conditions after final backfilling of the mine pits and after Pit 3 Reservoir fills (Section 6.2.2, Reclamation Plan). Groundwater elevations will recover quickly in the aquifers because of significant recharge in the form of seepage from perennial channel flows in Tongue River and Goose Creek, as well as by groundwater flow from the saturated alluvium of these valleys where the alluvium contacts the spoils and where the alluvium contacts remaining coal subcrops. Groundwater elevations in Dietz 2 coal are projected to fully recover within two years after final backfilling of Pit 1 (by year 1999). Groundwater elevations in the Dietz 3 and Monarch seams are predicted to fully recover within two to three years after filling of Pit 3 Reservoir. Postmining

groundwater elevations in the coal seam aquifers are expected to be similar to premining groundwater elevations. Groundwater elevations and gradients in the reclaimed spoils of Pits 1 through 3 were projected to be approximately the same as the premining Monarch coal. Attainment of hydrostatic equilibrium within the spoils is projected to occur within five years of final Pit 3 reclamation (Section 6.2.2, Reclamation Plan). Pit 3 Reservoir began filling in late 2000, and as of January 2002, it appears that the reservoir will reach its normal pool elevation (3560.5 feet) before the end of the first quarter 2002.

Infiltration and recharge rates

Section 6.1.5 of the Reclamation Plan describes how the reclaimed backfill will be recharged simultaneously with and by the same mechanisms as the coal aquifers since the backfill is physically connected to the same alluvial recharge sources and to the reconstructed Tongue River channel adjacent to Pit 2. Recharge to all affected aquifers and to the backfill of Pits 1 through 3 is projected to be relatively rapid, as described above. A backfill aquifer will not be restored in Pits 4 and 5 because these areas lie stratigraphically and topographically above the Tongue River valley where lateral groundwater recharge is inadequate to sustain significant groundwater saturation (Section 6.2.2, Reclamation Plan). Recharge to the Pits 4 and 5 spoils is predicted to be restricted to precipitation infiltration as opposed to the significant lateral groundwater recharge provided by the alluvium of Tongue River and Goose Creek valleys.

Postmining infiltration rates are qualitatively discussed in Section 6.2.2 of the Reclamation Plan in the context of referencing groundwater elevation recovery rates observed in coal monitoring wells. Postmining water table elevations in the backfill of Pits 1 through 3 are predicted to be hydraulically connected to the Monarch coal and to the saturated alluvium of Goose Creek and Tongue River. Based on these observations and conclusions, groundwater resaturation rates (groundwater infiltration rates) are projected to be relatively rapid for the affected coal and Tongue River alluvial aquifers as well as for the backfill itself.

Groundwater quality

The groundwater quality of the postmining spoils is predicted to be diverse but total dissolved solids concentrations are projected to decline over time as saturation levels and

groundwater flow patterns stabilize. Ultimately, the groundwater quality of the spoils is predicted to be suitable for the same uses that the coal aquifers had prior to mining (Section 6.2.2, Reclamation Plan).

Aquifer yields

Section 6.1.5 of the Reclamation Plan concludes that premining groundwater flow directions and gradients will be restored in the coal aquifers proximate to the reclaimed spoils of Pits 1 through 3; hence it can be inferred that the groundwater yields, transmissivities and storage characteristics of these aquifers will be restored. Section 6.2.2 of the Reclamation Plan concludes that the transmissivities of the resaturated spoils in Pits 1 through 3 appear to be at least that of the undisturbed coal aquifers; therefore it can be inferred that these spoils will yield sufficient groundwater for livestock watering as did the premining coal aquifers.

III.A.2 Projected Surface Water/Groundwater Interactions

In Section 6.2.3 of the Reclamation Plan, the most significant source of postmining coal recharge is stated to be Tongue River and its alluvium. The coal seams, particularly the Monarch, are projected to be the principal source of groundwater recharge to the backfill of Pits 1 through 3. Streamflow depletion in Tongue River associated with aquifer drawdown is described as minute, if any, and projected to cease after reclamation is complete and groundwater elevations in the coals and spoils aquifers have recovered. Section 7 of the Reclamation Plan describes the functions of the French drains on Pit 3 Reservoir to permanently connect the reservoir to the channel flow and alluvial groundwater flow of Tongue River. The South French Drain will permanently lower the water table in the alluvium of the river proximate to the drain. These projections taken together, it is clear that the Tongue River fluvial system is projected to remain a critical component in the surface and groundwater functions of Big Horn Mine.

III.B Demonstration Of Groundwater Restoration

This document has shown that the quantity of groundwater in the affected aquifers and backfill at Big Horn Mine has been essentially fully restored. Lateral groundwater flow from

the alluvium of Tongue River and Goose Creek valleys together with direct infiltration of streamflow in Tongue River over its reconstructed reach have been predominate recharge sources restoring subsurface flow and water storage in the backfill of Pits 1 through 3 and the affected coal aquifers. Resaturation (effective infiltration) rates in Pits 1 through 3 have been high while the backfill of Pits 4 and 5 remain essentially dry, as predicted. As of October 2001 or before, groundwater elevations and patterns of groundwater movement in the backfill and in the affected coal seams proximate to the backfill closely matched those predicted for equilibrium conditions in the Reclamation Plan. The storage characteristics of the coal seam aquifers have been restored with the recovery of the aquifers' potentiometric elevations. The backfill rapidly transmits water from surface sources as evidenced by groundwater elevations in the backfill changing seasonally in response to changes in stream stages and changes in alluvial water table elevations in Tongue River and Goose Creek valleys. Groundwater moving in to and out of storage in the backfill has been sufficient to provide a perennial pool in Reservoir 14 of Pit 1. Evidence obtained from test holes and most monitor wells indicates moderate to high rates of groundwater movement and storage in the spoils. Groundwater yields recorded from test holes and monitor wells completed in Pits 1 through 3 spoils are generally more than adequate to supply conventional livestock watering wells.

Water table elevations in the alluvium of Tongue River valley adjacent to the South French Drain on the Pit 3 Reservoir show permanent drawdown, as predicted. The alluvial groundwater will remain a principal supply source for the reservoir. Groundwater elevations and flow patterns now found within the alluvium near South French Drain agree with predictions made in the Reclamation Plan and appear to be in equilibrium with recharge provided by the Tongue River fluvial system.

With the exception of well 657-81 in Pit 3, groundwater quality data for Pits 1 through 3 spoils overwhelmingly indicate that the water is acceptable for livestock use per standards set forth by the WDEQ/WQD (Rules and Regulations, Chapter VIII, Section 5, Table 1). Solute concentrations exceeding the livestock use standards have been relatively rare in the backfill groundwater with the exception of well 657-81 in Pit 3 and well 823-84 in Pit 1. Over the past 20 years, total dissolved solids and sulfate concentrations in the groundwater of well 657 have frequently exceeded the livestock use standards, although the concentrations have diminished somewhat over time. High solute concentrations in well 657-81 are probably

due to the fact that the transmissivity (groundwater flow rate) of the spoils is known to be very small there. The elevated sulfate and TDS concentrations at well 657-81 will very likely continue to diminish over time as the spoils continue to be recharged and flushed, as has been observed at mines in the northern Powder River Basin (see Section II). The groundwater quality in well No. 823-84 in Pit 1 is uniquely different from all other spoil aquifer wells in that the solute concentrations there are very low but pH values frequently exceeded the livestock use standard prior to 1992. The high pH values in this well have diminished over time as the carbonate buffering capacity of the water increased with increasing solute concentrations. With the exception of the high pH values, the quality of the water at well 823-84 has otherwise frequently been excellent, meeting even the domestic use criteria of the Wyoming Department of Environmental Quality, Water Quality Division (R&R, Chapter VIII, 1993). The groundwater quality at both wells 657-81 and 823-84, while continuing to improve over time, is not indicative of Big Horn Mine's spoils aquifer as a whole having water quality suitable for livestock consumption.

Groundwater elevations in the backfill will continue to rise some two to four feet in areas proximate to Pit 3 Reservoir as the reservoir fills to its normal operating elevation. The patterns of groundwater flow will remain the same as shown in this document and water table elevations in the backfill and in the spoils proximate to the backfill will continue to fluctuate together in phase with seasonal changes in the stages of Tongue River and Goose Creek. Solute concentrations in groundwater of the Pit 1 through 3 spoils will continue to diminish and become more areally consistent as soluble mineral constituents are flushed out of the spoils.

C-3 Objection Exhibit A

1. Jason N. Todd

Mr. Todd is educated and trained in mining engineering with nearly twenty years of mining experience, which spans four continents and has primarily focused on coal mining. Mr. Todd will offer his opinions as to Brook Mining Co., LLC's surface coal mine application at issue in this contested case, particularly the submitted mine plan and its related documents, by evaluating the mining techniques, assumptions and parameters utilized in developing the mine plan, and the overall technical adequacy of the mine plan. A written designation of Mr. Todd's preliminary opinions, including the materials he has examined in developing his opinions, a statement of his qualifications, and his compensation for his work related to this matter are attached hereto as **Exhibit A**.

Mr. Todd will testify consistent with his statements and opinions as set forth in **Exhibit A** and reserves the right to expound upon and/or clarify those statements and opinions. Big Horn notes that discovery is yet to begin in this matter and Mr. Todd also reserves the right to supplement his opinions based upon the review of additional information and to provide testimony in rebuttal to any opinions offered by any expert witness designated by any other party to this action, provided that such rebuttal is within his areas of expertise.

Pursuant to the Order of Consolidation and Schedule of the EQC in this matter, dated March 13, 2017, all and any exhibits to be utilized or relied on by Mr. Todd will be disclosed on or before May 17, 2017. As a matter of good faith disclosure, at this time Mr. Todd does not intend to use any exhibits other than portions of Brook Mining Co., LLC's surface coal mine application, which is available to all parties in this matter.

2. Paul (Joe) Gerlach

Mr. Gerlach is a Professional Geologist, educated and trained in the fields of geology and hydrology with forty years of experience in these fields, including significant experience related to coal mining operations. Mr. Gerlach also has significant experience in preparing and assisting in the preparation of several mine and/or reclamation plans related to surface coal mining permit applications. Mr. Gerlach will offer his opinions as to Brook Mining Co., LLC's surface coal mine application at issue in this contested matter, particularly regarding the hydrologic, geologic, subsidence and safety analysis and related impacts associated with the proposed coal mining operations. A written designation of Mr. Gerlach's preliminary opinions, including the materials he has examined in developing his opinions, a statement of his qualifications and his fee schedule for his work related to this matter, are attached hereto as **Exhibit B**.

Mr. Gerlach will testify consistent with his statements and opinions as set forth in **Exhibit B** and reserves the right to expound upon and/or clarify those statements and opinions. Again, Big Horn notes that discovery is yet to begin in this matter and Mr. Gerlach also reserves the right to supplement his opinions based upon the review of additional information and to provide testimony in rebuttal to any opinions offered by any expert witness designated by any other party to this action, provided that such rebuttal is within his areas of expertise.

Pursuant to the Order of Consolidation and Schedule of the EQC in this matter, dated March 13, 2017, all and any exhibits to be utilized or relied on by Mr. Gerlach will be disclosed on or before May 17, 2017. As a matter of good faith disclosure, at this time

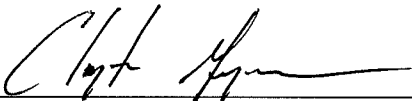

the exhibits Mr. Gerlach currently intends to utilize to support his opinions and testimony can be found included as part of **Exhibit B**. Mr. Gerlach also reserves the right to utilize any portion of Brook Mining Co., LLC's surface coal mine application as an exhibit to support his testimony, which is available to all parties in this matter.

Both Mr. Todd and Mr. Gerlach may also testify in support of any of the objections set forth in Big Horns Objections to Proposed Brook Mine Permit Application filed with the Wyoming Department of Environmental Quality, dated January 25, 2017, attached hereto as **Exhibit C**, provided the testimony is within their area of expertise.

Big Horn reserves the right to call any expert witness, whether retained or non-retained, designated by any other party to this action or identified in any manner pursuant to the Wyoming Rules of Civil Procedure, including those identified in written discovery responses and/or documents produced in response to discovery requests.

Big Horn also reserves the right to designate any and all witnesses necessary for rebuttal to any expert testimony offered by any other party to this matter.

ATTN: Mr. Alan Edwards, Assistant Administrator

**RE: Objections to Proposed Brook Mine Permit Application, Sheridan County,
Wyoming**

Dear Mr. Wendtland,

Big Horn Coal Company (BHCC) writes to provide objections to the Brook Mine permit application.

During the course of our review, we discovered that the information was inconsistent among the locations noted in the public notice. We advised Brook Mine's legal counsel of the inconsistency on December 20, 2016. We are not aware if the information was updated to correct the inconsistency between the locations.

Our objections are based upon what BHCC believes to be the most accurate, up-to-date information and relate primarily to the permit application's lack of adequately addressing hydrologic issues that could significantly affect existing and future water rights, the quantity and quality of surface water and groundwater within and adjacent to BHCC, the potential for coal seam fires to erupt in both the open pit and subsurface openings and the potential for miner safety and environmental harm proposed in the permit Mine Plan. The objections are referenced to text section headings, exhibits and addenda of the permit application Mine and Reclamation Plan.

Objection No. 1 – Mine Plan & Rec Plan Review

Big Horn Coal has reviewed the proposed mine and reclamation plan and is concerned with the general lack of detail contained in the proposed plan. It appears that no sampling, testing or analytical work of any sort has been performed to support the surface and highwall mine designs and plans. It is Big Horn Coal's opinion that excavating in the area, surrounding the Big Horn Mine will create a large safety concern and environmental

liability as the TR-1 trench cut could become inundated with water from the historic backfill of the BHCC spoils of Pit 1 and Pit 2.

BHCC would like to put on record that it is providing written notice of its concerns so Brook Mine and other affected parties have notice and are aware of these issues and that Big Horn Coal is not responsible for any personal, property or environmental damage or other loss due to the disturbance activities associated with the Brook Mine, its affiliated companies or successors in interest.

BHCC has not consented to overlapping permit boundaries nor has it been indemnified of any disturbance related to Brook Mine's proposed activities as it relates to the reclamation obligations and BHCC's reclamation liabilities.

Objection No. 2 – Section MP.4; Exhibit MP.4-1; Section MP.5; Section MP.13; Addendum MP-6

Section MP.4 and Exhibit MP.4-1 provide plans for the development of a highwall mining trench through and the development of highwall mining panels beneath reclaimed backfill of BHCC Pits 1 and 2 adjacent to Goose Creek and the Tongue River in the southeastern portion of the Brook Mine permit area. The trench would penetrate through the bottom of the backfill allowing mining of Carney coal found about 70 feet beneath the backfill. The backfill of the proposed trench area averages about 90 feet thick. The northeast corner of the highwall panel area appears on Exhibit MP.4-1 to be equivalent to the Brook Mine permit boundary, and would be less than 100 feet from the bank of the Tongue River. On Figure MP-6.1-1 of Addendum MP-6, the highwall mining panels are shown even closer to the Tongue River channel, and the reason for the disparity between the figure and Exhibit MP.4-1 is unexplained. BHCC is very concerned over and objects to the permit's disturbance, affected and permit boundaries all being equivalent to the mining panel boundary in this most environmentally sensitive area adjacent to the bank of the Tongue River. The affected area boundary shown on Exhibit MP.4-1 around the other proposed mining panels typically extends well beyond the disturbance boundary for reasons unexplained in the Mine Plan.

Mine Plan Section MP.4, together with all Mine Plan text inclusive of Section MP.13 and Addendum MP-6, are silent on the subject of the special textural and hydrologic characteristics of the proposed southeastern highwall mining area in Sections 15 and 22, T57N, R84W. The area is unique in that the strata overlying the coal to be mined includes a thick layer of unconsolidated, saturated backfill exhibiting shallow groundwater elevations of 20 feet or less below ground surface where existing ground elevations are 3600 feet and lower. The water surface in BHCC's postmining Reservoir 14 in the SESE Sec. 15 is an expression of the groundwater table. The groundwater throughout Pits 1 and 2 is directly connected to and recharged by Goose Creek and the Tongue River, as documented in the Big Horn Mine's Reclamation History, Groundwater Restoration Demonstration (GRD) approved by the WDEQ/LQD as Change No. 9 to Permit 213-T5 in August 2002. The GRD verifies that the Pits 1 and 2 backfill resaturated very rapidly, indicative of unconsolidated, porous material connected to perennial stream recharge sources nearby. Mine Plan Section MP.4 is silent on the subject of managing massive sloughing that may occur in the saturated and nonsaturated backfill of the southeastern highwall mining area as the highwall mining trenches are excavated through the backfill to the base of Carney coal. Section MP-5 of the Mine Plan also fails to present an

alternative water management and treatment plan to be followed should groundwater inflow volumes exceed infrastructure design capacities.

BHCC finds the assessment of potential land subsidence and the remediation plan presented for land subsidence in Addendum MP-6 to be inadequate relative to protecting the value and function of its lands, particularly for protecting the stability of the Tongue River and the quality of shallow groundwater connected to the river. Addendum MP-6 does not absolutely discount the possibility of land subsidence above the highwall miner holes, nor does it provide a plan for the discontinuation of any southeastern area highwall mining should subsidence occur in the lowlands contiguous to Tongue River or Goose Creek. The environmental implications of subsidence developing adjacent to Tongue River and Goose Creek are so severe as to warrant, at a minimum, a permit commitment to temporarily or permanently cease all mining throughout all of the southeastern highway mining area should any subsidence develop in any of the area at any time. The permit's plan for "backfilling will commence within 12 months of a subsidence location being identified if self-healing is not providing sufficient remediation" (Section MP-6.4, Addendum MP-6) is environmentally unacceptable for the southeastern highwall mining area because: 1) the stability and alignment of Goose Creek and Tongue River could be jeopardized should subsidence occur, and; 2) any groundwater quality impacts associated with underground coal fires developing in mine openings would have direct and essentially immediate access to Goose Creek and Tongue River via the shallow groundwater table.

The subsidence control plan presented in Addendum MP-6 is inadequate. It appears that no analytical work of any sort (sampling, material testing, etc.) has been performed in support of the highwall mining design presented in the mine plan. Additionally, it also appears that no geotechnical work of any sort has been performed. Addendum MP-6 discusses general assumptions for highwall mining penetration depths, entry widths, cutting heights and support pillars. This information is presented somewhat anecdotally and in the case of the support pillars, it states that "Support pillars will be designed to have a width equal to or exceeding the maximum extraction thickness anticipated in a highwall mining hole based on the mine's geologic model. This width-to-height ratio of at least 1:1 results in pillar stability factors that exceed recommended values suggested by National Institute for Occupational Safety and Health's (NIOSH) ARMPs-HWM stability program for the overburden thicknesses expected. Pillar dimension will also be in accordance with Brook Mine's Ground Control Plan approved by MSHA."

No material strength data (coal strength, overburden strength, interburden strength, etc.) is provided in the mine plan document. BHCC suspects that no material strength information has been gathered or determined. Can the NIOSH stability factors actually be achieved? This is unknown at this point as no definitive geotechnical and material strength data has been presented in the mine plan. The coals present in this area are of a younger age. Younger age coals have much weaker strengths than older age, deeper coals and it is quite possible that the safety and stability factors needed to safely and effectively execute the highwall mining approach presented in the mine plan cannot be achieved. BHCC insists that further analysis be performed to definitively prove that the web and barrier pillars dimensions are appropriate and that they will meet NIOSH's minimum stability factor of 1.3.

Very little highwall mining has been performed in Wyoming. Highwall mining has been performed relatively recently at the Bridger Mine, which is located in Southwest Wyoming.

While the exact details are unknown, BHCC is aware of at least one “cascading pillar failure” at that operation and fortunately, there were no injuries. It is suspected that this failure was caused by improper pillar layout and design. BHCC is concerned that the anecdotal mine design presented in this document is inadequate and must be performed with proper analytical data.

Objection No. 3 – Section MP.5.9; Section MP.6.2; Addendum MP-3; Section MP.8

The groundwater model of Addendum MP-3 was improperly constructed and executed because the model does not recognize the unique textural and hydraulic characteristics of saturated backfill in BHCC’s Pits 1 and 2, but instead simulates the backfill in the same fashion as native overburden strata (see Section 4.0 of Addendum MP-3). Section 2.5.1 of Addendum MP-3 states “no site-specific hydraulic conductivity information is available for the over/interburden (model) layers”. In fact, hydraulic conductivity data are available for the backfill from former monitor wells in the Pit 1 and Pit 2 area and for the Plachek Pit backfill. That data are provided in the GRD referenced under Objection No. 1 above. Hydraulic conductivity values assigned to the spoils together with all other “overburden” strata in the model are very small (less than one tenth) relative to those shown for backfill in the GRD. The groundwater model ignores determination of the spatial extent of drawdown in the water table of Pit 1 and Pit 2 backfill that is connected to the water table in Tongue River and Goose Creek alluvium, which in turn is supplied by flows in both streams. The text of Section MP.6.2.3 states “Drawdowns of the overburden were not modeled and only isolated sands where encountered are expected to be affected”.

Section 4.9 and Figure 4.9-11 of Addendum MP-3 shows where the groundwater model was used to predict water table drawdown in Tongue River valley alluvium at “alluvial target” points distributed over nearly a six-mile reach of the valley floor. Section 4.9 states that “the maximum impact to the Tongue River alluvium is conservatively estimated to reach 2.5 feet of drawdown near the river”. Addendum MP-3 and Section MP.6.2 provide no description or drawing of the spatial distribution of drawdown during mining in BHCC’s saturated backfill or in the alluvium of Tongue River and Goose Creek that is hydraulically connected to the backfill. Neither does the groundwater model explore potential permanent groundwater elevation changes associated with the highwall mining panels acting as drains to the backfill and alluvial water table via the highwall trench pits. Water table drawdown approaching 2.5 feet in the alluvium of Tongue River valley over a valley distance of nearly six miles would in fact represent a very large volume water loss that would likely cause stream flow losses.

The groundwater model of Addendum MP-3 fails to report groundwater inflow rates to any of the proposed mine excavations. Section MP.8 of the Mine Plan states “It is estimated that the total water use will be approximately 400 million gallons per year.” This is equivalent to an average daily use rate of 760 gallons per minute, about 3.36 acre-feet per day, or about 1,226 acre-feet per year. The Mine Plan does not identify the specific source(s) of the water beyond mentioning that “Industrial water will be obtained from groundwater wells or from water collected in sediment and flood control reservoirs”. The groundwater model of Addendum MP-3 does not include the effects of withdrawing any groundwater from wells for industrial or other uses, nor does it include the effects of dewatering wells mentioned in Section MP.5.9. In short, the Mine Plan is devoid of a hydrologic budget identifying specific groundwater sources, the quantity of industrial

water projected to be available from flood control reservoirs and sediment ponds, and the determination of what would remain of groundwater and surface water supplies while supplying the industrial water needs. BHCC is concerned that the value of its surface estate and future options for developing its surface estate could be marginalized by such a large water use demand, especially considering that water demands at Wyoming coal mines are primarily consumptive.

Objection No. 4 – Section MP.11; Addendum MP-5

The fire control plan referenced in Section MP.11 and presented in Addendum MP-5 describes measures to be taken to prevent and control fires in the mine pits, fires in the mine's processing and shop facilities, equipment fires and rangeland fires. BHCC objects, however to the Mine Plan and Addendum MP-5 not providing plans to control and extinguish new subsurface coal fires that may develop or existing subsurface coal fires that may become rekindled or enlarged as a result of the highwall mining panels that will be opened outboard of the highwall trench openings.

Attachment 1 provided with this Objection No. 4 is a drawing showing the approximate extent of underground coal mine fires in the area of proposed highwall mining in Sections 10 and 15, T57N, R84W, as reported by the U.S. Geological Survey in 1980. The fires in this particular area originated with mining of the Monarch coal. This and other nearby historic underground mines have long been known to exhibit numerous subsidence features and underground coal mine fires, and in the late 1980s BHCC received approval from the WDEQ/LQD to permanently place nearly 10 million bank cubic yards of overburden over the area shown on Attachment 1 in an attempt to reclaim the subsidence and control the fire. That unique reclamation feature is known as the Pit 3 Subsidence Dump in Big Horn Mine's reclamation history. The proposed highwall mining will develop mine openings in the Carney and Masters coal seams beneath the Monarch seam in areas that are known to still exhibit evidence of underground coal fires. Plumes of steam and smoke have been observed again over the general area of Sections 10 and 15 this winter of 2016-2017. These observations indicate that, in places, the perimeter of the historic subsurface coal seam fires has expanded notable distances from the referenced 1980 boundary delineation.

The subsidence control plan of Addendum MP-6 does little to guarantee the long-term protection of BHCC's surface estate especially where highwall mining panels will be driven beneath underground coal mine fires having a long history of activity. Section MP-6.2 of Addendum MP-6 provides numerical calculations for subsidence chimney heights, but there is no investigation of the potential that the historic mine fires may have compromised the structural integrity of strata underlying the fires and overlying the coals targeted for highwall panel mining (the interburden), leaving the interburden more prone to subside than normal. BHCC is particularly concerned and objects to highwall mining beneath or adjacent to pre-existing underground mine fires because of the potential for oxygen and water to be transmitted from the highwall mining openings to "hotspots" in the seams already burning via highwall trenches or via fractured or subsided interburden above the panel openings. BHCC strongly disagrees with the legitimacy of the plan stated in Section MP-6.4 of Addendum MP-6 which states "Backfilling will also be performed if it is determined that the introduction of water and oxygen could contribute to spontaneous ignition of the remaining coal not extracted from the highwall mining operations". BHCC

contends it to be common knowledge in the mining industry that oxygen and water are key catalysts in causing spontaneous combustion in coal, whether the coal be in mine openings or in stockpiles. BHCC also believes that the introduction of additional water and air to a coal seam already on fire is especially problematic.

Section MP-6.3 of Addendum MP-6 commits to maintaining highwall mining mapping and subsidence documentation in a subsidence report that will be available for inspection. BHCC objects to the Mine Plan not committing to freely submitting the highwall mining mapping and subsidence documentation report to all owners of surface estate within the Brook Mine permit area. BHCC also objects to the fact that the Subsidence Monitoring and Assessment reporting of Section MP-6.3 does not include mapping, photographing and describing all evidence of surface or underground coal fires occurring within the Brook Mine permit area whenever such evidence becomes available throughout the life of the mining and post-mining periods.

Objection No. 5 – Section MP.1.3; Exhibit MP.1-1

The mine plan on Page MP-5, identifies the “disturbance boundary includes all lands that will be physically and directly disturbed during mining.” Exhibit MP.1-1 shows the disturbance boundary as a dashed orange symbol that outlines an entire pink hatched polygon, identified as “DISTURBANCE FOR YEAR 2016,” located in Sections 15, 21, 22 and 27 of Township 57 North, Range 84 West.

Within the pink hatched polygon, there are existing assets to Big Horn Coal Company. These assets include a rail spur, water tank, pump house, access roads, fences and land owned by BHCC. Also within the pink hatch polygon is the mainline of the Burlington Northern Railroad and associated lands owned by Burlington Northern.

Based on the definition of Disturbance Boundary as indicated on page MP-5, does Brook Mine indeed have the rights to physically and directly disturb these lands within the pink hatched polygon? From the public record, BHCC has not been able to determine whether Brook Mine has secured surface owner consent from all surface owners, including the railroad, for these activities

Objection No. 6 – Section MP.1.5

The mine plan states on Pages MP-5 and continue onto page MP-6 that “Coal will either be temporarily stored in the pit or directly hauled off site.”

There is no mention in the permit as to where the coal will be hauled off site. Additionally there is no known agreement with the County of Sheridan, indicating approval to haul mineral across county roads.

Objection No. 7 – Section MP.1.9

The mine plan states on Pages MP-7 that “The Brook Mine will operate in conjunction with Taylor Quarry (Permit No. SP-757)... The Mine will work with Taylor Quarry to minimize impacts on Taylor Quarry’s operation.”

The following paragraph states “The Brook Mine will not obstruct Big Horn Coal’s (Permit 231-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal’s 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1.

To remain consistent with the statements made in regards to the Taylor Quarry, Big Horn Coal requests that the paragraph referencing Big Horn to be replaced and restated as follows:

“The Brook Mine will operate in conjunction with the Big Horn Mine and that the Brook Mine will work with Big Horn Coal to minimize impacts to Big Horn Coal operations. Specifically, Brook Mine will not obstruct Big Horn Coal’s (Permit 213-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal’s 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1.”

Big Horn Coal requests that the text be updated in the previous paragraph to reference the correct permit number for Big Horn Coal Company as (Permit 213-T8).

Objection No. 8 – Section MP.3.1, Section MP.3.1.3 – Roads; Exhibit MP.3-1

As stated in the mine plan on Page MP-11, “Primary roads are any road used for transporting mineral or spoil, or frequently used for access or other purposes for a period in excess of six months, or roads to be retained for postmining use.”

WDQ/LQD Rules and Regulations (R&R) Chapter 4, Section 2(j)(vii):

Primary roads.

(A) Certification. The construction or reconstruction of primary roads shall be certified in a report to the Administrator by a registered professional engineer. The report shall indicate that the primary road has been constructed or reconstructed as designed and in accordance with the approved plan. The report shall be available for review at the mine site within 30 days following the completion of construction of each primary road.

Mine plan Exhibit MP.3-1, titled Transportation Network identifies proposed primary haulroads as a solid black line, for the use of transporting mineral or spoil. Yet, there are no haulroads identified in the SE quarter of Section 15, Sections 21, 22 or 27. If the Brook Mine plans to haul mineral or spoil materials from the proposed Trench Cut (TR-1), there should be indication of a primary haul road leaving TR-1, accompanied by a certification of the road design. Unless there are no plans of transporting mineral or spoil from the TR-1 area.

Objection No. 9 – Section MP.4.2.3 – Stockpiles; Exhibit MP.4-3

The mine plan states on Page MP-16, “Stockpiles will not be constructed on unsuitable backfill.”

Mine plan Exhibit MP.4-3, Stockpile Locations identifies Topsoil Stockpile TS-1B proposed location within an area known as the Placheck Pit. This area was mined by Big Horn Coal from 1956 through 1963. It is Big Horn Coal's understanding that the proposed area beneath TS-1B is indeed unsuitable material and that topsoil should not be placed in the area as proposed on Exhibit MP.4-3. Additionally, Big Horn Coal is not aware of a surface owner consent document between Brook Mining Company and the Burlington Northern Railroad that would allow the crossing of the mainline with loaded haul trucks.

Objection No. 10 – Section MP.6.1; Exhibit MP.7-1

Exhibit MP.7-1 represents the operational Surface Water and Groundwater Monitoring Program. There are only two downstream surface water monitoring sites, identified as Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir. The text on page MP-41 of the Mine Plan states "However, the Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir will be disturbed by facilities disturbance."

Big Horn Coal believes there is inadequate downstream monitoring in the proposed plan. Upon disturbing of Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir, there will be no sites downstream of the Brook Mine to collect adequate surface and groundwater data to prove that there are no off site environmental impacts from the proposed operation.

Objection No. 11 - Addendum MP-2, Exhibit MP-2

The proposed Sediment Pond SP-8 is located within the current postmine approved Reservoir 14 constructed by BHCC. The bottom elevation of Reservoir 14 is currently at 3575 with a peak elevation at 3589. Sediment Pond SP-8 bottom elevation is proposed at 3585 with a high water elevation proposed at 3590. It is noted below the area capacity table on Exhibit 13, "1. Pond is entirely incised. No Spillway hydraulics are provided."

These elevations lead BHCC to believe the plan for construction of SP-8 will require Reservoir 14 to be completely backfilled prior to construction of SP-8. BHCC requests that the reconstruction and the water quality within Reservoir 14 be restored to pre-mining conditions before final bond release is allowed.

Objection No. 12 – Exhibit MP.4-1; Exhibit MP.4-2; Exhibit MP.4-5; Exhibit RP.5-1

The proposed mine plan indicates that topsoil and overburden removal will occur upon the BHCC Property and within the TR-1 area in years 1 and 2 of operation. Exhibit MP.4-1 shows coal removal to occur over the same first two years of operation. Exhibit MP.4-5 shows the overburden backfill sequence within TR-1 will occur in year 2. Exhibit RP.5-1 shows the topsoil replacement sequence within the BHCC Property occurring in years 12-16.

BHCC objects to this timeline of topsoil replacement upon its property. The BHCC property is the first to be disturbed and the last to be reclaimed. BHCC asks the question as to why every other proposed disturbance area is backfilled and topsoiled within a 2 to 3 year time frame except around the BHCC facilities area. The topsoil replacement timeframe is unacceptable and not contemporaneous in accordance with the Surface Mining Control and Reclamation Act, (SMCRA) and it is requested that the final

reclamation around the BHCC Property be within the 2 to 3 year time frame, similar to all other areas around the mine.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 14 – Section MP.4.4.1

It is a well-known fact within the mining industry that the term “Reserves” connotes that the mineral being extracted can be done so economically. BHCC opines that the mining approach presented in the mine plan cannot be done economically. Based on our internal

knowledge; the operating cost for a contractor to perform highwall mining is in the \$8/Ton to \$12/Ton range, which is very close to the domestic spot price for this type of coal. By the time the other costs for the surface mining to develop the highwall mining, transportation, G&A, etc. are taken into consideration, this operation appears to be completely uneconomical.

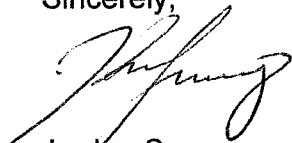

The market for this coal is unclear. The two closest coal mines, Decker and Spring Creek, serve the domestic and international market. Port capacity to the international market is constrained and it is unlikely that Brook Mine will secure access. Domestic demand has been in decline and is significantly oversupplied. Without a definitive market, the Brook Mine is at risk of commencing operations, producing product it cannot sell economically, and reclamation obligations that it cannot fund.

Objection No. 15 – Section MP.15

Objection No. 4 above introduces the fact that the underground mine fires in this area are still burning and have expanded. Section MP.15 does not, in any way, address that the burned areas have expanded. A surface mine excavation that comes in contact with a historic mine fire could be catastrophic in many ways, including: impacting the safety of mine workers, damage to equipment, wildfire initiation, etc. BHCC believes this mine plan has not adequately addressed surface mining activities that will occur near underground mines and insists that the Brook Mine operators must perform the necessary testing and analysis to prove that the proposed mine plan will not be impacted by historic mine fires. Specifically, attachment 1 provided with Objection No. 3 above shows that trench TR-2 is planned very near an area that was burning and is likely still burning. Given that the burned area has likely expanded, this area should not be disturbed at all.

In conclusion, Big Horn Coal Company feels strongly that the Brook Mine permit application should not be approved or deemed technically complete. The mine and reclamation plan lack a significant amount of detail that is required for a technical completeness determination, as stated in the above mentioned objections.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jordan Sweeney', written in a cursive style.

Jordan Sweeney

General Manager
Big Horn Coal Company

Counsel: Please see the attached.

And I apologize for having to use Dropbox – I tried unsuccessfully for quite some time to divide Dr. Marino's report into smaller portions but some of the individual pages are greater than the 25 MB limit for EQC electronic filing. Please let me know if you have any difficulty retrieving the report from Dropbox. The report was filed as part of our objections and was an exhibit to our petition, but the original version may be better, so I wanted to be sure to provide that to you.

And while I have you, thanks to Andrew for the CD with the permit application.

Thank you,
Shannon

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)
) **DOCKET 17-4802**
TFN 6 2-025)

EXPERT WITNESS DISCLOSURES

Pursuant to the March 13, 2017 scheduling order, the Powder River Basin Resource Council (“Resource Council”) hereby provides the following disclosures regarding expert witnesses who will appear in the above-captioned proceedings. These disclosures are made in accordance with Wyoming Rule of Civil Procedure 26(a)(2). All final exhibits and witnesses will be named no later than noon on May 17, 2017.

1. Gennaro G. Marino Ph.D., P.E., D.GE

Dr. Marino will present testimony on the subsidence risk presented by the mine and reclamation plan and will identify deficiencies in the permit application related to subsidence evaluation and prevention. A copy of Dr. Marino's report was originally attached to the Resource Council's objections and filed with DEQ at that time. Given the size of some of the exhibits to the report, it is unable to be attached to these disclosures but a complete version of his report is available for downloading via Dropbox at:

<https://www.dropbox.com/s/80ctznf4mcau8uc/RAMBM%20Report%20012317.pdf?dl=0>

Dr. Marino will present the opinions discussed in the report and other opinions related to subsidence he has drawn from reviewing the permit application.

Dr. Marino is the President of Marino Engineering Associates, Inc. with an office at 1370 McCausland Ave, St. Louis, MO 63117. Dr. Marino is a registered Professional Engineer in Wyoming. Dr. Marino's bio and list of professional qualifications is available at <http://www.meacorporation.com/leadership.php>. This information states, in part, that Dr. Marino has given expert testimony on numerous occasions within his range of engineering experience. Also during the course of his career he has authored over 90 articles and research publications on advanced engineering projects and authored a textbook: Earthquake Damage: Inspection, Evaluation and Repair. A copy of Dr. Marino's *curriculum vitae* is attached to these disclosures.

Dr. Marino will be compensated by the Resource Council for his time and travel expenses.

2. Mickel Wireman M.S., P.G.

Mr. Wireman will provide opinions related to the hydrology aspects of the permit application, including the sufficiency of the water monitoring plan, impacts to the hydrologic balance within and outside the permit area, and impacts to alluvium and alluvial valley floors. A copy of the report he has prepared is provided with these disclosures.

Mr. Wireman is the President of Granite Ridge Groundwater, LLC in Boulder, Colorado, and he is a former hydrogeologist and National Groundwater Expert with the Environmental Protection Agency's Region VIII Office in Denver. A copy of his *curriculum vitae* is attached.

Mr. Wireman has let his Wyoming geologist registration lapse, but he has associated with Wyoming professional geologist Sue Ann Spencer for the purposes of his testimony. Ms.

Spencer has provided a certification that she has reviewed Mr. Wireman's findings and that she finds them compliant with the standards of a professional geologist in Wyoming.

Mr. Wireman will be compensated by the Resource Council for his time and travel expenses.

3. Stu Levit, M.S.

Mr. Levit will present testimony on the inadequacies in the reclamation bond amount. Mr. Levit does not have an expert report; however, his opinions related to the reclamation bond amount were incorporated into the Resource Council's objections.

Mr. Levit is an employee of Center for Science in Public Participation with an office at 224 North Church Avenue, Bozeman, MT 59715. Mr. Levit formerly worked for the Montana Department of State Lands, Abandoned Mine Reclamation Bureau as a Land Reclamation Specialist, where he designed mine reclamation project plans. Mr. Levit's professional qualifications are available for review at <http://www.csp2.org/expertise>.

Dated this 3rd day of April, 2017.

Education

- Ph.D. University of Illinois at Urbana-Champaign, 1985
Civil (Geotechnical) Engineering
- M.S. Rutgers University, 1975
Civil (Soil Mechanics and Foundations) Engineering
- B.S. University of Dayton, 1972
Civil Engineering

Honors and Professional Credentials

Civil and Environmental Engineering Alumni Association Distinguished Alumnus Award from the University of Illinois, 2015

American Bar Association (ABA), Expert Witness Committee, Chairman of Civil Engineering Subcommittee, 2014 to present

Geo-Diplomate Award from ASCE, 2013

Registered Professional Engineer in Alabama, Arkansas, Colorado, Florida, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, North Dakota, Ohio, Oklahoma, Pennsylvania, Tennessee, Utah, Virginia, West Virginia, Wyoming, and National Accreditation.

Central Illinois Civil Engineer of the Year, American Society of Civil Engineers, 2011

Semi-Finalist for the Regional Outstanding Civil Engineering Achievement Award, American Society of Civil Engineers, 2010

Elected Member of the Geotechnical Advisory Committee for the Illinois Mine Subsidence Insurance Fund, 2008-2011

Chairman and Founder of Geotechnical Engineering Division, American Society of Surface Mining and Reclamation to 2003

Selected onto the Board of Consultants by the National Academy of Science for the study of Slurry Impoundment Failures, 2001

Selected by the U.S. Bureau of Mines to be an In-House Geotechnical Consultant at the

Minneapolis Research Center

Selected to a National Committee on Training of adjustors, contractors and engineers on reconstruction technologies for earthquake damage

Member on American Standard for Testing of Materials Committee on Soil and Rock (D18)

Registered Professional Engineer with the National Council of Examiners for Engineering and Surveying

Engineering Open House Award for Development of a Foundation Retrofit Methodology

Member of Society of Mining Engineers, American Society of Civil Engineers, American Society of Testing Materials, National Association of County Engineers

Professional Experience

7/97-Present	President and Senior Geotechnical/Civil Engineer for Marino Engineering Associates, Inc., Urbana, Illinois
1985-Present	Expert Witness on numerous Geotechnical/ Civil Engineering subjects
1/80 to 7/97	Geotechnical and Civil Engineering Consultant (research and practice)
1/88 to 5/93	Consultant to the Civil Engineering Department at the University of Illinois
3/86 to 3/88	In-House Geotechnical Consultant on U.S. Bureau of Mines research projects
6/85 to 5/87	Research Engineer and Principal Investigator in Civil Engineering at the University of Illinois
10/76 to 9/78	Geotechnical Research Engineer, Ensco, Inc., Port Royal Rd, Springfield, VA 33100
10/75 to 9/76	Project Engineer, ECB Engineers, Inc., Broad St. Falls Church, VA 22000
6/74 to 10/75	Soils Engineer, Haller and ShimeI Consulting Engineers, Leland Ave., Plainfield, NJ 07000
1/73 to 8/73	Soils Engineer, Joseph S. Ward and Assoc., Roseland Ave., Caldwell, NJ 07006

Geotechnical Engineering Experience

- Foundation feasibility studies and designs for various types of structures
- Foundation evaluation and design over shallow abandoned coal workings
- Field feasibility study and inspection of caissons for a high-rise building
- Analysis of ground conditions and construction difficulties for deep foundation projects
- Design and field supervision of grouting in soil and rock
- Evaluation of the cyclic or dynamic behavior of soils
- Slope stability and stabilization
- Pavement design
- Earth retaining system design
- Canal and berm seepage analysis
- Field mapping and analysis of ground conditions for rock excavations
- Field instrumentation work for underground openings
- Investigation of tunneling conditions and ground support in rock and soft ground
- Evaluation of the long-term stability of room and pillar mines
- Evaluation of mine permits for surface, room and pillar, and longwall mining
- Mine subsidence potential prediction
- Subsidence engineering investigations
- Evaluation of pipeline response to subsidence
- On-site supervision and inspection
- Laboratory testing

Forensic Engineering

- Analysis of groundwater seepage
- Investigation of damage to earth retaining systems
- Investigation of earth and concrete dam failures
- Rock hardness evaluation
- Analysis of the ground effects on failed plastic and large diameter steel pipeline systems
- Investigation and evaluation of earthquake and ground vibration damage
- Investigation and evaluation of damage to structures from ground movement (e.g. settlement, frost, and heaving) and other causes
- Investigation of slope failures
- Evaluation of pavement failures
- Evaluation of stability of underground openings and mines
- Evaluation of subsidence damage from underground mines
- Evaluation of subsidence damage from salt mining
- Evaluation of mine backfilling or grouting conditions

Construction & Structural Analysis

- Pre-bid analysis of ground conditions for installation of a slurry wall and a pipeline
- Evaluation of pipeline response to subsidence
- Foundation evaluation and design over shallow abandoned coal workings
- Estimation of subsidence damage cost from longwall mining
- Design of foundations to mitigate structural damage
- Repair methodology for earthquake damage
- Repair methodology for ground movement damage

Research Experience

2013 Principal investigator of development of a sinkhole warning system under a building using TDR technology.

1993 Analytical modeling of the response of transmission pipelines to ground movement for the U.S. Bureau of Mines.

9/79 to 9/93 Involved as Technical Director in funded research on mine subsidence related projects. Most of this work is in cooperation with The University of Illinois. The scope of the projects range from analysis of: the short- and long-term stability of the mine structures and overburdens; the nature and magnitude of subsidence movements in the overburden and on the surface; the behavior of surface and underground structures to subsidence; subsidence damage prediction; design and implementation of abatement procedures against hazards from subsidence as well as development of advanced reconstruction procedures for homes damaged by subsidence.

10/76 to 9/78 As a Research Engineer involved in the evaluation of geophysical data for assessment of geologic and geotechnical site conditions. The geophysical data was collected from field test sites by using borehole radar and acoustic sensors.

Technical Training Activities

- Researched and developed a detailed course for insurance adjusters on inspection and evaluation of earthquake damage claims.
- Instructor of workshop for architects: Approaching Earthquake Design and Damage Repair of Residential Structures, Jackson, Tennessee, 1992
- Developed "Research News" for the Illinois Mine Subsidence Fund. This is a periodic newsletter which was to disseminate research results in the area of mine subsidence.
- Developed general specifications for a number of advanced schemes for repairing mine subsidence damage in residential structures.
- Researched and developed a detailed course on repair of earthquake damage for insurance adjusters.
- Developed training course on logging Rock Core of Sedimentary Rocks.
- Developed workshop on Mine Subsidence, Damage and Remediation for Walmart, 2012

CURRICULUM VITAE

MICKEL WIREMAN

Prepared: December, 2016

EDUCATION

Bachelor of Science, Geology, 1976, Western Michigan University, Kalamazoo, MI

Master of Science, Hydrogeology, 1987, Western Michigan University, Kalamazoo, MI

Post MS: Advanced Ground-Water Hydrology, Colorado School of Mines, Geochemistry of Ground-Water Systems (USGS advanced short course), numerous ground-water related classes and seminars on various aspects of hydrogeology, ground-water protection, remediation and management

PROFESSIONAL EMPLOYMENT RECORD

2014 – present

President – Granite Ridge Groundwater, LLC

Provides scientific / technical consultation to a variety of clients

Active member of Sub-Committee on Groundwater (DOI Advisory Committee on Water Information)

Director – GWPC Ground Water Research and Education Foundation

Member – Western Michigan University Geosciences Department Advisory Council

Adjunct Instructor – Metropolitan State University, Global Water Concerns

Past consultant to The World Bank - Worked on hydrologic restoration project in lower Yangzi River basin and mine closure in Romania

Past President – US Chapter of International Association of Hydrogeologists

Past Director – NGWA Science and Engineering Division

1987 to 2014

National Ground-Water Expert, US EPA Region VIII. Provided scientific and technical support to EPA programs (including Superfund, RCRA, Enforcement, NEPA and Water programs), other Federal agencies, International programs and ground-water protection / management programs in several western states. Extensive experience in hydrogeologic characterization and remediation of hardrock mine sites, hydrogeologic aspects of uranium mining and oil and gas development, hydrology of mountain watersheds, DNAPL sites, fractured rock settings, nutrients in ground water, ground-water monitoring, ground-water sensitivity / vulnerability assessments, source-water / wellhead protection. Position included working closely with policy makers, decision makers and attorneys.

Teaching – Currently teaching Basic Principles of Groundwater and Contaminant Transport for Ground- Water Protection Council. Has served as adjunct professor at Metropolitan State College in Denver where he taught a class in Contaminant hydrology. Founder and co-instructor of EPA class entitled Basic Principles of Hydrogeology and Contaminant Hydrology. This class was offered to State DEQ and Environmental protection staff and was delivered 12 times in eight states. He also teaches classes for the National Ground -Water Association and Geological Society of America. Has developed and taught workshops in Eastern Europe and Middle East.

Expert testimony - Has provided expert testimony numerous times in federal court, State court, State Water Quality Control Commission and State Water court and before the Nuclear Regulatory Commission. Cases involved water rights issues, violations of State and Federal environmental laws / permits and re-licensing of in-situ uranium mining operations.

International Experience – Has worked extensively in Eastern Europe (Estonia, Ukraine, Romania, and the Republic of Georgia), Russia, the Middle East (Oman, Bahrain and Iraq), and China as a Technical Expert with EPA Office of External Affairs, EPA Office of Research and Development, US AID and The World Bank.

1981-1986

Hydrogeologist, Leonard Rice Consulting Water Engineers, Inc. Responsible for ground-water geology studies including interpretation and evaluation of hydrogeologic systems, aquifer testing, water supply development, water well drilling, ground-water contamination and monitoring and western water rights. Duties required collection and analyses of data, report preparation and expert testimony.

AFFILIATIONS

Colorado Ground-Water Association

Geological Society of America
National Ground Water Association
International Association of Hydrogeologists – Past Chair US National Chapter
Member of the Subcommittee on Ground Water – Advisory Committee on Water Information
Member, Board of Directors, NGWA Science and Engineering Division
Member – Board of Directors – Groundwater Research and Education Foundation (Ground Water Protection Council)

RE: Wireman Comments on the Revised RAMACO Brook Mine Permit Application

Dear Ms. Anderson:

As a current Wyoming registered Professional Geologist (P.G. 238), I am familiar with Mr. Mike Wireman's credentials and know him to be of good moral character, based on his work. I have also reviewed Mr. Wireman's comments on the Revised RAMACO Brook Mine Permit Application and find that his work meets the standards of a professional geologist registered in the State of Wyoming.

Thank you for this opportunity to be of service to your organization.

Respectfully Submitted,

Sue Ann Spencer, P.G.

MEMORANDUM REPORT

TO: Shannon Anderson
Powder River Basin Resources Council
Sheridan, WY

FROM: Mike Wireman
Granite Ridge Groundwater
Boulder, CO

SUBJECT: Review of Revised RAMACO Brook Mine permit application

Shannon,

I have completed a review of the Brook Mining Co., LLC Coal Mining Permit Application. The permit application proposes a highwall-auger / open pit coal mining project in north - central Sheridan County, Wyoming. I have reviewed the following documents related to the revised permit application:

- Appendix D6 –Hydrology
- Appendix D11 - Alluvial Valley Floors
- Appendix D5 –Topography, Geology And Overburden Assessment
- Revised mine plan
- Objections to the mine permit
- WY Administrative Rules - WDEQ / LQD - Chapters 2, 12, 19, 4 and 3
- WDEQ review comments on revised permit application

This memorandum provides my technical / scientific comments on the Revised Permit Application.

GENERAL FINDINGS

1. There is significant uncertainty / speculation re: annual and total coal production. Estimates presented by Brook Mine representatives have varied significantly and differ from what is presented in the Revised Mine Plan. Accurate estimates of annual production are essential to allow WDEQ to review the mine permit application and to evaluate potential impacts to land, air and water resources.
2. Appendix D6 and Section M.5 of the Revised Mine Plan present a very incomplete characterization of the hydrogeology and surface water hydrology. It is my opinion that as a result the permit application is not sufficient to meet the requirements included in WS 35-11 – 406 (b) (xvii) or WS 35-11 406 (n) (iii). The sparse hydrologic data (spatially and temporally), the absence of a conceptual model that explains the limited data and the very large uncertainties associated with the groundwater modeling (Addendum MP.3) severely constrains the ability to develop and implement an adequate *“plan to minimize disturbances to the prevailing hydrologic balance at the mine site and in associated offsite areas ..”* or to design and operate the coal mining operation to *“prevent material damage to the hydrologic balance outside permit area”*. Detailed comments on Appendix D6 are presented below.
3. There is insufficient data and understanding to allow determination of probable cumulative hydrologic impacts to surface and groundwater systems as required per WDEQ LQD rules {Chapter 19 - Section 2(a) (1)}, which states that such determination is required to consider impacts from the proposed Brook mine and *“their interaction with the impacts of all anticipated mining upon all affected hydrologic systems.”* Section MP.6 of the revised Mine Plan presents a highly qualitative discussion of probable hydrologic impacts that is based on a number of questionable assumptions and does not include an assessment of cumulative impacts. This is important because of the large drawdowns that were caused by extensive coal bed methane development from 2000-2012 which reportedly lowered the groundwater levels in the coal seams from 40-80 feet in the eastern part of the Brook mine permit area. Impacts to hydrologic balance that result from lowering the water table /potentiometric surface include reduction (or drying up) of domestic well yields (there are 357 permitted wells within the permit area that are permitted for domestic and /or stock watering) and degradation of riparian / fish ecologies that rely on groundwater discharge. Detailed comments on Section MP.6 are presented below.
4. The proposed water management plan is inadequate. The analyses presented in the application regarding estimates of peak flow / runoff volume (flood) water that will need to be managed during mining operations is based on old (1973) precipitation data and did not consider extreme precipitation events. Given the occurrence of extreme events across the US and in Wyoming in recent years, it is important to model these events. Even without modeling extreme events, as discussed on page D6-3, the

peak flows on Tongue River, Goose Creek, and Slater Creek are an order of magnitude higher than mean flows. Will water management structures be designed to handle mean flows or peak flows? There is a significant concern that Brook mine will not maintain /operate all of the hydrologic control structures and that the hydrologic control plan will not be maintained and effective because it relies on many structures working.

5. The permit application does not adequately address air quality issues. The revised mine plan (Section MP.16.3) only states that the Brook mine will “incorporate air pollution control equipment” and apply for an Air Quality Permit from WDEQ / AQD. There is no discussion of sources or types of air contaminants that will need to be managed. There is no discussion of the air quality monitoring program that will need to be designed and implemented to assure compliance with applicable standards.
6. Appendix D6 (page D6-9) states that reaches of the Tongue River are on the CWA 303(d) list and that a TMDL has been established for Goose Creek. However there is no discussion regarding how the proposed mining operations will be affect the listings and be in compliance with the TMDL.
7. Brook mine proposes that – any surface water right that is disturbed or affected by their mining operations shall have that water right replaced with a similar water source until *“such time that the original water right’s functionality is restored”*. Who determines if functionality is restored? Is there a maximum time limit for providing replacement water? Also -Brook mine only agrees to replace impacted wells if they are adjudicated. This is not appropriate or sufficient since most domestic /stock wells are not adjudicated.
8. The bond estimate included with the revised mine permit is insufficient. The bond amount is only for minor reclamation activities. There is no bond amount included for remediation or mitigation of environmental impacts, including hydrologic impacts. This is a serious omission.
9. Subsidence associated with trench / highwall mining could significantly perturb the shallow groundwater flow system which delivers water to Slater Creek. Hydraulic conductivities of subsidence deposits can be much lower than the undisturbed formation. This could alter groundwater flow paths and the “hydrologic balance”. This would also affect the quality of water in Slater Creek.

HYDROLOGY - APPENDIX D6 and D5

The following detailed comments are provided in support of Major Issues 2, 3, 4 and 5 above. The comments are intended to address the adequacy of the pre-mining hydrologic / hydrogeologic characterization completed in 2013 – 2014.

1. Overall the hydrogeologic characterization presented in Appendix D6 is very poor. The discussion is incomplete and based on extremely limited empirical data. There is no discussion or explanation for the apparently variably saturated conditions in the coal seams and the significant variability of water quality within and between water bearing units (coal seams and Ft. Union Formation above the coal). No conceptual model has been developed to describe the ground water flow systems in the Tongue River Member (including coal seams); the alluvial aquifer adjacent to the Tongue River; and the valley fill deposits in the Slater Creek valley.
2. No water quality data for the Tongue River above Goose Creek confluence or within the permit area is presented or discussed in Appendix D6. Water quality sampling stations should be established on the Tongue River upstream and downstream of the permit area (within ½ mile of permit boundaries). Appendix D6 should include a discussion of Tongue River water quality using data from the USGS station at Monarch WY (station 06299980) and the SCCD 2012 report. The data for the Tongue River at Decker is not representative of conditions near the mine permit area.
3. It is my opinion that the permit application is incomplete because there are no data for the USGS gage on Goose Creek after 1984. Pre-1984 data are not representative of present day.
4. There is a huge uncertainty re: temporal /spatial groundwater recharge. A sensitivity analysis included in Addendum MP-3 indicates that a change of 10-15% makes the model unstable.
5. The Tongue River Member of the Ft. Union Formation. is used extensively for water supply. As indicated on Table D6.2 -18 there are approximately 357 wells within the permit area and the adjacent 3 miles that are permitted for stock /domestic use. Section D6 .2 is deficient because it does not include a discussion on local aquifers within the Fort Union Tongue River Member including a discussion about which aquifer(s) are being used by domestic /stock wells and how vulnerable this important aquifer is to impacts from coal mining.
6. There is no discussion or data for the alluvial deposits along the Tongue River. As indicated on Exhibits D6.2-2 and D6.2-3, groundwater flow in the Masters and Carney coal seams is towards the Tongue River and likely discharges to the alluvial deposits along the north side of the River. However there are no monitoring wells in Tongue River alluvium and there is no water level, saturated thickness, or water quality data. No aquifer tests were conducted in the alluvium of Tongue River. This is a serious omission.
7. Appendix D6 contains very little site specific hydraulic conductivity data –only one value for each coal seam and only in the eastern part of the mine permit area. There is no site specific hydraulic conductivity data for the alluvial aquifers, overburden or interburden. A single storage co-efficient / specific yield value and a single porosity value were used for the entire formation. This significantly increases the error associated with the model predictions.

8. Groundwater flow in the coal seams is poorly characterized. This constrains the ability to estimate dewatering rates and volumes and to assess probable cumulative hydrologic impacts.
 - a. The potentiometric contours in Exhibits D6.2-2 and 6.2-3 indicate steep groundwater flow gradients – $i = .02$ – $.04$ ft/ft. Steep gradients result in higher flow velocities and higher discharge rates.
 - b. The potentiometric surface maps were made using average values –this limits interpretation and does not allow for seasonal comparisons.
 - c. Groundwater velocity estimates presented on page D6-19 (2-4 ft/yr for the Masters and 1-2.5 ft/yr for the Carney) are low. Using a k value of 0.55 ft/day from Table D6-4 (addendum D6-8) and a gradient of $.08 / .09$, velocity is calculated to be 10-19 ft/yr.
 - d. Appendix D6 should include a discussion of why the transmissivities vary so much for the coal seams.
 - e. On page D6-19 states that water level drawdowns from mining by Bighorn Coal are “superceded” by CBNG drawdowns, however there is no discussion about what this means. There should be a discussion of the cumulative drawdown impact from coal mining and production of CBNG. This baseline analysis is necessary before analysis of the probable hydrologic cumulative impacts of new mining can occur.
 - f. Page D6-19 -20 says that groundwater flow in 2 coal seams is NW-SE “although interrupted frequently” by faults. However the potentiometric surface maps (Exhibits D6.2-2 and D6.2-3) don’t show any change or alteration of contour lines as they cross faults.
 - g. The application contains a very poor discussion of coal seam discharge. On page D6-20 it says that there is no discharge from coal aquifers within the permit area and that there is no discharge from the Masters and Carney seams to Tongue River. This may be true –discharge is likely to Tongue River alluvium, which is not monitored.
 - h. Groundwater is stored and released from coal units (scoria) and is a source of recharge to Slater Creek alluvium. High water levels in Slater Creek alluvial wells occur in late winter indicating lag time or pulse flow. The permit application fails to properly analyze and disclose how this recharge will be affected by the intense mining in Slater Creek drainage.
9. While basin structure and topography exert some control on groundwater flow, lithology and secondary permeability features exert far greater control on flow.
10. It does not appear that Brook mine has data to support conclusion that the reach of Slater Creek that flows across the permit is a losing reach.
11. I concur with Big Horn Coal Company’s concern that proposed mining operations could cause drainage of saturated backfill in BHCC pits 1 and 2 located near the Tongue River / Goose Creek confluence. The bond to be posted by RAMACO should specifically identify this risk and the appropriate amount for remediation.
12. P D5-15 – Overburden chemistry (regulated analyte concentrations) data indicates significant exceedance of applicable standards. The mitigation presented in Appendix

- D5 for managing overburden with unacceptable concentrations of regulated analytes is vague and relies on in-situ methods. Post-closure monitoring should be conducted to help determine if there will be legacy sources of contaminants available to leach into groundwater, and such monitoring should be factored into the bond calculation.
13. There is inadequate monitoring of the underburden. There is only one monitoring well (409) in the east end of permit area screened in underburden. This is likely not representative of the underburden on the west end of the mine.
 14. Why were piezometers 578417 and 578408 constructed as 2 inch wells? It is very difficult to collect water quality samples from 2 inch wells.
 15. BHCC monitoring station HWC1-79 indicates that flow in Hidden Water Creek occurs primarily in late winter –yet there was no monitoring (flow rate / water quality sample) in late winter.
 16. Aquifer tests – Appendix D6 - Addendum D-8
 - a. It is unclear how the discharge rate of 0.33 gpm was determined as there was no step drawdown test.
 - b. The wells chosen for the aquifer testing are located in the far east end of the permit area and, given the variability in saturated conditions and water quality in the coal seams, it is unknown if the results from these wells are representative of hydraulic properties of the coal seams to the west.
 - c. The Slater Creek alluvial monitoring wells were not monitored during the aquifer tests. This was a serious omission. As determined by WDEQ there are AVF lands within the Slater Creek valley which might be impacted.
 - d. There should have been aquifer tests conducted using wells closer to Slater Creek alluvium or Tongue River alluvium to provide a more representative sample.
 17. Groundwater quality – there is considerable variation in ion chemistry between the alluvial wells and the coal wells and among the alluvial wells and coal wells. The baseline characterization provided in Appendix D6 (page D6-23, 24) does not provide any credible discussion or explanation of the geochemical processes and conditions that cause the variation. For instance, there is not sufficient data or analysis to support the conclusion that sulfate concentrations are higher in alluvial groundwater than in coal groundwater.
 18. The discussion on surface water –groundwater interaction (page D6-23) is wholly inadequate and inaccurate. The conclusion that there is no interaction is based on a highly qualitative comparison of ion chemistry between a single Slater Creek sample and a single Carney seam sample.

GROUNDWATER MODEL - ADDENDUM MP-3

1. Addendum MP-3 (page MP-3-2) lists two primary goals for the modeling effort: *(1) identify potential impact (if any) to adjacent water rights and (2) estimate long term impacts from mining operations*". The first goal was addressed. The model was developed exclusively to look at the radial extent of drawdown associated with mine

related dewatering and the potential decline of water levels in nearby domestic /stock wells. However, the modeling effort did not address the 2nd goal.

2. The groundwater model simulations and predictions were derived based on extremely limited site specific data. As stated in Addendum MP-3 (page MP-3-10) the data *“provide a limited understanding of the location, continuity and hydrology of the coal seams”*. Hydraulic properties were obtained from only one location and for some parameters, average values or literature derived values were used for all nodes.
3. A sensitivity analysis presented in Addendum MP-3 -Section 4.8 concludes that the model is sensitive to changes in hydraulic conductivity –yet only one hydraulic conductivity value was obtained from each coal seam (at a single location) and this value was used for the coals across the entire model domain. There was no empirical hydraulic conductivity data for the other 4 layers in the model including the water bearing alluvial deposits.
4. The lack of sufficient field data meant that simplifying assumptions were made – especially with regard to groundwater flow in the Ft. Union Fm. above and below the coal seams and the alluvial aquifer along the Tongue River. The model did not benefit from a well developed conceptual model aimed at characterizing groundwater flow in and between the coal seams, the overlying and underlying Ft Union Fm. and the alluvial deposits along Slater Creek and the Tongue River. This is a critical constraint since most of the domestic / stock wells in the area are completed in the non-coal parts of the Ft. Union Fm. and the alluvial aquifer along the Tongue River. The modeling effort was limited to estimating drawdowns in the coal seams and did not include an assessment of hydrologic changes in the non-coal parts of the Ft. Union Fm, the Tongue River alluvium or the alluvium along Slater Creek. Modeling the coal seams as hydrologically isolated is not based on real data and is far too simplistic.
5. There is no data to help determine the hydraulic relationship (recharge –discharge) between the Ft. Union Fm (and / or the coal seams) and the alluvial aquifer and the Tongue River. There is no discussion or data regarding water levels /saturated thickness of the Tongue River alluvial aquifer. There is no data to determine losing /gaining reaches of the Tongue River. The model assumed some discharge from Carney coal to Tongue River alluvium –but also assumed some recharge of Masters coal via loss from the Tongue River, however there is no data to verify these assumed relationships.
6. No data or information was presented regarding water level trends in nearby CBM wells. Modeling the current CBM affected coal seam water levels as static is far too simplistic. If the drawdowns from CBM production have caused the coals to be partially saturated what will happen if the water levels recover in areas where coal has been removed? The modeling indicates groundwater level recovery of 90% after 10 years for the Carney and 20 years for the Masters. This does not account for water level fluctuations due to CBM production.
7. As stated on page MP-3-10 the model was *“constructed to provide a general understanding of regional impacts”*. Using model results to make predictions at the scale of the mine permit area results in large uncertainties associated with the estimates of groundwater level drawdowns. This is especially true for potential water level declines in the Tongue River alluvial aquifer.

8. The Section on **Impacts** (p MP3-4) in the Executive Summary of Addendum MP-3 is very confusing – *“To assess the impacts on water levels for all users within the region, water levels were monitored during the mining simulation at the locations of wells completed within specific aquifers, and along the Tongue River. The maximum modeled drawdown within one existing domestic well was 25.8 ft. However, the maximum drawdown observed at most wells was less than 2 ft. with almost no drawdown predicted at many wells. The maximum estimated drawdown due to mining at additional targets along the Tongue River alluvium is 0.5 feet.* This is apparently the only place in the mine plan or Appendix D6 where there is a discussion of the impacts predicted by the modeling effort. Where are the *locations of wells completed within specific aquifers*? Where is the *existing domestic well with the predicted drawdown of 25.8 ft.*? Where are the *additional targets along the Tongue River alluvium*? *The data is insufficient to draw appropriate conclusions.*

ALLUVIAL VALLEY FLOORS - APPENDIX D11

The analysis presented in Appendix 11 is intended to satisfy requirements pursuant to WS 35-11 406 9n) (v) including a requirement that a coal mining operation *“not materially damage the quantity or quality of water in surface water or underground water systems that supply these alluvial valley floors”*. As discussed in Appendix 11, Brook mine has concluded that there are no AVFs in the Slater Creek drainage and therefore did provide information to satisfy the above requirement. However the WDEQ- LQD determined that there are AVFs in the Slater creek drainage within the permit area and that there may be additional AVFs on Slater Creek within ½ mile of the permit boundary (February 24, 2016 letter to Randall Atkins -WWC Engineering - from B. Kristiansen - WDEQ). This finding is supported by past subirrigation / flood irrigation agricultural activities. Limited subirrigation occurs on years with above average precipitation. Section D11.4.2 should discuss how many of past 50 years has been above average precipitation. Brook Mine should now submit a revised Appendix 11 that includes a plan to demonstrate how the mining operation will comply with WS 35-11 406 9n) (v).

Significant areas along the north and south sides of the Tongue River are underlain by AVFs. The Revised Mine Plan (section MP.25) states that there will be no direct mining on AVFs along the Tongue River or Goose Creek and therefore *“the essential hydrologic functions within Tongue River and Goose Creek AVFs shall be maintained”*. There is no discussion of potential impact that could occur from trench / highwall mining to the north of the Tongue River, which could reduce / alter discharge from the Tongue River Member of the Ft. Union Fm., (including the coal seams) to the Tongue River or Tongue River alluvium. This is directly related to one of the three “essential hydrologic functions” established by the WDEQ – *“ability to transmit groundwaters of suitable quality and quantity, to support subirrigation of certain areas”*. Brook mine should provide a discussion / assessment of the potential risk of reduced /altered discharge to alluvial valley floors along the Tongue River from trench/highwall mining on adjacent lands.

Detailed Comments – Appendix 11

1. The conclusion that map unit entitled -Stream Terrace Deposits Uncorrelated does not meet criteria for designation as an AVF needs to be explained and supported by data /analysis.
2. The decision to not designate surficial deposits that meet the criteria for AVFs in lower Slater Creek is not supported by data.
3. Section MP.25 of the Revised Mine Plan states that a monitoring system will be established to *“ensure that essential hydrologic functions of the AVFs are maintained.”* The monitoring system will consist of analysis of periodic infrared aerial photography and alluvial monitoring wells located along the Tongue River and Goose Creek. Details of this monitoring program should be presented and a discussion of a contingency plan if the data show impacts to AVFs from coal mining.

WATER RESOURCE MONITORING

1. An adequate water resource monitoring program should be based on a well developed conceptual model, which has not been completed. Pre-mining monitoring was focused on hydraulic testing of the two coal seams to be mined. Very limited data was obtained from four surface water monitoring stations and three non-coal groundwater monitoring wells. These data were not sufficient to develop a sound conceptual model that describes the hydrogeology, surface water hydrology and surface water-groundwater interaction.
2. Only four surface water monitoring locations were established for background characterization; two on Slater Creek and two on Hidden Water Creek. There were / are no pump samplers on the Hidden Water Creek locations so there is no water quality data to establish baseline conditions. No flow data for Slater Creek or Hidden Water Creek was obtained from Oct-March (6 months) – because the monitoring equipment was removed for winter.
3. The baseline monitoring period was too short for all four baseline locations – only one month in fall and one summer season. The lack of seasonal data precludes the establishment of annual hydrograph.
4. There were no monitoring stations established by Brook mine on the Tongue River. Both Appendix D6 and the Revised Mine Plan reference and provide data from two USGS stations on the Tongue River – one at Monarch and one near the Montana state line. While the station at Monarch will provide useful data, it is critical to establish monitoring stations upstream and downstream of the permit boundary to detect impacts from the proposed Brook mine.
5. Pre-mining groundwater monitoring did not include any monitoring wells in the alluvial deposits along the north side of the Tongue River. These deposits comprise a very important aquifer and are overlain by significant AVFs.
6. The discussion of the proposed operational monitoring network described in Section MP.7 is somewhat confusing:

- a. On page MP.47 it states that the operational surface water monitoring will be a continuation of pre- mining, baseline program. As discussed above this is inadequate. Section MP.7 includes information on how the location of any new surface water monitoring stations will be determined, however there is no discussion or commitment to establish additional surface water monitoring stations nor any discussion of potential locations.
 - b. Section MP.47 also states that the operational ground water monitoring will be a continuation of pre- mining, baseline program. Again, this is inadequate.
 - c. Ex. MP 7-1 depicts the three pre-mining alluvial monitoring wells along Slater Creek. On Table MP 7-4 five existing alluvial monitoring wells are listed. Two monitoring wells (578433 and 578434) are listed as being located in Sections 33 and 34 of T57NR84W. These two wells are not depicted on Ex. MP 7-1, nor is there any information about these two wells in Appendix D6 or the Revised Mine Plan. Table MP.7-4 also lists four proposed new alluvial wells. However there is no discussion of which geologic unit these wells are intended to monitor. Based on the locations given in Table MP.7-4 it appears these four wells are intended to monitor the alluvial deposits along Goose Creek and the Tongue River, but there is not analysis to support this conclusion. More information should be provided on these proposed wells and the permit should disclose whether WDEQ will require these wells to be installed.
 - d. Two observation wells (P62333.OW and 106680.OW) are shown on Figure 2.3-1 of Addendum MP-3. These wells appear to be located in the Tongue River alluvium. However there is no discussion of these wells in Appendix D6 or the Revised Mine Plan. Water level and water quality data from these wells should be presented and discussed.
7. The post-mining monitoring program that is discussed in Section RP.8.4 of the Reclamation Plan is very general and does not include any details on locations of proposed replacement monitoring wells or new monitoring wells. Brook mine proposes to continue the use of existing monitoring wells if they still exist after mining concludes.
- a. On Table RP.8-7 Monitoring well 578434 AI2 is listed as existing with a location and well construction information. However as indicated above on Table MP.7-4 this wells is listed as proposed.
 - b. Section RP.8.4 indicates that the pump tests will be conducted in the backfilled spoil to determine transmissivity and storage coefficient. There is no discussion of acceptable values for these parameters and what mitigation would be required if these values are not obtained.
 - c. Section RP.8.4 sates that groundwater monitoring will consist of annual water level monitoring and water quality sampling until a *“definite trend is established”* Establishing a trend with only annual monitoring could take many years. There is a real concern that Brook mine /RAMACO will not monitor long enough to establish trends. There is also a concern that water levels in the monitoring wells

will not recover for many years – so conducting the pump tests may not be possible.

8. There is no discussion or plan provided for “post-event inspections”
9. There should be a plan for monitoring quality of groundwater from dewatering that will be used for dust suppression.
10. The bond calculation should reflect all monitoring costs.

Detailed comments – Section MP.7

1. Depth to water data should be included for ground water monitoring wells listed in Table D6.2-1.
2. Screened intervals in groundwater monitoring wells (Masters, Carney, alluvium) vary a lot – many are 20 feet, which is too long and results in dilution of groundwater samples.
3. There needs to be a citation for the low flow sampling method referred to on page D6.22.

REVISED MINE PLAN

1. The mine plan does not discuss the risk of groundwater contamination (nitrate contamination) that may result from extensive blasting.
2. On page MP-4 it states that the height of tunnel associated with auger-highwall mining ranges from 2.5 to 28 ft. This is a large range and is unlikely to be correct. If it is a typo, it should be corrected.
3. Allowing placement of unsuitable overburden beneath ephemeral channel and spoil backfill in trenches or pits may create a legacy problem. The Reclamation plan (Section MP.8.4 indicates that pump tests /slug tests will be conducted post mining to demonstrate that there will be no major alteration of groundwater flow or chemistry. However there is no discussion of mitigation if post mine monitoring indicates unwanted changes.
4. Page MP-25 – there is no explanation of what “undisturbed” portions of Slater Creek means.
5. MP -25 says that Ex MP 5-1 shows ASCM areas and 9 trenches, however these are not depicted on EX MP 5-1. There should be a discussion /description of the ASCMs.
6. Page MP 26 – there is no discussion of why ASCMs greater than ½ mile from Tongue River / Goose Creek will not to be monitored per WDEQ/LQD Guideline Number 15.
7. Page MP-27 -waste water ponds need to be monitored for discharge to groundwater.

8. Description of flood control structures and plan to manage flood flows is weak. There is no disclosed basis for assuming that no flood waters will be received from lands disturbed by mining activities.
9. The mine plan will not follow WDEQ/LQD Guideline # 8 re: minimum flow for diversions. There is inadequate information on how the mine will prevent diversion discharges from having velocities that exceed permissible velocities.
10. There is no detailed information on pit dewatering – only gross estimates of the total required discharge. Also there is no discussion of treatment method for pit inflow if treatment is necessary.
11. MP.6 – PHI – numerous trenches will be aligned parallel to the Slater Creek channel plus surface pit mine–capture runoff, backfill will have different hydraulic properties than original material.
12. Stockpiles of overburden (40-75 ft high - 1.4 -13 acres) are potential point sources of contaminants. In years 6-12 all overburden stockpile locations are filled. There is a potential for leachate from these piles to migrate to groundwater or surface water. However there is no discussion of how this be mitigated.
13. The mine plan (MP.3.1) says roads will be reclaimed “unless retention is part of approved post mining land use.” It is important to make sure the roads are reclaimed and there is a concern that WDEQ will allow Brook mine to avoid road reclamation.
14. All wastewater ponds should be lined and monitored and costs should be appropriately considered in the bond calculation.

ATTORNEYS FOR PERMIT APPLICANT
BROOK MINING COMPANY, LLC

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	Civil Action No. 17-4802
TFN 6 2-025)	

**REPLY IN SUPPORT OF BROOK MINE'S MOTION TO DISMISS BIG HORN COAL
COMPANY'S PETITION FOR A CONTESTED CASE HEARING**

INTRODUCTION

Brook agrees with Big Horn that other than the deadline to file permit objections, the Environmental Quality Act (Act) does not explicitly impose a deadline to request a contested case for objections to a permit application. But that misses the point of Brook's argument. The Act does not set an additional deadline because the permit objection deadline applies universally and because the Act requires an informal conference or contested case occur within 20 days of the final date for filing objections. Wyo. Stat. Ann. § 35-11-406(j), (k); DEQ Rules of Practice and Procedure Ch. 3 § 3. An objector does not have to request a contested case. But this Council found otherwise. While Brook disagreed with the Council's decision insisting on a request for a contested case, Brook's motion merely argues the consequences of that ruling, namely that a logical deadline must exist to request a contested case. Under the plain language of the Act, the

only appropriate deadline is 30 days following the last date of publication. Big Horn's response simply asserts that it has a right to make the request. Nevertheless, the right to make such a request does not set a deadline or prove this Council has jurisdiction to hear Big Horn's objection. Nor does it somehow breathe life into an otherwise untimely request.

I. A logical reading of the Council's ruling makes Big Horn's request untimely.

This Council's authority comes from the Act. *Amoco Production Co. v. State Bd. of Equalization*, 12 P.3d 668, 673 (Wyo. 2000) (explaining an agency's power depends upon statutes, so "they must find within the statute warrant for the exercise of any authority which they claim.") To avoid exceeding its authority, the Council can impose only deadlines the legislature prescribed. *See id.* So if an objector must request a contested case, that request should have a deadline set forth in the Act, which is the deadline to object and request an informal conference. *See* Wyo. Stat. Ann. § 35-11-406(j), (k); DEQ Rules of Practice and Procedure Ch. 3 § 3. (Brook's Mot. 2-3.) Therefore, the logical deadline to request a contested case was January 27, 2017, making Big Horn's request untimely.

Nonetheless, Big Horn asserts Brook stipulated to an extended deadline and waived its objections. (Big Horn's Resp. 8.) Brook did neither. Brook agreed to a March date for the originally docketed 20-day hearing. But Brook never agreed to a deadline for Big Horn to request a contested case hearing. Brook has also objected to extending deadlines and the current procedure in its brief in support of the Council's jurisdiction and during the scheduling conference in this case and case 17-4801.¹

¹ The Fishers and Powder River Basin Resource Council's responses made the same arguments about timeliness and objections. To avoid duplication, Brook's arguments here apply to the Fishers and PRBRC's responses.

II. Big Horn's defense of the 1983 Release Agreement proves why the Council should dismiss.

Big Horn argues that the Council does not have authority to interpret or enforce the 1983 Release Agreement. (Big Horn's Resp. 10.) Brook's Motion does not require the Council to interpret the 1983 Agreement. Instead, Brook asks the Council to apply undisputed facts to decide if Big Horn has engaged in "contemptuous conduct" and "dilatory tactics." Wyo. Admin. Code § ENV PP Ch. 1 Sec. 13.

Big Horn agrees the 1983 Agreement is a valid contract. At the Order in Lieu of Consent Hearing conducted before this Council in August 2016, Big Horn's Mine Manager, Jordan Sweeney, said the 1983 Agreement controlled the extent of the rights between Big Horn and Brook in certain sections of land. (Transcript of Hearing Proceedings, Vol. II of II, p. 30, attached as Ex. A.) Big Horn agrees that the 1983 Agreement requires it not oppose Brook's mine plan before a governmental agency or take steps to get a state agency to disapprove of the mine plan. (Ex. B, 1983 Agreement, 2.) Big Horn also agrees it has objected to Brook's permit application, stating it "feels strongly that the Brook Mine permit application should not be approved or deemed technically complete." (Ex. C, Big Horn Objection, 10.)

Despite this consensus, Big Horn argues only a court should decide issues related to the 1983 Agreement. (Big Horn's Resp. 11-12.) This continues Big Horn's pattern. When Brook asked a court to declare its rights to mine coal, Big Horn moved to dismiss the case, arguing "the Wyoming Department of Environmental Quality is the **only entity** that can give Ramaco and Brook the right to start mining on Big Horn Coal's property." (Ex. D, excerpt from Hearing Transcript on Big Horn's Mot. to Dismiss, 5.) When Brook petitioned this Council for an order in lieu of consent, Big Horn asserted the district court had jurisdiction to decide the issue before

the relevant agencies acted. (Ex. E, Big Horn's Resp. to Brook's Req. for Ord in Lieu, 5.) After the Council decided to hear Brook's petition, Big Horn asked the Council to enforce the 1983 Agreement and find it precluded Brook from "accessing certain surface lands to extract coal by surface mining methods." (Ex. F, Big Horn's Memo and Proposed Findings, 10.) Now that Brook argues the 1983 Agreement affects this case, Big Horn contends the Council cannot consider or enforce it. (Big Horn's Resp. 11-12.)

No matter where Brook has turned to enforce its rights, Big Horn has argued the proper decision-maker is someone else, even if inconsistent with Big Horn's previous statements. That amounts to a delay tactic, which shows contempt for Brook, Brook's rights, and the permitting process.

CONCLUSION

Big Horn's response ascribes bad motives to Brook. But that is merely a smokescreen to obscure two realities: 1) a deadline must exist that complies with statutory deadlines; and 2) Big Horn contracted away its right to object 34 years ago. Big Horn's name-calling does not change this conclusion. Therefore, Brook requests the Council dismiss Big Horn's February 15, 2017 Petition for a contested case hearing.

DATED: March 21, 2017.

1 BEFORE THE ENVIRONMENTAL QUALITY COUNCIL

2 STATE OF WYOMING

3 IN RE: BROOK MINE APPLICATION)
4) Civil Action No. 16-1601
5)

TRANSCRIPT OF HEARING PROCEEDINGS
VOLUME II OF II

8 PURSUANT TO NOTICE, duly given to all parties
9 in interest, this matter came on for hearing on the
10 18th day of August, 2016, at the hour of 9:00 a.m., in
11 the Elk Room, Game and Fish Commission, 5400 Bishop
12 Boulevard, Cheyenne, Wyoming, before the Wyoming
13 Environmental Quality Council. Council members present
14 were Mr. Aaron Clark, presiding, with Dr. David Bagley,
15 Mr. Rich Fairservis, Mr. Tim Flitner, Mr. Nick Agopian,
16 and Ms. Meghan Lally.

17 Mr. Ryan Schelhaas, Attorney for the council;
18 Mr. Jim Ruby, Executive Director to the council; Mr.
19 Joe Girardin, Business Office Coordinator, were also in
20 attendance.

1 Q. Can I please call your attention to Big Horn
2 Coal Exhibit 2. Is that the 1983 release agreement
3 that you just referenced?

4 A. Yes, this is the May 6, 1983 release
5 agreement.

6 Q. And you're personally familiar with this
7 agreement?

8 A. I am.

9 Q. And are you personally familiar with this
10 agreement because it does control the extent of the
11 rights which Big Horn Coal and Ramaco/Brook Mine have
12 to those areas in Section 15 and the north half of 22
13 that we have been discussing?

14 A. Yes, it does.

15 Q. And is this an agreement between the same
16 parties as who were parties to the 1954 deed?

17 A. Yes, Sheridan, Wyoming Coal Company, a
18 Delaware corporation, and Big Horn Coal Company, a
19 Wyoming corporation.

20 Q. You testified yesterday that there had been a
21 change with regard to Big Horn Coal surface use of
22 Section 15 and the north half of Section 22 between
23 1954 and 1982. Can you please just summarize what that
24 change of surface use was?

25 A. Between 1954 and 1982, the area here, it was

RELEASE AGREEMENT

THIS RELEASE, made this 6th day of May, 1983, is by and between SHERIDAN-WYOMING COAL COMPANY, INC., a Delaware corporation, whose address for purposes of this Release is c/o Kennedy, Connor and Healy, P.O. Box 607, Sheridan, Wyoming 82801 (hereinafter called the "Lessor"), and BIG HORN COAL COMPANY, a Wyoming corporation, of Sheridan, Wyoming, whose address for purposes hereof is One Thousand Kiewit Plaza, Omaha, Nebraska 68131 (hereinafter called the "Lessee").

WITNESSETH:

WHEREAS, Lessor and Lessee entered into a certain Coal Mining Lease on June 28, 1954, and Supplemental Coal Mining Lease Agreements dated February 15, 1956, October 1, 1957, and September 9, 1977, and entered into a certain Coal Mining Lease dated June 12, 1979, to lease certain property situate in Sheridan County, Wyoming, and more particularly described in Schedule "A" attached hereto and by this reference incorporated herein; and

WHEREAS, Lessee exercised by letter on September 5, 1968, the option provision in the Coal Mining Lease dated June 28, 1954, to extend the lease term for fifteen years, which subsequently provided for that lease to terminate on June 30, 1984; and

WHEREAS, Lessor and Lessee desire to settle certain claims with respect to the Leases and to mutually terminate certain obligations thereunder;

NOW, THEREFORE, in consideration of the mutual covenants and agreements of the parties herein contained, the Lessor and Lessee agree as follows:

1. Lessee agrees to release, relinquish, and surrender unto Lessor all right, title, interest, claim and demand in and to the Leases insofar as they cover certain coal ("Released Coal") situate in Sheridan County, Wyoming, and more particularly described in Schedule "B" attached hereto and by this reference incorporated herein. Lessee will release its interest in the Released Coal to the Lessor by executing and recording this Release, as provided by Section 34-2-130, Wyoming Statutes (1977).

2. Lessee agrees that its obligations under the Leases with respect to property covered by the present Pits 1, 4, and 5 and more particularly described by Schedule "C" attached hereto and by this reference incorporated herein, will continue in force and effect until June 30, 1984.

3. Lessee agrees to quit, vacate, and surrender possession of the property covered by the present Pit 5 to Peter Kiewit Sons' Co. on June 30, 1984.

4. Lessor shall be entitled to retake possession of any of the above-described Released Coal which is not currently in Lessor's possession immediately upon execution of this Agreement, and shall be relieved from further duties and obligations under the aforementioned lease with respect to the Released Coal.

5. Lessor expressly consents and agrees to allow Lessee to leave intact any and all permanent structures, stockpiles, or spoil materials (referred to herein collectively as "structures and stockpiles") currently located in Sections 9, 10, 14, 15, 21, and the N $\frac{1}{2}$ of Section 22 of T. 57N., R. 84W., 6th P.M., as more specifically identified in Schedule D attached hereto. Unless Lessor's express written consent is received, any temporary or permanent structures or stockpiles located south of old Wyoming State Highway 338 in the SE $\frac{1}{4}$ of Section 22 or the N $\frac{1}{2}$ NE $\frac{1}{4}$ and NE $\frac{1}{2}$ NW $\frac{1}{4}$ of Section 27 shall be located at Lessee's sole risk and expense, and shall be subject to the following express conditions: The placement of any temporary or permanent structures or stockpiles in that part of Section 22 south of old Wyoming State Highway 338 and in Section 27 shall be subject to the terms and conditions of the Road Relocation Agreement, dated August 7, 1981, between Big Horn Coal Company and Sheridan-Wyoming Coal Company. In addition, Lessee agrees to move any structures and stockpiles, including the relocation of Wyoming State Highway 338, as necessary, at its sole cost and expense, at such time as the Lessor, or its successors in interest, presents to Lessee a mine plan approved by all applicable governmental agencies to mine the coal in either Section 22 or 27. If the Lessor makes application for approval of a plan to mine any of the coal in the pertinent portions of these two sections, its application shall in no way be prejudiced by the existence of any structures or stockpiles or the location of State Highway 338 in these sections. Lessee will not oppose any such mine plan before any governmental agency and will take no action, direct or indirect, to induce any federal, state, or local agency to disapprove or otherwise object to such mine plan. If approval is conditioned upon Lessee's consent to remove or relocate the road or any structures or stockpiles, Lessee shall not withhold such consent. Lessor reserves the right to seek specific performance of this obligation in addition to any and all remedies available to Lessor including all remedies provided under the Road Relocation Agreement. The parties recognize that the payment of monetary damages will not adequately and sufficiently compensate Lessor in the event Lessee breaches its obligation to move the highway and any structures or stockpiles located on Section 27 and south of old Wyoming State Highway 338 in Section 22. Lessee expressly waives, and shall be estopped from asserting any defenses to Lessor's claim for specific performance of these obligations. If Lessee breaches

8/7/81 Road Re-
location Agrmt.

its obligation, Lessor may, at its option, undertake to relocate the highway and move any structures or stockpiles located on said parts or Sections 22 and 27, and Lessee agrees to reimburse Lessor for any and all costs and expenses resulting from such action.

6. With respect to the coal in those areas described in Schedule B that is to be released, Lessee agrees that it will, upon execution of this Agreement, continue to perform within eighteen months thereafter all abandonment, reclamation, and related procedures required by any applicable law or regulation subject to Paragraph 7 of this Release Agreement. With respect to the coal in those areas described in Schedule C that is to be released on June 30, 1984, Lessee agrees that it will, "by no later than December 31, 1985, perform all abandonment, reclamation and related procedures required by any applicable law or regulation. It is understood, however, that the final reclamation for the identified portion of Section 15 which involves the Pit 3 extension out-of-pit stockpile area, will not necessarily be completed until June of 1987 and that that portion identified in the N $\frac{1}{4}$ of Section 22, and north of old Wyoming State Highway 338 in the SE $\frac{1}{4}$ of Section 22 will need to be redisturbed in the early 1990's with placement of out-of-pit soil from the Pit 1 southeast extension. Such reclamation and restoration activities shall be conducted diligently and in compliance with all applicable federal, state or local laws and regulations, as the same may exist or be enacted or amended from time to time.

7. Lessee agrees to apply for transfer to Lessor, at the option of the Lessor, of those permits and governmental authorizations identified in Schedule E attached hereto and incorporated by this reference with respect to the Released Coal within thirty (30) days from the date of execution of this Release Agreement. Lessee also agrees to transfer, at the option of the Lessor, to the Lessor any and all permits and governmental authorizations with respect to the property covered by the present Pits 1 and 4 by June 30, 1984.

8. Lessee hereby agrees to and does hereby assume all liability for and indemnify, protect, save, and hold harmless Lessor and Lessor's assigns and successors from and against any and all losses, costs, expenses, attorneys' fees, claims, demands, suit, and actions of any character whatsoever (hereinafter referred to collectively as "Liabilities") imposed upon or incurred by the Lessor on account of or arising directly or indirectly out of or in connection with the operations of Lessee with respect to the Released Coal. In the event that any Liabilities arise or are contributed to by the negligence of the Lessor, Lessee's liability for payment of such Liabilities shall be reduced in proportion to the amount of Lessor's negligence.

ATTN: Mr. Alan Edwards, Assistant Administrator

RE: Objections to Proposed Brook Mine Permit Application, Sheridan County, Wyoming

Dear Mr. Wendtland,

Big Horn Coal Company (BHCC) writes to provide objections to the Brook Mine permit application.

During the course of our review, we discovered that the information was inconsistent among the locations noted in the public notice. We advised Brook Mine's legal counsel of the inconsistency on December 20, 2016. We are not aware if the information was updated to correct the inconsistency between the locations.

Our objections are based upon what BHCC believes to be the most accurate, up-to-date information and relate primarily to the permit application's lack of adequately addressing hydrologic issues that could significantly affect existing and future water rights, the quantity and quality of surface water and groundwater within and adjacent to BHCC, the potential for coal seam fires to erupt in both the open pit and subsurface openings and the potential for miner safety and environmental harm proposed in the permit Mine Plan. The objections are referenced to text section headings, exhibits and addenda of the permit application Mine and Reclamation Plan.

Objection No. 1 – Mine Plan & Rec Plan Review

Big Horn Coal has reviewed the proposed mine and reclamation plan and is concerned with the general lack of detail contained in the proposed plan. It appears that no sampling, testing or analytical work of any sort has been performed to support the surface and highwall mine designs and plans. It is Big Horn Coal's opinion that excavating in the area, surrounding the Big Horn Mine will create a large safety concern and environmental

liability as the TR-1 trench cut could become inundated with water from the historic backfill of the BHCC spoils of Pit 1 and Pit 2.

BHCC would like to put on record that it is providing written notice of its concerns so Brook Mine and other affected parties have notice and are aware of these issues and that Big Horn Coal is not responsible for any personal, property or environmental damage or other loss due to the disturbance activities associated with the Brook Mine, its affiliated companies or successors in interest.

BHCC has not consented to overlapping permit boundaries nor has it been indemnified of any disturbance related to Brook Mine's proposed activities as it relates to the reclamation obligations and BHCC's reclamation liabilities.

Objection No. 2 – Section MP.4; Exhibit MP.4-1; Section MP.5; Section MP.13; Addendum MP-6

Section MP.4 and Exhibit MP.4-1 provide plans for the development of a highwall mining trench through and the development of highwall mining panels beneath reclaimed backfill of BHCC Pits 1 and 2 adjacent to Goose Creek and the Tongue River in the southeastern portion of the Brook Mine permit area. The trench would penetrate through the bottom of the backfill allowing mining of Carney coal found about 70 feet beneath the backfill. The backfill of the proposed trench area averages about 90 feet thick. The northeast corner of the highwall panel area appears on Exhibit MP.4-1 to be equivalent to the Brook Mine permit boundary, and would be less than 100 feet from the bank of the Tongue River. On Figure MP-6.1-1 of Addendum MP-6, the highwall mining panels are shown even closer to the Tongue River channel, and the reason for the disparity between the figure and Exhibit MP.4-1 is unexplained. BHCC is very concerned over and objects to the permit's disturbance, affected and permit boundaries all being equivalent to the mining panel boundary in this most environmentally sensitive area adjacent to the bank of the Tongue River. The affected area boundary shown on Exhibit MP.4-1 around the other proposed mining panels typically extends well beyond the disturbance boundary for reasons unexplained in the Mine Plan.

Mine Plan Section MP.4, together with all Mine Plan text inclusive of Section MP.13 and Addendum MP-6, are silent on the subject of the special textural and hydrologic characteristics of the proposed southeastern highwall mining area in Sections 15 and 22, T57N, R84W. The area is unique in that the strata overlying the coal to be mined includes a thick layer of unconsolidated, saturated backfill exhibiting shallow groundwater elevations of 20 feet or less below ground surface where existing ground elevations are 3600 feet and lower. The water surface in BHCC's postmining Reservoir 14 in the SESE Sec. 15 is an expression of the groundwater table. The groundwater throughout Pits 1 and 2 is directly connected to and recharged by Goose Creek and the Tongue River, as documented in the Big Horn Mine's Reclamation History, Groundwater Restoration Demonstration (GRD) approved by the WDEQ/LQD as Change No. 9 to Permit 213-T5 in August 2002. The GRD verifies that the Pits 1 and 2 backfill resaturated very rapidly, indicative of unconsolidated, porous material connected to perennial stream recharge sources nearby. Mine Plan Section MP.4 is silent on the subject of managing massive sloughing that may occur in the saturated and nonsaturated backfill of the southeastern highwall mining area as the highwall mining trenches are excavated through the backfill to the base of Carney coal. Section MP-5 of the Mine Plan also fails to present an

alternative water management and treatment plan to be followed should groundwater inflow volumes exceed infrastructure design capacities.

BHCC finds the assessment of potential land subsidence and the remediation plan presented for land subsidence in Addendum MP-6 to be inadequate relative to protecting the value and function of its lands, particularly for protecting the stability of the Tongue River and the quality of shallow groundwater connected to the river. Addendum MP-6 does not absolutely discount the possibility of land subsidence above the highwall miner holes, nor does it provide a plan for the discontinuation of any southeastern area highwall mining should subsidence occur in the lowlands contiguous to Tongue River or Goose Creek. The environmental implications of subsidence developing adjacent to Tongue River and Goose Creek are so severe as to warrant, at a minimum, a permit commitment to temporarily or permanently cease all mining throughout all of the southeastern highway mining area should any subsidence develop in any of the area at any time. The permit's plan for "backfilling will commence within 12 months of a subsidence location being identified if self-healing is not providing sufficient remediation" (Section MP-6.4, Addendum MP-6) is environmentally unacceptable for the southeastern highwall mining area because: 1) the stability and alignment of Goose Creek and Tongue River could be jeopardized should subsidence occur, and; 2) any groundwater quality impacts associated with underground coal fires developing in mine openings would have direct and essentially immediate access to Goose Creek and Tongue River via the shallow groundwater table.

The subsidence control plan presented in Addendum MP-6 is inadequate. It appears that no analytical work of any sort (sampling, material testing, etc.) has been performed in support of the highwall mining design presented in the mine plan. Additionally, it also appears that no geotechnical work of any sort has been performed. Addendum MP-6 discusses general assumptions for highwall mining penetration depths, entry widths, cutting heights and support pillars. This information is presented somewhat anecdotally and in the case of the support pillars, it states that "Support pillars will be designed to have a width equal to or exceeding the maximum extraction thickness anticipated in a highwall mining hole based on the mine's geologic model. This width-to-height ratio of at least 1:1 results in pillar stability factors that exceed recommended values suggested by National Institute for Occupational Safety and Health's (NIOSH) ARMPS-HWM stability program for the overburden thicknesses expected. Pillar dimension will also be in accordance with Brook Mine's Ground Control Plan approved by MSHA."

No material strength data (coal strength, overburden strength, interburden strength, etc.) is provided in the mine plan document. BHCC suspects that no material strength information has been gathered or determined. Can the NIOSH stability factors actually be achieved? This is unknown at this point as no definitive geotechnical and material strength data has been presented in the mine plan. The coals present in this area are of a younger age. Younger age coals have much weaker strengths than older age, deeper coals and it is quite possible that the safety and stability factors needed to safely and effectively execute the highwall mining approach presented in the mine plan cannot be achieved. BHCC insists that further analysis be performed to definitively prove that the web and barrier pillars dimensions are appropriate and that they will meet NIOSH's minimum stability factor of 1.3.

Very little highwall mining has been performed in Wyoming. Highwall mining has been performed relatively recently at the Bridger Mine, which is located in Southwest Wyoming.

While the exact details are unknown, BHCC is aware of at least one “cascading pillar failure” at that operation and fortunately, there were no injuries. It is suspected that this failure was caused by improper pillar layout and design. BHCC is concerned that the anecdotal mine design presented in this document is inadequate and must be performed with proper analytical data.

Objection No. 3 – Section MP.5.9; Section MP.6.2; Addendum MP-3; Section MP.8

The groundwater model of Addendum MP-3 was improperly constructed and executed because the model does not recognize the unique textural and hydraulic characteristics of saturated backfill in BHCC’s Pits 1 and 2, but instead simulates the backfill in the same fashion as native overburden strata (see Section 4.0 of Addendum MP-3). Section 2.5.1 of Addendum MP-3 states “no site-specific hydraulic conductivity information is available for the over/interburden (model) layers”. In fact, hydraulic conductivity data are available for the backfill from former monitor wells in the Pit 1 and Pit 2 area and for the Plachek Pit backfill. That data are provided in the GRD referenced under Objection No. 1 above. Hydraulic conductivity values assigned to the spoils together with all other “overburden” strata in the model are very small (less than one tenth) relative to those shown for backfill in the GRD. The groundwater model ignores determination of the spatial extent of drawdown in the water table of Pit 1 and Pit 2 backfill that is connected to the water table in Tongue River and Goose Creek alluvium, which in turn is supplied by flows in both streams. The text of Section MP.6.2.3 states “Drawdowns of the overburden were not modeled and only isolated sands where encountered are expected to be affected”.

Section 4.9 and Figure 4.9-11 of Addendum MP-3 shows where the groundwater model was used to predict water table drawdown in Tongue River valley alluvium at “alluvial target” points distributed over nearly a six-mile reach of the valley floor. Section 4.9 states that “the maximum impact to the Tongue River alluvium is conservatively estimated to reach 2.5 feet of drawdown near the river”. Addendum MP-3 and Section MP.6.2 provide no description or drawing of the spatial distribution of drawdown during mining in BHCC’s saturated backfill or in the alluvium of Tongue River and Goose Creek that is hydraulically connected to the backfill. Neither does the groundwater model explore potential permanent groundwater elevation changes associated with the highwall mining panels acting as drains to the backfill and alluvial water table via the highwall trench pits. Water table drawdown approaching 2.5 feet in the alluvium of Tongue River valley over a valley distance of nearly six miles would in fact represent a very large volume water loss that would likely cause stream flow losses.

The groundwater model of Addendum MP-3 fails to report groundwater inflow rates to any of the proposed mine excavations. Section MP.8 of the Mine Plan states “It is estimated that the total water use will be approximately 400 million gallons per year.” This is equivalent to an average daily use rate of 760 gallons per minute, about 3.36 acre-feet per day, or about 1,226 acre-feet per year. The Mine Plan does not identify the specific source(s) of the water beyond mentioning that “Industrial water will be obtained from groundwater wells or from water collected in sediment and flood control reservoirs”. The groundwater model of Addendum MP-3 does not include the effects of withdrawing any groundwater from wells for industrial or other uses, nor does it include the effects of dewatering wells mentioned in Section MP.5.9. In short, the Mine Plan is devoid of a hydrologic budget identifying specific groundwater sources, the quantity of industrial

water projected to be available from flood control reservoirs and sediment ponds, and the determination of what would remain of groundwater and surface water supplies while supplying the industrial water needs. BHCC is concerned that the value of its surface estate and future options for developing its surface estate could be marginalized by such a large water use demand, especially considering that water demands at Wyoming coal mines are primarily consumptive.

Objection No. 4 – Section MP.11; Addendum MP-5

The fire control plan referenced in Section MP.11 and presented in Addendum MP-5 describes measures to be taken to prevent and control fires in the mine pits, fires in the mine's processing and shop facilities, equipment fires and rangeland fires. BHCC objects, however to the Mine Plan and Addendum MP-5 not providing plans to control and extinguish new subsurface coal fires that may develop or existing subsurface coal fires that may become rekindled or enlarged as a result of the highwall mining panels that will be opened outboard of the highwall trench openings.

Attachment 1 provided with this Objection No. 4 is a drawing showing the approximate extent of underground coal mine fires in the area of proposed highwall mining in Sections 10 and 15, T57N, R84W, as reported by the U.S. Geological Survey in 1980. The fires in this particular area originated with mining of the Monarch coal. This and other nearby historic underground mines have long been known to exhibit numerous subsidence features and underground coal mine fires, and in the late 1980s BHCC received approval from the WDEQ/LQD to permanently place nearly 10 million bank cubic yards of overburden over the area shown on Attachment 1 in an attempt to reclaim the subsidence and control the fire. That unique reclamation feature is known as the Pit 3 Subsidence Dump in Big Horn Mine's reclamation history. The proposed highwall mining will develop mine openings in the Carney and Masters coal seams beneath the Monarch seam in areas that are known to still exhibit evidence of underground coal fires. Plumes of steam and smoke have been observed again over the general area of Sections 10 and 15 this winter of 2016-2017. These observations indicate that, in places, the perimeter of the historic subsurface coal seam fires has expanded notable distances from the referenced 1980 boundary delineation.

The subsidence control plan of Addendum MP-6 does little to guarantee the long-term protection of BHCC's surface estate especially where highwall mining panels will be driven beneath underground coal mine fires having a long history of activity. Section MP-6.2 of Addendum MP-6 provides numerical calculations for subsidence chimney heights, but there is no investigation of the potential that the historic mine fires may have compromised the structural integrity of strata underlying the fires and overlying the coals targeted for highwall panel mining (the interburden), leaving the interburden more prone to subside than normal. BHCC is particularly concerned and objects to highwall mining beneath or adjacent to pre-existing underground mine fires because of the potential for oxygen and water to be transmitted from the highwall mining openings to "hotspots" in the seams already burning via highwall trenches or via fractured or subsided interburden above the panel openings. BHCC strongly disagrees with the legitimacy of the plan stated in Section MP-6.4 of Addendum MP-6 which states "Backfilling will also be performed if it is determined that the introduction of water and oxygen could contribute to spontaneous ignition of the remaining coal not extracted from the highwall mining operations". BHCC

contends it to be common knowledge in the mining industry that oxygen and water are key catalysts in causing spontaneous combustion in coal, whether the coal be in mine openings or in stockpiles. BHCC also believes that the introduction of additional water and air to a coal seam already on fire is especially problematic.

Section MP-6.3 of Addendum MP-6 commits to maintaining highwall mining mapping and subsidence documentation in a subsidence report that will be available for inspection. BHCC objects to the Mine Plan not committing to freely submitting the highwall mining mapping and subsidence documentation report to all owners of surface estate within the Brook Mine permit area. BHCC also objects to the fact that the Subsidence Monitoring and Assessment reporting of Section MP-6.3 does not include mapping, photographing and describing all evidence of surface or underground coal fires occurring within the Brook Mine permit area whenever such evidence becomes available throughout the life of the mining and post-mining periods.

Objection No. 5 – Section MP.1.3; Exhibit MP.1-1

The mine plan on Page MP-5, identifies the “disturbance boundary includes all lands that will be physically and directly disturbed during mining.” Exhibit MP.1-1 shows the disturbance boundary as a dashed orange symbol that outlines an entire pink hatched polygon, identified as “DISTURBANCE FOR YEAR 2016,” located in Sections 15, 21, 22 and 27 of Township 57 North, Range 84 West.

Within the pink hatched polygon, there are existing assets to Big Horn Coal Company. These assets include a rail spur, water tank, pump house, access roads, fences and land owned by BHCC. Also within the pink hatch polygon is the mainline of the Burlington Northern Railroad and associated lands owned by Burlington Northern.

Based on the definition of Disturbance Boundary as indicated on page MP-5, does Brook Mine indeed have the rights to physically and directly disturb these lands within the pink hatched polygon? From the public record, BHCC has not been able to determine whether Brook Mine has secured surface owner consent from all surface owners, including the railroad, for these activities

Objection No. 6 – Section MP.1.5

The mine plan states on Pages MP-5 and continue onto page MP-6 that “Coal will either be temporarily stored in the pit or directly hauled off site.”

There is no mention in the permit as to where the coal will be hauled off site. Additionally there is no known agreement with the County of Sheridan, indicating approval to haul mineral across county roads.

Objection No. 7 – Section MP.1.9

The mine plan states on Pages MP-7 that “The Brook Mine will operate in conjunction with Taylor Quarry (Permit No. SP-757)... The Mine will work with Taylor Quarry to minimize impacts on Taylor Quarry’s operation.”

The following paragraph states “The Brook Mine will not obstruct Big Horn Coal’s (Permit 231-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal’s 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1.

To remain consistent with the statements made in regards to the Taylor Quarry, Big Horn Coal requests that the paragraph referencing Big Horn to be replaced and restated as follows:

“The Brook Mine will operate in conjunction with the Big Horn Mine and that the Brook Mine will work with Big Horn Coal to minimize impacts to Big Horn Coal operations. Specifically, Brook Mine will not obstruct Big Horn Coal’s (Permit 213-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal’s 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1.”

Big Horn Coal requests that the text be updated in the previous paragraph to reference the correct permit number for Big Horn Coal Company as (Permit 213-T8).

Objection No. 8 – Section MP.3.1, Section MP.3.1.3 – Roads; Exhibit MP.3-1

As stated in the mine plan on Page MP-11, “Primary roads are any road used for transporting mineral or spoil, or frequently used for access or other purposes for a period in excess of six months, or roads to be retained for postmining use.”

WDQ/LQD Rules and Regulations (R&R) Chapter 4, Section 2(j)(vii):

Primary roads.

(A) Certification. The construction or reconstruction of primary roads shall be certified in a report to the Administrator by a registered professional engineer. The report shall indicate that the primary road has been constructed or reconstructed as designed and in accordance with the approved plan. The report shall be available for review at the mine site within 30 days following the completion of construction of each primary road.

Mine plan Exhibit MP.3-1, titled Transportation Network identifies proposed primary haulroads as a solid black line, for the use of transporting mineral or spoil. Yet, there are no haulroads identified in the SE quarter of Section 15, Sections 21, 22 or 27. If the Brook Mine plans to haul mineral or spoil materials from the proposed Trench Cut (TR-1), there should be indication of a primary haul road leaving TR-1, accompanied by a certification of the road design. Unless there are no plans of transporting mineral or spoil from the TR-1 area.

Objection No. 9 – Section MP.4.2.3 – Stockpiles; Exhibit MP.4-3

The mine plan states on Page MP-16, “Stockpiles will not be constructed on unsuitable backfill.”

Mine plan Exhibit MP.4-3, Stockpile Locations identifies Topsoil Stockpile TS-1B proposed location within an area known as the Placheck Pit. This area was mined by Big Horn Coal from 1956 through 1963. It is Big Horn Coal's understanding that the proposed area beneath TS-1B is indeed unsuitable material and that topsoil should not be placed in the area as proposed on Exhibit MP.4-3. Additionally, Big Horn Coal is not aware of a surface owner consent document between Brook Mining Company and the Burlington Northern Railroad that would allow the crossing of the mainline with loaded haul trucks.

Objection No. 10 – Section MP.6.1; Exhibit MP.7-1

Exhibit MP.7-1 represents the operational Surface Water and Groundwater Monitoring Program. There are only two downstream surface water monitoring sites, identified as Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir. The text on page MP-41 of the Mine Plan states "However, the Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir will be disturbed by facilities disturbance."

Big Horn Coal believes there is inadequate downstream monitoring in the proposed plan. Upon disturbing of Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir, there will be no sites downstream of the Brook Mine to collect adequate surface and groundwater data to prove that there are no off site environmental impacts from the proposed operation.

Objection No. 11 - Addendum MP-2, Exhibit MP-2

The proposed Sediment Pond SP-8 is located within the current postmine approved Reservoir 14 constructed by BHCC. The bottom elevation of Reservoir 14 is currently at 3575 with a peak elevation at 3589. Sediment Pond SP-8 bottom elevation is proposed at 3585 with a high water elevation proposed at 3590. It is noted below the area capacity table on Exhibit 13, "1. Pond is entirely incised. No Spillway hydraulics are provided."

These elevations lead BHCC to believe the plan for construction of SP-8 will require Reservoir 14 to be completely backfilled prior to construction of SP-8. BHCC requests that the reconstruction and the water quality within Reservoir 14 be restored to pre-mining conditions before final bond release is allowed.

Objection No. 12 – Exhibit MP.4-1; Exhibit MP.4-2; Exhibit MP.4-5; Exhibit RP.5-1

The proposed mine plan indicates that topsoil and overburden removal will occur upon the BHCC Property and within the TR-1 area in years 1 and 2 of operation. Exhibit MP.4-1 shows coal removal to occur over the same first two years of operation. Exhibit MP.4-5 shows the overburden backfill sequence within TR-1 will occur in year 2. Exhibit RP.5-1 shows the topsoil replacement sequence within the BHCC Property occurring in years 12-16.

BHCC objects to this timeline of topsoil replacement upon its property. The BHCC property is the first to be disturbed and the last to be reclaimed. BHCC asks the question as to why every other proposed disturbance area is backfilled and topsoiled within a 2 to 3 year time frame except around the BHCC facilities area. The topsoil replacement timeframe is unacceptable and not contemporaneous in accordance with the Surface Mining Control and Reclamation Act, (SMCRA) and it is requested that the final

reclamation around the BHCC Property be within the 2 to 3 year time frame, similar to all other areas around the mine.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 14 – Section MP.4.4.1

It is a well-known fact within the mining industry that the term “Reserves” connotes that the mineral being extracted can be done so economically. BHCC opines that the mining approach presented in the mine plan cannot be done economically. Based on our internal

knowledge; the operating cost for a contractor to perform highwall mining is in the \$8/Ton to \$12/Ton range, which is very close to the domestic spot price for this type of coal. By the time the other costs for the surface mining to develop the highwall mining, transportation, G&A, etc. are taken into consideration, this operation appears to be completely uneconomical.

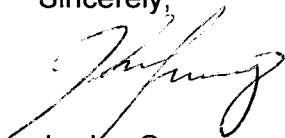

The market for this coal is unclear. The two closest coal mines, Decker and Spring Creek, serve the domestic and international market. Port capacity to the international market is constrained and it is unlikely that Brook Mine will secure access. Domestic demand has been in decline and is significantly oversupplied. Without a definitive market, the Brook Mine is at risk of commencing operations, producing product it cannot sell economically, and reclamation obligations that it cannot fund.

Objection No. 15 – Section MP.15

Objection No. 4 above introduces the fact that the underground mine fires in this area are still burning and have expanded. Section MP.15 does not, in any way, address that the burned areas have expanded. A surface mine excavation that comes in contact with a historic mine fire could be catastrophic in many ways, including: impacting the safety of mine workers, damage to equipment, wildfire initiation, etc. BHCC believes this mine plan has not adequately addressed surface mining activities that will occur near underground mines and insists that the Brook Mine operators must perform the necessary testing and analysis to prove that the proposed mine plan will not be impacted by historic mine fires. Specifically, attachment 1 provided with Objection No. 3 above shows that trench TR-2 is planned very near an area that was burning and is likely still burning. Given that the burned area has likely expanded, this area should not be disturbed at all.

In conclusion, Big Horn Coal Company feels strongly that the Brook Mine permit application should not be approved or deemed technically complete. The mine and reclamation plan lack a significant amount of detail that is required for a technical completeness determination, as stated in the above mentioned objections.

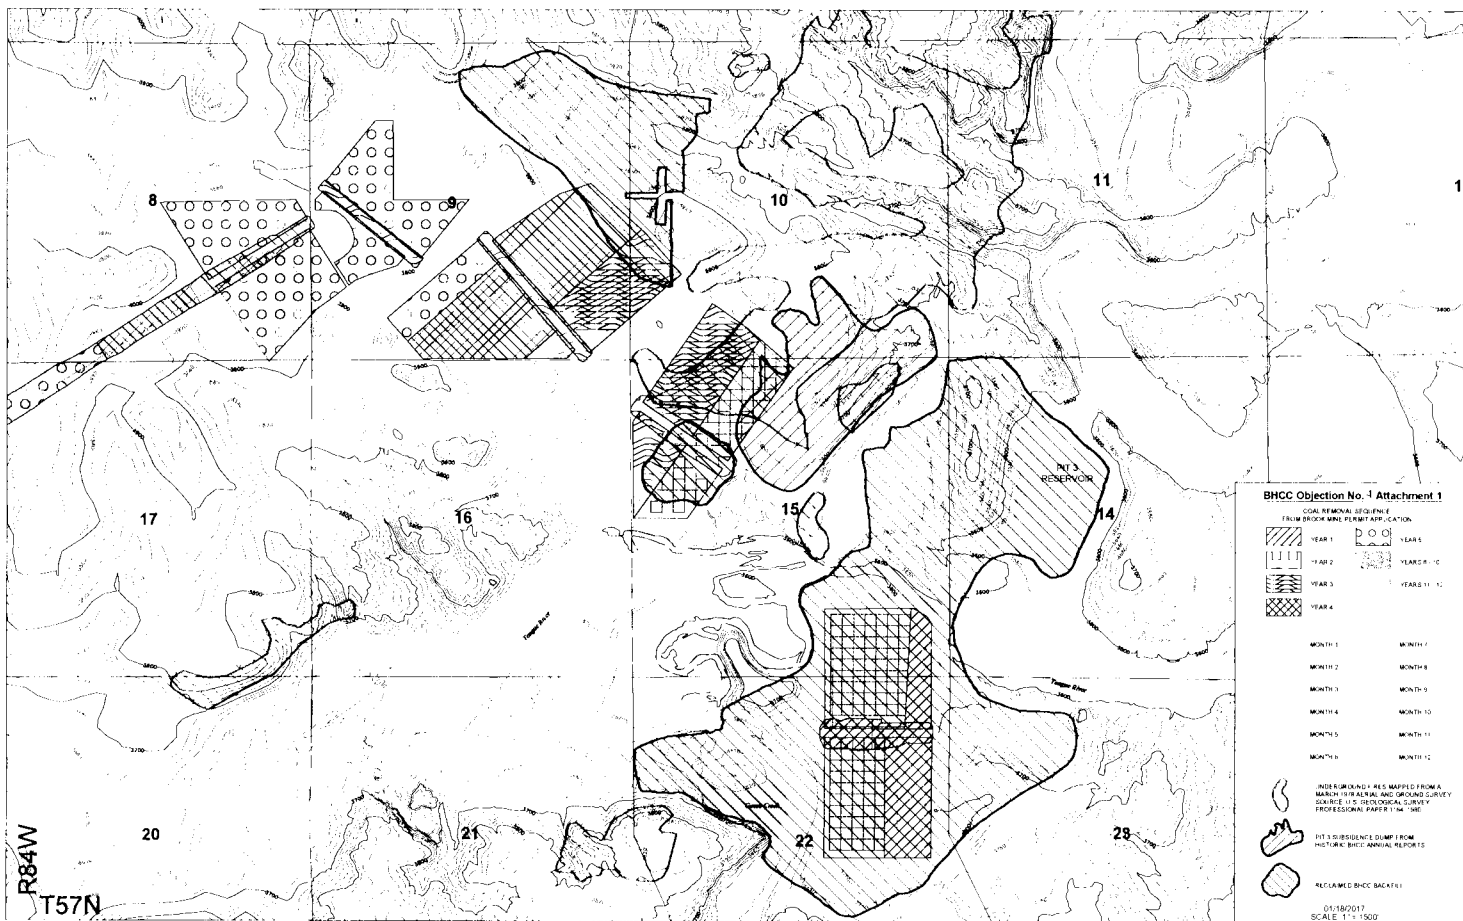

Sincerely,

A handwritten signature in black ink, appearing to read 'Jordan Sweeney', written over a horizontal line.

Exhibit D

CASE NO. CR-2014-372

BROOK MINING COMPANY,

Plaintiff,

VS.

MOTION TO DISMISS

BIG HORN COAL COMPANY,

Defendants.

The above-entitled matter came on for hearing before the Honorable William J. Edelman, Judge of the Fourth Judicial District of Wyoming, on January 8, 2015 at Sheridan, Wyoming.

The proceedings were reported by Jeff S. Eaton,
Official Court Reporter for the Fourth Judicial District, as
hereinafter certified.

A P P E A R A N C E S

The Plaintiff was present and represented by Anthony Todd Wendtland, Wendtland & Wendtland, LLP, Sheridan, Wyoming, and Thomas L. Sansonetti, Holland & Hart, LLP, Cheyenne, Wyoming.

The Defendant was present and represented by Jon T. Dyre and Lynnette J. Boomgaarden, Crowley Fleck PLLP, Billings, Montana.

EXHIBIT B

Jeff S. Eaton, Official Court Reporter
307-425-6057
jeaton@courts.state.wy.us

1 MR. DYRE: Thank you, Your Honor.

2 May it please the Court, Counsel.

3 As you know, I represent Big Horn Coal Company.

4 And Big Horn Coal Company owns some land just outside
5 of Sheridan on which -- which RAMACO wants to use for a
6 proposed coal mine.

7 We've referred to that land in the briefs as BHC
8 Land, I'll do so today.

9 Big Horn Coal Company obtained its interest in land
10 back in 1954 in a deed from Sheridan-Wyoming Coal Company. And
11 we've referred to that deed as the 1954 deed. We're not very
12 imaginative, but that's what we called it.

13 The grantor of the interest with Sheridan-Wyoming
14 Coal Company and Sheridan-Wyoming Coal Company reserved all
15 minerals including the coal.

16 In the last few years through I think two
17 conveniences, RAMAC Wyoming Coal Company, LLC is now the owner
18 of the mineral interests, including the coal.

19 And I believe that there has now been a lease of the
20 coal between RAMACO and Brook, which is why the two plaintiffs
21 in this case.

22 I'm not sure if you saw a reply brief we faxed and
23 filed it yesterday. But as we mentioned in the brief, Big Horn
24 Coal Company acknowledges that RAMACO now owns the coal and the
25 mineral -- minerals. And BHC also acknowledges -- Big Horn

1 Coal Company also acknowledges that under the 1954 deed, RAMACO
2 has the right, and I quote, To use as much of the surface of
3 the lands as may be necessary and convenient in order to enable
4 RAMACO to explore, drill, and extract and remove the coal.

5 Now, it's Big Horn's position that the right to use
6 the surface is limited to access of the coal that's under the
7 BHC lands and the adjacent land.

8 It's also Big Horn's position that RAMACO's right to
9 use the surface to mine is limited by certain legal principles
10 such as the accommodation doctrine, and it is also limited by
11 the Wyoming specrum [sic] Section 35-11-406.

12 We also contest the damage limitations that are in
13 the deed, \$10 per acre, I believe, and so forth.

14 Now, the -- the issues I just mentioned may be issues
15 before the Court at some point, but right now they're not.

16 Right now, the only issue that's been raised by
17 RAMACO is whether the mining operations set forth in RAMACO's
18 pending mine permit applications are within RAMACO's right to
19 use as much of the surface of the lands as may be necessary and
20 convenient for exploring, drilling, and extracting the coal.

21 Now, the key words in their requested relief is
22 "pending". Pending means not yet decided. Pending means we
23 are waiting for it to happen or yet to happen.

24 Synonyms for the word pending would include future,
25 contingent, and uncertain. And each of those words appears in

1 the Wyoming Supreme Courts decision in international
2 Association of Firefighters Local, Union No. 279 versus The
3 City of Cheyenne, in which the Court used those words in the
4 following manner: It is well established that a court cannot
5 declare the rights of parties upon a set of facts which is
6 future, contingent and uncertain, i.e., pending.

7 Other synonyms for the word pending would include
8 future or anticipated, where it is used by the Wyoming Supreme
9 Court in White versus Board of Land Commissioners, where the
10 court held, "The declaratory judgment act does not give the
11 courts power to determine future rights or anticipated disputes
12 or controversies, i.e., the Court does not have power to hear
13 pending rights.

14 The Court's jurisdiction under the Declaratory
15 Judgment Act is limited to determining those rights that
16 currently exist. And at the current time RAMACO doesn't have
17 the right to operate a mine.

18 The Wyoming Department of Environmental Quality is
19 the only entity that can give RAMACO and Brook the right to
20 start mining on Big Horn Coal's property.

21 As we pointed out in our brief, that is a lengthy
22 process that will probably take at least a year and maybe more
23 before we know whether RAMACO will be allowed to mine at all,
24 and if so, what operations will be actually be permitted and
25 allowed by Wyoming DEQ.

1 Now, from the standpoint of judicial economy, it
2 makes little sense for us to litigate whether or not RAMACO can
3 use Big Horn's property for a mine that may never happen.

4 From the standpoint of the jurisdictional limitations
5 on the Court, the fact that there is no -- we don't yet know
6 whether RAMACO will be allowed to mine or what they'll be
7 allowed to do is fatal to the jurisdictional requirements of
8 the Wyoming Supreme Court.

9 Any decision that you might render in this case now
10 could be rendered moot. If we take the mining permit and look
11 at the pending proposed operations.

12 If you were to rule based on that, we have no idea a
13 year from now they -- he may say either no, you cannot mine at
14 all, RAMACO, or all those operations you asked for, we don't
15 approve. And so whatever order you enter would have no effect,
16 it would be rendered moot.

17 Because we don't know what mining operations might
18 actually be approved by the DEQ, any ruling you would give at
19 this point particular point in time would be clearly advisory,
20 which is clearly not allowed.

21 The most you could do at this point is say, Well, if
22 the DEQ actually approves RAMACO's plans to do highwall mining,
23 which is also known as coffin pit mining.

24 The most the Court could do is say, Well, if that's
25 allowed it would or would not, however you rule, would be

1 within RAMACO's rights under the 1954 deed.

2 The "if" in that decision is fatal to jurisdiction.
3 The "if" is what shows that there is no relief that can be
4 granted at this time because it renders any decision that you
5 may reach on these hypothetical pending facts, purely advisory
6 and outside the Court's jurisdiction.

7 Now, as I said earlier, Big Horn Coal Company doesn't
8 contest what the deed says. It says what it says.

9 But what the deed says is that RAMACO has the right
10 to use as much of the surface of the lands that may be
11 necessary convenient.

12 The problem with the words like "necessary" and
13 "convenient" is you have to apply them to something, you have
14 to look at -- well, you have to know what you're looking at to
15 determine whether or not it's necessary or convenient, or, as
16 they say, "The devil's in the detail."

17 Here, we don't know all the details because the
18 detail's pending.

19 RAMACO's right to mine is a contingent right. The
20 operations are anticipated. They are not yet vested, they are
21 not yet determined.

22 And until pending rights and pending operations
23 become actual, the Court cannot grant final relief in this
24 case.

25 It's been suggested in the briefs that "I filed this

1 motion", "We filed this motion as a stall tactic." I didn't.

2 Pointing out a lack of subject matter of jurisdiction
3 is not a stall tactic.

4 Pointing out a lack of jurisdiction is not only
5 proper, but I believe it is mandatory, and needs to be raised
6 at the first opportunity, which we did.

7 Now, in RAMACO's reply brief RAMACO raised some
8 issues that they thought maybe the Court would have
9 jurisdiction to hear. They might -- they could probably could
10 bring a quiet title action, or maybe they could limit relief
11 being sought to permitting the deed. I don't know what issues
12 RAMACO might come up with. I only know what RAMACO requested
13 in the complaint as drafted.

14 And that complaint asked for one thing and only one
15 thing, and that's a ruling based on mining operations that have
16 been described in the pending application before DEQ.

17 And for reasons in our brief, and the reason I've
18 just mentioned, that claim for relief in the complaint fails to
19 state a claim upon which relief could be granted at this time.

20 Unless you have any questions, that concludes my
21 comments for the moment.

22 THE COURT: I don't. Thank you.

23 Mr. Wendtland, Mr. Sansonetti, who is responding on
24 behalf of RAMACO?

25 MR. SANSONETTI: Tony is going to take the lead.

REPORTER'S CERTIFICATE

STATE OF WYOMING)
 : SS.
COUNTY OF SHERIDAN)

I, Jeff S. Eaton, do certify that I am a Registered Professional Reporter in and for the State of Wyoming.

That as such reporter, I reported the occasion of the proceedings of the above-entitled matter at the aforesaid time and place.

That the proceeding was reported by me in stenotype using computer-aided transcription consisting of pages 2 through 26 inclusive;

That the same constitutes a true and correct transcription of the said proceedings;

That I am not of kin or otherwise associated with any of the parties herein or their counsel, and that I am not interested in the events thereof.

WITNESS my hand at Buffalo, Wyoming, this 10th day of April, 2015.

Re: Docket 16-1601: In re Brook Mine Application
Big Horn Coal Co. Response to
Brook Mine Request for Order in Lieu of Consent

Dear Mr. Ruby:

Big Horn Coal Company (BHC) hereby submits its timely response to Brook Mining Company, LLC's (Brook) Petition for Order in Lieu of Consent (Petition) in the above-referenced docket. Because a scheduling conference has been set in this matter for April 20, 2016, this response does not specifically address Brook's request for expedited hearing. BHC respectfully reserves all rights to address scheduling issues during the April 20th conference call.

I. Introduction

BHC is a non-resident, non-agricultural surface landowner entitled to protections afforded by the Environmental Quality Act (EQA) at W.S. 35-11-406(b)(xii).¹ In 1954, BHC purchased surface land and the right to lease and mine the coal under that land from Brook's predecessor, Sheridan-Wyoming Coal Company (SWC). BHC leased and mined coal on the land for more than thirty years. By 1982, BHC had developed facilities which connected the regional coal reserves to the main rail line. For example, BHC had built a bridge across the Tongue River and a rail spur that allowed coal to be hauled on the BNSF main line. Those facilities provided a base from which BHC mined and transported coal leased from SWC and others. Though BHC is not currently actively mining, BHC maintains valuable improvements and infrastructure and has existing rights and obligations pursuant to its existing Mine Permit No. 213-T8. Approximately 370 acres of land encompassed within BHC's existing mine permit overlap with lands included in Brook's mine permit application. Approximately 1,100 acres of BHC surface lands are within the proposed Brook mine permit area.

¹ BHC is wholly owned by LHR Coal, LLC (f/k/a AE Coal, LLC) and LHR Coal, LLC is wholly owned by Lighthouse Resources, Inc. (f/k/a Ambre Energy North America, Inc.)

II. Relevant Facts

By way of background, prior to Brook submitting its mine permit application, AE Coal, LLC, was party to an exploration agreement with Ramaco.² That July 2012 exploration agreement, together with all associated permissions for Ramaco to conduct pilot hole and core drilling and other related mineral exploratory and coal prospecting activities on BHC surface lands, expired by its own terms on July 19, 2014. Upon receiving preliminary mine plans from Ramaco in late 2012, BHC expressed in writing its general support of coal mining in the area and, specifically, its support for Ramaco's proposed mining beneath BHC's surface lands located north of the Tongue River.

Also prior to Brook submitting its mine permit application, on March 13, 2013, BHC consented to Ramaco conducting baseline environmental studies and surveys on certain BHC surface lands. Notwithstanding the March 2013 Landowner's Consent Agreement, on April 9, 2013, Ramaco sent a letter to BHC declaring that the June 28, 1954 Warranty Deed (the 1954 Deed) between its predecessors and BHC provides Ramaco "the legal right to access the surface land for core drilling, pre-permit monitoring or any other pre mining activities" without any additional approval or consent from BHC.³

Ramaco nevertheless provided BHC with revised, but incomplete, mine plans in the Spring of 2013, and with yet another set of maps and a request for surface owner consent in July 2014. Notably, the surface owner consent request and Form 8 that Ramaco provided BHC on July 23, 2014, did not include a complete mine plan and reclamation plan (collectively, "mine and reclamation plan") as required by W.S. 406(b)(xii)(A). Instead, that request was accompanied by just two maps. The first illustrated mine progression blocks; the second illustrated the Brook mine permit boundary and post mine topography. Based on these materials, BHC understood that Brook's rail spur loadout and facilities would be located on the south side of I-90, along the Tongue River toward the Town of Ranchester. BHC sent a letter to Ramaco on October 9, 2014, confirming that Ramaco's proposed activities on BHC lands south of the Tongue River do not conform to BHC's development plans, that BHC "does not consent to the mining and reclamation plan that is being proposed by the Brook Mine," and that BHC further does not agree with Ramaco's continued assertion that it has the right under the 1954 Deed to make reasonable use of BHC's surface lands for mine planning, mining and mine related facilities and

² Brook is the developer and operator of coal and coal mining interests owned by Ramaco Wyoming Coal Co., LLC (Ramaco).

³ This position starkly differed from Ramaco's course of conduct when submitting its Notice of Intent to Explore for Coal By Drilling to DEQ/LQD (Mr. Mark Taylor) on September 21, 2012, in which it referenced the now-expired July 19, 2012 exploration agreement between AE Coal, LLC and Ramaco.

activities without surface owner's consent. Rather than negotiate, Ramaco instead chose to litigate.⁴

BHC received Brook's most recent, incomplete mine and reclamation plan from Brook's consultant, Western Water Consultants Engineering (WWC), on February 5, 2016. WWC's correspondence included a Surface Ownership Request cover letter along with an attached Form 8. BHC's response was requested no later than February 19, 2016. Given BHC's long-standing concerns with Brook's ever-changing plans, BHC responded in a letter dated March 9, 2016, that it would not provide surface landowner consent.

III. The Council should deny the requested order in lieu of consent.

BHC refused to consent to the mine and reclamation plan Brook offered for review on February 5, 2016, and the EQC should deny Brook an order in lieu of BHC's consent to that mine and reclamation plan, for the following reasons:

A. Brook's mine and reclamation plan, as most recently submitted for BHC's consideration, was incomplete and differs significantly from those materials previously provided to BHC and WDEQ/LQD, with no explanation.⁵

Brook's plans have changed significantly with each new set of information BHC received. None of the plans BHC received were complete and Brook has provided no explanation regarding what has changed over time and why, or how the various plans relate to Brook's initial and/or amended mine permit application. BHC did not receive a copy of Exhibit 3-3 – Rail Loadout Facility in the materials it received on February 5, 2016. Moreover, to this day, Brook has failed to outline its operations relative to BHC's activity within the overlapping mine permit area. That failure, together with Brook's otherwise incomplete and ever-changing mine and reclamation plan, stands in direct contrast to the cooperation and agreement contemplated by DEQ/LQD SOP 2.1 and the spirit and intent of W.S. 35-11-406(b)(xii)(A).

B. Brook's mine plan and reclamation plan are not sufficiently detailed to illustrate the full proposed surface use, including proposed route of egress and ingress.

Being a mine permit holder and long-standing mine operator, BHC is knowledgeable of the mine and reclamation plan detail necessary for a surface owner to fully and fairly assess the full scope

⁴ Though not disclosed in Brook's Petition, the extent of Brook's right to use BHC surface lands under the 1954 Deed currently is being litigated pursuant to a Declaratory Judgment Complaint filed by Brook in *Brook Mining Company, LLC v. Big Horn Coal Company*, Civil Action No. CV 2014-372 (Fourth Judicial District Court, Sheridan County).

⁵ The various mine and reclamation plan materials Brook has provided to BHC and WDEQ/LQD also differ from the proposed mine operations Brook has documented with the District Court.

of intended surface use and the foreseeable impacts of that use on the surface landowner's operations. Viewing the materials BHC has received from Brook through the lens of its mining experience, BHC would characterize the Brook mine and reclamation plan as generic, with little more than boilerplate, standardized descriptions. Specific insufficiencies in Brook's mine and reclamation plan include, but are not necessarily limited to the following:

1. The Transportation Network Exhibit 3-1 shows haul roads that terminate in the middle of BHC's permit boundary prior to a loadout and/or facilities location. The first materials BHC received from Ramaco indicated Ramaco would build loadout facilities along I-90 near the BNSF mainline. The next set of materials provided to BHC and the District Court indicated that Ramaco intended to build a new rail spur on BHC-owned surface. The most recent information Ramaco provided to BHC shows haul roads that terminate in the middle of BHC's permit boundary with no loadout or rail facilities in proximity. BHC questions how Brook plans to ship coal to its customers without loading coal onto a train. The location of all anticipated haul roads are material to BHC's consideration of the mine and reclamation plan.

2. Exhibit 3-3 – Railroad Loadout Facility is listed in the Table of Contents, but BHC did not receive a copy of Exhibit 3-3 in the materials it received on February 5, 2016. The text of the materials BHC received says coal will be placed in pit crushers to haul off-site. However, the materials provide no explanation or illustration of where or how that haulage will occur other than the reference to a railroad loadout facility in the table of contents. BHC questions how Brook plans to ship coal to its customers without rail loadout facilities and how Brook's mine permit application can be deemed complete without haul roads leading to a rail loadout facility. This omission is material to BHC's consideration of the mine and reclamation plan.

3. The text of the mine and reclamation plan on page MP-7, Section MP.2 – Mine Facilities, discusses the location of a Change House, Equipment Service Shop, Additional Facilities, Fuel Station, Cistern, Septic Tank and Leach Field. However, none of these facilities are identified on Exhibit MP.2-1. Does Brook intend to provide the locations of these key surface mine facilities for review? These omissions are material to BHC's consideration of the mine and reclamation plan.

C. Brook's proposed use of BHC surface lands will substantially prohibit BHC operations.

Given present coal industry market conditions and the resulting uncertainty as to whether, when, and how Brook's mine and reclamation plans might come to fruition, it is inherently difficult for BHC or the EQC to assess the full scope of impact that Brook's mine and reclamation plan will have on BHC operations. Brook is well aware that BHC owns and controls access to valuable infrastructure and improvements on its surface lands. Namely, BHC surface lands within Brook's proposed mine permit area include an industrial shop, a rail spur facility, and a bridge across the Tongue River (collectively, BHC Facilities).

BHC has existing and planned future uses of its infrastructure and improvements – uses which are supported by surface rights BHC claims pursuant to a 1983 Release Agreement under which Ramaco's predecessor granted specific surface protections and property rights to BHC.⁶ BHC currently leases its shop facility and is negotiating to lease its rail spur to BNSF. In addition, BHC could in the future develop coal it leases from the State of Wyoming – proven economic reserves of 40 million tons. BHC would use its surface lands and BHC Facilities to access the coal and for a rail load-out facility. BHC's future plans to mine the state coal are as reasonably expected to occur as are Brook's mine plans.

As BHC understands Brook's most recent mine plan, Brook will disturb approximately 460 acres near BHC Facilities. By removing and storing topsoil and overburden related to its Phase I highwall mining, Brook would restrict access to and utilization of BHC Facilities, as well as BHC grazing land and additional BHC land north of the Tongue River, for more than twenty (20) years. Accordingly, Brook's use would substantially prohibit BHC operations.

D. Brook's proposed reclamation plan would not reclaim the surface to BHC's proposed future use as soon as feasibly possible.

Brook's mining plan contemplates beginning highwall mining on BHC surface lands, directly south of BHC's shop. The disturbance area appears to encompass all of the BHC property south of the Tongue River except for approximately 20-40 acres around the BHC Facilities. The overburden removal sequence for the initial highwall trench TR-1, is proposed to begin twelve (12) months following permit approval. The spoil backfilling sequence for TR-1 is twelve (12) months after overburden removal. The topsoil replacement sequence is contemplated to take an additional twenty (20) years after TR-1 is backfilled. Brook's reclamation plan would result in the disturbance of BHC surface lands and restricted access to BHC Facilities for 20-30 years. Brook's reclamation plan not only fails to reasonably accommodate BHC's existing land use, it also effectively blocks BHC efforts to secure approval for reasonably foreseeable future land use.

E. Brook has overstated the scope of its legal authority.

⁶BHC asserts that the 1983 Release Agreement, not the 1954 Deed, controls the surface rights of BHC and Ramaco. The 1983 Release Agreement states in relevant part: "SWC expressly consents and agrees to allow BHC to leave intact any and all permanent structures, stockpiles, or spoil materials (referred to herein collectively as 'structures and stockpiles') currently located in Sections 9, 10, 14, 15, 21, and the N1/2 of Section 22 of T. 57 N., R. 84 W., 6th P.M. ... as more specifically identified in Schedule D attached hereto...." The scope and effect of the 1983 Release Agreement is among the issues to be determined by the District Court in *Brook Mining Company, LLC v. Big Horn Coal Company*, Civil Action No. CV 2014-372.

Brook repeatedly asserts in its Petition that it not only owns the coal but also has broad rights to use BHC surface as necessary or convenient for mining pursuant to the 1954 Deed. Interestingly, however, nowhere in its Petition does Brook disclose that the 1954 Deed, together with the 1983 Release Agreement, is the subject of active litigation. (See footnotes 4 and 6, above.) BHC does not contest Brook's ownership of coal deposits subject to its mine permit application. BHC does, however, ardently dispute Brook's assertion that Brook's proposed mine and reclamation plan contains permitted uses of the surface under the 1954 Deed.

Issues pertaining to the scope of use, if any, permitted by the 1954 Deed are subject to the District Court's jurisdiction. As of this date, the District Court has denied both Brook's and BHC's competing motions for summary judgment; no formal discovery plans have been made and no trial date has been set. For these reasons, and those set forth in the BHC letters to WDEQ/LQD dated March 6, 2015, and to Mr. Andrew Kuhlmann, Senior Assistant Attorney General, dated December 16, 2015 (attached hereto as Exhibits A and B, respectively), it is wholly inappropriate and disingenuous for Brook to suggest that the EQC should give any weight or authority whatsoever to the existence of, or its alleged rights under, the 1954 Deed. BHC's surface owner rights under W.S. 35-11-406(b)(xii) are independent of any interpretation or operation of the 1954 Deed. By Brook's own admission, the Wyoming Attorney General has concluded the same.

F. Brook has not posted a bond as required by W.S. 35-11-416 and any order in lieu of consent should be conditioned upon the prior posting of an adequate surface owner protection bond.

Pursuant to W.S. 35-11-416, in addition to the performance bond Brook must post to secure reclamation costs, Brook also must execute a bond with the State for the use and benefit of BHC and other split estate surface owners within the proposed mine permit boundaries "in an amount sufficient to secure the payment for any damages to the surface estate, to the crops and forage, or to the tangible improvements of the surface owner." The statute makes clear that the surface owner protection bond must be in place prior to issuance of a mine permit. The statute does not otherwise specify when the surface owner protection bond must be posted or by what process the administrator will determine the bond amount.

The statute does specify that the amount of the surface owner protection bond "shall be commensurate with the reasonable value of the surrounding land, and *the effect of the overall operation of the landowner,*" and that "[f]inancial loss resulting from disruption of the surface owner's operation shall be considered as part of the damage." (Emphasis added.) The surface owner protections offered by the bond and the determination of the bond amount closely align with certain required elements for an order in lieu of consent (e.g. the effect of the proposed use on the surface owner's operations and the extent to which reclamation accommodates approved future uses as soon as feasibly possible). Accordingly, BHC requests that if the EQC should

conclude that an order in lieu of consent is warranted, any such order be issued only upon Brook's posting of the requisite surface owner protection bond, and that the parties have an opportunity to present further evidence to the administrator and/or EQC to support what bond amount is necessary to provide the surface owner statutory protections, and when such bond should be posted.

IV. Conclusion

The applicable provisions of the EQA say nothing about balancing the rights of mineral owners and surface owners, veto power, or economic leverage as Brook has suggested. Instead, the EQA explicitly requires that Brook's mine permit application include an instrument of consent from the surface landowner, even a non-resident or non-agricultural landowner, if different from the owner of the mineral estate. W.S. 35-11-406(b)(xii). If Brook cannot obtain all necessary surface landowner consent to its proposed mining plan or reclamation plan, or both, the EQC shall issue an order in lieu of consent if, and only if, it finds the statutory elements have been met. *Id.* The EQA, W.S. 35-11-416, further mandates that "a permit shall not be issued without the execution of a bond or undertaking to the state, whichever is applicable, for the use and benefit of the surface owner or owners of the land, in an amount sufficient to secure the payment for any damages to the surface estate, to the crops and forage, or to the tangible improvement of the surface owner." For the reasons stated above, Brook has not satisfied the statutory elements for an order in lieu of consent. Nor has Brook posted a bond for the use and benefit of BHC in an amount sufficient to protect BHC's interests.

BHC will defend its surface landowner rights under the EQA to: (1) receive and have an adequate opportunity to review the complete and accurate mine and reclamation plan that Brook provided to the WDEQ/LQD in support an approved draft mine permit for publication, and which is sufficiently detailed to assess the scope and duration of impact on BHC operations; (2) ensure that Brook's proposed use will not substantially prohibit BHC's operations; (3) ensure that Brook's proposed reclamation will accommodate approved future use of BHC surface as soon as feasibly possible; (4) ensure that Brook is not permitted to use the 1954 Deed to expand its rights as a mine permit applicant under the EQA; and (5) ensure that payment for foreseeable damages to BHC surface lands from Brook's proposed mine operations are appropriately secured. BHC looks forward to a full and fair opportunity at hearing to demonstrate to the EQC that an order in lieu of consent should not issue in this case, including the right to present additional objections, evidence and exhibits, and to cross examine witnesses.

Sincerely,

Lynne Boomgaarden

Re: Concerns Regarding Brook Mining Mine Permit Application and Exploratory
Drilling Activity within Big Horn Coal Co. Mine Permit Area:
Permit No. 213-T8

Dear Mr. Edwards:

As you are aware, Brook Mining Company, LLC ("Brook Mining")¹ submitted an application for a permit to mine, TFN # 62/025, to the Land Quality Division of the Wyoming Department of Environmental Quality ("DEQ/LQD") on October 31, 2014 ("Brook Mining Application"). My client, Big Horn Coal Company ("BHC")², did not consent to the mine plan and reclamation plan that Brook Mining provided to BHC for review because the proposed activities will unreasonably interfere with BHC's extensive surface infrastructure improvements and its existing use and development plans for the area, including but not limited to the exercise of BHC's rights and obligations under its *existing* Mine Permit No. 213-T8. As you are also aware, Brook Mining, through its agents, representatives and/or contractors, has recently undertaken drilling activity pursuant to a Coal Notification on surface lands owned by BHC in the N1/2N1/2, Section 21, Township 57 North, Range 84 West. BHC was never notified of, did not consent, and, due to its regulatory obligations under Mine Permit No. 213-T8, strenuously objects to any and all such activity without at least having been provided notice and a plan of operations. This letter serves to document BHC's legal

¹ Brook Mining is the developer and operator of coal and coal mining interests owned by Ramaco Wyoming Coal Co., LLC ("Ramaco").

² BHC is wholly owned by AE Coal, LLC and AE Coal LLC is wholly owned by Ambre Energy North America, Inc.

and operational concerns with the Brook Mining mine plan, reclamation plan, permit application adjudication and exploratory drilling activity.

Background

Prior to submission of the Brook Mining Application, AE Coal, LLC, was party to an exploration agreement with Ramaco. That exploration agreement, together with all associated permissions for Ramaco to conduct pilot hole and core drilling and other related mineral exploratory and coal prospecting activities on BHC surface lands, expired by its own terms on July 19, 2014. Also prior to submission of the Brook Mining Application, on March 13, 2013, BHC consented to Ramaco conducting baseline environmental studies and surveys on certain BHC surface lands. Notwithstanding the March 2013 Landowner's Consent Agreement, on April 9, 2013, Ramaco sent a letter to BHC declaring that a 1954 deed between its predecessors and BHC provides Ramaco "the legal right to access the surface land for core drilling, pre-permit monitoring or any other pre mining activities" without any additional approval or consent from BHC. This position starkly differed from Ramaco's course of conduct when submitting its Notice of Intent to Explore for Coal By Drilling to DEQ/LQD (Mr. Mark Taylor) on September 21, 2012, in which it referenced the now-expired July 19, 2012 exploration agreement between AE Coal, LLC and Ramaco.

BHC has expressed in writing to Brook Mining its general support of coal mining in the area and, specifically, its support for Brook Mining's proposed mining beneath BHC's surface lands located north of the Tongue River. However, on October 9, 2014, BHC sent a letter to Ramaco confirming that Ramaco's proposed activities on BHC lands south of the Tongue River do not conform to BHC's development plans, that BHC "does not consent to the mining and reclamation plan that is being proposed by the Brook Mine," and that BHC does not agree with Ramaco's assertion that it has the right under the 1954 deed to make reasonable use of BHC's surface lands for mine planning, mining and mine related facilities and activities without surface owner's consent. The extent of Brook Mining's right to use BHC surface lands under the 1954 deed currently is being litigated pursuant to a Declaratory Judgment Complaint filed by Brook Mining in *Brook Mining Company, LLC v. Big Horn Coal Company*, Civil Action No. CV 2014-372, and will be determined by the Fourth Judicial District Court for Sheridan County, Wyoming.³

³ In its district court complaint, Brook Mining also reserved the right to condemn BHC's property, including its surface rail and bridge infrastructure. Brook Mining's apparent intent to condemn BHC's existing surface infrastructure is curiously inconsistent with the Brook Permit Application, which proposes to mine under the existing surface infrastructure, thereby rendering that valuable infrastructure useless.

BHC's Surface Owner Rights under W.S. 35-11-406(b)(xii)

DEQ/LQD has no authority to adjudicate property rights disputes. Conversely, the District Court's determination of Brook Mining's rights under the 1954 deed has no bearing on BHC's rights as a non-resident, non-agricultural landowner under W.S. § 35-11-406(b)(xii). Ramaco admitted this point in its letter to Ambre Energy dated April 9, 2013, wherein Randall W. Atkins, Ramaco CEO, asserted Ramaco's rights under the 1954 deed and further stated,

Ambre, as a surface owner, has the right at the appropriate time to review our plans and consent, or not consent. If Ambre refuses to offer its consent to a compliant mine and reclamation plan, Ramaco can, and will, petition the Wyoming Environmental Quality Council (EQC) for an order in lieu of consent.

Despite acknowledging BHC's statutory rights, following BHC's refusal to consent to the mine plan and reclamation plan Brook Mining provided BHC to review (which as noted below was different from the mine plan and reclamation plan Brook Mining submitted to DEQ/LQD with its mine permit application), Brook Mining apparently provided the 1954 deed to DEQ/LQD in lieu of BHC's statutory right of consent. See Adjudication, Appendix A Index, Brook Mining Application. BHC admits that it does not possess the right of consent to entry by definition under W.S. 35-11-406(b)(xi), and by virtue of the surface use reservation in 1954 deed. Nevertheless, *nothing* in the Wyoming surface coal mining statutes permits a mine permit applicant to utilize a deed, with a general reservation of surface rights, to strip a surface owner under W.S. 35-11-406(b)(xii) of its rights to *review* a compliant mine and reclamation plan and to *refuse to consent* to such plan, or to *exempt* a mine permit applicant from its obligation to petition the EQC and provide sufficient evidence upon which the EQC can make the findings necessary under W.S. 35-11-406(b)(xii)(A)-(E) to support an order in lieu of consent.

According to W.S. 35-11-406(b)(xii), the EQC shall issue an order in lieu of consent if it finds that (A) the mining plan and the reclamation plan have been submitted to the surface owner for approval; (B) the mining plan and reclamation plan are detailed so as to illustrate the full proposed surface use, including proposed routes of egress and ingress; (C) the use does not substantially prohibit the operations of the surface owner; (D) the proposed plan reclaims the surface to its approved future use, in segments if circumstances permit, as soon as feasibly possible; and (E) for surface coal mining operations, that the applicant has the legal authority to extract coal by surface mining methods. Absent a specific exception in the statute, it is not reasonable to infer that the Wyoming Legislature intended that a deed executed and recorded long before enactment of Wyoming's surface coal mining statutes, by parties who no longer own the minerals or the surface, should negate the EQC's statutory obligation to consider, among other things, whether a mine plan proposed in 2014 would substantially prohibit the present surface owner's operations.

Federal surface coal mining statutes allow a mine permit applicant to submit a conveyance that *expressly grants or reserves the right to extract the coal by surface mining methods* in lieu of written consent from the surface owner. *See* 30 U.S.C.A. § 1260 (b)(6) (“SMCRA”). Wyoming’s surface coal mining statutes, which preceded SMCRA, contain no such provision, and despite adopting other post-SMCRA amendments, the Wyoming legislature has never seen fit to adopt a similar conveyance in lieu of a consent provision. In *Belle Fourche Pipeline Co. v. Wyoming*, 766 P.2d 537, 548 (Wyo. 1988), the Wyoming Supreme Court noted that “[e]ven though this provision is included in the SMCRA, surface owner consent was not one of the provisions specifically required to be included in a state program.” *Id.* According to the court, “Wyoming went even further than the SMCRA in its effort to provide more specific protection of the surface owner” by imposing a qualified requirement that a non-resident, non-agricultural surface owner be “granted the right to a hearing if they object to the proposed mining activities, after which the EQC still could issue an order in lieu of consent.” *Id.* at 547-48. The requirement set forth in W.S. 35-11-406(b)(xii) is clear and unambiguous. Brook Mining cannot avoid this requirement by providing DEQ/LQD reservation language in a 1954 deed.

Overlapping Permits

As expressly stated in LQD’s Coal Standard Operating Procedure No. 2.1 – Coal Permit Content and Review Procedures Relating to Abutting and Overlapping Coal Permit Area Boundaries, “overlapping permit boundaries create unusual permitting, field inspection, annual reporting, and reclamation performance bonding challenges.” According to SOP No. 2.1 both permittees have joint responsibility and control over shared lands and *“there must be cooperation and agreement between the two permittees. Both permits must have mutually compatible Mine and Reclamation Plans that outline the respective operations within the overlapping permit area.”* SOP 2.1, Section II.D. Brook Mining has been uncooperative. There is no agreement between Brook Mining and BHC; and the mine and reclamation plans provided by Brook Mining to BHC failed entirely to outline the respective operations of Brook Mining and BHC within the overlapping permit area. Indeed, the mine plan Brook Mining provided to BHC for review differs from that presented in the Brook Mine Permit Application.⁴ These varied representations of Brook Mining’s plans stand in direct contrast to the cooperation and agreement contemplated by SOP 2.1.

⁴ Similarly, the map Brook Mining attached to its written offer to purchase 452 acres of BHC’s land is not the same as a supplemental map Brook mining filed in the lawsuit – the map Brook Mining filed with the court shows an area of high wall mining in the north half of Section 22, while the map enclosed with the offer letter does not show any mining in Section 22, but shows the Phase I rail spur being built over the high wall mining area. The map submitted to the DEQ with the Brook Mining permit application shows high wall mining in the north half of Section 22 as well.

SOP 2.1, Section III.B.1.b., Permit Adjudication Section, further provides that a new permit application "must contain a written statement from Permittee 2 that all application elements addressing shared land are acceptable to Permittee 2." It appears that the Brook Mine Permit Application Adjudication Section contains no such written statement from BHC.

SOP 2.1, Section III.B.1.c., Mine Plan, further provides that the Mine Plan for each permit containing an overlapping permit area must include a separate section for each permit area boundary configuration that includes a brief discussion of how the mining operations coincide for the joint use areas. The Brook Mine Permit Application Mine Plan provided to BHC for review contained no such discussion.⁵

SOP 2.1, Section III.B.1.d., Reclamation Plan, further provides that the Reclamation Plan for each permit containing an overlapping permit area must include a separate section for each permit area boundary configuration that includes a map specifying the reclamation responsibility of each permittee. The Brook Mine Permit Application Reclamation Plan provided to BHC for review contained no such map. Nor did the Brook Mine Permit Application provided to BHC for review address the respective performance bond obligations of BHC and Brook Mining within the overlapping permit boundaries as required by SOP 2.1, Section III.B.1.e.

SOP 2.1, Section II.B., Definitions, states that where overlapping permit areas occur, the LQD's position is that both permittees have joint responsibility and control over shared lands. BHC's Mine Permit No. 213-T8 expressly provides that BHC shall conduct their operation in a manner which prevents violation of any applicable State or Federal law. If a violation is found to exist in the overlapping permit area, it is uncertain what effect this will have on BHC, BHC's mining permit, and BHC's insurance coverage, especially if the violation cannot be

⁵ The proposed "joint use" of greatest concern to BHC is that area south of the Tongue River and adjacent to BHC's existing shop facilities. The area was mined in the early to late 1970's and has since been backfilled with unconsolidated, saturated spoil materials with a direct connection to the Alluvial Valley Floor (AVF) of the Tongue River. Mining the Carney and Masters coal seams in this area would require a significant amount of de-watering and discharges into the Tongue River, causing catastrophic damage to the hydrologic balance. Additional monitoring wells in the immediate vicinity of the proposed coffin pit trench cut would be necessary to quantify the amount of water that would be intercepted.

In addition, Brook Mining has proposed stockpiling material on BHC lands in the immediate vicinity of wetlands and an AVF, without consulting with BHC regarding alternate locations that would be more environmentally friendly and would also accommodate BHC business development strategies.

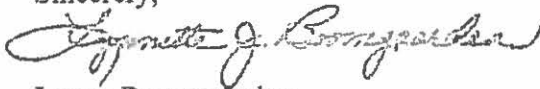

Finally, Brook Mining's proposed mine plan would render reclamation of the historic Placheck Pit (AML Project No. 171 – Northeast Wyoming Coal) on BHC surface lands impossible.

directly associated with one permittee's actions. BHC has many concerns surrounding its potential liability for Brook Mining's activities performed in the overlapping permit area. Additionally, although SOP 2.1 does not specifically address LQD-authorized activities conducted pursuant to a Coal Notification within an existing mine permit boundary, BHC asserts that cooperation between the parties is equally important under those circumstances as the same concerns regarding liability arise for activities performed by Brook Mining pursuant to their Coal Notification in BHC's mine permit area.

Requested Action

BHC sincerely appreciates LQD's responsiveness to BHC's inquiries to date. For the reasons stated above, BHC respectfully requests that DEQ/LQD (1) expressly acknowledge BHC's right, pursuant to W.S. 35-11-406(b)(xii), to review and consent to the mine plan and reclamation plan Brook Mining submitted to DEQ/LQD; (2) absent BHC's consent to a compliant mining plan and reclamation plan, require Brook Mining to petition to the EQC for an order in lieu of consent; and, (3) require that Brook Mining provide BHC (i) a list of wells and plan of operations, and (ii) prior notice of entry, under any existing or future Coal Notification that permits activities within the boundaries of BHC Mine Permit No. 213-T8.

Sincerely,

Lynne Boomgaarden

Re: Continued Concerns Regarding Lack of Surface Owner Consent and other
Representations Related to the Brook Mining Mine Permit Application

Dear Mr. Kuhlmann:

As you are aware from prior communications, my client, Big Horn Coal Company ("BHC"), did not consent to the mine plan and reclamation plan that Brook Mining/Ramaco (collectively, "Ramaco") provided to BHC for review because the proposed activities will unreasonably interfere with BHC's extensive surface infrastructure improvements and its existing use and development plans for the area, including but not limited to the exercise of BHC's rights and obligations under its *existing* Mine Permit No. 213-T8. BHC documented its legal and operational concerns with the Ramaco mine plan, reclamation plan, permit application adjudication and exploratory drilling activity in a letter dated March 6, 2015, to Mr. Alan Edwards and copied to you.

BHC recently became aware of certain assertions made by Ramaco to the Wyoming Attorney General and the Department of Environmental Quality Land Quality Division ("DEQ/LQD") in a letter to you from Mr. Tom Sansonetti dated October 13, 2015, and in Ramaco's Round 2 permit review responses.

Accordingly, today's letter is being provided for the purpose of reaffirming BHC's concerns and position regarding the necessity of obtaining the surface owner's consent to mining as required by the Wyoming Environmental Quality Act ("WEQA").

First, notwithstanding Mr. Sansonetti's assertion on behalf of Ramaco that "[t]he 1983 release agreement does not affect any of the rights reserved in the 1954 Deed," and "[t]he 1954 Deed controls the surface use mining rights of Ramaco relative to both Big Horn Coal and Padlock Ranch," the Wyoming district court denied Ramaco's and BHC's competing motions for summary judgment as to those assertions by an order dated September 21, 2015. This matter remains the subject of active litigation before the Fourth Judicial District Court for Sheridan County, Wyoming, in *Brook Mining Company, LLC v. Big Horn Coal Company*, Civil Action No. CV 2014-372. As of this date, no formal discovery plans have been made and no trial date has been set. BHC continues to ardently dispute Ramaco's assertion that it has the right under the 1954 deed to use BHC's surface lands to conduct all "necessary or convenient" coal mining activities and that the Ramaco Mine Plan application contains permitted uses of the surface under the 1954 Deed.

Second, as outlined in our March 6, 2015 letter to Mr. Edwards, BHC's surface owner rights under W.S. 35-11-406(b)(xii) are independent of any interpretation or operation of the 1954 deed because *nothing* in the WEQA permits a mine permit applicant to utilize a deed, with a general reservation of surface rights, to strip a surface owner under W.S. 35-11-406(b)(xii) of its rights to *review* a compliant mine and reclamation plan and to *refuse to consent* to such plan, or to *exempt* a mine permit applicant from its obligation to petition the Environmental Quality Council ("EQC") and provide sufficient evidence upon which the EQC can make the findings necessary under W.S. 35-11-406(b)(xii)(A)-(E) to support an order in lieu of consent. Ramaco erroneously relies on *WYMO Fuels, Inc. v. Edwards*, 723 P.2d 1230 (Wyo. 1986) to dispute this fact (see Adjudication, Response AG 1-Round 1). The Supreme Court in *WYMO Fuels* addressed the narrow issue of "whether condemnation of a way of necessity for a railroad spur track and a mine truck haul road ... dispenses with the statutory requirement that a resident or agricultural landowner or a surface landowner consent to mining operations." *Id.* at 1231. In answer to this narrow question, the Supreme Court "afford[ed] efficacy to the condemnation statute," by holding that two parties whose lands had been condemned were no longer surface owners and accordingly, "were left with no interest which required protection pursuant to the Wyoming Environmental Quality Act." *Id.* at 1236. The *WYMO Fuels* decision has no application here. BHC's fee surface interests have not been condemned and neither Ramaco nor DEQ/LQD may ignore BHC's surface consent rights under the WEQA.

For these reasons, BHC respectfully renews its request that DEQ/LQD expressly acknowledge BHC's right, pursuant to W.S. 35-11-406(b)(xii), to review and consent to any mine plan and reclamation plan that Ramaco submits to DEQ/LQD for consideration. Absent BHC's consent to a compliant mining plan and reclamation plan, BHC requests that DEQ/LQD require Ramaco to petition to the EQC for an order in lieu of consent.

Big Horn Coal Company Continued Objection to Brook Mining Company, LLC Permit
Application, TFN # 62/025
December 16, 2015
Page 3

Finally, Ramaco has failed to provide BHC (either directly or through its court filings) any mine and reclamation plans it has submitted to DEQ/LQD for review. To the best of BHC's knowledge, Ramaco still has not outlined the respective operations of Ramaco and BHC within the overlapping permit area. Moreover, Ramaco's mine plans as represented to the court appear to differ substantially from its filings with DEQ/LQD. As previously stated, these varied representations of Ramaco's plans stand in direct contrast to the cooperation and agreement contemplated by DEQ/LQD SOP 2.1 and undermine any credible foundation upon which Ramaco's permit application might succeed.

Thank you for your consideration of BHC's concerns. Please contact me if you have questions or would like to discuss this matter further.

Sincerely,

Lynne Boomgaarden
Crowley Fleck, PLLP

Exhibit F

For the following reasons, BHC does not approve of Petitioner's proposed mine and reclamation plans, does not consent to Petitioner entering on to BHC lands as proposed in such plans, and respectfully requests that the EQC decline to enter an order in lieu of BHC's consent.

I. Introduction

BHC is a non-resident, non-agricultural surface landowner entitled to protections afforded by the Wyoming Environmental Quality Act (WEQA) at W.S. § 35-11-406(b)(xii).¹ In 1954, BHC purchased surface land and the right to lease and mine the coal under that land from Petitioner's predecessor, Sheridan-Wyoming Coal Company (SWC). BHC leased and mined coal on the land for more than thirty years. By 1982, BHC had developed facilities which connected the regional coal reserves to the main rail line. For example, BHC had built a bridge across the Tongue River and a rail spur that allowed coal to be hauled on the BNSF main line. Those facilities provided a base from which BHC mined and transported coal leased from SWC and others. Though BHC is not currently actively mining, BHC maintains valuable improvements and infrastructure, leases its facilities to third parties for commercial use, and has existing rights and obligations pursuant to its existing Mine Permit No. 213-T8. Approximately 370 acres of land encompassed within BHC's existing mine permit overlap with lands included in Petitioner's mine permit application. Approximately 1,100 acres of BHC surface lands are within Petitioner's proposed mine permit area.

Petitioner provided BHC with incomplete mine plans in the Spring of 2013, and with yet another incomplete set of maps and a request for surface owner consent in July 2014. The surface owner consent request Petitioner provided BHC in July 2014 did not include a complete mine plan and reclamation plan (collectively, "mine and reclamation plans"). In response to Petitioner's 2014 consent request, BHC sent a letter to Petitioner in early October 2014, confirming that Petitioner's proposed activities on BHC lands south of the Tongue River do not conform to BHC's development plans, that BHC "does not consent to the mining and reclamation plan that is being proposed by the Brook Mine," and that BHC further does not agree with Petitioner's continued assertion that it has the right

¹ BHC is wholly owned by LHR Coal, LLC (f/k/a AE Coal, LLC) and LHR Coal, LLC is wholly owned by Lighthouse Resources, Inc. (f/k/a Ambre Energy North America, Inc.)

under the 1954 deed to make reasonable use of BHC's surface lands for mine planning, mining and mine related facilities and activities without surface owner's consent. Rather than negotiate a resolution of BHC's concerns, Petitioner instead chose to litigate.²

BHC later received mine and reclamation plans from Petitioner's consultant, Western Water Consultants Engineering (WWC), on February 5, 2016. WWC requested BHC's response no later than February 19, 2016. Given BHC's long-standing concerns with Petitioner's ever-changing plans and the impact of those plans on its existing facilities and mine permit obligations and liabilities south of the Tongue River, BHC responded in a letter dated March 9, 2016, that it would not provide surface landowner consent.

Petitioner filed a Request for Order in Lieu of Consent & Request for Hearing on March 16, 2016 ("Petition"). The EQC received evidence on Petitioner's Request for an Order in Lieu of Consent on August 17-18, 2016. Following the close of evidence, on August 26, 2016, Petitioner filed certain revisions to its mine and reclamation plans with Mr. B.J. Kristiansen, Wyoming Department of Environmental Quality ("WDEQ"), Land Quality Division ("LQD"), in part "as a result of the Order in Lieu of Consent hearing." These revisions are outside of the record evidence presented at hearing. Nevertheless, in the interest of efficiency BHC has considered the revisions and addresses them in its argument and proposed findings of fact and conclusions of law, below.

II. The EQC should deny the requested order in lieu of consent.

The Wyoming Environmental Quality Act ("EQA"), W.S. § 35-11-406(b)(xii)(A)-(E), provides that if the mine permit applicant can provide substantial evidence to support EQC findings that five (5) statutory elements have been satisfied, the EQC shall issue an order in lieu of the consent of a nonagricultural, nonresidential surface landowner. In this

² The extent of Petitioner's right to use BHC surface lands under the 1954 Deed currently is being litigated pursuant to a Declaratory Judgment Complaint filed by Petitioner in *Brook Mining Company, LLC v. Big Horn Coal Company*, Civil Action No. CV 2014-372 (Fourth Judicial District Court, Sheridan County).

case, the EQC should deny Petitioner an order in lieu of BHC's consent to Petitioner's mine and reclamation plans, even as those plans were revised following the closing of evidence at hearing, because Petitioner has failed to meet its burden of providing sufficient evidence to establish at least two of the five statutory requirements: W.S. § 35-11-406(b)(xii)(C) and (D).

A. Petitioner's recently revised mine and reclamation plans are internally inconsistent and are not sufficiently detailed to illustrate the full proposed surface use of BHC surface in accordance with W.S. § 35-11-406(b)(xii)(B).

W.S. § 35-11-406(b)(xii)(B) requires "[t]hat the mining plan and the reclamation plan is detailed so as to illustrate the full proposed surface use including proposed routes of egress and ingress." Nothing in this provision suggests, as Petitioner asserts, *see* Tr. Vol. I, p. 56, ll. 19-24 and p. 57, ll. 6-14, that the standard of detail required to satisfy this element is the same standard the WDEQ/LQD applies when reviewing the mine permit application for completeness. Indeed Mr. B. J. Kristiansen, WDEQ/LQD, explained to the EQC at hearing that the agency does not evaluate a mine plan from the surface owners' "side of it." Tr. Vol. I, p. 171, ll. 11-12. Rather, WDEQ/LQD looks at the mine plan from the applicant's perspective to make sure the applicant has met all of the completeness requirements. The surface owners have to evaluate the mine and reclamation plans based on their knowledge. Tr. Vol., p. 171, ll. 11-18.

Neither did the legislature provide any statutory language that would lessen the level of detail required or exempt Petitioner from providing sufficient detail of its full proposed surface use of BHC surface, so long as Petitioner included a statement in its mine plan that it would not obstruct the use of or access to BHC's existing facilities. The statute does not require, and the EQC should not expect, BHC to simply trust that Petitioner will not obstruct BHC's surface use or access. Any such trust would be particularly misplaced where, as here, Petitioner has refused to negotiate a commercially reasonable compromise, and has chosen instead to litigate in an attempt to secure the broadest possible rights to use BHC surface.

Turning to an evaluation of the information provided in Petitioner's revised mine and reclamation plans, the revisions Petitioner made to those plans on August 26, 2016 relevant to BHC surface lands can be summarized as follows:³

- Text at MP-7 to MP-10 revised "to show non obstructed use of BHC shop, bridge, and rail siding."
- Exhibit MP.1-1 revised "to show fencing, roads, and access road."
- Exhibit MP.3-1 revised "to show additional roads."

Petitioner's witness Mr. Barron testified at hearing that a mine permit applicant tries to keep the text of the proposed mine plan general and puts the detail in the mine plan figures, exhibits, and tables, understanding that a "picture is worth a thousand words." Tr. Vol. I, p. 68, ll. 5-25. In the context of Mr. Barron's testimony, and notwithstanding Petitioner's recent plan revisions, Petitioner's revised mine and reclamation plans suffer from the following internal inconsistencies and lack of detail:

- The mine plan text at MP.1.9 now states that "[t]he Brook Mine will not obstruct Big Horn Coal's (Permit 231-T8 [sic]) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1." See Exhibit A at p. 4.
 - This revision limits Petitioner's assurance of no obstruction to the use of BHC facilities in 2015 rather than current uses and operations as provided by the Environmental Quality Act.
 - Petitioner's assurance of no obstruction is not reflected on the more detailed mine plan Exhibit MP.1-1, which continues to request mine permit approval of a 400+ acre surface disturbance area (as shown by pink cross-hatch) across BHC's entire Permit 213-T8 area, to include BHC's shop and rail road siding. Brook Ex. 1.

³The August 26, 2016, post-hearing revisions to Permit to Mine Application TFN 6 2/025 BHC received from Petitioner are attached hereto as Exhibit A.

○ Neither the revised text nor mine plan Exhibit MP.1-1 illustrate how, as a practical matter given the size and location of the proposed stockpiles and pits that could restrict the existing access, Petitioner would be able to relocate BHC's access road on BHC surface. Nor does the text or mine plan Exhibit MP.1-1 indicate that Petitioner has, or would be able to obtain access rights from an adjoining surface owner, if necessary to provide BHC continuing access to its facilities.

• The text at MP.2.1 of the mine plan, Exhibit A at p. 4, states that the "approximate locations of mine facilities are shown on Exhibit MP.2-1. As facilities are designed and constructed they will be added to the exhibit." Other than the Mine Permit and Identification Sign, mine plan Exhibit MP.2-1 indicates no other mine facilities to be located on BHC surface. Brook Ex. 1. However, Mr. Barron testified that it is possible the personnel and equipment facilities could be located on BHC surface lands. Tr. Vol. I, p. 131, l. 2. Mr. Barron also testified that the coal preparation facilities identified in Petitioner's air quality permit application analysis dated December 11, 2015, Padlock Ex. 18, are not currently located on mine plan Exhibit MP.2-1. Tr. Vol. I, p. 118, ll. 14-15. Petitioner did not revise the text at MP.2.1 or mine plan Exhibit MP.2-1 to more specifically describe the possible location of these facilities in its submission on August 26, 2016.

• WDEQ/LQD's Coal Standard Operating Procedure No. 2.1 – Coal Permit Content and Review Procedure Relating to Abutting and Overlapping Coal Permit Area Boundaries ("SOP 2.1"), Section III.B.1.c. requires the mine plan for all new permit applications containing an overlapping permit area boundary to include a separate section for each permit area boundary configuration which, among other things, "includes a brief discussion of how the mining operations coincide for the joint use areas." The reclamation plan for all new permit applications containing an overlapping permit boundary must include a separate section for each permit area boundary configuration which, among other things, includes a map that specifies the reclamation responsibility of each permittee. Petitioner's revised mine and reclamation plans do not include these SOP 2.1 requirements. *See* Exhibit A and Brook Exs. 1 and 2; *see also* Tr. Vol. II, p. 15, ll. 12-25, and p. 16, ll. 1-2.

- Petitioner did not revise the mine plan Table of Contents to remove the reference to Exhibit 3-3 – Railroad Loadout Facility, notwithstanding Mr. Atkins’ representation at hearing that Petitioner has changed its plans and instead of mining coal and transporting it by rail to some utility someplace, “we will probably end up trucking coal to clients that are either contiguous or on our site.” Tr. Vol. I, p. 198, ll. 19-25, p. 199, ll. 1-2; *see also* Exhibit A and Brook Ex. 1 at MP-vii.

Petitioner’s revised mine plan also continues to stand in contradiction of current representations by Petitioner to the WDEQ Air Quality Division (“WDEQ/AQD”), *see* Padlock Ex. 18 at p. 4, Fig. 2-2, and p. 15, and to the District Court, *see* BHC Exs. 5A and 5D, regarding Petitioner’s intent to construct and use a rail loadout facility. Contrary to representations in the revised mine plan, but consistent with Petitioner’s representations to WDEQ/AQD and the court, Mr. Barron’s testimony at hearing was qualified to state that Petitioner will not disturb BHC’s shop, bridge or rail siding *as it stands today*. Tr. Vol. I, p. 87, ll.16-18 (emphasis added). Mr. Atkins similarly qualified his testimony to state that Petitioner “will *probably* end up trucking coal to clients that are either contiguous or on our site.” Tr. Vol. I, p. 198, ll. 19-25, and p. 199, ll. 1-2 (emphasis added).

Under these circumstances, BHC cannot rely on Petitioner’s recent addition to its mine plan of a bald, unsupported statement that Petitioner “will not obstruct Big Horn Coal’s (Permit 231-T8 [sic]) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal’s 2015 Annual report.” Petitioner has no binding commitment to BHC and has preserved in its mine plan the opportunity for WDEQ/LQD approval to disturb the surface of BHC’s entire existing mine permit area as shown in mine plan Exhibit MP.1-1. Such approval of MP.1-1 could allow Petitioner to easily modify its permit to expand Petitioner’s use of BHC surface lands following the EQC’s decision in this matter, without then having to satisfy the surface owner protections afforded by W.S. § 35-11-406(b)(xii).

These internal inconsistencies and lack of detail, considered in conjunction with Petitioner’s contradictory filings and qualified testimony, demonstrate Petitioner’s failure to comply with W.S. § 35-11-406(b)(xii)(B). Moreover, the EQC should acknowledge that

the lack of detail, internal inconsistencies, contradictory filings and qualified testimony make it extremely difficult for BHC to fully assess the extent to which Petitioner's proposed use of BHC surface lands will substantially prohibit BHC operations as required by W.S. § 35-11-406(b)(xii)(C).

B. Petitioner's revised mine and reclamation plans, viewed from the surface owner's perspective, indicate that the proposed mining and reclamation activity will substantially prohibit BHC operations. W.S. § 35-11-406(b)(xii)(C).

W.S. § 35-11-406(b)(xii)(C) requires Petitioner to demonstrate that its proposed use of BHC surface "does not substantially prohibit" BHC operations. Mr. Jordan Sweeney, BHC Corporate Environmental Manager, testified at hearing that BHC holds an existing mine permit subject to a reclamation performance bond in the amount of \$742,000. Tr. Vol. II., p. 275, ll. 15-17. BHC's mine permit is in compliance and the reclamation performance bond is related to BHC's industrial shop, rail spur and load-out facility. Tr. Vol. I, p. 275, ll. 11-20. BHC considers its shop, rail spur and load-out facility, and the bridge across the Tongue River as valuable assets. Tr. Vol. I, p. 276, ll. 23-25. BHC currently leases its shop to a welding fabrication tenant and to company employees for storage. Tr. Vol. I, p. 279, ll. 6-13. BHC recently entered into a rail storage agreement with a customer of its Decker, Montana mine for use of its rail spur facility for rail storage. Tr. Vol. I, p. 276, l. 25; p. 277, ll. 1-14. BHC is in the process of obtaining the necessary approvals from WDEQ/LQD and Sheridan County for the continued long-term rental and use of these facilities. Tr. Vol. I, p. 283, ll. 3-25, and p. 284, ll. 1-3; BHC Ex. 8. BHC's continued operations of its surface facilities is highly dependent on Petitioner's avoidance of those facilities and BHC's continued access to those facilities. Tr. Vol. II, p. 16, ll. 13-17.

The evidence of record and the information that is included in Petitioner's revised mine and reclamation plans illustrates that Petitioner's proposed mining and reclamation activity will more likely than not, substantially (i.e. "to a great extent") prohibit (i.e. "prevent") BHC's current surface operations. More specifically:

- Mine plan Exhibit MP.1-1, Brook Ex. 1, illustrates by pink cross-hatch, that Petitioner is requesting that WDEQ/LQD approve a surface disturbance area of over 400 acres, inclusive of BHC's existing permit area and BHC's presently leased shop and rail spur facilities. Neither Exhibit MP.1-1 nor the accompanying text provide any detail regarding when, where, or how Petitioner can or will reduce the disturbance area so as not to substantially prohibit BHC operations. BHC cannot reasonably rely on Petitioner's unsupported statements that it will not obstruct the use of BHC facilities and will provide an alternative access road if needed as the basis on which BHC can continue to contract for and conduct operations at its surface facilities. BHC must base its business decisions and contractual obligations on the potential impacts as set forth in the mine and reclamation plans. Tr. Vol. II, p. 20, ll. 8-19. Accordingly, WDEQ/LQD approval of Petitioner's requested disturbance area would substantially prohibit BHC's surface operations.

- Mine plan Exhibit MP.2-1 indicates no personnel or equipment facilities will be located on BHC surface. Brook Ex. 1. Mr. Barron's testimony, however, contradicts the representation on Exhibit MP.2-1 in that he stated it is possible the personnel and equipment facilities could be located on BHC surface lands. Tr. Vol. I, p. 131, l. 2. Mr. Barron also testified that the coal preparation facilities identified in Petitioner's air quality permit application analysis dated December 11, 2015, Padlock Ex. 18, are not currently located on MP.2-1. Tr. Vol. I, p. 118, ll. 14-15. Should any of these facilities be located on BHC surface, they could substantially prohibit use of and access to BHC facilities and operations.

- Should Petitioner later seek to modify its permit to construct rail load out facilities near BHC's existing rail spur consistent with representations it made to WDEQ/AQD and the District Court, such rail load out facilities would necessarily restrict BHC's access to and use of its rail spur.

- Mine plan Exhibit MP.3-1, Brook Ex. 1, illustrates Petitioner's intent to use BHC's existing access road for ingress and egress, yet also illustrates proposed high wall trench cuts that will transect BHC's existing access road. Absent additional information to illustrate how Petitioner would be able to relocate BHC's access road on BHC surface or that Petitioner would be able to obtain access rights from an adjoining surface owner, BHC

cannot reasonably rely on Petitioner's statement it will provide the access necessary for continued operations at BHC facilities. Absent a binding, enforceable commitment that Petitioner can and will relocate BHC's existing access road, it is reasonable to conclude from the record evidence that Petitioner's proposed operations will substantially prohibit BHC and its customers access to and use of BHC facilities.

- Nothing in Petitioner's mine and reclamation plans specifies the respective reclamation responsibilities of BHC and Petitioner or the coordinated joint use of the surface as contemplated by WDEQ/LQD SOP 2.1. Absent specific representations regarding Petitioner's and BHC's joint use of the surface within the overlapping mine permit boundaries, Petitioner's operations could prevent BHC from complying with its existing mine permit obligations and possibly subject BHC to regulatory and civil liabilities.

Petitioner, therefore, has failed to prove the required element set forth at W.S. § 35-11-406(b)(xii)(C).

III. Any EQC Finding of Fact and/or Conclusion of Law Regarding Petitioner's "legal authority to extract coal by surface mining methods" is for the Limited Purpose of Applying W.S. § 35-11-406(b)(xii) and Does Not Constitute an Adjudication of Any Private Property Rights at Issue in *Brook Mining Company, LLC v. Big Horn Coal Company*, Civil Action No. CV 2014-372 (Fourth Judicial District Court, Sheridan County).

W.S. § 35-11-406(b)(xii)(E) requires, for surface coal mining operations, that the Petitioner "has the legal authority to extract coal by surface mining methods." Petitioner relies on a 1954 deed as the source of its legal authority to extract coal by surface mining methods. Tr. Vol. I, pp. 108-11. BHC does not dispute that Petitioner holds coal rights beneath BHC surface pursuant to that deed; however, BHC asserts that a 1983 release agreement between Petitioner's and BHC's predecessors precludes Petitioner from legally accessing certain surface lands to extract coal by surface mining methods. Tr. Vol. II, p. 29 at lines 18-25. The relative surface rights of BHC and Petitioner on those certain lands are being litigated in District Court in *Brook Mining Company, LLC v. Big Horn Coal*

Company, Civil Action No. CV 2014-372 (Fourth Judicial District Court, Sheridan County).

By Petitioner's own admission, the Wyoming Attorney General rejected Petitioner's argument that Petitioner "did not need the consent of [BHC]" because "the 1954 deed already gave it the right to mine coal as well as the right to use the surface as is 'necessary or convenient' to mine coal." Petition, p. 2. In rejecting Petitioner's argument, the Attorney General advised Petitioner "to request an order in lieu of consent." Petition, pp. 2, 4. Thus, the relevant question for the EQC to answer is, what showing of "legal authority" did the legislature intend to require in order for Petitioner to obtain an order in lieu of BHC's consent from the EQC?

Regardless whether the EQC determines that the 1954 deed satisfies Petitioner's burden of demonstrating legal authority necessary to obtain an order in lieu of BHC's consent, it is important that the EQC expressly acknowledges in its conclusions of law that EQC's statutory authority does not extend to the application of Wyoming common law to interpret deeds, assignments or other contracts between BHC and Petitioner. The EQC's authority is limited to that granted to it by the Wyoming State Legislature. *Exxon Mobil Corp. v. Wyoming Dept. of Revenue*, 266 P.3d 944, 951 (Wyo. 2011). The Legislature has given EQC broad authority to "hear and determine all cases or issues arising under the laws, rules, regulations, standards or orders issued or administered by" the Wyoming Department of Environmental Quality, Land Quality Division. W.S. § 35-11-112(a); *see also Platte Dev. Co. v. Env'tl. Quality Council*, 966 P.2d 972, 975 (Wyo. 1998). Consequently, the EQC's determination of "legal authority" is for the limited purpose of deciding whether the statutory requirement under W.S. § 35-11-406(b)(xii)(E) has been met. EQC's determination cannot patently constitute an adjudication of the property rights dispute between BHC and Petitioner pending in District Court.⁴

⁴ This conclusion is reinforced by the language of the federal surface coal mining statutes which, contrary to the WEQA, allows a mine permit applicant to submit a deed that grants or reserves the right to mine coal by surface mining methods in lieu of written

IV. Conclusion

In submitting this Memorandum and Proposed Findings of Fact and Conclusions of Law, BHC does not waive and hereby reserves all rights as an interested party to file written objections and request a hearing before the EQC under W.S. § 35-11-406(k), all rights to protection under W.S. § 35-11-416(a), and all rights, arguments and defenses in *Brook Mining Company, LLC v. Big Horn Coal Company*, Civil Action No. CV 2014-372.

The WEQA explicitly requires Petitioner to include an instrument of consent from the surface landowner, even a non-resident or non-agricultural landowner, if different from the owner of the mineral estate, in its mine permit application. W.S. § 35-11-406(b)(xii). If Petitioner cannot obtain all necessary surface landowner consent, the EQC shall issue an order in lieu of consent if, and only if, it finds the statutory elements have been met. *Id.* For the reasons stated, Petitioner is not entitled to an order in lieu of surface owner consent and its mine permit application should therefore be denied. BHC respectfully submits the following Proposed Findings of Fact and Proposed Conclusions of Law as supported by evidence of record and as pertaining specifically to the elements set forth in W.S. § 35-11-406(b)(xii)(B), (C), and (E).

Proposed Findings of Fact

1. Detail in the mine plan Petitioner presented to BHC for review, mine plan Exhibit MP.1-1, Brook Ex. 1, shows the prospective impacted area to include all of BHC surface within its existing mine permit 213-T8, in Sections 15, 21, and 22, Township 57 North, Range 84 West, Sheridan County, Wyoming.

2. Petitioner's assurance in its revised mine plan dated August 26, 2016, that it will not obstruct Big Horn Coal's shop, bridge and rail road siding as they exist in Big Horn

consent from the surface owner. *See* 30 U.S.C.A. § 1260(b)(6)(B) ("SMCRA"). Under SMCRA, if a deed proffered in lieu of surface owner consent does not expressly grant the right to extract coal by surface mining methods, "the surface-subsurface legal relationship shall be determined in accordance with State law: *Provided*, That nothing in this chapter shall be construed to authorize the regulatory authority to adjudicate property rights disputes." *Id.* at § 1260(b)(6)(C).

Coal's 2015 Annual Report, Exhibit A, p. 4, is not reflected on, and is contradicted by, mine plan Exhibit MP.1-1. Brook Ex. 1.

3. Petitioner's mine plan fails to illustrate how Petitioner can feasibly provide an access road equivalent to the existing improved road if proposed stockpiles or pits should restrict the existing access as shown on mine plan Exhibit MP.1-1, as Petitioner stated it would do in its revised mine plan dated August 26, 2016. Exhibit A at p. 4; Brook Ex. 1 at mine plan Exhibit MP.1-1.

4. Personnel and equipment facilities not presently illustrated on mine plan Exhibit MP.2-1 may be constructed on BHC surface lands. Tr. Vol. I, p. 131, l. 2.

5. Petitioner's mine and reclamation plans do not include information required by WDEQ/LQD Standard Operating Procedure 2.1 – Coal Permit Content and Review Procedure Relating to Abutting and Overlapping Coal Permit Area Boundaries, Section III.B.1.c. Exhibit A; Brook Ex. 1; Tr. Vol. II, p. 15, ll. 12-25, and p. 16, ll. 1-2.

6. Petitioner's mine and reclamation plans contradict current representations Petitioner has made to WDEQ/AQD and to the District Court with regard to Petitioner's intent to construct a rail load out facility on BHC surface lands. Brook Ex. 1; Padlock Ex. 18, BHC Exs. 5A and 5C.

7. The Wyoming Department of Environmental Quality, Land Quality Division, did not evaluate Petitioner's mine and reclamation plans from the surface owners' perspective when determining whether Petitioner had met all of the completeness requirements. Tr. Vol. I., p. 171, ll. 11-12.

8. Petitioner holds coal rights beneath BHC surface lands. Tr. Vol. II, p. 29 at ll. 18-19.

9. Petitioner relies on a 1954 deed as the source of its legal authority to extract coal by surface mining methods. Tr. Vol. I, pp. 108-11.

10. BHC relies on a 1983 release agreement to deny Petitioner access to its surface to extract coal by surface mining methods. Tr. Vol. II, p. 29 at ll. 18-25.

11. Petitioner's and BHC's respective rights under the 1954 deed and 1983 release agreement are the subject of active litigation: *Brook Mining Company, LLC v. Big Horn Coal Company*, Civil Action No. CV 2014-372 (Fourth Judicial District Court, Sheridan County). BHC Ex. 5A.

Proposed Conclusions of Law

1. Petitioner's mine plan and reclamation plans, as revised on August 26, 2016, lack the detail required by W.S. § 35-11-406(b)(xii)(B) to illustrate Petitioner's full proposed use of BHC surface lands and to ensure BHC unobstructed use of its shop, bridge and rail siding, as stated in the revised plans.
2. Petitioner's proposed use of BHC surface lands, as detailed in mine plan Exhibit MP.1-1, will substantially prohibit BHC's current commercial operations at the shop and rail siding facilities, as well as access across BHC's bridge to BHC lands north of the Tongue River.
3. For purposes of issuing an order in lieu of consent under W.S. § 35-11-406(b)(xii), and for those purposes only, Petitioner has demonstrated sufficient legal authority to extract coal by surface mining methods. The Environmental Quality Council does not adjudicate private property rights as between parties to a proceeding under W.S. § 35-11-406(b)(xii).

RE: Brook Mine- Revision to Mine Plan and Reclamation Plan TFN 6 2/025

Dear Mr. Sweeney:

On behalf of RAMACO LLC, WWC Engineering is providing Lighthouse Resources Inc copies of revisions to the mine plan and reclamation plan that have been submitted to Wyoming Department of Environmental Quality Land Quality Division WDEQ/LQD August 26, 2016. The revisions are a result of issues raised during the EQC hearing August 17 & 18, 2016 and include mitigation components in the mine plan and reclamation plan that is greater detail than required by WDEQ/LQD.

Please contact, the undersigned at WWC Engineering- (ph: 307-672-0761) if you have any questions or comments regarding this request.

Sincerely,

Jeff Barron, P.E.
Project Engineer

JB/hjr

RE: Permit To Mine Application TFN 6 2/025

Dear Mr. Kristiansen:

On behalf of RAMACO LLC, WWC Engineering is submitting the attached revisions to the mine plan and reclamation plan as a result of the Order in Lieu of Consent hearing held August 17 & 18, 2016 and ongoing negotiations with Padlock Ranch.

Two copies of the change of index and supplemental information have been included for WDEQ/LQD staff to review.

Please contact, Randall Atkins (RAMACO), or Jeff Barron (WWC Engineering) if you have any questions or comments regarding this submittal.

Sincerely,

Jeff Barron, P.E.
Project Engineer

INDEX SHEET FOR MINE PERMIT AMENDMENTS OR REVISIONS

Page 1 of 1
Date August 25, 2016
TFN 6 2/025

MINE COMPANY NAME: RAMACO, LLC.

MINE NAME: Brook Mine
PERMIT NO. TFN 6 2/025

Statement: I, Jeff Barron, an authorized representative of RAMACO, LLC. declared that only the items listed on this and all consecutively numbered Index Sheets are intended as revisions to the current permit document. In the event that other changes inadvertently occurred due to this revision, those unintentional alterations will not be considered approved. Please initial and date.

NOTES: 1) Include all revision or change elements and a brief description of, or reason for, each revision element.

2) **This Change Index is for only those changes made during Round 4a Comment Response.**

VOLUME NUMBER	PAGE, MAP OR OTHER PERMIT ENTRY TO BE REMOVED	PAGE, MAP OR OTHER PERMIT ENTRY TO BE ADDED	DESCRIPTION OF CHANGE
Volume XI	MP-7 to MP-7 (Mine Plan Text tab)	MP-7 to MP-7 (Mine Plan TOC tab)	Update Text to show non obstructed use of BHC shop, bridge, and rail siding.
Volume XI	MP-10 to MP-10 (Mine Plan Text tab)	MP-10 to MP-10 (Mine Plan Text tab)	Update Text to describe fencing
Volume XI	Exhibit MP.1-1	Exhibit MP.1-1	Revise exhibit to show fencing, roads, and access road
Volume XI	Exhibit MP.3-1	Exhibit MP.3-1	Revise exhibit to show additional roads
Volume XII	Exhibit RP.3-1	Exhibit RP.3-1	Revise exhibit to show restoration of water network

Any structure within the Brook Mine Permit Area that is directly affected by mining activities will be properly abandoned and removed or relocated before mining activities commence. Relocation and/or abandonment criteria and procedures will be established to minimize significant impacts to the postmining land use plan.

If mining operations disrupt power or phone lines, the lines will be relocated and put into service before the old lines are abandoned. This will be done to minimize power or phone interruptions.

Relocation of roadways will be coordinated with Sheridan County or the road owner for design and relocation procedures. Interruption to traffic flow will be mitigated through previously formulated plans.

The Brook Mine will operate in conjunction with Taylor Quarry (Permit No. SP-757). The Taylor Quarry Permit Boundary is shown on Exhibit MP.1-1. The mine will work with Taylor Quarry to minimize impacts on Taylor Quarry's operation. Details regarding dual permitted areas are provided in Section MP.22.

The Brook Mine will not obstruct Big Horn Coal's (Permit 231-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1.

MP.2 MINE FACILITIES

MP.2.1 Personnel and Equipment Facilities

The approximate locations of mine facilities are shown on Exhibit MP.2-1. As facilities are designed and constructed they will be added to the exhibit.

MP.2.1.1 Administration Building

The administration building will be located in Sheridan. The administration building will contain offices, a conference room, and training facilities.

MP.2.1.2 Change House and Equipment Service Shop

The change house includes offices, shower facilities for employees, and a large meeting area and equipment service facility. Waste oil and lubricants will be temporarily stored in the equipment service facility until they can be transported to an offsite disposal facility. The equipment facility area will

emulsions, water gels, and slurry explosives will be stored separately from detonators, initiator products, and ANFO. Locations of explosive storage will be according to regulations.

MP.2.4 Power Transmission and Communication Lines

Electrical power will be transmitted to the mine property by a 3-phase 4160-Volt line.

Electric power will be purchased from Powder River Energy Corporation. Power distribution and electrical equipment will be constructed to comply with applicable federal, state, and local codes. Power lines within the Brook Mine Permit Area will be constructed to minimize impacts on raptors, as discussed in the Plan to Minimize Adverse Impacts on Fish and Wildlife.

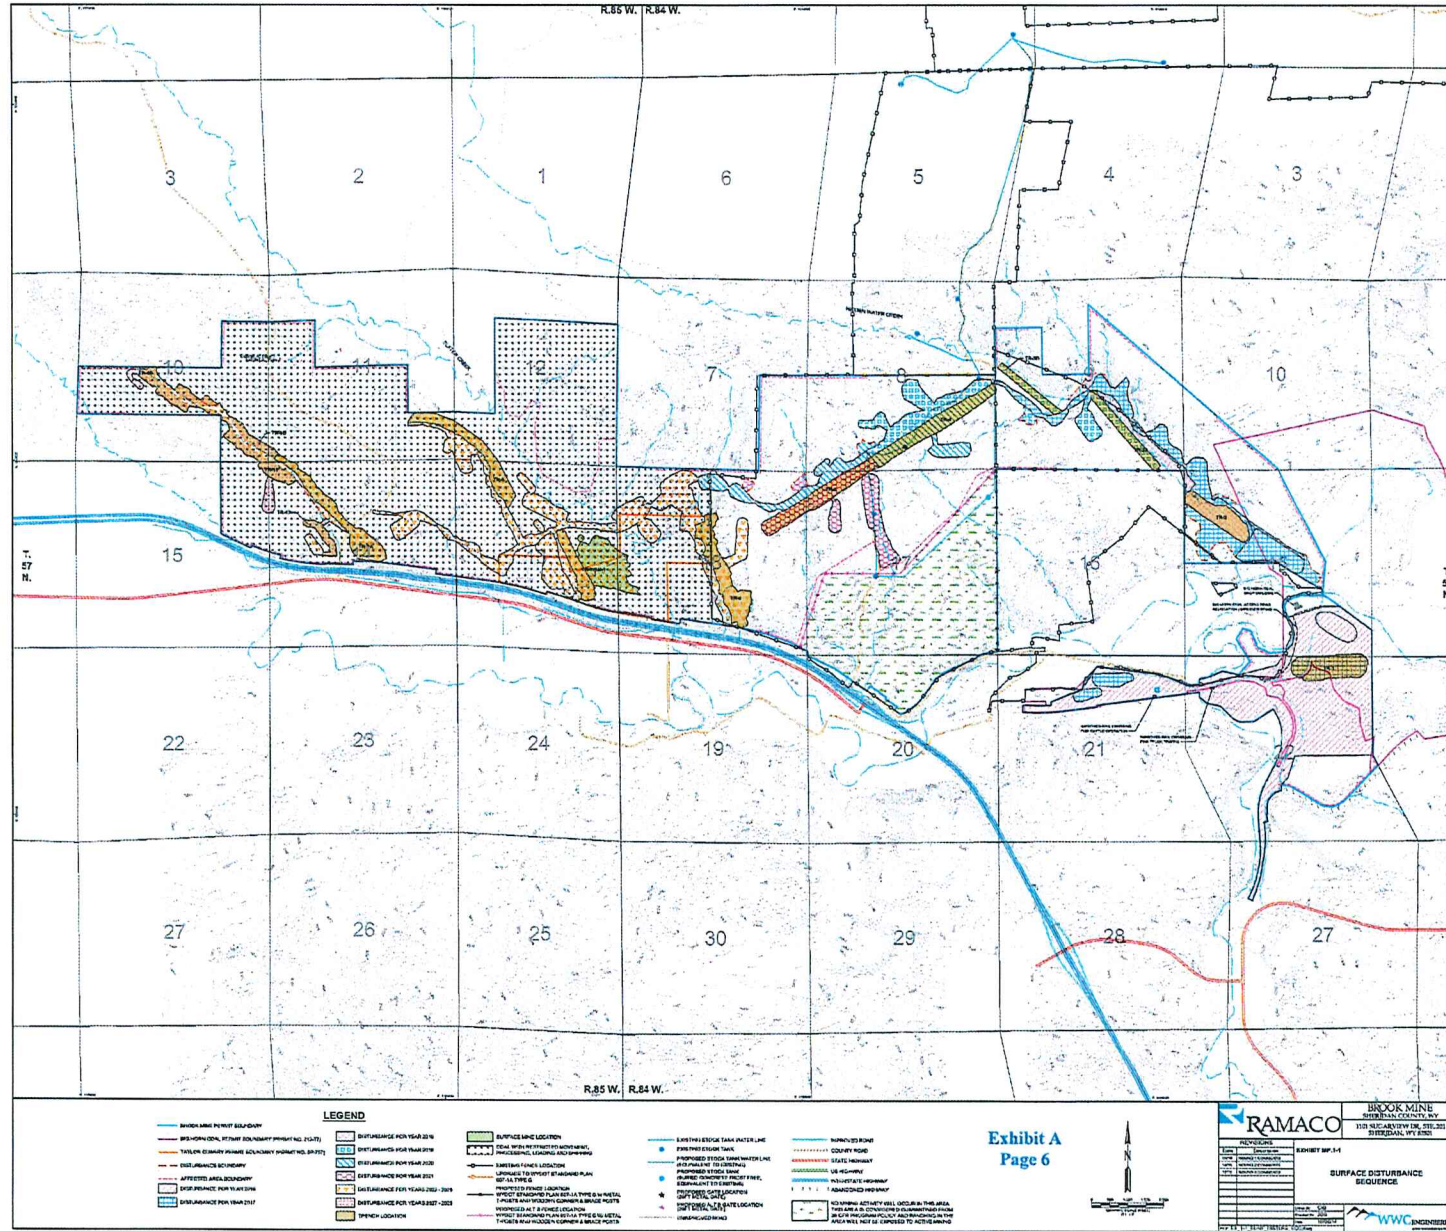

Telephone service will be installed by tapping into a local communications carrier. Communications within the Permit Area will be by mobile business band radios.

MP.2.5 Stockpiles

Separate topsoil and overburden stockpiles will be required for reclamation activities. The design of stockpiles is discussed in Section MP.4. Stockpile locations are shown on Exhibit MP.4-3.

MP.2.6 Access Control Features

The mine will control access to the Brook Mine to protect the health and safety of the mine workforce, general public, wildlife, and livestock. A guardhouse will be installed at the entrance to the Brook Mine. Fencing will be constructed around mining activities to prevent wildlife, livestock, and the general public from mistakenly entering as shown on Exhibit MP.1-1. Access will be allowed for existing cattle operations as needed in the NWNE of section 21 T57N R84W as shown on Exhibit MP.1-1. Fencing construction will follow recommendations found in WDEQ/LQD Guideline Number 10 and/or WYDOT standard 607-1A: Fencing, Signs and markers will be placed to alert the general public to the active mining area. Signs, markers, and buffer zones are discussed in Section MP.12. Locations of access control features are shown on Exhibit MP.2-1.

)	

**FISHERS' RESPONSE TO BROOK MINE'S MOTION TO DISMISS
OBJECTOR FISHERS' PETITION FOR A CONTESTED CASE HEARING**

Mary Brezik-Fisher and David Fisher ("Fishers"), by and through their undersigned counsel, hereby submit their Response to Brook Mining Company, LLC's ("Brook Mine") Motion To Dismiss Fishers' Petition For A Contested Case Hearing.

I. Summary of the Fishers' Response:

The Motion to Dismiss is easily disposed of for very simple reasons under Wyoming Statute §35-11-406. Brook Mine's motion focuses on a circular discussion of the timing set by the statute for filing objections to the mine plan and the twenty-day time frame for a hearing. The goal of this discussion is to convince the EQC that somehow the Objectors have not timely brought this matter before the EQC and by extension Brook Mine is simply

entitled to have its coal mining permit granted. The fatal trouble with Brook Mine's position is that it ignores the steps mandated by the statute as a *prerequisite* to issuance of any such permit.

In the event any interested party files a written objection (which clearly happened¹) then the statute provides that Brook Mine is only entitled to have its application for a mining permit proceed *after* either 1) the DEQ holds a informal conference *or* 2) the objectors have been provided with a contested case hearing before the EQC. Neither of these two things have happened and as a result Brook Mine is not entitled to have its application proceed until one of them does. Should the EQC accept Brook Mine's invitation to dismiss the petitions without either of these two things happening, then the statutory requirements for issuance of the permit will not have been met. As a result, Brook Mine would be, as a matter of law, precluded from having any permit issued. Brook Mine's only option under those circumstances would be to start the publication process anew. The EQC must decline Brook's invitation to proceed into a procedural blind alley.

1

The Fishers timely submitted their written objections to the mine plan to the Administrator of the Land Quality Division as required by Wyo. Stat. 35-11-406 and as the published public notices directed them to do. A copy of the Fishers' Objection is attached hereto as Appendix 1. (In Fishers' objections they raised a concern about a potential conflict of interest relative to Administrator Kyle Wendtland. Fishers have subsequently been informed that Kyle Wendtland has been fully recused from participation in this matter. Assuming this to be true, this topic will not be at issue in the contested case hearing. Fishers did not imply or intend to imply any impropriety by Kyle Wendtland or his brother Anthony Wendtland).

II. The EQC Must Deny Brook Mine's Motion to Dismiss:

A. Wyoming Statute §35-11-406 Requires that After Objections are Filed that the DEQ Hold an Informal Meeting or that the EQC Hold a Contested Case Hearing.

Section 35-11-406(k) provides that after interested persons timely submit written objections the Director of the DEQ may hold an informal conference if one is requested by the objecting parties. It is undisputed that multiple parties, including the Fishers, filed timely objections and requested an informal conference. However, the language of § 35-11-406 provides that the Director can decline to hold an informal conference, in which case the objector's concerns are to be addressed in a full contested case "public hearing" before the EQC. The statute is unequivocal in requiring that any timely objections must be addressed in either an informal conference or a public hearing "conducted as a contested case in accordance with the Wyoming Administrative Procedures Act."

Consequently, after timely objections, either one or both of these procedures can be afforded to the Objectors, but under no circumstances does the statute contemplate or allow a permit moving forward if *neither* one of these necessary steps has occurred. Yet, that is precisely what Brook Mining Company, LLC asks the EQC to sanction by virtue of its motions to dismiss against the objectors.

Importantly, in the event of timely objections such as those lodged in this case, §35-11-406(p) only allows the Director to render a decision on the application after the informal conference or after findings of fact and a decision by the EQC. Consequently, providing the

Objectors with one of these procedures is a mandatory condition precedent to the issuance of a permit. The Director lacks and will continue to lack any authority under the statute to act upon Brook Mine's application until after one of these two things happens.

For this reason, Brook Mine argues itself into a dead-end. If the EQC were to grant the motion to dismiss, the conditions precedent to issuing a permit will not have been met and Brook's mine application stalls and must be begun anew. Ironically, Brook Mine will not be entitled to complain about this result as the problem is one of its own request and making.

B. Brook Mining's Argument that the Objectors Were Obligated to Demand a Contested Case Hearing Prior to the End of the Objection Period is Nonsensical.

Through a rather distorted argument Brook Mine attempts to create a procedural loophole that will allow it to obtain a mining permit without going through the statute's mandated process of having public objections heard in either an informal conference or a contested case hearing. The entire argument pivots on a contention that the Objectors were not only obligated to submit their written objections during the objection period, but also demand a contested case hearing *prior to* the end of that period. This contention has no support in the statute, any case law and is contrary to any logical and reasoned assessment.

The Fishers and other interested parties were first given their opportunity to voice their objections and concerns to the DEQ after Brook Mine published and presented its statutory notice during the Christmas holidays of December, 2016. Prior to that publication,

both the DEQ and most particularly Brook Mine, refused to listen to the concerns of any interested person.

The published notice stated that “written objections” were to be delivered to the “*Administrator of the Land Quality Division . . . before the close of business January 27, 2017.*”² This aspect of the notice is in accordance and harmony with Wyo. Stat. §35-11-406(k) which states that interested persons are to raise their complaints through presenting “written objections”. Nowhere in either the notice published by Brook Mine nor in the statutory language is there support for Brook Mine’s current argument that complaining parties were required to both file written objections and demand a contested case hearing during the objection period. Indeed, the statute provides just the opposite and states that based upon the timely written objections the matter would then be addressed by the DEQ informally or by the EQC formally.

Brook Mine’s argument hinges on the fatally flawed assumption that in order to obtain a contested case hearing the Objectors were required to request such a hearing before the close of business on January 27, 2017 (the deadline for submitting only objections). There is no legal support for this proposition in the notices provided, the controlling statutory language of §35-11-406 or any case law. It is quite simply a fantasy. The

² Brook Mine’s Notice states “*The Director may hold an informal conference if requested, hear the complaint and take action on the application in accordance with the Department’s Rules of Practice and Procedure. The complainants shall have a right of appeal to the Environmental Quality Council where the complaint will be heard a second time.*” (See copy of Notice attached as Appendix 2).

Objectors were not even entitled to demand a contested case proceeding in that time frame because the DEQ had the discretion to conduct an informal meeting.

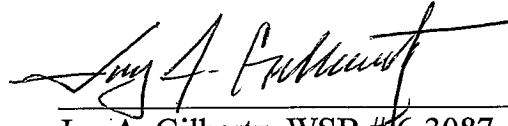

The earliest any deadline for requesting a contested case could have started would be the first date the Objectors were made aware they would not be provided the informal conference which they had properly requested. At the absolute earliest, this would have been the date the Director denied the Objectors' request for that informal conference. However, the date the Director denied the request for an informal conference was simultaneous with the date the initial contested case hearing was initiated. As a result, the Objectors were advised by this procedural step that they would be given a contested case hearing before the EQC (which was docketed for February 13 and 14, 2017). There is no need to demand something that has already been given.

Due to procedural concerns, the EQC dismissed the initial proceedings and instructed that any Objector that wished to avail themselves of a contested case hearing with the EQC could then do so. In this fashion the EQC sought to avoid a situation where a person filing an objection was compelled to participate in a contested case hearing simply by virtue of filing an objection. Only after the EQC dismissed the initial proceedings on February 22, 2017 did there become a need to request a contested case hearing. Hence the date from which any deadline to file a demand for a contested case can only be measured from and begin upon February 22, 2017. Under any calculation all the Objectors have timely made that request and Brook Mine's Motions to Dismiss must be denied.

WHEREFORE, the Fishers hereby request that the EQC deny Brook Mining LLC's
Motion to Dismiss.

DATED this 20th day of March, 2017.

RE: Ramaco, LLC/Brook Mine Permit
Sheridan County, Wyoming

Dear Mr. Wendtland:

Our property in Sheridan County is in the group of potentially affected landowners to the proposed Brook Mine Permit, and we received the Public Notice regarding this action. We have resided in this historic valley since 1996 and have run livestock and haying operations on our property. The purpose of this letter is to issue a written objection to the proposed mine permit based on the following concerns:

1. **Substantially Incomplete Mine Plan.** The mine plan has changed or been revised numerous times. It has gone from an operation purportedly employing 200-400 workers to its current version employing approximately 18-20 workers with initial projections of mining up to ten million tons per year to a revised plan of mining only two million tons in the first few years. In simple terms, local landowners are not clear on exactly what the current mine operation will entail as the current mine plan does not adequately address specific issues (to name a few, as follows): Where will the load-out facility be located? Where will infrastructure facilities be located? What type of "mobile crusher" will be used? How will the coal be transported and where? How many trucks will be on the road, how often, and what route will they take? How often will blasting occur and what are the hours of operation? Who specifically will be conducting the mine operations and what experience do they have in this type of operation (We understand that Mr. Woodring will be merely a "consultant")? Does Ramaco have a buyer/market for its coal?
2. **Ramaco's lack of history in conducting mining operations in Wyoming.** Other coal companies conducting business in Wyoming have a history of operating their mines in cooperation with local landowners and in compliance with local, state, and federal rules, regulations, statutes and procedures. For some landowners in this area, Ramaco has already demonstrated a disregard

Appendix

for "the Wyoming way" of conducting business. In our particular case, folks employed by Ramaco were caught trespassing on our property and taking soil samples without authorization. In fact, they were so blatant about it that my husband and a neighbor were out working on a baler in our hay field one afternoon and noticed two people out in our field. Those folks made no effort to come forward and identify themselves. My husband went up to them and asked what they were doing on our property and they told him they had permission to be there on behalf of Ramaco. He responded that he was the owner of the property and had not given them permission. They took the soil samples anyway and then departed. That is just one incident of several we have heard about concerning Ramaco's lack of cooperation with local landowners which does not bode well with their future operations.

3. **Soil Subsidence Issues and Sinkholes.** There have been geological surveys conducted in this area regarding the effects of coal mine subsidence in Sheridan County, specifically with respect to the area where Ramaco's mine operation will occur. Landowners are very concerned about subsidence, soil disturbance, and sinkhole issues considering how extensively this area has been mined. The mine plan does not adequately address these issues, including the possibility of re-igniting underground coal fires and measures to be taken for coal fire suppression. It is apparent that blasting within such close proximity to the old mines could further worsen the ongoing subsidence issues in this area.
4. **Damage to Water Wells and Foundations.** Affected landowners have substantial concerns that blasting operations may cause damage to the structural integrity of their water wells and foundations of homes and buildings on their property, including increasing drawdown in domestic wells. It is well-documented that previous mine operations in this same area caused damage to water wells and some were so extensive they had to be replaced. There are inadequate provisions in the current mine plan which protect landowners' ground and surface water.
5. **Air Quality, Noise and Light, and Other Health and Environmental Concerns.** The Tongue River Valley where many of the affected landowners live regularly sustains high winds in the area. The mine plan does not adequately address dust suppression measures and how mining operations will control the coal dust, dust from trucks and crushers, toxic fumes, emissions from increased truck traffic and potentially unhealthy air quality emissions due to mining operations. (Apparently no coal will be transported via rail...is that correct?) Will there be any restrictions on hours of operation, especially during high wind events? There is no provision in the mine plan for creating

a sound barrier to minimize the noise. There are concerns about coal dust blanketing the area leaving layers of dust and grime on homes, buildings, vehicles, ranch equipment, etc. Many local landowners/ranchers have livestock and horse farms which could be affected. In addition, there are health concerns regarding asthma and respiratory conditions which could arise due to mining operations. Light from the mine site will adversely affect the quality of life for residents in this area. The mine plan does not adequately address these health and safety issues.

6. **Proximity of Mine Operations to Interstate 90.** The mine operations are in very close proximity to Interstate 90, a major US highway. The mine plan does not address issues concerning potential damage to highway infrastructure and bridges, dust storms, effects of blasting, etc. on this heavily traveled major thoroughfare.
7. **Potential Pollution and Water Degradation to Tongue River and Adjacent Creeks.** The Wyoming Attorney General's Office has been involved in water law litigation with the State of Montana for well over 7 years which is finally reaching a conclusion. This involved irrigation rights and disputes between the two states regarding the Yellowstone River Compact, including the Tongue River. Given the close proximity of the Tongue River to Ramaco's mining operations, there are serious concerns about sediment runoff, wastewater issues, and potential pollution of waterways. If the Tongue River or adjacent creeks and tributaries are adversely affected by these mining operations, then the State of Wyoming could face further costly and protracted litigation over these issues. The current mine plan does not adequately address this.
8. **Inadequate Bonding and Reclamation Concerns.** It is our understanding that the bond for Ramaco's permit is only \$375,000. This seems wholly insufficient considering the potential for major impacts on air quality, pollution of Tongue River, creeks, irrigation, livestock waterway systems, etc. In addition, the bond as currently proposed does not take into account subsidence issues into the future and reclamation of the facilities and the pits. Considering the substantial increase in truck traffic, damages to county roads (including the Frontage Road) and other paved roads could be very costly to maintain and repair for the county. The approximately ten-mile long trenches associated with this mine plan could certainly require costly reclamation efforts and the current bond surely would not provide compensation to cover anywhere near those costs. Similarly, with the tremendous increase in truck traffic and other traffic from the mines on county roads, including the Frontage Road, and other paved roads in the area, safety concerns for local landowners and members of the public are huge. The potential of someone being injured

or killed as a result of the increased truck traffic is a high probability. Hwy. 345 (Frontage Road to Ranchester) recently was designated with a highway speed of 70 mph. With members of the public (including motorcyclists) traveling at that high rate of speed and slow-moving mine trucks and heavy equipment utilizing that two-lane road with great frequency, the possibility of highway accidents is imminent. The mine plan does not address these issues.

9. **Accidents or Environmental Harm.** Ramaco does not have a history of operating a highwall coal mine such as what is being proposed. How can adjacent landowners and members of the public be assured that Ramaco is capable of rectifying any potential serious accidents or harm that may occur as a result of its operations?

We understand that Ramaco faced stiff opposition to a similar plan of operation in Nottingham, Pennsylvania. Legislators, affected landowners, and members of the public (en masse) have been very vocal in expressing their concerns about deleterious effects the mining operation there could have on their quality of life, water and soil issues, and public health and safety.

10. **Impacts on Irrigation, Livestock, Wildlife, Hunting, Fishing, Recreational Activities.** The Tongue River Reservoir is located in close proximity to the mine operations and there is a very real potential that this area could be adversely affected which will have an impact on members of the public (from Wyoming and Montana) who recreate at the reservoir, including swimming, boating, fishing. A substantial number of ranchers in the area within close proximity to the mining operations have irrigation rights and conduct agricultural operations. If the waterways, ditches, drainages, reservoirs become polluted then the livelihood of a great many people in the area will be drastically affected, including impacts on livestock watering systems. In addition, the area has abundant wildlife which will also suffer.

11. **Black Diamond Trail Designation.** In addition to the prospect of the mining operations affecting the area valley designated as an alluvial valley floor, in September, 2012 the area along the frontage road between Sheridan and Ranchester (Hwy. 345) was designated as the Black Diamond Historic Mine Trail by the Sheridan Community Land Trust and the Wyoming Historic Preservation Work Group in conjunction with the Wyoming State Historic Preservation Office and Wyoming State Parks and Cultural Resources. Although not clearly defined in the mine plan, this area (Hwy 345) along the frontage road will sustain substantial truck traffic and will be impacted by dust, other air quality issues, road damage, etc. and may have an effect on this historic trail designation. There are no provisions in the current mine plan

addressing this historic designation to ensure its protection.

12. **Kleenburn Recreation Area.** This area which is in extremely close proximity to the mine operations (just east of the Acme exit off Interstate 90) is owned and operated by Sheridan County. The Wyoming Game and Fish is involved in stocking the ponds which provide members of the public the opportunity to fish for trout, largemouth bass, catfish and perch. Since its inception a few years ago, this recreation area has provided a countless number of folks, including tourists, with many hours of recreation, fishing, field trips for local school children, canoeing adventures, hiking, and many other forms of recreation. Potential pollution (air and water), noise, light, dust and truck traffic will greatly impact this area and pose adverse effects on the health and safety of not only local residents but members of the public at large. The mine plan does not adequately address this issue.
13. **Conflict of Interest.** The area landowners are concerned about a potential conflict of interest concerning Kyle Wendtland, Administrator for the Land Quality Division, whose brother, Tony Wendtland (Sheridan, Wyoming), is an attorney for Randall Atkins, CEO of Ramaco. Even if Kyle Wendtland recused himself from presiding over certain aspects of this mine plan, what assurances can be given to affected landowners that this process will be conducted, reviewed and monitored without bias or preference given to Ramaco's interests over the legitimate concerns of the public before, during, and after the mine operation? The very fact that landowners are required to submit objections to Kyle Wendtland is disconcerting. We have heard that Tony Wendtland may no longer be local counsel for Ramaco. Regardless of the current relationship between Attorney Wendtland and Ramaco, the fact is that Mr. Wendtland has provided legal representation to Ramaco throughout this critical mine permitting process.
14. **Adverse Effect On Property Values and Quality Of Life.** Local landowners are very worried about serious impacts on property values if the current mine plan is approved and they are equally concerned about threats to their quality of life. There are quite a number of landowners in this area whose property values could substantially diminish causing a significant reduction in the tax base for the county. Adverse effects from the mining operation will not only diminish property values but more importantly will endanger public health and safety and create a public nuisance.
15. **Viability of the Mine Operation.** Is the extraction of 10 million tons of coal per year even viable? Folks in this area are quite skeptical. Some who have worked in the coal mines here state that in the years of prime production, the

most that Big Horn Coal ever extracted was approximately 4 million tons. Given the potential for major detrimental impacts of Ramaco's proposed operation, is it really worth it?

CONCLUSION

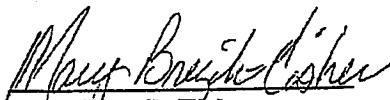

We are not attempting to preclude Brook Mining Company from operating a coal mine in the proposed area, but we have legitimate concerns about the mining operation under its current plan causing permanent and irreparable harm to a pristine area rich in history which has been enjoyed by Wyoming families for generations. This area has such a documented history that a number of books and articles have been published in attempts to enlighten folks about its history and preserve the heritage of this region. Local historians and others have frequently conducted lectures and presentations highlighting the history of the area. In addition, the local museum in Sheridan has devoted specific exhibits and dioramas to exemplify the historical significance of this longstanding mining community.

Initial projections gauging an economic boom to this community (and the State as a whole) as a result of the proposed Brook Mine have proven to be substantially distorted and misleading, and promises to provide an unrealistic number of jobs in an economically depressed area should not be the incentive for approving a mining operation which may result in devastation to this community and the State of Wyoming in the long run. Several of the issues and concerns identified above have not been addressed, and they represent a public nuisance to local property owners as well as significant threats to public health and safety.

We are hereby requesting an informal hearing with the director of DEQ on this matter.

Thank you for your attention.

Sincerely,

Mary Brezik-Fisher

David Fisher

(32 Slater Creek Lane, Ranchester, WY 82839)

Sheridan County Board of Commissioners

Public Notice

The Brook Mining Co., LLC of 1101 Sugarview Drive, Suite 201, Sheridan, WY 82801 has applied for a coal mining permit from the Land Quality Division of the Department of Environmental Quality for the State of Wyoming. The coal mining permit area will be located in: Sections 10, 11, 12, 13, 14 and 15 Township 57N, Range 85W, and Sections 7, 8, 9, 10, 15, 17, 18, 20, 21, 22 and 27 Township 57N, Range 84W Sheridan County, Wyoming. The Brook Mine is located approximately 6 miles Northwest of Sheridan, Wyoming. This area can be found on the Acme and Monarch USGS quadrangle maps. The proposed operation is scheduled to begin July 2017 and is estimated to continue until 2032. The land, after mining, will be returned to a grazing land use. Information regarding the proposed mining operation and reclamation procedures may be reviewed in the Office of the Land Quality Division of the Department of Environmental Quality in Cheyenne and Sheridan, Wyoming, the office of RAMACO in Sheridan, WY, or the Sheridan County Clerk's Office Sheridan, Wyoming. Written objections to the proposed mining operation must be received by the Administrator of the Land Quality Division, Department of Environmental Quality, 200 W. 17th Street, Cheyenne, WY 82002, before the close of business January 27, 2017. The Director may hold an informal conference if requested, hear the complaint and take action on the application in accordance with the Department's Rules of Practice and Procedure. The complainants shall have a right of appeal to the Environmental Quality Council where the complaint will be heard a second time. A conference shall be held if the Director determines that the nature of the complaint or the position of the complainants indicates that an attempt to informally resolve the disputes is preferable to a contested case proceeding. An informal conference or a public hearing shall be held within twenty (20) days after the final date for filing objections unless a different period is stipulated to by the parties. The Council or Director shall publish notice of the time, date and location of the hearing or conference in a newspaper of general circulation in the locality of the proposed operation once a week for two (2) consecutive weeks immediately prior to the hearing or conference. The hearing would be conducted as a contested case in accordance with the Wyoming Administrative Procedure Act (W.S. §16-3-101 through §16-3-115), and the right of judicial review would be afforded as provided in that act. All parties as given in W.S. §35-11-406(j) will be mailed a copy of this notice. The Wyoming Oil and Gas Commission will be mailed a copy of the application mine plan map as required by W.S. §35-11-406(j).

BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING

IN RE BROOK MINE APPLICATION)	
)	
)	Docket No. 17-4802
TFN 6 2-025)	
)	

**POWDER RIVER BASIN RESOURCE COUNCIL’S RESPONSE TO BROOK MINING
COMPANY’S MOTION TO DISMISS**

Pursuant to the Environmental Quality Council’s (“Council” or “EQC”) Order of March 2, 2017, and W.R.C.P. 12(b), the Powder River Basin Resource Council (“Resource Council”) submits this response to Brook Mining Company, LLC’s (“Brook”) Motion to Dismiss. The Resource Council respectfully requests that the EQC deny the motion and allow this matter to proceed to hearing.

STATEMENT OF THE CASE

The Resource Council brought this matter before the EQC to remedy deficiencies in Brook’s coal mine permit application and to raise grounds on which basis the permit application should be denied. The Resource Council did not choose a contested case hearing as its first opportunity for public participation, but was forced to request a hearing only because DEQ denied its request for an informal conference. Additionally, the parties find themselves in this proceeding at this time only because the EQC dismissed the previous proceedings. The procedural posture we find ourselves in is not the creation of the Resource Council, and as such the organization should not be penalized for any deficiencies in the Environmental Quality Act

and DEQ's regulatory framework that have led Brook to question the validity of these proceedings.¹ More importantly, as explained below, the Resource Council properly requested a hearing before the EQC and there are no grounds to dismiss such a hearing as Brook requests.

STANDARD OF REVIEW

Although Brook does not reference Rule 12 in its motion, or for that matter *any* law related to the standard for a motion to dismiss, for purposes of this response, the Resource Council assumes Brook is bringing its motion under W.R.C.P. 12(b)(1). A claim must be dismissed pursuant to W.R.C.P. 12(b)(1) when a court lacks jurisdiction over the subject matter. The Wyoming Supreme Court has held that "A court has jurisdiction when it has the power to hear and determine a matter in controversy." *Nyberg v. Wyoming Military Department*, 2003 WY 43 ¶ 8 (2003) (internal citations omitted). The same principle applies to administrative agencies acting as adjudicatory bodies.

For purposes of review of the motion, the Council should accept the facts alleged in the Resource Council's Petition as true. *Gates v. Richardson*, 719 P.2d 193, 194 (Wyo. 1986); *Wyoming v. Fremont Energy Corp.*, 651 P.2d 802, 804 (Wyo. 1982). Additionally, the EQC should be mindful that "dismissal is a drastic remedy which should be granted sparingly." *Rissler & McMurry, Co. v. Wyoming*, 917 P.2d 1158, 1160 (Wyo. 1996).

ARGUMENT

The EQC should spend little time and effort dispensing with Brook's Motion to Dismiss. It was written to intimidate those wishing to object to its coal mine permit application and force the parties to expend unnecessary resources.

¹ In its motion and brief in the previous docket, the Resource Council carefully reserved all rights to a contested case hearing.

The Resource Council can only assume that to be the case because even Brook seems to question the basis for its motion as Brook’s counsel, Isaac Sutphin, represented to the Sheridan County Board of County Commissioners – and the public in attendance and via the media – that “there will be a public hearing.” Pat Blair, *Group Says DEQ Denied Them Hearing on Ramaco*, *Sheridan Media*, Mar. 6, 2017, available at <http://www.sheridanmedia.com/news/group-says-deq-denied-them-hearing-ramaco91677>. In the audio recording linked via the *Sheridan Media* website, Mr. Sutphin represented that “The Environmental Quality Council will be hearing this matter” and referenced the scheduling conference that was set to occur on March 10, 2017. It is disingenuous for Brook to say publicly that “there will be a hearing” and at the same time try to dismiss that hearing with this motion.

Brook’s Motion to Dismiss should be denied for the following reasons.²

I. The Environmental Quality Act Does Not Require Parties to Request a Contested Case Hearing on a Coal Mine Permit by the Deadline for Submitting Objections

Citing no authority for its position, Brook argues that since the Resource Council “did not request a contested case within 30 days of the final publication date” of the public notice for objections on the coal mine permit application, the “Petition is untimely and should be dismissed.” Brook Mot. to Dismiss at 2. Brook argues that “a hearing request filed with the Council must occur on the same timetable as a request to the DEQ for an informal conference under Section 406(k).” *Id.* Brook’s arguments fail for several reasons.

Section 406(k) merely states that “Any interested person has the right to file written objections to the application with the administrator within thirty (30) days after the last publication of the above notice.” W.S. § 35-11-406(k) (referencing Section 406(j) regarding

² The Resource Council hereby incorporates into this response arguments made by Big Horn Coal Company and the Fishers as part of their responses in this now-consolidated docket.

public notice of a surface coal mine permit application). Section 406(k) then goes on to discuss informal conferences and contested case hearings but gives no instruction regarding a deadline to request either. Section 406(k) discusses that an informal conference may be “requested,” but does not contain similar language regarding contested case hearings before the EQC, except in cases where a party exercises its “right of appeal to the council.”

Similarly, the public notice *published by Brook* does not contain any instructions on how a party should request a contested case hearing or what the deadline for that request is. Like Section 406(k) itself, the public notice discusses that an informal conference may be “requested” but does not contain similar language inferring that a contested case hearing may also be requested. Importantly, neither the public notice nor Section 406(k) dictates that an interested person loses his or her right to request a contested case proceeding if they don’t do so within the time period afforded for the filing of objections.

Here, the Resource Council requested an informal conference, in compliance with DEQ’s rules of practice and procedure.³ DEQ subsequently denied the request for an informal conference, and the Resource Council has now timely exercised its “right of appeal” to the EQC for review of DEQ’s decision and the coal mine permit application in the exact manner that Section 406(k) contemplates. DEQ’s rules of practice and procedure afford a period of thirty days to exercise the “right of appeal” in Section 406(k). DEQ Rules of Practice & Procedure, Ch. 1 § 17(b). Additionally, the Resource Council complied with all other requirements of Chapter 1, Section 3 and therefore properly initiated proceedings before the EQC.

³ DEQ’s rules of practice and procedure also do not include a deadline for the informal conference request; however, the public notice’s “if requested” language infers that such request should be made by the same deadline as written objections. This reading is consistent with SMCRA’s implementing regulations, which require a request for an informal conference to “[b]e filed with the regulatory authority no later than 30 days after the last publication of the newspaper advertisement required under paragraph (a) of this section.”

Although this is a case of first impression, it seems clear that the Resource Council has timely petitioned for review of DEQ's action to deny the informal conference request *and* to review Brook's coal mine permit application. Brook cannot cite any supporting law to the contrary and its motion to dismiss should be denied.

II. Due Process and the Public's Right to Participate in Coal Mine Permitting Proceedings Require a Hearing to be Held

The Environmental Quality Act contemplates robust public participation opportunities for permitting proceedings, and in the case of coal mine permits, Section 406(k) provides that "An informal conference or a public hearing shall be held." The Act requires a proceeding and clearly contemplates that either an informal conference or a contested case proceeding will be held if requested.

Brook argues that such a proceeding must be held within twenty days and therefore the Resource Council is too late; however, Section 406(k) affords a different time period if it is stipulated to by the parties. Brook has participated willingly in the proceedings thus far, has not objected to the scheduling orders issued in either docket, and did not challenge the EQC's decision in the previous docket, which placed the parties in the procedural posture we are in. In other words, Brook has "stipulated" to a hearing outside the twenty day window because it has willingly participated in the proceedings thus far and, unless the company owns a time machine, it is impossible to go back and hold the now-required hearing in that time period.

III. The EQC Has Authority – and Statutory Obligation – to Review DEQ's Denial of the Informal Conference Requests

Calling it "baseless," Brook also seeks to dismiss the Resource Council's claim related to the denial of its request for an informal conference.

Given that Brook raises many of the same arguments as DEQ, and in an effort to avoid duplication of responsive arguments, the Resource Council hereby incorporates by reference its response to DEQ's motion to dismiss filed March 17, 2017.

Respectfully submitted this 20th day of March, 2017.

ATTORNEYS FOR PERMIT APPLICANT
BROOK MINING COMPANY, LLC

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	DOCKET 17-4802
)	
TFN 6 2-025)	

BROOK MINE'S EXPERT WITNESS DESIGNATION

Pursuant to the Council's Order of Consolidation and Schedule, Brook Mining Company
(Brook) names the following expert witnesses:

Jeff Barron, P.E.
WWC Engineering
1849 Terra Avenue
Sheridan, WY 82801

It is anticipated that Mr. Barron will primarily be Brook Mining's fact witness and will testify regarding his experience relating to mine plans, reclamation plans, the mine permit application process, and preparation and coordination of submitting the mine permit application at issue in this matter. Although Brook currently expects to present Mr. Barron solely as a fact witness based on his first-hand involvement with the subject mine permit application, Mr. Barron is qualified as a technical expert in the mine permitting area. In the event Brook is required to

present expert testimony regarding the mine permit application process or the technical components of the mine plan and the reclamation plan, Mr. Barron is qualified to provide such testimony and may be called as an expert witness. Mr. Barron has worked with various mines in filing several components of mine permits, currently on file with the Wyoming Department of Environmental Quality. Mr. Barron has assisted with non-substantial revisions and major revisions alike. Given Mr. Barron's education and experience, he may also be asked to provide expert opinions relating to the topics of ground water and surface water, as well as geotechnical engineering.

David Myers
Natural Resources Analyst
Wyoming Department of Environmental Quality

Brook may call Mr. Myers to testify as an expert in this matter. Mr. Myers is a Natural Resources Analyst at DEQ and has experience and expertise in surface water hydrology. If called, Mr. Myers may testify about: 1) hydrology relating to the technical adequacy and statutory compliance of Brook's mine permit; 2) the status of Big Horn Coal Co.'s reclamation efforts; 3) Big Horn Coal Co.'s remaining reclamation obligations; 4) the process for establishing a reclamation performance bond before issuing a permit; and 5) the authenticity of the Department's records for Big Horn Coal Co.

Bjarne Kristiansen
Assistant Supervisor, District III
Wyoming Department of Environmental Quality

Brook may call Mr. Kristiansen to testify as an expert in this matter. Mr. Kristiansen is a professional geologist in Wyoming as is the Assistant Supervisor, District III, at DEQ. Mr. Kristiansen has experience and expertise in geology, overburden assessment, hydrology, and alluvial valley floors. If called, Mr. Kristiansen may testify about: 1) the authenticity of the

Department's records for Brook Mine; 2) the process for establishing a surface damages bond and reclamation performance bond before issuing a permit; 3) Brook's statutory compliance with the subsidence control plan; 4) Brook's statutory compliance for hydro-geology; and 5) the general statutory compliance and technical adequacy of the Brook mine permit.

Stacy Page
Former Assistant Supervisor, District III
Wyoming Department of Environmental Quality

Brook may call Ms. Page to testify as an expert in this matter. Ms. Page was the Assistant Supervisor, District III, at DEQ and has experience and expertise in baseline vegetation and reclamation. If called, Ms. Page may testify about: 1) Brook's statutory compliance with vegetation studies within the permit and 2) the general statutory compliance and technical adequacy of the Brook mine permit.

Doug Emme
Blasting Program Principal
Wyoming Department of Environmental Quality

Brook may call Mr. Emme to testify as an expert in this matter. Mr. Emme is the Blasting Program Principal at DEQ and has experience and expertise in blasting and overburden removal as well as blasting program compliance. If called, Mr. Emme may testify about: 1) Brook's statutory compliance with blasting and 2) the general statutory compliance and technical adequacy of the Brook mine permit.

Jaime Jakes n/k/a Henderson
Natural Resources Analyst
Wyoming Department of Environmental Quality

Brook may call Ms. Henderson to testify as an expert in this matter. Ms. Henderson is a Natural Resources Analyst and has experience and expertise in baseline vegetation and reclamation. If called, Ms. Henderson may testify about: 1) Brook's statutory compliance with

vegetation studies within the permit and 2) the general statutory compliance and technical adequacy of the Brook mine permit.

Matt Kunze
Surface Water Hydrologist
Wyoming Department of Environmental Quality

Brook may call Mr. Kunze to testify as an expert in this matter. Mr. Kunze is a Surface Water Hydrologist at DEQ and has experience and expertise in surface water hydrology, baseline compliance, and mine plan/reclamation plan compliance. If called, Mr. Kunze may testify about: 1) Brook's statutory compliance with alluvial valley floor studies; 2) Brook's statutory compliance with surface water studies; and 3) the general statutory compliance and technical adequacy of the Brook mine permit.

Muthu Kuchanur
Land Quality Geology Supervisor
Wyoming Department of Environmental Quality

Brook may call Mr. Kuchanur to testify as an expert in this matter. Mr. Kuchanur is the Land Quality Geology Supervisor at DEQ and has experience and expertise in geology, hydrogeology, and groundwater. If called, Mr. Kuchaur may testify about: 1) Brook's statutory compliance with geology studies; 2) Brook's statutory compliance with groundwater studies; 3) Brook's statutory compliance with surface water studies; and 4) the general statutory compliance and technical adequacy of the Brook mine permit.

ADDITIONAL COMMENTS RELATING TO BROOK'S DESIGNATION

1. Brook reserves the right to call, without further notice, any expert witness, whether retained or non-retained, designated by any other party to this action or identified in any manner pursuant to the Wyoming Rules of Civil Procedure as if he or she were its own.

2. Brook expressly reserves the right to call to testify at the hearing any and all additional non-retained witnesses who qualify, or who may qualify, as experts who are identified in written discovery responses and/or documents produced by any party or non-party to this matter, as well as any person deposed and/or identified during the depositions of witnesses taken or yet to be taken in this matter.

3. Brook reserves the right to designate any and all witnesses necessary for rebuttal or for counter testimony to any other parties' designated experts.

4. Brook reserves the right to object to any expert listed by any other party to this matter on the basis of relevance, or otherwise.

5. In the event any of Brook's listed experts are unavailable to testify in person at the trial in this matter, Brook reserves the right to use parts or all of the depositions or videotaped depositions of any or all of these expert witnesses at trial, in lieu of the witnesses' actual live testimony.

6. Brook reserves the right, as this case develops, to name additional expert witnesses if the need arises or to expand on the areas and subjects listed above.

DATED: March 17, 2017.

OBJECTOR FISHERS' IDENTIFICATION OF EXPERT WITNESSES

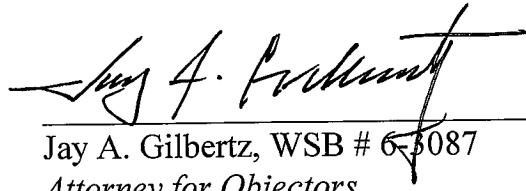

Jay A. Gilbertz, of the firm Yonkee & Toner, LLP, by and on behalf of Objectors Mary Brezik-Fisher and David Fisher ("Fishers"), and pursuant to the Order Of Consolidation And Schedule dated March 13, 2017, submits Objector Fishers' Identification Of Expert Witnesses.

Fishers do not have any independent or specifically retained experts to identify at this time. However, Fishers do fully reserve the right to subpoena, call, examine and cross-examine any expert witness identified by any other party to these proceedings whether or not such party remains a party to this action at the time of the hearing or whether or not any such party elects to call an identified expert as a witness at the hearing. Fishers hereby adopt by

reference as if fully set forth herein the identification of expert witnesses submitted by any and all other parties in this matter and in the prior contested case proceeding EQC Docket Number: 17-4801.

DATED this 17th day of March, 2017.

IN RE BROOK MINE APPLICATION)	
)	Docket No. 17-4802
)	
TFN 6 2-025)	

**OBJECTOR BIG HORN COAL COMPANY'S NAMING OF EXPERT
WITNESSES**

Big Horn Coal Company, by and through its undersigned counsel, Crowley Fleck PLLP, and pursuant to the Order of Consolidation and Schedule of the Environmental Quality Council ("EQC") in this matter, dated March 13, 2017, submits this list of expert witnesses it intends to call at the hearing set to begin on May 22, 2017 at 3:00 p.m.

Big Horn Coal Company intends to call the following expert witnesses:

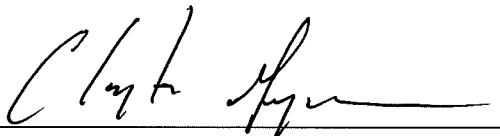

- 1. Jason N. Todd, QP**
Mining Consultant—Millcreek Mining Group
1011 E. Murray Holladay Rd, #100
Salt Lake City, UT 84117
(801) 904-2260

- 2. Paul (Joe) Gerlach**
President, Hydrogeologist—Aqua Terra Consultants
2624 Heartland Drive

Sheridan, WY 82801
(307) 672-7133

As required by the EQC's Order of Consolidation and Schedule, Big Horn Coal Company will provide an expert report for each of these expert witnesses on or before April 3, 2017 and will provide a complete list of witnesses it intends to call at the above referenced hearing on or before May 17, 2017. Both Mr. Todd and Mr. Gerlach must be contacted through the undersigned counsel for Big Horn Coal Company.

Subject: Scheduling conference

Dear Counsel:

You should have received an Order for Scheduling conference. The day of the week is wrong. It is FRIDAY, May 10th, 2017 at 1:30 p.m. NOT Wednesday the 10th.

I am sorry for the error. By this age I really should be able to read a calendar.

Thanks

Jim Ruby

Hi Jim, we spoke with Brooke Collins today who will not be submitting a separate petition. She would like her objections considered with our petition so if you could add her to the list that would be great. Thanks so much, Shannon

Hi Shannon. we will be setting up your case online. We received your paper filing in the Brook matter. Can you email me the list of previous objectors that you want to include in your new case as exhibits. Also your maps that you sent. Are those filed in the other matter as well? If so can you direct us to where they are or what they are identified as. I want to make sure we get everything moved over that you are wanting.

Thanks.

Subject: Question

Hi again:

As we were going through the paper you sent we came across the following stapled together. Energy Journal Q and A: Randall Atkins, Ramaco dated October 15, 2016; Letter to you from Coal Mine and Safety District 9 dated Dec. 2, 2016; Letter to Randall Atkins from Coal Mine Safety and Health District 9 dated June 9, 2016; Letter to Mine Safety and Health Administration District 9, FOIA Request from PRBRC dated Nov. 22, 2016; and finally a Letter to Mr. Atkins from the DEQ dated Feb. 24, 2016

Are these intended to be filed with us or are they something else. They are not identified in your Exhibit List.

Thanks

Jim

Hi Ms. Anderson:

The hearing officer has not decided upon consolidation yet because of the Motion to Dismiss pending in 17-4802. Under the consolidation rules the cases are consolidated under the earliest docket. If the Big Horn matter were to be dismissed than the consolidation would be under the Fischer docket and not the Big Horn case. If your client and other persons wish to file "friend of the court" briefs in the Big Horn matter than the process for considering those filings set forth in the rules of civil procedure and rules for appellate procedure would be followed by the Council.

Sincerely,

Jim Ruby

Mr. Ruby – Can you please clarify whether the case number for intervention shouldn't be 17-4802, since 17-4801 was the docket that was dismissed? Big Horn Coal supports the Council hearing these matters together. Big Horn would not object to intervention by other objectors in EQC Docket 17-4802, or in the alternative, to the consolidation of EQC Docket 17-4802 with Dockets initiated by other objectors.

Subject: Brook Mine

Dear Parties and Counsel:

As of now we have two appeals in the Brook Mine matter. The Council has three ways of handling this matter. We can have separate cases for each and every case which means separate hearings for each case. We can consolidate the cases at some point through a consolidation order or we can treat them as motions to intervene. The Council would appreciate your input on the process. If you wish to treat the process as motions to intervene than the Council would like you to file a one page motion requesting that your petitions (s) be treated as motions to intervene or if you haven't filed yet than you can simply make your choice and file a petition for contested case or file motions to intervene. The case number for intervention is 17-4801.

Sincerely,

Jim Ruby

BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING

In Re Brook Mine Permit Application)	
)	
TFN 6 2-025)	EQC Docket No. _____
)	

**PETITION TO THE ENVIRONMENTAL QUALITY COUNCIL
FOR A HEARING ON DEQ's DENIAL OF AN INFORMAL CONFERENCE AND ON
OBJECTIONS TO THE BROOK MINE PERMIT**

INTRODUCTION

1. Powder River Basin Resource Council ("PRBRC" or "Resource Council")¹ respectfully petitions the Environmental Quality Council ("EQC" or "Council") to hold a hearing on the Resource Council's objections to Brook Mining Co., LLC's ("Brook" or "company" or "applicant") coal mine permit application and the Department of Environmental Quality's ("DEQ") denial of informal conference public participation opportunities and due process rights as provided for under the Environmental Quality Act and the Surface Mining Control and Reclamation Act ("SMCRA").

¹ The Resource Council's address is 934 N. Main St., Sheridan, WY 82801. All correspondence can be addressed to Shannon Anderson at the postal address, sanderson@powderriverbasin.org, or (307) 672-5809.

2. The Resource Council submitted its objections to the permit application to the DEQ on January 27, 2017, requesting an informal conference before the Department. The objections and request for informal conference are attached as Exhibit 1.

3. Under the Environmental Quality Act and associated regulations, and corresponding federal law and regulations under SMCRA, DEQ was required to hold an informal conference on the Resource Council's objections. DEQ Rules of Practice & Procedure, Ch. 3 § 3(a) ("The conference shall be held in the locality of the operation or at the state capitol, at the option of the requester, within 20 days after the final date for filing objections unless a different period is stipulated to by the parties"); 30 U.S.C. § 1263(b) ("If written objections are filed and an informal conference requested, the regulatory authority shall then hold an informal conference in the locality of the proposed mining, if requested within a reasonable time of the receipt of such objections or request.").

4. However, DEQ denied the Resource Council's request for an informal conference, arguing that DEQ is afforded discretion in deciding whether or not to grant an informal conference request. DEQ's letter to the Resource Council is attached as Exhibit 2.

5. We respectfully ask the EQC to, without undue delay, schedule a hearing on DEQ's denial of the informal conference, and after such hearing, remand the Resource Council's objections to the permit application back to DEQ for consideration at an informal conference proceeding.

6. If the EQC is unwilling or unable to do that, we ask that the EQC consider our objections to Brook's coal mine permit application at a contested case hearing. In making a request for

hearing, in no way is the Resource Council waiving any of its rights or remedies related to the denial of the informal conference.²

7. We also respectfully ask the EQC to issue a temporary order preventing the DEQ from approving the permit until such time as the hearing is held and an order is issued therefrom, in accordance with Sections 406(k) and 406(p) of the Environmental Quality Act.

STATEMENT OF JURISDICTION

8. The EQC has jurisdiction to hold a hearing on DEQ's denial of the informal conference and/or the Resource Council's objections to the permit application. DEQ Rules of Practice and Procedure, Ch. 1, §§ 3, 17(b).

9. This petition is timely filed within thirty (30) days of receipt of DEQ's decision denying the request for an informal conference.³ *Id.* at § 17(b).

STATEMENT OF FACTS AND LAW

10. According to the Environmental Quality Act and SMCRA, "No mining operation may be commenced or conducted on land for which there is not in effect a valid mining permit to which the operator possesses the rights." W.S. § 35-11-405(a).

11. Requirements for coal mine permit applications as well as grounds for approval and denial are governed by Section 406 of the Wyoming Environmental Quality Act, along with the Land Quality Division's Rule and Regulations implementing the Environmental Quality Act.

² Separately, the Resource Council will be filing a petition with the Office of Surface Mining Reclamation and Enforcement ("OSMRE") pursuant to 30 C.F.R. § 733.12(a)(2) to evaluate the state program given the violations of SMCRA's permitting requirements related to the Brook Mine permit, including the failure to hold an informal conference in the location of the proposed mining operation, as requested by the Resource Council.

³ DEQ's decision is dated January 30, 2017, and it was received by the Resource Council via postal mail on February 2, 2017. Although DEQ did not hold an informal conference, and therefore there is no administrative decision following an informal conference to appeal, the Resource Council is still assuming that this appeal of DEQ's decision not to hold an informal conference falls under Ch. 1 § 17(b) related to informal conferences.

12. Specifically, “The applicant for a surface coal mining permit has the burden of establishing that his application is in compliance with this act and all applicable state laws.” *Id.* at § 406(n).

13. Additionally, before a coal mining permit can be approved, DEQ must make certain findings related to the application’s compliance with the Wyoming Environmental Quality Act, DEQ regulations, and SMCRA. *Id.* at §§ 406(n)(i)-(vii). As far as the Resource Council knows, these findings have yet to be made.

14. Requirements for mine reclamation bonds are governed by Section 417 of the Environmental Quality Act and corresponding DEQ regulations.

15. In response to the required public notice, the Resource Council timely filed objections to Brook’s coal mine permit application. The objections included a variety of issues ranging from incomplete and inaccurate information in the permit application to more technical issues such as hydrology and subsidence concerns and reclamation bond requirements.

16. Members of the Resource Council also timely filed objections to Brook’s coal mine permit application. John and Vanessa Buyok, Gillian Malone, Sadie Clarendon, Jane Buyok, Anton Bocek, Joan Tellez, Wendy Condrat, and William Bensel filed objections and their objections are hereby incorporated, to the extent possible into the Resource Council’s objections. Exhibits 3-10. Their objections also demonstrate that the Resource Council, through representation of its members, is an “interested person” within the meaning of the Wyoming Environmental Quality and Section 406(k) and a “person with an interest which is or may be adversely affected” within the meaning of Ch.1, § 17(b) of DEQ’s Rules of Practice and Procedure.

17. The objections of the Resource Council, along with objections of our members, included a request for an informal conference.

18. DEQ denied the requests for an informal conference on January 30, 2017 and referred all of the submitted objections to the EQC (regardless of whether the objecting party requested an informal conference, hearing, or neither type of proceeding). *See* Exhibit 2.

19. The EQC subsequently opened Docket 17-4801, held a scheduling conference, and entered into a scheduling order for a hearing.

20. However, after motions from the parties, including the Resource Council, filed February 6, 2017, the EQC vacated the hearing and requested additional briefing from the parties regarding the EQC's jurisdiction and authority to hear the case.

21. On February 21, 2017, after briefing and argument from the parties, the EQC voted to dismiss Docket 17-4801. However, in doing so, EQC members acknowledged that the parties could come back and file a petition for a hearing.⁴

ISSUES PRESENTED FOR REVIEW AT THE HEARING

22. Paragraphs 1-21 above are hereby incorporated.

23. DEQ cannot lawfully issue a permit for the Brook Mine unless the application demonstrates that it meets the requirements of applicable laws and regulations *and* unless DEQ makes the required findings of Section 406(n).

24. Additionally, DEQ cannot lawfully issue a permit for the Brook Mine unless the agency follows the required public participation process afforded under its rules and corresponding federal law and regulations pursuant to SMCRA. DEQ is under legal obligation to hold an informal conference on the Resource Council's objections. DEQ Rules of Practice & Procedure

⁴ At this time, the transcript is unavailable for specific citation.

Ch. 3 § 3(a); 30 U.S.C. § 1263(b); 30 C.F.R. § 773.6(c). DEQ is also under legal obligation to hold such an informal conference in the location of the proposed mining operation (i.e. Sheridan County) and to provide access to the proposed mine site, if requested. *Id.*

25. DEQ cannot waive these requirements because only Congress can exempt companies from compliance, through an amendment to SMCRA. DEQ's regulations provide mandatory – not discretionary – actions on the part of the agency in relation to its obligations to afford public participation opportunities.

26. DEQ regulations require information in a permit application to be “current” . . . “accurate and complete.” DEQ Land Quality Division Rules and Regulations, Ch. 2 § 1. The mine plan must include “[a] complete operations plan proposed to be conducted during the life of the mine” with an accurate estimate of “the number of acres that will be affected annually” and the “anticipated annual and total production by tonnage.” *Id.* at § 5(a)(i). As discussed in Sections 1 and 2 of the Resource Council's objections, the mine plan at issue here does not contain current, accurate, or complete information and does not meet the requirements of DEQ's regulations.

27. The mining and reclamation plan does not include “a plan to minimize the disturbances to the prevailing hydrologic balance at the minesite and in associated offsite areas and to the quality and quantity of water in surface and ground water systems both during and after mining operations and during reclamation” as required by the Environmental Quality Act and corresponding DEQ regulations. W.S. § 35-11-406(b)(xvii).

28. The proposed mine has not “been designed to prevent material damage to the hydrologic balance outside the permit area” are required by the Environmental Quality Act and corresponding DEQ regulations. *Id.* at § 406(n)(iii). DEQ is unable to make this finding until its Cumulative Hydrologic Impacts Assessment (“CHIA”) is completed.

29. DEQ is unable to make a finding that “the proposed operation would . . . [n]ot interrupt, discontinue, or preclude farming on alluvial valley floors” as required by Section 406(n)(v) as DEQ has yet to finish its mapping and determinations related to alluvial valley floors in adjacent areas as required by DEQ regulations. Land Quality Rules and Regulations, Ch. 12 § 1(a)(i).

30. The mine plan does not sufficiently include “[t]he methods of diverting surface water around the affected lands where necessary to effectively control pollution or unnecessary erosion” as required by the Environmental Quality Act and associated DEQ regulations. W.S. 35-11-406(b)(xv).

31. The mine plan does not include an appropriate plan to put out coal fires or properly treat or dispose of other “materials constituting a fire, health, or safety hazard.” W.S. 35-11-406(b)(ix).

32. The proposed reclamation bond does not cover the *entire* cost of surface and water reclamation, as required to be posted *prior* to any mining on the site. *See* W.S. § 35-11-416(c)(i) (the bond should equal the “cost of reclaiming the affected land disturbed” . . . “plus the administrator’s estimate of the additional cost to the state of bringing in personnel and equipment should the operator fail or the site be abandoned.”).

33. As discussed in the expert report submitted with the Resource Council’s objections, the subsidence control plan does not achieve its required objective: to control and prevent subsidence at the mine site. The expert report concludes that “There is a serious risk of surface subsidence from roof collapse in the proposed mining area.” Subsidence “constitutes a public nuisance or endangers the public and safety” of local landowners. W.S. § 35-11-406(m)(vii). It also has implications for whether the “reclamation plan can accomplish reclamation as required.”

Id. at § 406(n)(ii). And it has implications for creating damage to the hydrologic balance both within the permit area and in outside areas. *Id.* at §§ 406(b)(xvii), 406(n)(iii).

34. The company's application does not comply with DEQ requirements that the application include "[a] list identifying the Mine Safety and Health Administration identification number for all mine facilities that require MSHA approval and licenses, permits or approvals needed by the applicant to conduct the proposed operation, whether and when they have been issued, the issuing authority, and the steps to be taken to comply with the requirements." Land Quality Rules and Regulations, Ch. 2 § 2(a)(v).

35. The Resource Council reserves the right to raise any additional issues brought forth in its objection letter or in other objection letters submitted to DEQ.

36. The Resource Council also reserves the right to provide additional evidence and support for its objections.

37. The Resource Council further reserves the right to supplement its objections and grounds for hearing if and when DEQ makes any findings pursuant to Sections 406(n)(i)-(vii).

38. The Resource Council further reserves the right to supplement its objections and ground for hearing based on discovery provided by DEQ and Brook as part of this hearing process.

REQUEST FOR TEMPORARY RELIEF

39. Paragraphs 1-38 above are hereby incorporated.

40. The Resource Council requests that the EQC prevent DEQ from issuing the permit until such time as there is a final order from an informal conference held by DEQ or from a hearing by the EQC on the Resource Council's objections to the permit.

41. Preventing DEQ from issuing a decision on the permit until after the hearing is consistent with W.S. § 35-11-406(p) (requiring the DEQ Director to "issue or deny the permit no later than

fifteen (15) days from receipt of any findings of fact and decision of the environmental quality council.”) Additionally, as discussed in paragraph 13, *supra*, DEQ has yet to make findings required before the permit can be issued.

PRAYER FOR RELIEF

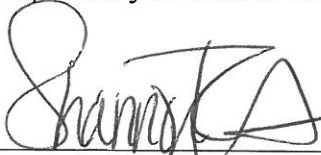

42. For the reasons set forth above, the EQC should immediately issue an order remanding the Resource Council’s objections to the DEQ and ordering the agency to hold an informal conference on the objections, held pursuant to the Environmental Quality Act, SMCRA, and associated state and federal regulations.

43. However, if the EQC declines to issue such an order, we request that the EQC hold a contested case hearing to consider the objections of the Resource Council and other parties.

44. The EQC should grant temporary relief to the Resource Council by ordering a stay on any permitting action by DEQ pending the outcome of the requested hearing.

45. After the hearing, the EQC should issue a decision to deny the permit application and should submit such decision to the DEQ for its action.

Respectfully submitted this 24th day of February, 2017.

Shannon Anderson (Wyo. Bar No. 6-4402)

I am sorry. Typos. It is 4802. Not 4801. Thank you for catching that.

Mr. Ruby – Can you please clarify whether the case number for intervention shouldn't be 17-4802, since 17-4801 was the docket that was dismissed? Big Horn Coal supports the Council hearing these matters together. Big Horn would not object to intervention by other objectors in EQC Docket 17-4802, or in the alternative, to the consolidation of EQC Docket 17-4802 with

Dockets initiated by other objectors.

Regards,

Lynne

Subject: Brook Mine

Dear Parties and Counsel:

As of now we have two appeals in the Brook Mine matter. The Council has three ways of handling this matter. We can have separate cases for each and every case which means separate hearings for each case. We can consolidate the cases at some point through a consolidation order or we can treat them as motions to intervene. The Council would appreciate your input on the process. If you wish to treat the process as motions to intervene than the Council would like you to file a one page motion requesting that your petitions (s) be treated as motions to intervene or if you haven't filed yet than you can simply make your choice and file a petition for contested case or file motions to intervene. The case number for intervention is 17-4801.

Sincerely,

Jim Ruby

We will be mailing our petition today and will be sending it via email this afternoon. We also have no objection to consolidation with the other dockets or intervention in our soon-to-be-established docket, however we are filing a separate petition as we have different grounds for our petition than the other parties.

Attorney for Objectors,
Mary Brezik-Fisher and David Fisher

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	DOCKET _____
TFN 6 2-025)	
)	

**OBJECTOR FISHERS' PETITION FOR A HEARING ON THEIR OBJECTIONS
BEFORE THE ENVIRONMENTAL QUALITY COUNCIL**

Objectors Mary Brezik-Fisher and David Fisher ("Fishers"), by and through their undersigned counsel, hereby submit this Petition and their demand for a contested case hearing before the Wyoming Environmental Quality Council in relation to the Fishers' objections to the proposed mining application and permit for the Brook Mine. In support of this demand, the following facts and sequence of events have transpired:

1. Mary Brezik-Fisher and David Fisher are landowners in Sheridan County, Wyoming at 32 Slater Creek Lane, Ranchester, WY 82839. The Fishers are represented by attorney Jay A. Gilbertz whose contact and other pertinent information are set forth above.
2. Because the DEQ has refused to provide the Fishers with an informal conference to present their objections and the Fishers have not otherwise been allowed to present

their objections in any hearing, the Fishers hereby demand that the EQC provide them with a contested case hearing before the Council as is required by Wyoming Statute §35-11-406(k).

3. The Fishers have objections to the proposed permit based on deficiencies, incompleteness, and other inadequacies and problems associated with the proposed mining and mine plan including, but not limited to, geotechnical and subsidence concerns, hydrological concerns, reclamation concerns and others. The Fishers set forth their objections and concerns in their letter to the DEQ which is attached hereto and incorporated by reference as Appendix 1¹. In addition, the Fishers adopt by reference the other concerns and objections raised by all other objectors as set forth in these parties' respective submissions to the DEQ as filed of record in EQC Docket No. 17-4801.
4. The Fisher lands are in close proximity to the proposed mining operations and within the zone of influenced property potentially impacted by the proposed mining. The Fishers are otherwise interested and effected residents of the State of Wyoming.
5. Brook Mining Company, LLC is a Wyoming limited liability company with its principal office located at 1101 Sugarview Drive, Ste. 201, Sheridan, WY 82801.
6. Brook Mine has submitted an application for a coal mining permit from the Wyoming Land Quality Division of the Department of Environmental Quality, DEQ File No. "TFN 6 2-025 (the "permit application").
7. According to the public notice, the coal mining permit area will be located in various Sections of Township 57N, Range 85W and various Sections of Township 57N, Range 84W Sheridan County, Wyoming (the "permit area").
8. Public Notice of the mine application was published by Brook Mining Co., LLC in the Sheridan Press in the form attached hereto as Appendix 2.
9. Pursuant to terms and instructions of the Public Notice published by Brook Mining Co., LLC, written objections to the proposed mining operation and application were to be delivered to and received by Kyle Wendtland, Administrator of the Land Quality Division, Department of Environmental Quality before the close of business on

¹ In Fishers' objections they raised a concern about a potential conflict of interest relative to Administrator Kyle Wendtland. Fishers have subsequently been informed that Kyle Wendtland has been fully recused from participation in this matter. Assuming this to be true, this topic will not be at issue in the contested case hearing. Fishers did not imply or intend to imply any impropriety by Kyle Wendtland or his brother Anthony Wendtland.

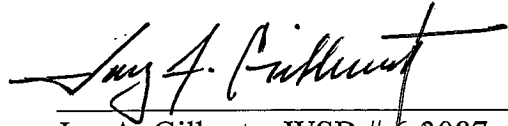

January 27, 2017. (See EQC Docket No. 17-4801.)

10. The Fishers along with several other objectors timely filed written objections to the proposed mining operation citing numerous concerns, and pursuant to the published notice from Brook Mine delivered those objections to the DEQ as directed. A copy of the Fishers' objections are incorporated by reference and attached hereto as Appendix 1.
11. The Fishers, together with other objectors, requested an informal public conference with the Director of DEQ, and that request was summarily denied.
12. In response to the objections filed by the Fishers and all the other Objectors, the DEQ referred the matter to the Environmental Quality Council ("EQC") which set a contested case hearing for February 13th and 14th, 2017 to be held in Cheyenne, Wyoming.
13. Prior to the established hearing date, the EQC invited briefing and held a hearing on the issue of whether the Objectors' complaints were properly before the Council as a result of the referral process used by the agency (the DEQ). Consequently, on February 7, 2017, the EQC issued an Order Vacating Contested Case Hearing And Setting Oral Argument on the issue for February 21, 2017.
14. The Oral Argument Hearing was held on February 21, 2017 and immediately afterward, the EQC dismissed Docket 17-4801. During its verbal pronouncements, the EQC indicated that each objector would be allowed to subsequently make a request for a contested case hearing before the EQC should any such objector wish to do so. An Order Of Dismissal was issued on February 22, 2017. (See Appendix 3 attached.)
15. Prior to the Oral Argument Hearing held on February 21, 2017, Objector Big Horn Coal filed a Petition For A Contested Case Hearing with EQC on February 15, 2017.
16. In light of the EQC's dismissal of Docket 17-4801, (which was done without the consent nor at the behest of the Fishers), the Fishers hereby demand a contested case hearing before the EQC at which their objections will be heard and addressed.

WHEREFORE, the Fishers hereby demand that the EQC set and conduct a contested case hearing before the EQC to hear and address the Fishers' objections to the proposed coal mining permit sought by Brook Mining Company, LLC.

DATED this 23rd day of February, 2017.

**RE: Ramaco, LLC/Brook Mine Permit
Sheridan County, Wyoming**

Dear Mr. Wendtland:

Our property in Sheridan County is in the group of potentially affected landowners to the proposed Brook Mine Permit, and we received the Public Notice regarding this action. We have resided in this historic valley since 1996 and have run livestock and haying operations on our property. The purpose of this letter is to issue a written objection to the proposed mine permit based on the following concerns:

1. **Substantially Incomplete Mine Plan.** The mine plan has changed or been revised numerous times. It has gone from an operation purportedly employing 200-400 workers to its current version employing approximately 18-20 workers with initial projections of mining up to ten million tons per year to a revised plan of mining only two million tons in the first few years. In simple terms, local landowners are not clear on exactly what the current mine operation will entail as the current mine plan does not adequately address specific issues (to name a few, as follows): Where will the load-out facility be located? Where will infrastructure facilities be located? What type of "mobile crusher" will be used? How will the coal be transported and where? How many trucks will be on the road, how often, and what route will they take? How often will blasting occur and what are the hours of operation? Who specifically will be conducting the mine operations and what experience do they have in this type of operation (We understand that Mr. Woodring will be merely a "consultant")? Does Ramaco have a buyer/market for its coal?
2. **Ramaco's lack of history in conducting mining operations in Wyoming.** Other coal companies conducting business in Wyoming have a history of operating their mines in cooperation with local landowners and in compliance with local, state, and federal rules, regulations, statutes and procedures. For some landowners in this area, Ramaco has already demonstrated a disregard

Appendix

for "the Wyoming way" of conducting business. In our particular case, folks employed by Ramaco were caught trespassing on our property and taking soil samples without authorization. In fact, they were so blatant about it that my husband and a neighbor were out working on a baler in our hay field one afternoon and noticed two people out in our field. Those folks made no effort to come forward and identify themselves. My husband went up to them and asked what they were doing on our property and they told him they had permission to be there on behalf of Ramaco. He responded that he was the owner of the property and had not given them permission. They took the soil samples anyway and then departed. That is just one incident of several we have heard about concerning Ramaco's lack of cooperation with local landowners which does not bode well with their future operations.

3. **Soil Subsidence Issues and Sinkholes.** There have been geological surveys conducted in this area regarding the effects of coal mine subsidence in Sheridan County, specifically with respect to the area where Ramaco's mine operation will occur. Landowners are very concerned about subsidence, soil disturbance, and sinkhole issues considering how extensively this area has been mined. The mine plan does not adequately address these issues, including the possibility of re-igniting underground coal fires and measures to be taken for coal fire suppression. It is apparent that blasting within such close proximity to the old mines could further worsen the ongoing subsidence issues in this area.
4. **Damage to Water Wells and Foundations.** Affected landowners have substantial concerns that blasting operations may cause damage to the structural integrity of their water wells and foundations of homes and buildings on their property, including increasing drawdown in domestic wells. It is well-documented that previous mine operations in this same area caused damage to water wells and some were so extensive they had to be replaced. There are inadequate provisions in the current mine plan which protect landowners' ground and surface water.
5. **Air Quality, Noise and Light, and Other Health and Environmental Concerns.** The Tongue River Valley where many of the affected landowners live regularly sustains high winds in the area. The mine plan does not adequately address dust suppression measures and how mining operations will control the coal dust, dust from trucks and crushers, toxic fumes, emissions from increased truck traffic and potentially unhealthy air quality emissions due to mining operations. (Apparently no coal will be transported via rail...is that correct?) Will there be any restrictions on hours of operation, especially during high wind events? There is no provision in the mine plan for creating

a sound barrier to minimize the noise. There are concerns about coal dust blanketing the area leaving layers of dust and grime on homes, buildings, vehicles, ranch equipment, etc. Many local landowners/ranchers have livestock and horse farms which could be affected. In addition, there are health concerns regarding asthma and respiratory conditions which could arise due to mining operations. Light from the mine site will adversely affect the quality of life for residents in this area. The mine plan does not adequately address these health and safety issues.

6. **Proximity of Mine Operations to Interstate 90.** The mine operations are in very close proximity to Interstate 90, a major US highway. The mine plan does not address issues concerning potential damage to highway infrastructure and bridges, dust storms, effects of blasting, etc. on this heavily traveled major thoroughfare.
7. **Potential Pollution and Water Degradation to Tongue River and Adjacent Creeks.** The Wyoming Attorney General's Office has been involved in water law litigation with the State of Montana for well over 7 years which is finally reaching a conclusion. This involved irrigation rights and disputes between the two states regarding the Yellowstone River Compact, including the Tongue River. Given the close proximity of the Tongue River to Ramaco's mining operations, there are serious concerns about sediment runoff, wastewater issues, and potential pollution of waterways. If the Tongue River or adjacent creeks and tributaries are adversely affected by these mining operations, then the State of Wyoming could face further costly and protracted litigation over these issues. The current mine plan does not adequately address this.
8. **Inadequate Bonding and Reclamation Concerns.** It is our understanding that the bond for Ramaco's permit is only \$375,000. This seems wholly insufficient considering the potential for major impacts on air quality, pollution of Tongue River, creeks, irrigation, livestock waterway systems, etc. In addition, the bond as currently proposed does not take into account subsidence issues into the future and reclamation of the facilities and the pits. Considering the substantial increase in truck traffic, damages to county roads (including the Frontage Road) and other paved roads could be very costly to maintain and repair for the county. The approximately ten-mile long trenches associated with this mine plan could certainly require costly reclamation efforts and the current bond surely would not provide compensation to cover anywhere near those costs. Similarly, with the tremendous increase in truck traffic and other traffic from the mines on county roads, including the Frontage Road, and other paved roads in the area, safety concerns for local landowners and members of the public are huge. The potential of someone being injured

or killed as a result of the increased truck traffic is a high probability. Hwy. 345 (Frontage Road to Ranchester) recently was designated with a highway speed of 70 mph. With members of the public (including motorcyclists) traveling at that high rate of speed and slow-moving mine trucks and heavy equipment utilizing that two-lane road with great frequency, the possibility of highway accidents is imminent. The mine plan does not address these issues.

9. **Accidents or Environmental Harm.** Ramaco does not have a history of operating a highwall coal mine such as what is being proposed. How can adjacent landowners and members of the public be assured that Ramaco is capable of rectifying any potential serious accidents or harm that may occur as a result of its operations?

We understand that Ramaco faced stiff opposition to a similar plan of operation in Nottingham, Pennsylvania. Legislators, affected landowners, and members of the public (en masse) have been very vocal in expressing their concerns about deleterious effects the mining operation there could have on their quality of life, water and soil issues, and public health and safety.

10. **Impacts on Irrigation, Livestock, Wildlife, Hunting, Fishing, Recreational Activities.** The Tongue River Reservoir is located in close proximity to the mine operations and there is a very real potential that this area could be adversely affected which will have an impact on members of the public (from Wyoming and Montana) who recreate at the reservoir, including swimming, boating, fishing. A substantial number of ranchers in the area within close proximity to the mining operations have irrigation rights and conduct agricultural operations. If the waterways, ditches, drainages, reservoirs become polluted then the livelihood of a great many people in the area will be drastically affected, including impacts on livestock watering systems. In addition, the area has abundant wildlife which will also suffer.

11. **Black Diamond Trail Designation.** In addition to the prospect of the mining operations affecting the area valley designated as an alluvial valley floor, in September, 2012 the area along the frontage road between Sheridan and Ranchester (Hwy. 345) was designated as the Black Diamond Historic Mine Trail by the Sheridan Community Land Trust and the Wyoming Historic Preservation Work Group in conjunction with the Wyoming State Historic Preservation Office and Wyoming State Parks and Cultural Resources. Although not clearly defined in the mine plan, this area (Hwy 345) along the frontage road will sustain substantial truck traffic and will be impacted by dust, other air quality issues, road damage, etc. and may have an effect on this historic trail designation. There are no provisions in the current mine plan

addressing this historic designation to ensure its protection.

12. **Kleenburn Recreation Area.** This area which is in extremely close proximity to the mine operations (just east of the Acme exit off Interstate 90) is owned and operated by Sheridan County. The Wyoming Game and Fish is involved in stocking the ponds which provide members of the public the opportunity to fish for trout, largemouth bass, catfish and perch. Since its inception a few years ago, this recreation area has provided a countless number of folks, including tourists, with many hours of recreation, fishing, field trips for local school children, canoeing adventures, hiking, and many other forms of recreation. Potential pollution (air and water), noise, light, dust and truck traffic will greatly impact this area and pose adverse effects on the health and safety of not only local residents but members of the public at large. The mine plan does not adequately address this issue.
13. **Conflict of Interest.** The area landowners are concerned about a potential conflict of interest concerning Kyle Wendtland, Administrator for the Land Quality Division, whose brother, Tony Wendtland (Sheridan, Wyoming), is an attorney for Randall Atkins, CEO of Ramaco. Even if Kyle Wendtland recused himself from presiding over certain aspects of this mine plan, what assurances can be given to affected landowners that this process will be conducted, reviewed and monitored without bias or preference given to Ramaco's interests over the legitimate concerns of the public before, during, and after the mine operation? The very fact that landowners are required to submit objections to Kyle Wendtland is disconcerting. We have heard that Tony Wendtland may no longer be local counsel for Ramaco. Regardless of the current relationship between Attorney Wendtland and Ramaco, the fact is that Mr. Wendtland has provided legal representation to Ramaco throughout this critical mine permitting process.
14. **Adverse Effect On Property Values and Quality Of Life.** Local landowners are very worried about serious impacts on property values if the current mine plan is approved and they are equally concerned about threats to their quality of life. There are quite a number of landowners in this area whose property values could substantially diminish causing a significant reduction in the tax base for the county. Adverse effects from the mining operation will not only diminish property values but more importantly will endanger public health and safety and create a public nuisance.
15. **Viability of the Mine Operation.** Is the extraction of 10 million tons of coal per year even viable? Folks in this area are quite skeptical. Some who have worked in the coal mines here state that in the years of prime production, the

most that Big Horn Coal ever extracted was approximately 4 million tons. Given the potential for major detrimental impacts of Ramaco's proposed operation, is it really worth it?

CONCLUSION

We are not attempting to preclude Brook Mining Company from operating a coal mine in the proposed area, but we have legitimate concerns about the mining operation under its current plan causing permanent and irreparable harm to a pristine area rich in history which has been enjoyed by Wyoming families for generations. This area has such a documented history that a number of books and articles have been published in attempts to enlighten folks about its history and preserve the heritage of this region. Local historians and others have frequently conducted lectures and presentations highlighting the history of the area. In addition, the local museum in Sheridan has devoted specific exhibits and dioramas to exemplify the historical significance of this longstanding mining community.

Initial projections gauging an economic boom to this community (and the State as a whole) as a result of the proposed Brook Mine have proven to be substantially distorted and misleading, and promises to provide an unrealistic number of jobs in an economically depressed area should not be the incentive for approving a mining operation which may result in devastation to this community and the State of Wyoming in the long run. Several of the issues and concerns identified above have not been addressed, and they represent a public nuisance to local property owners as well as significant threats to public health and safety.

We are hereby requesting an informal hearing with the director of DEQ on this matter.

Thank you for your attention.

Sincerely,

Mary Brezik-Fisher

David Fisher

(32 Slater Creek Lane, Ranchester, WY 82839)

cc: Steve Maier, Chairman
Sheridan County Board of Commissioners

Public Notice

The Brook Mining Co., LLC of 1101 Sugarview Drive, Suite 201, Sheridan, WY 82801 has applied for a coal mining permit from the Land Quality Division of the Department of Environmental Quality for the State of Wyoming. The coal mining permit area will be located in: Sections 10, 11, 12, 13, 14 and 15 Township 57N, Range 85W, and Sections 7, 8, 9, 10, 15, 17, 18, 20, 21, 22 and 27 Township 57N, Range 84W Sheridan County, Wyoming. The Brook Mine is located approximately 6 miles Northwest of Sheridan, Wyoming. This area can be found on the Acme and Monarch USGS quadrangle maps. The proposed operation is scheduled to begin July 2017 and is estimated to continue until 2032. The land, after mining, will be returned to a grazing land use. Information regarding the proposed mining operation and reclamation procedures may be reviewed in the Office of the Land Quality Division of the Department of Environmental Quality in Cheyenne and Sheridan, Wyoming, the office of RAMACO in Sheridan, WY, or the Sheridan County Clerk's Office Sheridan, Wyoming. Written objections to the proposed mining operation must be received by the Administrator of the Land Quality Division, Department of Environmental Quality, 200 W. 17th Street, Cheyenne, WY 82002, before the close of business January 27, 2017. The Director may hold an informal conference if requested, hear the complaint and take action on the application in accordance with the Department's Rules of Practice and Procedure. The complainants shall have a right of appeal to the Environmental Quality Council where the complaint will be heard a second time. A conference shall be held if the Director determines that the nature of the complaint or the position of the complainants indicates that an attempt to informally resolve the disputes is preferable to a contested case proceeding. An informal conference or a public hearing shall be held within twenty (20) days after the final date for filing objections unless a different period is stipulated to by the parties. The Council or Director shall publish notice of the time, date and location of the hearing or conference in a newspaper of general circulation in the locality of the proposed operation once a week for two (2) consecutive weeks immediately prior to the hearing or conference. The hearing would be conducted as a contested case in accordance with the Wyoming Administrative Procedure Act (W.S. §16-3-101 through §16-3-115), and the right of judicial review would be afforded as provided in that act. All parties as given in W.S. §35-11-406(j) will be mailed a copy of this notice. The Wyoming Oil and Gas Commission will be mailed a copy of the application mine plan map as required by W.S. §35-11-406(j).

DOCKET 17-4801

TFN 6 2-025

ORDER OF DISMISSAL

On the 21st day of February, 2017, the Council held a hearing on its own motion in Room 1699, Herschler Building, 1st Floor West, 122 West 25th St. Cheyenne WY 82009. The issue heard was whether there is a proper appeal before the Council at this time necessitating a contested case.

Council members present were Megan Degenfelder, Nick Agopian, Tim Flitner, Meghan Lally, Dr. Dave Bagley, and Rich Fairservis. Council member Aaron Clark was absent. Present on behalf of the parties were Isaac Sutphin, Jeffrey Pope, and Thomas Sansonetti on behalf of Brook Mine LLC., Andrew Kuhlman and James LaRock on behalf of the Department of Environmental Quality, Shannon Anderson on behalf of Powder River Basin Resource Council, Lynnette Boomgaarden on behalf of Big Horn Coal, and Jay Gilbertz on behalf of Mary and David Brezik- Fisher.

After reviewing the pleadings and hearing oral argument from the parties, the Council unanimously finds that there currently is not a proper appeal before it necessitating a contested case. Currently, no interested person, as part of this docket, has filed a petition for a contested case with the Council that would allow the Council to exercise its jurisdiction over the Brook Mine permit application. Following his denial of requests for an informal conference, the

FILED

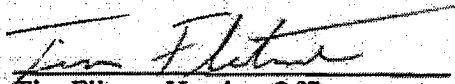

FEB 22 2017

**Jim Ruby, Executive Secretary
Environmental Quality Council**

Director of the Department of Environmental Quality referred this matter directly to the Council on January 30, 2017, for the Council's review and determination at a contested case matter. However, the Council may not exercise any authority over the Brook Mine permit application on a referral from the Director. Under Wyoming Statutes § 35-11-406(k) and (p) and the Department of Environmental Quality's rules of practice and procedure, the Council may only exercise jurisdiction over the Brook Mine permit application after an interested person has filed a petition for a contested case with the Council – something not done as part of this docket. The Council, in this docket, is without authority to accept jurisdiction over the Brook Mine permit application through the referral from the Director.

IT IS HEREBY ORDERED that this docket, in its entirety, is dismissed.

ENTERED this 22nd day of February, 2017.

ATTORNEYS FOR PERMIT APPLICANT
BROOK MINING COMPANY, LLC

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	Civil Action No. 17-4802
TFN 6 2-025)	

**BROOK MINE’S MOTION TO DISMISS BIG HORN COAL COMPANY’S PETITION FOR
A CONTESTED CASE HEARING**

INTRODUCTION

On February 15, 2017, Big Horn Coal Company petitioned the Council to hold a contested case hearing on its objections to Brook Mine’s permit application. Big Horn’s request comes 19 days after the final day to object, 19 days after the final day to request an informal conference with the Director of DEQ, and 19 days after the deadline to request a hearing with the Council. Big Horn’s request also comes 34 years after Big Horn agreed not to oppose Brook’s mine plans. Big Horn is just too late; and their request should be denied.

Big Horn’s petition is based on Wyo. Stat. §§ 35-11-406(k) and (p), 2. As this Council recently held, objectors wishing to have their case heard by the Council must request a formal hearing pursuant to Section 406(k). Only then will the Council hear objections to a surface coal mining permit application. In dismissing the previously-docketed contested case involving all

objections to Brook's application, including Big Horn's objection, the Council decided that before it has jurisdiction to hear a contested case, an objector must request a hearing. The Council's decision means that a hearing request filed with the Council must occur on the same timetable as a request for an informal conference with the DEQ under Section 406(k). Big Horn's request does not meet that timetable; so the Council has no jurisdiction to hear it. *See* Council's Order of Dismissal, 2 filed today, February 22, 2017 in Docket 17-4801 (Ex. A).

Even if Big Horn had made a timely request, it had no right to make one. Big Horn promised that if Brook sought to develop a mine where Brook now seeks to, Big Horn would not "oppose any such mine plan before any governmental agency and will take no action, direct or indirect, to induce any federal, state, or local agency to disapprove or otherwise object to such mine plan." (Ex. A, 1983 Lease Release Agreement, 2.) Big Horn has broken that promise twice. First, when it refused to consent to Brook's mine plan and opposed Brook before this very Council. And now when it objected to Brook's permit application. Big Horn's strategy has become clear—convince state agencies to deny or at least needlessly delay Brook's permit application. These efforts fly in the face of Big Horn's contractual duties and are the opposite of what Big Horn promised 34 years ago. The time has come to enforce Big Horn's promise.

ARGUMENT

I. Big Horn's request for a contested case hearing is untimely.

Under the Act, the public had 30 days after the final publication date of Brook's permit application to object or comment. Wyo. Stat. Ann. § 35-11-406(j), (k). Section 406(k) allows someone who comments or objects to request an informal conference with the DEQ Director. *Id.* That request must occur within the 30-day statutory period because the informal conference with the director shall take place within 20 days "after the final date for filing objections...." *Id.* at (k); DEQ Rules of Practice and Procedure Ch. 3 § 3.

Because the Council decided that an objector must request a contested case hearing to get one, the same deadlines and procedures in Section 406(k) apply. (Ex. A, 2.) Section 406(k) creates deadlines to ensure the permit application process moves forward in a timely manner. Thus, whether requesting an informal conference or a public hearing, the deadline is the same.

But Big Horn did not meet this deadline. (Ex. A, 2.) Brook's final day of publishing its permit application was December 27, 2016. The public had until January 27, 2017 to object or comment. Big Horn objected within that time period and requested an informal conference with the director. But Big Horn waited until February 15, 2017 to request a contested case hearing—19 days after the deadline. (Big Horn's Jurisdiction Brief, 5.) Even that request was contingent on the DEQ Director denying a renewed request for an informal conference, a procedure not set out in statutes or regulations. Simply put, Big Horn did not request a contested case within 30 days of the final publication date. Their Petition is untimely and should be dismissed.

Big Horn may contend that the statute does not set a deadline to request a contested case. That's the problem. The statute contemplates either an informal conference or a hearing within 20 days of the final date to file objections. Although the Council decided that the statute also requires an objector request a contested case before the Council has jurisdiction, that process must follow the deadlines set forth in the statute because the Council has no authority to create new procedures or deadlines not already provided in the statute. *Amoco Production Co. v. State Bd. of Equalization*, 12 P.3d 668, 673 (Wyo. 2000) (explaining an agency's power depends upon statutes, so "they must find within the statute warrant for the exercise of any authority which they claim.") Big Horn asked for this process and now must live with the consequences.

II. Big Horn has no right to a contested case hearing.

It does not matter if Big Horn met the deadline for requesting a contested case because Big Horn cannot request one. Doing so violates its obligations to Brook. As the Council knows

from the Order in Lieu of Consent Hearing and discussed on September 28, 2016, Big Horn agreed not to oppose any mine plan before a governmental agency and take no steps to get a state agency to disapprove of the mine plan when it executed the 1983 Lease Release Agreement. (Ex. B, 2.) But that is exactly what Big Horn has done. Big Horn's objection letter states it "feels strongly that the Brook Mine permit application should not be approved or deemed technically complete." (Ex. C, Big Horn Objection, 10.)

The Council should not enable Big Horn to breach its contract with Brook. Instead, it should exercise its authority to dismiss Big Horn's request. The Council has the authority to exclude Big Horn before any hearing if it finds that Big Horn engaged in "contemptuous conduct" or has used "dilatory tactics." Wyo. Admin. Code § ENV PP Ch. 1 Sec. 13. Big Horn has done both by ignoring its contractual obligation to Brook.

Contemptuous conduct is conduct that shows a lack of respect for something or someone. Meriam-Webster's Dictionary. Big Horn's refusal to keep its promises to Brook shows a lack of respect for Brook and the law. It does not require a court to decide that Big Horn has broken its promise to Brook; the Council can review the plain language of the 1983 Agreement to make that determination. *Claman v. Popp*, 279 P.3d 1003, 1013 (Wyo. 2012) (analyzing a contract begins with its "plain language.") Big Horn's choice to break its promises shows it does not respect Brook or Wyoming law. See *Schlinger v McGhee*, 268 P.3d 264, 268 (Wyo. 2012) (explaining how Wyoming law enforces parties' contracts). Wyoming case law compels the Council to dismiss Big Horn's request.

Big Horn's reason for breaking its promises is simple—delay. Big Horn has used the order in lieu of consent process and the public comment process to needlessly delay Brook's mine permit. Big Horn first asked this Council to deny an order in lieu needed for the permit

process to proceed. Even though Brook prevailed, Big Horn's stance added months to the process. Big Horn has objected again seeking to delay permit approval. Big Horn has also tried to delay the statutorily required 20-day hearing to some unknown date months later. Simply put, Big Horn has spent more than a year using procedural hurdles to derail and delay Brook's permit application despite promising the opposite. That is the very definition of a dilatory tactic.

Should Big Horn's broken promises not be enough to dismiss, the Council should limit what Big Horn can present. Big Horn objected extensively to Brook's mine plan and reclamation plan during the order in lieu of consent process—and lost. Big Horn's current objections repeat many of the same arguments. For example, Big Horn continues to object to an alleged lack of detail in the mine and reclamation plans. But Wyoming law does not allow Big Horn the chance to argue issues already raised and decided between the same parties. *Slavens v. Board of County Comm'rs for Unita County*, 854 P.2d 683, 685-86 (Wyo. 1993) (explaining that collateral estoppel applies to administrative proceedings barring relitigation of the same claims.) This means that if the Council allows Big Horn to participate at all, Big Horn should only be permitted to address objections 10, 11, 14, and 15. All other objections either repeat objections raised in the order in lieu process or could have been raised then.

CONCLUSION

The Council has spoken on the need for objectors to request a contested case. (Ex. A, 2.) But that has consequences for all objectors. None of the objectors, Big Horn included, have filed a request for a contested case hearing within the deadlines set out in Section 406(k). (Ex. A, 2.) Big Horn's late request does not excuse its failure to meet the deadline. Besides not meeting its obligations under the statute, Big Horn has shown that it will not meet its obligations to Brook. Big Horn contracted away the right to object to Brook's permit application 34 years ago. The

Council should not allow Big Horn to violate the terms of the 1983 Release Agreement.

Therefore, Brook requests the Council dismiss Big Horn's February 15, 2017 Petition for a contested case hearing.

Without waiving any of its arguments, Brook respectfully asserts that if the Council decides to hear Big Horn's objections, the Council must proceed expeditiously. The Environmental Quality Act unequivocally sets out a 20-day timeline for holding an informal conference or a public hearing. Even giving Big Horn the benefit of allowing its late-filed Petition to proceed, the Council is statutorily obligated to hold a hearing on Big Horn's objections by March 7, 2017.

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION

)
)
)
)

DOCKET 17-4801

TFN 6 2-025

ORDER OF DISMISSAL

On the 21st day of February, 2017, the Council held a hearing on its own motion in Room 1699, Herschler Building, 1st Floor West, 122 West 25th St. Cheyenne WY 82009. The issue heard was whether there is a proper appeal before the Council at this time necessitating a contested case.

Council members present were Megan Degenfelder, Nick Agopian, Tim Flitner, Meghan Lally, Dr. Dave Bagley, and Rich Fairservis. Council member Aaron Clark was absent. Present on behalf of the parties were Isaac Sutphin, Jeffrey Pope, and Thomas Sansonetti on behalf of Brook Mine LLC., Andrew Kuhlman and James LaRock on behalf of the Department of Environmental Quality, Shannon Anderson on behalf of Powder River Basin Resource Council, Lynnette Boomgaarden on behalf of Big Horn Coal, and Jay Gilbertz on behalf of Mary and David Brezik- Fisher.

After reviewing the pleadings and hearing oral argument from the parties, the Council unanimously finds that there currently is not a proper appeal before it necessitating a contested case. Currently, no interested person, as part of this docket, has filed a petition for a contested case with the Council that would allow the Council to exercise its jurisdiction over the Brook Mine permit application. Following his denial of requests for an informal conference, the

FILED

FEB 22 2017

**Jim Ruby, Executive Secretary
Environmental Quality Council**

Director of the Department of Environmental Quality referred this matter directly to the Council on January 30, 2017, for the Council's review and determination at a contested case matter. However, the Council may not exercise any authority over the Brook Mine permit application on a referral from the Director. Under Wyoming Statutes § 35-11-406(k) and (p) and the Department of Environmental Quality's rules of practice and procedure, the Council may only exercise jurisdiction over the Brook Mine permit application after an interested person has filed a petition for a contested case with the Council – something not done as part of this docket. The Council, in this docket, is without authority to accept jurisdiction over the Brook Mine permit application through the referral from the Director.

IT IS HEREBY ORDERED that this docket, in its entirety, is dismissed.

ENTERED this 22nd day of February, 2017.

Tim Flitner, Hearing Officer
Environmental Quality Council 

Exhibit B

RELEASE AGREEMENT

THIS RELEASE, made this 6th day of May, 1983, is by and between SHERIDAN-WYOMING COAL COMPANY, INC., a Delaware corporation, whose address for purposes of this Release is c/o Kennedy, Connor and Healy, P.O. Box 607, Sheridan, Wyoming 82801 (hereinafter called the "Lessor"), and BIG HORN COAL COMPANY, a Wyoming corporation, of Sheridan, Wyoming, whose address for purposes hereof is One Thousand Kiewit Plaza, Omaha, Nebraska 68131 (hereinafter called the "Lessee").

WITNESSETH:

WHEREAS, Lessor and Lessee entered into a certain Coal Mining Lease on June 28, 1954, and Supplemental Coal Mining Lease Agreements dated February 15, 1956, October 1, 1957, and September 9, 1977, and entered into a certain Coal Mining Lease dated June 12, 1979, to lease certain property situate in Sheridan County, Wyoming, and more particularly described in Schedule "A" attached hereto and by this reference incorporated herein; and

WHEREAS, Lessee exercised by letter on September 5, 1968, the option provision in the Coal Mining Lease dated June 28, 1954, to extend the lease term for fifteen years, which subsequently provided for that lease to terminate on June 30, 1984; and

WHEREAS, Lessor and Lessee desire to settle certain claims with respect to the Leases and to mutually terminate certain obligations thereunder;

NOW, THEREFORE, in consideration of the mutual covenants and agreements of the parties herein contained, the Lessor and Lessee agree as follows:

1. Lessee agrees to release, relinquish, and surrender unto Lessor all right, title, interest, claim and demand in and to the Leases insofar as they cover certain coal ("Released Coal") situate in Sheridan County, Wyoming, and more particularly described in Schedule "B" attached hereto and by this reference incorporated herein. Lessee will release its interest in the Released Coal to the Lessor by executing and recording this Release, as provided by Section 34-2-130, Wyoming Statutes (1977).

2. Lessee agrees that its obligations under the Leases with respect to property covered by the present Pits 1, 4, and 5 and more particularly described by Schedule "C" attached hereto and by this reference incorporated herein, will continue in force and effect until June 30, 1984.

3. Lessee agrees to quit, vacate, and surrender possession of the property covered by the present Pit 5 to Peter Kiewit Sons' Co. on June 30, 1984.

4. Lessor shall be entitled to retake possession of any of the above-described Released Coal which is not currently in Lessor's possession immediately upon execution of this Agreement, and shall be relieved from further duties and obligations under the aforementioned lease with respect to the Released Coal.

5. Lessor expressly consents and agrees to allow Lessee to leave intact any and all permanent structures, stockpiles, or spoil materials (referred to herein collectively as "structures and stockpiles") currently located in Sections 9, 10, 14, 15, 21, and the N $\frac{1}{2}$ of Section 22 of T. 57N., R. 84W., 6th P.M., as more specifically identified in Schedule D attached hereto. Unless Lessor's express written consent is received, any temporary or permanent structures or stockpiles located south of old Wyoming State Highway 338 in the SE $\frac{1}{4}$ of Section 22 or the N $\frac{1}{2}$ NE $\frac{1}{4}$ and NE $\frac{1}{2}$ NW $\frac{1}{4}$ of Section 27 shall be located at Lessee's sole risk and expense, and shall be subject to the following express conditions: The placement of any temporary or permanent structures or stockpiles in that part of Section 22 south of old Wyoming State Highway 338 and in Section 27 shall be subject to the terms and conditions of the Road Relocation Agreement, dated August 7, 1981, between Big Horn Coal Company and Sheridan-Wyoming Coal Company. In addition, Lessee agrees to move any structures and stockpiles, including the relocation of Wyoming State Highway 338, as necessary, at its sole cost and expense, at such time as the Lessor, or its successors in interest, presents to Lessee a mine plan approved by all applicable governmental agencies to mine the coal in either Section 22 or 27. If the Lessor makes application for approval of a plan to mine any of the coal in the pertinent portions of these two sections, its application shall in no way be prejudiced by the existence of any structures or stockpiles or the location of State Highway 338 in these sections. Lessee will not oppose any such mine plan before any governmental agency and will take no action, direct or indirect, to induce any federal, state, or local agency to disapprove or otherwise object to such mine plan. If approval is conditioned upon Lessee's consent to remove or relocate the road or any structures or stockpiles, Lessee shall not withhold such consent. Lessor reserves the right to seek specific performance of this obligation in addition to any and all remedies available to Lessor including all remedies provided under the Road Relocation Agreement. The parties recognize that the payment of monetary damages will not adequately and sufficiently compensate Lessor in the event Lessee breaches its obligation to move the highway and any structures or stockpiles located on Section 27 and south of old Wyoming State Highway 338 in Section 22. Lessee expressly waives, and shall be estopped from asserting any defenses to Lessor's claim for specific performance of these obligations. If Lessee breaches

8/7/81 Road Re-
location Agrmt.

its obligation, Lessor may, at its option, undertake to relocate the highway and move any structures or stockpiles located on said parts or Sections 22 and 27, and Lessee agrees to reimburse Lessor for any and all costs and expenses resulting from such action.

6. With respect to the coal in those areas described in Schedule B that is to be released, Lessee agrees that it will, upon execution of this Agreement, continue to perform within eighteen months thereafter all abandonment, reclamation, and related procedures required by any applicable law or regulation subject to Paragraph 7 of this Release Agreement. With respect to the coal in those areas described in Schedule C that is to be released on June 30, 1984, Lessee agrees that it will, "by no later than December 31, 1985, perform all abandonment, reclamation and related procedures required by any applicable law or regulation. It is understood, however, that the final reclamation for the identified portion of Section 15 which involves the Pit 3 extension out-of-pit stockpile area, will not necessarily be completed until June of 1987 and that that portion identified in the N $\frac{1}{4}$ of Section 22, and north of old Wyoming State Highway 338 in the SE $\frac{1}{4}$ of Section 22 will need to be redisturbed in the early 1990's with placement of out-of-pit soil from the Pit 1 southeast extension. Such reclamation and restoration activities shall be conducted diligently and in compliance with all applicable federal, state or local laws and regulations, as the same may exist or be enacted or amended from time to time.

7. Lessee agrees to apply for transfer to Lessor, at the option of the Lessor, of those permits and governmental authorizations identified in Schedule E attached hereto and incorporated by this reference with respect to the Released Coal within thirty (30) days from the date of execution of this Release Agreement. Lessee also agrees to transfer, at the option of the Lessor, to the Lessor any and all permits and governmental authorizations with respect to the property covered by the present Pits 1 and 4 by June 30, 1984.

8. Lessee hereby agrees to and does hereby assume all liability for and indemnify, protect, save, and hold harmless Lessor and Lessor's assigns and successors from and against any and all losses, costs, expenses, attorneys' fees, claims, demands, suit, and actions of any character whatsoever (hereinafter referred to collectively as "Liabilities") imposed upon or incurred by the Lessor on account of or arising directly or indirectly out of or in connection with the operations of Lessee with respect to the Released Coal. In the event that any Liabilities arise or are contributed to by the negligence of the Lessor, Lessee's liability for payment of such Liabilities shall be reduced in proportion to the amount of Lessor's negligence.

۲۴۸

A circular seal with a double-lined border. The text "AMERICAN NATIONAL COAL COMPANY, INCORPORATED" is written along the top inner edge, and "DELAWARE" is at the bottom. In the center, the word "SELL" is prominently displayed between two horizontal lines. To the right of the seal, the date "MARCH 1920" is printed.

TO THAT CERTAIN RELEASE AGREEMENT

DATED May 6, 1983

BY AND BETWEEN

THE SHERIDAN-WYOMING COAL COMPANY, INC.

AND

BIG HORN COAL COMPANY

ALL COAL

Coal situate in Sheridan County, Wyoming and subject to the provisions of the Coal Mining Lease dated June 28, 1954, and Supplemental Coal Mining Lease Agreements dated February 15, 1956, October 1, 1957, and September 9, 1977, and the Coal Mining Lease dated June 12, 1979, refers to and is identified by any and all coal owned by SHERIDAN-WYOMING COAL COMPANY, INC., in Sheridan County which is subject to an option to lease, and all coal presently leased and outlined on the Property Map attached to this Schedule A and described as follows:

T. 57 N., R. 84 W., 6th P.M.:

Section 9:	E1/2	320 acres
Section 10:	W1/2	320 acres
Section 14:	That portion of SW1/4SW1/4 located south and west of the center of the Tongue River	11 acres
Section 15:	All of the NW1/4	160 acres
	SW1/4	160
	SW1/4NE1/4	40
	W1/2SE1/4	80
	That portion of NE1/4SE1/4 located southwest of the center of the Tongue River	6
	SE1/4SE1/4	40
	A tract of land in the NE1/4NE1/4 described as	

follows: "Beginning at a point on the west line of the NE1/4NE1/4 of Section 15, which point lies 150 ft. north of the southwest corner of the NE1/4NE1/4 of said Section 15; thence northeasterly to a point on the east line of the NE1/4NE1/4 of said Section 15, which point lies 150 ft. south of the northeast corner of the NE1/4NE1/4 of said Section 15, thence south to the southeast corner of the NE1/4NE1/4 of said Section 15, thence west to the southwest corner of the NE1/4NE1/4 of said Section 15; thence north along the west line of the NE1/4NE1/4 of said Section 15 to the point of beginning."

20 acres

But excepting the following described two parcels of land from said Section 15.

The land in the SW1/4 belonging to Carl Weissman and Sons described as follows: "Beginning at a point 50 ft. north 26°54'30" west of a point which is 1,984.5 ft. north 31°23' east from the southwest corner; thence north 69°6' west 100.51 ft.; thence north 26°54'30" west 420.82 ft.; thence north 24°54' east 127.24 ft.; thence south 86°14' east 509.5 ft.; thence south 26°55' east 363.2 ft.; thence south 69°6' west 477.6 ft. to the point of beginning."

(less 6 acres)

Also that tract belonging to Big Horn Coal Company known as the Acme townsite and

more particularly described as follows: "Beginning at a point 20 ft. west of the northwest corner of SE1/4SW1/4 of Section 15; thence north 0°42' west, a distance of 300 ft. along the east boundary of the present County Road; thence due east a distance of 130 ft.; thence south a distance of 300 ft., more or less, to the north boundary of the SE1/4SW1/4 of said Section 15; thence east along said boundary line a distance of 1,223 ft. to the northeast corner of the SE1/4SW1/4 of Section 15; thence south along the east boundary of said quarter section to the center of the present channel of Goose Creek; thence northwesterly along the center of Goose Creek to a point 20 ft. west of the west boundary of the SE1/4SW1/4 of Section 15; thence north to the point of beginning."

(less 25 acres)

Section 20: That portion of NE1/4 south of the county road which was formerly U.S. Highway 87
N1/2SE1/4
SE1/4SE1/4

Schedule E

TO THAT CERTAIN RELEASE AGREEMENT

DATED May 6, 1983

BY AND BETWEEN

THE SHERIDAN-WYOMING COAL COMPANY, INC.

AND

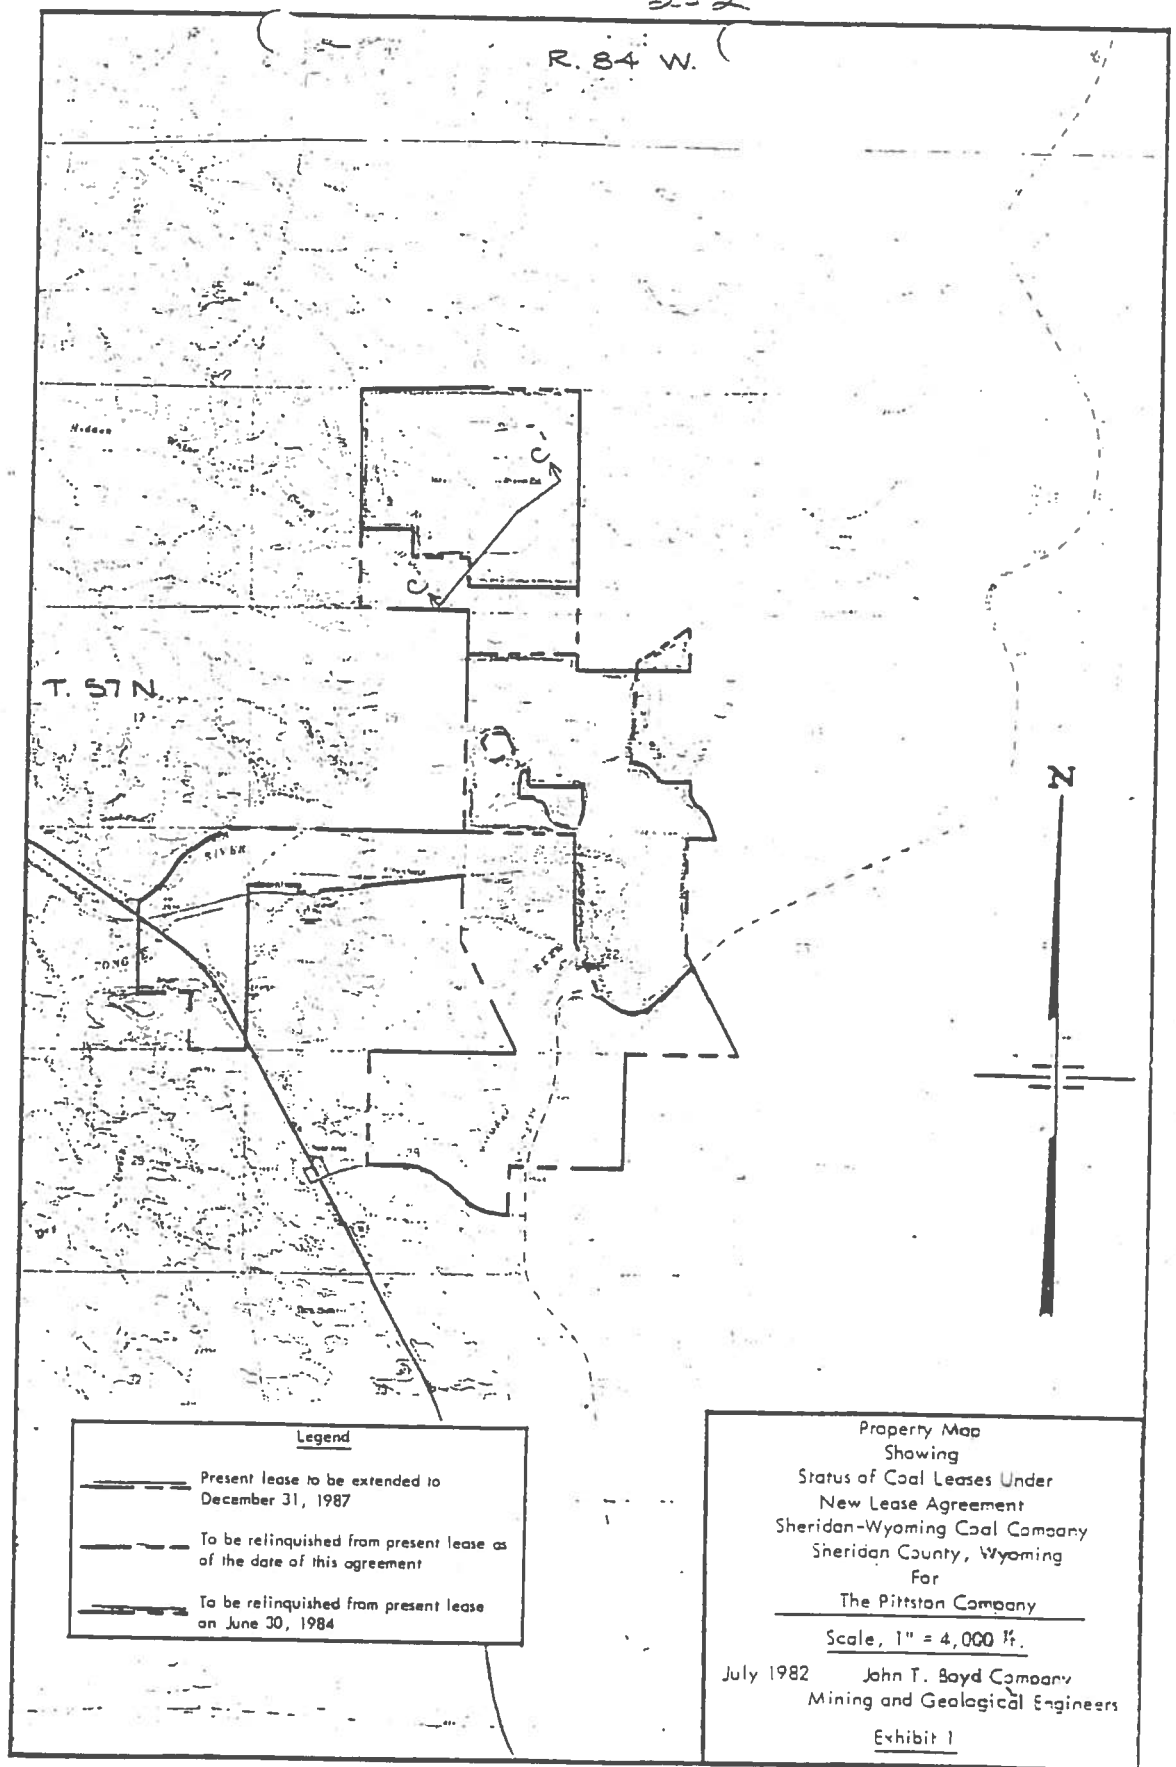

BIG HORN COAL COMPANY

LIST OF PERMITS

The following list of permits represent those permits that shall be transferred by the Lessee to the Lessor, upon Lessor's request, in order for Lessor to continue coal mining operations on the Released Coal:

Permit to Mine
Air Quality Permit
Wastewater Discharge Permit
Solid Waste Management and Disposal Permit
NPDES Discharge Permit
Construction Permit
Blasting/Explosives Permit
Sanitation Permit
MSHA
FCC

All transferrable local permits covering land use, air quality, water quality, etc.

BHC00200

Exhibit C

**BIG HORN COAL COMPANY

ATTN: Mr. Alan Edwards, Assistant Administrator

**RE: Objections to Proposed Brook Mine Permit Application, Sheridan County,
Wyoming**

Dear Mr. Wendtland,

Big Horn Coal Company (BHCC) writes to provide objections to the Brook Mine permit application.

During the course of our review, we discovered that the information was inconsistent among the locations noted in the public notice. We advised Brook Mine's legal counsel of the inconsistency on December 20, 2016. We are not aware if the information was updated to correct the inconsistency between the locations.

Our objections are based upon what BHCC believes to be the most accurate, up-to-date information and relate primarily to the permit application's lack of adequately addressing hydrologic issues that could significantly affect existing and future water rights, the quantity and quality of surface water and groundwater within and adjacent to BHCC, the potential for coal seam fires to erupt in both the open pit and subsurface openings and the potential for miner safety and environmental harm proposed in the permit Mine Plan. The objections are referenced to text section headings, exhibits and addenda of the permit application Mine and Reclamation Plan.

Objection No. 1 – Mine Plan & Rec Plan Review

Big Horn Coal has reviewed the proposed mine and reclamation plan and is concerned with the general lack of detail contained in the proposed plan. It appears that no sampling, testing or analytical work of any sort has been performed to support the surface and highwall mine designs and plans. It is Big Horn Coal's opinion that excavating in the area, surrounding the Big Horn Mine will create a large safety concern and environmental

liability as the TR-1 trench cut could become inundated with water from the historic backfill of the BHCC spoils of Pit 1 and Pit 2.

BHCC would like to put on record that it is providing written notice of its concerns so Brook Mine and other affected parties have notice and are aware of these issues and that Big Horn Coal is not responsible for any personal, property or environmental damage or other loss due to the disturbance activities associated with the Brook Mine, its affiliated companies or successors in interest.

BHCC has not consented to overlapping permit boundaries nor has it been indemnified of any disturbance related to Brook Mine's proposed activities as it relates to the reclamation obligations and BHCC's reclamation liabilities.

Objection No. 2 – Section MP.4; Exhibit MP.4-1; Section MP.5; Section MP.13; Addendum MP-6

Section MP.4 and Exhibit MP.4-1 provide plans for the development of a highwall mining trench through and the development of highwall mining panels beneath reclaimed backfill of BHCC Pits 1 and 2 adjacent to Goose Creek and the Tongue River in the southeastern portion of the Brook Mine permit area. The trench would penetrate through the bottom of the backfill allowing mining of Carney coal found about 70 feet beneath the backfill. The backfill of the proposed trench area averages about 90 feet thick. The northeast corner of the highwall panel area appears on Exhibit MP.4-1 to be equivalent to the Brook Mine permit boundary, and would be less than 100 feet from the bank of the Tongue River. On Figure MP-6.1-1 of Addendum MP-6, the highwall mining panels are shown even closer to the Tongue River channel, and the reason for the disparity between the figure and Exhibit MP.4-1 is unexplained. BHCC is very concerned over and objects to the permit's disturbance, affected and permit boundaries all being equivalent to the mining panel boundary in this most environmentally sensitive area adjacent to the bank of the Tongue River. The affected area boundary shown on Exhibit MP.4-1 around the other proposed mining panels typically extends well beyond the disturbance boundary for reasons unexplained in the Mine Plan.

Mine Plan Section MP.4, together with all Mine Plan text inclusive of Section MP.13 and Addendum MP-6, are silent on the subject of the special textural and hydrologic characteristics of the proposed southeastern highwall mining area in Sections 15 and 22, T57N, R84W. The area is unique in that the strata overlying the coal to be mined includes a thick layer of unconsolidated, saturated backfill exhibiting shallow groundwater elevations of 20 feet or less below ground surface where existing ground elevations are 3600 feet and lower. The water surface in BHCC's postmining Reservoir 14 in the SESE Sec. 15 is an expression of the groundwater table. The groundwater throughout Pits 1 and 2 is directly connected to and recharged by Goose Creek and the Tongue River, as documented in the Big Horn Mine's Reclamation History, Groundwater Restoration Demonstration (GRD) approved by the WDEQ/LQD as Change No. 9 to Permit 213-T5 in August 2002. The GRD verifies that the Pits 1 and 2 backfill resaturated very rapidly, indicative of unconsolidated, porous material connected to perennial stream recharge sources nearby. Mine Plan Section MP.4 is silent on the subject of managing massive sloughing that may occur in the saturated and nonsaturated backfill of the southeastern highwall mining area as the highwall mining trenches are excavated through the backfill to the base of Carney coal. Section MP-5 of the Mine Plan also fails to present an

alternative water management and treatment plan to be followed should groundwater inflow volumes exceed infrastructure design capacities.

BHCC finds the assessment of potential land subsidence and the remediation plan presented for land subsidence in Addendum MP-6 to be inadequate relative to protecting the value and function of its lands, particularly for protecting the stability of the Tongue River and the quality of shallow groundwater connected to the river. Addendum MP-6 does not absolutely discount the possibility of land subsidence above the highwall miner holes, nor does it provide a plan for the discontinuation of any southeastern area highwall mining should subsidence occur in the lowlands contiguous to Tongue River or Goose Creek. The environmental implications of subsidence developing adjacent to Tongue River and Goose Creek are so severe as to warrant, at a minimum, a permit commitment to temporarily or permanently cease all mining throughout all of the southeastern highway mining area should any subsidence develop in any of the area at any time. The permit's plan for "backfilling will commence within 12 months of a subsidence location being identified if self-healing is not providing sufficient remediation" (Section MP-6.4, Addendum MP-6) is environmentally unacceptable for the southeastern highwall mining area because: 1) the stability and alignment of Goose Creek and Tongue River could be jeopardized should subsidence occur, and; 2) any groundwater quality impacts associated with underground coal fires developing in mine openings would have direct and essentially immediate access to Goose Creek and Tongue River via the shallow groundwater table.

The subsidence control plan presented in Addendum MP-6 is inadequate. It appears that no analytical work of any sort (sampling, material testing, etc.) has been performed in support of the highwall mining design presented in the mine plan. Additionally, it also appears that no geotechnical work of any sort has been performed. Addendum MP-6 discusses general assumptions for highwall mining penetration depths, entry widths, cutting heights and support pillars. This information is presented somewhat anecdotally and in the case of the support pillars, it states that "Support pillars will be designed to have a width equal to or exceeding the maximum extraction thickness anticipated in a highwall mining hole based on the mine's geologic model. This width-to-height ratio of at least 1:1 results in pillar stability factors that exceed recommended values suggested by National Institute for Occupational Safety and Health's (NIOSH) ARMPS-HWM stability program for the overburden thicknesses expected. Pillar dimension will also be in accordance with Brook Mine's Ground Control Plan approved by MSHA."

No material strength data (coal strength, overburden strength, interburden strength, etc.) is provided in the mine plan document. BHCC suspects that no material strength information has been gathered or determined. Can the NIOSH stability factors actually be achieved? This is unknown at this point as no definitive geotechnical and material strength data has been presented in the mine plan. The coals present in this area are of a younger age. Younger age coals have much weaker strengths than older age, deeper coals and it is quite possible that the safety and stability factors needed to safely and effectively execute the highwall mining approach presented in the mine plan cannot be achieved. BHCC insists that further analysis be performed to definitively prove that the web and barrier pillars dimensions are appropriate and that they will meet NIOSH's minimum stability factor of 1.3.

Very little highwall mining has been performed in Wyoming. Highwall mining has been performed relatively recently at the Bridger Mine, which is located in Southwest Wyoming.

While the exact details are unknown, BHCC is aware of at least one “cascading pillar failure” at that operation and fortunately, there were no injuries. It is suspected that this failure was caused by improper pillar layout and design. BHCC is concerned that the anecdotal mine design presented in this document is inadequate and must be performed with proper analytical data.

Objection No. 3 – Section MP.5.9; Section MP.6.2; Addendum MP-3; Section MP.8

The groundwater model of Addendum MP-3 was improperly constructed and executed because the model does not recognize the unique textural and hydraulic characteristics of saturated backfill in BHCC’s Pits 1 and 2, but instead simulates the backfill in the same fashion as native overburden strata (see Section 4.0 of Addendum MP-3). Section 2.5.1 of Addendum MP-3 states “no site-specific hydraulic conductivity information is available for the over/interburden (model) layers”. In fact, hydraulic conductivity data are available for the backfill from former monitor wells in the Pit 1 and Pit 2 area and for the Plachek Pit backfill. That data are provided in the GRD referenced under Objection No. 1 above. Hydraulic conductivity values assigned to the spoils together with all other “overburden” strata in the model are very small (less than one tenth) relative to those shown for backfill in the GRD. The groundwater model ignores determination of the spatial extent of drawdown in the water table of Pit 1 and Pit 2 backfill that is connected to the water table in Tongue River and Goose Creek alluvium, which in turn is supplied by flows in both streams. The text of Section MP.6.2.3 states “Drawdowns of the overburden were not modeled and only isolated sands where encountered are expected to be affected”.

Section 4.9 and Figure 4.9-11 of Addendum MP-3 shows where the groundwater model was used to predict water table drawdown in Tongue River valley alluvium at “alluvial target” points distributed over nearly a six-mile reach of the valley floor. Section 4.9 states that “the maximum impact to the Tongue River alluvium is conservatively estimated to reach 2.5 feet of drawdown near the river”. Addendum MP-3 and Section MP.6.2 provide no description or drawing of the spatial distribution of drawdown during mining in BHCC’s saturated backfill or in the alluvium of Tongue River and Goose Creek that is hydraulically connected to the backfill. Neither does the groundwater model explore potential permanent groundwater elevation changes associated with the highwall mining panels acting as drains to the backfill and alluvial water table via the highwall trench pits. Water table drawdown approaching 2.5 feet in the alluvium of Tongue River valley over a valley distance of nearly six miles would in fact represent a very large volume water loss that would likely cause stream flow losses.

The groundwater model of Addendum MP-3 fails to report groundwater inflow rates to any of the proposed mine excavations. Section MP.8 of the Mine Plan states “It is estimated that the total water use will be approximately 400 million gallons per year.” This is equivalent to an average daily use rate of 760 gallons per minute, about 3.36 acre-feet per day, or about 1,226 acre-feet per year. The Mine Plan does not identify the specific source(s) of the water beyond mentioning that “Industrial water will be obtained from groundwater wells or from water collected in sediment and flood control reservoirs”. The groundwater model of Addendum MP-3 does not include the effects of withdrawing any groundwater from wells for industrial or other uses, nor does it include the effects of dewatering wells mentioned in Section MP.5.9. In short, the Mine Plan is devoid of a hydrologic budget identifying specific groundwater sources, the quantity of industrial

water projected to be available from flood control reservoirs and sediment ponds, and the determination of what would remain of groundwater and surface water supplies while supplying the industrial water needs. BHCC is concerned that the value of its surface estate and future options for developing its surface estate could be marginalized by such a large water use demand, especially considering that water demands at Wyoming coal mines are primarily consumptive.

Objection No. 4 – Section MP.11; Addendum MP-5

The fire control plan referenced in Section MP.11 and presented in Addendum MP-5 describes measures to be taken to prevent and control fires in the mine pits, fires in the mine's processing and shop facilities, equipment fires and rangeland fires. BHCC objects, however to the Mine Plan and Addendum MP-5 not providing plans to control and extinguish new subsurface coal fires that may develop or existing subsurface coal fires that may become rekindled or enlarged as a result of the highwall mining panels that will be opened outboard of the highwall trench openings.

Attachment 1 provided with this Objection No. 4 is a drawing showing the approximate extent of underground coal mine fires in the area of proposed highwall mining in Sections 10 and 15, T57N, R84W, as reported by the U.S. Geological Survey in 1980. The fires in this particular area originated with mining of the Monarch coal. This and other nearby historic underground mines have long been known to exhibit numerous subsidence features and underground coal mine fires, and in the late 1980s BHCC received approval from the WDEQ/LQD to permanently place nearly 10 million bank cubic yards of overburden over the area shown on Attachment 1 in an attempt to reclaim the subsidence and control the fire. That unique reclamation feature is known as the Pit 3 Subsidence Dump in Big Horn Mine's reclamation history. The proposed highwall mining will develop mine openings in the Carney and Masters coal seams beneath the Monarch seam in areas that are known to still exhibit evidence of underground coal fires. Plumes of steam and smoke have been observed again over the general area of Sections 10 and 15 this winter of 2016-2017. These observations indicate that, in places, the perimeter of the historic subsurface coal seam fires has expanded notable distances from the referenced 1980 boundary delineation.

The subsidence control plan of Addendum MP-6 does little to guarantee the long-term protection of BHCC's surface estate especially where highwall mining panels will be driven beneath underground coal mine fires having a long history of activity. Section MP-6.2 of Addendum MP-6 provides numerical calculations for subsidence chimney heights, but there is no investigation of the potential that the historic mine fires may have compromised the structural integrity of strata underlying the fires and overlying the coals targeted for highwall panel mining (the interburden), leaving the interburden more prone to subside than normal. BHCC is particularly concerned and objects to highwall mining beneath or adjacent to pre-existing underground mine fires because of the potential for oxygen and water to be transmitted from the highwall mining openings to "hotspots" in the seams already burning via highwall trenches or via fractured or subsided interburden above the panel openings. BHCC strongly disagrees with the legitimacy of the plan stated in Section MP-6.4 of Addendum MP-6 which states "Backfilling will also be performed if it is determined that the introduction of water and oxygen could contribute to spontaneous ignition of the remaining coal not extracted from the highwall mining operations". BHCC

contends it to be common knowledge in the mining industry that oxygen and water are key catalysts in causing spontaneous combustion in coal, whether the coal be in mine openings or in stockpiles. BHCC also believes that the introduction of additional water and air to a coal seam already on fire is especially problematic.

Section MP-6.3 of Addendum MP-6 commits to maintaining highwall mining mapping and subsidence documentation in a subsidence report that will be available for inspection. BHCC objects to the Mine Plan not committing to freely submitting the highwall mining mapping and subsidence documentation report to all owners of surface estate within the Brook Mine permit area. BHCC also objects to the fact that the Subsidence Monitoring and Assessment reporting of Section MP-6.3 does not include mapping, photographing and describing all evidence of surface or underground coal fires occurring within the Brook Mine permit area whenever such evidence becomes available throughout the life of the mining and post-mining periods.

Objection No. 5 – Section MP.1.3; Exhibit MP.1-1

The mine plan on Page MP-5, identifies the “disturbance boundary includes all lands that will be physically and directly disturbed during mining.” Exhibit MP.1-1 shows the disturbance boundary as a dashed orange symbol that outlines an entire pink hatched polygon, identified as “DISTURBANCE FOR YEAR 2016,” located in Sections 15, 21, 22 and 27 of Township 57 North, Range 84 West.

Within the pink hatched polygon, there are existing assets to Big Horn Coal Company. These assets include a rail spur, water tank, pump house, access roads, fences and land owned by BHCC. Also within the pink hatch polygon is the mainline of the Burlington Northern Railroad and associated lands owned by Burlington Northern.

Based on the definition of Disturbance Boundary as indicated on page MP-5, does Brook Mine indeed have the rights to physically and directly disturb these lands within the pink hatched polygon? From the public record, BHCC has not been able to determine whether Brook Mine has secured surface owner consent from all surface owners, including the railroad, for these activities

Objection No. 6 – Section MP.1.5

The mine plan states on Pages MP-5 and continue onto page MP-6 that “Coal will either be temporarily stored in the pit or directly hauled off site.”

There is no mention in the permit as to where the coal will be hauled off site. Additionally there is no known agreement with the County of Sheridan, indicating approval to haul mineral across county roads.

Objection No. 7 – Section MP.1.9

The mine plan states on Pages MP-7 that “The Brook Mine will operate in conjunction with Taylor Quarry (Permit No. SP-757)... The Mine will work with Taylor Quarry to minimize impacts on Taylor Quarry’s operation.”

The following paragraph states "The Brook Mine will not obstruct Big Horn Coal's (Permit 231-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1.

To remain consistent with the statements made in regards to the Taylor Quarry, Big Horn Coal requests that the paragraph referencing Big Horn to be replaced and restated as follows:

"The Brook Mine will operate in conjunction with the Big Horn Mine and that the Brook Mine will work with Big Horn Coal to minimize impacts to Big Horn Coal operations. Specifically, Brook Mine will not obstruct Big Horn Coal's (Permit 213-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1."

Big Horn Coal requests that the text be updated in the previous paragraph to reference the correct permit number for Big Horn Coal Company as (Permit 213-T8).

Objection No. 8 – Section MP.3.1, Section MP.3.1.3 – Roads; Exhibit MP.3-1

As stated in the mine plan on Page MP-11, "Primary roads are any road used for transporting mineral or spoil, or frequently used for access or other purposes for a period in excess of six months, or roads to be retained for postmining use."

WDQ/LQD Rules and Regulations (R&R) Chapter 4, Section 2(j)(vii):

Primary roads.

(A) Certification. The construction or reconstruction of primary roads shall be certified in a report to the Administrator by a registered professional engineer. The report shall indicate that the primary road has been constructed or reconstructed as designed and in accordance with the approved plan. The report shall be available for review at the mine site within 30 days following the completion of construction of each primary road.

Mine plan Exhibit MP.3-1, titled Transportation Network identifies proposed primary haulroads as a solid black line, for the use of transporting mineral or spoil. Yet, there are no haulroads identified in the SE quarter of Section 15, Sections 21, 22 or 27. If the Brook Mine plans to haul mineral or spoil materials from the proposed Trench Cut (TR-1), there should be indication of a primary haul road leaving TR-1, accompanied by a certification of the road design. Unless there are no plans of transporting mineral or spoil from the TR-1 area.

Objection No. 9 – Section MP.4.2.3 – Stockpiles; Exhibit MP.4-3

The mine plan states on Page MP-16, "Stockpiles will not be constructed on unsuitable backfill."

Mine plan Exhibit MP.4-3, Stockpile Locations identifies Topsoil Stockpile TS-1B proposed location within an area known as the Placheck Pit. This area was mined by Big Horn Coal from 1956 through 1963. It is Big Horn Coal's understanding that the proposed area beneath TS-1B is indeed unsuitable material and that topsoil should not be placed in the area as proposed on Exhibit MP.4-3. Additionally, Big Horn Coal is not aware of a surface owner consent document between Brook Mining Company and the Burlington Northern Railroad that would allow the crossing of the mainline with loaded haul trucks.

Objection No. 10 – Section MP.6.1; Exhibit MP.7-1

Exhibit MP.7-1 represents the operational Surface Water and Groundwater Monitoring Program. There are only two downstream surface water monitoring sites, identified as Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir. The text on page MP-41 of the Mine Plan states "However, the Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir will be disturbed by facilities disturbance."

Big Horn Coal believes there is inadequate downstream monitoring in the proposed plan. Upon disturbing of Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir, there will be no sites downstream of the Brook Mine to collect adequate surface and groundwater data to prove that there are no off site environmental impacts from the proposed operation.

Objection No. 11 - Addendum MP-2, Exhibit MP-2

The proposed Sediment Pond SP-8 is located within the current postmine approved Reservoir 14 constructed by BHCC. The bottom elevation of Reservoir 14 is currently at 3575 with a peak elevation at 3589. Sediment Pond SP-8 bottom elevation is proposed at 3585 with a high water elevation proposed at 3590. It is noted below the area capacity table on Exhibit 13, "1. Pond is entirely incised. No Spillway hydraulics are provided."

These elevations lead BHCC to believe the plan for construction of SP-8 will require Reservoir 14 to be completely backfilled prior to construction of SP-8. BHCC requests that the reconstruction and the water quality within Reservoir 14 be restored to pre-mining conditions before final bond release is allowed.

Objection No. 12 – Exhibit MP.4-1; Exhibit MP.4-2; Exhibit MP.4-5; Exhibit RP.5-1

The proposed mine plan indicates that topsoil and overburden removal will occur upon the BHCC Property and within the TR-1 area in years 1 and 2 of operation. Exhibit MP.4-1 shows coal removal to occur over the same first two years of operation. Exhibit MP.4-5 shows the overburden backfill sequence within TR-1 will occur in year 2. Exhibit RP.5-1 shows the topsoil replacement sequence within the BHCC Property occurring in years 12-16.

BHCC objects to this timeline of topsoil replacement upon its property. The BHCC property is the first to be disturbed and the last to be reclaimed. BHCC asks the question as to why every other proposed disturbance area is backfilled and topsoiled within a 2 to 3 year time frame except around the BHCC facilities area. The topsoil replacement timeframe is unacceptable and not contemporaneous in accordance with the Surface Mining Control and Reclamation Act, (SMCRA) and it is requested that the final

reclamation around the BHCC Property be within the 2 to 3 year time frame, similar to all other areas around the mine.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 14 – Section MP.4.4.1

It is a well-known fact within the mining industry that the term “Reserves” connotes that the mineral being extracted can be done so economically. BHCC opines that the mining approach presented in the mine plan cannot be done economically. Based on our internal

knowledge; the operating cost for a contractor to perform highwall mining is in the \$8/Ton to \$12/Ton range, which is very close to the domestic spot price for this type of coal. By the time the other costs for the surface mining to develop the highwall mining, transportation, G&A, etc. are taken into consideration, this operation appears to be completely uneconomical.

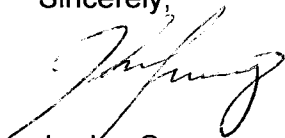

The market for this coal is unclear. The two closest coal mines, Decker and Spring Creek, serve the domestic and international market. Port capacity to the international market is constrained and it is unlikely that Brook Mine will secure access. Domestic demand has been in decline and is significantly oversupplied. Without a definitive market, the Brook Mine is at risk of commencing operations, producing product it cannot sell economically, and reclamation obligations that it cannot fund.

Objection No. 15 – Section MP.15

Objection No. 4 above introduces the fact that the underground mine fires in this area are still burning and have expanded. Section MP.15 does not, in any way, address that the burned areas have expanded. A surface mine excavation that comes in contact with a historic mine fire could be catastrophic in many ways, including: impacting the safety of mine workers, damage to equipment, wildfire initiation, etc. BHCC believes this mine plan has not adequately addressed surface mining activities that will occur near underground mines and insists that the Brook Mine operators must perform the necessary testing and analysis to prove that the proposed mine plan will not be impacted by historic mine fires. Specifically, attachment 1 provided with Objection No. 3 above shows that trench TR-2 is planned very near an area that was burning and is likely still burning. Given that the burned area has likely expanded, this area should not be disturbed at all.

In conclusion, Big Horn Coal Company feels strongly that the Brook Mine permit application should not be approved or deemed technically complete. The mine and reclamation plan lack a significant amount of detail that is required for a technical completeness determination, as stated in the above mentioned objections.

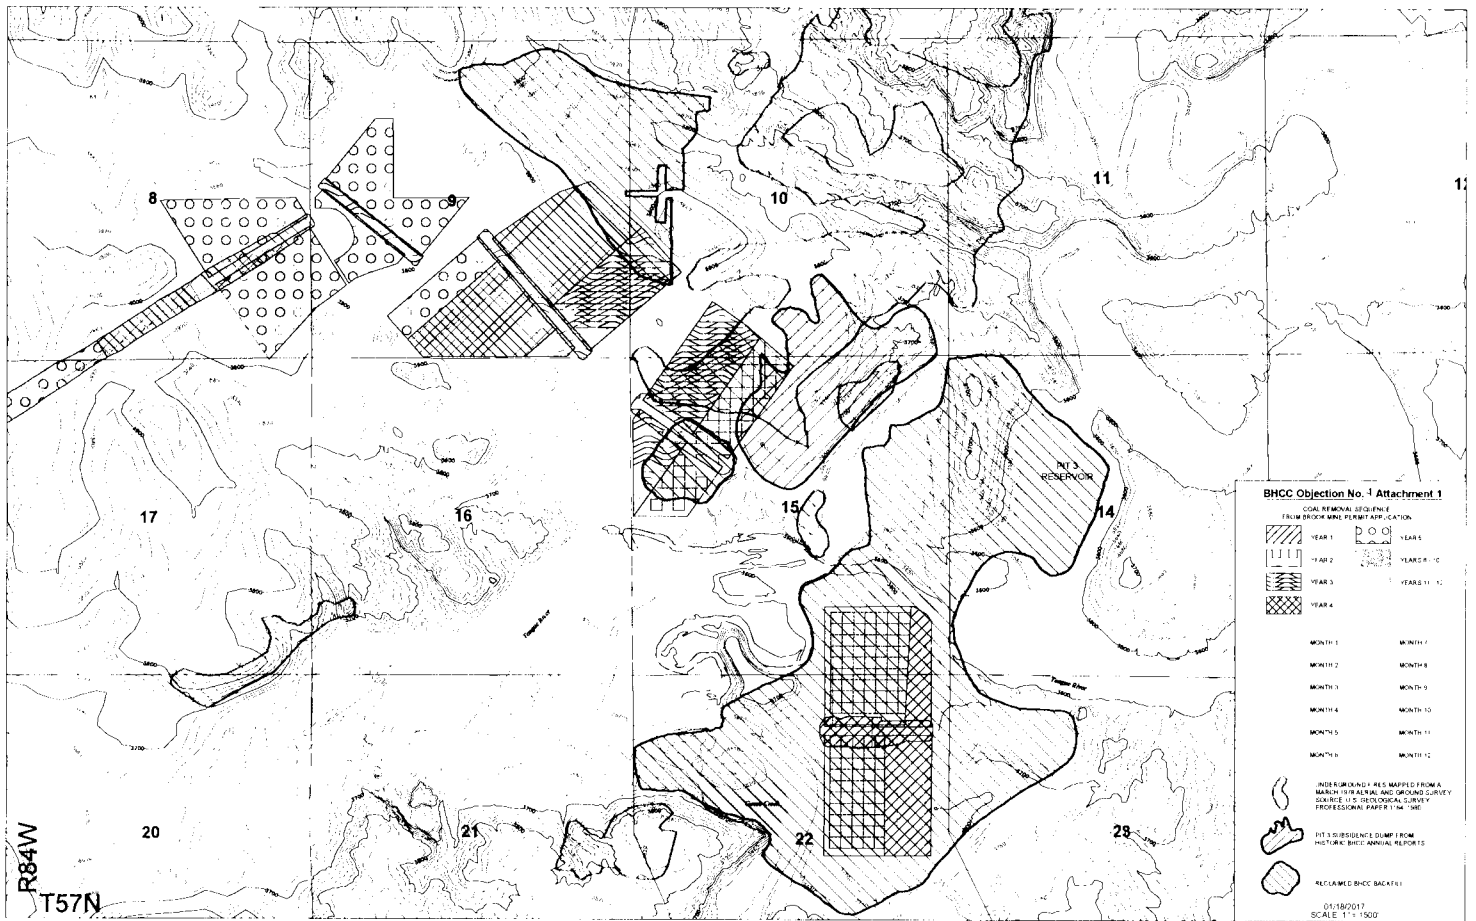

Sincerely,

A handwritten signature in black ink, appearing to read 'Jordan Sweeney', written over a horizontal line.

Date: Thursday, February 16, 2017 1:18:19 PM

Each party will be given 5 minutes during oral arguments the tentative order is Ms. Anderson. Ms. Boomgaarden. Mr. Gilbertz. Ms. Collins. Mr. Kuhlman and Mr. Pope. If the parties prefer a different order of presentation. Feel free to make a suggestion. Have a great weekend and I will see you on Tuesday.

Jim

Parties:

Please find attached our brief in response to the EQC's Order of last week.

I will be appearing in person at next week's oral arguments. Jim, if you could advise us of the general time parameters & order of the parties for the argument, that would be very helpful.

Thank you,

Shannon

TFN 6 2-025)
)

**FISHERS' BRIEF REGARDING WHETHER A
CONTESTED CASE HEARING IS PROPERLY BEFORE
THE EQC AT THIS TIME**

Mary Brezik-Fisher and David Fisher, through their undersigned attorney, hereby file this brief in relation to the issue of whether a contested case hearing is properly before the Environmental Quality Council at this time.

I. Procedural Background

Brook Mining Company, LLC filed an application for a mining permit with the Wyoming Department of Environmental Quality (DEQ) in relation to a surface coal mine which Brook proposes in and near the alluvial Tongue River Valley just north of Sheridan, Wyoming. DEQ personnel evidently considered the permit application ready for publication

and thus authorized Brook Mining to send direct notice to affected landowners and publish general public notice of the pending application in the newspaper. Both the direct notice to the Fishers and the notice published in the paper stated that *"The Director may hold an informal conference if requested, hear the complaint and take action on the application in accordance with the Department's Rules of Practice and Procedure. The complainants shall have a right of appeal to the Environmental Quality Council where the complaint will be heard a second time."* (See copy of Notice attached as Appendix 1). The notice was clearly suggestive that the DEQ would initially hear the complaints of the objectors and that at a later time the EQC would hear any continuing complaints "a second time".

The Fishers and numerous other parties filed objections and all, or nearly all, objectors requested an informal conference with the Director as they were directed to do in the notices. Rather than providing an informal conference, the DEQ decided to refer this matter directly to the EQC to hear the objectors' complaints for the first time. For the reasons explained below, this was inappropriate and in violation of the Department's own Rules and Regulations. The EQC must return this matter to the DEQ with direction that the Director Todd Parfitt or an appropriate Administrator¹ conduct the informal conference.

¹ The Administrator of the Land Quality Division is Kyle Wendtland. Mr. Wendtland is the brother of attorney Tony Wendtland of Sheridan, Wyoming. The Fishers are informed that Tony Wendtland has an attorney-client relationship with RAMACO or Brook Mine and has advocated on behalf of the entities' plans for the Brook Mine. This creates a clear conflict of interest or at least the appearance of such a conflict and Kyle Wendtland should not be involved in any decisions in relation to this mine application.

II. The Department of Environmental Quality's Rules and Regulations Dictate that the Objecting Parties Must be Given an Informal Conference with the DEQ Prior to this Matter Being Taken up by the Environmental Quality Council.

The Fishers' position on this matter is best understood by addressing the issue in the context of the statutes and regulations which apply, the DEQ's own controlling Rules of Practice and Procedure and the legal arguments of the various objectors.

Wyoming Statute § 35-11-406(k) provides that any party objecting to the coal mining permit must file their written objections within 30 days after the last date that notice of the pending coal mining application is published in the newspaper. That same section of the statute goes on to say that the Director shall hold an informal conference if one is requested by any objector but suggests the DEQ has the discretion to decide if it is "preferable" for the matter to be addressed in an informal conference or to decide to refer the objections to the EQC for a full contested case proceeding. (See Wyo. Stat. 35-11-406(k) LexisNexis 2015.)

Fishers, Powder River Basin Resource Council and other objectors take issue with this assumed discretionary power of the DEQ to forego the informal conference. Fishers and the other objectors contend that Wyoming's statute providing the DEQ with the discretion to forego the informal hearing is contrary to the Federal minimum requirements under these circumstances. Under Federal environmental law, there is no discretion regarding the informal conference associated with a proposed coal mine. The law states that "the regulatory agency *shall* then hold an informal conference in the locality of the proposed mining" 30 U.S.C. § 1263(b) (emphasis added).

It is a basic tenet of environmental law that Wyoming may only exercise control over the application and administration of environmental protection laws *so long as* Wyoming's environmental rules and regulations are drafted and applied in at least as stringent and protective a manner as the federal counterpart law – in this case, the Surface Mining Control and Reclamation Act, 30 U.S.C. § 1201, et seq. (“SMCRA”). Therefore, Wyoming DEQ's regulations, application and enforcement must be no less protective, no less stringent and no less effective than the federal rules. 30 U.S.C. § 1253; 30 C.F.R. § 730.5. As stated above, under Federal law, the informal conference is mandatory in nature and not discretionary. (See 30 U.S.C. § 1263(b)).

Importantly, however, the DEQ's own Rules of Practice appear to resolve the statute's inconsistency with Federal law and afford the same protection and procedure as that afforded under SMCRA. (See DEQ Rules of Practice and Procedure Chapter 3 § 3(a)). Rule 3(a) relates directly and specifically to surface coal mining permits and states that an informal conference *shall* be conducted by DEQ. The only discretionary aspect of the DEQ's own rule is that the DEQ is vested with the discretion to decide whether the objectors will be given access to the proposed mine site itself. DEQ's rule at Chapter 3, §3, also states the conference should be held in “the locality of the proposed mining operation or at the state capitol, at the option of the requester”. This essentially mirrors the Federal rule's requirement that the conference be held in the “locality of the proposed mining”. (See 30 U.S.C. § 1263(b).) Put another way, any “discretion” afforded by Wyo. Stat §35-11-406(k) to the DEQ is negated or removed by DEQ's own Rules and Regulations which make the

informal conference mandatory – just like the Federal law counterpart set forth in SMCRA.

It is likely that the DEQ's own rule, which affords the absolute right to an informal conference, was purposefully constructed to ensure Wyoming's procedure for dealing with coal mining applications was in harmony with the minimum procedure established by Federal law on this same point. The Wyoming Environmental Quality Council must hold the DEQ to its own rules and require that an informal conference be conducted in Sheridan County, Wyoming – the locality of the proposed mining operation.

III. The Rules of Practice and Procedure Provide for a Stay of Proceedings before the EQC for the Purposes of facilitating an Informal Review by the Director.

DEQ's Rules of Practice and Procedure, Chapter 6, provide for an informal review by the Director of the DEQ of any action or proposed action by DEQ during the pendency of an appeal to the EQC. Rules of Practice and Procedure, Chapter 6, §4(a) provides:

(a) Where an appeal to the Council of the Administrator's decision is afforded, a petition should be filed with the Council within the time provided by law. This proceeding will be stayed if an informal conference with the Director is requested until the Director has made his determination. If the petitioner is not satisfied with the Director's determination, he shall inform the Council that he wishes to proceed with appeal to the Council. The Council shall conduct the hearing as if the informal hearing had not occurred, provided however, that the Director's decision may be introduced into evidence.

In this case all (or nearly all) of the Objectors requested an informal conference from the outset. If not clear by their previous written requests on this topic, the Fishers hereby demand an informal conference with the Director on this matter. The Fishers' prior filing of objections otherwise satisfies any requirement for identification of the issues which the Fishers would like to address in the conference. Similarly, the filed objections of the other

objectors outline their concerns which they wanted addressed at the informal conference. As it stands, the EQC has had this matter referred to it – a matter in which the DEQ has not made any determinations as to whether or not to grant the permit. All the objecting parties have requested an informal conference on this coal mining application but such a conference has not been provided contrary to the DEQ's own rules. The DEQ's and EQC's Rules of Practice and Procedure dictate that these proceedings be "stayed" pending the Director of the DEQ conducting an informal conference and making a "determination". A EQC contested case hearing is only appropriate after a determination has been rendered by the Director and after one or more of the objectors request such a hearing in light of the Director's determination.

IV. Enforcement of DEQ's own Rules and Regulations also Helps to Resolve the Procedural Due Process and Other Practical Problems Caused by Disregarding the Mandatory Requirement for an Informal Hearing.

As part of the initial filings with the EQC, the Fishers raised objections based on due process grounds. Fishers and several other objectors who joined in this motion contend that by moving forward with an extremely abbreviated pre-hearing schedule so that a full-blown contested case could be started just a few days after the objections were filed deprived the objectors of any meaningful way to prepare for this important hearing and denied them the right to engage in the discovery otherwise provided by the Administrative Procedure Act. Those arguments and contentions will not be repeated here, but Fishers adopt by reference their prior objections and the brief on this subject filed with the EQC relating to these procedural deficiencies.

There is a fundamental difference between being prepared to present complaints and observations in an informal setting within 20 days and being fully prepared for a contested case trial-like adjudication in just 20 days. If the EQC stays this matter as it must and directs the Department to comply with its own rules by providing the informal hearing, any subsequent contested case hearing would not be subject to this impermissibly truncated pre-hearing procedure. Put another way, these serious due process problems are likely resolved by enforcing the DEQ's own rules.

Yet another problem is created by proceeding directly to a contested case proceeding in lieu of an informal conference. Under Wyo. Stat. § 35-11-406(p), after the conclusion of the contested case proceeding before the EQC, the EQC should issue findings of fact and a "decision on the application". Thereafter, the Director shall "issue or deny" the permit within 15 days. However, before any coal mining permit is granted, the Administrator must make *in writing* all findings required by Wyo. Stat. §35-11-406(n). To the best of the Fishers' knowledge these findings have not yet been made by the Administrator. Consequently, if the EQC were to proceed with a contested case hearing at this time, it could face a subsequent appeal as to the Administrator's findings under Subsection (n) of the statute. On the other hand, requiring the DEQ to follow its own rules would alleviate the potential for multiple appeals to the EQC.

WHEREFORE, and for the foregoing reasons set forth above, the Fishers request that the Environmental Quality Council direct the DEQ to follow its own established Rules of Practice and Procedure and direct the DEQ to have the Director Todd Parfitt conduct an

informal conference in Sheridan County, Wyoming.

DATED this 15th day of February, 2017.

Public Notice

The Brook Mining Co., LLC of 1101 Sugarview Drive, Suite 201, Sheridan, WY 82801 has applied for a coal mining permit from the Land Quality Division of the Department of Environmental Quality for the State of Wyoming. The coal mining permit area will be located in: Sections 10, 11, 12, 13, 14 and 15 Township 57N, Range 85W, and Sections 7, 8, 9, 10, 15, 17, 18, 20, 21, 22 and 27 Township 57N, Range 84W Sheridan County, Wyoming. The Brook Mine is located approximately 6 miles Northwest of Sheridan, Wyoming. This area can be found on the Acme and Monarch USGS quadrangle maps. The proposed operation is scheduled to begin July 2017 and is estimated to continue until 2032. The land, after mining, will be returned to a grazing land use. Information regarding the proposed mining operation and reclamation procedures may be reviewed in the Office of the Land Quality Division of the Department of Environmental Quality in Cheyenne and Sheridan, Wyoming, the office of RAMACO in Sheridan, WY, or the Sheridan County Clerk's Office Sheridan, Wyoming. Written objections to the proposed mining operation must be received by the Administrator of the Land Quality Division, Department of Environmental Quality, 200 W. 17th Street, Cheyenne, WY 82002, before the close of business January 27, 2017. The Director may hold an informal conference if requested, hear the complaint and take action on the application in accordance with the Department's Rules of Practice and Procedure. The complainants shall have a right of appeal to the Environmental Quality Council where the complaint will be heard a second time. A conference shall be held if the Director determines that the nature of the complaint or the position of the complainants indicates that an attempt to informally resolve the disputes is preferable to a contested case proceeding. An informal conference or a public hearing shall be held within twenty (20) days after the final date for filing objections unless a different period is stipulated to by the parties. The Council or Director shall publish notice of the time, date and location of the hearing or conference in a newspaper of general circulation in the locality of the proposed operation once a week for two (2) consecutive weeks immediately prior to the hearing or conference. The hearing would be conducted as a contested case in accordance with the Wyoming Administrative Procedure Act (W.S. §16-3-101 through §16-3-115), and the right of judicial review would be afforded as provided in that act. All parties as given in W.S. §35-11-406(j) will be mailed a copy of this notice. The Wyoming Oil and Gas Commission will be mailed a copy of the application mine plan map as required by W.S. §35-11-406(j).

ATTORNEYS FOR OBJECTORS
BIG HORN COAL COMPANY

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	Docket No. _____
)	
TFN 6 2-025)	

**OBJECTOR BIG HORN COAL COMPANY'S PETITION FOR A
HEARING BEFORE THE ENVIRONMENTAL QUALITY COUNCIL**

Big Horn Coal Company ("Big Horn"), by and through it undersigned counsel, Crowley Fleck PLLP, hereby submits this Petition for Hearing before the Environmental Quality Council (the "Council").

This matter arises from the coal mining permit application of Brook Mining Company, LLC ("Brook Mine") and the numerous objections related thereto. First and foremost, Big Horn asserts that it requested and has renewed its request for an informal conference in this matter, and that DEQ should reconsider Big Horn's and

the other objectors' requests for an informal conference.¹ In the event that DEQ confirms its decision to deny the requests for an informal conference, Big Horn now requests a contested case hearing before the Council regarding Brook Mine's permit application and Big Horn's objections thereto pursuant to Wyo. Stat. Ann. § 35-11-112(a)(iv),(c)(ii); -406(k),(p).

Facts

1. Big Horn Coal Company is a Wyoming corporation, active and in good standing, with its principal office located at 110980 South Jordan Gateway, South Jordan, Utah. Big Horn is wholly owned by LHR Coal, LLC and LHR Coal, LLC is wholly owned by Lighthouse Resources, Inc.

2. Brook Mining Company, LLC is a Wyoming limited liability company with its principal office located at 1101 Sugarview Drive, Ste. 201, Sheridan, WY.

3. Brook Mine has submitted an application for a coal mining permit from the Land Quality Division of the Department of Environmental Quality for the State of Wyoming, DEQ File No. TFN 6 2-025 (the "permit application").

¹ Big Horn asserts that numerous requests for an informal conference were made during the period for filing objections to Brook Mine's permit application pursuant to Wyo. Stat. Ann. § 35-11-406(k). In furtherance of its initial request and given the current, unique procedural posture of this matter, Big Horn has also formally renewed its request for an administrative, informal conference, attached hereto as **Exhibit A**. This request for a contested case hearing before the Council is contingent on a confirmed denial of an opportunity for informal conference and to ensure that the objections of Big Horn are properly presented and considered.

4. According to the public notice, the coal mining permit area will be located in: Sections 10, 11, 12, 13, 14 and 15 of Township 57N, Range 85W and Sections 7, 8, 9, 10, 15, 17, 18, 20, 21, 22, and 27 of Township 57N, Range 84W Sheridan County, Wyoming (the “permit area”).

5. Big Horn is the owner of real property interests in the permit area that will be negatively affected by proposed mining operations.

6. Big Horn has existing rights and reclamation obligations pursuant to its existing Mine Permit No. 213-T8, which lies within the boundaries of Brook Mine’s proposed mine permit area.

7. Pursuant to the Public Notice of Brook Mining Co., LLC Permit Application, written objections to the proposed mining operation were to be received by the Administrator of the Land Quality Division, Department of Environmental Quality before the close of business on January 27, 2017. *See* EQC Docket No. 17-4801.

8. Big Horn, along with several other parties, timely filed written objections to the proposed mining operation citing numerous concerns, including but not limited to, highly technical issues regarding the accuracy and completeness of Brook Mine’s mine and reclamation plans due to a lack of testing, data, and analysis to support present conclusions on hydrologic impacts, material strength, sloughing, and dangers related to existing subsurface fire activity and subsidence. The objections primarily address concerns pertaining to human health, safety and

the likely environmental impacts of the proposed mining operation. *See* EQC Docket No. 17-4801.

Request for Hearing

Big Horn now requests that the Environmental Quality Council schedule and hold a contested case hearing in this matter, in accordance with the Wyoming Administrative Procedure Act, whereby the Council will make findings of fact and issue a determination on the permit application.

Issues to be Determined at the Hearing

1. Whether Brook Mine has satisfied its obligations to ensure that the permit application is in compliance with Wyoming's Environmental Quality Act and all applicable state laws, and that Brook Mine has demonstrated that it has or can meet all requirements set forth in Wyo. Stat. Ann. § 35-11-406(n).
2. Whether Brook Mine has met and satisfied all conditions and requirements for submission and approval of its permit application, mining plan and reclamation plan found in the Environmental Quality Act and the Rules and Regulations of the Wyoming Department of Environmental Quality, including but not limited to those from Wyo. Admin. Code ENV LQD Ch. 2 and Ch. 12.

WHEREFORE, Big Horn hereby requests that the Environmental Quality Council schedule and hold a contested case hearing in this matter whereby:

1. The Council shall issue findings of fact and a decision on the permit application within sixty (60) days after the final hearing. Wyo. Stat. Ann. § 35-11-406(p).

2. The Director of the Department of Environmental Quality shall issue or deny the permit within fifteen (15) days of the Council's findings and decision. *Id.*
3. The parties shall be afforded right of judicial review from any action resulting from this hearing as provided in the Wyoming Administrative Procedure Act. *Id.* at -406(k).

DATED: February 15, 2017.

**RE: Renewed Request for an Informal Conference regarding Big Horn
Coal Company's Written Objections to Brook Mining Co., LLC's
Coal Mining Permit Application, DEQ File No. TFN 6 2-025**

Dear Mr. Wendtland and Mr. Parfitt,

On behalf of Big Horn Coal Company ("Big Horn"), and for the reasons stated in Objector Big Horn Coal Company's Brief Addressing Whether the Environmental Quality Council Presently has Jurisdiction over this Matter, I am renewing Big Horn's previous request for an administrative informal conference pursuant to Wyo. Stat. Ann. § 35-11-406(k) and Wyo. Admin. Code ENV PP Ch. 3 § 3.

The requested conference shall be for the purpose of considering Big Horn's written objections to Brook Mining Company's surface coal mining permit application, DEQ File No. TFN 6 2-025, filed with Mr. Wendtland on January 25, 2017. In accordance with the Rules and Regulations, the primary issues to be addressed at this conference shall include: (1) whether Brook Mine has or can meet its burden of satisfying all requirements for permit approval

pursuant to Wyo. Stat. Ann. § 35-11-406(n) and the related Rules and Regulations; and (2) the merits of Big Horn's technical objections to Brook Mine's permit application, which primarily relate, but are not limited, to hydrologic data and impacts, material testing and data, sloughing, existing subsurface fire activity and related controls, and subsidence.¹ Big Horn staunchly believes these issues can be best addressed, and possibly resolved or narrowed, in the context of an open, candid, informal conference with Big Horn representatives, Brook Mine and its consultants, and the DEQ technicians who reviewed and will take action on Brook Mine's mine and reclamation plans and any accompanying data. Pursuant to Wyo. Admin. Code ENV PP Ch. 3 § 1, Big Horn requests that a record of the conference be made.

Big Horn does not request that the conference be held in the locality of the proposed mining operation and does not request access to the proposed permit area. However, if another interested party requests these accommodations, Big Horn has no objection thereto.

Big Horn requests that the informal conference be held as soon as practicable.

Sincerely,

CROWLEY FLECK PLLP

LYNNE BOOMGAARDEN

¹ A copy of Big Horn's objections to the Brook Mine permit application filed in this matter is attached hereto as **Exhibit A**.

**RE: Objections to Proposed Brook Mine Permit Application, Sheridan County,
Wyoming**

Dear Mr. Wendtland,

Big Horn Coal Company (BHCC) writes to provide objections to the Brook Mine permit application.

During the course of our review, we discovered that the information was inconsistent among the locations noted in the public notice. We advised Brook Mine's legal counsel of the inconsistency on December 20, 2016. We are not aware if the information was updated to correct the inconsistency between the locations.

Our objections are based upon what BHCC believes to be the most accurate, up-to-date information and relate primarily to the permit application's lack of adequately addressing hydrologic issues that could significantly affect existing and future water rights, the quantity and quality of surface water and groundwater within and adjacent to BHCC, the potential for coal seam fires to erupt in both the open pit and subsurface openings and the potential for miner safety and environmental harm proposed in the permit Mine Plan. The objections are referenced to text section headings, exhibits and addenda of the permit application Mine and Reclamation Plan.

Objection No. 1 – Mine Plan & Rec Plan Review

Big Horn Coal has reviewed the proposed mine and reclamation plan and is concerned with the general lack of detail contained in the proposed plan. It appears that no sampling, testing or analytical work of any sort has been performed to support the surface and highwall mine designs and plans. It is Big Horn Coal's opinion that excavating in the area, surrounding the Big Horn Mine will create a large safety concern and environmental

liability as the TR-1 trench cut could become inundated with water from the historic backfill of the BHCC spoils of Pit 1 and Pit 2.

BHCC would like to put on record that it is providing written notice of its concerns so Brook Mine and other affected parties have notice and are aware of these issues and that Big Horn Coal is not responsible for any personal, property or environmental damage or other loss due to the disturbance activities associated with the Brook Mine, its affiliated companies or successors in interest.

BHCC has not consented to overlapping permit boundaries nor has it been indemnified of any disturbance related to Brook Mine's proposed activities as it relates to the reclamation obligations and BHCC's reclamation liabilities.

Objection No. 2 – Section MP.4; Exhibit MP.4-1; Section MP.5; Section MP.13; Addendum MP-6

Section MP.4 and Exhibit MP.4-1 provide plans for the development of a highwall mining trench through and the development of highwall mining panels beneath reclaimed backfill of BHCC Pits 1 and 2 adjacent to Goose Creek and the Tongue River in the southeastern portion of the Brook Mine permit area. The trench would penetrate through the bottom of the backfill allowing mining of Carney coal found about 70 feet beneath the backfill. The backfill of the proposed trench area averages about 90 feet thick. The northeast corner of the highwall panel area appears on Exhibit MP.4-1 to be equivalent to the Brook Mine permit boundary, and would be less than 100 feet from the bank of the Tongue River. On Figure MP-6.1-1 of Addendum MP-6, the highwall mining panels are shown even closer to the Tongue River channel, and the reason for the disparity between the figure and Exhibit MP.4-1 is unexplained. BHCC is very concerned over and objects to the permit's disturbance, affected and permit boundaries all being equivalent to the mining panel boundary in this most environmentally sensitive area adjacent to the bank of the Tongue River. The affected area boundary shown on Exhibit MP.4-1 around the other proposed mining panels typically extends well beyond the disturbance boundary for reasons unexplained in the Mine Plan.

Mine Plan Section MP.4, together with all Mine Plan text inclusive of Section MP.13 and Addendum MP-6, are silent on the subject of the special textural and hydrologic characteristics of the proposed southeastern highwall mining area in Sections 15 and 22, T57N, R84W. The area is unique in that the strata overlying the coal to be mined includes a thick layer of unconsolidated, saturated backfill exhibiting shallow groundwater elevations of 20 feet or less below ground surface where existing ground elevations are 3600 feet and lower. The water surface in BHCC's postmining Reservoir 14 in the SESE Sec. 15 is an expression of the groundwater table. The groundwater throughout Pits 1 and 2 is directly connected to and recharged by Goose Creek and the Tongue River, as documented in the Big Horn Mine's Reclamation History, Groundwater Restoration Demonstration (GRD) approved by the WDEQ/LQD as Change No. 9 to Permit 213-T5 in August 2002. The GRD verifies that the Pits 1 and 2 backfill resaturated very rapidly, indicative of unconsolidated, porous material connected to perennial stream recharge sources nearby. Mine Plan Section MP.4 is silent on the subject of managing massive sloughing that may occur in the saturated and nonsaturated backfill of the southeastern highwall mining area as the highwall mining trenches are excavated through the backfill to the base of Carney coal. Section MP-5 of the Mine Plan also fails to present an

alternative water management and treatment plan to be followed should groundwater inflow volumes exceed infrastructure design capacities.

BHCC finds the assessment of potential land subsidence and the remediation plan presented for land subsidence in Addendum MP-6 to be inadequate relative to protecting the value and function of its lands, particularly for protecting the stability of the Tongue River and the quality of shallow groundwater connected to the river. Addendum MP-6 does not absolutely discount the possibility of land subsidence above the highwall miner holes, nor does it provide a plan for the discontinuation of any southeastern area highwall mining should subsidence occur in the lowlands contiguous to Tongue River or Goose Creek. The environmental implications of subsidence developing adjacent to Tongue River and Goose Creek are so severe as to warrant, at a minimum, a permit commitment to temporarily or permanently cease all mining throughout all of the southeastern highway mining area should any subsidence develop in any of the area at any time. The permit's plan for "backfilling will commence within 12 months of a subsidence location being identified if self-healing is not providing sufficient remediation" (Section MP-6.4, Addendum MP-6) is environmentally unacceptable for the southeastern highwall mining area because: 1) the stability and alignment of Goose Creek and Tongue River could be jeopardized should subsidence occur, and; 2) any groundwater quality impacts associated with underground coal fires developing in mine openings would have direct and essentially immediate access to Goose Creek and Tongue River via the shallow groundwater table.

The subsidence control plan presented in Addendum MP-6 is inadequate. It appears that no analytical work of any sort (sampling, material testing, etc.) has been performed in support of the highwall mining design presented in the mine plan. Additionally, it also appears that no geotechnical work of any sort has been performed. Addendum MP-6 discusses general assumptions for highwall mining penetration depths, entry widths, cutting heights and support pillars. This information is presented somewhat anecdotally and in the case of the support pillars, it states that "Support pillars will be designed to have a width equal to or exceeding the maximum extraction thickness anticipated in a highwall mining hole based on the mine's geologic model. This width-to-height ratio of at least 1:1 results in pillar stability factors that exceed recommended values suggested by National Institute for Occupational Safety and Health's (NIOSH) ARMPS-HWM stability program for the overburden thicknesses expected. Pillar dimension will also be in accordance with Brook Mine's Ground Control Plan approved by MSHA."

No material strength data (coal strength, overburden strength, interburden strength, etc.) is provided in the mine plan document. BHCC suspects that no material strength information has been gathered or determined. Can the NIOSH stability factors actually be achieved? This is unknown at this point as no definitive geotechnical and material strength data has been presented in the mine plan. The coals present in this area are of a younger age. Younger age coals have much weaker strengths than older age, deeper coals and it is quite possible that the safety and stability factors needed to safely and effectively execute the highwall mining approach presented in the mine plan cannot be achieved. BHCC insists that further analysis be performed to definitively prove that the web and barrier pillars dimensions are appropriate and that they will meet NIOSH's minimum stability factor of 1.3.

Very little highwall mining has been performed in Wyoming. Highwall mining has been performed relatively recently at the Bridger Mine, which is located in Southwest Wyoming.

While the exact details are unknown, BHCC is aware of at least one “cascading pillar failure” at that operation and fortunately, there were no injuries. It is suspected that this failure was caused by improper pillar layout and design. BHCC is concerned that the anecdotal mine design presented in this document is inadequate and must be performed with proper analytical data.

Objection No. 3 – Section MP.5.9; Section MP.6.2; Addendum MP-3; Section MP.8

The groundwater model of Addendum MP-3 was improperly constructed and executed because the model does not recognize the unique textural and hydraulic characteristics of saturated backfill in BHCC's Pits 1 and 2, but instead simulates the backfill in the same fashion as native overburden strata (see Section 4.0 of Addendum MP-3). Section 2.5.1 of Addendum MP-3 states “no site-specific hydraulic conductivity information is available for the over/interburden (model) layers”. In fact, hydraulic conductivity data are available for the backfill from former monitor wells in the Pit 1 and Pit 2 area and for the Plachek Pit backfill. That data are provided in the GRD referenced under Objection No. 1 above. Hydraulic conductivity values assigned to the spoils together with all other “overburden” strata in the model are very small (less than one tenth) relative to those shown for backfill in the GRD. The groundwater model ignores determination of the spatial extent of drawdown in the water table of Pit 1 and Pit 2 backfill that is connected to the water table in Tongue River and Goose Creek alluvium, which in turn is supplied by flows in both streams. The text of Section MP.6.2.3 states “Drawdowns of the overburden were not modeled and only isolated sands where encountered are expected to be affected”.

Section 4.9 and Figure 4.9-11 of Addendum MP-3 shows where the groundwater model was used to predict water table drawdown in Tongue River valley alluvium at “alluvial target” points distributed over nearly a six-mile reach of the valley floor. Section 4.9 states that “the maximum impact to the Tongue River alluvium is conservatively estimated to reach 2.5 feet of drawdown near the river”. Addendum MP-3 and Section MP.6.2 provide no description or drawing of the spatial distribution of drawdown during mining in BHCC's saturated backfill or in the alluvium of Tongue River and Goose Creek that is hydraulically connected to the backfill. Neither does the groundwater model explore potential permanent groundwater elevation changes associated with the highwall mining panels acting as drains to the backfill and alluvial water table via the highwall trench pits. Water table drawdown approaching 2.5 feet in the alluvium of Tongue River valley over a valley distance of nearly six miles would in fact represent a very large volume water loss that would likely cause stream flow losses.

The groundwater model of Addendum MP-3 fails to report groundwater inflow rates to any of the proposed mine excavations. Section MP.8 of the Mine Plan states “It is estimated that the total water use will be approximately 400 million gallons per year.” This is equivalent to an average daily use rate of 760 gallons per minute, about 3.36 acre-feet per day, or about 1,226 acre-feet per year. The Mine Plan does not identify the specific source(s) of the water beyond mentioning that “Industrial water will be obtained from groundwater wells or from water collected in sediment and flood control reservoirs”. The groundwater model of Addendum MP-3 does not include the effects of withdrawing any groundwater from wells for industrial or other uses, nor does it include the effects of dewatering wells mentioned in Section MP.5.9. In short, the Mine Plan is devoid of a hydrologic budget identifying specific groundwater sources, the quantity of industrial

water projected to be available from flood control reservoirs and sediment ponds, and the determination of what would remain of groundwater and surface water supplies while supplying the industrial water needs. BHCC is concerned that the value of its surface estate and future options for developing its surface estate could be marginalized by such a large water use demand, especially considering that water demands at Wyoming coal mines are primarily consumptive.

Objection No. 4 – Section MP.11; Addendum MP-5

The fire control plan referenced in Section MP.11 and presented in Addendum MP-5 describes measures to be taken to prevent and control fires in the mine pits, fires in the mine's processing and shop facilities, equipment fires and rangeland fires. BHCC objects, however to the Mine Plan and Addendum MP-5 not providing plans to control and extinguish new subsurface coal fires that may develop or existing subsurface coal fires that may become rekindled or enlarged as a result of the highwall mining panels that will be opened outboard of the highwall trench openings.

Attachment 1 provided with this Objection No. 4 is a drawing showing the approximate extent of underground coal mine fires in the area of proposed highwall mining in Sections 10 and 15, T57N, R84W, as reported by the U.S. Geological Survey in 1980. The fires in this particular area originated with mining of the Monarch coal. This and other nearby historic underground mines have long been known to exhibit numerous subsidence features and underground coal mine fires, and in the late 1980s BHCC received approval from the WDEQ/LQD to permanently place nearly 10 million bank cubic yards of overburden over the area shown on Attachment 1 in an attempt to reclaim the subsidence and control the fire. That unique reclamation feature is known as the Pit 3 Subsidence Dump in Big Horn Mine's reclamation history. The proposed highwall mining will develop mine openings in the Carney and Masters coal seams beneath the Monarch seam in areas that are known to still exhibit evidence of underground coal fires. Plumes of steam and smoke have been observed again over the general area of Sections 10 and 15 this winter of 2016-2017. These observations indicate that, in places, the perimeter of the historic subsurface coal seam fires has expanded notable distances from the referenced 1980 boundary delineation.

The subsidence control plan of Addendum MP-6 does little to guarantee the long-term protection of BHCC's surface estate especially where highwall mining panels will be driven beneath underground coal mine fires having a long history of activity. Section MP-6.2 of Addendum MP-6 provides numerical calculations for subsidence chimney heights, but there is no investigation of the potential that the historic mine fires may have compromised the structural integrity of strata underlying the fires and overlying the coals targeted for highwall panel mining (the interburden), leaving the interburden more prone to subside than normal. BHCC is particularly concerned and objects to highwall mining beneath or adjacent to pre-existing underground mine fires because of the potential for oxygen and water to be transmitted from the highwall mining openings to "hotspots" in the seams already burning via highwall trenches or via fractured or subsided interburden above the panel openings. BHCC strongly disagrees with the legitimacy of the plan stated in Section MP-6.4 of Addendum MP-6 which states "Backfilling will also be performed if it is determined that the introduction of water and oxygen could contribute to spontaneous ignition of the remaining coal not extracted from the highwall mining operations". BHCC

contends it to be common knowledge in the mining industry that oxygen and water are key catalysts in causing spontaneous combustion in coal, whether the coal be in mine openings or in stockpiles. BHCC also believes that the introduction of additional water and air to a coal seam already on fire is especially problematic.

Section MP-6.3 of Addendum MP-6 commits to maintaining highwall mining mapping and subsidence documentation in a subsidence report that will be available for inspection. BHCC objects to the Mine Plan not committing to freely submitting the highwall mining mapping and subsidence documentation report to all owners of surface estate within the Brook Mine permit area. BHCC also objects to the fact that the Subsidence Monitoring and Assessment reporting of Section MP-6.3 does not include mapping, photographing and describing all evidence of surface or underground coal fires occurring within the Brook Mine permit area whenever such evidence becomes available throughout the life of the mining and post-mining periods.

Objection No. 5 – Section MP.1.3; Exhibit MP.1-1

The mine plan on Page MP-5, identifies the “disturbance boundary includes all lands that will be physically and directly disturbed during mining.” Exhibit MP.1-1 shows the disturbance boundary as a dashed orange symbol that outlines an entire pink hatched polygon, identified as “DISTURBANCE FOR YEAR 2016,” located in Sections 15, 21, 22 and 27 of Township 57 North, Range 84 West.

Within the pink hatched polygon, there are existing assets to Big Horn Coal Company. These assets include a rail spur, water tank, pump house, access roads, fences and land owned by BHCC. Also within the pink hatch polygon is the mainline of the Burlington Northern Railroad and associated lands owned by Burlington Northern.

Based on the definition of Disturbance Boundary as indicated on page MP-5, does Brook Mine indeed have the rights to physically and directly disturb these lands within the pink hatched polygon? From the public record, BHCC has not been able to determine whether Brook Mine has secured surface owner consent from all surface owners, including the railroad, for these activities

Objection No. 6 – Section MP.1.5

The mine plan states on Pages MP-5 and continue onto page MP-6 that “Coal will either be temporarily stored in the pit or directly hauled off site.”

There is no mention in the permit as to where the coal will be hauled off site. Additionally there is no known agreement with the County of Sheridan, indicating approval to haul mineral across county roads.

Objection No. 7 – Section MP.1.9

The mine plan states on Pages MP-7 that “The Brook Mine will operate in conjunction with Taylor Quarry (Permit No. SP-757)... The Mine will work with Taylor Quarry to minimize impacts on Taylor Quarry's operation.”

The following paragraph states "The Brook Mine will not obstruct Big Horn Coal's (Permit 231-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1.

To remain consistent with the statements made in regards to the Taylor Quarry, Big Horn Coal requests that the paragraph referencing Big Horn to be replaced and restated as follows:

"The Brook Mine will operate in conjunction with the Big Horn Mine and that the Brook Mine will work with Big Horn Coal to minimize impacts to Big Horn Coal operations. Specifically, Brook Mine will not obstruct Big Horn Coal's (Permit 213-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1."

Big Horn Coal requests that the text be updated in the previous paragraph to reference the correct permit number for Big Horn Coal Company as (Permit 213-T8).

Objection No. 8 – Section MP.3.1, Section MP.3.1.3 – Roads; Exhibit MP.3-1

As stated in the mine plan on Page MP-11, "Primary roads are any road used for transporting mineral or spoil, or frequently used for access or other purposes for a period in excess of six months, or roads to be retained for postmining use."

WDQ/LQD Rules and Regulations (R&R) Chapter 4, Section 2(j)(vii):

Primary roads.

(A) Certification. The construction or reconstruction of primary roads shall be certified in a report to the Administrator by a registered professional engineer. The report shall indicate that the primary road has been constructed or reconstructed as designed and in accordance with the approved plan. The report shall be available for review at the mine site within 30 days following the completion of construction of each primary road.

Mine plan Exhibit MP.3-1, titled Transportation Network identifies proposed primary haulroads as a solid black line, for the use of transporting mineral or spoil. Yet, there are no haulroads identified in the SE quarter of Section 15, Sections 21, 22 or 27. If the Brook Mine plans to haul mineral or spoil materials from the proposed Trench Cut (TR-1), there should be indication of a primary haul road leaving TR-1, accompanied by a certification of the road design. Unless there are no plans of transporting mineral or spoil from the TR-1 area.

Objection No. 9 – Section MP.4.2.3 – Stockpiles; Exhibit MP.4-3

The mine plan states on Page MP-16, "Stockpiles will not be constructed on unsuitable backfill."

Mine plan Exhibit MP.4-3, Stockpile Locations identifies Topsoil Stockpile TS-1B proposed location within an area known as the Placheck Pit. This area was mined by Big Horn Coal from 1956 through 1963. It is Big Horn Coal's understanding that the proposed area beneath TS-1B is indeed unsuitable material and that topsoil should not be placed in the area as proposed on Exhibit MP.4-3. Additionally, Big Horn Coal is not aware of a surface owner consent document between Brook Mining Company and the Burlington Northern Railroad that would allow the crossing of the mainline with loaded haul trucks.

Objection No. 10 – Section MP.6.1; Exhibit MP.7-1

Exhibit MP.7-1 represents the operational Surface Water and Groundwater Monitoring Program. There are only two downstream surface water monitoring sites, identified as Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir. The text on page MP-41 of the Mine Plan states "However, the Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir will be disturbed by facilities disturbance."

Big Horn Coal believes there is inadequate downstream monitoring in the proposed plan. Upon disturbing of Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir, there will be no sites downstream of the Brook Mine to collect adequate surface and groundwater data to prove that there are no off site environmental impacts from the proposed operation.

Objection No. 11 - Addendum MP-2, Exhibit MP-2

The proposed Sediment Pond SP-8 is located within the current postmine approved Reservoir 14 constructed by BHCC. The bottom elevation of Reservoir 14 is currently at 3575 with a peak elevation at 3589. Sediment Pond SP-8 bottom elevation is proposed at 3585 with a high water elevation proposed at 3590. It is noted below the area capacity table on Exhibit 13, "1. Pond is entirely incised. No Spillway hydraulics are provided."

These elevations lead BHCC to believe the plan for construction of SP-8 will require Reservoir 14 to be completely backfilled prior to construction of SP-8. BHCC requests that the reconstruction and the water quality within Reservoir 14 be restored to pre-mining conditions before final bond release is allowed.

Objection No. 12 – Exhibit MP.4-1; Exhibit MP.4-2; Exhibit MP.4-5; Exhibit RP.5-1

The proposed mine plan indicates that topsoil and overburden removal will occur upon the BHCC Property and within the TR-1 area in years 1 and 2 of operation. Exhibit MP.4-1 shows coal removal to occur over the same first two years of operation. Exhibit MP.4-5 shows the overburden backfill sequence within TR-1 will occur in year 2. Exhibit RP.5-1 shows the topsoil replacement sequence within the BHCC Property occurring in years 12-16.

BHCC objects to this timeline of topsoil replacement upon its property. The BHCC property is the first to be disturbed and the last to be reclaimed. BHCC asks the question as to why every other proposed disturbance area is backfilled and topsoiled within a 2 to 3 year time frame except around the BHCC facilities area. The topsoil replacement timeframe is unacceptable and not contemporaneous in accordance with the Surface Mining Control and Reclamation Act, (SMCRA) and it is requested that the final

reclamation around the BHCC Property be within the 2 to 3 year time frame, similar to all other areas around the mine.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 14 – Section MP.4.4.1

It is a well-known fact within the mining industry that the term “Reserves” connotes that the mineral being extracted can be done so economically. BHCC opines that the mining approach presented in the mine plan cannot be done economically. Based on our internal

knowledge; the operating cost for a contractor to perform highwall mining is in the \$8/Ton to \$12/Ton range, which is very close to the domestic spot price for this type of coal. By the time the other costs for the surface mining to develop the highwall mining, transportation, G&A, etc. are taken into consideration, this operation appears to be completely uneconomical.

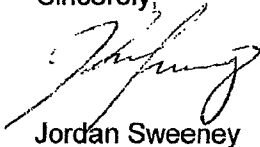

The market for this coal is unclear. The two closest coal mines, Decker and Spring Creek, serve the domestic and international market. Port capacity to the international market is constrained and it is unlikely that Brook Mine will secure access. Domestic demand has been in decline and is significantly oversupplied. Without a definitive market, the Brook Mine is at risk of commencing operations, producing product it cannot sell economically, and reclamation obligations that it cannot fund.

Objection No. 15 – Section MP.15

Objection No. 4 above introduces the fact that the underground mine fires in this area are still burning and have expanded. Section MP.15 does not, in any way, address that the burned areas have expanded. A surface mine excavation that comes in contact with a historic mine fire could be catastrophic in many ways, including: impacting the safety of mine workers, damage to equipment, wildfire initiation, etc. BHCC believes this mine plan has not adequately addressed surface mining activities that will occur near underground mines and insists that the Brook Mine operators must perform the necessary testing and analysis to prove that the proposed mine plan will not be impacted by historic mine fires. Specifically, attachment 1 provided with Objection No. 3 above shows that trench TR-2 is planned very near an area that was burning and is likely still burning. Given that the burned area has likely expanded, this area should not be disturbed at all.

In conclusion, Big Horn Coal Company feels strongly that the Brook Mine permit application should not be approved or deemed technically complete. The mine and reclamation plan lack a significant amount of detail that is required for a technical completeness determination, as stated in the above mentioned objections.

Sincerely,

Jordan Sweeney

ATTORNEY FOR OBJECTORS
BIG HORN COAL COMPANY

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	Docket No. 17-4801
)	
TFN 6 2-025)	

**OBJECTOR BIG HORN COAL COMPANY'S BRIEF ADDRESSING WHETHER
THE ENVIRONMENTAL QUALITY COUNCIL PRESENTLY HAS
JURISDICTION OVER THIS MATTER**

Big Horn Coal Company ("Big Horn"), by and through its undersigned counsel, timely submits this brief pursuant to the Environmental Quality Council's (the "Council") February 7, 2017 Order Vacating Contested Case Hearing and Setting Oral Argument (the "Order").

INTRODUCTION

This matter involves the current, unique procedural posture of Big Horn's and other interested parties' objections to Brook Mining Company, LLC's ("Brook Mine") surface coal mining permit application under the Wyoming Environmental Quality Act (the "Act") and the Department of Environmental Quality's ("DEQ") Rules of Practice and Procedure

(the “Rules”). The Order specifically requested that the parties brief the following issue: “whether there is a proper appeal before the Council at this time that necessitates a contested case.”¹ Wyo. Stat. Ann. § 35-11-406, read as a whole, answers the question posed: Absent a request for hearing from an interested person, the Council has no jurisdiction over this matter. Accordingly, there is no proper appeal before the Council at this time that necessitates a contested case.

PROCEDURAL BACKGROUND

Pursuant to Wyo. Stat. Ann. § 35-11-406(j) and (k), notice of Brook Mine’s permit application was published and interested persons were afforded the right to file written objections to the application with the Administrator through January 27, 2017. *See Exhibit A, Public Notice of Brook Mining Co., LLC Permit Application.*

Numerous parties, including Big Horn, filed written objections to the application and specifically requested an informal conference as provided by the Rules and Wyo. Stat. Ann. § 35-11-406(k). *See* EQC Dkt. No. 17-4801. No party requested a contested case hearing before the Council. *Id.* On January 30, 2017, DEQ Director Todd Parfitt informed Big Horn and the other objectors that he had determined an informal conference was unlikely to be successful in resolving the disputes and that he was “referring this permit application to the [Council] for their review and determination at a contested case hearing.” *See e.g. Exhibit B, DEQ Letter to Big Horn.* On that same date, following numerous informal email communications from Council staff concerning the immediate scheduling

¹ Because no decision has been made regarding Brook Mine’s permit application, any contested case at this stage would need to flow from a request for a hearing/protest to a permit, not an appeal. *See* Wyo. Admin. Code ENV PP Ch. 1 § 3.

of a pre-hearing conference, and prior to Big Horn's receipt of Director Parfitt's decision regarding its request for an informal conference, the Council ordered the parties to appear for a pre-hearing conference in the docketed contested case, on February 2, 2017. **Exhibit C, Pre-hearing Conference Order.** The parties were informed that "[f]ailure to appear at the pre-hearing conference may result in dismissal from this case." *Id.* Following the pre-hearing conference, the Council issued a Scheduling Order setting a contested case hearing for February 13 and 14, 2017, with all motions, responses, discovery and disclosures to occur in the week leading up to the hearing. **Exhibit D, Amended Order for Contested Case Hearing.** Big Horn and other objectors responded to the Scheduling Order by raising due process concerns. *See* EQC Dkt. No. 17-4801. Objector Powder River Basin Resource Council further specifically challenged the Council's jurisdiction to hold a contested case hearing at this time and requested a remand of the proceedings back to the Director, with instructions to conduct an informal conference, as requested. *Id.*

The Council then issued the Order vacating the contested case hearing, requesting briefs on the jurisdictional issue, and setting oral argument for February 21, 2017. **Exhibit E, Order Vacating Contested Case Hearing and Setting Oral Argument.**

ARGUMENT

I. Absent a Request by an Interested Person, the Council has No Jurisdiction over this Matter.

For surface coal mining operations, the Act provides interested persons the right to file written objections to a permit application with the Land Quality Division Administrator for a period of thirty (30) days, and if requested, the Director may hold an informal

conference to take action on the permit application in accordance with DEQ's rules of practice and procedure. Wyo. Stat. Ann. § 35-11-406(k). The statute further provides that "[a]n informal conference or a public hearing shall be held within twenty (20) days after the final date for filing objections unless a different period is stipulated to by the parties," and that a hearing shall be conducted as a contested case hearing. *Id.* Subsection (k), read alone, suggests that after the time for filing objections has expired either an informal conference or a contested case hearing must be held. Subsection (k) does not address the possibility that a request for an informal conference might be denied, the timing or communication of such decision to the requesting party within the 20-day window, or otherwise set forth what would necessarily trigger a hearing under those circumstances and when. Wyo. Stat. Ann. § 35-11-406(p) sheds important additional light on this issue by stating that "if no informal conference or hearing *is requested*" the Director must render a decision on the application within thirty (30) days of the notice period. *Id.* (emphasis added). Read as a whole, then, the statutory language makes clear that both an informal conference and a hearing before the Council must be initiated on the request of an interested person. *See id.*

The Council is a creature of statute and may only exercise those powers given to it by the legislature. In other words, the Council "must find within the statute warrant for the exercise of any authority which it claim[s]." *Exxon Mobil Corp. v. Wyoming Dept. of Revenue*, 266 P.3d 944, 951 (Wyo. 2011) (citing *Amoco Prod. Co. v. Wyo. State Bd. of Equalization*, 12 P.3d 668, 673 (Wyo.2000)). Here, nothing within the statute warrants a conclusion that the Council may exercise any authority over the Brook Mine permit

application simply on a referral from the Director following his denial of the objectors' requests for an informal conference. To the contrary, as illustrated above, the legislature understandably gave the objectors the right to request (or decline to request) a hearing before the Council. As of the date of the Order, no such request had been made and the Council presently has no jurisdiction over this matter.

II. Given the Unique Course of Events in this Matter, Big Horn Coal Respectfully Renews its Request for an Informal Conference, or in the Alternative Requests a Contested Case Hearing before the Council, in Order to Preserve All Its Rights as an Interested Person.

Beyond the jurisdictional issue addressed above, the statutes and Rules do not set forth a clear procedural path or timeline in the event DEQ denies a request(s) for an informal conference. For example, Wyo. Stat. Ann. § 35-11-406(k) indicates the Director has sole discretion whether to hold an informal conference and that the Director would conduct the informal conference. Chapter 6, §1 of the Rules speaks to the Director's authority to *review* by informal conference any decision, order or notice by the Administrator, but does not provide that the Director may conduct an informal review in the first instance. Moreover, section 5 of this same chapter expressly prohibits the Director from reviewing "any informal conference proceeding requested and held pursuant to [Wyo. Stat. Ann.] § 35-11-406(k)."

The Rules imply that the authority to conduct an informal conference requested pursuant to Wyo. Stat. Ann. § 35-11-406(k) has been delegated to the Administrator with a direct appeal of any action following the informal conference to the Council. See Wyo.

Admin. Code ENV PP Ch. 1 §17(b) (an interested person may appeal any administrative decision *following* an informal conference related to a surface coal mining operation to the Council within 30 days of notice of the decision). Consistent with the timeline set forth in Wyo. Stat. Ann. § 35-11-406(k), Chapter 3, § 3 of the Rules further provides that any informal conference requested of *the Administrator* on a surface coal mining permit be held “within 20 days after the final date for filing objections unless a different period is stipulated to by the parties.” The Rules simply fail, however, to address what occurs following the Director’s or Administrator’s denial of a request for an informal conference, and when. No amount of briefing can fill these gaps or rectify these uncertainties.

Big Horn staunchly believes that its objections to Brook Mine’s permit application - critical, technical issues primarily related to hydrologic data and impacts, material testing and data, sloughing, existing subsurface fire activity and related controls, and subsidence - would be most efficiently and effectively addressed in the context of an open, candid, informal conference with Big Horn Coal representatives, Brook Mine and its consultants, and the DEQ technicians who reviewed Brook Mine’s mine and reclamation plans and any accompanying data; not in the context of a hotly contested, “battle of the experts” presentation to the Council. If DEQ is willing to revisit this issue, Big Horn will defer to the DEQ whether any informal conference on the Brook Mine permit application would be conducted by the Administrator or the Director.

For these reasons, contemporaneous with filing this brief, Big Horn has submitted to the Administrator a renewed request for an informal conference pursuant to Wyo. Stat. Ann. § 35-11-406(k) and the Rules, Chapter 3, § 3. *See Exhibit F*. Given the referenced

uncertainties and the possibility no informal conference will be held, contemporaneous with filing this brief and within 20 days after the final date for filing objections, Big Horn also has filed with the Council and served upon the Director and the parties, a petition for hearing in accordance with the Rules, Chapter 1, § 3. *See Exhibit G.* Big Horn further asserts that because no party timely objected to the Council's briefing and oral argument schedule, and because the statute allows the parties to stipulate to a different period, any claim asserting a failure to comply with the 20-day hearing/conference requirement under Wyo. Stat. Ann. § 35-11-406(k) or any prejudice arising therefrom has been waived. *See Amoco Production Co.*, 7 P.3d at 906 (Wyo. 2000) (holding that "[i]f a party has an opportunity to object to the administrative tribunal's procedural rulings and fails to do so, it waives its right to challenge the administrative tribunal's procedure on appeal").

CONCLUSION

For the reasons set forth above, an informal conference before the Director or Administrator is the best context for discussion and possible resolution of all or at least some of Big Horn's and other objectors' concerns with Brook Mine's mine permit application. The Council may exercise jurisdiction over this matter only: (1) if an appeal is filed following an informal conference, or (2) no informal conference is held and pursuant to Big Horn's or any other party's request for a contested case hearing.

 Wyoming Department of Environmental Quality

Public Notice of Brook Mining Co., LLC Permit Application

The Brook Mining Co., LLC of 1101 Sugarview Drive, Suite 201, Sheridan, WY 82801 has applied for a coal mining permit from the Land Quality Division of the Department of Environmental Quality for the State of Wyoming. The coal mining permit area will be located in: Sections 10, 11, 12, 13, 14 and 15 Township 57N, Range 85W, and Sections 7, 8, 9, 10, 15, 17, 18, 20, 21, 22 and 27 Township 57N, Range 84W Sheridan County, Wyoming. The Brook Mine is located approximately 6 miles Northwest of Sheridan, Wyoming. This area can be found on the Acme and Monarch USGS quadrangle maps.

The proposed operation is scheduled to begin July 2017 and is estimated to continue until 2032. The land, after mining, will be returned to a grazing land use. Information regarding the proposed mining operation and reclamation procedures may be reviewed in the Office of the Land Quality Division of the Department of Environmental Quality in Cheyenne and Sheridan, Wyoming, the office of RAMACO in Sheridan, WY, or the Sheridan County Clerk's Office Sheridan, Wyoming. Written objections to the proposed mining operation must be received by the Administrator of the Land Quality Division, Department of Environmental Quality, 200 W. 17th Street, Cheyenne, WY 82002, before the close of business January 27, 2017. The Director may hold an informal conference if requested, hear the complaint and take action on the application in accordance with the Department's Rules of Practice and Procedure. The complainants shall have a right of appeal to the Environmental Quality Council where the complaint will be heard a second time. A conference shall be held if the Director determines that the nature of the complaint or the position of the complainants indicates that an attempt to informally resolve the disputes is preferable to a contested case proceeding. An informal conference or a public hearing shall be held within twenty (20) days after the final date for filing objections unless a different period is stipulated to by the parties. The Council or Director shall publish notice of the time, date and location of the hearing or conference in a newspaper of general circulation in the locality of the proposed

operation once a week for two (2) consecutive weeks immediately prior to the hearing or conference. The hearing would be conducted as a contested case in accordance with the Wyoming Administrative Procedure Act (W.S. §16-3-101 through §16-3-115), and the right of judicial review would be afforded as provided in that act. All parties as given in W.S. §35-11-406(j) will be mailed a copy of this notice. The Wyoming Oil and Gas Commission will be mailed a copy of the application mine plan map as required by W.S. §35-11-406(j).

 South Jordan, UT 84095

**RE: Proposed Brook Mine Permit Application, Sheridan County – TFN 6 2/025
 Public Comment Period**

Dear Mr. Sweeney:

Your letter regarding the proposed Brook Mine permit application has been received by the Department of Environmental Quality (DEQ). The public notice and approval process for such surface coal mine permit applications is addressed in Wyoming Statute § 35-11-406. Several of the comment letters received by the DEQ requested an informal conference be conducted on the permit application and on specific objections to the application.

I have carefully considered the objections received and determined that an attempt to informally resolve the disputes is unlikely to be successful through the informal conference process. Therefore, I am referring this permit application to the Environmental Quality Council (EQC) for their review and determination at a contested case hearing. Your comment letter, and all others received by the Department are being forwarded to the EQC. The EQC will be in contact with you regarding arrangements for a hearing before them. If you would like to contact the EQC directly for more details regarding their process, they can be reached at:

Wyoming Environmental Quality Council
 122 W. 25th
 Herschler Bldg. 1W, Room 1714
 Cheyenne, WY 82002
 Phone: (307) 777-7170
 Email: eqc-all@wyo.gov

Thank you for sharing your comments with the Department regarding this proposed new mine permit application. Your participation in the public review process is important and very helpful to the Department and the State.

Sincerely,

Todd Parfitt
 Director

AMENDED ORDER

The Parties appeared for a pre-hearing conference in this matter on Thursday, February 2, 2017 at 10:30 a.m. via telephone conference call and in the Board of Equalization Board Room, 1st Floor West of the Herschler Building, Cheyenne, Wyoming. Present were Isaac Sutphin and Jeff Pope on behalf of Brook Mine LLC., Andrew Kuhlman and James LaRock on behalf of DEQ, Shannon Anderson and Jill Morrison on behalf of the Powder River Basin Resource Council, Lynn Boomgaarden on behalf of Big Horn Coal, Jay Gilbertz on behalf of Mary Brezik- Fisher, and Brook Collins. Also present for the Council are Jim Ruby, Executive Officer and Joe Girardin, council business coordinator and Ryan Schelhaus from the Attorney General office.

The final hearing in this matter will begin on the 13th of February 2017 at 9:00 a.m. and will continue on the 14th of February. In the event the hearing cannot be completed by the end of the 14th the Council will schedule the conclusion for a later day.

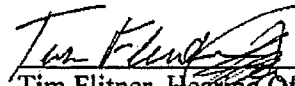

The following schedule is set for this hearing. Any preliminary motions shall be filed no later than February 6, 2017. Responses to the motions shall be filed by February 9th 2017. The hearing on any motions will be heard by the Council on February 13th prior to the final hearing.

The deadline for naming of expert witnesses, sending of any written interrogatories and requests for production is February 6, 2017. Responses to Interrogatories and Requests for Production will be February 10, 2017. The deadline for identification of all exhibits and witnesses to be used or called at the time of trial along with expert disclosures is February 10, 2017. The

deadline for filing any motions to strike, motions in limine etc. is February 10, 2017 and responses shall be filed no later than February 13, 2017 at 8:30 a.m.

The parties may file prehearing memorandum no later than February 10, 2017.

DATED this 2nd day of February, 2017.

**ORDER VACATING CONTESTED CASE HEARING AND SETTING ORAL
ARGUMENT**

Upon review of the recent pleadings filed by Powder River Basin Resource Council, Mary Brezik-Fisher and David Fisher, and Big Horn Coal Company, and upon review of Wyo. Stat. Ann. § 35-11-406(k), I believe the parties need to address the issue of whether there is a proper appeal before the Council at this time necessitating a contested case. As a result, the parties are asked to brief the issue of whether there is a proper appeal before the Council at this time that necessitates a contested case. Because I want to provide the parties time to brief this issue and for the Council to fully consider and decide the issue, the contested case set for February 13 and 14 is vacated.

THEREFORE, the motion hearing and final contested case hearing scheduled for February 13 and 14, 2017 is vacated. Further, the parties have until February 15, 2017, by 5:00 p.m. to file briefs on the issue set forth above. A teleconference before the Council to hear oral arguments on this issue will be held on February 21, 2017, at 1:30 p.m. in Room 1699, 1st Floor West, Herschler Building 122 West 25th St. Cheyenne WY. The parties may participate by phone by providing advance notice to the Council.

SO ORDERED this 7th day of February, 2017.

**RE: Renewed Request for an Informal Conference regarding Big Horn
Coal Company's Written Objections to Brook Mining Co., LLC's
Coal Mining Permit Application, DEQ File No. TFN 6 2-025**

Dear Mr. Wendtland and Mr. Parfitt,

On behalf of Big Horn Coal Company ("Big Horn"), and for the reasons stated in Objector Big Horn Coal Company's Brief Addressing Whether the Environmental Quality Council Presently has Jurisdiction over this Matter, I am renewing Big Horn's previous request for an administrative informal conference pursuant to Wyo. Stat. Ann. § 35-11-406(k) and Wyo. Admin. Code ENV PP Ch. 3 § 3.

The requested conference shall be for the purpose of considering Big Horn's written objections to Brook Mining Company's surface coal mining permit application, DEQ File No. TFN 6 2-025, filed with Mr. Wendtland on January 25, 2017. In accordance with the Rules and Regulations, the primary issues to be addressed at this conference shall include: (1) whether Brook Mine has or can meet its burden of satisfying all requirements for permit approval

pursuant to Wyo. Stat. Ann. § 35-11-406(n) and the related Rules and Regulations; and (2) the merits of Big Horn's technical objections to Brook Mine's permit application, which primarily relate, but are not limited, to hydrologic data and impacts, material testing and data, sloughing, existing subsurface fire activity and related controls, and subsidence.¹ Big Horn staunchly believes these issues can be best addressed, and possibly resolved or narrowed, in the context of an open, candid, informal conference with Big Horn representatives, Brook Mine and its consultants, and the DEQ technicians who reviewed and will take action on Brook Mine's mine and reclamation plans and any accompanying data. Pursuant to Wyo. Admin. Code ENV PP Ch. 3 § 1, Big Horn requests that a record of the conference be made.

Big Horn does not request that the conference be held in the locality of the proposed mining operation and does not request access to the proposed permit area. However, if another interested party requests these accommodations, Big Horn has no objection thereto.

Big Horn requests that the informal conference be held as soon as practicable.

Sincerely,

CROWLEY FLECK PLLP

LYNNE BOOMGAARDEN

¹ A copy of Big Horn's objections to the Brook Mine permit application filed in this matter is attached hereto as **Exhibit A**.

ATTN: Mr. Alan Edwards, Assistant Administrator

**RE: Objections to Proposed Brook Mine Permit Application, Sheridan County,
Wyoming**

Dear Mr. Wendtland,

Big Horn Coal Company (BHCC) writes to provide objections to the Brook Mine permit application.

During the course of our review, we discovered that the information was inconsistent among the locations noted in the public notice. We advised Brook Mine's legal counsel of the inconsistency on December 20, 2016. We are not aware if the information was updated to correct the inconsistency between the locations.

Our objections are based upon what BHCC believes to be the most accurate, up-to-date information and relate primarily to the permit application's lack of adequately addressing hydrologic issues that could significantly affect existing and future water rights, the quantity and quality of surface water and groundwater within and adjacent to BHCC, the potential for coal seam fires to erupt in both the open pit and subsurface openings and the potential for miner safety and environmental harm proposed in the permit Mine Plan. The objections are referenced to text section headings, exhibits and addenda of the permit application Mine and Reclamation Plan.

Objection No. 1 – Mine Plan & Rec Plan Review

Big Horn Coal has reviewed the proposed mine and reclamation plan and is concerned with the general lack of detail contained in the proposed plan. It appears that no sampling, testing or analytical work of any sort has been performed to support the surface and highwall mine designs and plans. It is Big Horn Coal's opinion that excavating in the area, surrounding the Big Horn Mine will create a large safety concern and environmental

liability as the TR-1 trench cut could become inundated with water from the historic backfill of the BHCC spoils of Pit 1 and Pit 2.

BHCC would like to put on record that it is providing written notice of its concerns so Brook Mine and other affected parties have notice and are aware of these issues and that Big Horn Coal is not responsible for any personal, property or environmental damage or other loss due to the disturbance activities associated with the Brook Mine, its affiliated companies or successors in interest.

BHCC has not consented to overlapping permit boundaries nor has it been indemnified of any disturbance related to Brook Mine's proposed activities as it relates to the reclamation obligations and BHCC's reclamation liabilities.

Objection No. 2 – Section MP.4; Exhibit MP.4-1; Section MP.5; Section MP.13; Addendum MP-6

Section MP.4 and Exhibit MP.4-1 provide plans for the development of a highwall mining trench through and the development of highwall mining panels beneath reclaimed backfill of BHCC Pits 1 and 2 adjacent to Goose Creek and the Tongue River in the southeastern portion of the Brook Mine permit area. The trench would penetrate through the bottom of the backfill allowing mining of Carney coal found about 70 feet beneath the backfill. The backfill of the proposed trench area averages about 90 feet thick. The northeast corner of the highwall panel area appears on Exhibit MP.4-1 to be equivalent to the Brook Mine permit boundary, and would be less than 100 feet from the bank of the Tongue River. On Figure MP-6.1-1 of Addendum MP-6, the highwall mining panels are shown even closer to the Tongue River channel, and the reason for the disparity between the figure and Exhibit MP.4-1 is unexplained. BHCC is very concerned over and objects to the permit's disturbance, affected and permit boundaries all being equivalent to the mining panel boundary in this most environmentally sensitive area adjacent to the bank of the Tongue River. The affected area boundary shown on Exhibit MP.4-1 around the other proposed mining panels typically extends well beyond the disturbance boundary for reasons unexplained in the Mine Plan.

Mine Plan Section MP.4, together with all Mine Plan text inclusive of Section MP.13 and Addendum MP-6, are silent on the subject of the special textural and hydrologic characteristics of the proposed southeastern highwall mining area in Sections 15 and 22, T57N, R84W. The area is unique in that the strata overlying the coal to be mined includes a thick layer of unconsolidated, saturated backfill exhibiting shallow groundwater elevations of 20 feet or less below ground surface where existing ground elevations are 3600 feet and lower. The water surface in BHCC's postmining Reservoir 14 in the SESE Sec. 15 is an expression of the groundwater table. The groundwater throughout Pits 1 and 2 is directly connected to and recharged by Goose Creek and the Tongue River, as documented in the Big Horn Mine's Reclamation History, Groundwater Restoration Demonstration (GRD) approved by the WDEQ/LQD as Change No. 9 to Permit 213-T5 in August 2002. The GRD verifies that the Pits 1 and 2 backfill resaturated very rapidly, indicative of unconsolidated, porous material connected to perennial stream recharge sources nearby. Mine Plan Section MP.4 is silent on the subject of managing massive sloughing that may occur in the saturated and nonsaturated backfill of the southeastern highwall mining area as the highwall mining trenches are excavated through the backfill to the base of Carney coal. Section MP-5 of the Mine Plan also fails to present an

alternative water management and treatment plan to be followed should groundwater inflow volumes exceed infrastructure design capacities.

BHCC finds the assessment of potential land subsidence and the remediation plan presented for land subsidence in Addendum MP-6 to be inadequate relative to protecting the value and function of its lands, particularly for protecting the stability of the Tongue River and the quality of shallow groundwater connected to the river. Addendum MP-6 does not absolutely discount the possibility of land subsidence above the highwall miner holes, nor does it provide a plan for the discontinuation of any southeastern area highwall mining should subsidence occur in the lowlands contiguous to Tongue River or Goose Creek. The environmental implications of subsidence developing adjacent to Tongue River and Goose Creek are so severe as to warrant, at a minimum, a permit commitment to temporarily or permanently cease all mining throughout all of the southeastern highway mining area should any subsidence develop in any of the area at any time. The permit's plan for "backfilling will commence within 12 months of a subsidence location being identified if self-healing is not providing sufficient remediation" (Section MP-6.4, Addendum MP-6) is environmentally unacceptable for the southeastern highwall mining area because: 1) the stability and alignment of Goose Creek and Tongue River could be jeopardized should subsidence occur, and; 2) any groundwater quality impacts associated with underground coal fires developing in mine openings would have direct and essentially immediate access to Goose Creek and Tongue River via the shallow groundwater table.

The subsidence control plan presented in Addendum MP-6 is inadequate. It appears that no analytical work of any sort (sampling, material testing, etc.) has been performed in support of the highwall mining design presented in the mine plan. Additionally, it also appears that no geotechnical work of any sort has been performed. Addendum MP-6 discusses general assumptions for highwall mining penetration depths, entry widths, cutting heights and support pillars. This information is presented somewhat anecdotally and in the case of the support pillars, it states that "Support pillars will be designed to have a width equal to or exceeding the maximum extraction thickness anticipated in a highwall mining hole based on the mine's geologic model. This width-to-height ratio of at least 1:1 results in pillar stability factors that exceed recommended values suggested by National Institute for Occupational Safety and Health's (NIOSH) ARMPS-HWM stability program for the overburden thicknesses expected. Pillar dimension will also be in accordance with Brook Mine's Ground Control Plan approved by MSHA."

No material strength data (coal strength, overburden strength, interburden strength, etc.) is provided in the mine plan document. BHCC suspects that no material strength information has been gathered or determined. Can the NIOSH stability factors actually be achieved? This is unknown at this point as no definitive geotechnical and material strength data has been presented in the mine plan. The coals present in this area are of a younger age. Younger age coals have much weaker strengths than older age, deeper coals and it is quite possible that the safety and stability factors needed to safely and effectively execute the highwall mining approach presented in the mine plan cannot be achieved. BHCC insists that further analysis be performed to definitively prove that the web and barrier pillars dimensions are appropriate and that they will meet NIOSH's minimum stability factor of 1.3.

Very little highwall mining has been performed in Wyoming. Highwall mining has been performed relatively recently at the Bridger Mine, which is located in Southwest Wyoming.

While the exact details are unknown, BHCC is aware of at least one "cascading pillar failure" at that operation and fortunately, there were no injuries. It is suspected that this failure was caused by improper pillar layout and design. BHCC is concerned that the anecdotal mine design presented in this document is inadequate and must be performed with proper analytical data.

Objection No. 3 – Section MP.5.9; Section MP.6.2; Addendum MP-3; Section MP.8

The groundwater model of Addendum MP-3 was improperly constructed and executed because the model does not recognize the unique textural and hydraulic characteristics of saturated backfill in BHCC's Pits 1 and 2, but instead simulates the backfill in the same fashion as native overburden strata (see Section 4.0 of Addendum MP-3). Section 2.5.1 of Addendum MP-3 states "no site-specific hydraulic conductivity information is available for the over/interburden (model) layers". In fact, hydraulic conductivity data are available for the backfill from former monitor wells in the Pit 1 and Pit 2 area and for the Plachek Pit backfill. That data are provided in the GRD referenced under Objection No. 1 above. Hydraulic conductivity values assigned to the spoils together with all other "overburden" strata in the model are very small (less than one tenth) relative to those shown for backfill in the GRD. The groundwater model ignores determination of the spatial extent of drawdown in the water table of Pit 1 and Pit 2 backfill that is connected to the water table in Tongue River and Goose Creek alluvium, which in turn is supplied by flows in both streams. The text of Section MP.6.2.3 states "Drawdowns of the overburden were not modeled and only isolated sands where encountered are expected to be affected".

Section 4.9 and Figure 4.9-11 of Addendum MP-3 shows where the groundwater model was used to predict water table drawdown in Tongue River valley alluvium at "alluvial target" points distributed over nearly a six-mile reach of the valley floor. Section 4.9 states that "the maximum impact to the Tongue River alluvium is conservatively estimated to reach 2.5 feet of drawdown near the river". Addendum MP-3 and Section MP.6.2 provide no description or drawing of the spatial distribution of drawdown during mining in BHCC's saturated backfill or in the alluvium of Tongue River and Goose Creek that is hydraulically connected to the backfill. Neither does the groundwater model explore potential permanent groundwater elevation changes associated with the highwall mining panels acting as drains to the backfill and alluvial water table via the highwall trench pits. Water table drawdown approaching 2.5 feet in the alluvium of Tongue River valley over a valley distance of nearly six miles would in fact represent a very large volume water loss that would likely cause stream flow losses.

The groundwater model of Addendum MP-3 fails to report groundwater inflow rates to any of the proposed mine excavations. Section MP.8 of the Mine Plan states "It is estimated that the total water use will be approximately 400 million gallons per year." This is equivalent to an average daily use rate of 760 gallons per minute, about 3.36 acre-feet per day, or about 1,226 acre-feet per year. The Mine Plan does not identify the specific source(s) of the water beyond mentioning that "Industrial water will be obtained from groundwater wells or from water collected in sediment and flood control reservoirs". The groundwater model of Addendum MP-3 does not include the effects of withdrawing any groundwater from wells for industrial or other uses, nor does it include the effects of dewatering wells mentioned in Section MP.5.9. In short, the Mine Plan is devoid of a hydrologic budget identifying specific groundwater sources, the quantity of industrial

water projected to be available from flood control reservoirs and sediment ponds, and the determination of what would remain of groundwater and surface water supplies while supplying the industrial water needs. BHCC is concerned that the value of its surface estate and future options for developing its surface estate could be marginalized by such a large water use demand, especially considering that water demands at Wyoming coal mines are primarily consumptive.

Objection No. 4 – Section MP.11; Addendum MP-5

The fire control plan referenced in Section MP.11 and presented in Addendum MP-5 describes measures to be taken to prevent and control fires in the mine pits, fires in the mine's processing and shop facilities, equipment fires and rangeland fires. BHCC objects, however to the Mine Plan and Addendum MP-5 not providing plans to control and extinguish new subsurface coal fires that may develop or existing subsurface coal fires that may become rekindled or enlarged as a result of the highwall mining panels that will be opened outboard of the highwall trench openings.

Attachment 1 provided with this Objection No. 4 is a drawing showing the approximate extent of underground coal mine fires in the area of proposed highwall mining in Sections 10 and 15, T57N, R84W, as reported by the U.S. Geological Survey in 1980. The fires in this particular area originated with mining of the Monarch coal. This and other nearby historic underground mines have long been known to exhibit numerous subsidence features and underground coal mine fires, and in the late 1980s BHCC received approval from the WDEQ/LQD to permanently place nearly 10 million bank cubic yards of overburden over the area shown on Attachment 1 in an attempt to reclaim the subsidence and control the fire. That unique reclamation feature is known as the Pit 3 Subsidence Dump in Big Horn Mine's reclamation history. The proposed highwall mining will develop mine openings in the Carney and Masters coal seams beneath the Monarch seam in areas that are known to still exhibit evidence of underground coal fires. Plumes of steam and smoke have been observed again over the general area of Sections 10 and 15 this winter of 2016-2017. These observations indicate that, in places, the perimeter of the historic subsurface coal seam fires has expanded notable distances from the referenced 1980 boundary delineation.

The subsidence control plan of Addendum MP-6 does little to guarantee the long-term protection of BHCC's surface estate especially where highwall mining panels will be driven beneath underground coal mine fires having a long history of activity. Section MP-6.2 of Addendum MP-6 provides numerical calculations for subsidence chimney heights, but there is no investigation of the potential that the historic mine fires may have compromised the structural integrity of strata underlying the fires and overlying the coals targeted for highwall panel mining (the interburden), leaving the interburden more prone to subside than normal. BHCC is particularly concerned and objects to highwall mining beneath or adjacent to pre-existing underground mine fires because of the potential for oxygen and water to be transmitted from the highwall mining openings to "hotspots" in the seams already burning via highwall trenches or via fractured or subsided interburden above the panel openings. BHCC strongly disagrees with the legitimacy of the plan stated in Section MP-6.4 of Addendum MP-6 which states "Backfilling will also be performed if it is determined that the introduction of water and oxygen could contribute to spontaneous ignition of the remaining coal not extracted from the highwall mining operations". BHCC

contends it to be common knowledge in the mining industry that oxygen and water are key catalysts in causing spontaneous combustion in coal, whether the coal be in mine openings or in stockpiles. BHCC also believes that the introduction of additional water and air to a coal seam already on fire is especially problematic.

Section MP-6.3 of Addendum MP-6 commits to maintaining highwall mining mapping and subsidence documentation in a subsidence report that will be available for inspection. BHCC objects to the Mine Plan not committing to freely submitting the highwall mining mapping and subsidence documentation report to all owners of surface estate within the Brook Mine permit area. BHCC also objects to the fact that the Subsidence Monitoring and Assessment reporting of Section MP-6.3 does not include mapping, photographing and describing all evidence of surface or underground coal fires occurring within the Brook Mine permit area whenever such evidence becomes available throughout the life of the mining and post-mining periods.

Objection No. 5 – Section MP.1.3; Exhibit MP.1-1

The mine plan on Page MP-5, identifies the “disturbance boundary includes all lands that will be physically and directly disturbed during mining.” Exhibit MP.1-1 shows the disturbance boundary as a dashed orange symbol that outlines an entire pink hatched polygon, identified as “DISTURBANCE FOR YEAR 2016,” located in Sections 15, 21, 22 and 27 of Township 57 North, Range 84 West.

Within the pink hatched polygon, there are existing assets to Big Horn Coal Company. These assets include a rail spur, water tank, pump house, access roads, fences and land owned by BHCC. Also within the pink hatch polygon is the mainline of the Burlington Northern Railroad and associated lands owned by Burlington Northern.

Based on the definition of Disturbance Boundary as indicated on page MP-5, does Brook Mine indeed have the rights to physically and directly disturb these lands within the pink hatched polygon? From the public record, BHCC has not been able to determine whether Brook Mine has secured surface owner consent from all surface owners, including the railroad, for these activities

Objection No. 6 – Section MP.1.5

The mine plan states on Pages MP-5 and continue onto page MP-6 that “Coal will either be temporarily stored in the pit or directly hauled off site.”

There is no mention in the permit as to where the coal will be hauled off site. Additionally there is no known agreement with the County of Sheridan, indicating approval to haul mineral across county roads.

Objection No. 7 – Section MP.1.9

The mine plan states on Pages MP-7 that “The Brook Mine will operate in conjunction with Taylor Quarry (Permit No. SP-757)... The Mine will work with Taylor Quarry to minimize impacts on Taylor Quarry’s operation.”

The following paragraph states "The Brook Mine will not obstruct Big Horn Coal's (Permit 231-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1.

To remain consistent with the statements made in regards to the Taylor Quarry, Big Horn Coal requests that the paragraph referencing Big Horn to be replaced and restated as follows:

"The Brook Mine will operate in conjunction with the Big Horn Mine and that the Brook Mine will work with Big Horn Coal to minimize impacts to Big Horn Coal operations. Specifically, Brook Mine will not obstruct Big Horn Coal's (Permit 213-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1."

Big Horn Coal requests that the text be updated in the previous paragraph to reference the correct permit number for Big Horn Coal Company as (Permit 213-T8).

Objection No. 8 – Section MP.3.1, Section MP.3.1.3 – Roads; Exhibit MP.3-1

As stated in the mine plan on Page MP-11, "Primary roads are any road used for transporting mineral or spoil, or frequently used for access or other purposes for a period in excess of six months, or roads to be retained for postmining use."

WDQ/LQD Rules and Regulations (R&R) Chapter 4, Section 2(j)(vii):

Primary roads.

(A) Certification. The construction or reconstruction of primary roads shall be certified in a report to the Administrator by a registered professional engineer. The report shall indicate that the primary road has been constructed or reconstructed as designed and in accordance with the approved plan. The report shall be available for review at the mine site within 30 days following the completion of construction of each primary road.

Mine plan Exhibit MP.3-1, titled Transportation Network identifies proposed primary haulroads as a solid black line, for the use of transporting mineral or spoil. Yet, there are no haulroads identified in the SE quarter of Section 15, Sections 21, 22 or 27. If the Brook Mine plans to haul mineral or spoil materials from the proposed Trench Cut (TR-1), there should be indication of a primary haul road leaving TR-1, accompanied by a certification of the road design. Unless there are no plans of transporting mineral or spoil from the TR-1 area.

Objection No. 9 – Section MP.4.2.3 – Stockpiles; Exhibit MP.4-3

The mine plan states on Page MP-16, "Stockpiles will not be constructed on unsuitable backfill."

Mine plan Exhibit MP.4-3, Stockpile Locations identifies Topsoil Stockpile TS-1B proposed location within an area known as the Placheck Pit. This area was mined by Big Horn Coal from 1956 through 1963. It is Big Horn Coal's understanding that the proposed area beneath TS-1B is indeed unsuitable material and that topsoil should not be placed in the area as proposed on Exhibit MP.4-3. Additionally, Big Horn Coal is not aware of a surface owner consent document between Brook Mining Company and the Burlington Northern Railroad that would allow the crossing of the mainline with loaded haul trucks.

Objection No. 10 – Section MP.6.1; Exhibit MP.7-1

Exhibit MP.7-1 represents the operational Surface Water and Groundwater Monitoring Program. There are only two downstream surface water monitoring sites, identified as Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir. The text on page MP-41 of the Mine Plan states "However, the Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir will be disturbed by facilities disturbance."

Big Horn Coal believes there is inadequate downstream monitoring in the proposed plan. Upon disturbing of Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir, there will be no sites downstream of the Brook Mine to collect adequate surface and groundwater data to prove that there are no off site environmental impacts from the proposed operation.

Objection No. 11 - Addendum MP-2, Exhibit MP-2

The proposed Sediment Pond SP-8 is located within the current postmine approved Reservoir 14 constructed by BHCC. The bottom elevation of Reservoir 14 is currently at 3575 with a peak elevation at 3589. Sediment Pond SP-8 bottom elevation is proposed at 3585 with a high water elevation proposed at 3590. It is noted below the area capacity table on Exhibit 13, "1. Pond is entirely incised. No Spillway hydraulics are provided."

These elevations lead BHCC to believe the plan for construction of SP-8 will require Reservoir 14 to be completely backfilled prior to construction of SP-8. BHCC requests that the reconstruction and the water quality within Reservoir 14 be restored to pre-mining conditions before final bond release is allowed.

Objection No. 12 – Exhibit MP.4-1; Exhibit MP.4-2; Exhibit MP.4-5; Exhibit RP.5-1

The proposed mine plan indicates that topsoil and overburden removal will occur upon the BHCC Property and within the TR-1 area in years 1 and 2 of operation. Exhibit MP.4-1 shows coal removal to occur over the same first two years of operation. Exhibit MP.4-5 shows the overburden backfill sequence within TR-1 will occur in year 2. Exhibit RP.5-1 shows the topsoil replacement sequence within the BHCC Property occurring in years 12-16.

BHCC objects to this timeline of topsoil replacement upon its property. The BHCC property is the first to be disturbed and the last to be reclaimed. BHCC asks the question as to why every other proposed disturbance area is backfilled and topsoiled within a 2 to 3 year time frame except around the BHCC facilities area. The topsoil replacement timeframe is unacceptable and not contemporaneous in accordance with the Surface Mining Control and Reclamation Act, (SMCRA) and it is requested that the final

reclamation around the BHCC Property be within the 2 to 3 year time frame, similar to all other areas around the mine.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 14 – Section MP.4.4.1

It is a well-known fact within the mining industry that the term “Reserves” connotes that the mineral being extracted can be done so economically. BHCC opines that the mining approach presented in the mine plan cannot be done economically. Based on our internal

knowledge; the operating cost for a contractor to perform highwall mining is in the \$8/Ton to \$12/Ton range, which is very close to the domestic spot price for this type of coal. By the time the other costs for the surface mining to develop the highwall mining, transportation, G&A, etc. are taken into consideration, this operation appears to be completely uneconomical.

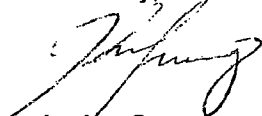

The market for this coal is unclear. The two closest coal mines, Decker and Spring Creek, serve the domestic and international market. Port capacity to the international market is constrained and it is unlikely that Brook Mine will secure access. Domestic demand has been in decline and is significantly oversupplied. Without a definitive market, the Brook Mine is at risk of commencing operations, producing product it cannot sell economically, and reclamation obligations that it cannot fund.

Objection No. 15 – Section MP.15

Objection No. 4 above introduces the fact that the underground mine fires in this area are still burning and have expanded. Section MP.15 does not, in any way, address that the burned areas have expanded. A surface mine excavation that comes in contact with a historic mine fire could be catastrophic in many ways, including: impacting the safety of mine workers, damage to equipment, wildfire initiation, etc. BHCC believes this mine plan has not adequately addressed surface mining activities that will occur near underground mines and insists that the Brook Mine operators must perform the necessary testing and analysis to prove that the proposed mine plan will not be impacted by historic mine fires. Specifically, attachment 1 provided with Objection No. 3 above shows that trench TR-2 is planned very near an area that was burning and is likely still burning. Given that the burned area has likely expanded, this area should not be disturbed at all.

In conclusion, Big Horn Coal Company feels strongly that the Brook Mine permit application should not be approved or deemed technically complete. The mine and reclamation plan lack a significant amount of detail that is required for a technical completeness determination, as stated in the above mentioned objections.

Sincerely,

Jordan Sweeney

General Manager
Big Horn Coal Company

ATTORNEYS FOR OBJECTORS
BIG HORN COAL COMPANY

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION

)

)

)

)

Docket No. _____

TFN 6 2-025

**OBJECTOR BIG HORN COAL COMPANY'S PETITION FOR A
HEARING BEFORE THE ENVIRONMENTAL QUALITY COUNCIL**

Big Horn Coal Company ("Big Horn"), by and through it undersigned counsel, Crowley Fleck PLLP, hereby submits this Petition for Hearing before the Environmental Quality Council (the "Council").

This matter arises from the coal mining permit application of Brook Mining Company, LLC ("Brook Mine") and the numerous objections related thereto. First and foremost, Big Horn asserts that it requested and has renewed its request for an informal conference in this matter, and that DEQ should reconsider Big Horn's and

the other objectors' requests for an informal conference.¹ In the event that DEQ confirms its decision to deny the requests for an informal conference, Big Horn now requests a contested case hearing before the Council regarding Brook Mine's permit application and Big Horn's objections thereto pursuant to Wyo. Stat. Ann. § 35-11-112(a)(iv),(c)(ii); -406(k),(p).

Facts

1. Big Horn Coal Company is a Wyoming corporation, active and in good standing, with its principal office located at 110980 South Jordan Gateway, South Jordan, Utah. Big Horn is wholly owned by LHR Coal, LLC and LHR Coal, LLC is wholly owned by Lighthouse Resources, Inc.

2. Brook Mining Company, LLC is a Wyoming limited liability company with its principal office located at 1101 Sugarview Drive, Ste. 201, Sheridan, WY.

3. Brook Mine has submitted an application for a coal mining permit from the Land Quality Division of the Department of Environmental Quality for the State of Wyoming, DEQ File No. TFN 6 2-025 (the "permit application").

¹ Big Horn asserts that numerous requests for an informal conference were made during the period for filing objections to Brook Mine's permit application pursuant to Wyo. Stat. Ann. § 35-11-406(k). In furtherance of its initial request and given the current, unique procedural posture of this matter, Big Horn has also formally renewed its request for an administrative, informal conference, attached hereto as **Exhibit A**. This request for a contested case hearing before the Council is contingent on a confirmed denial of an opportunity for informal conference and to ensure that the objections of Big Horn are properly presented and considered.

4. According to the public notice, the coal mining permit area will be located in: Sections 10, 11, 12, 13, 14 and 15 of Township 57N, Range 85W and Sections 7, 8, 9, 10, 15, 17, 18, 20, 21, 22, and 27 of Township 57N, Range 84W Sheridan County, Wyoming (the “permit area”).

5. Big Horn is the owner of real property interests in the permit area that will be negatively affected by proposed mining operations.

6. Big Horn has existing rights and reclamation obligations pursuant to its existing Mine Permit No. 213-T8, which lies within the boundaries of Brook Mine’s proposed mine permit area.

7. Pursuant to the Public Notice of Brook Mining Co., LLC Permit Application, written objections to the proposed mining operation were to be received by the Administrator of the Land Quality Division, Department of Environmental Quality before the close of business on January 27, 2017. *See* EQC Docket No. 17-4801.

8. Big Horn, along with several other parties, timely filed written objections to the proposed mining operation citing numerous concerns, including but not limited to, highly technical issues regarding the accuracy and completeness of Brook Mine’s mine and reclamation plans due to a lack of testing, data, and analysis to support present conclusions on hydrologic impacts, material strength, sloughing, and dangers related to existing subsurface fire activity and subsidence. The objections primarily address concerns pertaining to human health, safety and

the likely environmental impacts of the proposed mining operation. *See* EQC Docket No. 17-4801.

Request for Hearing

Big Horn now requests that the Environmental Quality Council schedule and hold a contested case hearing in this matter, in accordance with the Wyoming Administrative Procedure Act, whereby the Council will make findings of fact and issue a determination on the permit application.

Issues to be Determined at the Hearing

1. Whether Brook Mine has satisfied its obligations to ensure that the permit application is in compliance with Wyoming's Environmental Quality Act and all applicable state laws, and that Brook Mine has demonstrated that it has or can meet all requirements set forth in Wyo. Stat. Ann. § 35-11-406(n).
2. Whether Brook Mine has met and satisfied all conditions and requirements for submission and approval of its permit application, mining plan and reclamation plan found in the Environmental Quality Act and the Rules and Regulations of the Wyoming Department of Environmental Quality, including but not limited to those from Wyo. Admin. Code ENV LQD Ch. 2 and Ch. 12.

WHEREFORE, Big Horn hereby requests that the Environmental Quality Council schedule and hold a contested case hearing in this matter whereby:

1. The Council shall issue findings of fact and a decision on the permit application within sixty (60) days after the final hearing. Wyo. Stat. Ann. § 35-11-406(p).

2. The Director of the Department of Environmental Quality shall issue or deny the permit within fifteen (15) days of the Council's findings and decision. *Id.*
3. The parties shall be afforded right of judicial review from any action resulting from this hearing as provided in the Wyoming Administrative Procedure Act. *Id.* at -406(k).

DATED: February 15, 2017.

**RE: Renewed Request for an Informal Conference regarding Big Horn
Coal Company's Written Objections to Brook Mining Co., LLC's
Coal Mining Permit Application, DEQ File No. TFN 6 2-025**

Dear Mr. Wendtland and Mr. Parfitt,

On behalf of Big Horn Coal Company ("Big Horn"), and for the reasons stated in Objector Big Horn Coal Company's Brief Addressing Whether the Environmental Quality Council Presently has Jurisdiction over this Matter, I am renewing Big Horn's previous request for an administrative informal conference pursuant to Wyo. Stat. Ann. § 35-11-406(k) and Wyo. Admin. Code ENV PP Ch. 3 § 3.

The requested conference shall be for the purpose of considering Big Horn's written objections to Brook Mining Company's surface coal mining permit application, DEQ File No. TFN 6 2-025, filed with Mr. Wendtland on January 25, 2017. In accordance with the Rules and Regulations, the primary issues to be addressed at this conference shall include: (1) whether Brook Mine has or can meet its burden of satisfying all requirements for permit approval

pursuant to Wyo. Stat. Ann. § 35-11-406(n) and the related Rules and Regulations; and (2) the merits of Big Horn's technical objections to Brook Mine's permit application, which primarily relate, but are not limited, to hydrologic data and impacts, material testing and data, sloughing, existing subsurface fire activity and related controls, and subsidence.¹ Big Horn staunchly believes these issues can be best addressed, and possibly resolved or narrowed, in the context of an open, candid, informal conference with Big Horn representatives, Brook Mine and its consultants, and the DEQ technicians who reviewed and will take action on Brook Mine's mine and reclamation plans and any accompanying data. Pursuant to Wyo. Admin. Code ENV PP Ch. 3 § 1, Big Horn requests that a record of the conference be made.

Big Horn does not request that the conference be held in the locality of the proposed mining operation and does not request access to the proposed permit area. However, if another interested party requests these accommodations, Big Horn has no objection thereto.

Big Horn requests that the informal conference be held as soon as practicable.

Sincerely,

CROWLEY FLECK PLLP

LYNNE BOOMGAARDEN

¹ A copy of Big Horn's objections to the Brook Mine permit application filed in this matter is attached hereto as **Exhibit A**.

**RE: Objections to Proposed Brook Mine Permit Application, Sheridan County,
Wyoming**

Dear Mr. Wendtland,

Big Horn Coal Company (BHCC) writes to provide objections to the Brook Mine permit application.

During the course of our review, we discovered that the information was inconsistent among the locations noted in the public notice. We advised Brook Mine's legal counsel of the inconsistency on December 20, 2016. We are not aware if the information was updated to correct the inconsistency between the locations.

Our objections are based upon what BHCC believes to be the most accurate, up-to-date information and relate primarily to the permit application's lack of adequately addressing hydrologic issues that could significantly affect existing and future water rights, the quantity and quality of surface water and groundwater within and adjacent to BHCC, the potential for coal seam fires to erupt in both the open pit and subsurface openings and the potential for miner safety and environmental harm proposed in the permit Mine Plan. The objections are referenced to text section headings, exhibits and addenda of the permit application Mine and Reclamation Plan.

Objection No. 1 – Mine Plan & Rec Plan Review

Big Horn Coal has reviewed the proposed mine and reclamation plan and is concerned with the general lack of detail contained in the proposed plan. It appears that no sampling, testing or analytical work of any sort has been performed to support the surface and highwall mine designs and plans. It is Big Horn Coal's opinion that excavating in the area, surrounding the Big Horn Mine will create a large safety concern and environmental

liability as the TR-1 trench cut could become inundated with water from the historic backfill of the BHCC spoils of Pit 1 and Pit 2.

BHCC would like to put on record that it is providing written notice of its concerns so Brook Mine and other affected parties have notice and are aware of these issues and that Big Horn Coal is not responsible for any personal, property or environmental damage or other loss due to the disturbance activities associated with the Brook Mine, its affiliated companies or successors in interest.

BHCC has not consented to overlapping permit boundaries nor has it been indemnified of any disturbance related to Brook Mine's proposed activities as it relates to the reclamation obligations and BHCC's reclamation liabilities.

Objection No. 2 – Section MP.4; Exhibit MP.4-1; Section MP.5; Section MP.13; Addendum MP-6

Section MP.4 and Exhibit MP.4-1 provide plans for the development of a highwall mining trench through and the development of highwall mining panels beneath reclaimed backfill of BHCC Pits 1 and 2 adjacent to Goose Creek and the Tongue River in the southeastern portion of the Brook Mine permit area. The trench would penetrate through the bottom of the backfill allowing mining of Carney coal found about 70 feet beneath the backfill. The backfill of the proposed trench area averages about 90 feet thick. The northeast corner of the highwall panel area appears on Exhibit MP.4-1 to be equivalent to the Brook Mine permit boundary, and would be less than 100 feet from the bank of the Tongue River. On Figure MP-6.1-1 of Addendum MP-6, the highwall mining panels are shown even closer to the Tongue River channel, and the reason for the disparity between the figure and Exhibit MP.4-1 is unexplained. BHCC is very concerned over and objects to the permit's disturbance, affected and permit boundaries all being equivalent to the mining panel boundary in this most environmentally sensitive area adjacent to the bank of the Tongue River. The affected area boundary shown on Exhibit MP.4-1 around the other proposed mining panels typically extends well beyond the disturbance boundary for reasons unexplained in the Mine Plan.

Mine Plan Section MP.4, together with all Mine Plan text inclusive of Section MP.13 and Addendum MP-6, are silent on the subject of the special textural and hydrologic characteristics of the proposed southeastern highwall mining area in Sections 15 and 22, T57N, R84W. The area is unique in that the strata overlying the coal to be mined includes a thick layer of unconsolidated, saturated backfill exhibiting shallow groundwater elevations of 20 feet or less below ground surface where existing ground elevations are 3600 feet and lower. The water surface in BHCC's postmining Reservoir 14 in the SESE Sec. 15 is an expression of the groundwater table. The groundwater throughout Pits 1 and 2 is directly connected to and recharged by Goose Creek and the Tongue River, as documented in the Big Horn Mine's Reclamation History, Groundwater Restoration Demonstration (GRD) approved by the WDEQ/LQD as Change No. 9 to Permit 213-T5 in August 2002. The GRD verifies that the Pits 1 and 2 backfill resaturated very rapidly, indicative of unconsolidated, porous material connected to perennial stream recharge sources nearby. Mine Plan Section MP.4 is silent on the subject of managing massive sloughing that may occur in the saturated and nonsaturated backfill of the southeastern highwall mining area as the highwall mining trenches are excavated through the backfill to the base of Carney coal. Section MP-5 of the Mine Plan also fails to present an

alternative water management and treatment plan to be followed should groundwater inflow volumes exceed infrastructure design capacities.

BHCC finds the assessment of potential land subsidence and the remediation plan presented for land subsidence in Addendum MP-6 to be inadequate relative to protecting the value and function of its lands, particularly for protecting the stability of the Tongue River and the quality of shallow groundwater connected to the river. Addendum MP-6 does not absolutely discount the possibility of land subsidence above the highwall miner holes, nor does it provide a plan for the discontinuation of any southeastern area highwall mining should subsidence occur in the lowlands contiguous to Tongue River or Goose Creek. The environmental implications of subsidence developing adjacent to Tongue River and Goose Creek are so severe as to warrant, at a minimum, a permit commitment to temporarily or permanently cease all mining throughout all of the southeastern highway mining area should any subsidence develop in any of the area at any time. The permit's plan for "backfilling will commence within 12 months of a subsidence location being identified if self-healing is not providing sufficient remediation" (Section MP-6.4, Addendum MP-6) is environmentally unacceptable for the southeastern highwall mining area because: 1) the stability and alignment of Goose Creek and Tongue River could be jeopardized should subsidence occur, and; 2) any groundwater quality impacts associated with underground coal fires developing in mine openings would have direct and essentially immediate access to Goose Creek and Tongue River via the shallow groundwater table.

The subsidence control plan presented in Addendum MP-6 is inadequate. It appears that no analytical work of any sort (sampling, material testing, etc.) has been performed in support of the highwall mining design presented in the mine plan. Additionally, it also appears that no geotechnical work of any sort has been performed. Addendum MP-6 discusses general assumptions for highwall mining penetration depths, entry widths, cutting heights and support pillars. This information is presented somewhat anecdotally and in the case of the support pillars, it states that "Support pillars will be designed to have a width equal to or exceeding the maximum extraction thickness anticipated in a highwall mining hole based on the mine's geologic model. This width-to-height ratio of at least 1:1 results in pillar stability factors that exceed recommended values suggested by National Institute for Occupational Safety and Health's (NIOSH) ARMPs-HWM stability program for the overburden thicknesses expected. Pillar dimension will also be in accordance with Brook Mine's Ground Control Plan approved by MSHA."

No material strength data (coal strength, overburden strength, interburden strength, etc.) is provided in the mine plan document. BHCC suspects that no material strength information has been gathered or determined. Can the NIOSH stability factors actually be achieved? This is unknown at this point as no definitive geotechnical and material strength data has been presented in the mine plan. The coals present in this area are of a younger age. Younger age coals have much weaker strengths than older age, deeper coals and it is quite possible that the safety and stability factors needed to safely and effectively execute the highwall mining approach presented in the mine plan cannot be achieved. BHCC insists that further analysis be performed to definitively prove that the web and barrier pillars dimensions are appropriate and that they will meet NIOSH's minimum stability factor of 1.3.

Very little highwall mining has been performed in Wyoming. Highwall mining has been performed relatively recently at the Bridger Mine, which is located in Southwest Wyoming.

While the exact details are unknown, BHCC is aware of at least one "cascading pillar failure" at that operation and fortunately, there were no injuries. It is suspected that this failure was caused by improper pillar layout and design. BHCC is concerned that the anecdotal mine design presented in this document is inadequate and must be performed with proper analytical data.

Objection No. 3 – Section MP.5.9; Section MP.6.2; Addendum MP-3; Section MP.8

The groundwater model of Addendum MP-3 was improperly constructed and executed because the model does not recognize the unique textural and hydraulic characteristics of saturated backfill in BHCC's Pits 1 and 2, but instead simulates the backfill in the same fashion as native overburden strata (see Section 4.0 of Addendum MP-3). Section 2.5.1 of Addendum MP-3 states "no site-specific hydraulic conductivity information is available for the over/interburden (model) layers". In fact, hydraulic conductivity data are available for the backfill from former monitor wells in the Pit 1 and Pit 2 area and for the Plachek Pit backfill. That data are provided in the GRD referenced under Objection No. 1 above. Hydraulic conductivity values assigned to the spoils together with all other "overburden" strata in the model are very small (less than one tenth) relative to those shown for backfill in the GRD. The groundwater model ignores determination of the spatial extent of drawdown in the water table of Pit 1 and Pit 2 backfill that is connected to the water table in Tongue River and Goose Creek alluvium, which in turn is supplied by flows in both streams. The text of Section MP.6.2.3 states "Drawdowns of the overburden were not modeled and only isolated sands where encountered are expected to be affected".

Section 4.9 and Figure 4.9-11 of Addendum MP-3 shows where the groundwater model was used to predict water table drawdown in Tongue River valley alluvium at "alluvial target" points distributed over nearly a six-mile reach of the valley floor. Section 4.9 states that "the maximum impact to the Tongue River alluvium is conservatively estimated to reach 2.5 feet of drawdown near the river". Addendum MP-3 and Section MP.6.2 provide no description or drawing of the spatial distribution of drawdown during mining in BHCC's saturated backfill or in the alluvium of Tongue River and Goose Creek that is hydraulically connected to the backfill. Neither does the groundwater model explore potential permanent groundwater elevation changes associated with the highwall mining panels acting as drains to the backfill and alluvial water table via the highwall trench pits. Water table drawdown approaching 2.5 feet in the alluvium of Tongue River valley over a valley distance of nearly six miles would in fact represent a very large volume water loss that would likely cause stream flow losses.

The groundwater model of Addendum MP-3 fails to report groundwater inflow rates to any of the proposed mine excavations. Section MP.8 of the Mine Plan states "It is estimated that the total water use will be approximately 400 million gallons per year." This is equivalent to an average daily use rate of 760 gallons per minute, about 3.36 acre-feet per day, or about 1,226 acre-feet per year. The Mine Plan does not identify the specific source(s) of the water beyond mentioning that "Industrial water will be obtained from groundwater wells or from water collected in sediment and flood control reservoirs". The groundwater model of Addendum MP-3 does not include the effects of withdrawing any groundwater from wells for industrial or other uses, nor does it include the effects of dewatering wells mentioned in Section MP.5.9. In short, the Mine Plan is devoid of a hydrologic budget identifying specific groundwater sources, the quantity of industrial

water projected to be available from flood control reservoirs and sediment ponds, and the determination of what would remain of groundwater and surface water supplies while supplying the industrial water needs. BHCC is concerned that the value of its surface estate and future options for developing its surface estate could be marginalized by such a large water use demand, especially considering that water demands at Wyoming coal mines are primarily consumptive.

Objection No. 4 – Section MP.11; Addendum MP-5

The fire control plan referenced in Section MP.11 and presented in Addendum MP-5 describes measures to be taken to prevent and control fires in the mine pits, fires in the mine's processing and shop facilities, equipment fires and rangeland fires. BHCC objects, however to the Mine Plan and Addendum MP-5 not providing plans to control and extinguish new subsurface coal fires that may develop or existing subsurface coal fires that may become rekindled or enlarged as a result of the highwall mining panels that will be opened outboard of the highwall trench openings.

Attachment 1 provided with this Objection No. 4 is a drawing showing the approximate extent of underground coal mine fires in the area of proposed highwall mining in Sections 10 and 15, T57N, R84W, as reported by the U.S. Geological Survey in 1980. The fires in this particular area originated with mining of the Monarch coal. This and other nearby historic underground mines have long been known to exhibit numerous subsidence features and underground coal mine fires, and in the late 1980s BHCC received approval from the WDEQ/LQD to permanently place nearly 10 million bank cubic yards of overburden over the area shown on Attachment 1 in an attempt to reclaim the subsidence and control the fire. That unique reclamation feature is known as the Pit 3 Subsidence Dump in Big Horn Mine's reclamation history. The proposed highwall mining will develop mine openings in the Carney and Masters coal seams beneath the Monarch seam in areas that are known to still exhibit evidence of underground coal fires. Plumes of steam and smoke have been observed again over the general area of Sections 10 and 15 this winter of 2016-2017. These observations indicate that, in places, the perimeter of the historic subsurface coal seam fires has expanded notable distances from the referenced 1980 boundary delineation.

The subsidence control plan of Addendum MP-6 does little to guarantee the long-term protection of BHCC's surface estate especially where highwall mining panels will be driven beneath underground coal mine fires having a long history of activity. Section MP-6.2 of Addendum MP-6 provides numerical calculations for subsidence chimney heights, but there is no investigation of the potential that the historic mine fires may have compromised the structural integrity of strata underlying the fires and overlying the coals targeted for highwall panel mining (the interburden), leaving the interburden more prone to subside than normal. BHCC is particularly concerned and objects to highwall mining beneath or adjacent to pre-existing underground mine fires because of the potential for oxygen and water to be transmitted from the highwall mining openings to "hotspots" in the seams already burning via highwall trenches or via fractured or subsided interburden above the panel openings. BHCC strongly disagrees with the legitimacy of the plan stated in Section MP-6.4 of Addendum MP-6 which states "Backfilling will also be performed if it is determined that the introduction of water and oxygen could contribute to spontaneous ignition of the remaining coal not extracted from the highwall mining operations". BHCC

contends it to be common knowledge in the mining industry that oxygen and water are key catalysts in causing spontaneous combustion in coal, whether the coal be in mine openings or in stockpiles. BHCC also believes that the introduction of additional water and air to a coal seam already on fire is especially problematic.

Section MP-6.3 of Addendum MP-6 commits to maintaining highwall mining mapping and subsidence documentation in a subsidence report that will be available for inspection. BHCC objects to the Mine Plan not committing to freely submitting the highwall mining mapping and subsidence documentation report to all owners of surface estate within the Brook Mine permit area. BHCC also objects to the fact that the Subsidence Monitoring and Assessment reporting of Section MP-6.3 does not include mapping, photographing and describing all evidence of surface or underground coal fires occurring within the Brook Mine permit area whenever such evidence becomes available throughout the life of the mining and post-mining periods.

Objection No. 5 – Section MP.1.3; Exhibit MP.1-1

The mine plan on Page MP-5, identifies the “disturbance boundary includes all lands that will be physically and directly disturbed during mining.” Exhibit MP.1-1 shows the disturbance boundary as a dashed orange symbol that outlines an entire pink hatched polygon, identified as “DISTURBANCE FOR YEAR 2016,” located in Sections 15, 21, 22 and 27 of Township 57 North, Range 84 West.

Within the pink hatched polygon, there are existing assets to Big Horn Coal Company. These assets include a rail spur, water tank, pump house, access roads, fences and land owned by BHCC. Also within the pink hatch polygon is the mainline of the Burlington Northern Railroad and associated lands owned by Burlington Northern.

Based on the definition of Disturbance Boundary as indicated on page MP-5, does Brook Mine indeed have the rights to physically and directly disturb these lands within the pink hatched polygon? From the public record, BHCC has not been able to determine whether Brook Mine has secured surface owner consent from all surface owners, including the railroad, for these activities

Objection No. 6 – Section MP.1.5

The mine plan states on Pages MP-5 and continue onto page MP-6 that “Coal will either be temporarily stored in the pit or directly hauled off site.”

There is no mention in the permit as to where the coal will be hauled off site. Additionally there is no known agreement with the County of Sheridan, indicating approval to haul mineral across county roads.

Objection No. 7 – Section MP.1.9

The mine plan states on Pages MP-7 that “The Brook Mine will operate in conjunction with Taylor Quarry (Permit No. SP-757)... The Mine will work with Taylor Quarry to minimize impacts on Taylor Quarry’s operation.”

The following paragraph states "The Brook Mine will not obstruct Big Horn Coal's (Permit 231-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1.

To remain consistent with the statements made in regards to the Taylor Quarry, Big Horn Coal requests that the paragraph referencing Big Horn to be replaced and restated as follows:

"The Brook Mine will operate in conjunction with the Big Horn Mine and that the Brook Mine will work with Big Horn Coal to minimize impacts to Big Horn Coal operations. Specifically, Brook Mine will not obstruct Big Horn Coal's (Permit 213-T8) Shop, Bridge, and Rail Road Siding as they exist in Big Horn Coal's 2015 Annual Report. An access road equivalent to the existing improved road will be provided if proposed stockpiles or pits should restrict the existing access as shown on Exhibit MP.1-1."

Big Horn Coal requests that the text be updated in the previous paragraph to reference the correct permit number for Big Horn Coal Company as (Permit 213-T8).

Objection No. 8 – Section MP.3.1, Section MP.3.1.3 – Roads; Exhibit MP.3-1

As stated in the mine plan on Page MP-11, "Primary roads are any road used for transporting mineral or spoil, or frequently used for access or other purposes for a period in excess of six months, or roads to be retained for postmining use."

WDQ/LQD Rules and Regulations (R&R) Chapter 4, Section 2(j)(vii):

Primary roads.

(A) Certification. The construction or reconstruction of primary roads shall be certified in a report to the Administrator by a registered professional engineer. The report shall indicate that the primary road has been constructed or reconstructed as designed and in accordance with the approved plan. The report shall be available for review at the mine site within 30 days following the completion of construction of each primary road.

Mine plan Exhibit MP.3-1, titled Transportation Network identifies proposed primary haulroads as a solid black line, for the use of transporting mineral or spoil. Yet, there are no haulroads identified in the SE quarter of Section 15, Sections 21, 22 or 27. If the Brook Mine plans to haul mineral or spoil materials from the proposed Trench Cut (TR-1), there should be indication of a primary haul road leaving TR-1, accompanied by a certification of the road design. Unless there are no plans of transporting mineral or spoil from the TR-1 area.

Objection No. 9 – Section MP.4.2.3 – Stockpiles; Exhibit MP.4-3

The mine plan states on Page MP-16, "Stockpiles will not be constructed on unsuitable backfill."

Mine plan Exhibit MP.4-3, Stockpile Locations identifies Topsoil Stockpile TS-1B proposed location within an area known as the Placheck Pit. This area was mined by Big Horn Coal from 1956 through 1963. It is Big Horn Coal's understanding that the proposed area beneath TS-1B is indeed unsuitable material and that topsoil should not be placed in the area as proposed on Exhibit MP.4-3. Additionally, Big Horn Coal is not aware of a surface owner consent document between Brook Mining Company and the Burlington Northern Railroad that would allow the crossing of the mainline with loaded haul trucks.

Objection No. 10 – Section MP.6.1; Exhibit MP.7-1

Exhibit MP.7-1 represents the operational Surface Water and Groundwater Monitoring Program. There are only two downstream surface water monitoring sites, identified as Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir. The text on page MP-41 of the Mine Plan states "However, the Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir will be disturbed by facilities disturbance."

Big Horn Coal believes there is inadequate downstream monitoring in the proposed plan. Upon disturbing of Big Horn No. 2 Reservoir and Big Horn No. 14 Reservoir, there will be no sites downstream of the Brook Mine to collect adequate surface and groundwater data to prove that there are no off site environmental impacts from the proposed operation.

Objection No. 11 - Addendum MP-2, Exhibit MP-2

The proposed Sediment Pond SP-8 is located within the current postmine approved Reservoir 14 constructed by BHCC. The bottom elevation of Reservoir 14 is currently at 3575 with a peak elevation at 3589. Sediment Pond SP-8 bottom elevation is proposed at 3585 with a high water elevation proposed at 3590. It is noted below the area capacity table on Exhibit 13, "1. Pond is entirely incised. No Spillway hydraulics are provided."

These elevations lead BHCC to believe the plan for construction of SP-8 will require Reservoir 14 to be completely backfilled prior to construction of SP-8. BHCC requests that the reconstruction and the water quality within Reservoir 14 be restored to pre-mining conditions before final bond release is allowed.

Objection No. 12 – Exhibit MP.4-1; Exhibit MP.4-2; Exhibit MP.4-5; Exhibit RP.5-1

The proposed mine plan indicates that topsoil and overburden removal will occur upon the BHCC Property and within the TR-1 area in years 1 and 2 of operation. Exhibit MP.4-1 shows coal removal to occur over the same first two years of operation. Exhibit MP.4-5 shows the overburden backfill sequence within TR-1 will occur in year 2. Exhibit RP.5-1 shows the topsoil replacement sequence within the BHCC Property occurring in years 12-16.

BHCC objects to this timeline of topsoil replacement upon its property. The BHCC property is the first to be disturbed and the last to be reclaimed. BHCC asks the question as to why every other proposed disturbance area is backfilled and topsoiled within a 2 to 3 year time frame except around the BHCC facilities area. The topsoil replacement timeframe is unacceptable and not contemporaneous in accordance with the Surface Mining Control and Reclamation Act, (SMCRA) and it is requested that the final

reclamation around the BHCC Property be within the 2 to 3 year time frame, similar to all other areas around the mine.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 13 – Section MP.1.2.1; Figure MP.1-2.

Section MP.1.2.1 discusses the work that will be done to “prepare for highwall mining” and describes how the “trenches” will be constructed to “create working areas for highwall mining equipment”. This section of the mine plan states that “The highwalls will have a 65-degree bench slope to provide a stable trench environment. Where the trench intersects the burnt Monarch coal seam, a 35-foot wide safety bench will be added. Where the Carney and Masters coal seams come close to convergence, a vertical wall will be used to maintain the desired pit width.” Earlier, under Objection No. 2, BHCC discussed the presence of saturated backfill where trench TR-1 is planned to be excavated. Section MP.1.2.1 does not address in any fashion the fact that trench TR-1 will be constructed in an area containing a significant amount of saturated backfill material. In our opinion, utilizing a 65-degree bench slope in this material will be impossible as the saturated backfill will not safely stand at this angle. Furthermore, no geotechnical information (sampling, testing or analysis) supporting slope stability assumptions for the surface mining or highwall mining operations have been provided in the mine plan. BHCC finds the information regarding highwall bench slope angles presented in MP.1.2.1 to be inadequate given the variability of non-coal material that will be encountered during excavation of trenches in support of the highwall mining operation.

Objection No. 14 – Section MP.4.4.1

It is a well-known fact within the mining industry that the term “Reserves” connotes that the mineral being extracted can be done so economically. BHCC opines that the mining approach presented in the mine plan cannot be done economically. Based on our internal

knowledge; the operating cost for a contractor to perform highwall mining is in the \$8/Ton to \$12/Ton range, which is very close to the domestic spot price for this type of coal. By the time the other costs for the surface mining to develop the highwall mining, transportation, G&A, etc. are taken into consideration, this operation appears to be completely uneconomical.

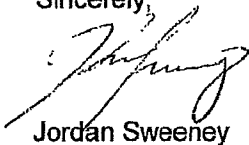

The market for this coal is unclear. The two closest coal mines, Decker and Spring Creek, serve the domestic and international market. Port capacity to the international market is constrained and it is unlikely that Brook Mine will secure access. Domestic demand has been in decline and is significantly oversupplied. Without a definitive market, the Brook Mine is at risk of commencing operations, producing product it cannot sell economically, and reclamation obligations that it cannot fund.

Objection No. 15 – Section MP.15

Objection No. 4 above introduces the fact that the underground mine fires in this area are still burning and have expanded. Section MP.15 does not, in any way, address that the burned areas have expanded. A surface mine excavation that comes in contact with a historic mine fire could be catastrophic in many ways, including: impacting the safety of mine workers, damage to equipment, wildfire initiation, etc. BHCC believes this mine plan has not adequately addressed surface mining activities that will occur near underground mines and insists that the Brook Mine operators must perform the necessary testing and analysis to prove that the proposed mine plan will not be impacted by historic mine fires. Specifically, attachment 1 provided with Objection No. 3 above shows that trench TR-2 is planned very near an area that was burning and is likely still burning. Given that the burned area has likely expanded, this area should not be disturbed at all.

In conclusion, Big Horn Coal Company feels strongly that the Brook Mine permit application should not be approved or deemed technically complete. The mine and reclamation plan lack a significant amount of detail that is required for a technical completeness determination, as stated in the above mentioned objections.

Sincerely,

Jordan Sweeney

General Manager
Big Horn Coal Company

Parties:

Please find attached our brief in response to the EQC's Order of last week.

I will be appearing in person at next week's oral arguments. Jim, if you could advise us of the general time parameters & order of the parties for the argument, that would be very helpful.

Thank you,
Shannon

EQC Docket No. 15-4801, <i>In Re Eagle Butte (Alpha West)</i>	13

STATEMENT OF THE ISSUES

On behalf of itself and its members who submitted objections to the permit application, and pursuant to the Environmental Quality Council's ("EQC") February 7, 2017 Order, Powder River Basin Resource Council ("Resource Council") hereby contends that the EQC does not have proper jurisdiction at this time and that proceedings should be remanded to the Department of Environmental Quality ("DEQ") with instructions to hold the required informal conference, as requested by the Resource Council and other parties.

ARGUMENT

I. Introduction.

On January 27, 2017 over a dozen parties submitted objections to the Brook Mine permit. These parties included the Resource Council and its members who are adjacent landowners and Sheridan County residents concerned about impacts to their property, health, safety, and way of life. On the very next business day, January 30, 2017, the Director wrote to each party that submitted objections to the Brook Mine permit application and notified the objector that the Director was denying requests for an informal conference and was referring the permit application to the EQC "for their review and determination at a contested case hearing." *See, e.g.* Letter from Todd Parfitt to Anton Bocek, Jan. 30, 2017 (available on the EQC Electronic Filing System website for this Docket).

For the reasons discussed below, the Director has a mandatory duty to hold an informal conference and he does not have the authority to refer the matter directly to the EQC. As such, the EQC does not have jurisdiction to hold a contested case hearing at this time and must remand

proceedings back to the Director, with instructions that he must hold an informal conference in the location of the proposed mining operation, as requested by the objecting parties.

Alternatively, should the EQC find that the Director has discretion to deny the request for an informal conference, the EQC should stay proceedings until such time as an objecting party formally petitions for review of the Director's decision and thereby initiates proceedings pursuant to DEQ's Rules of Practice and Procedure.

II. DEQ's Rules Require an Informal Conference.

Wyoming DEQ (and in parts, the EQC) implements the federal Surface Mining Control and Reclamation Act, 30 U.S.C. § 1201, *et seq.* ("SMCRA"). Under SMCRA's system of cooperative federalism, Wyoming's state-authorized program as embodied in the Wyoming Environmental Quality Act ("WEQA") and corresponding state regulations must be "no less stringent" and "no less effective" than the federal program. 30 U.S.C. § 1253; 30 C.F.R. § 730.5.

In the case of requests for an informal conference, SMCRA's requirements provide:

If written objections are filed and an informal conference requested, the regulatory authority shall then hold an informal conference in the locality of the proposed mining, if requested within a reasonable time of the receipt of such objections or request.

30 U.S.C. § 1263(b) (emphasis added). This section creates a clear mandatory obligation on the part of the regulatory authority (in this case DEQ) to hold an informal conference if requested by an objecting party.

These requirements are further spelled out in the Office of Surface Mining Reclamation and Enforcement's ("OSMRE") federal regulations implementing SMCRA:

Informal conferences.

(1) Any person having an interest which is or may be adversely affected by the decision on the application, or an officer or a head of a Federal, State, or local government agency, may request in writing that the regulatory authority hold an informal conference on the application for a permit, significant revision to a permit under § 774.13, or renewal of a

permit under § 774.15. The request shall—(i) Briefly summarize the issues to be raised by the requestor at the conference;(ii) State whether the requestor desires to have the conference conducted in the locality of the proposed operation; and(iii) Be filed with the regulatory authority no later than 30 days after the last publication of the newspaper advertisement required under paragraph (a) of this section.

(2) Except as provided in paragraph (c)(3) of this section, if an informal conference is requested in accordance with paragraph (c)(1) of this section, the regulatory authority shall hold an informal conference within a reasonable time following the receipt of the request. The informal conference shall be conducted as follows:(i) If requested under paragraph (c)(1)(ii) of this section, it shall be held in the locality of the proposed surface coal mining and reclamation operation.(ii) The date, time, and location of the informal conference shall be sent to the applicant and other parties to the conference and advertised by the regulatory authority in a newspaper of general circulation in the locality of the proposed surface coal mining and reclamation operation at least 2 weeks before the scheduled conference.(iii) If requested in writing by a conference requestor at a reasonable time before the conference, the regulatory authority may arrange with the applicant to grant parties to the conference access to the proposed permit area and, to the extent that the applicant has the right to grant access to it, to the adjacent area prior to the established date of the conference for the purpose of gathering information relevant to the conference.(iv) The requirements of section 5 of the Administrative Procedure Act, as amended (5 U.S.C. 554), shall not apply to the conduct of the informal conference. The conference shall be conducted by a representative of the regulatory authority, who may accept oral or written statements and any other relevant information from any party to the conference. An electronic or stenographic record shall be made of the conference, unless waived by all the parties. The record shall be maintained and shall be accessible to the parties of the conference until final release of the applicant's performance bond or other equivalent guarantee pursuant to subchapter J of this chapter.

(3) If all parties requesting the informal conference withdraw their request before the conference is held, the informal conference may be canceled.

30 C.F.R. § 773.6(c) (emphasis added).

For the state program to be “no less stringent” and “no less effective” than the federal program, DEQ’s rules must incorporate these requirements into its state program. To do this, DEQ has a rule of practice and procedure specifically related to an informal conference request on any application for a surface coal mining permit. DEQ’s state regulatory language largely mirrors the federal regulation, and provides that an informal conference shall be held if requested:

Informal Conference. (a) Any request that the Administrator hold an informal conference on any application for a surface coal mining permit shall briefly state the issues to be discussed, whether the requester desires the conference to be held in the locality of the proposed mining operation, and whether access to the proposed permit area is desired. If requested, the Administrator may arrange with the applicant to grant parties to the conference access to the permit area for the purpose of gathering information relative to the conference. The conference shall be held in the locality of the operation or at the state capitol, at the option of the requester, within 20 days after the final date for filing objections unless a different period is stipulated to by the parties. If all parties requesting the conference reach agreement and withdraw their request, the conference need not be held.

DEQ Rules of Practice and Procedure Ch. 3 § 3(a) (emphasis added).¹

These requirements related to “applications for a surface coal mining permit” are distinctive from the general requirements, and corresponding discretion, afforded under W.S. § 35-11-406(k) related to “surface coal mining operations.”² Specifically, while the statute uses the word “may,” the regulations related to new surface coal mining applications use the word “shall.” *Id.* (requiring that “[t]he conference shall be held in the locality of the operation or at the state capitol, at the option of the requester, within 20 days after the final date for filing objections unless a different period is stipulated to by the parties.”).

Courts have clearly and consistently held that when a statute or regulation uses the word “shall,” it imposes a mandatory and nondiscretionary duty to act as the statute or regulation requires. See Kingdomware Technologies, Inc. v. U.S., 136 S.Ct. 1969, 1977 (2016)(“When a statute distinguishes between ‘may’ and ‘shall,’ it is generally clear that ‘shall’ imposes a

¹ The Resource Council was contemplating requesting access to the permit area at the time the informal conference was denied. The Resource Council reserves its right to request a permit area tour if and when the informal conference is granted.

² The Resource Council also contends that the discretion afforded in W.S. § 35-11-406(k) allowing the Director to deny a request for an informal conference related to permit renewals and major modifications of permits is also contrary to SMCRA and its implementing federal regulations, but the EQC need not reach that conclusion here because the provision is not specific to applications for a new surface coal mine permit. Here, the regulations that are specific to the situation before the EQC govern.

mandatory duty.”); U.S. v. Gabaldon, 522 F.3d 1121, 1126 (10th Cir. 2008)(holding that the word “shall” in a regulation indicates a mandatory duty); Bellamy v. Bellamy, 949 P.2d 875, 876 (Wyo. 2002)(“There is no judicial license to pick and choose only those words which promote a particular purpose...Faced with a legislative ‘shall,’ the courts must give effect to the legislative prescription and are without authority to carve out exceptions to the mandate.” (citing State by and Through Dept. of Family Services v. Jennings, 818 P.2d 1149, 1150 (Wyo. 1991)); In re LePage, 18 P.3d 1177, 1180 (Wyo. 2001)(“Where a statute uses the mandatory language ‘shall,’ a court must obey the statute as a court has no right to make the law contrary to what is prescribed by the legislature...The choice of the word ‘shall’ intimates an absence of discretion by the [Department] and is sufficiently definitive of the mandatory rule intended by the legislature.”); See also Wilson v. Tyrell, 246 P.3d 265, 279-80 (Wyo. 2011)(holding that the disclosure requirement in W.R.C.P. 26(a)(2) is mandatory where the rule uses the word “shall.”).³

As discussed above, the rule’s embodiment of SMCRA’s mandatory requirement to hold an informal conference is necessary to ensure that the state program is “no less stringent” and “no less effective” than the federal program. Since the Wyoming DEQ Rules of Practice and Procedure are consistent with SMCRA and specific to informal conferences requested on new coal mine permits, while § 406(k) is neither consistent with SMCRA nor specific to the situation at hand, the regulation – not the statute – should control in this situation. The regulation should

³ Should DEQ argue that its interpretation of its Rule of Practice & Procedure is entitled to deference, it is not. It is a common principle of administrative law is that if the plain meaning of a regulation is clear, an agency is not entitled to deference in interpreting that regulation. See Chevron U.S.A., Inc. v. Natural Resources Defense Council, Inc., 467 U.S. 837 (1984). In this case, the plain meaning of “shall” is clear – DEQ must afford an opportunity for an informal conference.

be interpreted as being consistent with the federal “shall” requirement and should prevail over the inconsistent “may” requirement which is found in the statute.

Since DEQ’s own rules require DEQ to hold an informal conference, the agency must do so here. DEQ cannot lawfully bypass the informal conference stage, and the EQC should remand proceedings back to DEQ to comply with their rules and regulations (and corresponding federal law).

III. An Informal Conference is Required to Afford Public Participation Opportunities.

An informal conference is required, if requested, as it affords affected landowners and other members of the public the opportunity to be heard. The informal conference is akin to a public comment hearing for an air or water permit. It not only affords the opportunity for adversarial presentations by the parties, but also provides a public comment opportunity for any members of the public that wish to attend the conference and provide comments – either positive or negative – about the permit application or the proposed mining operation.⁴

Here, when adjacent landowners and other impacted citizens have requested an informal conference in Sheridan County, the informal conference becomes a critical component of their public participation opportunities. By denying the informal conference, the Director has denied the rights of objecting landowners and citizens – and other members of the public who would have provided comments at the informal conference – who are unable to participate in the expensive and burdensome contested case hearing in Cheyenne the opportunity to be heard. In

⁴ While DEQ’s Rules of Practice and Procedure afford opportunities for intervention in a hearing related to surface coal mining operations, that does not solve the public participation problem presented here because should a party wish to intervene it would still be burdened with participation in a contested case hearing in Cheyenne. There is no “public comment” opportunity at a contested case hearing.

doing so, the Director has bypassed an important public participation opportunity of our surface coal mining laws and regulations.

While there is no Wyoming case law specific to the subject of informal conferences for surface coal mining applications, two cases from other jurisdictions are instructive as they hold that public participation rights, and specifically informal conference opportunities, must be honored to afford impacted citizens' due process rights.

First, a case decided by the Massachusetts Supreme Court arose when a plaintiff was denied an informal conference after the Chelsea Housing Authority terminated the plaintiff's public housing benefits. Rivas v. Chelsea Housing Authority, 982 N.E.2d 1147 (Mass. 2013). The Court in Rivas recognized that the Housing Authority's grievance procedures "shall provide...[an] informal conference" before denying a tenant their property interest in public housing "to give the tenant an opportunity to resolve the dispute before it becomes a formal grievance. It is focused on resolving the problem, not adjudicating the allegation." Id. at 1155. Accordingly, the Rivas Court held that although the plaintiff received two other opportunities to present her case to the relevant authority, "as long as the settlement conference requirement remains in effect, the authority may not arbitrarily disregard it to the prejudice of an individual's rights." Id.

Rivas reinforces that when regulations require that an agency "shall" hold an informal conference, the agency does not have the discretion to deny it because that conference is a necessary part of public participation and due process rights – even if (like here) other more formal complaint resolution processes are available.

Second, the Oklahoma Supreme Court recently struck down a rule that limited participation in informal conferences before the Oklahoma Department of Mines regarding a

pending mine application to residents or property owners within one mile of the proposed mining location. Daffin v. Oklahoma Department of Mines, 251 P.3d 741, 746 (Okla. 2011).⁵

The plaintiff did not live within a mile of the mining site, but he lived within the projected flood plain that would be affected by mining operations and would possibly be damaged by blasting at the mine site. Id. at 745. The Oklahoma Supreme Court held that the informal conference rule under Oklahoma’s Mining Lands Reclamation Act did not provide sufficient procedural due process to the plaintiff to protect his property rights in connection with the pending mine permit application. Id. at 748. In its holding, the Court reasoned that the

...state’s interest in having a smooth administrative process for issuing mining permits is not outweighed by according due process to plaintiff and other property owners by allowing them to appear and be heard at an informal conference. Allowing the current procedures to stand, however, threatens the interest of individual property owners and deprives them of due process. Formality at the conference is not required, but they are entitled to appear and be heard.

Id. Daffin reinforces the importance of informal conferences as an avenue for landowners near a proposed mine operation to protect their property and other legally cognizable interests. Like in Daffin, the DEQ here should not have the discretion to deny the right to appear and be heard at an informal conference, notwithstanding the permissive language of state law, if denying such an opportunity would not sufficiently protect the interests of the Resource Council and other objecting parties.

In summary: (1) DEQ’s Rule of Practice and Procedure should prevail and control over the discretion afforded under § 406(k) because it is consistent with SMCRA’s mandatory requirement to hold an informal conference; (2) the “shall” in SMCRA and federal and state implementing regulations is unambiguous in that it imposes a mandatory duty; and (3)

⁵ While not at issue in the case, the Oklahoma rule also requires that the agency “shall” hold an informal conference if properly requested.

SMCRA's purpose of providing ample public participation and due process opportunities supports a reading that the regulation – not the statute – is controlling as it creates a mandatory requirement for an informal conference.

IV. A Contested Case Hearing Is Not Appropriate At This Time.⁶

Furthermore, there are no provisions in the WEQA or DEQ's Rules of Practice and Procedure that authorize the Director to "refer" an objection to a surface coal mining permit to the EQC for a contested case hearing when that objecting party has requested an informal conference. Section 17(b) of the Rules of Practice and Procedure provide for appeals of "any administrative decision following an informal conference relating to a surface coal mining operation" to the EQC by the applicant or "any person with an interest" but there is no such provision that provides for referrals to the EQC by the Director or Administrator. Similarly, the public notice for the Brook Mine permit application instructs that "The complainants shall have a right of appeal to the Environmental Quality Council where the complaint will be heard a second time."⁷

By remanding these proceedings back to the DEQ for an informal conference, the parties will be able to present information to the DEQ and a decision will be made. While that decision may still result in a contested case hearing, the parties have a right to both public participation opportunities, and have the right to choose to appeal the DEQ decision to the EQC rather than the DEQ referring the matter to the EQC without consultation of the objecting parties.

⁶ By making this argument, in no way is the Resource Council waiving its rights to participate in a contested case hearing should one be held.

⁷ See W.S. §§ 35-11-406(p) which specifies the timing of decisions of the Director after informal conferences and hearings. It should be noted that both § 406(k) and § 406(p) apply to coal and non-coal permit applications and only objectors to coal permit applications are afforded the opportunity to request an informal conference. Therefore, the reading of these statutory sections can be misleading in regards to how they apply specifically to coal permits.

Additionally, an informal conference will benefit the EQC because an informal conference may resolve some of the objections and thus allow the parties to limit the scope of issues (or possibly parties) on appeal to the EQC. Regardless, as discussed above, it is the right of the parties to request an informal conference and to have the right to appeal a decision made in relation to the request for an informal conference to the EQC.

DEQ has once before denied an informal conference requested by the Resource Council. In that case, involving an objection to a renewal permit of the Eagle Butte Mine, the DEQ denied the informal conference request but did not refer the case to the EQC. *See* EQC Docket No. 15-4801, *In Re Eagle Butte (Alpha West)*, available at <https://eqc.wyo.gov/Public/ViewPublicDocument.aspx?DocumentId=10918> . In response to the denial of the informal conference, the Resource Council petitioned the EQC for review of the decision denying the informal conference and requested a contested case hearing on the objections to the permit.⁸ While that hearing was ultimately stayed for other reasons specifically related to Alpha’s bankruptcy proceedings at the time, no party – including DEQ – raised procedural concerns about the petition and how the case found its way to the EQC. Additionally, that proceeding was not treated as a “20 day” hearing under W.S. § 35-11-406(k).

In contrast to that previous case, in these proceedings, DEQ has referred the matter directly to the EQC. This renders its decision to deny the informal conference effectively unreviewable. Additionally, it prevents the objecting parties the opportunity to petition the EQC for review of DEQ’s permitting actions, which is the normal procedure and process for an appeal of a permit. *See* W.S. § 35-11-112(a)(iv) (The EQC shall “[c]onduct hearings in any case contesting the grant, denial, suspension, revocation or renewal of any permit, license,

⁸ *See* <https://eqc.wyo.gov/Public/ViewPublicDocument.aspx?DocumentId=10912>.

certification or variance authorized or required by this act.”).⁹ Here, should DEQ have chosen to deny the request for an informal conference, it should have just told the objecting parties that and should not have referred the matter directly to the EQC. This would have afforded the objecting parties the opportunity to petition for review of DEQ’s decision regarding the informal conference, and the permit application itself, within thirty (30) days of DEQ’s decision, and procedurally would have created a different posture before the EQC as the hearing would not be bound by the “20 day” hearing requirements of W.S. § 35-11-406(k).

Therefore, should the EQC find against us that DEQ had discretion to deny the requests for an informal conference, it should at the very least stay proceedings until such time as an objecting party (or parties) petitions for review and initiates proceedings in accordance with DEQ’s Rules of Practice and Procedure.¹⁰

Conclusion

For the foregoing reasons, the EQC must remand the proceedings back to the DEQ Director with instructions to hold an informal conference pursuant to Chapter 3, Section 3(a) of the Rules of Practice and Procedure.

Dated this 15th day of February, 2017.

Subject: DEQ motion for clarification
Date: Tuesday, February 07, 2017 1:27:25 PM

Dear Parties:

DEQ filed a motion for clarification of the timeline. With the vacation of the final hearing all of the timelines leading up to that final hearing are also suspended until the issue is resolved outlined in the Order.

There will be an Order issued shortly. Just wanted to give you a quick answer.

Jim

Attachments: [ORDER VACATING CONTESTED CASE HEARING AND SETTING ORAL ARGUMENT.pdf](#)

Dear Parties:

After further review of the pleadings and 35-11-406(k) Councilman Flitner believes there is an important issue that needs briefing by the parties and thoughtful consideration by the Council without the overreaching pressure of preparing for a contested case proceeding at the same time. Attached is an Order setting forth the following. The final hearing set for the 13th and 14th is cancelled. The parties are given until February 15th to brief the following issue.

Whether the Director's referral of this matter to the Council for a contested case confers jurisdiction over the matter to the Council or is there more that must take place to perfect the appeal?

There will be a teleconference hearing on the 21st at 1:30 p m. for oral arguments on this issue. Any of you who wish to appear in person are welcome to do so. If you are not going to attend in person please send Joe an email with your phone number you will be using to call in.

If you have any questions please feel free to contact me.

DOCKET 17-4861

Jim Ruby, Executive Secretary
Environmental Quality Council

TFN 6 2-025

**ORDER VACATING CONTESTED CASE HEARING AND SETTING ORAL
ARGUMENT**

Upon review of the recent pleadings filed by Powder River Basin Resource Council, Mary Brezik-Fisher and David Fisher, and Big Horn Coal Company, and upon review of Wyo. Stat. Ann. § 35-11-406(k), I believe the parties need to address the issue of whether there is a proper appeal before the Council at this time necessitating a contested case. As a result, the parties are asked to brief the issue of whether there is a proper appeal before the Council at this time that necessitates a contested case. Because I want to provide the parties time to brief this issue and for the Council to fully consider and decide the issue, the contested case set for February 13 and 14 is vacated.

THEREFORE, the motion hearing and final contested case hearing scheduled for February 13 and 14, 2017 is vacated. Further, the parties have until February 15, 2017, by 5:00 p.m. to file briefs on the issue set forth above. A teleconference before the Council to hear oral arguments on this issue will be held on February 21, 2017, at 1:30 p.m. in Room 1699, 1st Floor West, Herschler Building 122 West 25th St. Cheyenne WY. The parties may participate by phone by providing advance notice to the Council.

SO ORDERED this 7th day of February, 2017.

Tim Flitner, Hearing Officer
Environmental Quality Council

Environmental Quality Council
Room 1714

Subject: Time for the hearing?

Jim:

Could you please clarify the start time for the hearing on Monday. Our scheduling order says 9 but the public notice says 10. As the public notice is still not posted on the EQC docket website I thought I would confirm that in fact the hearing starts at 10 at the Game & Fish on Monday. And to clarify, do you still want us all there at 8:30 to drop off hard copies of exhibits and other filings (and for responses to any motions filed on Friday)?

Also, can you confirm the general time parameters for the hearing – as we have at least one witness that will be available via video conference, I'd like to have some idea of how long into the evening we will go going. An estimate is fine.

Thank you,
Shannon

life. The next business day, on January 30, 2017, the Director wrote to each party that submitted objections to the Brook Mine permit application and notified the objector that the Director was denying requests for an informal conference and was referring the permit application to the EQC “for their review and determination at a contested case hearing.” *See, e.g.* Letter from Todd Parfitt to Anton Bocek, Jan. 30, 2017 (available on the EQC Electronic Filing System website for this Docket).

For the reasons discussed below, the Director has a mandatory duty to hold an informal conference and he does not have the authority to refer the matter directly to the EQC. As such, the EQC does not have jurisdiction to hold a contested case hearing at this time and must remand proceedings back to the Director, with instructions that he must hold an informal conference in the location of the proposed mining operation, as requested by the objecting parties.

Alternatively, should the EQC find that the Director has discretion to deny the request for an informal conference, the EQC should stay proceedings until such time as an objecting party formally petitions for review of the Director’s decision and thereby initiates proceedings pursuant to DEQ’s Rules of Practice and Procedure.

ARGUMENT

I. DEQ’s Rules Require an Informal Conference.

Wyoming DEQ (and in parts, the EQC) implements the federal Surface Mining Control and Reclamation Act, 30 U.S.C. § 1201, *et seq.* (“SMCRA”). Under SMCRA’s system of cooperative federalism, Wyoming’s state-authorized program as embodied in the Wyoming Environmental Quality Act (“WEQA”) and corresponding state regulations must be “no less stringent” and “no less effective” than the federal program. 30 U.S.C. § 1253; 30 C.F.R. § 730.5.

In the case of requests for an informal conference, SMCRA’s requirements provide:

If written objections are filed and an informal conference requested, the regulatory authority *shall* then hold an informal conference in the locality of the proposed mining, if requested within a reasonable time of the receipt of such objections or request.

30 U.S.C. § 1263(b) (emphasis added). This section creates a clear mandatory obligation on the part of the regulatory authority (in this case DEQ) to hold an informal conference if requested by an objecting party. For the state program to be “no less stringent” and “no less effective” than the federal program, DEQ’s rules must incorporate these requirements into its state program.

To meet these requirements, DEQ has a rule of practice and procedure specifically related to an informal conference request on any application for a surface coal mining permit:

Informal Conference. (a) Any request that the Administrator hold an informal conference on any application for a surface coal mining permit shall briefly state the issues to be discussed, whether the requester desires the conference to be held in the locality of the proposed mining operation, and whether access to the proposed permit area is desired. If requested, the Administrator may arrange with the applicant to grant parties to the conference access to the permit area for the purpose of gathering information relative to the conference. The conference *shall* be held in the locality of the operation or at the state capitol, at the option of the requester, within 20 days after the final date for filing objections unless a different period is stipulated to by the parties. If all parties requesting the conference reach agreement and withdraw their request, the conference need not be held.

DEQ Rules of Practice and Procedure Ch. 3 § 3(a) (emphasis added).

These requirements related to “applications for a surface coal mining permit” are distinctive from the general requirements, and corresponding discretion, afforded under W.S. § 35-11-406(k) related to “surface coal mining operations.”² Specifically, while the statute uses the word “may,” the regulations related to new surface coal mining applications use the word “shall.” *Id.* (requiring that “[t]he conference shall be held in the locality of the operation or at the

² The Resource Council also contends that the discretion afforded in W.S. § 35-11-406(k) allowing the Director to deny a request for an informal conference is also contrary to SMCRA, but the EQC need not reach that conclusion here because the provision is not specific to applications for a new surface coal mine permit. Here, the regulations that are specific to the situation before the EQC governs.

state capitol, at the option of the requester, within 20 days after the final date for filing objections unless a different period is stipulated to by the parties.”). As discussed above, the rule’s embodiment of SMCRA’s mandatory requirement to hold an informal conference is necessary to ensure that the state program is “no less stringent” and “no less effective” than the federal program.

Since DEQ’s own rules require DEQ to hold an informal conference, the agency must do so here. DEQ cannot lawfully bypass the informal conference stage, and the EQC should remand proceedings back to DEQ to comply with their rules and regulations (and corresponding federal law).

II. An Informal Conference is Required to Afford Public Participation Opportunities.

An informal conference is required, if requested, as it affords affected landowners and other members of the public the opportunity to be heard. The informal conference is akin to a public comment hearing for an air or water permit. It not only affords the opportunity for adversarial presentations by the parties, but also provides a public comment opportunity for any members of the public that wish to attend the conference and provide comments – either positive or negative – about the permit application or the proposed mining operation.³

Here, when adjacent landowners and other impacted citizens have requested an informal conference in Sheridan County, the informal conference becomes a critical component of their public participation opportunities. By denying the informal conference, the Director has denied the rights of objecting landowners and citizens – and other members of the public who would

³ While DEQ’s Rules of Practice and Procedure afford opportunities for intervention in a hearing related to surface coal mining operations, that does not solve the public participation problem presented here because should a party wish to intervene it would still be burdened with participation in a contested case hearing in Cheyenne. There is no “public comment” opportunity at a contested case hearing.

have provided comments at the informal conference – who are unable to participate in the expensive and burdensome contested case hearing in Cheyenne the opportunity to be heard. In doing so, the Director has bypassed an important public participation opportunity of our surface coal mining laws and regulations.

III. A Contested Case Hearing Is Not Appropriate At This Time.⁴

Furthermore, there are no provisions in the WEQA or DEQ's Rules of Practice and Procedure that authorize the Director to "refer" an objection to a surface coal mining permit to the EQC for a contested case hearing when that objecting party has requested an informal conference. Section 17(b) of the Rules of Practice and Procedure provide for appeals of "any administrative decision following an informal conference relating to a surface coal mining operation" to the EQC by the applicant or "any person with an interest" but there is no such provision that provides for referrals to the EQC by the Director or Administrator. Similarly, the public notice for the Brook Mine permit application instructs that "The complainants shall have a right of appeal to the Environmental Quality Council where the complaint will be heard a second time."⁵

By remanding these proceedings back to the DEQ for an informal conference, the parties will be able to present information to the DEQ and a decision will be made. While that decision may still result in a contested case hearing, the parties have a right to both public participation opportunities, and have the right to *choose* to appeal the DEQ decision to the EQC rather than

⁴ By making this argument, in no way is the Resource Council waiving its rights to participate in a contested case hearing should one be held.

⁵ See W.S. §§ 35-11-406(p) which specifies the timing of decisions of the Director after informal conferences and hearings. It should be noted that both § 406(k) and § 406(p) apply to coal and non-coal permit applications and only objectors to coal permit applications are afforded the opportunity to request an informal conference. Therefore, the reading of these statutory sections can be misleading in regards to how they apply specifically to coal permits.

the DEQ referring the matter to the EQC *without* consultation of the objecting parties.

Additionally, an informal conference will benefit the EQC because an informal conference may resolve some of the objections and thus allow the parties to limit the scope of issues (or possibly parties) on appeal to the EQC. Regardless, as discussed above, it is the right of the parties to request an informal conference *and* to have the right to appeal a decision made in relation to the request for an informal conference to the EQC.

DEQ has once before denied an informal conference requested by the Resource Council. In that case, involving an objection to a renewal permit of the Eagle Butte Mine, the DEQ denied the informal conference request but did not refer the case to the EQC. *See* EQC Docket No. 15-4801, *In Re Eagle Butte (Alpha West)*, available at <https://eqc.wyo.gov/Public/ViewPublicDocument.aspx?DocumentId=10918> . In response to the denial of the informal conference, the Resource Council petitioned the EQC for review of the decision denying the informal conference and requested a contested case hearing on the objections to the permit.⁶ While that hearing was ultimately stayed for other reasons, no party – including DEQ – raised procedural concerns about the petition and how the case found its way to the EQC. Additionally, that proceeding was not treated as a “20 day” hearing under W.S. § 35-11-406(k).

In contrast to that previous case, in these proceedings, DEQ has referred the matter directly to the EQC. This renders its decision to deny the informal conference effectively unreviewable. Additionally, it prevents the objecting parties the opportunity to petition the EQC for review of DEQ’s permitting actions, which is the normal procedure and process for an appeal

⁶ *See* <https://eqc.wyo.gov/Public/ViewPublicDocument.aspx?DocumentId=10912>.

of a permit.⁷ Here, should DEQ have chosen to deny the request for an informal conference, it should have just told the objecting parties that and should not have referred the matter directly to the EQC. This would have afforded the objecting parties the opportunity to petition for review of DEQ's decision regarding the informal conference, and the permit application itself, within thirty (30) days of DEQ's decision, and procedurally would have created a different posture before the EQC as the hearing would not be bound by the "20 day" hearing requirements of W.S. § 35-11-406(k).

Therefore, should the EQC find against us that DEQ had discretion to deny the requests for an informal conference, it should at the very least stay proceedings until such time as an objecting party (or parties) petitions for review and initiates proceedings in accordance with DEQ's Rules of Practice and Procedure.

Conclusion

For the foregoing reasons, the EQC must remand the proceedings back to the DEQ Director with instructions to hold an informal conference pursuant to Chapter 3, Section 3(a) of the Rules of Practice and Procedure.

Dated this 6th day of February, 2017.

IN RE BROOK MINE APPLICATION)
) **DOCKET 17-4801**
TFN 6 2-025)

DESIGNATION OF EXPERT WITNESSES

The Powder River Basin Resource Council hereby designates the following expert witnesses who will appear in the above-captioned proceedings, if time allows for them to testify. A full witness list and exhibits will be provided pursuant to the scheduling order on February 10, 2017.

1. Gennaro G. Marino Ph.D., P.E., D.GE

Dr. Marino will present testimony on the subsidence risk presented by the mine and reclamation plan and will identify deficiencies in the permit application related to subsidence. A copy of Dr. Marino's report is attached to the Resource Council's objections. Dr. Marino will present the opinions discussed in the report and other opinions related to subsidence he has drawn from reviewing the permit application.

Dr. Marino is the President of Marino Engineering Associates, Inc. with an office at 1370 McCausland Ave, St. Louis, MO 63117. Dr. Marino is a registered Professional Engineer in Wyoming. Dr. Marino's bio and list of professional qualifications is available at <http://www.meacorporation.com/leadership.php>. This information states, in part, that Dr. Marino

has given expert testimony on numerous occasions within his range of engineering experience. Also during the course of his career he has authored over 90 articles and research publications on advanced engineering projects and authored a textbook: Earthquake Damage: Inspection, Evaluation and Repair.

Dr. Marino will be compensated by the Resource Council for his time and travel expenses.

Dr. Marino will be available to testify in person at the hearing. Given his out of state travel and the accommodations to his schedule he is making to be available in person, we ask that the EQC accommodate him and allocate time during the hearing for him to testify in person while he is present in Cheyenne.

2. Mickel Wireman M.S., P.G.

Mr. Wireman will provide opinions related to the hydrology objections raised by the Resource Council, including the sufficiency of the water monitoring plan, impacts to the hydrologic balance within and outside the permit area, and impacts to alluvium and alluvial valley floors. He has not prepared an expert report and will base his opinions on his review of the permit application.

Mr. Wireman is the President of Granite Ridge Groundwater, LLC in Boulder, Colorado, and he is a former hydrogeologist and National Groundwater Expert with the Environmental Protection Agency's Region VIII Office in Denver. A copy of his *curriculum vitae* is attached.

Mr. Wireman has let his Wyoming geologist registration lapse, but he will be associating with a registered Wyoming geologist for the purposes of his testimony.

Mr. Wireman will be compensated by the Resource Council for his time.

Mr. Wireman will be available to testify in person at the hearing in Cheyenne.

3. Stu Levit, M.S.

Mr. Levit will present testimony on the inadequacies in the reclamation bond amount. Mr. Levit does not have an expert report; however, his opinions related to the reclamation bond amount were incorporated into the Resource Council's objections.

Mr. Levit is an employee of Center for Science in Public Participation with an office at 224 North Church Avenue, Bozeman, MT 59715. Mr. Levit formerly worked for the Montana Department of State Lands, Abandoned Mine Reclamation Bureau as a Land Reclamation Specialist, where he designed mine reclamation project plans. Mr. Levit's professional qualifications are available for review at <http://www.csp2.org/expertise>.

Mr. Levit is available to testify on February 13th via video conference, but he is unavailable to testify on February 14th. Please contact us so we can arrange the video conference logistics for Mr. Levit in advance of the hearing.

Dated this 6th day of February, 2017.

Master of Science, Hydrogeology, 1987, Western Michigan University, Kalamazoo, MI

Post MS: Advanced Ground-Water Hydrology, Colorado School of Mines, Geochemistry of Ground-Water Systems (USGS advanced short course), numerous ground-water related classes and seminars on various aspects of hydrogeology, ground-water protection, remediation and management

PROFESSIONAL EMPLOYMENT RECORD

2014 – present

President – Granite Ridge Groundwater, LLC

Provides scientific / technical consultation to a variety of clients

Active member of Sub-Committee on Groundwater (DOI Advisory Committee on Water Information)

Director – GWPC Ground Water Research and Education Foundation

Member – Western Michigan University Geosciences Department Advisory Council

Adjunct Instructor – Metropolitan State University, Global Water Concerns

Past consultant to The World Bank - Worked on hydrologic restoration project in lower Yangzi River basin and mine closure in Romania

Past President – US Chapter of International Association of Hydrogeologists

Past Director – NGWA Science and Engineering Division

1987 to 2014

National Ground-Water Expert, US EPA Region VIII. Provided scientific and technical support to EPA programs (including Superfund, RCRA, Enforcement, NEPA and Water programs), other Federal agencies, International programs and ground-water protection / management programs in several western states. Extensive experience in hydrogeologic characterization and remediation of hardrock mine sites, hydrogeologic aspects of uranium mining and oil and gas development, hydrology of mountain watersheds, DNAPL sites, fractured rock settings, nutrients in ground water, ground-water monitoring, ground-water sensitivity / vulnerability assessments, source-water / wellhead protection. Position included working closely with policy makers, decision makers and attorneys.

Teaching – Currently teaching Basic Principles of Groundwater and Contaminant Transport for Ground- Water Protection Council. Has served as adjunct professor at Metropolitan State College in Denver where he taught a class in Contaminant hydrology. Founder and co-instructor of EPA class entitled Basic Principles of Hydrogeology and Contaminant Hydrology. This class was offered to State DEQ and Environmental protection staff and was delivered 12 times in eight states. He also teaches classes for the National Ground -Water Association and Geological Society of America. Has developed and taught workshops in Eastern Europe and Middle East.

Expert testimony - Has provided expert testimony numerous times in federal court, State court, State Water Quality Control Commission and State Water court and before the Nuclear Regulatory Commission. Cases involved water rights issues, violations of State and Federal environmental laws / permits and re-licensing of in-situ uranium mining operations.

International Experience – Has worked extensively in Eastern Europe (Estonia, Ukraine, Romania, and the Republic of Georgia), Russia, the Middle East (Oman, Bahrain and Iraq), and China as a Technical Expert with EPA Office of External Affairs, EPA Office of Research and Development, US AID and The World Bank.

1981-1986

Hydrogeologist, Leonard Rice Consulting Water Engineers, Inc. Responsible for ground-water geology studies including interpretation and evaluation of hydrogeologic systems, aquifer testing, water supply development, water well drilling, ground-water contamination and monitoring and western water rights. Duties required collection and analyses of data, report preparation and expert testimony.

AFFILIATIONS

Colorado Ground-Water Association

Geological Society of America
National Ground Water Association
International Association of Hydrogeologists – Past Chair US National Chapter
Member of the Subcommittee on Ground Water – Advisory Committee on Water Information
Member, Board of Directors, NGWA Science and Engineering Division
Member – Board of Directors – Groundwater Research and Education Foundation (Ground Water Protection Council)

3. “Describe” means to specify in detail and to particularize the content of the answer to the question and not just to state the reply in summary or outline fashion, including all pertinent facts about the fact, event, or situation in question, including but not limited to:

- (a) the time, date, and place;
- (b) identification of all persons present or involved;
- (c) identification of all oral or written communications made during the event or situation;
- (d) a detailed description of all actions taken.

4. “Document(s)” is used in the broadest sense contemplated by W.R.C.P. 34. It means all records and other tangible forms of expression, including information in electronic, magnetic, or photographic form, in your possession, custody, or control, including drafts and any copies thereof that contain notes or otherwise differ from the original, however many, by whomever created, however prepared, circulated, sent, received, dated or used, produced or stores (manually, mechanically, electronically, or otherwise), including but not limited to books, papers, files, modeling files and data, notes, correspondence, memoranda, reports, writings, drawings, photographs, telegrams, facsimiles (faxes), telephone logs, contracts, agreements, calendars, datebooks, worksheets, summaries, magnetic tapes, data files, other data compilations from which information can be obtained, electronic mail, disks, diskettes, disk packs, and other electronic media, microfilm, microfiche, and storage devices. It includes all material that relates or refers in whole or in part to the subjects referred to in any Interrogatory and also includes the file jackets, and any labels thereon, in which responsive documents are contained. If any documents contain attachments or appendices, describe the attachments or appendices.

5. “Identify” means:

(a) When applied to an individual person, state the full name, present or last known business address, position with the state or other employer, job description, and telephone number;

(b) When applied to a document, state the title, date(s), author(s), signer(s), intended recipient(s), addressee(s), present location and custodian of the document, and current or last known address of the custodian of the document.

(c) When applied to oral communication, identify the speaker(s) and the person(s) addressed, state the date, place and medium of the communication and describe completely the content of the communication.

6. “Including” means “including, but not limited to.”

7. “Regarding,” “Related to,” and “Concerning” means concerning, referring to, alluding to, responding to, relating to, connected with, commenting upon, in respect of, about, establishing, analyzing, criticizing, touching upon, constituting, supporting, refuting and/or being.

9. “DEQ” refers to the Wyoming Department of Environmental Quality or any agent, officer or employee of DEQ. This includes the Wyoming Division of Land Quality (“Land Division”) and any agent, officer or employee of any of the divisions.

10. “You” or “Your” means DEQ or any agent officer, or employee of DEQ. This includes the Land Division and any agent, officer or employee of any of the divisions.

INSTRUCTIONS

In responding to these Interrogatories and Requests for Production of Documents, please adhere to the following instructions:

1. Furnish all information that is available to you, known to you, or that can be known after reasonable inquiry, including information in the possession, custody, or control of your attorneys, staff, agents, employees, officers, consultants, experts, or other representatives. In answering, you are required to make a reasonable inquiry to ascertain the information or knowledge necessary to respond in detail to such request. Answers must be specific and responsive.

2. If you do not or cannot answer any Interrogatory or Request for Production of Documents after exercising due diligence in attempting to secure the information, please state your answer to the extent possible and indicate your inability to answer the remainder. Include whatever information you may have concerning the unanswered portions and set forth in detail all efforts undertaken to ascertain the requested information.

3. If anything is deleted from a document produced in response to an Interrogatory or Request for Production, state the reason for the deletion, the subject matter of the deletion, and the name of the person or persons who decided to delete the information.

4. If any information in these Interrogatories or Requests for Production is withheld pursuant to an objection or claim of privilege, answer portions of the Interrogatory or Request for Production for which the privilege does not apply, identify the objection or privilege claimed, set forth a specific basis upon which the objection is raised or the privilege is claimed, and provide a privilege log and/or index of documents withheld that includes the following information: a statement identifying the nature of the information withheld, the date and subject matter of any communication containing that information, the names of all persons with knowledge of the information including the author, and the basis for withholding the information.

5. Answer all Interrogatories and Requests for Production under oath, and provide verification from appropriate representatives of DEQ, to support these answers.

6. Provide answers to these Interrogatories and Requests for Production by February 10, 2017. If you cannot complete these answers within this time, provide immediate notice to the Resource Council's counsel so that an amicable resolution to the problem can be reached.

7. These Interrogatories and Requests for Production are to be deemed continuing in nature. Supplement all answers as required by W.R.C.P. 26(e).

INTERROGATORIES

1. Identify and describe all persons at DEQ who were involved in any aspect of the permit application review process for Brook's permit and identify and describe their role in the process.

2. Identify and describe any advisors, consultants, or experts, if any, hired or used by DEQ in reviewing Brook's permit application and identify and describe their role in the permit process.

3. Identify and describe each step of the application and review/approval process for Brook's permit.

4. Please explain where DEQ is in the process of issuing a Cumulative Hydrologic Impact Assessment (CHIA) for Brook's proposed mine and disclose the anticipated timing of when the CHIA will be finalized. Please identify and describe all DEQ staff, and any advisors, consultants, or experts, if any, from outside the agency involved in the CHIA writing and review process.

5. Please explain how DEQ will incorporate the CHIA's findings into any decisions on Brook's permit application.

6. Please explain where DEQ is in the process of determining and designating Alluvial Valley Floors (AVFs) in the area. Please explain what work, if any, DEQ plans to carry out to further determine and designate AVFs in the area and the timing for the proposed actions.
7. Please explain when DEQ plans to issue a State Decision Document and/or a draft permit for Brook's proposed mine.
8. Please disclose how many water wells the groundwater modeling indicates will be impacted by Brook's proposed mine.
9. Please disclose the number and location of surface and ground water monitoring sites and explain how DEQ determined that the monitoring program was sufficient to adequately characterize the hydrologic balance and hydrologic systems of the area.
10. Please explain how DEQ plans to respond to a subsidence occurrence at the mine site.
11. Please explain and describe any coal fires that DEQ knows to be occurring in the area at the present time or have occurred in the area over the course of the AML and LQD programs.
12. Please provide all information from the AML division regarding efforts to address coal mine fires and subsidence and please list all dates and times the AML division has had to address coal mine fires and subsidence in the area.
13. Please explain how the DEQ reviewed and considered potential impacts to recreation uses in and around the Brook mine permit boundary.

REQUESTS FOR PRODUCTION OF DOCUMENTS

1. Provide a copy of any written findings by DEQ made pursuant to W.S. 35-11-406(n).

2. Provide a copy of any DEQ reports or memorandum used as background to make findings pursuant to W.S. 35-11-406(n), including, but not limited to, the Cumulative Hydrologic Impact Assessment required under Chapter 19 of DEQ's coal mining rules and regulations.
3. Provide a copy of any written findings by DEQ made pursuant to W.S. 35-11-406(m).
4. Provide a copy of any recommendation by the administrator made pursuant to W.S. 35-11-403(a)(iv) related to the issuance or denial of Brook's permit application.
5. Please provide a copy of "The administrator's estimate of the additional cost to the state of bringing in personnel and equipment should the operator fail or the site be abandoned" that is to be incorporated into the bond amount under W.S. 35-11-417(c)(i).
6. Please provide a copy of the names and addresses of all surface owners and affected properties who received a copy of the public notice published in December 2016 pursuant to W.S. 35-11-406(j).
7. Please provide a copy of any determinations made by DEQ related to Alluvial Valley Floor designations inside the permit boundary or in the area surrounding the proposed mining operation.
8. Please provide a copy of any draft or final mine permit, state decision document, and/or other written determinations by DEQ related to permit terms and conditions.
9. Please provide a copy of any correspondence that DEQ staff or agents have in their possession, including electronic correspondence or transcripts of voicemails, between the DEQ and EQC related to the referral of the permit application for a contested case hearing.

10. Please provide a copy of any correspondence between the DEQ and any person that submitted an objection letter regarding the objection letter or the referral of objections to the EQC. Letters that are already part of the EQC Docket need not be provided.

11. Please provide a copy of any water quality TMDLs for the Tongue River, Goose Creek, and any other streams or tributaries that are located within the permit boundary.

12. Please provide a copy of any AML reports related to coal mines in the area.

13. Please provide a copy of any searches ran through the Applicant Violator System related to this permit application.

Dated this 6th day of February, 2017.

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)
)
 TFN 6 2-025) **DOCKET 17-4801**

**POWDER RIVER BASIN RESOURCE COUNCIL'S FIRST SET OF
INTERROGATORIES AND REQUESTS FOR PRODUCTION OF DOCUMENTS
SERVED ON BROOK MINING CO., LLC**

In accordance with the Presiding Officer’s Scheduling Order of February 2, 2017, and pursuant to Wyoming Rules of Civil Procedure 26, 33, 34, and the following definitions and instructions, Powder River Basin Resources Council (“Resource Council” or “PRBRC”) requests that Brook Mining Co., LLC or any agent, officer or employee of Brook who has relevant information answer fully and under oath the following Interrogatories and Requests for Production of Documents.

DEFINITIONS

1. “Brook” means the permit applicant Brook Mining Co., LLC and includes any employee, officer, agent, or expert of Brook.
2. “Communication(s)” means conversations, discussions, meetings, telephone calls, notes, letters, memoranda, reports, telecopies of facsimiles (faxes), electronic mail, voice mail, text messages, data or file transfer, pictures or photographs, and all other forms of oral, written or electronic expression by which information may be conveyed, including any mechanical or electronic sound recording or transcription thereof.

3. “Describe” means to specify in detail and to particularize the content of the answer to the question and not just to state the reply in summary or outline fashion, including all pertinent facts about the fact, event, or situation in question, including but not limited to:

- (a) the time, date, and place;
- (b) identification of all persons present or involved;
- (c) identification of all oral or written communications made during the event or situation;
- (d) a detailed description of all actions taken.

4. “Document(s)” is used in the broadest sense contemplated by W.R.C.P. 34. It means all records and other tangible forms of expression, including information in electronic, magnetic, or photographic form, in your possession, custody, or control, including drafts and any copies thereof that contain notes or otherwise differ from the original, however many, by whomever created, however prepared, circulated, sent, received, dated or used, produced or stores (manually, mechanically, electronically, or otherwise), including but not limited to books, papers, files, modeling files and data, notes, correspondence, memoranda, reports, writings, drawings, photographs, telegrams, facsimiles (faxes), telephone logs, contracts, agreements, calendars, datebooks, worksheets, summaries, magnetic tapes, data files, other data compilations from which information can be obtained, electronic mail, disks, diskettes, disk packs, and other electronic media, microfilm, microfiche, and storage devices. It includes all material that relates or refers in whole or in part to the subjects referred to in any Interrogatory and also includes the file jackets, and any labels thereon, in which responsive documents are contained. If any documents contain attachments or appendices, describe the attachments or appendices.

5. “Identify” means:

- (a) When applied to an individual person, state the full name, present or last known business address, position with the state or other employer, job description, and telephone number;
- (b) When applied to a document, state the title, date(s), author(s), signer(s), intended recipient(s), addressee(s), present location and custodian of the document, and current or last known address of the custodian of the document.
- (c) When applied to oral communication, identify the speaker(s) and the person(s) addressed, state the date, place and medium of the communication and describe completely the content of the communication.

6. “Including” means “including, but not limited to.”

7. “Regarding,” “Related to,” and “Concerning” means concerning, referring to, alluding to, responding to, relating to, connected with, commenting upon, in respect of, about, establishing, analyzing, criticizing, touching upon, constituting, supporting, refuting and/or being.

9. “DEQ” refers to the Wyoming Department of Environmental Quality or any agency, officer or employee of DEQ. This includes the Wyoming Division of Land Quality (“Land Division”) and any agent, officer or employee of any of the divisions.

10. “You” or “Your” means Brook or any agent, officer, or employee of Brook.

INSTRUCTIONS

In responding to these Interrogatories and Requests for Production of Documents, please adhere to the following instructions:

1. Furnish all information that is available to you, known to you, or that can be known after reasonable inquiry, including information in the possession, custody, or control of

your attorneys, staff, agents, employees, officers, consultants, experts, or other representatives.

In answering, you are required to make a reasonable inquiry to ascertain the information or knowledge necessary to respond in detail to such request. Answers must be specific and responsive.

2. If you do not or cannot answer any Interrogatory or Request for Production of Documents after exercising due diligence in attempting to secure the information, please state your answer to the extent possible and indicate your inability to answer the remainder. Include whatever information you may have concerning the unanswered portions and set forth in detail all efforts undertaken to ascertain the requested information.

3. If anything is deleted from a document produced in response to an Interrogatory or Request for Production, state the reason for the deletion, the subject matter of the deletion, and the name of the person or persons who decided to delete the information.

4. If any information in these Interrogatories or Requests for Production is withheld pursuant to an objection or claim of privilege, answer portions of the Interrogatory or Request for Production for which the privilege does not apply, identify the objection or privilege claimed, set forth a specific basis upon which the objection is raised or the privilege is claimed, and provide a privilege log and/or index of documents withheld that includes the following information: a statement identifying the nature of the information withheld, the date and subject matter of any communication containing that information, the names of all persons with knowledge of the information including the author, and the basis for withholding the information.

5. Answer all Interrogatories and Requests for Production under oath, and provide verification from appropriate representatives of Brook, to support these answers.

6. Provide answers to these Interrogatories and Requests for Production by February 10, 2017. If you cannot complete these answers within this time, provide immediate notice to the Resource Council's counsel so that an amicable resolution to the problem can be reached.

7. These Interrogatories and Requests for Production are to be deemed continuing in nature. Supplement all answers as required by W.R.C.P. 26(e).

INTERROGATORIES

1. Identify and describe all persons employed by Brook Mining Co., LLC.

2. Identify and describe any advisors, consultants, or experts, if any, hired or used by Brook in preparing or reviewing your permit application. Please describe the qualifications of these individuals.

3. Identify and describe all subsidiary and/or parent companies/entities related to Brook.

4. Please describe any plans for blasting in the area, including proposed blasting timing and amounts.

5. Please describe any relationship Brook has with Cloud Peak Energy, including but not limited to agreements for surface use, ingress/egress, rights of way, etc.

6. Please disclose whether Brook has obtained surface owner access or orders in lieu of consent from all surface owners with the permit boundary, including the BNSF.

7. Please disclose whether Brook is aware of coal fires in the area at the present or in the past.

8. Please disclose whether Brook is aware of subsidence in the area at the present or in the past.

REQUESTS FOR PRODUCTION OF DOCUMENTS

1. Provide a copy of all state and federal permits received by Brook for the proposed project.
2. Provide a copy of any permit applications to MSHA.
3. Provide a copy of the traffic control plan referenced in the permit application.
4. Provide a copy of any agreements with Cloud Peak Energy.
5. Please provide documents that demonstrate the amount of water saturation in the targeted coal seams and what the groundwater inflow rates are in relation to the proposed mine excavations.

Dated this 6th day of February, 2017.

ATTORNEYS FOR OBJECTORS
BIG HORN COAL COMPANY

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	Docket No. 17-4801
)	
TFN 6 2-025)	

**OBJECTOR BIG HORN COAL COMPANY'S OBJECTION TO PROCEDURE
AND SCHEDULING AS A VIOLATION OF DUE PROCESS**

Big Horn Coal Company (hereinafter "BHC"), by and through it undersigned counsel, Crowley Fleck PLLP, hereby submits this Objection to Procedure and Scheduling as a Violation of Due Process.

On February 6, 2017, Jay A. Gilbertz of Yonkee & Toner, LLP, on behalf of Objectors Mary Brezik-Fisher and David Fisher, filed a formal objection to the procedure and scheduling of this contested case hearing as violating established and applicable rules of procedure and fundamental procedural due process rights. See Objection to Procedure and Scheduling Which Violated Objectors' Due Process Rights and Demand that Discovery and Hearing be Modified to Comport with Due Process, filed on Feb. 6, 2017 (hereinafter "*Objection to Procedure and Scheduling*"). Having reviewed Mr. Gilbertz's

Objection to Procedure and Scheduling, BHC hereby adopts, incorporates and joins Mr. Gilbertz's Objection and also joins in the proposed solution contained therein. *See id.*

On February 2, 2017, the parties to this matter appeared for a pre-hearing conference before the Environmental Quality Council (EQC) where the hearing in this matter was set to begin on February 13, 2017 at 9:00 a.m. and all discovery was required to be conducted from February 6-10, 2017, a matter of one business week. *See Amended Order*, dated February 2, 2017. At this conference, Counsel for BHC (as well as several other parties) affirmed that it had requested an informal conference with the Wyoming Department of Environmental Quality ("DEQ") Director pursuant to W.S. § 35-11-406 and objected to this significantly truncated scheduling of the contested case proceeding on due process grounds.

As stated in the *Objection to Procedure and Scheduling* filed by Mr. Gilbertz, the schedule and procedure currently imposed on the parties would deny the Objectors their due process rights to a meaningful opportunity to be heard and express their objections. For the sake of brevity, these arguments will not be recited in this Objection, but instead are incorporated through this reference.

BHC also joins Mr. Gilbertz's proposed solution under which the hearing may still commence on February 13, 2017, but with the condition that the proceedings begin with the DEQ presenting its evidence pertaining to the draft permit which will then be followed by Brook Mine's presentation of evidence, to the extent time allows. From here, the proceedings would be continued to allow the parties to conduct meaningful discovery in anticipation of the resumption of the hearing related to the contested issues. This solution

would resolve the procedural due process issues and is most practicable considering that the evidence in this matter likely cannot be presented in the two-day timeframe currently scheduled. See Amended Order, dated February 2, 2017.

WHEREFORE, for the reasons stated herein and as more particularly stated in the *Objection to Procedure and Scheduling* filed by Mr. Gilbertz, BHC joins the objection of Mr. Gilbertz on behalf of Objectors Mary Brezik-Fisher and David Fisher and requests that the EQC enter an order directing the hearing dates of February 13 and 14, 2017 to include only evidence from DEQ and possibly Brook Mine, and that after this time the hearing will be continued for discovery and resumption for all further evidence at a later date.

DATED: February 6, 2017.

ATTORNEYS FOR OBJECTORS
BIG HORN COAL COMPANY

**BEFORE THE ENVIRONMENTAL QUALITY COUNCIL
STATE OF WYOMING**

IN RE BROOK MINE APPLICATION)	
)	Docket No. 17-4801
)	
TFN 6 2-025)	

**OBJECTOR BIG HORN COAL COMPANY'S NAMING OF EXPERT
WITNESSES**

Big Horn Coal Company, by and through its undersigned counsel, Crowley Fleck PLLP, and pursuant to the Amended Order of the Environmental Quality Council in this matter, dated February 2, 2017, submits this list of expert witnesses it intends to call at the hearing set to begin on February 13, 2017 at 9:00 a.m.

Big Horn Coal Company intends to call the following expert witnesses:

- 1. Jason N. Todd, QP**
Mining Consultant—Millcreek Mining Group
1011 E. Murray Holladay Rd, #100
Salt Lake City, UT 84117
(801) 904-2260

- 2. Paul (Joe) Gerlach**
President, Hydrogeologist—Aqua Terra Consultants
2624 Heartland Drive

Sheridan, WY 82801
(307) 672-7133

Big Horn Coal Company will provide an expert disclosure for each of these expert witnesses on or before February 10, 2017 as required by the Amended Order of the Environmental Quality Council in this matter, dated February 2, 2017. Both Mr. Todd and Mr. Gerlach must be contacted through the undersigned counsel for Big Horn Coal Company.

DATED: February 6, 2017.

**OBJECTOR BIG HORN COAL COMPANY'S DISCOVERY REQUESTS TO
WYOMING DEPARTMENT OF ENVIRONMENTAL QUALITY (DEQ)**

TO: Wyoming DEQ, by and through Andrew Kuhlman and James LaRock, Wyoming Attorney General's Office, Pioneer Building, 2nd Floor, 2424 Pioneer Avenue, Cheyenne, WY 82002, their attorneys:

Pursuant to Wyo. Stat. Ann. § 16-3-107(g) and Rules 33 and 34 of the Wyoming Rules of Civil Procedure, Big Horn Coal Company, by and through its counsel of record, submits the following interrogatories and requests for production (collectively, the "Discovery Requests") to Wyoming DEQ.¹ Pursuant to Order of the Environmental

¹ By submitting these Discovery Requests, Big Horn Coal Company does not waive any due process objections made of record during the Scheduling Conference of February 2, 2017 and in Big Horn Coal Company's Objection to Procedure and Scheduling as a Violation of Due Process Rights, filed in this Matter on February 6, 2017. These Discovery Requests are simply an attempt to obtain some of the necessary

Quality Council ("EQC"), dated February 2, 2017, responses from Wyoming DEQ are due by February 10, 2017.

These Discovery Requests are not intended to duplicate any disclosures required by the EQC's Order of February 2, 2017. Instead, these Discovery Requests are an attempt to supplement these required disclosures with other relevant information as defined by the Wyoming Rules of Civil Procedure and appropriate case law interpreting the same. To the extent that the information requested in these Discovery Requests is duplicative of any already required disclosure, please indicate where that information was/will be provided and provide all other responsive information.

INSTRUCTIONS AND DEFINITIONS

The following instructions and definitions apply to these Discovery Requests and are incorporated therein:

1. The term "You", "Your", any plural, or any synonym thereof, are intended to and shall embrace and include Wyoming DEQ, counsel for said party, and all agents, servants, employees, representatives, or anyone on behalf of Wyoming DEQ, or who has acted for or on behalf of the Wyoming DEQ, who are in possession of, or may have obtained information for or on behalf of Wyoming DEQ.
2. The responses to these interrogatories and document requests ("Discovery Requests") shall include all non-privileged information and documents that are within your possession, custody, or control, to the fullest extent allowed under the Wyoming Rules of Civil Procedure.

information to present meaningful objections at the hearing set for February 13, 2017 and despite the lack of appropriate time to prepare under the scheduling in this matter.

3. Each Discovery Request should be construed as broadly as permissible under the Wyoming Rules of Civil Procedure, and no Discovery Request should be construed as a limitation on any other Discovery Request. If, in answering these Discovery Requests, you claim an ambiguity in interpreting a particular request, definition, or instruction, such claim shall not be used as a basis for refusing to respond. Instead, you should identify the language deemed ambiguous and the interpretation chosen or used in responding to the Discovery Request.

4. If there exists no information, documents, or things that are responsive to a particular request, that fact should be stated in response to the request.

5. These Discovery Requests are deemed to be continuing to the fullest extent permitted by the Wyoming Rules of Civil Procedure, until and up to the date and time of the EQC hearing currently set for February 13, 2017 at 9:00 a.m.

6. Regardless of the tense employed, all verbs shall be read as applying to the past, present, and future as necessary to make any paragraph more, rather than less, inclusive.

7. None of these Discovery Requests are intended to request information or documents protected by attorney-client privilege, protected as work-product or otherwise privileged or protected. To the extent that the following Discovery Requests seek such privileged or protected information, please provide all information not so protected and indicate the existence of the protected information.

8. "And," "or," or "and/or" shall be construed in either the disjunctive or conjunctive in order to elicit the broadest possible response.

9. IDENTIFY and/or IDENTIFYING: The terms “Identify” and/or “Identifying,” with respect to a natural Person, means to provide that Person’s name, home address and telephone number, current employer and job title, and work address and telephone number. The term “Identify” and/or “Identifying,” with respect to an entity, means to provide the name, address and telephone number for that entity. The term “Identify” and/or “Identifying,” with respect to a Document, means to provide the date, subject matter, author(s), addressee(s), recipient(s), length and current location of the Document. The term “Identify” and/or “Identifying,” when used with respect to oral statements or communications, means to state the maker of the communication or statement, recipient of the communication or statement, when the communication or statement was made, where the communication or statement was made, the person(s) present when the communication or statement was made, the mode of communication, and the subject matter of the communication or statement.

10. PERSON: The term “Person” includes natural persons and business entities.

11. DOCUMENT: The term “Document” means all materials, things, and tangible evidence within the scope of the Wyoming Rules of Civil Procedure, including, but not limited to, writings, memoranda, correspondence, files, cards, reports, forms, contracts, agreements, notes, inventories, diaries, calendars, communications or summaries of any kind, billing records, drawings, graphs, charts, photographs, films, recordings, videotapes, computer tapes, computer disks, electronically or digitally recorded data or information, electronic mail, and any other data or information compilations in any form, which are in the possession, custody or control of the you, your agents, counsel, or any other person(s)

acting on your behalf. Each draft and non-identical copy of a Document is to be considered a separate Document.

12. INCLUDING: The term "Including" means including but not limited to.

13. COMMUNICATION: The term "Communication" means the imparting or interchange of thoughts, opinions, or information by speech, writing, or signs, including but not limited to all inquiries, discussions, conversations, negotiations, agreements, meetings, telephone conversations, letters, correspondence, notes, facsimile transmissions, answering machine or voice mail information, electronic mail transmissions, or recordings, whether communicated by writing, electronically, orally, or otherwise.

INTERROGATORIES

INTERROGATORY NO. 1: Please identify all persons who aided in the preparation of these answers and responses to these Discovery Requests.

ANSWER:

INTERROGATORY NO. 2: Please identify each and every person you may, or intend to, call as a witness at the hearing for this matter, including a description of the substance of their proposed testimony, an identification of all documents or communications that will be referred to in each person's testimony or that was relied on forming any knowledge, beliefs or opinions that will be expressed in each witness's testimony. If any witnesses identified in response to this request will or may be presented or qualified as an expert, please indicate this as well.

ANSWER:

INTERROGATORY NO. 3: Please identify any person holding himself/herself out to be an expert or consultant in any field with respect to any of the issues in this hearing which you, your attorneys, or the potential experts/consultants listed herein have consulted with, and/or which you may use to in the presentation of your case or who have assisted in the preparation of your case. For each person state:

- a) the name address and field of expertise of each such person;
- b) the subject matter on which the expert is expected to testify or has consulted with you regarding;
- c) the substance of the facts and opinions to which the expert is expected to testify or has consulted with you regarding;
- d) a summary of the grounds for each such opinion of the expert/consultant;
and
- e) all documents and facts relied upon by such person in reaching his or her opinion(s).

ANSWER:

INTERROGATORY NO. 4: Please provide a summary of the evidence you believe establishes the requirements for a surface coal mining permit found in Wyo. Stat. Ann. § 35-11-406(n)(i)-(vii). Included in this summary, please identify what witnesses, documents, exhibits or any other evidence that you may use to establish each of these requirements at the EQC hearing for this matter set to begin on February 13, 2017.

ANSWER:

INTERROGATORY NO. 5: Please identify and describe any information responsive to any required disclosure found in Rule 26 of the Wyoming Rules of Civil Procedure, replacing as necessary the use of “trial” with “hearing” referring to the hearing in the matter currently set to begin on February 13, 2017, including but not limited to any disclosure required by Rule 26(a)(1) and (a)(3).

ANSWER:

INTERROGATORY NO. 6: Please identify and describe any documents, research, communications or correspondence with any person or entity discussing or referencing any potential material impacts on hydrologic balance inside or outside of the permit area, or any other potential material environmental, health, safety or other impacts of the proposed mining operations involved in this matter, including but not limited to any risks associated with existing underground coal fires and possible subsidence, and the extent to which the proposed reclamation bond is sufficient to address such impacts.

ANSWER:

INTERROGATORY NO. 7: Please identify and describe any documents, research, communications or correspondence discussing or referencing the requirements, policies or guidelines of the Wyoming Department of Environmental Quality, Land Quality Division’s Coal Standard Operation Procedure 2.1, regarding Coal Permit Content and Review Procedures Relating to Abutting and Overlapping Coal Permit Area Boundaries.

ANSWER:

REQUESTS FOR PRODUCTION

REQUEST FOR PRODUCTION NO. 1: Please produce a true and correct copy of any and all documents, exhibits, drawings, photographs, videotapes, motion pictures or other items of evidence that you may use or present at the EQC hearing set to begin on February 13, 2017.

RESPONSE:

REQUEST FOR PRODUCTION NO. 2: Please produce copies of all documents identified or referred to in your answers to these Discovery Requests, or utilized or relied on in answering these Discovery Requests.

RESPONSE:

REQUEST FOR PRODUCTION NO. 3: Please provide all documents responsive to any required disclosure found in Rule 26 of the Wyoming Rules of Civil Procedure, replacing as necessary the use of “trial” with “hearing” referring to the EQC hearing in the matter currently set to begin on February 13, 2017, including but not limited to any disclosure required by Rule 26(a)(1) and (a)(3).

RESPONSE:

REQUEST FOR PRODUCTION NO. 4: Please produce any documents, research, communications or correspondence with any person or entity discussing or

referencing any negative environmental, health or safety impacts of the proposed mining operations involved in this matter.

RESPONSE:

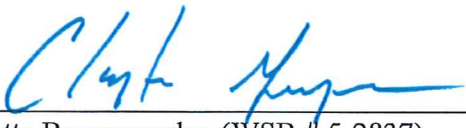

REQUEST FOR PRODUCTION NO. 5: Please produce any data, mapping, documents or research concerning, or any communications or correspondence with any person or entity discussing or referencing any of the following:

- a. Geotechnical designs or highwall mining design of the proposed mining operations involved in this matter;
- b. Coal strength or stability factors of the proposed mining operations involved in this matter;
- c. Materials reports or studies regarding the proposed mining operations involved in this matter;
- d. Water use rates and/or groundwater aquifer testing;
- e. Historical underground workings in or around the mining area of the proposed mining operations involved in this matter; **or**
- f. Subsurface fires in or around the mining area of the proposed mining operations involved in this matter.

Hi Jeff:

At this point the hearing officer will hold everyone to 5 minutes on openings. That is subject to further discussions but that is what is currently planned.

Jim

BJ:

I really need the names and contact information of the objectors that you have. I need to get hold of them to advise them of a conference this Thursday. Can you get those to me asap.

Thanks

Jim

On Mon, Jan 30, 2017 at 8:59 AM, Alan Edwards <alan.edwards@wyo.gov> wrote:

BJ is the permit coordinator and is the individual who reviewed the permit and is reviewing the comment letters. He would be the contact for that side otherwise let me know what you are trying to get information on and I will get you who you need. Andrew will be our AG for this hearing. If you contact BJ by e-mail I would appreciate if you would copy both Andrew and I. The hearing is coming up fast so that would help us ensure you are getting what you need. We are making arrangements to get a pdf copy of the permit application that was available for public review and comment on the assumption you will want/need to upload that to your docket. Heads up, though, it will be a big file. You should have the

electronic copy of all of the comment letters received so far and Todd's response letters this morning. We will also get you the list of the contact information for those who submitted comment letters including their phone numbers that we have been able to find. If we receive any additional comment letters that satisfy the public comment requirements we will forward those as we get them.

Alan

On Mon, Jan 30, 2017 at 8:46 AM, Jim Ruby <jim.ruby@wyo.gov> wrote:

I am not sure. Probably whoever was the person who was the contact person for comments on the permit. I just want to make sure I know who I can contact if something comes in that I might need help figuring out or who should be on the case to get information for your permit file along with you. Also is Andrew going to be your attorney in this case?

Thanks

Jim

Counsel & Mr. Ruby,

I would like to state that it is important to not have these conversations via email until 1) all counsel have made an appearance in the case and 2) it is clear which of the objecting parties will be continuing in the proceeding. Until then, these conversations border on ex parte conversations and are troublesome.

Looking forward to speaking with you tomorrow at the scheduling conference.

Thank you,
Shannon

Subject: Re: Brook

Hi Lynn:

Because of the short time frame for this hearing, 20 days from end of comment period, and the requirement that the Council publish notice of the hearing twice on two consecutive weeks, I have to have the scheduling conference this week. Thursday is the best day for the hearing officer and for me to get some kind of notice out to all of the parties so they can try and appear.

The conference can be attended by phone so you don't have to be present. The main reason for the conference is just to get a line on how best to handle the hearing and where. I regret I can't change the day or the time unless I am able to get an agreement of all the parties to change the final hearing date.

I don't have the names and addresses of all of the objectors yet, I am hopeful that I will have that in the next hour or so.

Jim

On behalf of Big Horn Coal Company, we do not object to the hearing being scheduled in Cheyenne. Unfortunately, I am traveling on Thursday and cannot be available for a scheduling conference on that day. Please let me know whether the scheduling conference can be rescheduled to a date when all counsel are available and what other counsel/objectors will be participating.

Thank you,

Lynne

Subject: Brook

Hi Counsel:

Just a quick update the scheduling conference time has been tentatively changed to 10:30 a.m. on Thursday the 2nd of Feb. The hearing officer, Nick Agopian, would also like to have the hearing in Cheyenne if possible so if you have any objections to that please let me know.

Thanks

Jim

BJ:

I really need the names and contact information of the objectors that you have. I need to get hold of them to advise them of a conference this Thursday. Can you get those to me asap.

Thanks

Jim

BJ is the permit coordinator and is the individual who reviewed the permit and is reviewing the comment letters. He would be the contact for that side otherwise let me know what you are trying to get information on and I will get you who you need. Andrew will be our AG for this hearing. If you contact BJ by e-mail I would appreciate if you would copy both Andrew and I. The hearing is coming up fast so that would help us ensure you are getting what you need. We are making arrangements to get a pdf copy of the permit application that was available for public review and comment on the assumption you will want/need to upload that to your docket. Heads up, though, it will be a big file. You should have the electronic copy of all of the comment letters received so far and Todd's response letters this morning. We will also get you the list of the contact information for those who submitted comment letters including their phone numbers that we have been able to find. If we receive any additional comment letters that satisfy the public comment requirements we will forward those as we get them.

Alan

I am not sure. Probably whoever was the person who was the contact person for comments on the permit. I just want to make sure I know who I can contact if something comes in that I might need help figuring out or who should be on the case to get information for your permit file along with you. Also is Andrew going to be your attorney in this case?

Thanks

Jim

Are you looking for the permit coordinator who was the lead for the permit review or for records? I want to make sure you are getting the person you need. Alan

Good Morning Alan:

Who should I talk to in Land quality regarding Brook and the filed appeal? Have a great week.

Jim
